Edging forward a bit, Baakar said, "I can truthfully say, Mister, that I haven't seen such a beautiful camel in the whole market."

Nandu swelled with pride and replied, "She isn't the only one. They are all beautiful. I give them enriched fodder."

In a softer tone of voice Baakar asked, "Will you *sell* her?"

Nandu said, "Of course! I brought them all here to sell."

"Then tell me how much you're asking for her."

Nandu surveyed Baakar from head to toe and laughingly asked, "Do you want her, or are you buying her for your boss?"

"I want her," Baakar said with determination.

Nandu shrugged his shoulders. How could this labourer afford to buy such a beautiful she-camel? "How in the world are you going to afford her?"

The one hundred and fifty rupees lying in Baakar's pocket were itching to jump out. A little angry, he said, "What is it to you who buys her? You should only be interested in your pocket. Tell me what the price is."

Nandu, looking at Baakar's tattered clothes, his *tehmad* above his knees and his shoes so old they appeared to be left over from the days of Noah, said with a mind to discourage him: "Look, you go buy some ordinary camel. The price of this one is not less than rupees twenty times eight."

The tired, anguished face of Baakar glowed with delight. He had been afraid that the headman would state a price he couldn't afford, but when he himself had said one hundred and sixty rupees, his joy knew no bounds. He already had one hundred and fifty rupees. If the headman did not accept this amount he would borrow ten rupees. He didn't know how to haggle. Immediately he took out the one hundred and fifty rupees and threw them down in front of Nandu. He said, "Count them. I don't have a penny more. The rest is up to you."

Nandu absent-mindedly started counting the money. His eyes lit up at the amount. He had said the price was one hundred and sixty rupees to get rid of Baakar, otherwise the very best she-camel in the marketplace was available for one hundred and fifty rupees. He had never dreamed he would get even one hundred and forty rupees for this one. Nevertheless, quickly hiding his feelings and as if doing Baakar a favour, he said, "She's really worth two hundred rupees, but for you I'll knock ten rupees off my price." Saying this he got up and gave the tether to Baakar.

Even so a lump came to Nandu's throat. This she-camel had been born and raised at his place. Having brought her up, to hand her over to someone else today made him feel somewhat like a father when he gives his daughter away in marriage. In a quivering voice he said, "This camel has been well cared for. Don't you ruin her." Like a father-in-law would say to his son-in-law: My daughter has been raised with great affection; see to it that she suffers no hardship.

Flying on the wings of joy Baakar replied, "Don't you worry at all. I'll care for her with my life."

Carefully tucking away the bills in his waistband, Nandu filled a clay mug with water from a pitcher as if to wet his dry throat a bit. Dust was flying everywhere in the market. Even in big city stockyards where dozens of temporary taps are installed and sprinkling is kept up all day, there is no scarcity of dust. So in a desert stockyard dust reigns supreme. On the sugar seller's sugarcane, on the candyman's sweets,on the yogurt vendor's dumplings, everywhere dust had full and final authority.

The water in the pitcher had been brought from the canal in tin buckets, but on the way it had become murky, almost muddy. Nandu had planned to drink it when the particles settled, but his throat was getting dry. Finishing the mug in one gulp Nandu offered Baakar some water. When Baakar had come he had been extremely thirsty, but now where was the time to have a drink of water? He wanted to reach the village before nightfall.

Picking up the camel's reins he crossed through the cloud of dust and left.

BAAKAR had wanted to buy a young beautiful she-camel for a very long time. He was a labourer. His ancestors had been potters, but his father had given up the traditional occupation and become a labourer. After him Baakar had also continued feeding himself and his small family by this means. It wasn't that he worked hard. He always shirked work. Why shouldn't he, when his wife was there working twice as hard as he, sharing his burden and giving him every comfort? His family wasn't big—he himself, his wife and a tiny daughter So for whom should he put himself out? However, the cruel pitiless Creator had awakened him from his inertia and his happy daydreams and forced him to understand his responsibilities. He had learnt soon enough that there is more in life than just pleasure and ease; there is also sorrow and hardship.

Five years ago his beloved wife had died, leaving behind a pretty, doll-like daughter. At the time of death his wife had showed all her pain in her dim, lustreless eyes as she told Baakar, "My Razia is now in your hands; don't let her face any hardships."

This sentence changed the whole course of his life. After his wife's death he brought his widowed sister from her village and forsaking his laziness and fecklessness, he drove himself to fulfil the last wish of his deceased wife.

He worked day and night so that he might afford different kinds of things to please his little daughter. Whenever he returned from the market tiny Razia would wrap herself round his legs and fixing her big eyes on his dirt-smeared face, would ask, "Daddy, what have you brought me?" He would take her on his lap and shower her with either candy or toys. Then Razia would climb down and run to show her girlfriends her toys or candy.

One day when this little doll was eight years old she had one obstinate desire. "Papa, I want a she-camel. Buy me a she-camel." Such an innocent little girl! How could she know that she was the daughter of an impoverished, resourceless labourer, for whom the purchase of a camel was an impossible goal and the dream of it almost a sin? Laughingly, Baakar took her on his lap and said, "Rajjo, you yourself are a she-camel." But Razia wouldn't take this for an answer. One day she had seen Masheer Maal mounted on a she-camel, his daughter seated in front of him, come to this village to hire a few labourers. This was the moment that the strong desire was born in Razia's childish mind that she herself would one day ride a she-camel. And from that very day whatever indolence had remained in Baakar also vanished.

Though he had tried to distract Razia, in his heart-of-hearts Baakar vowed to buy a beautiful she-camel for her. And so it happened that where his average income had not been even three annas per day, it now grew to eight to ten annas. He began to work in distant villages. During the harvest he would work day and night harvesting the crops, threshing and storing the grain in barns, making haystacks. During the planting season he would drive a plough, make furrows, sow seeds. When there was no job he would get up at dawn and, walking a distance of sixteen miles, would reach the marketplace; after doing eight to ten annas worth of labour he would return home. He would save six annas a day. He did not allow anything to interfere with this routine. It was as if he were possessed.

His sister would say, "Baakar, you are completely changed nowadays. You never pushed yourself so hard before."

Baakar would laugh and say, "Do you want me to be idle all my life?"

His sister would reply, "I am not suggesting that you sit idle, but I can't advise you to accumulate money while squandering your health."

On such occasions Baakar always felt as if he were seeing his dead wife in front of him and her last wish would echo in his ears. He would cast an affectionate glance at Razia playing in the courtyard and, sadly smiling, start work again. And today, after one and a half years of very hard work, he had been able to fulfil his long-cherished desire. Here he was walking along the banks of the canal, the tether of a she-camel in his hand.

It was dusk. In the west the rays of the setting sun were giving their final gift of gold to the earth.There was a chill in the air and somewhere in distant fields chirping *titihari* birds were in flight. Every now and then Baakar would see some farmer →

mounted on his camel lurch by, or a group of farm boys returning from the fields seated in a bullock cart filled with bales of straw. As they went along the boys would pet the oxen, singing a stanza or two of some song or play with the snouts of the silently moving camels tied to the back of the cart.

Baakar, as if awakening from some dream, looked towards the sun setting in the west. His village was still very far away. Happily glancing over his shoulder at the silent camel following behind him, he caressed her fondly. Then at the thought that Razia might go to sleep before he reached home, he stepped up his pace.

THE small village of Masheer Maal came into view. His village was close by, only about four miles from here. Baakar's pace slackened and his imagination began painting variegated pictures on the canvas of his mind. He had just reached home; little Razia, dancing with joy, was hanging on to his legs, then seeing the camel her big eyes filled with delight. Next he saw that he had seated Razia in front of him on the camel and was galloping along the banks of the canal. It was evening; there was a cool breeze and here and there a black crow, cawing several times, would spread his large wings, swoop low, then fly off. Razia is infinitely happy, as though she is flying in an airplane...

He now imagines that he is standing with Razia in the marketplace of Bahaawalnagar. With wonder and astonishment tiny Razia looks at the huge piles of grain, the countless wagons and other amazing things. Baakar is cheerfully giving explanations for everything. A recordplayer is playing in a store and Baakar takes her there. How a song comes out of this wooden box, who is hidden inside it, these are matters beyond Razia's comprehension.

Engrossed in his daydreams he was passing by a village when suddenly a thought stopped him and he entered the settlement of Masheer Maal. It was not a big village, at the most there would be thirty huts. There were as yet no wooden beam roofs nor fired brick buildings in this area. In Baakar's own village there were fifteen houses. Houses? They were only lean-tos. Tents were made of reed mats, they couldn't even be called huts.

Masheer Maal village was a settlement of twenty to twenty-five such lean tos, only the residence of Masheer Maal was made from adobe brick, but even he had only a thatched roof.

Baakar stopped in front of Naanak, the carpenter's hut. Before going to market he had placed an order for a saddle for the camel. He realised that if Razia insisted on mounting the animal he would not be able to refuse her. It was this thought which made him turn in here. Once or twice he called out to Naanak. From inside someone, perhaps it was his wife, answered that he wasn't there, he had gone to the market.

Baakar's heart sank. He had no idea what to do. If Naanak had gone to the market, could he have made the saddle before leaving? Then he thought, "Perhaps he did finish it first." This idea gave him some comfort and he called out again, "I gave an order for a camel's saddle. Did he make it or not?"

The response was, "I don't know."

Half of Baakar's joy vanished. How could he take the she-camel without a saddle? If Naanak had been home, whether the saddle was ready or not, he could have borrowed another. Then he had another idea. He could borrow one from Masheer Maal. He had so many camels there would surely be an old saddle. For now that would work. By then Naanak would have the new saddle ready. Thinking along these lines he started off in the direction of Masheer Maal's house.

IN the days when Masheer had been employed he had accumulated a tidy sum of money. When the canal had been built here he had purchased several plots of land for a song. Now he had retired here. He had tenants, a good income and was leading a comfortable life. Seated on a cot on the front porch, smoking a hookah, he was dressed in a white turban, shirt, vest and *tehmad*.

Seeing the filthy Baakar coming towards him holding the reins of a camel he asked, "Hey Baakar, where are you coming from?"

Baakar bowed in greeting and replied, "Sir, I'm coming from the market."

"Whose she-camel is this?"

"She's mine, sir. I've just bought her."

"How much did you pay for her?"

Baakar wanted to say that he had paid one hundred and sixty rupees. In his eyes even two hundred rupees was cheap for such a beautiful camel, but his conscience wouldn't let him say this. He spoke up, "Sir, he was asking for one hundred and sixty rupees, but I only paid him one hundred and forty."

Masheer Maal glanced at the camel. For a long time he himself had been wanting to buy such a beautiful she-camel to go riding on. He had a she-camel, but she had been sick last year. Although with the use of indigo and other medicines she had recovered, there was no longer that spirit in her walk, not that spring. This camel captivated him. What a beautiful, well-structured body, what a pretty whitish brown color, what a long, supple neck.

He said, "OK, I'll give you one hundred and sixty rupees. I need a she-camel and the extra twenty rupees can be for your labour."

Baakar smiled bitterly and said, "Sir, I haven't even had the chance to enjoy owning her yet."

Masheer Maal stood up and began patting the camel's neck. "Wow! What a beautiful animal! All right, I'll give you five more rupees."

Then he called out, "Nura! O Nura!"

The servant had been chopping up straw for the buffaloes. He came running, hatchet still in hand. Masheer Maal said, "Take this camel and tie her up. What do you say? Not bad for one hundred and sixty-five rupees."

Nura took the reins out of the stupefied Baakar's hand and looking the she-camel over from head to toe said, "She's a fine animal." With that he went off towards the barn.

Masheer Maal took sixty rupees out of his money belt and putting them in Baakar's hand said with a grin, "Just a little while ago a tenant gave me this. It must have been destined for you. For now you take this much. I'll give you the rest within the next month or two. If you're lucky, it's posible you'll get it even sooner." Without waiting to hear the reply he walked off towards the barn. Nura was again chopping the hay so from way off he yelled, "Forget the buffaloes' straw. First give the camel something to eat. She seems to be hungry."

He came closer and began to stroke her neck.

The declining moon had not yet come out. In the hour of solitude a mist was spreading over everything. A few stars had emerged above and in the distance the trees had become big, dark blotches.

Seated under the cover of a bush on the outskirts of his village, Baakar was staring at one faint light. He knew Razia would be awake, awaiting him. He was waiting too, waiting for the light to be extinguished, waiting for Razia to go to sleep so he could stealthily enter the house. ■

The Scourge Of Noise

THE quantum of noise in Bombay and other urban parts of India, according to scientists, is fast exceeding the human tolerance limit. If this continues, by the end of the century, a large number of people may well turn deaf, besides acquiring a number of diseases by noise pollution. Article 48A of the Constitution enjoins upon the state to endeavour to protect and improve the environment (Directive Principle of State Policy).

Various other laws have been enacted for the prevention of noise and the maintenance of a peaceful atomsphere. The Bombay Police Act (BPA), the Indian Penal Code (IPC), the Criminal Procedure Code (Cr PC), the Bombay Rent Act (BRA), the Bombay Municipal Corporation Act (BMCA) and various other laws prohibit nuisance by noise.

However, it is a common experience that none of these laws is observed in practice. Once police permission to operate loudspeakers is secured, people think they have the licence to "deafen" the area with as much noise as possible. When harassed citizens complain to the police, they find the forces of law reluctant to move in the matter. Police action, if any, is mostly perfunctory in nature. There is a sound reason for this passivity: most of the applicants have used pressure or clout of some kind or other to secure permits for the operation of loudspeakers.

Such permits are issued without prior inspection of the surroundings for suitability. Besides, frequently, several loudspeakers operate at full blast, often within a radius of less than a furlong of each other. They compete with one another in blaring capacity, thus shattering peace in the area almost permanently,considering the frequency of public functions in our cities.

Secular Indeed!

Similar is the problem created by a religious gathering. Being secular, India has a vast maze of temples, mosques, *gurdwaras* and churches, often within a short distance of one another. Calls to prayer, recitals and chants over loudspeakers shatter the silence and often become a matter of despair to people who do not hold that particular religious belief. One cannot stop religious functions altogether—that is too extreme an action; but what one *can* do is withdraw the loudspeaker permits from such bodies so that their ceremonies are conducted within the relative privacy of their four walls.

Politicians and mob meetings are a modern nuisance. The din they create during election campaigns, and the like is plain unbearable.

There are also no temporary or permanent arrangements to control noise in theatres and public halls. As a result, the unfortunate residents of such areas have almost permanently to live amidst a welter of cacophonous sounds. Add to this the recent phenomenon of open-air theatres—during festivals in by-lanes and on public roads—and the pollution is total. Whenever people have requested that loudspeakers in the vicinity of their homes be toned town, they have been bewildered by the violence of the abuse, threat and assault with which their requests are met. Plus, since freedom, a new dimension has been added to the noise pollution in the form of constant slogan-shouting, *morchas*, *dharnas*, picketings and the like.

Fight For Peace!

Since most of our politicians, social workers and public figures have relied upon noise for their success, it is difficult to appeal to them for any relief. Once they have generated sufficient noise in pursuit of power, they retire into cocooned nests and into the silence of the aristocratic localities in their towns.

So the only remedy available to peace-loving citizens is in the form of an organised fight for peace. Although the makers of laws are indifferent, they *can* be compelled through judicial proceedings and public opinion properly to execute these laws. However, if the citizens themselves are not prepared to insist on the scrupulous observance of laws in such matters, they might as well learn to live with the nuisance rather than pointlessly was about it, as they are apt to do.

Energy From Space

BY an ironical quirk of of fate, salvation for poor millions in India and other Third World countries, whom the benefits of even basic technology has largely evaded so far, may lie in energy obtained from space. With the scope for tapping solar energy on earth itself being limited, the only answer to the impending energy crunch seems to be the solar power satellite (SPS).

It is in the context of unequal development in different parts of the world that the potential of space science and technology has to be viewed. The recent advances in space technology have indeed benefitted the poor countries through weather forecasting, resources surveys, etc.

The atom did hold high hopes, but its use has been fraught with problems like nuclear-waste disposal, dangerous leakages and the high cost of installation and maintenance, especially in poor countries. On the other hand, fusion energy continues to be a distant dream.

Thus the one silver lining in this picture of gloom is provided by the recent researches in solar energy which has unlimited possibilities, especially for a tropical country like India. It promises a cheap, reliable and pollution-free supply of energy.

The discovery of the sun as a source of energy, surprisingly, is a recent one with the advances in physics, astronomy, chemistry and the space sciences. These researches hold out the hope that extra-terrestrial solar energy can be a reality within 20 years—by the time conventional fossil sources are expected to dry up.

The idea of collecting solar power in space through photovoltaic arrays or solar collectors in orbit and transmitting it through micro-waves or laser beams was first thought of in 1968.

Since then this concept has been further developed, and though the environmental and economic aspects are yet to be studied more elaborately, it has been established that this source can compare favourably with other energy alternatives.

The solar power satellite will receive about 15 times the solar energy which could be received on the ground and it will be available all the time without earthly limitations.

Such a satellite will have a working life of 30 years, providing a variety of options because of the absence of gravity and limitations of the earth's environment.

It is estimated that an average satellite can supply ten million kw of power which can be received by a 60 sq km antenna located outside a city. It can meet the energy demands of four million people in a developing country.

Thus, 150 satellites can meet the requirements of 600 million people in urban areas. However, 37 such solar-power-receiving structures in India will be enough to begin with, though these calculations do not include the requirements of the rural population, which is too widely dispersed to be served in the immediate future.

These rural people will, however, get an indirect benefit as the conventional sources of energy from the urban areas can be diverted to them. Moreover, as a physicist foresees, "the existing infrastructure could easily assume the task of distributing the new liquid fuels from the satellite-powered chemical synthesis plants, and one ten-million kw satellite can synthesise enough methanol to provide cooking fuel for 16 million people, thus freeing millions of tonnes of cow-dung for manure and saving trees from being destroyed for firewood."

Though, costwise, the satellites are not yet attractive to many developing countries, reservations about unfavourable environmental implications because of energy leakages near the receiver, antenna site—such as the effect on the weather and damage to the ozone layer—have been set right by recent studies by the Department of Energy of the United States.

As for cost, a country's development and progress require large and small technologies in an appropriate mix. It is not, therefore, surprising that the Government of India has set apart Rs 10 crores for research in fuel. The answer to the high cost of the power-satellites is obviously a co-operative venture, with contributions according to their capacity by many countries.

They're both wearing the same thing. Grandma's shawl. The little one's sweater. Both made from Cashmilon, the amazing acrylic fibre. For a range of fabrics. For knitwear and shawls... warm, yet light. Totally mothproof.

Cashmilon acrylic fibre can also be made into shirtings and dress material, hosiery and suitings. All of them colourful. Light. Crease resistant. Drip dry.

Next time you go to buy fabric, ask for Cashmilon blends.

Cashmilon

Acrylic fibre. Made by IPCL.

Indian Petrochemicals Corporation Limited

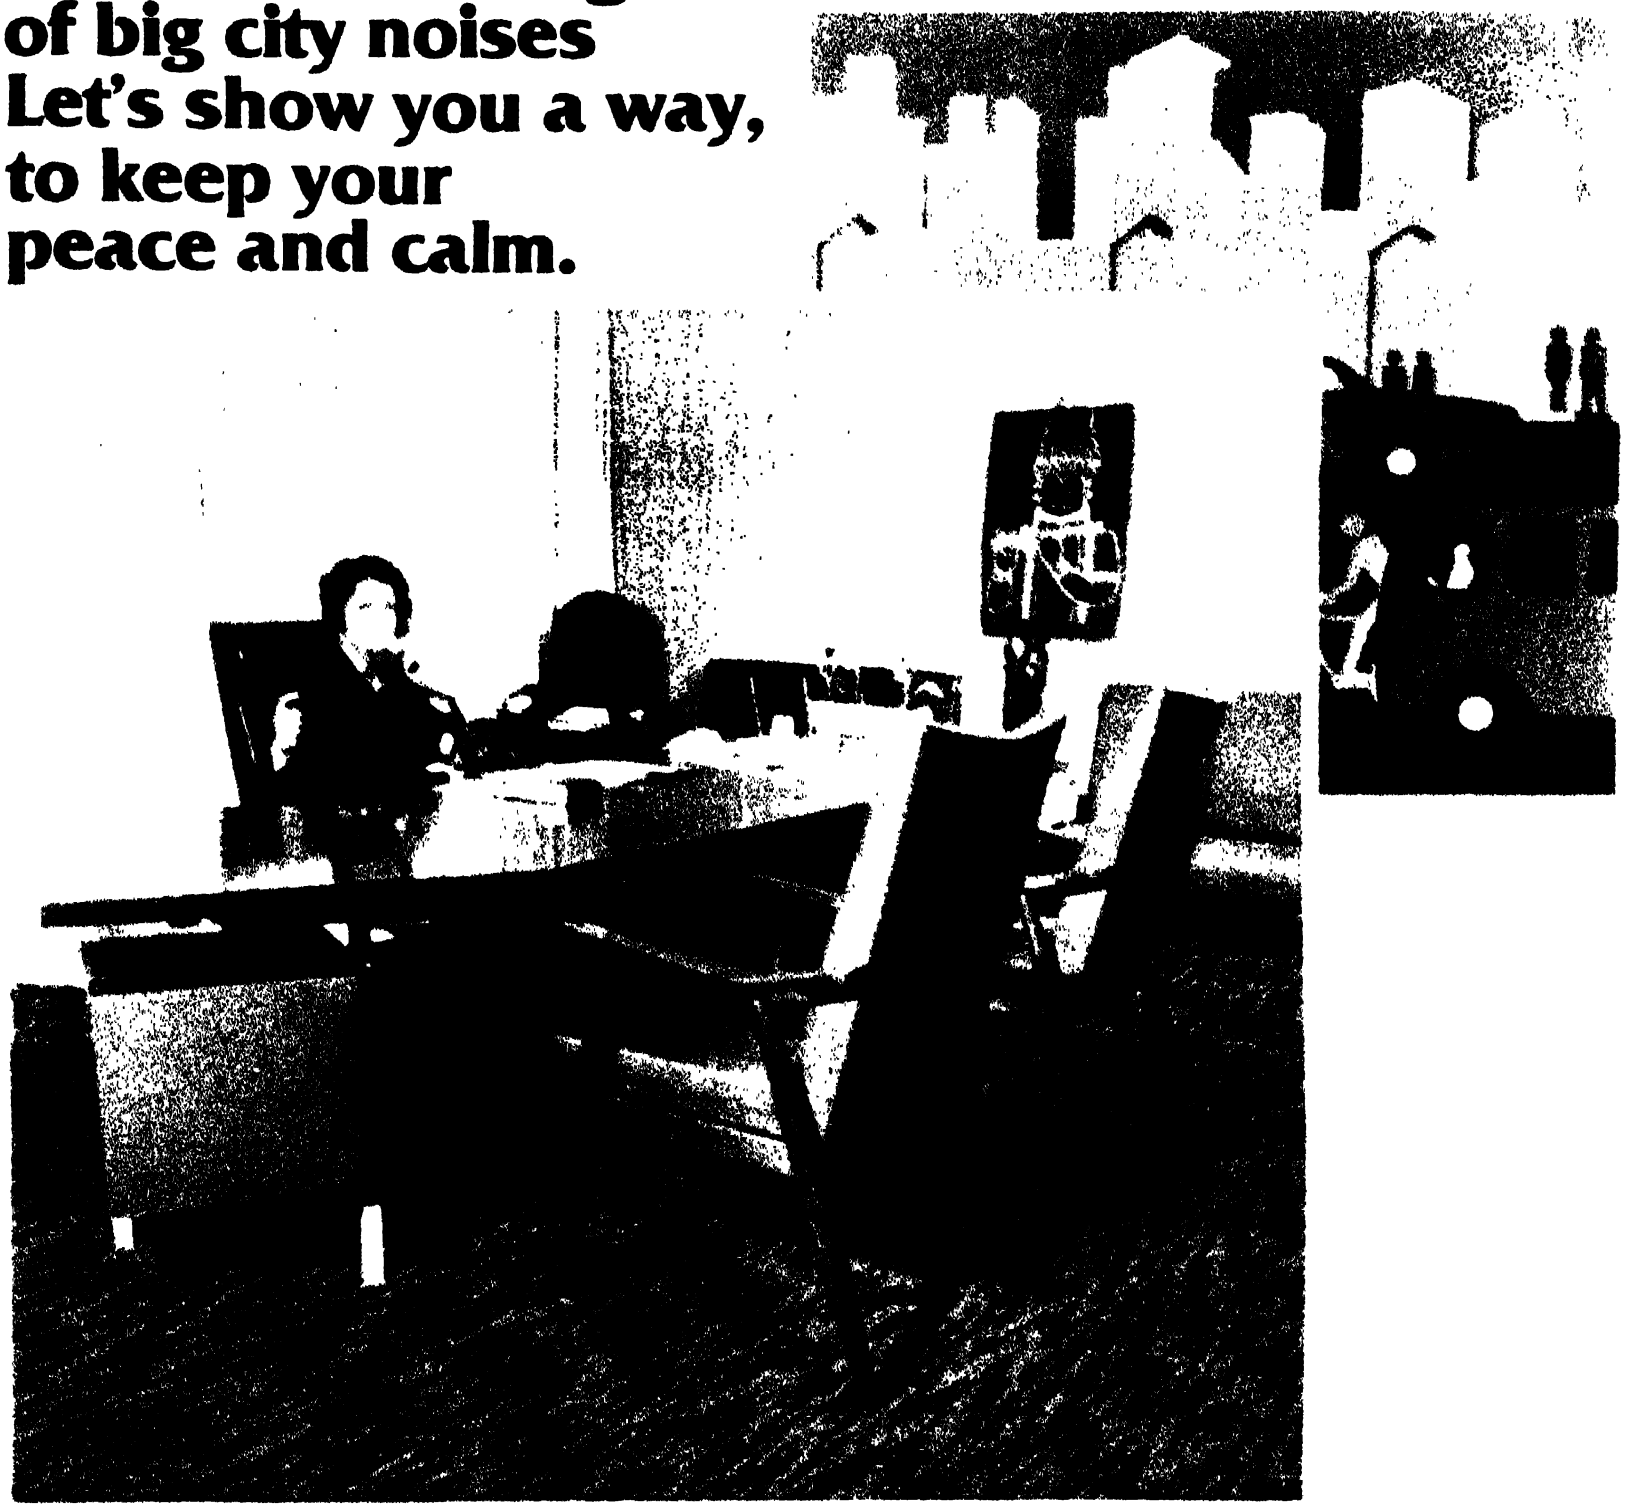
In the maddening bustle of big city noises Let's show you a way, to keep your peace and calm.



Decorate your home with coir. It's India's wonder fibre, and it looks gorgeous.

Coir is an excellent noise muffler. So, in your coir home, the maddening bustle of city noises will seem very far away.

In summer, coir decor (wall panelling, false roofing, carpeting) get the temperature down by as much as 3°C. And similarly in winter, coir keeps you snug and comfy.

Is coir expensive?

Coir is one of the least expensive decor materials.

And it requires very little maintenance. Coir is moth proof. Coir doesn't gather dust - the dust just slides through. So no need for expensive dry or vacuum cleaning.

Coir isn't just gorgeous, it works for you.

Take a very practical decision. Decide on coir for your home.

Enter the world of coir

Vim Vigour Vitality

Vive la Vitamins

by Julie Bijalpita Chatterjee

THE stormy eighties. Life moving at the pace of a nuclear missile. In the hurly-burly of a conveyor belt existence, the human body is subjected to greater and greater stress. It is fairly widely acknowledged in dietetic circles that stress creates an extra demand for vitamins and minerals that are absolutely necessary for normal functioning. If stress overtakes you it also takes away a large chunk off your vitamin reserves—consequently depleting its supplies. In fact some vitamins and minerals are essential to keep certain vital organs fully functional. The brain, for instance, cannot convert glucose into energy without the catalyst Vitamin B1.

Good Things In Little Packages

Although vitamins are an indispensable factor in human physiological exercise, they are (amazingly enough), required in comparatively very small doses, supplementing the body's requirements of fats, carbohydrates and proteins.

No one disputes the need for vitamins but what is disputed however, and rather hotly, is whether or not we need to supplement our ordinary diets with vitamin pills.

One school of nutritionists believes that you can have colossal doses and depend on megavitamin therapy for the cure of all ills ranging from paranoia to sore throats! There is a more accepted and undisputed theory in practice, however, which points out that indiscriminate use of vitamin doses, many times the recommended daily allowance, might be biochemically hazardous just as in the case of drug abuse.

An Apple A Day

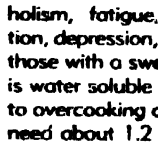
With a normal intake of vitamins one need hardly worry about malnutrition and deficiency diseases. It is, therefore, essential to ensure a regular intake of vitamins (remember the age old belief) in a "balanced diet". Moreover, it is crucial to understand that the vitamin balance in natural foods can hardly ever be matched by even the lust of multivitamin pill. For, the balance of vitamins in natural foods is extremely complex and can perhaps never be exactly accomplished with the most sophisticated equipment in the most sophisticated of laboratories. You may do well to remember that a lasting way to glowing health is through a healthy intake of vitamins in natural foods.

The Vitamins At A Glance

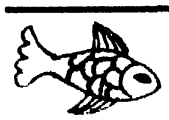
Vitamin A (*Retinol*) is fat soluble. It is easily available abundantly in eggs, liver, oily fish, kidney, green and yellow vegetables like spinach, carrots, peaches and apricots, and all dairy products. An indirect source of this vitamin is a substance called *carotene*, which the body can convert into Vitamin A.

In our country, many people who cannot afford foods rich in this vitamin fall prey to nightblindness (poor vision in little light). Studies show that it has a therapeutic and preventive value in stress-induced diseases, infectious diseases and respiratory infections. This vitamin, if consumed in large quantities can lead to severe disorders of the nervous system, bones and other disorders. Recommended dosage 750 micrograms daily.

Vitamin B1 (*Thiamine*) is water soluble. You can find it in nuts, yeast, beans, pork, wheatgerm, bread and milk. This vitamin is associated directly with alcoholism, fatigue, forgetfulness, indigestion, depression, pregnancy, smokers and those with a sweet tooth. As this vitamin is water soluble it should not be exposed to overcooking and the atmosphere. You need about 1.2 milligrams a day and as there is no chance of storing this particular vitamin, a daily intake is the only way out.



Vitamin B2 (Riboflavin) is also water soluble. If you like cheese, milk, yeast, greens, mushrooms—then you are an innocent B2 consumer. Good for you! This vitamin will ensure a fairly happy state of mental health and will make your skin lustrous and eyes powerful. But if you are prone to cracking at the corners of the mouth or inflammation of the tongue, then watch out. Good for dieters and the young as it stimulates growth.

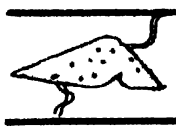


Vitamin B3 (*Niacin*) is water soluble. Soyabeans, fish, brewer's yeast, nuts, greens, wheatgerm, whole grains, pulses, and liver will give you enough of a supply. Deficiencies are associated with apprehension, personality changes, confusion, worry and depression. B3 has been useful in treating insomania, schizophrenia, other stress disorders, and is currently being used in overcoming excessive alcohol consumption. Most important of all, *pellagra*, a vitamin deficiency disease caused by a serious lack of nicotinic acid may occur. Exposed areas of the skin become dark and inflamed, and later the patient develops diarrhoea and shows lack of mental balance. 18mg suggested daily intake.

Vitamin B5 (*Pantothenic Acid*) is water soluble. You can get an inexhaustible supply of this vitamin in sunflower seeds, peanuts, bees royal jelly, tomatoes, potatoes, yeast. It is absolutely necessary for the functioning of all cells. Neither fat nor sugar can be converted into energy without it. It is essential for growth and antibody protection. Often called the "anti-stress vitamin", because of its importance to adrenal glands. 10mg every day should be enough to revitalise your cellular activities.

Vitamin B6 (*Pyridoxine*) is water soluble.

Sources: organ meats, whole grains, walnuts, bananas, yeast, brown rice. Aids in metabolism and is important for brain functions—deficiencies are associated with diabetes, anaemia, nausea, nervous disorders and even asthma. This vitamin is a bonus for all you women who suffer from pre-menstrual tension—include it regularly in your diet and it will actually save you the down-and-out feeling.



Vitamin B12 (*Cynacobalamin*) is water soluble. Indians who are mostly vegetarians need to sit up and take heed that most of the anaemia they suffer from, is due to a complete lack of B12 in their normal vegetarian diet unless they replenish it by eating enough cheese, milk (and eggs?). It plays a pivotal role in the formation of red blood corpuscles (erythrocytes). Older people should be given enough of it. The absorption process of this vitamin in the body is quite remarkable. The process depends on the presence of a substance called an intrinsic factor, usually present in the gastric juices of the stomach. If there is a problem in the absorption of this vitamin, the person may be given injections at monthly intervals. Can be stored at 1 microgram a day which should keep the doctor away.

Vitamin C (*Ascorbic Acid*) is water soluble. Do you remember mother's voice ringing in the ears—"Drink your juice" as you ran down the stairs in double-quick time while still trying to tie your shoelaces? It is found in all citrus fruits, greens, pepper, broccoli, strawberries, tomatoes, spinach. Excellent for the healing of wounds and fighting infection, repairing tissue, maintaining healthy adrenal glands. Lack of this vitamin is known to cause *scurvy*. If you are on a slimmer's diet you should take at least 130 mg a day. Ordinarily, 60 mg should do.

Vitamin D *Cholecalciferol*) is fat soluble. Found plentifully in fatty fish, cream, eggs, butter, cheese, liver. This *sunshine* vitamin is unique—it is produced in the skin on exposure to sunlight. For bone formation it is indispensable and if you want strong, milky teeth its certainly what the doctor would prescribe for you. A lack of this vitamin can cause *rickets* in children. But caution is the catchword here—an excess of this vitamin may mean a deposit of calcium in the kidneys and the heart and this may prove harmful in the long run.

Vitamin E (*Tocopherols*) is fat soluble. Found in whole grains (rice, wheat), sunflower oil, peanuts. The wonder vitamin that proverbially does *everything*! It is usually believed to be an anti-clotting agent, it is said to heal burns, it improves blood flow and oxygen utilisation. But most interesting of all, it is claimed that this vitamin is absorbed *directly* by the skin. A great boon for herbal-cream oriented beauticians because their vitamin E packs are selling well. No specific dosage recommended.

Vitamin K: leafy vegetables; spinach and oranges. It is also formed by the bacteria that build natural colonies in our intestines. It has an all-important role in blood clotting and as it is required in *very small* quantities, usually there is little chance of deficiency unless you are a complete fast-food fanatic.

All in all, if you eat wisely—and curb the devil in you that wants the hot-fudge nut sundae instead of a fruit salad at the end of the meal, you should not require a multi-vitamin pill. With the advent of tinned food, we tend to be tempted to rely on pre-cooked food that has lost all its nutritional value. If you eat a fairly *mixed* diet, there is no reason why you need have supplemental vitamins.

Finally, there is one point that you must remember: taking that extra vitamin capsule may correct *some* deficiencies but there is a certain stipulated limit—don't forget. And there are certain vitamin depleters like sugar and alcohol—stay away as far as possible from them—try not to eat overcooked food, and *try* to develop a taste for fresh salads. **Above all, if you want to make doubly sure of your vitamin intake—take the vitamin pill—but be certain that you have one that supplies *all* B vitamins, because they work together synergistically.** ■

FOR ALL THE GRACE AND FLUENCY OF ZAHEER ABBAS and the concentrated fury of Imran Khan, it is Javed Miandad *(seen sweeping Maninder Singh above)* who remains Pakistan's most combative cricketer. India were already down in the dumps by the time they came round to the Fourth Test and Miandad ground them into the Pak dust by hitting a second unbeaten 280 which now has put every Indian bowler to the sword. The most remarkable aspect of this Miandad innings was the avidity with which that batsman ran singles even after crossing the 200 mark. And, following his unbeaten 280, Miandad was there on the field at silly-point to mount the psychological pressure on India—a pressure that now them crash to 273 all out and lose by an innings and 119 runs.

PATHAN IMRAN had Sunil first ball, remember, in Gavaskar's second knock of the November 1978 Karachi Test, but the Indian opener got the benefit of the umpiring doubt that time and went on to hit a hundred in each innings. However, in the first four Tests of the current series, the new Pak skipper has had the drop on Gavaskar each time. (Gavaskar has combated Imran on occasion, but as a purely defensive mould.) Actually Imran's struck terror into faint Indian hearts every time he's come on to bowl, marshalling his resources with skill and imagination to take a decisive 3-0 lead in the series by the stage of the Fourth Test at Hyderabad (Sind).

THE ZAHEER TOUCH is the touch India missed in their own country but have encountered all over again in Pakistan! Zaheer Abbas it was (according to Gavaskar) who has timed the decline of our span in 1978-79. Now, in 1982-83, smashing what remains of India's bowling to pulp, Zaheer *(seen playing Madan Lal here)* has established for Pakistan an ascendancy in the series never surrendered by an Imran bowling with his tail up.

Photographs by Amiya Tarafdar

Pak Smash India To Pulp

MUDASSAR NAZAR has always been a thorn in India's side—when not successful with the bat, he's chipped in with a vital wicket or two. In the Hyderabad (Sind) Test that India lost by an innings and plenty, Mudassar showed himself a rare grafter in hitting 231 and setting up a new world record for Pakistan in partnership with Javed Miandad. The most eloquent commentary on the failure of India's bowling in this series is its inability to get a player like Mudassar Nazar out. Syed Kirmani behind the stumps can only stand there and reflect on how our Spin Trio in its heyday would have made short work of the Mudassar Nazars of cricket.

MEMORY IS SHORT, but it is pertinent to recall that it was on our last tour of Pakistan that Viswanath showed the first signs of fallibility against fast bowling, when Imran Khan consistently aimed for his rib-cage Viswanath—up to that point fairly consistent—has (if you look up the records) been an in-and-out performer since. It is noticeable—particularly with this series—that both Vish and Sunny now play at the quickies and miss much more often than before. This suggests a slowing of reflexes—a slowing Imran Khan's been quick to exploit. It is easy to argue that Vish now has no place in India's team to the West Indies, but is there a single batsman of matching class to take his place? Viswanath, according to the doyen of Kiwi cricket critics, Dick Brittenden, is a better player of pace than Gavaskar, though there may have been little evidence of it during the current series.

MR Little lived in a little house in a little town, and he worked for a very little salary. The neighbours wondered how Mr Little and the whole Little family could get along on such a small salary. He was asked, "Mr. Little, how do you and Mrs. Little and the seven little Littles get along on such a little salary?"
He replied, "Every Little helps."

A MAN and two children entered a restaurant and ordered three plates and three glasses of water. When the waiter brought the order, the man took some sandwiches from his pocket, unwrapped them and after passing one to each of the children, began to eat.

The astounded manager, who had been watching, rushed over: "What do you think you're doing?" he exploded. "And who are you?" inquired the diner.

"I'm the manager."

"Good," said the man. "I was just going to send for you, why isn't the orchestra playing?"

MABEL was the only child in the class who spoke up briskly when, for the benefit of some visitors, the teacher asked:
"Can any little girl recite?"
"Please teacher, I can."
"That's a good girl, Mabel, step out in front of the class.
Now, what can you say for us?"
"Nelson's farewell to his mother."
"Splendid. Well, now begin."
"Ta-ta, Mum," said Mabel, dramatically, waving her hand in the air.

SHE was about to go out on her fist real date and she asked her mother, "What shall I do if he tries to kiss me?"

"Well," said her understanding mother, "I suppose you could whisper for help."

DURING the history lesson, the teacher pointed out to the class that a surname often indicated the trade of the ancestors of those who bore the name. He gave obviously simple examples of Smith, Taylor and Baker. Then he questioned one of the boys:

"What were your ancestors, Webb?" "Spiders, sir!"

BUSINESSMAN: "I like your approach."
Salesman: "Thank you, sir."
Businessman: "And now let's see your departure."

DAD commented to his daughter: "That fellow who's been taking you for walks in the park seems to me to be rather ill-mannered."

"Well," she replied, "he's a little rough around the hedges."

"ONE of the most tactful men I ever saw," says a manufacturer, "was the man who sacked me from my very first job. He called me in and said, "young man, I don't know how we're ever going to get along without you, but starting from Monday, we're going to try."

TEACHER: "John, who was Anne Boleyn
John: "Anne Boleyn was a flat iron."
Teacher: "What an earth do you mean?"
John: "Well, it says here in the history book
Henry, having disposed of Catherine, pressed
suit with Anne Boleyn."

"DO you make life-size enlargements of sm
shots?"
"That's our speciality."
"Fine. Here's a picture I took of Mount Everes

A BUSINESSMAN engaged a boy who wo
ed well but persisted in whistling jazz tunes.

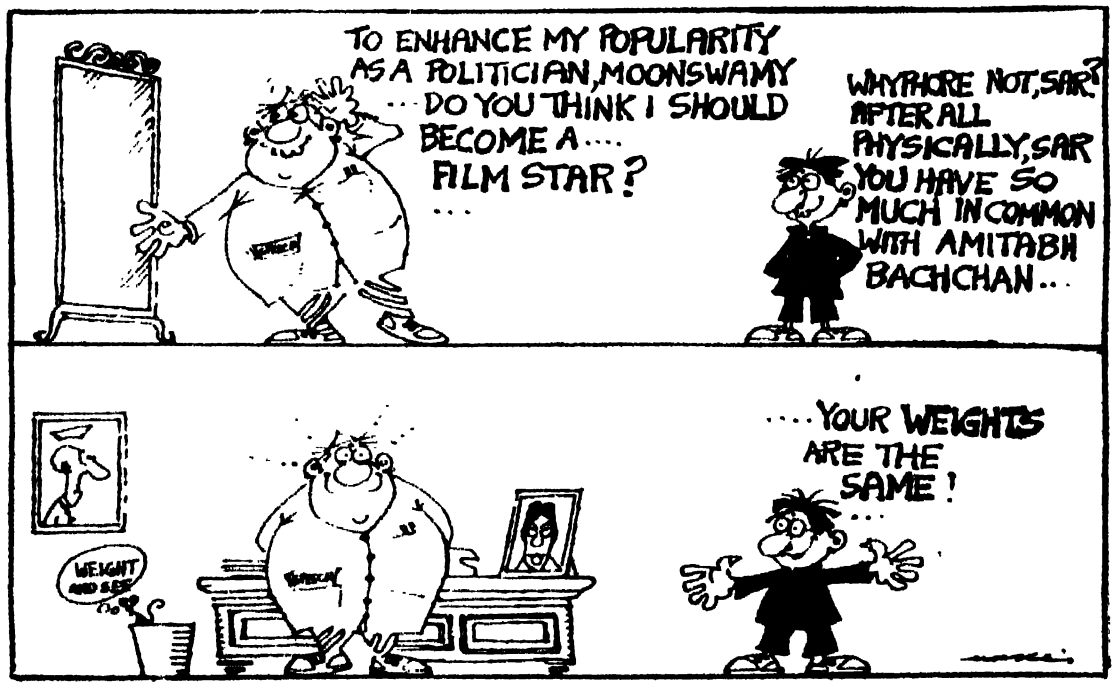
THE HON'BLE MINISTER BUNDALDASS . morio



The only time we do some social service is when we do it by accident!!

"PATRICK", said the priest, "whisky is your worst enemy." "But father," said Pat, "wasn't it only last Sunday that you were telling us to love our enemies?"

"It was," said the priest, "but I didn't say anything about swallowing them."

A WOMAN married to a hypnotist, brought her husband to court, charging him with cruelty. "Your honour," she complained, "my husband is the meanest man in the world. He hypnotised me into thinking I was a canary and gave me birdseeds for breakfast, dinner and supper."
The husband objected. "I beg your pardon," he said, "but I don't think that was mean."
The magistrate's eyes popped out.
"No," the husband asserted, "I could have hypnotised her into thinking she was a sparrow and let her find her own food."

COUNSEL addressed the man in the dock: "Did you or did you not, on the day in question or at any time previously, or subsequently, say, or even intimate, to the defendant or to anyone else, that the statement imputed to you, whether just or unjust, and denied by plaintiff, was a matter of no moment or otherwise? Answer me! Did you or did you not?"

The man in the dock clutched his throat, "Did I, or did I not what?" he gasped.

SOLICITOR: "Did you call him a rogue, a liar, a highway robber and a vagabond?"
Defendant: "I did"
"And did you call him a double-eyed twister?"
"No. I forgot that."

COUNSEL: "What is your age, madam?"
Witness: (hesitatingly) "I've seen twenty-three summers."
Counsel: "How many summers were you blind?"

SMITH was a young lawyer, clever in many respects, but very forgetful. He had been sent to interview an important client, when the head of his firm received this telegram: "Have forgotten name of client. Please wire at once."

The reply was a masterpiece of sarcasm. It ran: "Client's name Jenkins. Your name Smith."

"IS it possible to confide in you?"
"Certainly, I will be as silent as the grave."
"Well, then, I have a pressing need of ten bucks."
"Don't worry. It is as if I had heard nothing."

A SCOTSMAN on a visit to a friend in London, overstayed his welcome. His host thought that a hint might have the desired result.

"Don't you think," he said, "that your wife and family will want you to be with them?"
"That's very thoughtful of you," replied the Aberdonian, "I'll just send for them."

"WHAT did your father say when you told him you wanted to be an artist?"
"Oh," he said, "All right, but don't start drawing on me."

NIGHT watchmen are the laziest people on earth. They never do a day's work.

IT's no fun to kiss a girl over the phone unless you happen to be in the same booth with her

(Compiled by Sheela H. N.)

BEAU PEEP — the adventures of Legionnaire Beau Peep

The Weekly Pick

Poverty and Women's Work, Malavika Karlekar, Vikas, Rs 75

This is a compilation of data collected during a study of 80 sweeper women of Delhi. Well knit, the information gleaned by the researcher is organised into 6 heads. Of these, *Employment Conditions*, and *The Role of Home-maker* make very interesting reading. It is fairly clear from the studies that female employment in this category is essential for the national economy as well as the individual family. The socially-ostracised community, we often forget, is indispensable to our way of living, and it is indeed appalling that scavengers are cast aside so savagely.

Mamallapuram And The Pallavas, Michael Lockwood, Christian Literature Society, Rs 44

Mahabalipuram. The very name conjures up images of the culturally advanced Pallava dynasty of South India. But this is not a book for one-night-stop tourists. It is actually a selection of research articles, some of which have been submitted to the Archaeological Society of South India. The descriptions of the cave temples are vivid, precise and analytical, and each style is accurately deciphered and neatly slotted into appropriate historical compartments. For students of Ancient Indian History and Archaeology, a veritable treasure.

You Can't Please Everyone
Kobita Sarkar, IBH, Rs 15

Subtitled "Film Censorship. The Inside Story" The author's longstanding experiences as a film critic emerge in the course of this single-breath commentary on the faulty, illogical censorship rules practised by the film world of India. She raises pertinent questions (for eg Why the kiss should be taboo?). The book abounds in anecdotes and personal impressions which makes it really worthwhile reading. She analyses the reason for inverted sex and sadism in our films (which she quite rightly points out is a warped expression of human attachment and involvement). And she makes another perceptive point: that eve-teasing and rape and dowry deaths in films are often reflected in real-life attitudes.

Julie

Newman's Campaign

Suddenly Paun Newman is everywhere: in magazines and TV chat shows. He is even advertising safety belts for motor cars. For years Newman instructed his public relations firm, Roger & Cowan, to keep his name out of the media in order to protect his privacy. All that has changed now with Newman seriously bidding for his first Oscar for his performance as an alcoholic lawyer in *The Verdict*. One studio executive says that Newman is a "willing participant in this (Oscar) campaign no matter what he says about hating awards".

—The Sunday Observer

Liz To Adopt Orphan

Elizabeth Taylor, the 50-year-old movie star, is trying to adopt a 12-month-old baby girl she found in an Israeli orphanage but the baby's missing father has turned up and says he wants to keep his daughter. When staff at the orphanage told her that the baby's mother died of leukaemia and that her father had disappeared, Liz rushed across the room and lifted Karen out of her cot. She pressed the child very close to her and kissed her repeatedly. She very much wanted Karen to be with her so she could enjoy a better life. Talks were well under way when Karen's dad, 26-year-old Abraham Peretz, turned up to claim his daughter. But Liz is still hoping he will change his mind and will be influenced by her record with Maria, the girl she adopted 21 years ago and who is now a successful model.

—The Daily Mirror

Woody Joins Immortals

Woody Allen has got into the Hodder Book of Christian Quotations, a 4,000-strong collection published on January 17. They have been chosen on the liberal and experimental principle that they "cast some light upon the mysteries and exigencies of life". Together with the 13th century sage Dante Alighieri, and the 12th century mystic Sir Richard Chichester, are sardonic, solemn and often secular 20th century voices. Cliff Richards, Marshall Tito, Charles Aznavour and Joseph Stalin.

—The Guardian

Remembering Marilyn

Marilyn Monroe died 21 years ago, but the polka dot blouses, circle skirts and sheath dresses of her era are being revived in the hope that the '80s woman wants to look like the '50s star. The "Remembering Marilyn" boutiques opened last month at 12 Bloomingdale's department stores. Mr Roger Richman, who represents the late actress's estate, said he expects the boutiques to catch on because of Miss Monroe's enduring mystique and because the era of the '50s is particularly appealing during economically troubled times.

Box Items

Anything happening to the journalist tribe is (these days) a box-item—whether his purse is picked, his car is missing, he was not given a complimentary pass, he was not cared for at a function or he was denied entry to the Intensive Care Unit to interview Amitabh Bachchan.

—V. Sundaram in The Hindustan Times Weekly.

Lure of Banditry

Lured by the exploits of Phoolan Devi, more and more women in the Chambal region seem to be taking to banditry.

The police say that every major gang in the ravines has now a woman, not as a mere moll but as a leader.

Many of these women are already a terror to villagers in Chambal—and all but one switched from the security of married life to the perils of banditry.

—Free Press Journal

Shared Traits

Mrs Gandhi said both Sanjay and Rajiv Gandhi shared the traits of their late father, Mr Feroze Gandhi, and had great concern for honesty and achieving excellence in their work. She said they were both direct and knew their own minds and had leadership qualities. Perhaps Mr Rajiv Gandhi had greater self-confidence and poise, she added.

—The Hindustan Times

Grandma's Concern

I am sad that the little boy is not getting the care that is his due, nor is he in surroundings which can help to build character and inculcate values.

—Mrs Gandhi on grandson Varun

Great Achievements

Many of our young people had become apathetic, and many taken to destructive activities. Sanjay was able to harness this strength for creative purpose and to get the youth involved in nation-building programmes. He was on the threshold of far greater achievements.

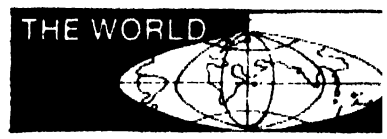
—Mrs Gandhi quoted by UNI

Spineless Leaders

The State-level leaders are so spinelessly steeped in the habit of being spoon-fed that even after the trauma of the election debacle, they are unable to handle their own local affairs.

—Comment in The Hindustan Times

Goldie



Nancy Re-enters Films

First Lady, Nancy Reagan, wi resume her acting career. She has agree to make an appearance in NBC's weekl comedy "Different Strokes". She will pla a character who condemns the use a drugs, an issue that is close to her heart.

The last acting job that Mrs Reaga had was in 1957 when she played in th film "Hellcats To The Navy" opposite he husband, now President Reagan.

Gig

Next Week For You

S.K.KELKAR

CAPRICORN
(Makara)
Dec. 21-Jan. 19

The accent is on friends, new acquaintances, business and travel abroad. The necessary recommendations and favours should be secured from available sources in order to enhance your reputation. Follow your hunches: they may bring a windfall or the key to certain mysteries and puzzling events of the past

AQUARIUS
(Kumbha)
Jan 20-Feb 18

The emphasis this week is on domestic comforts and financial well-being. Do not make undue haste with regard to business dealings. You will be caught up in the social whirl early in the week. You must build goodwill and maintain status quo. Clear all backlog by midweek so that the weekend may be free

PISCES
(Mina)
Feb. 19-Mar 20

This is perhaps the best week this month. You can boost up business and steer your personal life in the direction you want. You will be much in demand among friends and associates. They will come to you for consolation and draw confidence from your steady practicality. Do not let them down.

ARIES
(Mesha)
Mar 21 Apr 20

An excellent week for securing the desired co-operation from family and seniors, Socialise as much as possible and widen the circle of your friends. Such activities will help you to gain the contacts necessary for expanding your business and professional activities. Follow your intuition in all matters

TAURUS
(Vrishabha)
Apr 21-May 20

The week days assure you of great success in the social field. Some one close to you may pay you a surprise visit and keep you busy all the week. Clear all backlog early for midweek will find you on sudden travel. News from abroad will help enlarge your group activities and export business as well. The weekend is hectic.

GEMINI
(Mithuna)
May 21-June 20

There are splendid opportunities this week for settling partnership issues and confirming marriage proposals. Guests from abroad may suddenly descend on you early in the week. You must be prepared to look after and entertain them. A windfall may come your way. Avoid air travel during the weekend.

CANCER
(Kataka)
June 21-July 20

Curb your social and political activities for the time being. You must operate from only behind the scenes. Be sporting in the face of minor defeats in the early part of the week. You may meet a stranger midweek. You will benefit from the meeting and be kept busy strengthening the acquaintance

LEO
(Simha)
July 21-Aug 21

A week for quiet consolidation of your affairs rather than launching out on new ventures. In the next four weeks you must curb social and political activities for the time being. You must operate from only behind the scenes. Be sporting in the face of minor defeats in the early part of the week Clear all backlog.

VIRGO
(Kanya)
Aug 22-Sept 23

A week for quiet consolidation of your affairs rather than launching out on new ventures. In the next four weeks you must balance your budget strictly because much of the money you need for your ventures will not be easily procured. Follow your intuition when in difficulties: it will help you to score over rivals.

LIBRA
(Tula)
Sept 24-Oct. 23

It will be prudent to take the counsel of legal and technical experts before you commit yourself an anything, either in business or personal life in the next two weeks. Do not make lofty promises you cannot keep. A stroke of luck brings money your way midweek as also applause and appreciation.

SCORPIO
(Vrishchika)
Oct 24-Nov. 22

Those who deserted you in the past will return to you, contrite and full of apologies. Do not promise any friendship or association without sifting the chaff from the grain. A parcel comes from abroad bringing with it good tidings. Think deeply and well before you make any commitments

SAGITTARIUS
(Dhanu)
Nov 23-Dec 20

Loved ones who have troubled you in the past will surprise you by suddenly acceeding to your demands. Youngsters will bring some thrill into your life. Artists, writers and surgeons will be at their best this week. Recognition of their work comes midweek bringing them into the limelight.

STAR FOCUS

Love In 1983 - II

Taurus: Taureans exhibit great tact while playing the love game and know all the tricks there are to make their prey submit to their designs. The year provides ample opportunities for exhilarating games of chase and challenge, especially in the second half of 1983. Almost inadvertently you will form a delicate tie in March. The relationship will be strengthened.

Gemini: The intellectual aspect of your personality attracts the opposite sex towards you in late February or early March. Job activities and other shared hobbies bring you closer in June. August finds you giving expression to your innermost feelings but you suddenly change colour in September. October will find you in two frames of mind about a new tie.

Cancer: A contrasting year of bitter-sweet experiences. You may come in contact with a lovable soul in May. Around July, some rare developments occur but your domestic problems will upset the balance in August/September. This will be taken seriously by your new-found friend and the relationship may break sooner than you anticipate. Do not lose heart.

Leo: Your tendency to react to flattery and praise will be made use of by those who have designs on you and they may put you in an embarrassing position. At work you will be extremely responsive to a member of the opposite sex and will begin to take the relationship seriously in July. However, you will soon realise that the relationship is not genuine

Sunday, February 6

Your energy, confidence and studious habits will make for better career prospects. Between May and September be discreet about your investments and avoid taking any risks. You will gain greater momentum from October onwards.

Monday, February 7

The middle of the year may cause much confusion leading to dissatisfaction both in personal life as well as career. Do not break old relationships at least until September.

Tuesday, February 8

Rely on your judgement and intuition with regard to career they will not let you down. Take a better look at your prospects before plunging into new ventures.

Wednesday, February 9

An unsettled period lies ahead of you. You are better advised to maintain status-quo. Better luck comes your way in April. November is good for finances and career. Early 1984 is a good period for marriage.

Thursday, February 10

The events of the year will prove beneficial to your career. However, you must be very cautious while making your moves. You will have to take some important steps in October and make a change for the better in November.

Friday, February 11

A year of mixed influences. As far as possible do not take up any challenges in mid-1983. Conserve energy in August and September. Gainfully utilise your resources in October/November.

Saturday, February 12

Physical and mental pressures throughout the year cannot be ruled out. Build up your finances until October after which you will have an easier time until your next birthday.

THE MAGAZINE YOU CAN RELY UPON

For all people on the threshold of a career decision or a competitive exam, here's a magazine that shows you the way ... to the top.

Packed with a wealth of research-based data, it gives you: Practical guidelines for achievement and personality development. Regular features on scholarships, competitive exams, interviews and I.Q. tests. Penetrating spotlights on careers. And a special pull-out for practice tests on all major subjects.

And for those who have little time to read much else, there's a comprehensive account of national and international events, essays on major current issues and discussions on various subjects to keep you well-informed and on the go

The magazine that spells success.

Career & competition times

A Times of India Publication

ARMS/D/608-F

This Week's Bridge
1982 World Championships — IV

Ladies Pairs:

YET another record field entered the Ladies Pairs. The French and Americans had the largest contingents, followed by pairs from other European countries.

As in the Open, 40 pairs qualified for the finals. Defending Champions Kathie Wei and Judi Radin did not make it, but their 1981 teammates from the second place American team Edith Kemp-Nancy Gruver, and Betty Ann Kennedy - Carol Sanders did, the latter just qualifying in the 40th place. Several strong French and American pairs made it, but none from India.

In a remarkable climb, Kennedy-Sanders, starting with no carryover, leap frogged the field and walked off with the Championship, ahead of Deas-Palmer of USA and Sally Horton-Sandra Landy of Britain, the 1981 Venice Trophy winners

Both Sanders and Kennedy had been ill during the Championships, but they shrugged off their troubles for a magnificent win. Here are a few of their deals, culled from the Daily Bulletins edited by Dorthy and Henry Francis:

Carol Sanders and Betty Ann Kennedy formed their partnership 13 years ago. Except for a five-year haitus to take care of their families, they have piled up several championships. This is their third world championship—they were victors in the Venice Cup competition in both 1974 and 1976. They also came mighty close in New Orleans in 1978 when they finished second in the Ladies Pairs. Carol also finished third in the Mixed Pairs in 1978 and seventh in 1974. Betty Ann Kennedy was sixth in the Mixed in 1974, and they as a partnership were seventh in the Ladies Pairs in the same year.

One of the hands that demonstrates the skill that enabled them to pull themselves up by their bootstraps was the fourth deal of the third final on which Betty Ann was the declarer.

Board - 4: Dealer West Both Vul.

	♠ A9 ♥ K843 ♦ Q432 ♣ AKJ	
♠ QJ105 ♥ Q107 ♦ AJ108 ♣ 102	N W E S	♠ 7642 ♥ 96 ♦ K7 ♣ 97543
	♠ K83 ♥ AJ52 ♦ 965 ♣ Q86	

The bidding:

West	North Kennedy	East	South Sanders
P	1NT	P	3NT
All Pass.			

Lead: Heart nine

In case the opening leader was leading the Heart nine from the Q109, Betty Ann played a Jack from dummy. That was covered by the Queen, and the King won the trick. Betty Ann could see only eight tricks if the Hearts were breaking, so she cashed the Heart Ace to make sure When the suit broke she put her right hand opponent in with the Heart ten. The shift was to the obvious Diamond—the Diamond Jack Betty Ann wasn't about to cover that—she had to play her RHO for the length and most of the strength in that suit. If that were so, the other hand would have to unblock a high honour for her partner. That was the winning line East unblocked the Diamond King, winning the trick, and led another to the Ace. West returned the Spade Queen, taken by the Ace, and Betty Ann had a squeeze on West. Betty Ann cashed a Heart and three Clubs, forcing West to make TWO discards This was the position when the last Club was led:

	♠ 9 ♥ — ♦ Q4 ♣ J	
♠ J10 ♥ — ♦ 108 ♣ —	N W E S	IMMATERIAL.
	♠ K8 ♥ — ♦ 9 ♣ Q	

West could not stand the pressure What had begun as eight tricks had become ten—three Hearts, three Clubs, two Spades and a Diamond—plus the squeeze trick

Carol tried a bit of deception on this deal from the last session, and it paid off.

Board-23: Dealer South, Both Vul

	♠ AJ97 ♥ A75 ♦ 42 ♣ K1042	
♠ 62 ♥ KJ843 ♦ KJ ♣ J983	N W E S	♠ Q3 ♥ 10962 ♦ 8753 ♣ A65
	♠ K10854 ♥ Q ♦ AQ1096 ♣ Q7	

The bidding:

West	North Kennedy	East	South Sanders
			1S
P	2NT(i)	P	3H(ii)
P	4S(iii)	All Pass	

(i) Jacoby 2NT
(ii) Singleton
(iii) Nothing in reserve

The opening lead was the Heart four, and Carol took the Ace. She went after Diamonds before touching trumps because she anticipated a Heart return if the Damond King was offside. It was offside, and West returned the Diamond Jack. Carol took the Ace and cashed the Spade King and Sppade Ace Then she led a low Club—and nobody told East she had to hop with the Ace if she wanted a trick Carol happily won the Queen and cashed the three good Diamonds, pitching the rest of the Clubs from dummy. Making six was worth a huge matchpoint score.

Carol Sanders, squeezed the last possible trick out of this hand from the third session of the Ladies Pairs finals.

Board - 22: Dealer East, E - W Vul

	♠ K94 ♥ J93 ♦ QJ42 ♣ Q98	
♠ A875 ♥ A6 ♦ 98653 ♣ 43	N W E S	♠ 1032 ♥ Q107542 ♦ - ♣ J1072
	♠ QJ6 ♥ K8 ♦ AK107 ♣ AK65	

The bidding:

West	North Kennedy	East	South Sanders
		P	2NT
P	3NT	All Pass	

West led the Diamond nine, and dumy's Queen won as East besides Queen as East bean ill-fated echo with the Heart five Carol gave East a chance to complete the echo by leading a Diamond to her Ace—and East co-operated by playing the Heart two. Now it was time to let West take advantage of the misinformation—she led the Spade Queen to West's Ace. West of course led the Heart Ace and another, and was disappointed to see Carol produce the King But that was only the beginning of the misery for East Carol played out all her Diamonds and Spades and came down to her four clubs In dummy she had the original three Clubs and the Heart Jack. East had to find some way to hold all four of her Clubs plus the Heart Queen, but of course she couldn't She folded her cards, conceding the rest to declarer Making 11 tricks at No Trump was a very fine score ■

AVINASH GOKHALE

This Week's Chess
Queen Sacrifice On h2

FAMILIAR patterns often recur in combinations. In position No 299 there is the potential threat of a Queen sacrifice on h2 followed by a Rook check and a Knight check resulting in mate in four. The forced mate in four after Queen and Rook sacrifices in position No 300 is not obvious at first sight.

Hartston-Barua

The brilliancy prize of Rs 2,000 provided by the Bank of America was awarded to this game played in the Bhilwara International Grand Masters' Tournament at New Delhi. Sponsored by Mr L.N. Jhunjhunwala of the Bhilwara Group of Industries, this great event was staged at the Soviet House of Art, Science and Culture with the cooperation of the USSR Ambassador Mr Vorontsov, from December 15 to December 31. President of India, Mr Zail Singh declared it open at an impressive function.

Ranking, points and prizes: GM Dorfman (USSR) 8/11 (Rs 15,000); GM Kupreichik (USSR) 7½ (Rs 10,000); GM Taimanov, (USSR), D. Barua, P. Thipsay 7 each (Rs 6,000, Rs 4,000, Rs 3,000 shared); IM R. Ravi Sekhar 6½ (Rs 1,0001; IM's. Parameswaran and Ravi Kumar 5½ each; IM Hartston (UK) and V. Koshy 4½ each; Nasir Ali 2; Alexander 1.

Barua and Thipsay made their second norm to become eligible for the International Master title.

1 e4, e5 2.Bc4, Nc6 3.Nc3, Nf6 4.d3, Bb4 5.Nf3, d5 6 exd5, Nxd5 7.00, Bxc3 8.bxc3, 00 9.Ng5, h6 10 Ne4, f5 11.Qh5!?, f4! 12.Ba3, Rf5 13.Qf3, Kh8 14.Rfe1, Nb6 15.Bb3, a5! 16.Nc5, Qd6! 17.Nxb7!, Qg6! 18.Nd6!? cxd6 19 Qxc 6, f3 20.g3, a4! 21.Bd5, Nxd5! 22.Qxa8, Qg4!! 23.Qxc8ch, Kh7 24 Kh1, Qh3 25.Rg1, ..

Position No 299:

25. .Nf6!! 26.g4, Rh5!! 27.gxh5, Qxc8 28.Bxd6, Qxc3 29.Rab1, Nxh5 30.Rb5, Qxc2 31.Bxc5, g5! 32 Rb7ch, Kg6 33.Rb6ch, Kf5 34.Rxh6, Kxe5 35.Rxg5ch, Kf4 36.Rhxh5, Qxf2 37.Rf5ch, Ke3 38.Rhg5, Qxa2 39.Rg1, Qb2 40.Re1ch, Kf2 41.Rd1, a3; 0-1.

4.d3) The Vienna Game.

5.Nf3) 5.Bg5 and 5.Nge2 are the alternatives.

7. Bxc3) Not 7 ..Nxc3 8.bxc3, Bxc3 9.Ng5! ('Kurs Dvebutov')

11.Qh5!?) A bit superficial; better was 11.Ba3, Re8 (11 ..Rf7! 12.Nd6!) 12.Qh5, Ne7 13.f4; or 12...Be6 13 Nc5

16.. Qd6!) Preventing Be6 and threatening 17 .a4 as well as planning a King side attack.

18 Nd6!?) Even after 18 Nc5, a4 19.Be6, Bxe6 20.Qxe6, f3 21 g3, Qg4 or 19.Bd5, Nxd5 20 Qxd5, f3 21 g3, Qg4 Black has a winning attak.

22.Qxa8) A possible defence is 22.Qxd5, Ra6 (22 . Rb8? 23.QxQxd6, Qg4 24.Qxb8, Qh3 25 Qxc8ch, Kh7 26. Qxf5ch (23.Qc4

25.. Nf6!!) The threat is 26 ..Qxh2ch! 27.Kxh2, Rh5ch 28.Qh3, Ng4ch 29 Kh1, Rxh3 mate.

28...Qxc3 The Black Queen proves far more powerful than White's two Rooks.

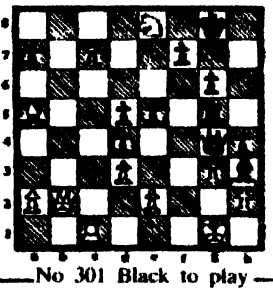
Inkiov-Bajovic Plovdiv 1982

1 d4, Nf6 2.c4, e6 3 Nf3, b6 4 g3, Bb7 5 Bg2, Be7 6.00, 00 7.Nc3, Ne4 8 Bd2 Nxc3 9 Bxc3, d6 10 d5, e5 11.b4, Nd7 12.e4, c6 13 Rc1, cxd5 14 cxd5!, a5! 15.a3, axb4 16 axb4, Ra7 17 Qb3, Qc7 18 Bb2!, Rfa8 19 Nd2!, f5 20.f4, exf4 21.gxf4, Bf6 22 Nf3, Bxb2 23 Qxb2, b5! 24.Ng5, Qb6ch 25 Kh1, bxc4 26 Nc6, Nf6 27 Rg1?, Ra2 28.Qc3, Qf2! 29 Rcf1, Qh4 30.Rd1, R8a3 31.Qd4...

Position No 300

31 ..Qxh2xh!!, 0-1, in view of 32.Kxh2, Ng4ch 33 Kh1, Rh3ch!! 34 Bxh3, Rh2 mate

Queen's Indian Defence. 8.Qc2, Nxc3 9.Qxc3, f5 is usual. 14.cxd5 seems logical. 18.Ra1 or 19.Ra1 to contest the file was necessary. 27.Rxc4, Ba6 28 Rc6; or 27 .Ra2 28.Qd4 would have enabled White to put up a fight.



No 301 Black to play

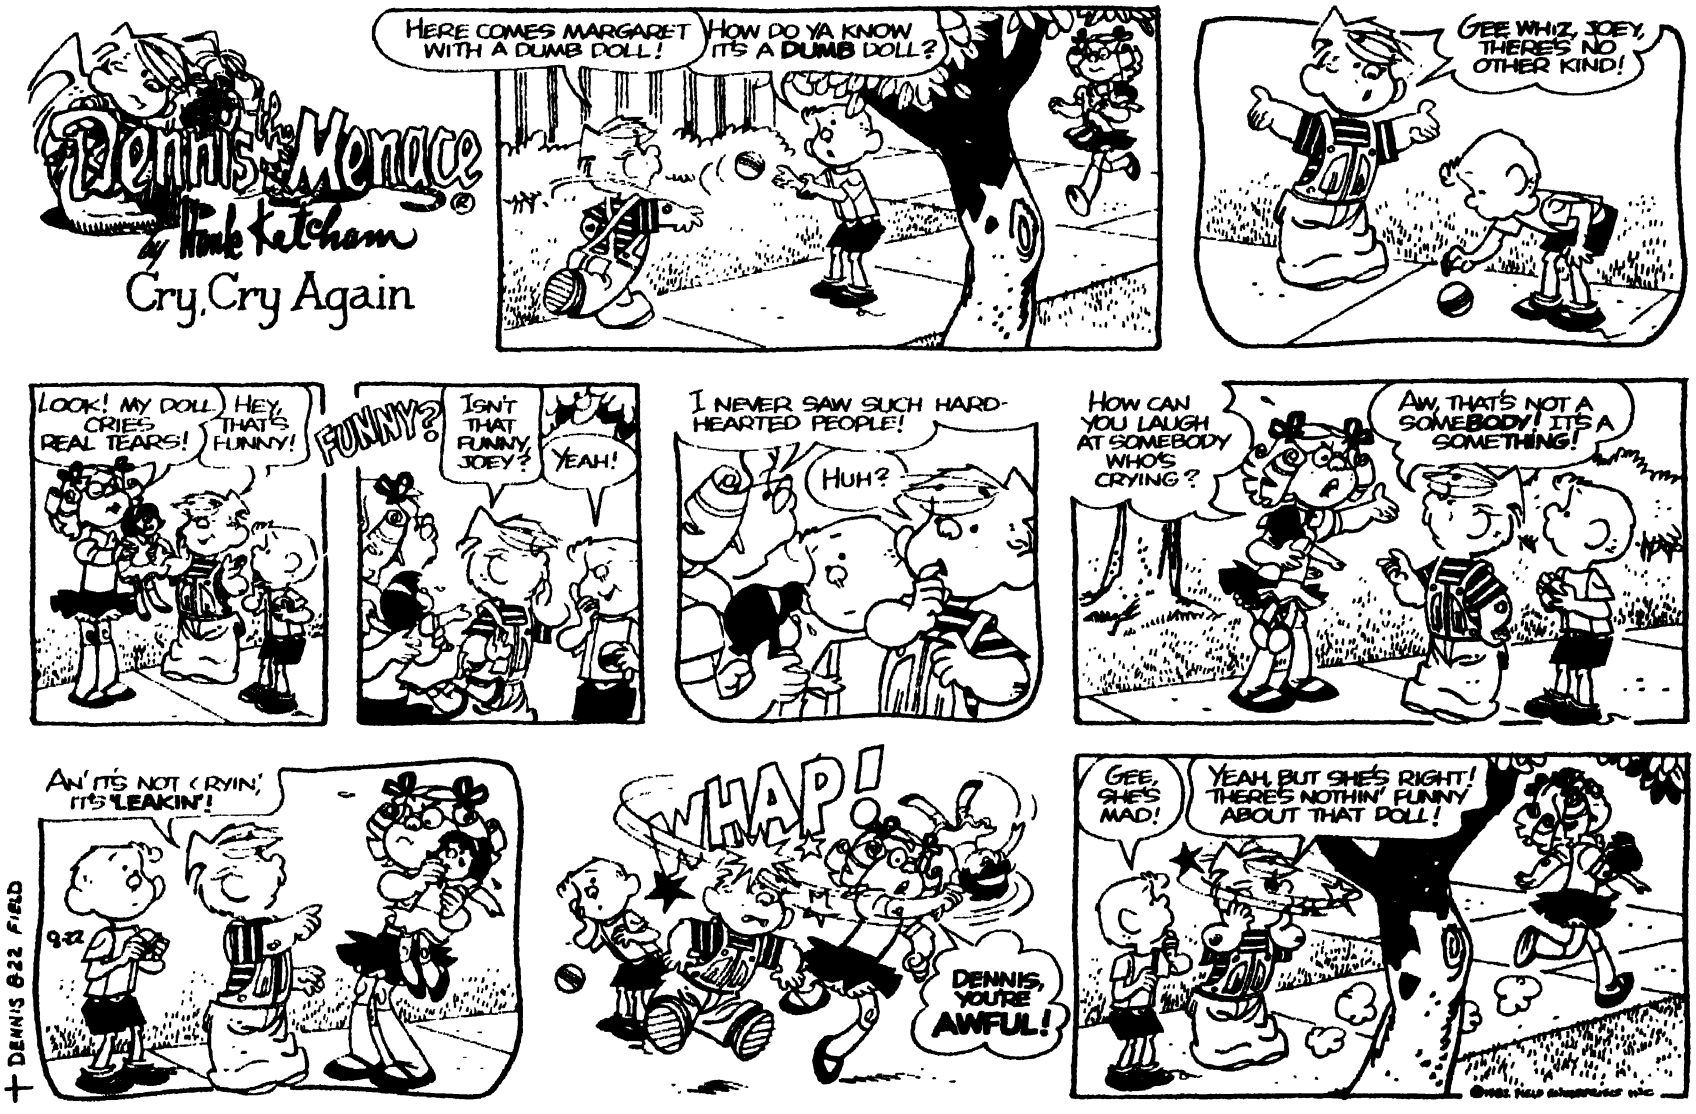
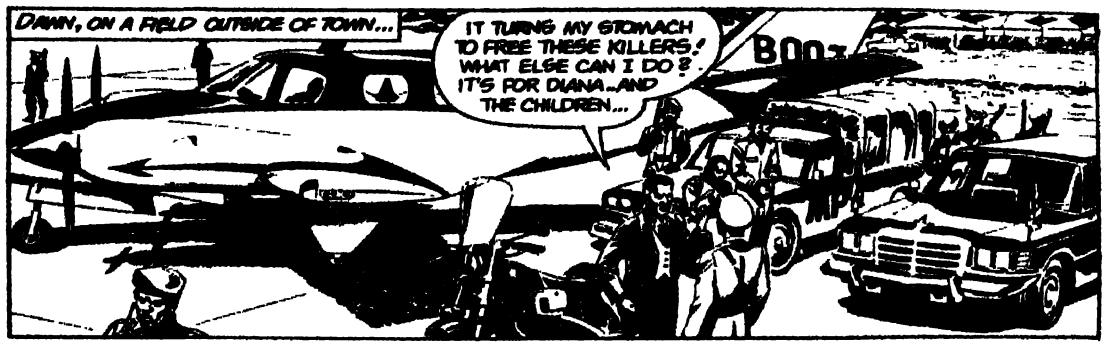
Cry, Cry Again



THE PHANTOM
by
LEE FALK



DAWN, ON A FIELD OUTSIDE OF TOWN...
IT TURNS MY STOMACH TO FREE THESE KILLERS! WHAT ELSE CAN I DO? IT'S FOR DIANA..AND THE CHILDREN...
BOOM

DADDY!
DADDY? SO THIS IS THE MYSTERY MAN IN THE CELLAR!
PHANTOM!

DROP YOUR GUNS OR I SHOOT THIS WOMAN!
AND THESE KIDS!
BAD BAD LADY!

!
!
PHANTOM GUNS ROAR...WITH DEADLY AIM!
!

SHOOT MY CHILDREN?!
UH!

DIANA..KEEP THE GUN ON THIS WOMAN. IF SHE MAKES TROUBLE, USE IT. YOU TWO... BACK TO THE HOUSE.
NO..HE'S TAKING US DOWN TO THE CELLAR... TO KILL US!
SY BARRY 8/15
© 1982 King Features Syndicate, Inc. World rights reserved.

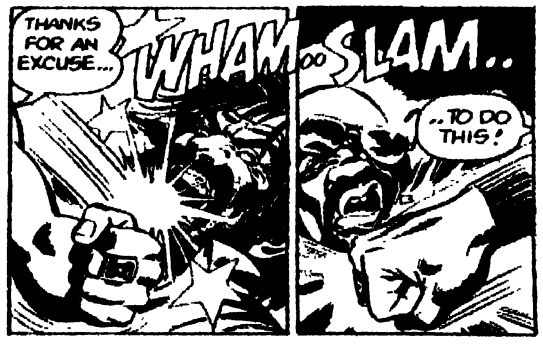
LOAD ALL THESE VERMIN ON THE CHOPPER, CAPTAIN McCOMBER. THEN TAKE OFF.
MAN, YOU'RE SOMETHING ELSE. WHO ARE YOU?
MY DADDY!

PABLO'S THE LEADER. A VICIOUS KILLER.
THEY'RE ALL KILLERS. THE COURTS'LL HANDLE THEM.
LAST TRIP TO TOIDY BEFORE WE FLY.
I DON'T HAVE TO, MOMMY.

HE'S PUT HIS GUNS AWAY. I'M GOING FOR HIM!
EASY, PABLO. THAT'S LIKE GOING FOR DYNAMITE!

THE TERRORISTS...
!
LAST CHANCE.. NOW... GRAB HIS GUNS!
SY BARRY 8/22

CRACK
UH..
OU..!
HE WHIRLS...CATCHING THEM IN MIDAIR...



THANKS FOR AN EXCUSE...
WHAM
SLAM..
..TO DO THIS!

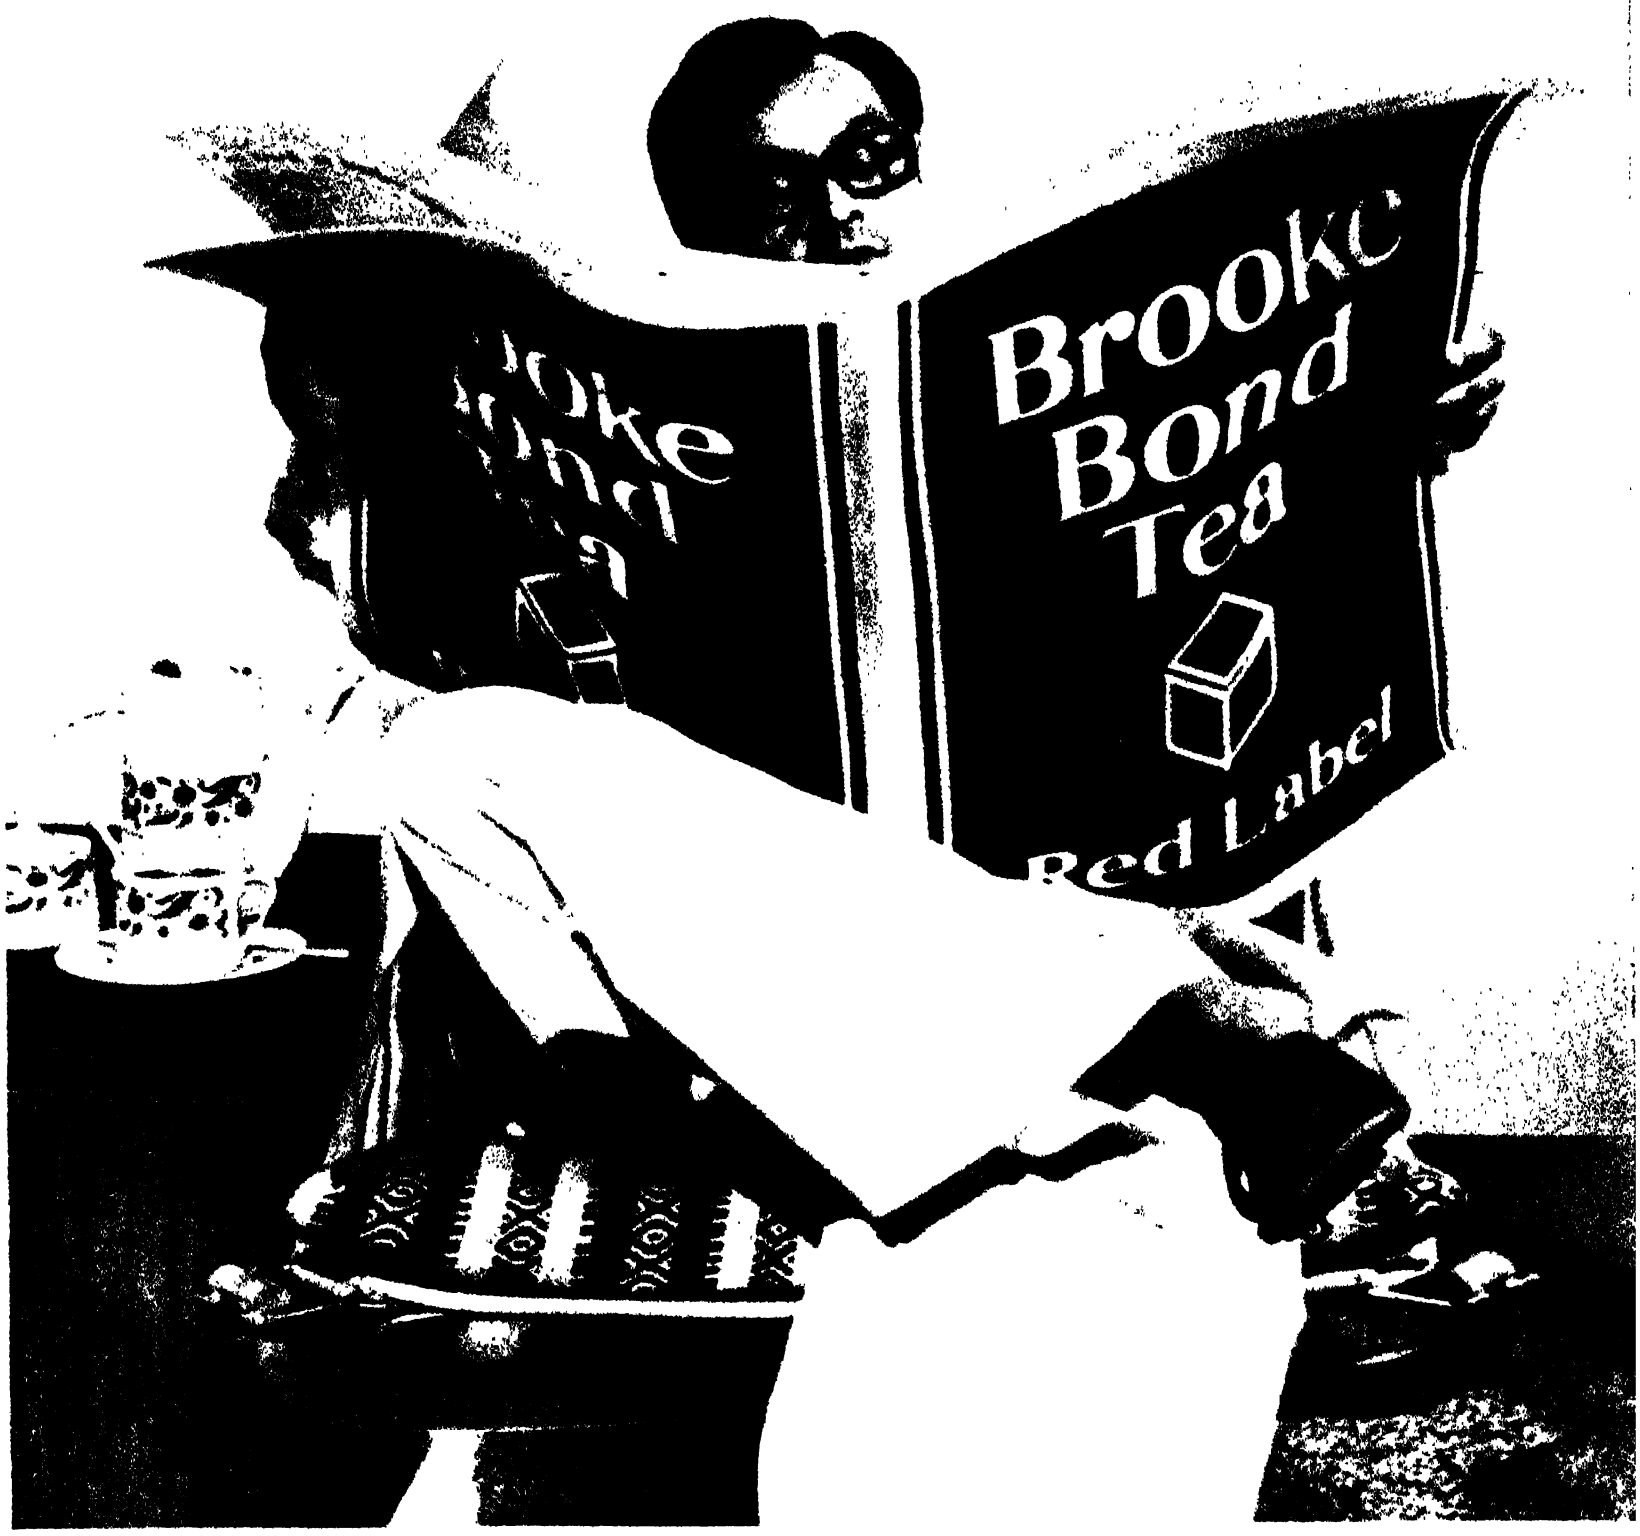
YOU ARE SOMETHING! THE ONLY NAME I'VE HEARD FOR YOU IS "DADDY." MAY I CALL YOU DADDY?
YOU'RE A LITTLE TOO OLD FOR THAT, McCOMBER...

WHAT HAPPENED TO THEM?
HIT BY A TRUCK.
THEY'RE ALL TIED LIKE THIS... THEY'LL ALL "SLEEP" QUIETLY FOR A FEW HOURS.

..JUST IN CASE..TAKE THESE. DON'T BE AFRAID TO USE THEM..THEY ARE VICIOUS KILLERS.
AREN'T YOU ..COMING WITH US?
CONT'D.

THE PHANTOM

In millions of homes, good mornings begin like this.



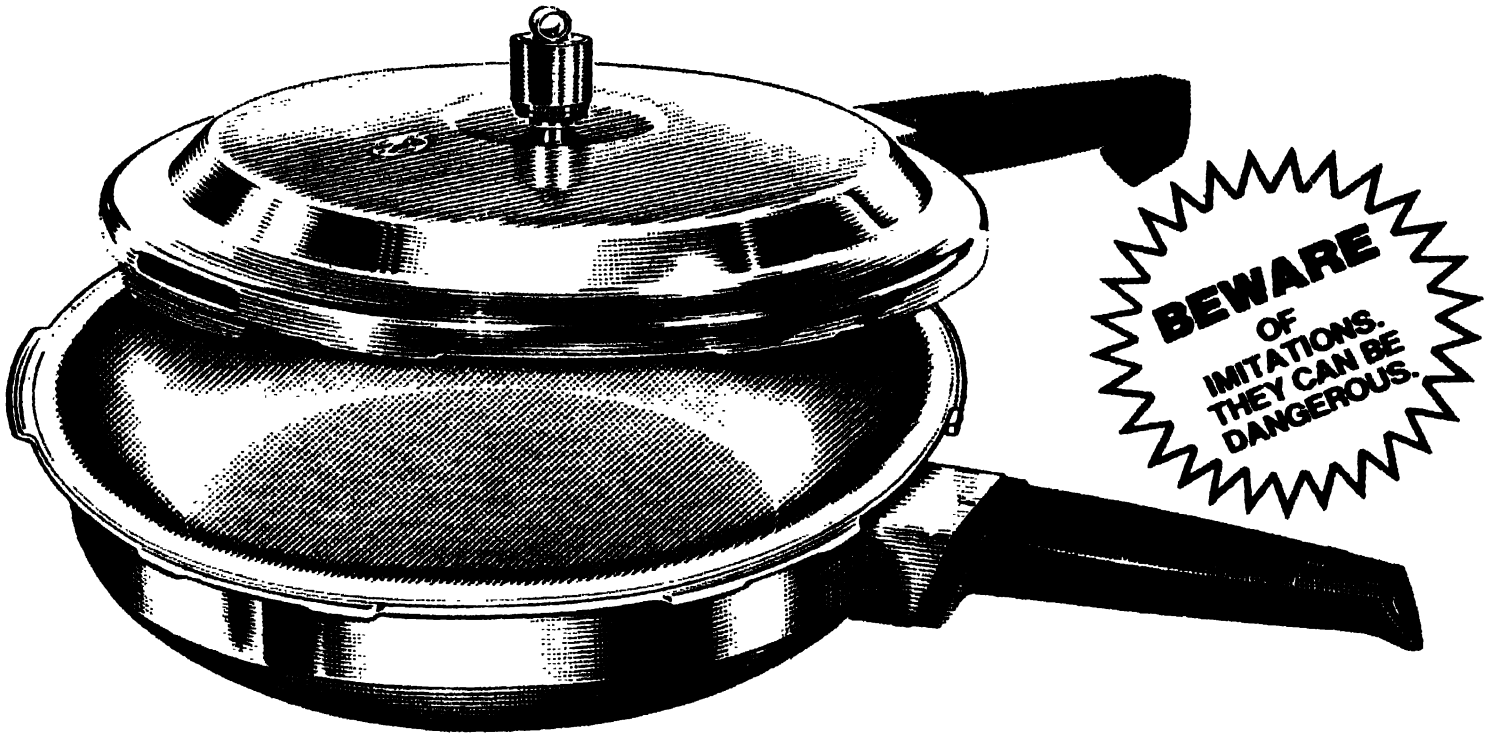
With rich, strong Brooke Bond Red Label tea. Red Label gives total satisfaction and great value for money. And the consistent quality, the purity and garden fresh taste only packaged teas can give. That's why more tea drinkers trust Red Label than any other tea Day after day, year after year.

Good tea. Good value. Any time.

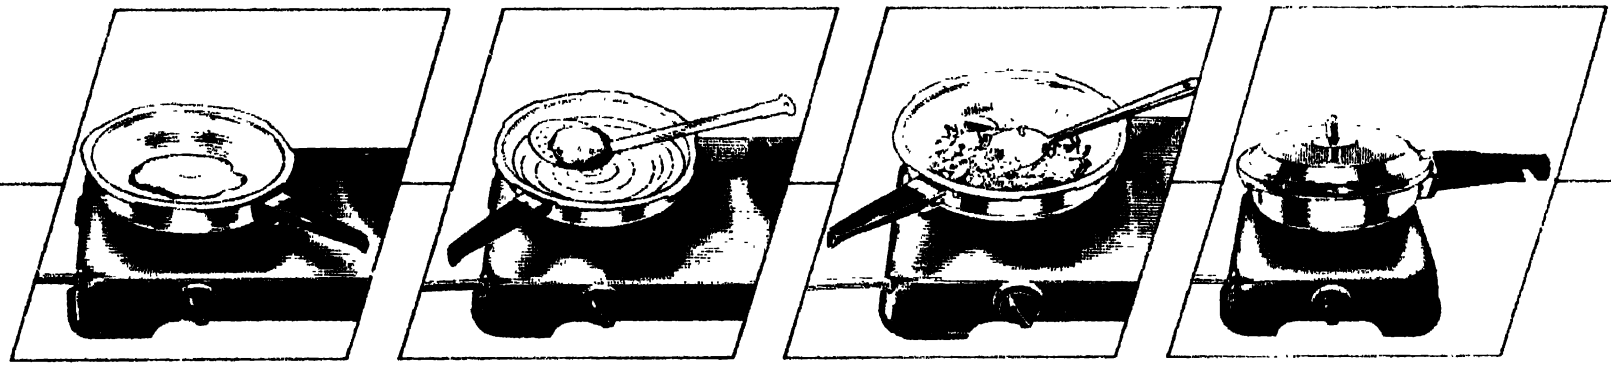
Brooke Bond Red Label
India's largest selling packet leaf tea.

It's so versatile you'll wonder how you ever cooked without it

The Prestige Pressure Pan



FRY **DEEP FRY** **SAUTE** **PRESSURE COOK**



You can fry and deep fry in it. Season. Saute. Simmer in it. Then cover and cook. Quick. The Prestige Pressure Pan. So versatile. So convenient and handy. It just had to be designed! To help you make all those exciting recipes your family clamours for ..... in a matter of minutes.

Uncovered it's a heavy gauge frying pan that fries onions, vegetables, masalas, meat, chicken with the merest whisper of oil.

Cover it with the Prestige lid and it cooks your dish in a jiffy. Chicken bhurta? Twenty minutes. Mutton dopiaza? Twenty five minutes. Dum aloo? Even less. Saves your time for better things. Makes your fuel last longer.

Now you can stop frying in one pan, simmering in a sauce pan and finally cooking it all in a pressure cooker. The Prestige Pressure Pan offers you one vessel convenience with a many-vessel versatility.

The Pressure Pan comes from Prestige. The people who gave India its first, most widely used pressure cooker and developed the unique gasket release system to make pressure cooking absolutely safe.

The Prestige Pressure Pan. It will be the most used vessel in your kitchen.

HERE'S HOW YOU CAN GET THE PRESSURE PAN FOR LESS THAN HALF ITS PRICE

If you already own a Prestige Pressure Cooker congratulate yourself!

The Prestige Pressure Pan is yours for just the price of an ordinary heavy gauge pan. Buy just the pan—your Prestige cooker lid fits exactly over it to give you the new Prestige Pressure Pan at a better than bargain price. Because at Prestige we are working to give you better value, better products for your hard earned money.

If you do not own a Prestige Pressure Cooker yet...

This is the chance to get yourself a real package deal. We now offer you two marvellous kitchen aids—the safest pressure cooker in India with its unique gasket release system and the exciting pressure pan— for little over the price of one. One lid fits both and you save over Rs. 150/-

Prestige PRESSURE PAN

A remembrance of an exquisite tradition

Pochampalli silks

from APCO

Decades ago, the process of ikat or tie & dye process of weaving spread from Chirala to Pochampalli where it established itself. Threads of silk and cotton, tied and dyed, warp and weft were woven into wonderful designs. Parrots, swans, elephants, checks and floral motifs sprang from the weavers' flying shuttles. . . creating a whole new range of fabrics.

Today, silks from Pochampalli have won acclaim the world over for their distinct fusion of bright hues and bold patterns.

Make it easier for your baby to change from milk to solids...

Nestum: the baby cereal specially formulated for a gentle transition.

You want the very best for your baby. That's why you breast-feed him. The most nourishing and easily digestible feed you can give.

When he is about four months, he'll need solids in his diet. But his digestive system is still delicate. So he needs a cereal that's easy on his digestion. Like Nestum.

Nestum is so right as a first solid because of its special formulation. It's made from rice. And nutrition experts agree this is the easiest to digest amongst cereals as it's gluten-free.

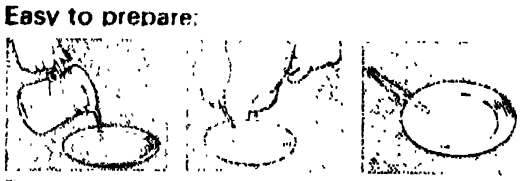
Nutrition-conscious mothers like you say 'yes' to Nestum because it's fortified with 11 vitamins, iron and calcium—vital nutritional support for your baby. Vitamins to give a glow to his skin, a sparkle to his eyes and build baby's resistance to disease. Iron for healthy blood and calcium for strong bones and teeth.

Introducing solids in baby's diet is never a simple process. But Nestum can help you make the transition from milk to solids, gentle.

Fortified with iron and 11 vitamins

Nestum®
rice

Easy to prepare:



Pour warm, pre-boiled milk | Add Nestum & mix | Heady to serve

NESTLÉ.

JOB OPPORTUNITIES FOR TRAINED PERSONNEL

Train yourself through

THE BRITISH INSTITUTES

• LARGEST CORRESPONDENCE COLLEGE IN INDIA
• CAREER ORIENTED COURSES • OVER 45 YEARS' EXPERTISE
• HAS HELPED OVER A MILLION AMBITIOUS MEN AND WOMEN

ENGINEERING: A.M.I.E. (INDIA), A.M.I.MECH.E. (INDIA), A.M.I.I.CHEM.E., A.M.AE.S.I., A.S.E. LONDON), N.P.C. SUPERVISORS & I.I.T. ENTRANCE EXAMINATIONS.

DIPLOMA Courses in MECHANICAL ENGG., Mechanical Draughtsmanship, ARCHITECTURE, CIVIL ENGG., Overseers (Bldgs. & Roads), AUTOMOBILE ENGG., Diesel Engg., ELECTRICAL ENGG. & ELECTRONICS, Electrical Supervision, RADIO ENGINEERING, TRANSISTOR RADIO ENGG., Television, TELEVISION MAINTENANCE & SERVICING, REFRIGERATOR SERVICING, Chemical Engg., Industrial Chemistry, PETROLEUM TECH., Rubber Tech., AUTOCODER PROGRAMMING, Computer Programming IBM 360, TEXTILE MANUFACTURE & Textile Technology.

Research & Development has led Cipla to many a success...

Cipla's continuing dedication to research has resulted in the basic manufacture of sophisticated bulk drugs through innovative technology. The highly diversified range of Cipla's exports includes synthetic bulk drugs, steroids and upgraded natural products to newer and non-traditional markets.

It is this emphasis on R&D that has enabled Cipla to keep pace with the latest trends in therapeutics through the introduction of several modern drugs to the medical profession.

Cipla has taken up the challenge to improve the quality of health care for people everywhere. The CHEMEXCIL FIRST AWARD is a further recognition of this commitment.

the latest is the CHEMEXCIL FIRST AWARD for Export.

LETTERS TO THE EDITOR

The Minorities

Sir—The WEEKLY of January 9 was a vibrant issue. You have with proper planning focused on a lively subject for public debate giving equal importance to the different points of view. In the wake of communal riots in some parts of the country, specifically in Kerala, where the problem is of recent origin, this issue, I believe, will be read by hundreds of lakhs of people.

In this context, May I also suggest that you announce a new department—Public Forum—open to your readers who wish to express their views specifically on such subjects of all-India importance. Their photographs may also be published with a view to generating keen response. But please don't abruptly issue your edict that "correspondence on this subject is now closed—Ed." Allow it to gather momentum issue after issue. That is the best way to gain reader participation.

K.R. Varadarajan
Bombay

Sir—Balraj Madhok's article ("Indian Muslims: Pampered Or Persecuted?", January 9) gave a lot of impressive statistics. But it ignored the Muslims who were born after Partition. He has failed to identify their bearings in free India. Such Muslims cannot be persecuted for the misgivings of their previous generation, a majority of which, according to Madhok, opted for Pakistan.

Personally, as a Muslim born and brought up in free India, I must admit that our religion is *the* religion. That, however, does not imply that, as true secularists, we tend to downgrade or disrespect other religions. My children have studied Hinduism, and are as proficient in the details of Hindu mythology as they are well-versed in Islam and its religious objects. Their knowledge of Hinduism is due to the secular ideals that we uphold (or rather, if Mr Madhok is to be believed, the Hindu majority upholds.)

Muslims should neither be pampered nor persecuted. They must be provided opportunities to prove their nationalism and patriotism. This will not happen as long as Madhok and his tribe are around. Muslims will have to wait for the next generation/s to realise their ambitions of being true Indians.

Arif Kudwani
Bombay

Sir—None can deny Balraj Madhok's bold assertion that the Muslims in India are pampered. EMS gifted away one district—Malappuram—in Kerala as an epitaph to our secularism. The Centre is always singing the mellifluous lullaby of coexistence even at the cost of others. How else can this minority escape without punishment under IPC for smuggling, raping and murdering and not live happily thereafter under the protective umbrella of Islam when it comes to four marriages and a massive rate of human reproduction?

U.S. Iyer
Madras

Sir—During ASIAD-82, our Muslim brothers' sympathies were with the visiting Pakistani hockey team and not with the Indian team which included captain Jafar Iqbal, Mahammad Shahid and Akbar Ali. Does that answer the charges made by Syed Shahabuddin?

Mukul Sharma
Etawah

Sir—Mr K.C. Khanna's thesis ("The Roots Of Conflict", January 9) that secular and democratic norms should be maintained is perhaps suitable for tha platform rhetoric, but we should not forget that it had brought about the subjugation of India by the Muslims and the British.

M.G. Sundaram
Madras

Sir—Balraj Madhok has rightly analysed the position of Muslims in India.

Nowhere else in the world do minorities enjoy better facilities. In India a large number of positions of responsibility have often been entrusted to persons from the minority communities.

Ramesh
New Delhi

Sir—Both Balraj Madhok and Syed Shahbuddin have taken extreme positions and have misinterpreted or exaggerated the facts. The truth lies between the two poles. Indian Muslims are neither persecuted nor pampered. Syed Shahabuddin had made some baseless and totally false allegations in saying that the Muslims live in a state of constant terror, insecurity; that they are butchered, etc.

Balraj Madhok, on the other hand, had grossly exaggerated the facts to show that the Muslims are pampered. Why not let sleeping dogs (or tigers) lie in the ruins of history? Why resurrect the cruel and fanatical rulers who destroyed Hindu temples?

Miss Prabha Padmanabhan
Bombay

Sir—How does Mr Balraj Madhok know that Urdu verbs are derived from Hindi? Has he carried out any research to support this conclusion? I can also say that Hindi is mere a copy of Urdu—with some verbs borrowed from a language like Sanskrit. If Urdu is not the spoken language of any region then let him show in which region is his Sanskrit spoken? Why is so much attention paid to this language?

Bismillah Irrahman Nirrakim
Salem

Wise Verdict

Sir—Mr K. C. Khanna's article "Verdict Against Corruption" (January 26) was thought-provoking. I fully endorse his view that the result of the recent assembly election is a "personal defeat" for Mrs Gandhi. Earlier, however, Mr Khanna had not given much weightage to the Opposition. But then there was no doubt in anybody's mind that the current election could *not* be a cake walk for Mrs Gandhi. The stunning defeat of the Congress (I) showed the wisdom and maturity of the electorate.

P.P.
Bombay

Sir—Your comments on the article exploded the mythical arguments of the apologists—Hindu and Muslim. I rather liked Sitanshu Das's "Problems Of Power" (January 9).

Madhu B. Thaker
Gujarat

Sir—"A State Of Siege?" by Syed Shahabuddin looks as if he wrote it after going through Balraj Madhok's article and not vice versa. Is this not a case of pampering?

R. P. Saxena
Bombay

Sir—Syed Shahabuddin is a good writer, he has perhaps not found it necessary to analyse the situation dispassionately. He prefers to tread the beaten track. He is no doubt in a position to make the analysis factual if he so desires. This would certainly contribute in improving the situation. A Muslim, who has been educated in Mdrassa (Muslim school) has been taught that non-Muslims are "idol-worshippers" and therefore *kaffirs*. And *kaffirs* cannot be trusted.

As an adult, such a person is exposed to non-Muslims in various interactions. If for any chance, a transaction with a non-Muslim turns sour, he immediately comes to the conclusion that a *kaffir* is unreliable, and untrustworthy. The Muslim will, however, *not* analyse the real cause of the failure.

Distrust begets distrust. Can any one then blame a Non-Muslim if he preferes a non-muslim? When this happens, the Muslim complains of deliberate discrimination. No other community except the Muslims feel discriminated against. A Muslim educated in a convent or a missionary school is a different breed altogether. He feels himself on par with the Hindus. Such persons occupy high positions and enjoy the trust and friendship of "idol-worshippers". They stay in cosmopolitan localities and have rapport with non-Muslims. But such persons are so few and far between that percentage-wise they are marginal.

C.P. Mansukhani
Bombay

Sir—Balraj Madhok's views are highly communal, biased, venomous and preposterous even! By any yardstick, the view that post-Partition India is a country only for the Hindus and the Muslims play second fiddle is unacceptable. Madhok may have been a historian of good repute, but his views at times are extra-historical. A hypothesis, eg to controvert the fact as to who built the Kutb is quite absurd.

S.K. Das
Calcutta

Sir—Mr Madhok's views only confirmed my childhood notion that he is an irrational Hindu fanatic. To him Islam is a cancer. Mr Shahabuddin also seems to have a closed mind, though he rightly says that the Muslims have little room in our police and army forces. What appealed to my mind most is your piece "Roots of Conflict" which serves as the apt moderator in a crucial debate. I fully agree with the view that secularism is the clue for the survival of Hinduism.

Satya Prakash Mishra
Sonepur Raj, Orissa

Sir—In your excellent analysis of the viewpoints of Messrs Madhok, Sitanshu Das and Syed Shahabuddin you have rightly pointed out that while the majority of us are tolerant it is the minority which advocates hatred against other religions and castes on filmsy grounds.

This section is more organised and militant than the humane majority. This makes all the difference for the religions and castes against whom the former's campaigns of hatred are unleashed from time to time. No wonder that the Muslims, the Harijans, the Brahmins and various other sections of society feel insecure and oppressed.

V. Vijayamohan
Madras

Thought-Provoking

Sir—Apropos P.K. Nijhawan's tribute "Hafeez Jalandhri: Poet of Eternal Youth" (January 9), Urdu poetry has suffered gravely in recent times. First Firaq, then Josh and now Hafeez is no more. Hafeez Jalandhri the man who apart from being the poet laureate of Pakistan wrote his country's national anthem after they had rejected 722 compositions; His *"Abhi To Main Jawan Hoon"* has been immortalised for its lyrical depth. He was, undoubtedly, a legend in his life time.

Dr Maharaj K. Kour
Srinagar

Calcutta's Calumny

Sir—Dr Ashok Mitra has courageously deprecated the gimmicry of renaming Calcutta streets (January 2). The history of Calcutta in the last thrity-five years is the history of the march of socialism. A fine city, a jewel of Asia, a city in which people rich and poor once lived decently, a city that produced a host of Indian luminaries including Tagore, has been transformed into a veritable hell on earth.

Calcutta also symbolises the degradation of the Indian people under the spell of socialism. The city has changed its presiding deity—from Kali to Marx-Lenin. While Kali resides in an obscure part of Calcutta by the side of a ditch, Lenin, Marx and Engels now stand guard in the heart of Calcutta. But swapping of the street names has but brought disgrace to the names meant to be honoured.

Raju Bala
24 Parganas, West Bengal

Unfair

Sir—Mr Raghavan praises Tanzania, Uganda, etc, for standing firm against the West, but these countries are actively working to drive out Asian traders from their territories, a despicable action that exposes the hypocricy of Afro-Asian solidarity which exists in a negative gang-up against the West only. ("Spectre Of Trade War", January 2)

The meeting also exploded the Afro-Asian myth of a Western gang-up against them; as was seen, there was a triangular tussle between the US, EEC and Japan.

But the most glaring anomaly was that none bothered to note the basic fact of deliberate non-participation by East Block communist countries in GATT. How can one talk of New International Economic Order (NIEO) when the socialist States do not participate? What about their responsibility to the Third World?

K. Susrita
Calcutta

Hamstrung Hamlet?

Sir—Thanks for the excellent review of Lord Laurence Olivier's autobiography: *Confessions of an Actor*. (December 5).

"Brevity is the Soul of Wit" said Shakespeare. But our "Hamlet" seems to have forgotten his Bard! No wonder then that the reviewer finds the narration, at times, long-winded and even ponderous.

Whatever esthetics may say, etymologically "art" and "artifice" have the same root; and therefore, it is as well that the confessions are here and there a string of lies—good or no good.

We, in India, know the actor mainly through his films. So, when the films are not given adequate treatment in the book it loses a good deal of attraction for us here in India.

P.N. Pathak
Bhavnagar

INDIRA IS INDISPENSABLE to the Congress(I) despite 'her' recent electoral rout.

Will The Congress (I) Put Its House In Order?

by K.C. Khanna

WILL Mrs Gandhi put her house in order? Has she learnt any lesson from the Congress (I)'s poll debacle in Andhra Pradesh and Karnataka? Can she summon the nerve and the will to undertake the massive spring-cleaning that is necessary to ensure its survival?

The very fact that these questions are being posed is a grim indictment of the recent changes in the corridors of power. A spate of officially inspired reports had earlier aroused great expectations. A determined drive against corruption, a drastic devaluation of the numerous Kitchen Cabinets, a ruthless campaign to weed out inept wheeler-dealers from the Ministries at the Centre and in the States, a genuine delegation of powers all down the line and a vigorous effort to dispel the widespread fears of "dynastic rule" were said to be on the agenda. The Prime Minister has, no doubt, taken some preliminary steps in that direction. But they have been too short, halting and unsure to inspire confidence in the intelligentsia, let alone enthuse the electorate.

The induction of Kamlapati Tripathi as the Working President of the Congress (I) underscores the point. He belongs to the Old Guard. As such, he is credited with some commitment to the values the old-timers in the Congress hold dear, a certain sagacity of style and benignity. But his long innings in office at the Centre or in his home State have never been marked by intellectual brilliance, administrative acumen or sterling probity. He was forced out of the Railway Ministry in 1980 under a cloud. His reputation has been tarnished by his close attachment to his son, Lokpati, the Scarlet Pimpernel of UP Politics, and a daughter-in-law who acquired during the Emergency some sort of a notoriety as a conduit for electoral funds.

Personally, Tripathi is known as a "boneless wonder". Can he be expected to wield the clout

needed to restore discipline and coherence in a party that has degenerated virtually everywhere into a rabble of opportunists or self-seekers? If so, why has Mrs Gandhi fought shy of clothing him with the authority required to clean up the Augean stables?

In view of the enormous burden she carries as Prime Minister, Mrs Gandhi has not been averse in the past to handing over the office of the Party President to another incumbent. Why then has Tripathi been saddled with an ambiguous title? Is it to put him on notice that he must not entertain any ideas of grandeur and dutifully take the cue from the motley crowd of advisers in the so-called palace? Or is he just a stopgap meant only to keep the seat warm for Rajiv Gandhi until the time is judged opportune for the latter to take over? In either case, the move augurs ill for a party whose fortunes are rapidly sagging anyway.

In an article following, the author expresses the view that Mrs Gandhi is simply incapable of changing her style of politicking. He also takes the line that reports of "Operation Clean-Up" were a figment of journalistic imagination.

The second point can be quickly disposed of. While there might have been an element of wishful thinking in the speculation about Mrs Gandhi's impending moves, there can be no doubt that it was officially orchestrated. Else, resignations of all or most of the Ministers would not have been called for with so much fanfare. That Mrs Gandhi missed the psychological opportunity to chop off all the deadwood in the Central Cabinet at one fell blow and induct men of proven worth in their place is undeniable. But it does not necessarily follow that she will not proceed to do so piecemeal.

CHARISMATIC AUTHORITY is inherently unstable. Now that it has been shaken, Mrs Gandhi should opt for politics of cohesion and consensus. This will indeed be heartening for the country's democratic future.

The Prime Minister is a complex person. She is willing to lend an ear to gossip and to sycophants. She is also a hard realist, capable of tough decisions. She has never had a permanent group of her own. On the other hand, she has never functioned without one. This has been both her strength and her weakness. A leader whose loyalties are so fragile cannot get the best out of her followers. But this trait has also enabled Mrs Gandhi to rise above group politics and become a national leader without peer. In any case, it could not be otherwise for a politician so imbued with a sense of her own destiny as Mrs Gandhi is.

Whatever one may think of the kaleidoscopic coteries of her close advisers since 1966, the situation has been somewhat different since 1974 with the intrusion of the Sanjay (and later the Rajiv) factor. Bureaucrats, politicians and businessmen alike resented having to kowtow to Sanjay's praetorian guard of worthless goons even as some crowded around them to feather their own nests. Since the advent of Rajiv Gandhi, things, if anything, are a lot worse. The political firmament has become crowded with many disparate deities and favour-seekers have to go round paying obeisance to them all, not knowing who can bestow the boon, if at all.

Inevitably, this is playing havoc with morale in the party, the Government, business and industry, big or small. If Rajiv Gandhi were given a well-defined responsibility in the Central Cabinet or as an office-bearer of the Congress (I), the intelligentsia may accept it—perhaps more reluctantly now than before the poll reverses in the South. But it is certainly in no mood to brook any semblance of the so-called extra-constitutional authority, however good, discreet or veiled.

It follows that mere tinkering with the system will not do. The entire power structure needs to be thoroughly revamped. All the proposals on the "agenda" must be taken out of the realm of speculation and speedily implemented on the ground. This is the need of the hour. K.R. Sundar Rajan, like many others, believes that Mrs Gandhi is temperamentally incapable of the effort. But I am not sure. The rot has admittedly corroded her party machine through and through. But that does not mean she is its prisoner. She can always induct technicians, lawyers, economists and other professionals of merit to run the Government with celerity.

She has often, in the past, gauged the mood of the country right and appealed to it over the heads of her detractors within and outside the Congress. She may do so again. Parliamentary elections are only two years away. There is no time to lose. ■

THE TIME TO ACT IS NOW against the dissidence, sycophancy and corruption in the Congress(I).

Can Mrs Gandhi Do It?

by K.R. Sundar Rajan

FOR once, Mrs Gandhi is not entirely to blame. If the "Great Cleansing Operation" has not taken place, if there has been no "Massacre of The Corrupt and The Guilty", she can legitimately plead that she is innocent.

It was all the work of newspaper correspondents and editorial writers. Over the years, they had sedulously propagated the myth that Mrs Gandhi is at her decisive best—or worst—in adversity, that there is a built-in clock in her brain which tells her when to act and that, whatever she does, has necessarily to be marked by a sense of drama.

The Capital's journalists believed the stories they had themselves floated. Political gossip in the Central Hall of Parliament, where Members of Parliament and a small group of privileged correspondents with special passes meet every day to exchange and manufacture rumours, had assumed fanciful proportions in the wake of the Congress (I)'s shattering defeat in the South.

It was said that Mrs Gandhi's backroom boys were busy planning a major surgical operation. One senior journalist was saying that a second nuclear "implosion" was on the cards. Another predicted "some kind of military action" to capture the imagination of the public and take the sting out of the electoral debacle in Andhra Pradesh and Karnataka.

Huddled round a coal-fire in the home of a former Cabinet Minister as Delhi was lashed by cold winds from the Himalayas, politicians and journalists even discussed the possibility of Mrs Gandhi offering to step down from the Prime Ministership. They recalled the consternation which her father had caused when he once hinted at a meeting of the Parliamentary Party that he would like to retire

'False Propaganda' Indeed!

To be sure, had Mrs Gandhi made such a gesture, the result would have been dramatic. The impact would have been equally stunning if she had announced that she had been given wrong advice by Rajiv Gandhi and his Kitchen Cabinet and asked the whiz-kids to pack off with their computers and other sophisticated equipment.

But Mrs Gandhi was not thinking on these lines. Her first public reaction to the verdict in the South was that it had been caused by false propaganda against her party. A few days later, the Prime Minister's Secretariat released a letter she had written to an "ardent admirer" after the reverses in Andhra Pradesh and Karnataka. In it, she said that there was no debacle at all and blamed foreign forces for instigating some groups in India to weaken her Government

Surely, this kind of response cannot be construed as honest heart-searching.

In fact, Mrs Gandhi's statements after the Assembly Elections only confirmed that she is just incapable of drawing appropriate lessons from mistakes and defeats. If anything, she proceeds from one mistake to another. Adversity only further isolates her from harsh realities.

According to the author of an otherwise admiring biography of Mrs Gandhi, she believes what she is told by bad advisers and sycophants. He writes: "Even during the Emergency, Mrs Gandhi believed those who told her how much the people loved Sanjay. It has also led her to suddenly throwing good advisers out because they have told her the truth. (Pontius) Pilate had the right line written for him in the New Testament—*Truth is not an exactitude, it varies from person to person*... Mrs Gandhi does not ask what the truth is so long as it is what she, against all evidence, believes."

Since Mrs Gandhi split the undivided Indian National Congress in 1969 after managing to instal V.V. Giri in Rashtrapati Bhavan in clear violation of her promise to Sanjiva Reddy, she has come to have implicit faith in the superiority of ends over means. Her successes in the subsequent years went to her head. Many intellectuals, including newspaper editors, lawyers and professors, encouraged her to believe that the Indian people can be easily swayed by a display of "strength" even when this is divorced from morality or ethics.

A familiar newspaper cliche was that Mrs Gandhi was the only man in her party. She was called a Durga. The Governor of Uttar Pradesh said at a State function to promote national integration that Mrs Gandhi should be worshipped as a goddess.

But in spite of their illiteracy and poverty, the people of India do not take long to see through false gods and goddesses. This is the land of Ayodhyapati Ram, the prince who voluntarily retired into the forest instead of staging a non-violent coup to retain his throne. King Ram did not need computers to find out what people really thought of him. He travelled incognito, listening to critical voices and reacting to them constructively as only a true god would have done.

What Mrs Gandhi ought to have done, what she needs to do now to remove public misgivings and project the right image of her Party and Government is easy to spell out. But she will not listen. She has never listened to unpleasant truths.

The "bitter medicine"—of which she is reputed to possess an inexhaustible stock—is only for the people, not for herself, her family or for her party.

Sordid Public Image

The sordid public image of the Congress (I) is the result of years of wrong actions—ranging from corruption to authoritarianism—and cannot be corrected merely through cosmetic changes or by inducting one or two honest politicians like V.P. Singh into her Cabinet. She must begin from the beginning.

It is, in a sense, understandable if Mrs Gandhi has not mounted a frontal attack on corruption, because it will mean undermining the very foundation on which the Congress (I) has come to exist. If Chief Ministers are asked not to collect funds for the party through questionable methods, how can it fight elections?

The late Rajni Patel candidly admitted in a magazine interview

that, when he was with Mrs Gandhi, he collected Rs 150 crores for the party, mainly by showing favours to businessmen and industrialists.

The Antulays and the Gundu Raos were not an aberration but the inevitable by-products of a political system which had come to put the highest value on vote-catching regardless of principles. This is why Antulay is still active behind the scenes in Maharashtra politics despite the Bombay High Court verdict.

The Bhosales and the Anjiahs with their sickening "loyalty" also are unavoidable. How can Mrs Gandhi promote inner-party democracy or delegate real power and responsibility to worthy and talented men and women when she is tormented by the suspicion that such people may one day become rival power centres, threatening her dynastic experiments?

Mrs Gandhi repeatedly says that she is not building a dynasty. But if this impression persists, it is because she first clothed Sanjay with enormous powers and then brought Rajiv into the picture. That Rajiv was not initially willing to become a politician and it was Mrs Gandhi who made him one has only strengthened the suspicion that she does not want to leave the future of India to the good sense of the people of India.

The Basic Problem

Rajiv Gandhi's dismal failure as an "election strategist" in the South and his consequent deflation as a possible successor to his mother provide an opportunity to Mrs Gandhi to demonstrate by her action that she is not aiming at family rule. All she has to do is to trust people outside her immediate family and the small favoured circle of courtiers.

But this again means returning to the basic problem. As the Cabinet and party changes have shown, Mrs Gandhi is prepared only for a tinkering operation, not for real surgery to remove the cancerous growths.

During Jawaharlal Nehru's final years, one agonising question was being repeatedly posed: *After Nehru, what?* But it took less than a week for the country to adjust itself to the absence of Nehru. All the fears of chaos after 17 years of his stable stewardship of the country disappeared in no time, testifying to the innate vitality of Indian democracy.

After Indira Gandhi, what? Maybe there will be some political confusion since, by her own deliberate actions, she has stifled the growth of capable and worthy second-line leaders in her party. In other words, if the transition from her is not smooth, history will blame her squarely.

But the situation is not without hope. Judging by her obstinate unwillingness to learn from the recent electoral debacle and her failure to bring about credible reforms, it looks as if Mrs Gandhi is resolved to devalue her and her party's relevance in the next two years. This is a sufficient interval for other democratic forces to consolidate and augment their strength.

In any case, it makes no sense to try to save a leader who is determined not to save herself.

There is something inexorable about the decline of Indira Gandhi. ■

The Importance Of Being Kamlapati Tripathi

New Delhi:

BY making Kamlapati Tripathi the Working President of the Congress (I), Mrs Gandhi has, for all practical purposes, it appears, spiked the guns of a potential dissident at the Centre. For the newly created post, she selected a Congressman whose sprawling ministerial bungalow in the capital had, of late, become the meeting ground of all those party MPs and leaders who were concerned, 'disturbed' or alarmed over things happening in the Party and the Government. They found in "Panditji" as Kamlapati Tripathi is fondly called by everyone a sympathetic and understanding veteran colleague who could share their grief. Not only that, Panditji's advice if not blessing was almost invariably sought by every group of dissidents that visited the Capital from various Congress (I)-ruled States to apprise or pressure the High Command.

Was this the reason that chiefly weighed with Mrs Gandhi while hoisting Kamlapati Tripathi to the high position? Did she want thus to pre-empt any unpleasant possibility? Or was it the weight of his long innings in the Congress?

The somewhat swollen and red-faced Panditji does not like to be called an 80-year-old. He quickly corrects you: "I'm 78, not 80!" At the same time, he emphatically stresses that he is the seniormost Congressman today. "I've been a Congress worker for the last 63 years," he says.

Kamlapati Tripathi was suddenly removed from the Railway Ministry in 1980 by Mrs Gandhi. (The reasons are still some sort of a mystery.) Since then, he has been out of power, though not quite out of politics. A Member of Parliament from Varanasi, his presence on the scene was weighty enough to make him Chairman of the Central Sales Tax Reforms Committee.

Maybe Kamlapati Tripathi has reached an age and stage in his political career where he does not feel the need to mince words when it comes to an objective analysis of political situations. This is what he reportedly did when Mrs Gandhi called him and sought his view on the debacle in Andhra and Karnataka. He is believed to have spoken clearly against making the whole party apparatus solely election-oriented, against the effectiveness of the new "scientific" method of political management now in currency in the party and advised her to leave the State Congress Legislature Parties free to choose their leaders and to share her responsibility.

This could only have been done by someone of the seniority and standing of Kamlapati whose loyalty to Mrs Gandhi and the party was beyond question. Tripathi's loyalty to her has never wavered. Not even when he was unceremoniously removed in 1981; or, way back in 1973, from the Chief Ministership of UP following the famous PAC revolt. This cannot as easily be said for some other stalwarts like Sardar Swaran Singh, Yashwantrao Chavan and K. Brahmananda Reddi.

Moreover, with almost the entire South having rejected the Congress (I) and most of the sensitive border States including Jammu and Kashmir, Punjab and the entire North-East either out of the Congress (I) fold or restive, Mrs Gandhi's only solid potential base remains the Hindi-speaking belt, the heartland comprising Madhya Pradesh, Uttar Pradesh, Bihar, Rajasthan and Haryana. In view of the general elections due after 2 years, Kamlapati Tripathi as the Working President would be of considerable help to her with his vast experience.

However, the fact that he has been made only the Working President has raised doubts about the freedom of action Tripathi will have. Though he started his very first day in office by indirectly criticising several party policies followed (like imposition of Chief Ministers from above), the real test of his authority and autonomy will be the selection of Party General Secretaries, the Executive and then the way he manages the promised organisational elections.

What remains to be seen is whether Mrs Gandhi has really created a new power centre of merely a listening-post for irate, dissatisfied and complaining party workers. Is it the beginning of an era of real inner democracy in a defeat-scarred, demoralised ruling party weakened beyond measure by years of ad-hocism *at all levels and attendant vices? Does it mean that, after years of keeping the party under her control, Mrs Gandhi seriously desires decentralisation, delegation of power and shared responsibility? Or it is merely another clever political move designed to create, for the time being, an impression of party reform and restructuring among the masses, on the one hand, and to stem the ever-rising waves of dissidence in the States, on the other?*

Time alone will tell.

— A Special Correspondent

The Dalai Lama

Tibetan Exiles: Too Rich To Go Back

by K.N. Sud

"There are so many common things between Tibetans and Indians. In the field of culture, we are disciples of India. Our culture is mainly based on Buddhism and Buddhism came from India. We always regard India as a sacred land, a holy land," said the Dalai Lama in answer to a question some time back. How well placed are Tibetan exiles in India?

NEARLY 6,000 Tibetans, lamas and laymen had gathered on a cloudy day in December last at the Theckchen Choling monastery to observe the 500th death anniversary of Tsongkhapa, the Guru of the Yellow Sect Buddhists. Built on a wooded ridge in McLeod Ganj, 10 km from Dharamsala in Himachal Pradesh—with the mighty Himalayan massif of the Dhauladhar range in the background and the picturesque Kangra valley down below—Theckchen Choling is the largest monastery outside Tibet. The Dalai Lama himself is its head priest.

Though the road is metalled, the ascent is steep and circuitous and the bus from Dharamsala takes 45 minutes to cover the short distance. Dharamsala is the headquarters of Kangra district. An excellent 90-km road links it with Pathankot, the gateway to both Kashmir and the "new" Himachal. Kangra and its adjoining hills formed part of Punjab before their merger in the "old" Himachal—that is, the Simla-Sirmur complex. Dharamsala can also be reached by bus or car from Hoshiarpur.

The region has inspired the devout and souls in search of secluded retreats since time immemorial. No wonder the Dalai Lama (Ocean of Wisdom) and his entourage, after their escape from Tibet in 1959 in the wake of the Chinese invasion, made McLeod Ganj (7,000 ft above sea-level) their headquarters. As a result, the entire area has undergone a sea change and domination of Dharamsala's economy by the Tibetan exiles and their progeny is all too visible.

The Theckchen Choling monastery—located at a stone's throw from the heavily guarded official residence of the Dalai Lama—has a spacious hall which is jampacked with the early arrivals that day. Many devotees have come from outside Dharamsala. Hundreds, who could not secure entry into the hall, crowd the wide verandahs and open spaces on all sides.

His Normal Day

A huge ornate statue of the Buddha overlooks the assemblage in the hall. Innumerable *ghee*-fed wicks from earthen *divas* flicker in one corner and also in a side glass-panelled room. Two monks have been detailed to replenish the supply of *ghee* to the wicks. Prayer flags flutter from trees and rooftops all around. The 47-year-old Dalai Lama (Tenzin Gyatso), who leads the prayers, sits at a vantage point in the hall and can be seen from any side through the windows. He looks the picture of compassion as he recites from the Tibetan texts. His words are repeated after him in an even refrain by the faithful to the clanging of cymbals and whirling of little prayer-wheels held aloft in hands.

Large drum-like brass prayer-wheels installed all around the hall keep rotating throughout. These are inlaid with quotations from the Buddhist scriptures. No *jais* or similar cries are raised. The atmosphere is tranquil and mystical.

The Tibetan pontiff's normal day, according to information supplied by volunteers attending to the needs of the gathering, is the day of a meditator-cum-administrator. Most of his mornings are devoted to religious practices and the afternoons to sorting out the problems of his flock in India, which by now is believed to number over 100,000. He is, however, said to be meditating all the time, whether working, talking or sleeping. He also spends considerable time writing books, the most notable among them being *My Land and My People*, which is his autobiography and which he plans to update.

The Dalai Lama is held in high esteem not only by the Tibetans but also by other residents of Dharamsala and the neighbouring areas. Whenever he moves out, people with hands joined reverently stand in rows on both sides of the road for his *darshan*. Some Tibetans prostrate as he passes. The Dalai Lamas are believed to be the manifestations of Buddha the Compassionate. The present pontiff, born on July 6, 1935, is the 14th in the line and was enthroned in 1940.

In the middle of McLeod Ganj is Namgyal Stupa. Here too, round its base, big brass prayer-wheels keep rotating all the time. On three sides of it are rest-houses for Tibetan pilgrims.

There are three rows of shops in McLeod Ganj's long bazar. Almost all are owned by Tibetans. They are well stocked with goods—groceries, cotton and woollen garments, blankets, carpets, dry fruit, stainless steel and brass utensils, plastic articles, handicrafts, trinkets, toys and the like. Visitors from the plains mostly buy woollens in the belief that they are "pure", though I am told by non-Tibetan locals that they are, by and large, products of Ludhiana and Calcutta's hosiery units. The prices are generally on the high side. A woollen blanket is quoted to me at Rs 800. There is a carpet factory but the prices of its products are almost prohibitive—much higher than those of the famous Mirzapur variety.

A feature of the bazar that intrigues me is an overabundance of 500-gm packs of a popular brand of butter

stacked high in front of the shops. My enquiries reveal that the Tibetans consume large quantities of butter with everything they eat and drink, including tea and *chang* (Tibetan liquor). It is also fed to lambs and other animals meant to be slaughtered for dinner.

The Dharamsala Tibetans' present prosperity has to be seen to be believed. When they first arrived in India 24 years ago, they were in dire straits—shelterless, famished, exhausted, clad in rags, families separated, children orphaned or abandoned. Prompt aid by India and international charitable institutions, however, enabled them to start life afresh. The able-bodied, unskilled refugees were engaged for road-building and performing other manual operations. The skilled and the semi-skilled were given funds to make handicrafts and articles of daily use.

Today, the Tibetan exiles can be proud of the fact that they—like the Hindu and Sikh refugees from West Pakistan—have made good and are able to enjoy comforts that go with affluence. In the Kotwali Bazar of Dharamsala, the two types of refugees, with totally different backgrounds, live cheek by jowl and are doing roaring business. Almost all nationalised banks have branch offices here. The Tibetans are their most valued clients. Framed portraits of the Dalai Lama adorn the bank halls.

A bank official confided that maximum fixed-deposit accounts have been opened by the Tibetans. Mostly, these are held in joint names—the depositor and his guru. The amounts deposited are also larger than those brought for the purpose by the locals. The Tibetans lend money to each other on trust—that is, without recording the transaction on paper.

Many Tibetan youths, including girls, wear jeans and sport the latest hairstyles. They fluently speak Hindi and English, enjoy costly hotel food, listen to disco music and watch Indian and Western movies on video. There are hotels galore offering modern amenities. There is also free mixing of the sexes.

The children are healthy, rosy-cheeked and dressed in expensive attire. No more running noses and hands extended in supplication before visitors for a paisa—a sight that was common 20 years ago.

There is the Tibetan Children's Village, 5 km from the Dalai Lama's residence. It was built for orphans between the ages of 8 months and 15 years. They are well looked after and brought up in the Tibetan tradition. The subjects taught include religion, Hindi, English and, of course, their own language.

There is a fine Tibetan museum 3 km from Dharamsala. Some of the Dalai Lama's precious collections are housed in it. It has also Tibetan books, scrolls, coins and other antiques. Within the precincts of the museum is a research institute where Tibetan, Indian and foreign students study Buddhism, the Tibetan language and the arts.

The Tibetan Medical Centre in McLeod Ganj dispenses "cure-all wonder pills" made from herbs, minerals, pearls, precious metals and other expensive ingredients. The pills are called *Rinchen Rilpus* and are used for treating diseases ranging from simple headache to cancer. The Centre, headed by a lady doctor, is always crowded. A good number of Indians and a few foreigners can be seen among the patients. Medicines are also sent by post.

Tibet's medical system is claimed to have been revealed by the Buddha at Varanasi. It was taken to Tibet where it became part of the local culture.

It is reported from time to time that the Tibetan exiles are determined to return home, that China has made overtures to the Dalai Lama to come back and that intermediaries are busy bringing about a reconciliation between the two sides. More than anybody else, the pontiff himself misses no opportunity to air his firm conviction that, one day, he would be back in Lhasa with all his powers, spiritual and temporal, intact. But the realities of the situation do not support his assertion and the optimistic predictions of others claiming to know the Chinese mind and the conditions inside Tibet.

My discussions with some insiders in Dharamsala and a couple of lamas at the McLeod Ganj monastery revealed that the Tibetans in India feel very much at home and are not much interested in what is happening to their compatriots on the "Roof of the World". They say they never had it so good even before their migration. In no case would they risk another uprooting in exchange for an uncertain future under the Chinese overlords.

The new-generation Tibetans have grown up in Indian conditions and have been exposed to modern thought currents. Having enjoyed living in an open society, they are loath to return to a place where regimentation is now the way of life. "How can we trust promises of fair treatment by China which, till the other day, was dubbing us as renegades?" many of them ask.

They are aware that Tibet has changed beyond recognition in the last two decades. It may well look to them an alien land if they ever set foot on it again. The Potala, the temples, the monasteries and other symbols of the old Tibetan order are in decline. Many of these were swept out of existence by the Red Guards in the wake of the 1966 Cultural Revolution. On the other hand, in India (their new home), the Tibetans enjoy complete religious freedom and have become part of the mainstream of national life. An increasing number of them are taking up Indian citizenship.

Even as a race, the Tibetans traditionally derive their religious and cultural heritage from Indian sources and claim for their quondam royal dynasty Indian descent. The simple and devout people living in the northern frontier areas of India (such as Ladakh, Lahul, Spiti, Kinnaur, Almora, Pithoragarh, Bumdila, Tawang and Darjeeling) have a racial, religious and cultural affinity with those inside Tibet. The religion practised on both sides of the border is Mahayana Buddhism.

Some time back, the Dalai Lama, in answer to the question whether he foresaw any chances of young Tibetans born and brought up in India becoming part and parcel of Indian society, told a group of teachers who met him in Dharamsala:

They will be absorbed in Indian society because there are so many common things between Tibetans and Indians. In the field of culture, we are disciples of India. Our culture is mainly based on Buddhism and Buddhism came from India. We always regard India as a sacred land, a holy land. That is why Tibetans have a feeling of closeness with India and Indians. For example, they find it easier to pick up Hindi as compared to English.

He was stating the obvious.

The Chinese Angle

Take the Chinese angle. Now that the world has nearly forgotten the Tibetan problem, will Beijing risk reviving it by getting back the Dalai Lama and making the media focus attention on him and his followers once again? Can it be sure that they would not create trouble for the new rulers in Lhasa after their return? Why resurrect Tibetan nationalism when it has already taken a back-seat in that country's affairs?

In all probability, the overtures reportedly being made by Beijing to the Dalai Lama are meant for international consumption and to whitewash its excesses in the wake of its occupation of Tibet. The conciliatory noises also fit into the climate being created by China for improvement of its relations with India. Simultaneously, they want the world to believe that they are as tolerant and liberal as any other people.

But, cunning though the Chinese may be, they do not mince matters when it comes to the crunch. Last year, a team of the Dalai Lama's representatives, headed by a senior member of his "cabinet", visited Beijing to assess for themselves China's intentions. According to a Chinese newspaper report, they were told, in no uncertain terms, that there could be no question of either independence for Tibet or even a special autonomous status of the kind being offered to Taiwan. There was also to be no going back on the socialist policies introduced in Tibet and the Dalai Lama could be taken back only as a religious head. The only gain China expects from his return, if it takes place, is that it would put the stamp of approval on Beijing's position in Tibet.

The high pontiff himself has let it be known that his own return is of secondary importance and that he is more anxious to ensure the welfare of Tibetans. This ambivalence itself is enough to provide the *raison d'etre* for his followers in India to stay put. And who knows, in course of time, they may start asking New Delhi for a linguistic state of their own! ■

AS A RACE, the Tibetans traditionally derive their religious and cultural heritage from Indian sources and claim for their quondam royal dynasty Indian descent.

Purandaradasa Aradhanotsava at Hampi – where the arts meet in melody and design.

February 1983—a time for rejoicing a great tradition. A homage to the founder of Carnatic music. And this, against the backdrop of what was once, a mighty empire. See Hampi, come alive again, as renowned artistes echo the fervour of Purandaradasa's Kirtanas.

The festival is to be held on the 19th, 20th and 21st of February. There will be 'Aradhana' by the Purandaradasa Seva Samiti. Added attractions will be audio-visual films presentation and a ballet on Purandaradasa.

There will be special buses between Bangalore and Hampi during the festival period, in addition to special conducted tours.

THE WORLD AROUND US

—Rajus Devadas

DANNY KAYE, who delighted children the world over with his portrayal of "Hans Christian Anderson", now heads UNICEF. Here he greets Indian Ambassador K.R Narayanan and Mrs Narayanan at the Washington premiere of the film Gandhi.

COMPUTERS IN THE CLASSROOM. A computer for every schoolchild in Britain, within the next two years, is what this advertisement, which appeared in The Guardian, *foresees.*

See what they're teaching our kids these days.

At the moment there are over 25,000 microcomputers in British schools.

Under the current DOI subsidised scheme, that number is set to increase and it is reckoned that within two years virtually every child at school will have regular daily access to a microcomputer.

How they use the computer, and how it can help in their education and development is, naturally, of considerable interest to every parent.

But how can the layman begin to understand this new technology?

To meet this need is the main aim of the BBC's massive Computer Literacy Project, which includes courses, books, software and a number of major television series.

A new series starts very soon, and it would be very useful to have, or have access to a microcomputer in order to make the most of it.

Now this is not as daunting as it sounds. The BBC Microcomputer – one of the principal machines used in the series – actually costs less than most video recorders. (You can get a BBC Micro for as little as £299.)

It is light, compact, and as you will see, easy to use. It plugs into your TV, and has a wide range of programs including computer games. It has a real typewriter keyboard, and can, with a special adaptor, take computer programs straight from BBC's Ceefax service. These will start in March.

It is also most likely the computer your children will be familiar with at school – over 75% of machines now being ordered under the DOI scheme are BBC Micros.

If you would like to have details of where you can buy one to use with the series, telephone 01-200 0200.

Or, for more information, send a stamped addressed envelope to PO Box 7, London W3 6XJ.

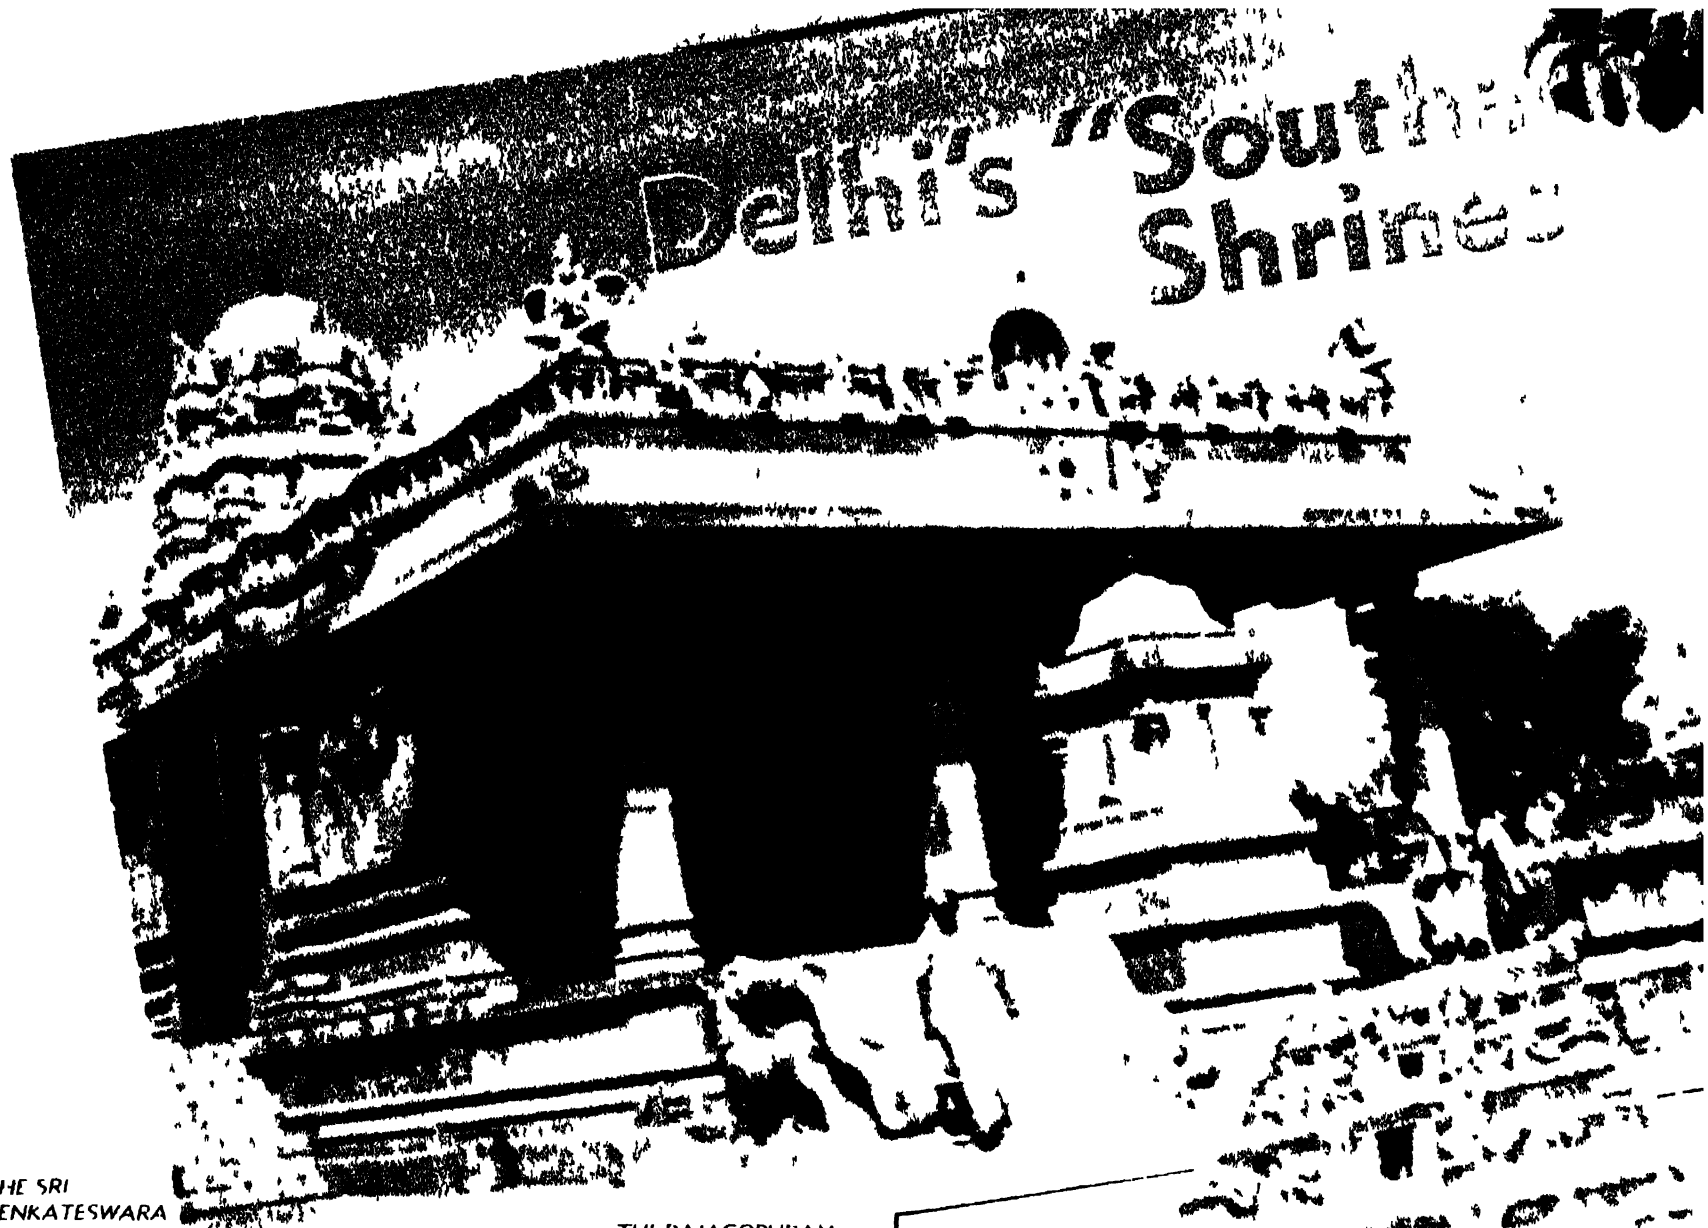
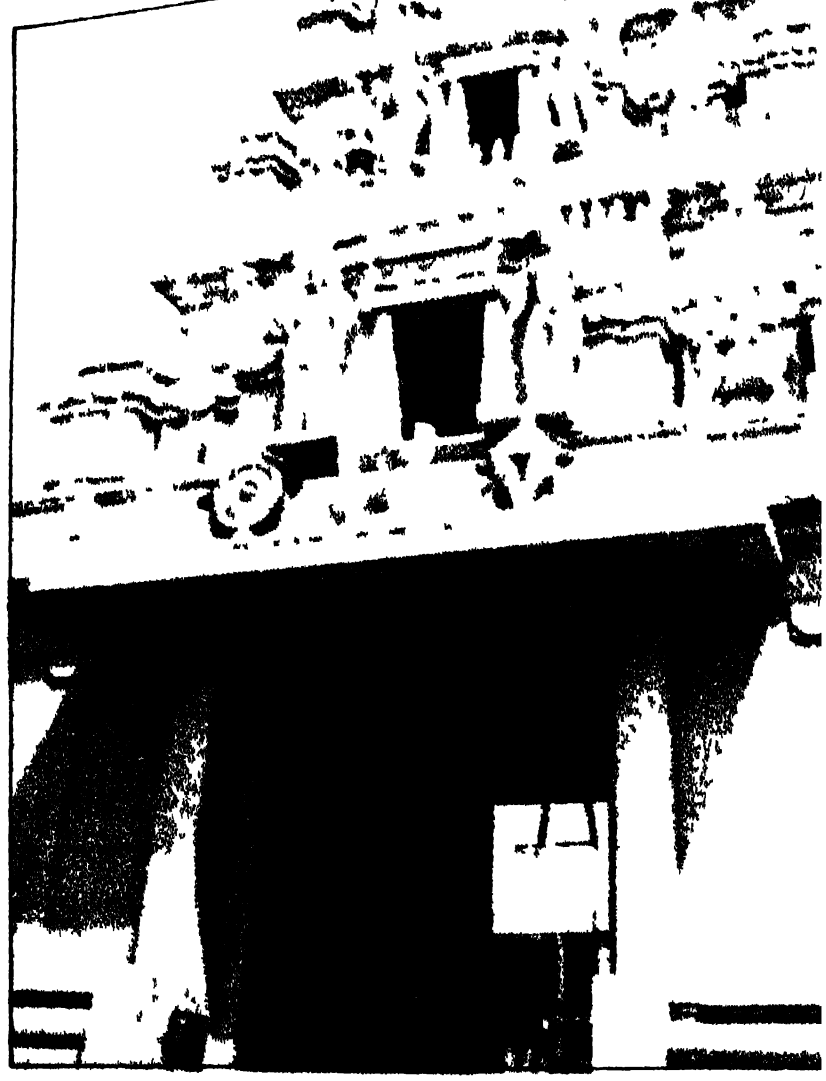
Delhi's "South" Shrines



THE SRI VENKATESWARA TEMPLE at Ramakrishnapuram

THE RAJAGOPURAM of the Vaikunthar athi Temple Ber ar ji



Delhi is a rare blend of the old and the new in art, culture and civilisation The magnificent Mughal monuments and the mushrooming skyscrapers apart, it is the city's myriad temples, many built in the Southern style, which combine to make Delhi ageless and wonderful

by N. N. Chatterjee

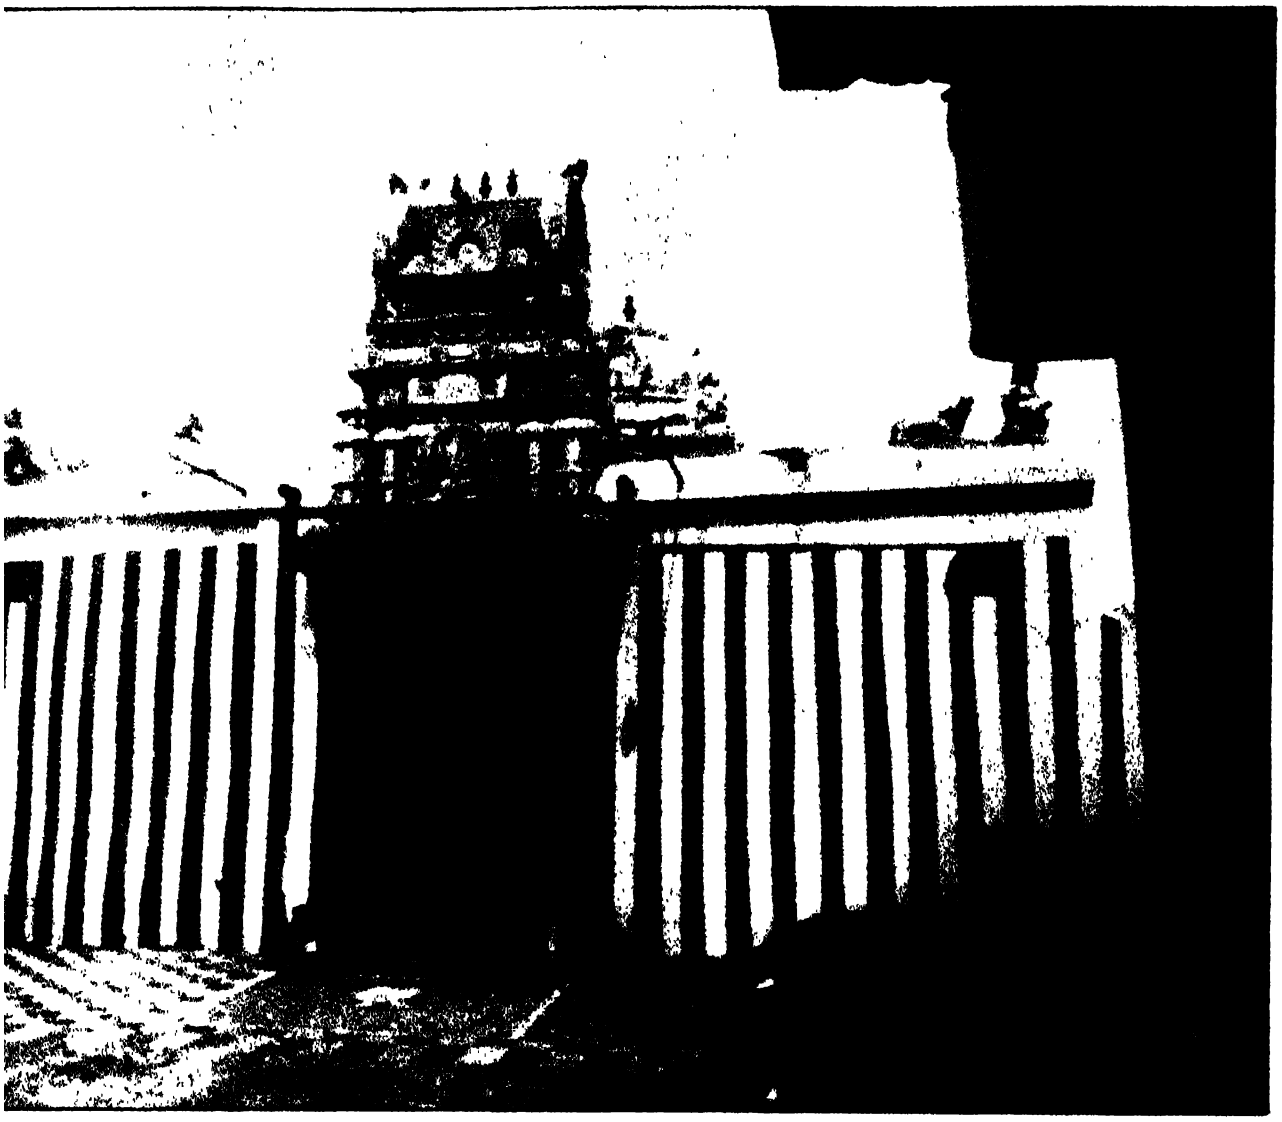
NUMEROUS temples some in the style of the great Southern temples greet visitors to Delhi The most important among them is the magnificent temple of Sri Swaminatha Swami in south Delhi This is the northern counterpart of the Sri Swaminatha Swami temple at Swamimalai near Kumbakonam in the Thanjavoor district of Tamil Nadu Since it is located in northern India it is known as Uttara Swamimalai

It was born in the 1935 when an ardent devotee of Lord Karthikeya started worshipping the Lord at his residence in New Delhi He obtained a small idol of Lord Swaminatha from Tiruvanna malai It appears he had a vision of Bhagwan Sri Ramana Maharishi and that he went immediately to the Maharishi who was then at Tiruvannamalai There he was offered an idol of Lord Swami natha in *maragatha* (green) stone Thus it is, by the grace of Bhagwan Sri Rama na that the seed for this great temple was sown In 1943 this devotee along with others organised the first *Skanda Shasthi* celebrations It gained import ance with each passing year

Search For A Site

The need for a temple of Lord Swami natha was keenly felt by one and all and the search for a suitable hillock com menced in 1961 The hillock Uttara Swamimalai indicated by the Lord Him self was acquired by the Sree Swami natha Swami Seva Sama, from the Gov ernment in 1963 A small *balalaya* was erected on the top of the hillock and worship started soon after The founda tion stone for the bigger temple was laid on September 8 1965 by Shri Bhaktha vatsalam the then Chief Minister of Tamil Nadu under the Presidentship of the then Prime Minister the late Lal Bahadur Shastri

→



THE SRI VINAYAKA MANDIR in Sarojini Nagar.

The *Sila Sangrahanam* (the ceremony for lifting the stone for the idol) was performed on June 2, 1967 The stone was located in the bed of the Tambara Varuni river at Kurukkuthurai near Tirunelveli in Tamil Nadu The carved idol of Lord Swaminatha was taken to Kancheepuram and blessed by His Holiness Jagadguru Kanchi Kamakoti Peetadhipathi Sri Sankaracharya Chandrasekharendra Saraswathi Swami with *abhishekam* and *pooja* and then brought to the present site at Uttara Swamimalai

A society was formed to build a temple in Delhi to Lord Srinivasa The society was registered in March 1964. At the request of this society Government allotted a piece of land in Sector III, Ramakrishnapuram, New Delhi The society started worshipping the Lord by erecting first in 1965 a small structure and installing a life-size portrait of the Lord of Tirupati Later in a small temple, the regular *utsava moorthis* were erected.

The installation in this *balalaya* was made on May 12, 1967, by the Chief Pandit of Srirangam With the contributions from the large number of devotees over a period, a sizable sum from the Tirupati Devasthanam and others, and a benefit performance by Srimati M S Subbulakshmi, the society was able to complete the erection of the main temple and instal the *moorthi* of the Lord Srinivasa of the same size as at Tirupati, along with the *moorthis* of other gods, goddesses and saints

The idols have been carved in granite under the overall guidance and supervision of Sri Ganapati, *sthapathi* of the Government School of Sculpture, Mahabalipuram, Tamil Nadu The *panchloha* idols or *utsava moorthi* of Srinivasa and His consorts was made by Ramaswamy *sthapathi* of Swamimalai, Thanjavoor District and the other *utsava moorthis* by Jagannatha, *sthapathi* of Kumbakonam, all receipients of the President's award for their skill in their respective arts.

The society has also been able to acquire the adjoining land and build on it a *pathasala* (school) for teaching the recitation of the *Vedas* and the Dravidian equivalent thereto, viz, the songs of Nammalvar and the other alvars and also the *Vedanta* in general

Swamiye Saranam Ayyappa

The worship of Lord Ayyappa, the legendary avatar combining the *Brahma-amsa* of Siva, associated with *jnana* and *tapas*, and the *Kshatra-amsa* of Vishnu, associated with *bhakti*, *prema* and *kripa*, was till recently confined to Kerala alone The Lord used to be always associated and identified with His ancient sacred temple atop the Sabari Hills amidst the lofty ranges and the dense green forests of the Western Ghats.

Innumerable devotees from different parts of the country and abroad congregate at the Sabari Hills during the *mandalam* period to have a *darshan* of the *Makara Jyoti*. Tradition has it that the pale dusk of the impending night of the 14th day of January, every year, heralding the month of *Makara* of the Hindu Calendar, a Divine Flow appears on the Western Ghats. To have the *darshan* of this magnificent sight which is reckoned as the Lord's Own manifestation, pilgrims prepare themselves for 41 days.

The Ayyappa Puja Samithi, R.K Puram, New Delhi was established in 1970 The Samithi's decision to construct an Ayyappa Temple in Delhi was not only to fulfil the cherished dreams of innumerable Ayyappa *bhaktas* in the Capital but also to develop the temple complex as a centre for national spiritual integration through spread of *Sanatana Dharma*.

After taking possession of the half acre plot in Sector II, Ramakrishnapuram, the Ayyappa Puja Samithi conducted a *Sthala Prasanam* and *Deva Prasanam* under the guidance of the renowned astrologer Kaimukh Vaidikan Brahmashri Parameswaran Namboodiripad. It was revealed that the temple site was a sacred *jalasaya* in ancient times and the Lord would be pleased to manifest Himself in the proposed temple The foundation stone was laid by His Holiness Jagadguru Shankaracharya Sri Swami Shantanand Maharaj of Jyotirmath Badrikashram, on September 14, 1977.

The Puja Samithi proposes to take up the next phase of construction of the temple complex without any let-up

Shankara Advaita Vidyashrama

Shankara Vidya Kendra was born on May 2, 1962. It was a happy concidence that the birthday of the Kendra fell on the auspicious day—Shankara Jayanti—the birthday of Shri Adishankaracharya. At the temple of Shri Chandrasekhara Swami, Shri Sharada and Shri Adi Shankaracharya regular *poojas* are being performed both in the mornings and in the evenings. *Vedaparayanam* takes place every evening. The cost of the building including the *gopurams* and *vimanas* has been estimated at Rs 5 lakhs.

The marbled harmonies of the *rajagopuram* of the Sri Vaikunthanathji Mandir (Sri Ranganatha Paduka Ashram) has gone up tier upon tier, in a diminishing upward sweep, above the surrounding flats at Bersarai, South Delhi. The temple, like most of the temples in the South India, has three components: (i) the *garbhagriha* (sanctuary); (ii) the *mandapa* in the middle and (iii) the *rajagopuram*.

It was way back in 1949 that a handful of residents of Delhi decided to have a forum for the discussion and propagation of the celebrated Vedic values and, in particular, the teachings of Jagadguru Sriman Madhawacharya. Soon a registered body Sri Madhwa Sangha appeared with the objective of providing the much-needed forum for organising activities which would uplift the spiritual knowledge of the citizens of Delhi.

May 7, 1980—the memorable day worthy of being embossed as a golden day in the annals of the Sangha, saw the culmination of the relentless efforts of a large number of devotees of Lord Krishna, Lord Anjaneya and Sri Guru Raghavendra. On this day the installation ceremony of Lord Krishna, Lord Anjaneya and Brindavana of Sri Raghavendra Swamigal in a beautifully sculptured *garba griha* adorned by a superb *vimana* of the Vijayanagara style of architecture was performed. The idol of Lord Krishna in glittering black stone is a faithful replica of the idol at Udipi which was consecrated by Jagadguru Sri Madhwacharya himself seven hundred years ago

Primary Object

As far back as 1950 a group of devotees in the Capital formed a Committee known as Sri Vinayaka Mandir Committee. The primary object of the committee was to instal Lord Vigneswara in the capital. A piece of land measuring about 500 sq yds was leased by the New Delhi Municipal Committee on the October 13, 1960. A small temple with a *garba griha* for Lord Vinayaka and *prakarams* around it was built out of the donations and the aid from the Madras Government. With the blessings of His Holiness Sri Sankaracharya Swamigal of Kanchi Kamakoti Peetham and His Holiness Sri Sankaracharya Swamigal of Sringeri Sharada Peetham, the idols were installed on August 24, 1961, in this temple built by the *sthapathis* from the South. The *kumbhabhishekam* was performed in the traditional South Indian style.

The capital is growing not only in size, but also in diversity reflecting faithfully the culture of the country. More temples are being planned by the devotees living in other colonies of the great city.

On visiting these temples one is struck by the self-expression through conformity to tradition. In the past the precincts of the temples were often the only venue for all social activities. The rich and poor alike had the benefit of these activities. In today's Delhi in the midst of disco songs and dances these temples are islands of faith and the deities to whom the structures are dedicated symbolise the supreme principle which control the affairs of the universe and give direction to *Sathyam, Shivam and Sundaram.* ■

Letter From Calcutta

Death Behind Bars

SOMETHING may at last be done about the frightful conditions in jails in West Bengal as elsewhere in India I do not mean that the three deaths in Dum Dum central jail in early January (allegedly from malnutrition, inadequate covering in severe cold and lack of medical care) was by any means the worst outrage brought to official notice Nor was Mr Rajesh Khaitan, the advocate and Congress (I) MLA, who petitioned Calcutta High Court for "protection and safeguard of the jail inmates under Article 226 of the Indian Constitution' necessarily moved only by pure altruism But the resultant uproar—with prisoners on hunger strike angrily holding on to the three corpses—may at last force the Government into action It has quietly shelved the three-part report of the West Bengal Jail Reforms Committee set up in 1978, but might think it wiser to take more notice of the findings of the chief reporters of *The Statesman* and *The Telegraph* who were ordered by Mr Justice P C Barooah to report on Dum Dum conditions

West Bengal has 52 prisons with nearly 12,000 inmates Overcrowding is no longer an acute problem but filth neglect and cruelty are Jails are insanitary places where undertrials live cheek by jowl with hardened criminals, lunatics and children who have nowhere else to go and desperately need care and protection But the most scandalous abuses relate to the manner in which jailors and superintendents are accused of running rackets in collusion with long term convicts Rations, bedding and medicines are withheld from newer prisoners to be sold outside or doled out only in return for bribes The rules stipulate rice wheat milk, sugar, tea, potatoes, biscuits and even mutton, but though charged for, these are rare luxuries behind bars How soever innocent he might be, a man who once falls foul of the law is at the mercy of the prison staff, and it is a miracle indeed if he emerges unscathed

"Massical" Music

AFFICIONADOS claimed to be disappointed by the quality of the fare but for Calcutta it was an exciting event when Pandit Ravi Shankar and Ustad Ali Akbar Khan played together in a *jugal bandi* after about ten years The dual *tabla* accompaniment was provided by Alla Rakha and his son Zakir Hussein

The quartet received a rapturous ovation the overflowing audience at the Netaji Indoor Stadium did not really need to be beguiled there with the promise of two tickets for every carton and a half of Four Square Kings cigarettes they bought (Four Square sponsored the show which had been organised by the Jalsaghar group) It would have flocked to the hall in any case There were some moving personal touches too Ravi Shankar went to Ali Akbar's home to practice the day before the concert, and George Harrison (remember him? One of the immortal four who with John Lennon, Paul McCartney and Ringo Starr once held the entertainment world in thrall as the Beatles) slipped quietly into town for what was surely the decade's most important musical happening

At a Press conference the day before, Ravi Shankar paid tribute to big industrial houses for having replaced rajas and maharajas as patrons of the arts, suggesting that they should enjoy some form of tax concession He also defended himself and Ali Akbar for spending so much time abroad to popularise Indian music and classical music for not competing with pop or disco music It was a medium for select listeners he argued, otherwise 'classical music will become 'massical music'

PILGRIMS go to Sagar Island in country boats

PANDIT RAVI SHANKAR AND USTAD ALI AKBAR KHAN in the jugalbandi after a decade

ENTRANCE to the Asiatic Society

Show Of Might

AFTER the latest killings in Tripura, West Bengal can no longer be imperious to what goes on in the north-east especially in Assam where the February polling may have a major bearing on the fate of Bengalis Perhaps this was why Calcutta Doordarshan concentrated so heavily on Army Day not on celebrations in our local Fort William but in Gauhati where Lt-Gen A S Vaidya the Eastern Command GOC in C inspected the parade It was a most impressive sight but the message was unmistakably clear—the men in uniform are there in force to put down any hanky panky by the All Assam Students' Union or the All Assam Gana Sangram Parishad

But it might be a little far fetched to expect the army to convert enemies into friends Race relations are sadly deteriorating in Tripura where the mid January murder of three politically prominent Bengalis revealed the extent of tribal antagonism Also indicative of the rigidity building up on both sides of the ethnic great divide is the fact that for the first time in history a member of the Amra Bangalee now sits as an elected member in the Assembly in Agartala

Deep Waters

THIS year's holy dip at Sagar island in the mouth of the Ganga has given rise to a most unholy controversy The *Sagar Mela* has continued from time immemorial, hundreds of thousands of pilgrims make the journey every *Makar Sankranti* to worship at the ancient temple of Kapil Muni and bathe in the waters Traditionally too, the festival is presided over by burly muscled priests from the Sri Panch Nirbani Akhara Hanumangarhi in the sacred town of Ayodhya in Uttar Pradesh The offerings go to them

As always, 20 priests came from Ayodhya in January and well over two lakh pilgrims attended the mela Then the Left Front set the cat among the pigeons by complaining that it was grossly unfair that it should pay for the entire organisation while the U P Brahmins take away more than Rs 15 lakhs in donations Nothing of the sort retorted the priests The collection was less than Rs 60 000 half of it had been spent on improvements on the island and the rest would be used for social welfare in Ayodhya In any case what right had an atheist and anti religion" Government to dictate to priests who claimed descent from Kapil Muni himself?

Another controversy revolves on the land occupied—illegally suggest the authorities -by social welfare organisations like the Kashi Viswanath Seva Samity Hanuman Parishad and the Rani Seva Samity The police were also at odds with civil defence personnel who were accused of extorting money from pilgrims, there were fights and arrests and the *mela* apparently drew more than 2 000 criminals from all over India

Society In Distress

THE venerable Asiatic Society limped into its 200th year on January 15 groping in vain for the financial crutches that alone will enable it to complete two centuries in 1984 in some semblance of reasonable health The Society was once Asia's foremost centre of Oriental studies, it was certainly the first to be set up and its *Journals* and a series of publications titled *Calcutta Past And Present* have become valuable collectors items Its collection of books manuscripts and paintings is still probably the best of its kind in India

But money is in desperately short supply for the Society which ekes out its hand to mouth existence on ad hoc grants from West Bengal and New Delhi How niggardly these can be was revealed when it became known that the Centre's last allocation (a measly Rs 1 46 lakhs) was received in February 1982 Not a paise since then West Bengal's total help during 1981 82 amounted to a magnificent Rs 2 10 lakhs!

New Delhi is apparently prepared to be more generous but on its own terms It wants to make inroads in the Society's autonomy with a board of management for the library and publications and possibly also full time officials as director and general secretary The West Bengal Government is said to harbour similar ambitions There are also disputes within the organisation and the president (Dr Pratul Gupta) and secretary (Mr Amalendu De) say they were not present when the governing council for 1983 84 was recommended

It would be pleasant to be able to support the Asiatic Society against official encorachment but unfortunately the confusion in the Society's affairs and the decline in its standard as well as the neglect of its literary heritage make such championship rather pointless

Magic Rail

MRABA Ghani Khan Chowdhury our magician from Malda did not say that Calcutta's underground trains would run at sputnik speed as he himself claims to do But he has promised that the 16 43 kilometre section between Esplanade and Bhowanipore will be ready by the end of the year which has surprised the Metro Railway authorities no end This was supposed to have been operational in 1984 but the U Rail way Minister has waved his magic wand and the Metro authorities are hurrying ahead so as not to disappoint him

Technically this is the least complicated section of the project since the track will run under the Maidan where there are no buildings above or underground drains pipes cables or other obstacles But the air conditioning and ventilating systems are nowhere near ready and trial runs of coaches to test their electronic control mechanism are still going on In fact the Metro now has only eight coaches made by the Bharat Heavy Electricals for initial tests it is waiting for another 12 so that a train of 20 coaches can be run for two years on a trial basis Safety would not otherwise be guaranteed they say

But ministerial wishes cannot be disobeyed so technical considerations must go by the board In any case the Maidan stretch will be of little help to harassed commuters They may not ever use it which would be even better since the trains and track are likely to be imperfect An empty underground may not serve any public purpose but at least it will lend substance to Mr Ghani Khan Chowdhury's boast ■

Sumita Sandilya

Letter From New Delhi

▲ *FAREWELL TO APPU. The closing day ceremony at the IX Asiad.*

by N. Iqbal Singh

THE IX Asiad has come and gone. Few people, even in Delhi, realise that apart from the seven new flyovers and widening of 290 kilometres of Delhi roads and planting of 400,000 new trees, Delhi is going to have a sort of special bonus which will take myriad forms. For instance, South Delhi will now have a permanent ultra-modern auditorium, totally air-conditioned and with all the latest gadgetry, for its cultural shows; it has a seating capacity of 2,250 and a stage larger than any other in Delhi. Then, the Centre is going to be a gainer, because we are going to have an additional fleet of 290 public buses; an electrified ring railway; 3,500 more rooms in the 12 new hotels that have recently been constructed; 1,600 new telephones and 80 telexes. Another boon: new equipment to control air pollution resulting from the belching chimneys at the Indraprastha power station. And much more. Not to forget colour television which brought the Asian Games to thousands of homes.

A pleasant hangover of the Asiad, if I may take the liberty of coining that expression, was the organisation of two exhibitions—one, the Rodin exhibition, which synchronised with the visit of President Mitterand of France and Madame Mitterand, and the other an exhibition of Sports and Games in Indian Art, organised by the National Museum, New Delhi.

Much has been written about the sculpture of Rodin, but the exhibition of Sports and Games in Indian Art did not receive the attention it deserved. It comprised almost a couple of hundred items, starting with a miniature chariot from Mohenjo Daro and some chess pieces and dices in clay and stone from circa the 3rd millenium BC and went on to show some of the finest Mughal, Kangra and Rajasthani miniatures. Quite a few of the miniatures really stood out, like Radha and Krishna playing chess (Bundi) or Chand Bibi playing polo (Deccani) or Rama and his brothers playing ball (also Deccani); the Mughul miniature depicting wrestling and another one of Babur witnessing wrestling bouts and animal fights taken from the Baburnama (1598 AD). There were also some manuscripts which included a work on archery in Persian by Hidyat-ul-Ramy in the Nastaliq script and a treatise on ball playing from Raghuvamsa by Kalidasa in Sanskrit (Nagari script—17th century). Then you had javelins inlaid in ivory and swords with gorgeous handles encrusted with precious stones. The prize exhibit, to my mind, was the 12th century Hoysala sculpture of a huntress. Some very rare coins were also on display; they included a gold coin showing Chandragupta II (Vikramaditya) slaying a lion, and another one, also in gold, with Kumaragupta I on horseback.

Unusual Exhibition

Talking of exhibitions, an unusual exhibition, perhaps the first of its kind in New Delhi, was recently mounted by Puratan, a society only three years old, founded with the objective of creating "more meaningful interest in Indian art and culture". On display were a large number of lithographs and engravings and as many as 130 maps of India made during the period 1522 to 1880. To us, who are now used to maps made to scale and accurate to the nth degree, many of the maps on display appeared to be grotesque, but that was only to be expected because all the maps made during the early days were based on word of mouth accounts of what the travellers had seen and noticed. And most of the travellers were seafaring men interested primarily in trade. No wonder, therefore, that the cartographers were confined to men belonging to imperial powers like the Dutch, the Portuguese, the Spaniards, the French and, of course, the British.

BATHSHEBHA, pencil, stump and watercolour by Auguste Rodin. (The annotation at bottom right is in Rodin's handwriting.)

The etchings and engravings that one saw began with the advent of the eighteenth century and went on till the dawn of the era of photography. Most of the drawings in the earlier days were done by wives and daughters of British dignitaries, for to be able to draw and paint was then considered an essential equipment for the "well bred" woman. Among them were the Eden sisters and many others, and to them we owe some excellent pictures depicting the contemporary scene. Then there were people like the Daniels, who drew not only the people but ancient monuments and many other facets of Indian life and the environment in which the Indians—and the rulers of India—lived. Another group of artists were those sent by publishers who were interested in publishing books on India and the Orient, to be on the spot to record faithfully what they saw.

The collections of maps and engravings were obviously gathered with a great deal of painstaking effort and enthusiasm by two Delhi women socialites—Susan Gole (maps) and Meenakshi Devi (engravings).

Gandhi—A Major Experience

Much has already been written about the film *Gandhi*. I must admit that when I went to see it I did so with great expectation, but at the same time with a great deal of trepidation for the simple reason that one didn't know what to expect. There had been such contradictory reports, based mainly on hearsay and rumours. Some had

"TEARS COME EASILY AND SEVERAL TIMES". Kasturba (Rohini Hattangadi) teaches Gandhi (Ben Kingsley) how to use the spinning wheel in Richard Attenborough's film.

said it was terrible, others that it was marvellous. So one literally held one's breath when the film came on the screen. Yet, within the first few minutes one became conscious of the fact that one was in for a major experience. *Gandhi*, despite its minor historical inaccuracies and failure of our actors, is a great film. It is extremely moving and, as a friend from London wrote to me in a letter, "tears in one's eyes came easily and several times". Ben Kingsley as Gandhi is superb and Gandhi emerges as the colossus that he was. Viewed from that point of view, *Gandhi* is an unqualified success. Yet, to those of us who had the good fortune of seeing something at close quarters of leaders like Nehru, Jinnah and Azad and some of the others, it seems such a pity that they are portrayed not as they were but as mere cardboard characters. I shall never forget a dinner meeting with Jinnah sometime in 1936 in Lahore at the house of mutual friends. Since there were only four of us, Jinnah could afford to be himself. In spite of his obvious arrogance, he had a great deal of charm and undeniable brilliance, none of which comes across. This was just before the 1937 elections to the provincial legislatures. He was full of hope and was convinced that the 1935 Government of India Act would work and, if the Congress and the Muslim League were to form coalition governments in the provinces, it would mean a major stride towards independence. (Incidentally, he was sipping brandy with soda all the time while he was talking before, during and after dinner.) I shall also never forget my two meetings with Nehru. Once, in Lahore in early 1938, again in mutual friends' room in Faletti's Hotel where Amrita Sher-Gil was also present. (Nehru sipped sherry.) He was tired and yet the way he spoke, softly and with such charm, his face which was so mobile, his eyes that had a glow, his humanity, his good looks—they are unforgettable.

My second meeting was in early '47 when Dr Sutan Shahriar, the first Prime Minister of independent Indonesia, had come to attend the Asian Relations Conference and was staying as Nehru's guest in his house on York Road. I was then in All India Radio and there had been some mix-up about his proposed broadcast. I was talking with Shahriar when Nehru came down the staircase. He joined us and in no time at all was able to persuade Shahriar to do the broadcast. He was bare-headed and looked like a Roman emperor, but what I remember most was his graciousness and dynamism. I was reminded then of what Amrita had once said to me: "Nehru is so good looking that I can never paint him." I could go on and on and talk also about Patel—he was so grim that one never got close to him—and Maulana Azad and Abdul Ghaffar Khan and others. But it would be an exercise in futility. Attenborough's objective was to recreate Gandhi, and he has done so magnificently. In fact, he has resurrected Gandhi. And to a generation who didn't know the others, or to the foreigners, the others don't matter. In the circumstances, there is no denying the fact that *Gandhi* is a great film. And what is more it is a very human document. Let us hope some one else will, in time to come, be able to make similarly great films about Nehru and other leaders of the time and do them justice!

Truffaut's Adele H Here

Visiting Delhi currently for a prolonged stay with friends is the great, great granddaughter of Victor Hugo. I asked Adele Hugo, for that is her name, what made her come to India. She said she had always wanted to come here ever since she read some of the verses that Victor Hugo had written about India. Yes, she added, it shows that her great, great grandfather was obviously attracted by the Orient, and particularly to India, else why would he have chosen to compose verses about this country! Adele paints in watercolours and pastels and graduated in art from the Chelsea Art School in London (her mother was English). Since coming to India she has taken to painting on fabric and has painted a large number of cushions which have become so popular that they are selling like the proverbial hot cakes. Painting is in her blood, she told me. Victor Hugo himself indulged in painting. He mostly did pen and ink washes, and you find a large number of them on display in Musee Hugo in Place des Vosges in Paris and in the Museum named after him in Guernsey in the Channel Islands where he spent 20 long years as an exile for his opposition to the Napoleonic regime. Her grandfather, George Hugo, was also a painter and painted in the Renoir style. So was her father, Jean. Jean's speciality, said Adele, was painting landscape and *nature morte* in oils and gouache. In the twenties, he did some theatre designing for Jean Cocteau. So art does truly run in the family. Apart from painting she wishes to travel and see something of the real India. In the mean while, she is trying to learn something of Indian culture—mainly by seeing and listening, she hastened to add. Hindustani music, both classical and light, she seems to have taken to. Listening to it, she said, struck some kind of a sympathetic chord. Apart from Ravi Shankar and Ali Akbar Khan, whose duet she heard during the Asiad, she said she was full of admiration for Asad Ali Khan, whose playing on the vichitra veena she found masterly. She also enjoyed the folksy style of music which she heard Ghulam Ali from Pakistan sing. She loves Delhi's old monuments and expects to see more when she sets out on her travel to other cities in the country. She is in no hurry to go back, she told me, because she has friends who would like her to stay on and also because she loves the friendliness of the people she has met here. And she also likes Indian curries! ■

In The States

Seeking Rural Health And Wealth

V. R. Krishnan

MADRAS: Not long ago, a doctor on weekly rounds of a village in Tamil Nadu, as part of the rural health care programme, was approached by an old farmer for treatment of ear-ache. The following week, the doctor was surprised to see the old man back in the queue, this time complaining of some other ailment.

"It occurred to me on the spot," recalled young Dr Daleep S. Mukharji, "that malnutrition due to stark poverty was the root cause of the recurring ailments. Therefore, medical health by itself was not the answer. Maintenance of proper health relies on well-planned socio-economic development, and any model of primary health care for rural India must include an integrated multi-disciplinary approach, bringing together the resources of the people, the Government and voluntary agencies in achieving total community development."

The result of such bold thinking was the birth, three years ago, of an unusual rural development organisation called Rural Unit for Health and Social Affairs (RUHSA).

Its aim is not only the cure of bodily ailments but also to help improve the social, educational and economic status of the rural folk. The objective is to serve the whole man in the totality of his being, and in doing so, make rural India relevant to modern India," explains Dr Mukarji

RUHSA is attempting to implement such an ambitious programme by interesting banks, industries, Government authorities and the villagers themselves to work together for meaningful social change.

Born in Lahore in a progressive family of prominent educators and civil servants and educated in Darjeeling, Daleep took his medical degree from the Christian Medical College at Vellore. After working in rural health projects for some time, he received specialised training at the Tropical School of Medicine in England and and enriched this with a course in social planning at the famed London School of Economics.

It was fitting that Dr Mukarji's bold concept of socio-economic development as a prerequisite to good health should have been taken up by his alma mater, the CMC Hospital. Fitting, too, that the region selected for implementation of the unique concept should be a backward rural area—the K.V. Kuppam Block comprising some 90 villages with 100,000 people sustaining themselves on marginal farming and a usually unpredictable monsoon.

RUHSA's total development concept is sought to be achieved by "team approach"—a four-member team, comprising an agricultural expert, a non-formal educationist, a social affairs specialist and a medico work together in each village. The teams pay special attention to the educated unemployed youth in the villages. These are considered an important resource available to the village community and therefore must be encouraged to stay behind and contribute to its welfare. Through proper training in self-employment projects, the youth are helped to play a significant role.

Housewives, too, are taught simple craft which RUHSA markets in the cities, providing a source of vital income to help ease the family budget. Housewives are also trained in basic medical aid and child care and nutrition.

It is well-known that inequality and social injustice are the result of traditional domination of certain privileged classes upon whom the rural poor depend for their daily subsistence. This inhibits them from taking initiative and decisions of their own to improve their lot in society. RUHSA has helped to break this vicious circle by encouraging them from cooperatives, mostly in dairy and poultry farming. In related activity, RUHSA has organised a broiler unit, a mulberry crop and silk-worm rearing unit for supplementing the income of seasonal farmers.

More important than the immediate material improvement is the change in outlook of the K.V. Kuppam people, instilling in them an ambition for a richer and fuller life.

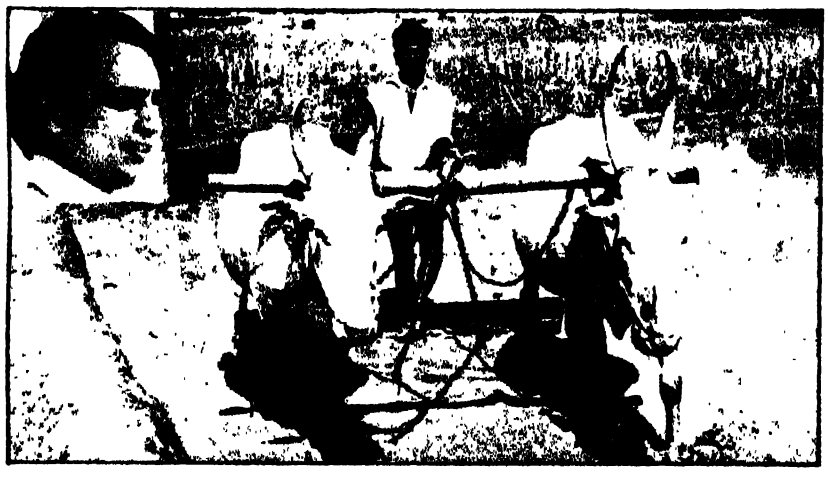
"Once interest is aroused," notes Dr Mukarji, "people acquire new skills of organisation." But, he emphasises, "While organising the rural poor, their confidence has to be won. They must be assured that the organisation will provide concrete services and solutions to their problem. They must be actively involved both in its working and its servicing activities." Keeping this in mind, "We work with the entire community, not with any particular section in the village," he adds.

The result of RUHSA's pioneering effort over the past two years is obvious to any discerning visitor to K.V. Kuppam Block in the North Arcot District of Tamil Nadu, located some 100 miles from Madras city.

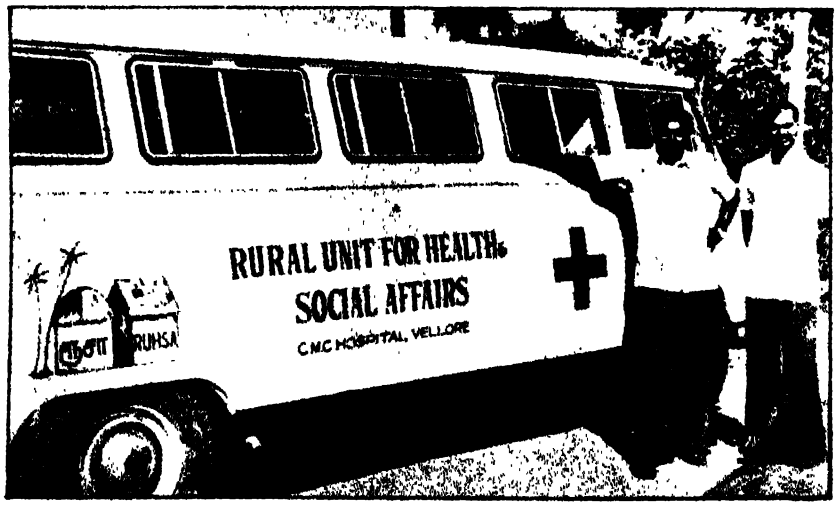
As one community welfare expert put it, "K.V. Kuppam's once backward status is now being slowly transformed to one of all round prosperity for the men and women as also the youths and children of the block."

No wonder, then, that at 36, Dr Mukarji is the youngest recipient of the prestigious Dr B.C. Roy Memorial Award for outstanding service for community welfare.

It is time that the RUHSA experiment at K.V. Kuppam Block in Tamil Nadu is taken up by scores of blocks in every State of India. ■



BOLD THINKING. Dr Mukarji (inset, right) realised that medical health alone was not the answer to rural well-being. So he launched the RUHSA. He is the youngest recepient of the Dr B.C. Roy Memorial award



One Poet's Search....

BANGALORE: Archaeological excavations usually carry an air of romanticism and adventure about them. But how accidental they really are was recently borne out by the discovery of the home of Harihara, a rebel Kannada poet of the 12th century.

Professor M. Chidananda Murthy, Head of the Department of Kannada at Bangalore University is an authority on dates and places and can count off on the tips of his fingers all the well-known age-old Kannada works, sculptures and engravings. Harihara is his favourite subject.

This poet's works, particularly his *ragales* (couplets), are known for their beauty and precision. Prof. Murthy feels that his epics are still important to us because of the conviction they carry, a conviction that is still relevant in contemporary society. He fought for Harijan welfare, deploring the decaying values of the upper classes in that period. He was a firebrand to begin with, later he became a spiritual recluse, living in the precincts of the temple of Lord Virupaksha at Hampi (160 kms from Bangalore), then the glorious capital of the bygone Vijayanagara empire.

By Indian Design

CHANDIGARH: Joginder Singh Sindhu, a student of Punjab University, Chandigarh, has developed what is claimed to be the world's smallest camera.

Weighing only 2.5 grams, it is about 10 times smaller than the Japanese-made *Petal* listed as the smallest camera by the *Guinness Book Of World Records.*

Joginder's camera, named *Santokh* after his father, is only 1.4 cms long, 0.9 cms wide and 0.9 cms high. It has a focal length of 0.4 cms. The lens is nearly three times smaller than the lens of the Japanese camera and has several additional features, including variable aperture, shutter speed and flash-gun attachment.

It took Joginder three months and Rs 4,000 to design and produce the

SUCCESS BY ACCIDENT A happy coincidence led Professor Murthy into uncovering the home of 12th century Kannada poet Harihara.

Prof Murthy's favourite book, however, has been a biography of the poet, written by his brother-in-law, eulogising the works and life of Harihara During one of the innumerable readings of the book, one line, hitherto unimportant, appeared, to Prof Murthy, quite illuminating The line, *Naganathana Purovrithiappa Vahana Grihovannu Therapu Galisi* (the place reserved for Naganatheswara's chariots and other temple vehicles was redecorated and was donated to Harihara to live), triggered off Murthy's enthusiastic search for the exact site of the poet's home His innumerable visits to Hampi, the site of all great ruins, were in vain since the Naganatheswara temple was not found anywhere in that famous ancient city.

However, a friend of the Professor, who shared his enthusiasm on a recent visit to Hampi, happened to witness the renovation of an ancient temple by the Archaeological Department He was told that the temple was the Naganandeshwara, which in his overenthusiasm, he heard as Naganatheswara Professor Murthy rushed to Hampi only to find that the temple being renovated was Nagonandeshwara and not Naganatheswara Disguising his disappointment, he went round the temple, peering at every carving and scrutinising each slab when he accidently stepped on a stone with *Sri Naganatheswara Temple, 144* engraved on it It was clear that for centuries the people had been worshipping the idol as Naganandeshwara!!

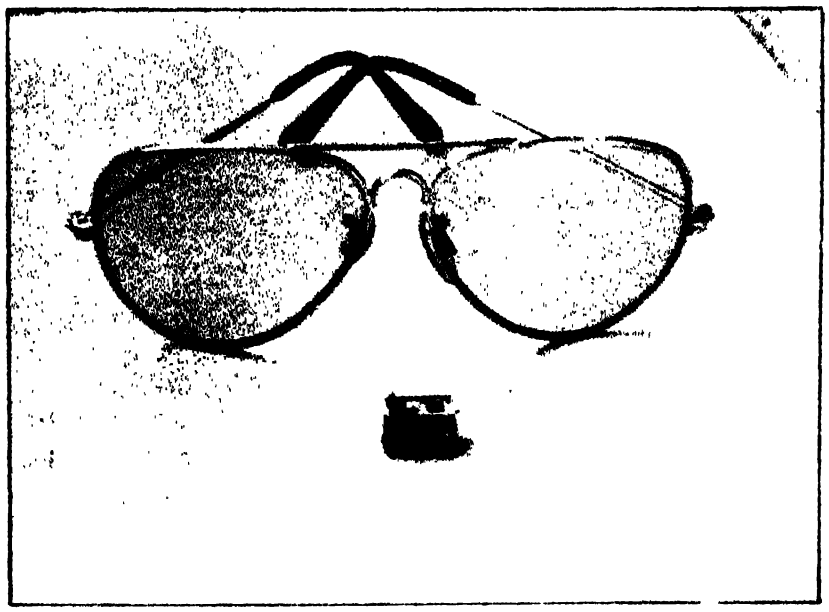
Having found the right temple, locating the ancient garage for the chariots was easy Even the *Amrithakund* (the holy pond, on the banks of which the poet was supposed to have lived) mentioned in the biography was located

At last one poet's search for another poet's home was over.

M.N. Chakravarthy

Woodcraft

*ALL ART IS BUT IMITATION OF NATURE So said the Roman philosopher Seneca The truth of his observation is proved by the work of Kota-based Western Railway diesel driver Yagya Dutt (above) to whom "art is not the bread but the wine of life" He looks for the odd-shapes among knobbly branches and gnarled stems and knocks them into various shapes without drastically altering the form Two of his pieces presented here are the Raja and the Panchhi By contrast Advocate Dilip Deshmukh of Akola (below left) loves to fashion shapes out of bamboo using the blade, the knife and *Fevicol*. He has had no formal training in the craft but his experience is considerable and his craft-works well finished*



INDIAN ENTERPRISE A young couple from Chandigarh have designed what, one must believe, is at present the world's smallest camera.

camera. In this task he was helped by his fiancee, Charanjiv Kaur. As a matter of fact, he designed the camera only because she is interested in photography! Charanjiv is adept at needle work and her expertise came in handy for precision drilling and tooling of the camera.

The camera can be used for espionage and for taking photographs of vital human organs from inside the body. It can be swallowed like a capsule Joginder is now developing a system to operate the camera through remote control. It will cost less than Rs 500 if commercial production is undertaken, he claims.

Joginder is applying for a patent in the United States of America.

BPL-TV COLOUR TELEVISION

A new dimension in Colour, Vision and Sound

BPL-TV is manufactured with the latest Japanese technology. And is brought to you by the **BPL GROUP**. Which, with over 17 years in the electronics business, 5 companies and 7 integrated factories, has vast experience in six sophisticated areas of electronics: Computers, Communication, Components, Instrumentation (Industrial, Medical, Measurement), Office Equipment and Consumer Electronics.

Six Fabulous Features:

- Protected from voltage fluctuation from 130 to 290V.
- Pin-cushion distortion-free colour picture tube from Japan. Ensuring high quality picture.
- Electronic VHF/UHF tuning with 12 soft push buttons.
- Latest LSI technology. Ensures high reliability.
- Fire Retardant PCBs and Fusable Resistors. Eliminate fire hazards.
- Prompt and effective after sales service.

BPL-TV COLOUR TELEVISION

The best in colour technology from Japan

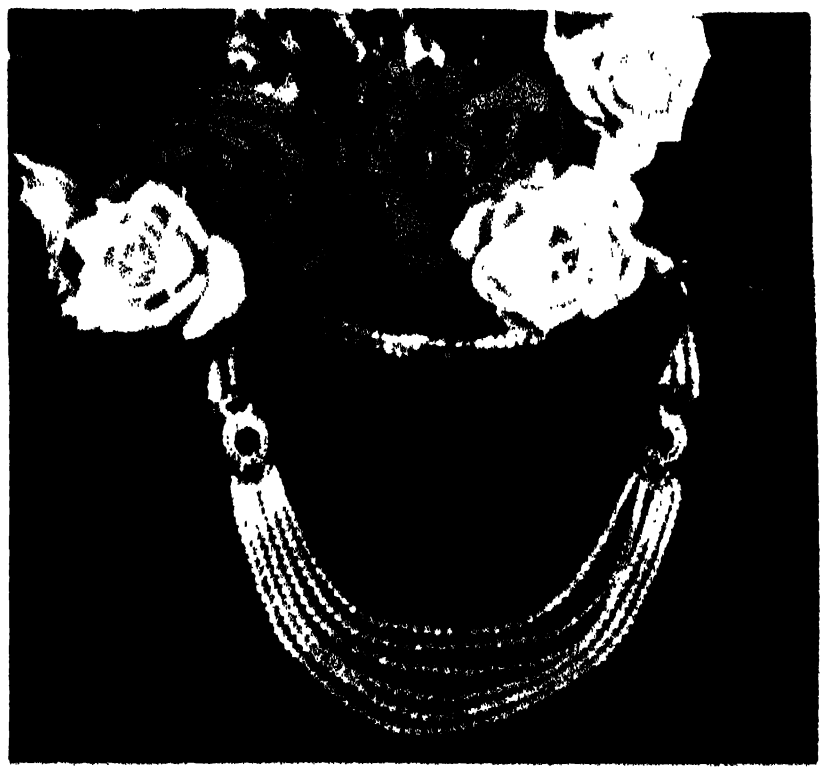
Sparkle And Glitter



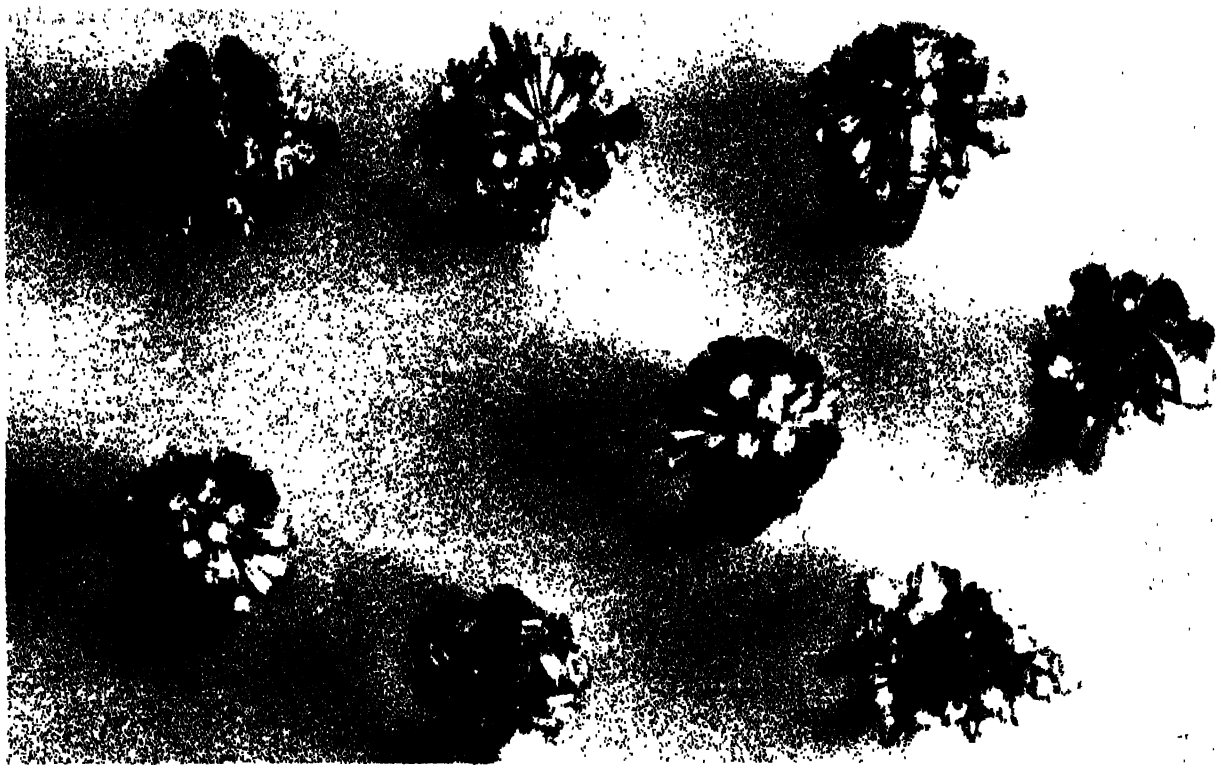
It seems ironical that India, a veritable gemhouse, imports large quantities of precious and semi-precious stones. Moreover, the bulk of these gems, after cutting and polishing, are exported.

by Meera Pandya

THE glittering rubies, sapphires, emeralds and other precious and semi-precious stones which adorn the women of our country and seem so plentiful here are almost all imported But what we see is only a tiny fraction of the gems that come into India because the bulk of them are exported after cutting and polishing. Rough precious and semi-precious stones worth Rs 1666.49 lakhs were imported between April 1981 and March 1982 and finished gems valued at Rs 3642.17 lakhs were exported Cheap but skilled labour keeps the stone cutting flourishing in India.

It is not that stones are not available in this country; they are and in plenty The Gemmological Institute of India lists 70 precious and semi-precious stones- seven of them man-made. Of the 60 that are mined, 30 are found in India in varying quantities. According to a dealer of these stones, the apathy of the Centre and the State Governments in mining of precious and semi-precious stones is to blame for not giving the necessary boost to this industry. The Geological Survey of India, though it has all the information about deposits, has not undertaken any mining. Private individuals get vague answers when they approach this body for mining rights. This is regrettable since the stones, being very much in demand abroad, could earn valuable foreign exchange

Tamil Nadu is a virtual "goldmine" for gems Rubies, sapphires, garnets, aquamarines, moonstones, iolites, zircons and tourmalines can all be mined here. In fact, rubies can be found just five feet below the ground Illicit mining by villagers is rampant While Kerala is famous for the cat's eye, Karnataka abounds in rubies, aquamarine and aventurine (jade) Rubies, amethysts and aquamarines are found in Andhra Pradesh Madhya Pradesh also has rubies Agate is located in Gujarat and Maharashtra, especially in the Aurangabad belt



CORAL BEADS IN THREE SHADES Extremely popular among a vast majority of Indian women, it is usually worn according to the dictates of the horoscope

RINGS STUDDED WITH DIAMONDS rubies and sapphires. Rubies are found in Tamil Nadu while the Kashmir sapphires are among the best in the world

A NECKLACE OF MALACHITE beads Semi precious stones attract foreign buyers for their relatively low prices. For example, a string of garnets is available for as little as Rs 30

India's Gemhouse

Orissa, a relatively new entrant in the field of gem mining, can compete with Tamil Nadu for the title of gemhouse of India Garnets, aquamarines, topaz, sapphires, alexandrites and emeralds are abundant in this State

Kashmir has the finest sapphires The stones from this area are intensely blue with a velvet translucence not seen in other areas They are mainly found in the Zanskar range of the Himalayas. Large-scale mining of sapphires can prove to be very lucrative for the country

Emeralds, rubies and sapphires are precious stones while the rest fall into the semi-precious category. Rubies can cost up to Rs 50,000 a carat, emeralds Rs 45,000 and sapphires about Rs 15,000 Garnets, of which several varieties are available, are the cheapest– a string of them is available for as little as Rs 30 Prices depend on demand, colour, clarity, lustre and size of the stone Rubies valued at Rs 100 a carat can also be found in the market

Appraising the stones is best left to experts as a layman can be very easily cheated. Your eyes may sparkle at the sight of a big lustrous emerald, but beware! Flawless emeralds are extremely rare and most specimens are marred by

→

flaws and inclusions which greatly reduce their transparency. Indian rubies are of a fine red colour but are not transparent. The finer specimen, a rarer variety, are translucent and of a medium colour. In contrast to the Kashmir sapphire, those found in South India are of a much poorer quality.

Apart from the precious and semi-precious stones already listed, the following also figure in the GII chart as being found in India: amazonite, apatite (blue and green), bloodstone, bowenite, chrysoberyl, chrysoprase, cornelian, hematite, kyanite (rarely cuttable), onyx and sardonyx. Diopside, enstatite, idocrase and sphene are also to be found in this country.

Trade Centre

Jaipur is the trade centre for precious and semi-precious stones. Stone-cutting is often a family business and these small units fall under the cottage industries sector. Some units are also located at Bombay and Cambay. Stones are most often cut in calibrated sizes to facilitate the making of cast jewellery which is done by machines. The most common shapes for cut and polished stones are oval, octagonal, pear, round, marquis, square and cabashone.

Stones are imported from all over the world. Emeralds come from Brazil, Zambia and Zimbabwe, rubies from Kenya and Thailand, sapphires from Australia and Thailand, golden topaz, though mined in Brazil, is imported from West Germany and the United Kingdom. Peridot comes from USA.

DIGGING FOR EMERALDS. This piece of calcite may contain a fortune in emeralds or it may contain nothing!!

According to the provisional figures made available by the Gem and Jewellery Export Promotion Council, India imported rough stones worth Rs 16666.49 lakhs between April 1981 and March 1982. Of the total, precious stones accounted for Rs 1578.98 lakhs. Main contributors to the total imports were: Belgium—Rs 50.30 lakhs, Hong Kong—Rs 156.70 lakhs, Switzerland—Rs 367.28 lakhs, United Kingdom—Rs 386.05 lakhs, USA—Rs 546.40 lakhs and West Germany—Rs 54.40 lakhs.

During 1981-82, cut and polished stones were exported to over 31 countries. The biggest markets were: USA (Rs 1133.26 lakhs), West Germany (Rs 582.74 lakhs), France (Rs 524.21 lakhs), Switzerland (Rs 468.56 lakhs), Hong Kong (Rs 458.04 lakhs), UK (Rs 209.04 lakhs), Singapore (Rs 160.56 lakhs) and Italy (Rs 131.12 lakhs). Garnets fetch a good price in West Germany whereas agates are more favoured in Africa, especially Nigeria. Sphene, a dark, olive green stone, has recently become very popular in USA. Gulf countries prefer gold jewellery studded with stones.

Imports and exports of precious and semi-precious stones have both shown increases compared to the previous year. Imports which stood at Rs 1023.93 lakhs in 1980-81, jumped to Rs 1578.98 lakhs the next year. Net exports registered a significant increase by going up from Rs 2813.39 lakhs the previous year to Rs 3642.17 lakhs in 1981-82. ■

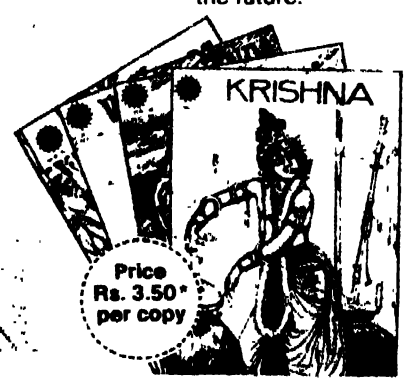
Amar Chitra Katha

Fascinating Picture Stories of the past. That teach so much about great people. Great events.

Yes. When a child reads Amar Chitra Katha — he takes a very important step on the road to learning about his heritage. The rich spectacle of India's past. Now vivid and alive in exciting picture stories. That entertain, even as they teach.

Page after page -- a world of myth and legends, battles and bravery, great people and great events — unfolds with colour and imagination. Shivaji. Parashurama. Rana Pratap. The Rani of Jhansi. They all come to life in the 278 titles of Amar Chitra Katha. Available in 6 regional languages, as well as in English and Hindi.

Amar Chitra Katha. What more could a child ask for? It's not only learning history while having fun. It's learning to be proud of a great country. And keeping sight of the past — while preparing for the future.



Annual subscription of Rs. 84/- for 24 issues of Amar Chitra Katha to be sent to:

Partha Books Division
Nav Prabhat Chambers
Ranade Rd , Dadar, Bombay 400 028

(Rs. 3/- extra for outstation cheques)

Amar Chitra Katha

Marketed by:

That's Business

From Our Special Correspondents

D.N. PATODIA, President of FICCI and Chairman of Springs India Ltd

Campaign For VAT

WITH the budget approaching, the long-standing demand for tax reform is again gathering momentum. "Why is the Government sitting over the reports of the Wanchoo Committee, the Chaksi Committee, the Jha Committee and the Economic Administration Reforms Commission?" is the common refrain at business get-togethers: An articulate voice is that of Mr D.N. Patodia, who heads FICCI's (Federation of Indian Chambers of Commerce and Industry) sub-committee on taxation and is in the vanguard of the campaign for value added tax (VAT).

He explains that VAT means tax on the value added to an item as it moves from stage to stage, starting with the manufacturer and ending with the consumer. It is thus not a single-point tax but a single-concept tax. Mr Patodia asserts that if the present excise duty-sales tax-octroi system were to be replaced by VAT, as has been done in West European countries, two advantages would accrue: one, there would not be the cascading inflationary impact of multiple excise duties that a manufacturer has to pay on his inputs; two, VAT is conceptually simple and would avoid the bottle-necks, corruption and litigation that flourish under the present system.

Mr Patodia, who is Chairman of the Sahibabad-based Springs India Limited, one of the two companies in the country making metallic precision springs, does not agree with Mr L.K. Jha's limited concept of MANVAT—value added tax only at the manufacturing stage: "When we can cope with the present system, it is surprising that he considers us insufficiently trained to handle a full-scale VAT."

The "Other Car"

While the country waits for the first Maruti-Suzuki to roll off the assembly line, a four-wheel Dolphin has been put on the road. This "other car" is a neat, compact two-door vehicle, smaller than the Volkswagen beetle. It is being assembled in collaboration with Reliant Motors of the UK. Moderate size sheds have come up on a five-acre plot in Bangalore's industrial area on Tumkur Road.

According to Mr R.K. Sipani, the 39-year-old entrepreneur who has nursed the project since 1979, there is a design in keeping a low profile "until I touch the peak production level by March 1983". Considering that he has averaged no more than 30 cars per month since September, the time-frame he envisages for optimum production seems most unrealistic.

How did he get permission from the Union Ministry for Industry to manufacture a car with British collaboration in the first place? Mr Sipani started ten years ago with his ambitious three-wheeler project, Badal. For reasons beyond his control, the project collapsed after he had produced about 1,000 Badals, and even attempted a four-wheel contraption. Since Government allowed import of technology to existing industries, Mr Sipani staked his claim and walked away with a licence. First, two Dolphins were imported. These were paraded in Bombay. Before long, he had collected a substantial advance from dealers and buyers for about 2,000 cars, enough to invest in his new enterprise. Then came the engine, the moulds for the fibre glass body and experts from Reliant Motors to train local hands.

Already about 100 cars are on the road, nearly 60 of them in Bombay. Dolphin is priced at Rs 80,000. And now, when Maruti-Suzuki are claiming concessions in import duty, etc to be able to price their ware at Rs 45,000, Mr Sipani is also hoping to edge in sideways to obtain similar concessions.

New Interest In India

West European investors may not be itching to come to India but they seem to be interested, if my conversations with some participants at the recent Indo-EEC conference are any indication. While complaining about this country's restrictive policies and tardy procedures, a lot of them feel that the irritants are made up for by the positive factors.

Sir Cyril Pitts, President of the British and South Asian Trade Association, seems to speak for a fair number of EEC businessmen when he says: "You have political stability, a large market and a reservoir of trained manpower. The huge IMF loan testifies to your creditworthiness. In any case, we have learned to expect rules and regulations in the developing world." The company he heads in London, Peter Brotherhood, specialises in steam turbines and compressors. (It has a technological tie-up with Triveni Engineering.) Sir Cyril is also a consultant to Northern Engineering Industries, which is leading the British consortium entrusted with the Riband super-thermal project.

SIR CYRIL PITTS, President of the British and South Asian Trade Association.

That Dr Cesare Rossi, Vice-President, Stalviscosa Eastern Trading, Milan, should also consider India's creditworthiness a major factor is perfectly understandable. Recently, his company lost over $100 million in Mexico as that country slid into bankruptcy. Dr Rossi has technological collaboration with Baroda Rayon and South India Viscose of Coimbatore. As President of the Indian Section of the Italian Chamber of Commerce, he is trying to encourage Indo-Italian tie-ups at the small and medium level, pointing out "The big ones are already there." Mr Stefano Bianchi and Dr Alberto Pesce of the Italian Machine Tool Manufacturers Association evince no less interest in doing business in India. They assert that their technology is as good as the Germans' and the Americans'—and cheaper.

Is the recession compelling West European businessmen to look afresh at the Indian market?

A Review Long Overdue

By setting up a committee to review the monetary system, the Reserve Bank of India has taken a step that was long overdue. The last time the country's monetary system was comprehensively studied was as long ago as 1925-26 when the Hilton-Young Commission was appointed. The Central Banking Enquiry Committee of 1929-31 examined structural details but did not study the monetary system as a composite whole. The terms of reference of the Banking Commission of 1968-70 were too narrow because the RBI, prone to be treated like a holy cow, was excluded. The Banking Commission of 1976-77 proved abortive because its Chairman quit to contest the 1977 elections. Then there have been the committees headed by Mr Prakash Tandon, Dr K.N. Raj, Mr Chore and Professor Dantwala. These provide good analyses of specific banking problems but, again, none of the committees could go into the principles and policies of the monetary authorities—the Finance Ministry and the RBI.

Professor Sukhamoy Chakravarty of the Delhi School of Economics, who heads the new committee, has been given a rather free hand, as is suggested by the first term of reference: "To critically review the structure and operation of the monetary system in the context of the basic objectives of planned development." At present, the professor is unwilling to say much, beyond revealing that he is neither a monetarist nor overly-impressed by Milton Friedman's view of the world, the fellows who attach tremendous importance to checking the growth of money supply as a panacea for inflation. He says: "The growth of money supply is only one factor in the situation. How it is brought about and how the money is spent on different sectors of the economy is no less important."

Professor Chakravarty completed his doctorate under the guidance of Professor Tinbergen of the Netherland School of Economics who was the first economist to win the Nobel Prize in 1969. (He was a member of the Planning Commission from 1971 to 1977.) Despite his taciturnity, he concedes that he will have to tackle questions like high commercial lending rates, decline in the rate of growth of bank deposits and balancing the competing objectives of checking inflation and meeting the financial needs of the corporate sector. What about governmental profligacy, considering that bank credit to the Government sector has already exceeded the limit set by the IMF for the current year? No reply.

PROF SUKHAMOY CHAKRAVARTY of the Delhi School of Economics.

Shiromani Award For Vig

Among the Punjabis who recently received the Shiromani award from the Sikh Studies Foundation for distinguished services in different fields is Mr M.K. Vig, Chairman, Oriental Bank of Commerce. He is reluctant to talk about himself, but the performance of the bank, as brought out in a survey conducted by the *Business Standard* of Calcutta, gives a clue to the award.

By assigning appropriate weightage to six criteria—opening of branches in rural and semi-urban areas, priority sector lending, deposit mobilisation, export credit, net profits to working funds and wage productivity—an integrated priority index has been formulated. Performance based on this index gives Oriental Bank of Commerce second ranking after Andhra Bank among the group of six banks which were nationalised in April 1980. As regards individual criteria, the bank has secured the first position in branch expansion, priority sector lending and deposit mobilisation, but its profitability has suffered. In recent years deposits of the Oriental Bank of Commerce have increased five-fold, from Rs 100 crore in 1977 to Rs 500 crore in 1982.

Asked about the success of his bank, Mr Vig, who is an old State Bank of India hand, attributes it to "good industrial relations".

M.K. VIG, Chairman of Oriental Bank of Commerce

All Things Bronzed And Beautiful

by V. P. Dwivedi

DANCING KRISHNA. The dimpled, cuddlesome god-child was rendered to perfection by South Indian metalsmiths.

METAL images, which are easily portable, more lasting and obtain sharp finish and, therefore, convenient for individual as well as public worship, have existed all over India from the earliest times. Several sacred texts provide elaborate details about their metal contents, iconomentry and casting techniques. These images, most of which are religious, are not only divinely "true" in the terms of their creators' religious ideas, but they specifically reflect human forms and types and these provide us chronological clues. Most are creations of anonymous artists. Some bear inscriptions which are mostly dedicatory and name only the donors. Very rarely is the name of the artist mentioned.

The *cire perdue* casting of the famous dancing girl from Mohanjodaro, a Chalcolithic site (c 2300-1750 BC) attest to the attainment of the Harappan artists in bronze. Her posture, at once alert and graceful as if caught in a breather between bouts of dancing is not the only example of the bronze casting of its time. Smaller figures—a dog, a bull and a buffalo are equally attractive. The bronze buffalo can compete with any other creation of its time for its graceful and natural rendering of the contours and limbs, the twisted tail and the expectant look on its face.

The continuity of the tradition is reflected in the recently discovered group of bronzes at Daimabad (elephant, rhinoceros, buffalo and bull-yoked chariot) in Maharashtra. These late Chalcolithic (c 1500 BC) figures are larger than the Harappan figures known earlier. The lifelike buffalo on a wheeled platform shows the familiarity of the artists with the animal. However, the exact purpose of these figures still remains obscure. The enormous quantity of metal used in their manufacture and the technical excellence of their manufacture and the unwieldly weight point to uses other than as playthings.

Both the examples discussed so far are cast solid. But the *cire perdue* casting produces hollow objects as well, which came into vogue much later, probably to reduce the weight and to minimise the use of the metal. Most of the figures are, however, cast solid. But from the Gupta period onwards the base of the images which was cast separately, was always made hollow. Here is how the artisans cast the statues: the images were first made in wax. After thrice coating them over with clay the artisan dried them in shade and the image thus cast was finished by breaking the burnt earthern mould and cleaning it up with water. The master-craftsman then finished the image with fine tools. Since the mould had to be destroyed in every case, the process had to be repeated in all details for every single image. Each image is thus unique.

A wide chronological gap exists between the earliest occurrence of bronzes in the Harappan period and those in historical i.e. about the 2nd century AD, when the bronzes occur again. A figure of Karttikeya, the commander-in-chief of the gods, recovered by excavations from the Kusana levels at Sonkh, Mathura, recently is flat in its treatment. This also marks an improvement in the technique of manufacture. The deity's rather long lance, turban and akimbo pose are well in conformity with the contemporary sculptures in stone. Unlike the Chalcolithic figures, this image must have been an object of worship.

Indian artists seem to have had a great admiration for the majestic elephant and naturally bestowed utmost care upon its manufacture. The find of a miniature elephant with four riders (5x7 cm) from Kolhapur, Maharashtra shows the mastery of the Satavahana artists of the 2nd century AD. The rendering of the four figures as well as the elephant remind us of similar figures in the Karle caves in Maharashtra. This realistic presentation also indicates a secular theme.

Artistic activity in all media touched lofty heights during the Gupta-Vakataka period (4th-6th centuries AD). The Gupta rulers, who were devout worshippers of Vishnu, extended their patronage to all religions. And this accounts for the find of a large number of bronze figurines of the Buddha during the period. A singularly large hoard of Buddhist bronzes from Phophnar, Madhya Pradesh datable to the 6th century, contains several figures of the Buddha standing on a high rectangular pedestal in *abhaya-mudra* or protective attitude. Some of these have parasols fixed over them. Though the Buddha figures are cast solid, the pedestals are hollow cast. X-ray photographs of a contemporary Gupta bronze figure, now an American museum, have revealed that in certain cases these images were cast in three parts. The head, body and pedestal were each cast separately and then joined together. Based on the Sarnath prototype of the Buddha figure in stone, the image shows a round face with clearly defined features—tall forehead, rounded chin, softly rounded eyebrows, straight nose, broad nostrils, fleshly and full lips, and semi-open eyes with a benign expression on the face. His hair is curly with a well pronounced *ushnisa* (*i.e.* a lump at the top of head).

Discoveries of several hoards of Jaina figurines indicate that the rich Jain merchants vied with one another in extending patronage to the metalsmiths *(sthapatis)* and in embellishing the images with gold. In fact, Jain images outnumber all other images. *Ajanulambabahu* with hands reaching below the knees, one of the features of the Jain Tirthankara, wearing *dhoti* (lower garment) and standing in *koyatsarga* (standing upright with the two hands parallel to the body) is a fine example of the post-Gupta metal workmanship. The famous Akota hoard, comprising of 68 images from Gujarat helps us in tracing the development of Jain iconography and art from 6th to 10th centuries AD. Some of these show the Tirthankara standing while others show him seated cross-legged in *dhyanamudra* (meditation posture). A panel showing three Jain apostles from Akota, datable to the Maitraka workmanship of 8th centuries AD, shows Jina Pasvanatha, identified by the parasol of seven cobra hoods. He is the 23rd Tirthankara out of 24 apostles of the Jain pantheon. He is flanked by two other standing Tirthankaras (the pathfinder and saviour). The pedestal shows a demigod couple a *Yaksha* and his Consort serving as attendants respectively and eight heads, as emblems of the eight planets. This image, too, was once gilded like most of the Jain bronzes.

Bronzes from Sirpur, Madhya Pradesh, show the expanse of post-Gupta influence and the consummate skill attained by the Chedismiths of the Mahakosala region (Madhya Pradesh). The 9th century image of Manjusri, Buddhist god of learning, from this hoard, shows him seated in an easy posture on a high lotus pedestal holding a long stem lotus in his left hand, surmounted by a book. The right hand is in gift-bestowing gesture and he is decorated with elaborate

jewellery and eyes inlaid with silver and lips in copper. The inscription on the pedestal mentions one Dronaditya as the artist.

Nalanda in Bihar was not only famous for its university but also for its elegant bronzes. Most of these images are Buddhist. Jambhala and Tara, both of 9th century workmanship, show that the Nalanda artist lavished the same care on the images of minor deities as on the major. While Jambhala (the Buddhist god of wealth) is pot-bellied, the figure of Tara is an exquisite example of suppleness. Both statues were gilded but have now lost the shine. The influence of Nalanda bronzes extended not only upto the neighbouring Nepal but as far as Java, Indonesia. Kurkihar in Bihar and Rangpur in Bengal produced bronzes which are similar to those from Nalanda.

Metal images from the Himachal region have a shine, yellowish in colour, of their own. Characterised by slender figures, stately and simple, recalling to a certain extent earlier Gupta traditions blended with Kashmiri, Gandhara and Pratihara. A five-headed and ten-armed Devi, riding a human vehicle, is a typical example of the region showing 10th-century workmanship. It has a dedicatory inscription also. The Western Chalukyan sculptures in metal are known for their suppleness, decorated *prabhas* (the back drop arch) and elongation of figures.

JINA PARSVANATHA. Many of the Jain bronzes were gilded and embellished with gold.

THE OLDER INDIAN ICONS are imbued with an inner grace which the modern creations lack.

Although all India is deservedly famed for its bronzes, the great achievements of later Indian bronze sculptures are to be found in South India. An amazingly large quantity of superb bronzes in sizes ranging from a few centimetres upto 130 centimetres in height show images of Buddhist, Jaina, Saivite and Vaishnavite deities. Beginning with tentative experiments in a rather stiff and flat manner under the Pallavas, the South Indian artists mastered techniques required to produce, solid, unique casts of great complexity, culminating in Siva Nataraja, the lord of dance. Various forms of Siva along with his bride Uma and son Skanda, called Somaskanda, seated at ease (Sukhasana) and Nataraja, the lord of cosmic dance, became immortalised in the hands of the Chola artists of South India (9th to 13th centuries). The best bronze of the tenth century Chola workmanship can compete on equal terms with bronze sculpture from any part of the world. Ganesa and Parvati also found expression in Chola and Vijayanagar art (14th-17th cent.). The early Chola period bronzes from Nagapattinam, mostly Buddhist, usually have a flame like projection on their heads.

One of the best known images in the world is the huge bronze of Nataraja from Tiruvelangadu, Tamil Nadu, which roused the admiration of Auguste Rodin, the famous sculpter, who considered it to be the most perfect representation of rhythmic movement in the world. He wrote, "The image of Nataraja can well contest for superiority in gracefulness with the gesture of Venus de Medici which defends its charm by the arm, while Siva does the same by an ingenious gesture."

Poses, derived from the requirements of religious iconography and movements of the dance, range from the intense devotion of the well known Saiva saint Manikkavachaka, groups of male and female figures *i.e.* Somaskanda, fierce aspect of Vishnu as oganarasimha (half-lion-half-man) in Yoga pose; Balakrishna or Krishna as child which is always shown as a dimpled, cuddlesome infant, naked except for a few ornaments and dancing in ecstasy.

The Chola tradition maintained an amazing vitality through the 13th century but with the passage of time there in a growing emphasis on minor details, a bland elongation of the figures, such as, Parvati and Bharata. In the Vijayanagara bronzes stylisation has set in at the expense of pliant charm of the earlier periods (However, images like that of Bharata, which is a masterpiece of its time, are an exception. It fully reflects the unparalleled devotion of the Prince of Ayodhya for his elder brother Rama who was the heir apparent, but was exiled by palace intrigues, as recounted in the Ramayana, is shown carrying sandals of the elder brother on his head as a mark of devotion and symbol of royalty.) The devotion to details is still more obvious in 17th century bronzes from Kerala.

Some of these large South Indian bronze figures have either hooks or holes in the pedestals for carrying them in processions during the festivals on their *vahanas* (vehicles) of different variety. This preoccupation with details became more pronounced as time advanced.

On festive occasions these bronzes were elaborately dressed up with ornaments, flower garlands and silken garments.

The South Indian bronze style never collapsed completely and icons are still being made for wealthy patrons. But lack of faith and dedication has deprived the modern creations with that inner power which once glowed on ancient images. ■

Chakbast:

Poet For All Times

If poets are forgotten, it is because they are either behind times or too far ahead. Chakbast was both. The author recalls, with reverence, the life and times of this evergreen poet.

by P.K. Nijhawan

PANDIT Brij Narain Chakbast, whose centenary year has just concluded, was an Urdu poet and writer of national resurgence not only of his own times (the first quarter of the 20th century) but in some respects perhaps of all times. Writing about him, the late Sir Tej Bahadur Sapru, one of the tallest moderates of India, says, "It is not my intention here to in any way compare and contrast Pandit Chakbast with Ullama Iqbal Both are, in fact, representative poets of our times... Still it would not be out of place here to say that while Iqbal is inclined more towards Sufism and matters spiritual and philosophical, the poetry of Chakbast sparkles with poignant human emotions and sentiments, as well as with colour and gaiety . In my opinion vast stretches of fine poetry are to be found in both Iqbal and Chakbast " Sapru's quotation is taken from his Foreward to *Subh-e-Watan* (The Morning of Motherland), Chakbast's solitary collection of poems, the second edition of which appeared with the foreward only a few months after the death of the poet at the age of 44, in 1926.

Sapru was a scholar of distinction as also a great patron of Urdu poetry and knew what he was talking about. Chakbast's tragedy is that a poet of his calibre, whose verse and prose so sensitively and passionately mirror the nation's agony and ecstacy during his time was soon forgotten by his countrymen

Dubh-r-Esen is the only collection of his poems that survived him in 1926 To this was added, in 1928, a collection of his 20 essays entitled *Muzameen-e-Chakbast*. Even these books were not easily available. In consequence, most students of Urdu literature during the next 50 years did not know anything worthwhile about Chakbast beyond a few poems or prose pieces which had somehow found their way into school and college textbooks.

How does the work of a great poet get consigned to oblivion? There can be three possible explanations. The first is that the poet is obscure. This is not the case with Chakbast. He touches his readers quite deeply and is both simple and direct. A poet may also be forgotten if he gets too closely identified with his times and the context abruptly changes. Or he might be much ahead of his time. It would seem that in the case of Chakbast both the latter factors had conspired to put him out of the public eye.

A Chakbast revival started only about five years ago. It is a remarkable resurrection of both the man and his work. In this short period, some 1,400 pages on the various facets of Chakbast have been published. His complete works have been unearthed, researched, annotated and put together in book form. *Kuliat-e-Chakbast*, which contains all his available poems has an 85-page scholarly introduction in addition to about 200 foot notes. It is now a textbook for the Master of Arts degree in Urdu of Indian universities.

This remarkable achievement is the work of one man, Kali Das Gupta "Riza", who worked night and day to bring out four books on Chakbast. He had a date with Chakbast, so to say, to complete this entire work by January this year, *ie* before the centenary year of the poet ended. He had the financial resources to acquire all the necessary tools needed for his work, but rarely do money and this type of backbreaking literary work conducted almost with missionary zeal go together these days.

Even more curious, however, is the fact that the entire process of unearthing Chakbast's works has been done in Bombay, far away from Lucknow or Delhi or Patna or Aligarh or Bhopal or even Hyderabad—the centres of Urdu literature and culture. Perhaps such a stupendous job could be done only in an atmosphere free from the glare of publicity and the encroachment of literary friends.

Riza is himself a writer and poet of no mean stature. He recalls how when he was young his father used to read and quote Chakbast copiously and so some of Chakbast's verses got deeply etched on his mind. For example, this highly philosophical couplet:

The atmosphere will always remain surcharged
with electricity of thought,
Sans thought what is man but a lump of clay—
may stay, may not stay!

When he came back from Kenya in 1970, Riza was very keen to study Chakbast, but he could not lay his hands on any of his works. So he started looking for Chakbast's writings and this is what eventually led to his project on the poet.

In fact, as time passes Chakbast and Riza may be remembered as a twosome, in much the same way as Machhinder Nath, the yogi is usually mentioned with his disciple, Guru Gorakh Nath or as Ramakrishna Paramahansa and Swami Vivekananda always go together. Just as in a discussion of the *Brahma Sutras*, a referal to the commentary of Shankaracharya is inevitable. What is sought to be conveyed is that Riza's work on Chakbast is as significant. In the process he has established new norms for literary research work in Urdu.

Kashmiri Pandits

Chakbast was born in a family of Kashmiri Pandits. This community lived in small clusters in cities like Lahore, New Delhi, Lucknow and Allahabad. Chakbast's father was a Deputy Collector who was profligate enough to squander all that he had. So at his death, when he left five-year-old Chakbast to the care of his elder brother, poverty hovered over the family. It was a typical middle-class situation in which the family has to struggle all over again to go up the ladder of success. All this, by and large, moulded the character and personality of Chakbast. That he was highly sensitive and an introvert, goes without saying. Such persons if not creative can easily become destructive. But Chakbast was not only creative, he was afire with patriotism.

Urdu was like a mothertongue to his people and Persian also came naturally to them. Chakbast, too, had a natural mastery over these two languages. In that age of reform when *Biradaris* had once again been revived, "Social Conference Kashmiri Panditan", provided an early forum for him. In the forum he read his first poem, *Hubb-e-Quam*, composed at the age of 12. If one did not know beforehand that Chakbast wrote that poem so early in life, one would not place it among his early poems. Here is one of the verses:

If this be the beginning, how beautiful shall be the end!
After all, this is just the first sip of the heady wine I'm taking.

Chakbast's future as a great poet was already predictable. But unfortunately he wrote only on occasion, being more occupied with providing for the joint family he lived in and maintaining all the trappings of his class. So he decided to take up law and passed his LL.B. in 1907 at the age of 25. He had to sacrifice his great urge to write. In one of his ghazals he says:

The daily grind is verily the enemy of my verse.
Only I can sing a ***ghazal*** *in such circumstances.*

As can be expected, for some time he did not succeed at the Bar. But then he had the ability to laugh at himself. Says he in a quartet *(Rubai)*

For nothing do I quarrel with destiny
Poets like me spurn laurels.
Why should I bend backwards for renown
When fame herself will one day seek me out.

Strange Pessimism

There is a strange pessimism reigning in Chakbast's heart. Perhaps because he did not get the recognition that he felt he deserved. It is quite possible that for his defence of Pandit Daya Shankar Naseem alias Nasikh, a master poet of Lucknow, he had earned the ire of the reigning lords of Urdu poetry. It is really painful for a poet of such refinement that he be accused of modelling his poetry, especially his *ghazals* after Ghalib and Atish. In a way the charge could even be one of plagiarism. Even if faintly implied, it could have been enough to hurt him.

Chakbast's greatness lies in that he gave a new content to Urdu poetry, both the narrative poem and the *ghazal*. He was the first committed poet of Urdu, who came much before the progressive movement got under way. He was certainly not speaking of a proletariat revolution but he raised his powerful voice in support of national independence, humanism and liberalism based on liberty, equality and fraternity. But he was nowhere strident in supporting or decrying anything. In fact, he was too levelheaded to indulge in any kind of rabble-rousing polemics. In defence of human dignity he says in one of his immortal verses:

Scant worried shall I be if religion be drowned
All I want is that the embodiment of Man's liberty stand permanent.

Chakbast was a teetotaller. But *ghazal's* poetry has wine and inebriation as integral motifs. So he also wrote of wine but with a marked difference of idiom. One verse may be quoted here as an example:

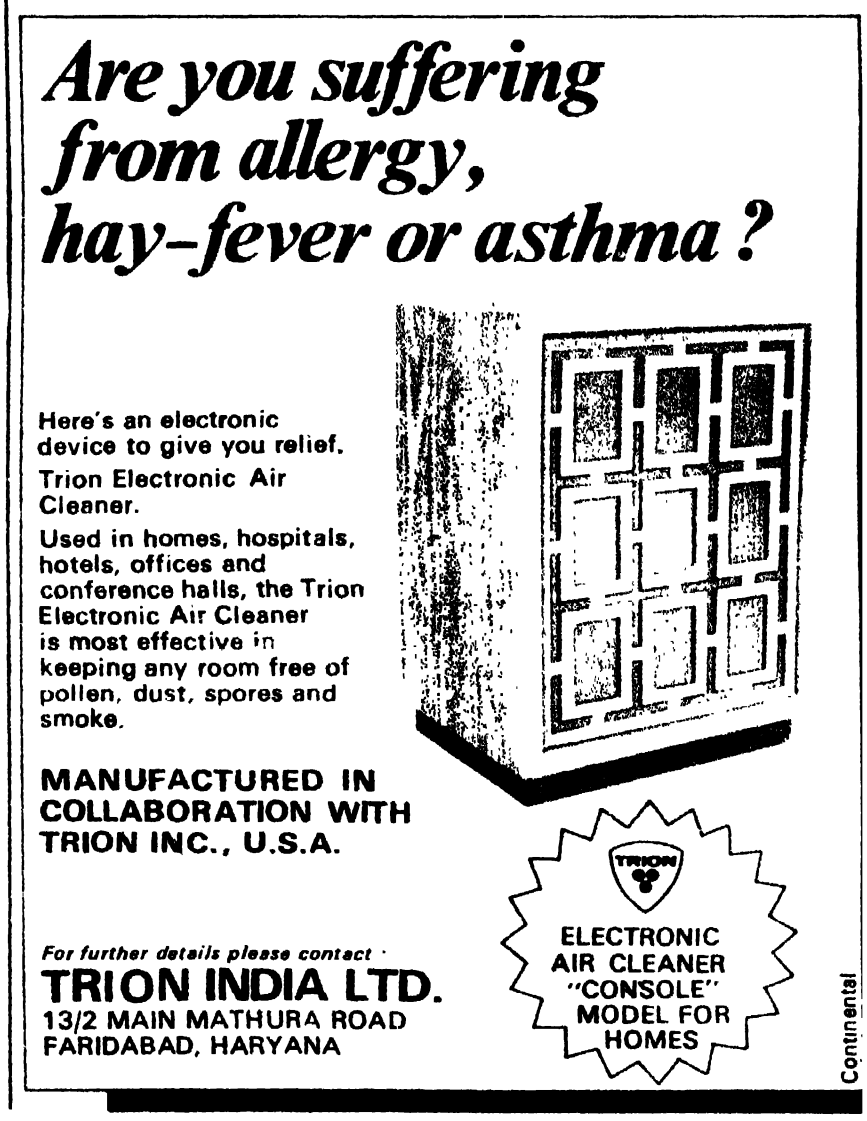
Pub it is and it dishes out democracy
Equal are kings and beggars in the eyes of a boozer!

But Chakbast is superlative when he comes to singing dirges and writing satire. Death appears to have been a fixation with him. Personal calamities apart, perhaps the *Shia* atmosphere of Lucknow had also influenced him. Whenever a big leader or a friend of his died, he paid him homage by writing a poem. These poems will remain a priceless heritage of Urdu poetry. Without being philosophical, they are full of pathos which is haunting.

His satire is also very devastating. He touches its height in his poem, *A Tiff with Lord Curzon*, a long poem full of both passion and art! It appears that Lord Curzon had thoroughly incensed him. Otherwise Chakbast was among those who believed that the British rule was paternal and benign. Like other moderates, his vision, too, did not go beyond Home Rule. My own hunch is that he could have earned the wrath of the Government for such a piece of writing. But then British Viceroys and Governors liked to be lampooned! *Sauda*, the great berater whom Chakbast invokes, must have felt jealous of Chakbast even in his grave for writing such a masterly poem.

Chakbast was also a great prose writer, with a direct, simple and spontaneous style. But that is a separate and vast subject.

Riza has done a yeoman service by resurrecting a great poet and writer and presenting him to the literary world in his centenary year. ■



Hem Kund and

Text and Photographs by P.N. Mehra

THE Himalayas, besides attracting tourists, trekkers and climbers, have long been the abode of religious souls. The hills of Uttarkhand (northern UP), specially, have been associated with some god or sage. In reverence to these religious souls, thousands of Indians go on a pilgrimage to these places—Badrinath, Kedarnath, Amarnath, Gangotri-Jamnotri and, of late, to Hem Kund which is situated 4,500 metres above sea level, and the route to which is one of the most picturesque ever.

Hem Kund is named after an ice-covered lake. Being so high it is almost always under heavy snow and is open to pilgrims only from June to October.

An overnight journey from Delhi takes one to Rishikesh from where plenty of transport is available for the 250-km pilgrim route to Badrinath. Most of the buses carry *yatris* to Badrinath and Hem Kund. As the journey commences there are shouts of *Badri Vishal Ki Jai* and *Jo Bole So Nihal* from the pilgrims to Badrinath and Hem Kund respectively. The Hem Kund pilgrims, mostly Sikhs and some others who are heading for the Valley of Flowers, get down at Govind Ghat, 24 km short of Badrinath. At Govind Ghat there are adequate arrangements for an overnight stay in the PWD rest-house and gurdwara, the latter also providing a free *langar*. The next day one has to trek 14 km to Ghanghaira, now also called Govindham, a very arduous climb of over 7 hours. The path is well marked. For weaker souls, ponies and litters *(dandies)* are also available at Govind Ghat. Ghanghaira is a lovely place, situated in a pine forest, and there are a number of places to stay, including tourist huts, gurdwara sheds and quite a few eating houses including the gurdwara *langar*.

From Ghanghaira there are two routes—one leading to the famous Valley of Flowers and the other to Hem Kund lake. The latter is much more arduous and equally rewarding. This trek is full of pilgrims of all ages shouting *Jo Bole So Nihal*. The whole way is studded with almost all the flowers in the Valley, but here we see more—the Brahm Kamal, a beautiful lotus-like cream yellow blossom which grows only above 3,500 metres. Here and there one sees a birch grove shimmering in white as if painted with snow. When you are close to your destination you can see a big yellow flag fluttering at the top of the hill to assure you that you have made it.

Surprisingly, quite a few devotees brave the bitter cold and take a dip in the holy waters. It must be their faith which helps them to bear it. The *sewadars* in the gurdwara give you unlimited glasses of hot tea, and what a blessing it is at that height and in that cold! Hem Kund is a beautiful lake encompassed by snow-clad hills at the feet of which bloom myriads of flowers. Unfortunately, the big concrete dome of the Gurdwara takes something away from the beauty of the lake. But faith is stronger than aesthetics. One should not tarry too long as the weather invariably turns inclement in the afternoons; that is why you are asked at Ghanghaira to leave for Hem Kund at daybreak. Lucky indeed is the person who can spend a week rambling in this enchanted valley. ■

PILGRIMS PROGRESS (above) As the journey to Hem Kund commences, there are shouts of Jo Bole So Nihal from the pilgrims. Below Hem Kund lake with the Lakshman Temple on its banks.

the Valley of Flowers

Text And Photographs By Sanat Shodhan

IN 1936 a Mr Smith, who was part of an expedition to Kamet, one of the snow-clad peaks of the Himalayas, was caught in an avalanche and fell several thousand feet. When he pulled himself together, he found himself standing at the edge of a valley carpeted with millions of dancing flowers of different hues. The beautiful sight he beheld brought tears of happiness to his eyes. He later named this valley the Valley of Flowers.

The Bhyunder Valley is situated at 12,000 ft. The journey from Ghanghaira is a trekker's delight but the chill seeped into our bones making climbing very difficult. The rains had made the uneven and stony path slippery but chill and toil were forgotten when we saw a cluster of brilliant blue forget-me-nots merrily dancing in the breeze.

We were gaining height rapidly and the flowers, ferns and trees were changing, too. After those tiny blues there came brilliant yellow monocharis and countless bhoipatra trees. Soon we got our first glimpse of a glacier.

We continued up, delighting in the myriad flowers and trees. At last we crossed a small bridge and stepped into God's heaven on earth—the beautiful Valley of Flowers. Our eyes drank in the magnificent panorama of colourful flowers and innumerable shrubs. We were completely bowled over. From the clutches of stark mountain and rock we had been released into a vast garden of soft-pink balsams and golden buttercups, yellow potentilas, white lady's lace, brilliant red primulas and wild roses. Lush green ferns, golden tipped, marvellously set off the flowers. Further down the slope was a carpet of bright orange locked with green and forming an amazing checkered pattern. A light drizzle was falling, imparting a dream quality to the whole thing.

We walked all over the 4-km stretch until we sank, exhausted, near the helipad. The air was filled with the sweet perfume of the flowers. In one corner we saw the tomb of Margaret, a botanist, who died in the valley some years ago when she fell from a rock. People come from all over to pay homage to this great lover of nature.

Not satisfied with what we had already seen, we walked across the slopes and saw many other flowers, including a rare species of poison flowers—take a deep breath and you will never wake up again. We saw rhododendron, white arums, creamy yellow cassiope, blue cashmiriana, jasmina, marigolds The colourful flowers, lush green ferns, light-green creepers and deep-green weeds covered every inch of the valley, making it look like a gorgeous green carpet woven with drops of pearls, emeralds and gold.

In the late afternoon, as the mist was setting in slowly and the cool breeze brought light rain in its wake, we prepared to leave this magnificent valley which wore the look of a painting where different colours had been thrown on a canvas and then washed with a lovely, soft green.

Goodbye Valley of Flowers, Garden of God. Goodbye. ■

ABHA 10

Vintage Violins

by V. Sridhar

TWO years ago, at his concert in Bombay, Ruggiero Ricci, the great violinist, played on an instrument perhaps more famous than himself. A Guarneri del Gesu (so called after the celebrated craftsman), the violin is said to have been made in 1734 and may today cost up to $300,000 (a whopping Rs 27 lakhs), about ten times its weight in gold. A Guarneri is hard to lay hands on, now, and Ricci told newsmen that there was nothing romantic in his acquiring it and that he just bought it in a violin shop.

What was really romantic was that ten years ago, at the world famous sales room of Sotheby's in London, a violin named "Lady Blunt" was up for sale. It was a 1721 Strad made by a more famous master, Antonio Stradivari, rated by experts as the world's second finest Stradivarius. (The "Alard" is said to be the best).

"Lady Blunt" first made the scene in 1864 when it turned up in Paris via Spain. Its possessor, Luthier Villaume, a Frenchman, is reported to have written to a friend: "What I possess is the most remarkable Stradivarius. It is a discovery."

Lady Anne Blunt (grand-daughter of the poet Lord Byron), after whom the violin came to be known, was an amateur musician. She bought the instrument from the Frenchman for £260. Later, it was owned by a German collector and then changed hands seven times before it came up for auction at Sotheby's.

Bidding is said to have begun at £20,000 and rose by leaps of £2,000. Andrew Hill, partner of the famous firm of W.E. Hill, leading violin traders, ultimately knocked it down at the record price of £84,000 on behalf of an unknown buyer.

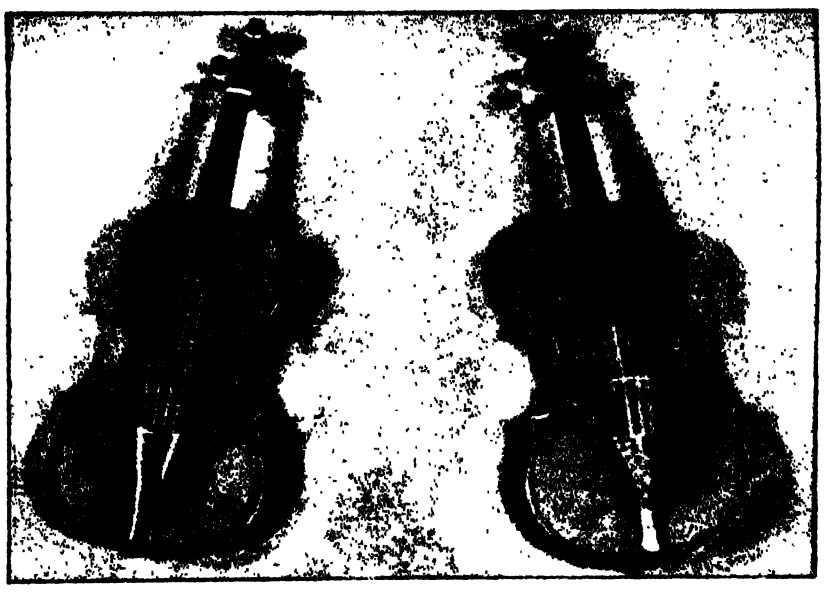
In October, 1979, another famous Stradivarius called "Reginer" because it was once owned by the French maestro, Leon Reginer, was also sold at Sotheby's for $96,000. It was again put up by an anonymous "gentleman" and bought anonymously.

One wonders who plays "Lady Blunt" and "Reginer" now. In the hands of Ruggiero Ricci or Yehudi Menuhin or one of our own *"vidwans"* like Lalgudi Jayaraman, M.Gopalakrishnan, T.N. Krishnan, Chandrashekhar, Subramanian and Rajam, they can coo comforting cadences. What a pity that they should become rich collectors' items!

(The highest price ever paid at a public auction for a music instrument was $390,000 for a piano built less than a century ago. The Steinway grand piano was designed in 1884 by Laurence Alma Tadero and purchased for the aforesaid sum by a private investor in New York on March 28, 1980. It had been last auctioned in 1903 for $8,000.)

Some time ago, Lalgudi lamented to me that it was extremely difficult to get a good violin in India. He was lucky to have been presented with an instrument by Menuhin in 1965 when the two met at the Edinburgh festival. Menuhin invited Lalgudi to his house and when the latter went there without his violin, the maestro was surprised. He asked Lalgudi to play on his own (some violinsts are so finicky that they will not let others even touch their instrument). After the performance, he took up the phone and called his manufacturers in Rome and placed an order for a good violin. The Marinus Capicchioni was delivered to Lalgudi in Madras in a month's time. Jayaraman treasures this gift, using it till today for all his concerts.

VIOLIN MAESTRO YEHUDI MENUHIN



COLLECTOR'S ITEMS. Violins made by Stradivarius: inlaid ivory (left), 1683, and (right) known as "The Messiah", 1716.

A UNIQUE DOUBLE VIOLIN, a twin-bodied, ten-stringed stereophonic instrument used by L. Shankar, a member of the popular music group, "Shakti".

In India,the violin is more popular in the South than in the North. You cannot think of a Carnatic vocal music concert without the violin accompaniment while solo recitals are eagerly looked forward to. An average Carnatic music violinist is as good as his Western counterpart and the maestros could, quite conceivably compete with Menuhin or Ricci Yet, the violin-making industry is largely concentrated in Calcutta. Unfortunately, Indian manufacturers do not have the same sincerity, sophistication and dedication of the Stradivarius or Guamerius families Almost cast in a mould and turned out in thousands, their products are a bug-bear to the artistes. And they have the temerity to stamp the name of Stradivarius on these instruments! The late Dwaram Venkataswamy Naidu, a violin *vidwan* par excellence, once remarked that Indian violins were nothing but matchboxes.

Anatomy Of A Violin

The anatomy of a violin is said to consist of 84 different pieces and when crafted by specialists like Stradivari or Guarneri it can be a feast to the eye as well as the ear. Both these masters belonged to the school of the acknowledged head of violin-making in Gremona, Nicolas Amati, but each implanted his individuality on his creation. While Stradivari first emphasised accoustics and then appearance, Guarneri revived the earlier Brescial style of bold rugged outline and masterly carelessness Tone was his main consideration The secret of their technique, though much debated, has never been found out. It is said that Stradivari used pinewood, seasoned for years and dried in the sun. The pine trees would be tapped even before cutting to make sure they had the requisite hum.

Some of the other more famous Strads are: The "Hellier", the "Selliere", the "Tuscan", the "Betts", the "Ernst", the "La Pucelle", the "Viotti", the "Dolphin", the "Messiah", the "Muntz", and the "Millanollo" (the only Strad in India owned by an unknown lucky person).

Modern Masters

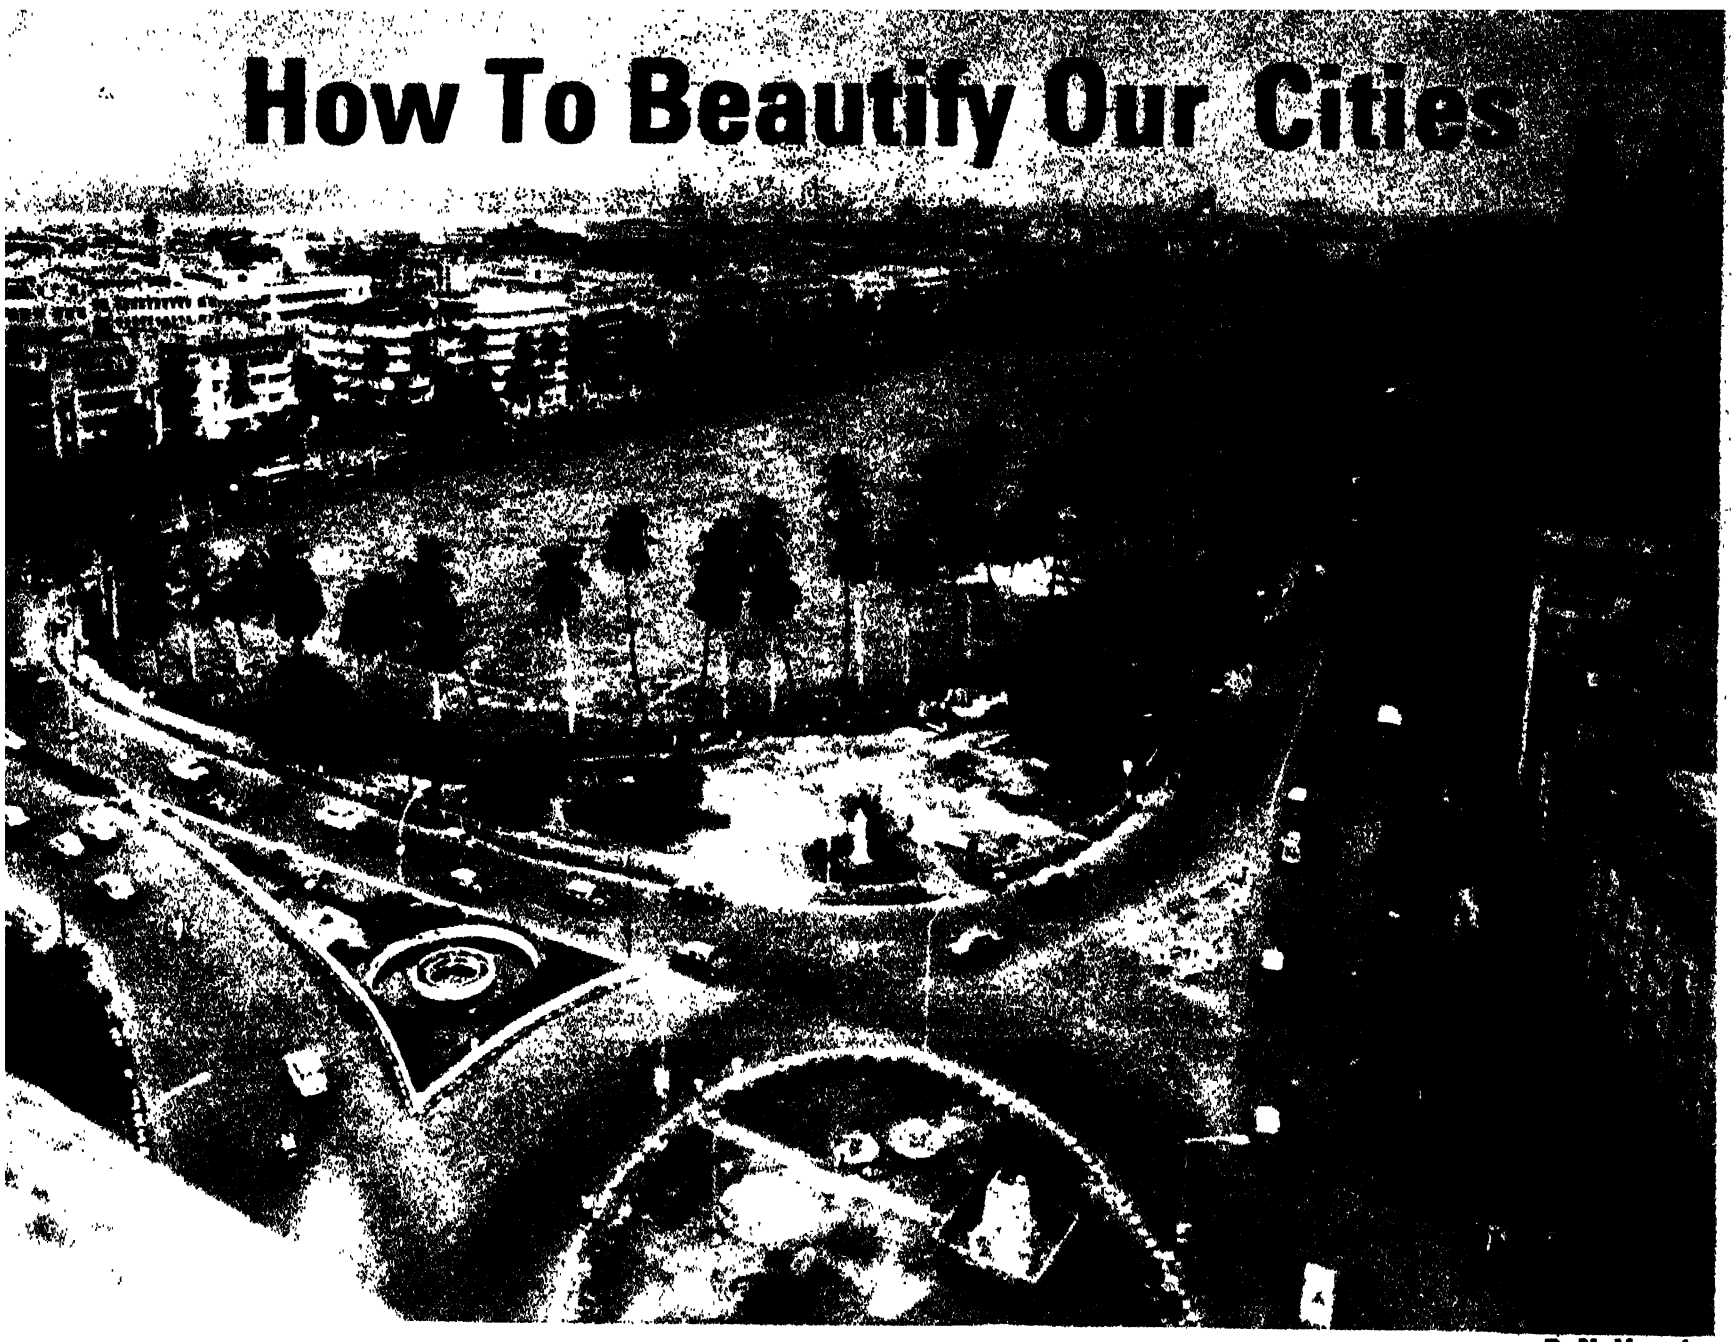
There have been other masters, too, like Giardini, Pugnani, Franccuer, Graun and Benda and more modern masters like Mayseder and Spohr whose creations must be making mellifluous music the world over On the Continent are a number of villages—Mirecourt in the Vosges, Mittenwald in Bavaria, Markneukirchen in Saxony and Schoubach in Czechoslovakia—which for generations have specialised in violin-making. In Mittenwald, the only monument in the hamlet—a violin-maker with a violin on his knee— has been erected in memory of Mathais Klotz, another great craftsman. Each home in these villages makes violins and every violin sings.

Not to be outdone by all these celebrities, a cobbler in Edinburgh manufactured a leather violin in 1813 which was claimed to be not inferior to any made of wood But no more of this has been heard since

The latest to make the violin scene is the "LSD" (L. Shankar's Double Violin)— a twin-bodied, ten-stringed stereophonic "contraption". This instrument is however, exclusive to Shankar; no one else has adopted the design.

It is claimed that the violin owes its origin to an Indian instrument called 'Ravanastom' made of a cylinder of syca more wood hollowed out from one end to the other. The famous musicologist, Heron Allon, says the history of violin is simply the history of bow, establish the bow and you have the existence of the violin. And the bow is believed to be Asia's contribution to the music world. ■

How To Beautify Our Cities



—R. N. Verneker

THE OVAL SHAPE OF THINGS TO COME is not quite evident in this picture. In any case, the Oval is one maidan in Bombay which has witnessed minimum encroachment. Go to Bombay's Azad Maidan and Cross Maidan and all you see is encroachment! In the case of what was known as the Lloyd's Reclamation—one of Bombay's most beautiful playgrounds right up to the mid 1960s—what you see is the University Stadium, the Wankhede Stadium and the Hockey Stadium!

Any plan for urban development must necessarily cater for that long-neglected part of urban life: recreation.

by M. N. Buch

IN 1972, I was the Administrator of the Municipal Corporation of Bhopal. There was a small piece of waste land, about 1.5 hectares in area, lying between the Upper and Lower Lakes. The rocky ground had a steep slope towards the Lower Lake and was used for the dumping of garbage by the persons living around it.

As a city, Bhopal has beautiful surroundings, with lakes and hills and plains merging into each other. However, Bhopal sadly lacked recreational facilities. I, therefore, decided to convert this waste land into a park. It was my good fortune to have a horticulturist of great sensitivity and knowledge, B.L. Patodia, with me and, together, we converted this rocky land into a modest park. I would consider this to be amongst the better gardens in India.

All this has a moral to it. The late Shakir Ali Khan, a Communist member of the State Legislature and a person whom I (together with many people in Madhya Pradesh) remember with great respect, severely criticised what he thought was wasteful expenditure by the Municipal Corporation at a time when the level of services in Bhopal left much to be desired. My only reaction was to take the stand that, whereas I could not give a garden to each house in Bhopal, I could create gardens to which every Bhopali could come. Within 3 months of its creation, *Kilol* attracted so many people and was taken to heart to such an extent by the Bhopalis that Shakir Saheb, to his credit, made a statement in the Vidhan Sabha to the effect that he withdrew all his objections and desired that more such parks be created in Bhopal!

Average Citizen's Yearning

The point I am trying to make is that *the average citizen*, however overtaken by his own circumstances, has a yearning for beauty and for a place of recreation where he can forget his cares. Indeed, recreation is almost as important a public service as transport, street lighting or drainage.

The first Master Plan of Delhi recognised that city people need planned recreational areas. In fact, the Master Plan envisaged the creation of a system of greens which would interlink the whole city. One was the park development along the Yamuna which, commencing at Wazirabad, went all the way down to Okhla and Kalkaji. The other was the development of the Ridge from near the University, down to Tuglakhabad and Mehrauli.

Perhaps the main consideration behind this planning proposal was environmental, but there is a strong underlying assumption that these green areas would be used by the people as lungs for recreation. If there is any part of the Master Plan which has been implemented successfully, it is the development of these interlinking green areas. Yamuna Bazar, Vijay Ghat, Shanti Van and Raj Ghat, the trees on the Ring Road, Ferozeshah Kotla, the development opposite New Friends Colony, the lovely gardens commencing at Kalkaji Temple and going into the valley between the temple and Nehru Place, are examples of extremely sensitive horticultural treatment of areas which could otherwise have degenerated in

THE MAN WHO MADE DELHI GREEN. The effort of the architect and the engineer, says the author, to make Delhi ugly has been effectively counteracted by one single person, Sahdeo Singh *(above)*

KILOL—A PARK WITH A FAIRYLAND LOOK. Located between Old and New Bhopal, it virtually "spans" two periods—the ancient and the modern. It has become a symbol of change and hope in the civic life of the Madhya Pradesh State Capital.

we develop stadia! In the early 1960s, there was, on our part, a countrywide mania for developing stadia, with the result that every district spent lakhs of rupees on construction work at district headquarters. Concrete monstrosities have been put up at great cost, leaving nothing for the development of the grounds proper.

For example, at Ratnagiri (Maharashtra), lakhs have been spent on constructing pavilions of singularly ugly design, but the playing-fields enclosed by the pavilions are not even levelled. Naturally enough, there is no money for equipment, with the result that the stadia which we have prepared are generally not used by sportsmen.

Theory And Practice

In Delhi, every school has acres of land, theoretically to be developed as playing-fields, but very few of these have, in fact, been so utilised. It is no wonder that in practically every game, except perhaps ludo and tiddlywinks, Indians perform badly. If a stroll in the park is good recreation for elders, knocking about on a football field is ideal for youngsters. Our youngsters are being neglected—badly.

Recreation goes beyond the purely physical and embraces the world of aesthetics and spiritualism. Spiritual needs are well catered for in this country, sometimes by places of worship built legally and, more often, by those built illegally. One only wishes that God—by whatever name He is worshipped—could convince His priests and acolytes that He is not deaf and that prayers conveyed to Him without the aid of amplifying equipment would still reach Him!

Our aesthetic needs must naturally be catered for by art, music, dance and drama. Even in the absence of permanent art galleries, our climate permits open-air viewing of the work of artists. It is the audio-visual arts which really need a forum. We have failed to evolve a design of theatres which would permit construction at reasonable cost. The result is that we construct either barnlike buildings, which are quite useless, or extremely expensive theatres, which few can afford. In fact, our climate is most amenable to open-air stages and screens. This would be inexpensive and would also permit more performing artistes to practise their art in public. In the ultimate analysis, it is the audiences which make art, not the artistes alone.

Whereas rural society is homogenous and closely knit, urban society is heterogeneous. Homogeneity lends itself to internal planning whereas a heterogeneous society has to be planned for. It is in this context that any plan for urban development must cater for that long-neglected part of urban life: recreation. ■

Courtesy: *Urban India*

THE AUTHOR'S SHATTERED DREAM? The signboard is self-explanatory, bearing as it does the legend: *The Great Work of Buch*. It was photographed amidst the ruins of a demolished, dilapidated house in the main square of Old Bhopal during the time P.C. Sethi was MP Chief Minister.

the manner in which much of the seafront has done in Bombay.

Similarly, forest and garden development on the Ridge—of which Northern Ridge, Sabzi Mandi, Dhaula Kuan, Jehan-panah, Tuglakhabad and Mehrauli are a few examples—also indicates the triumph of the horticulturist over a barren environment. The effort of the architect and the engineer to make Delhi ugly has been effectively counteracted by one single person: Sahdeo Singh, Director of Horticulture of the Delhi Development Authority. The people of Delhi owe him a debt of gratitude. Where, however, the Plan has not fully materialised is in the development of recreational areas in the crowded parts of the city, reference to which will be made later.

Two Exceptions

Bhopal and Delhi are exceptions. In the case of the former, the existence of the Capital Project of the DDA made funds available for the development of recreational areas. In most cities in India, the local bodies function so near the margin of survival that money is just not available for the development of parks and gardens.

Even where money is available, it is utilised in such a wasteful manner that what emerges is not a recreational area but a place to be avoided. Planners are carried away by the beautiful shades of green which appear on their plans and assume that, because they have provided the space for recreation, ergo the space is, in fact, developed. Land between buildings, which does not take the form of a compound, in fact becomes a community garbage-dump. Land earmarked for playgrounds and parks invites encroachment. Quite often, the recreational areas themselves are put where no one can visit them.

This is because most Master Plans are required to provide for the reservation of 8 to 10 per cent of land area for community recreation and, because such land is not available where it is most needed—that is, in crowded localities—percentages are made up by reservation in peripheral areas.

Even in Delhi, Nehru Park and Buddha Jayanti Park are located in zones where people have their own large gardens or where no one lives. On the other hand, open land available for recreational use in the old city is less than 2 per cent of the total land area. A person living in Khari Baoli, Shahjahanabad or Daryaganj hardly feels the impact of forest development around Tuglakhabad. For land to be truly developed for recreational use, it must be located in the midst of populated areas and developed in such a manner that, in fact, people use it.

In this context, the Oval in Bombay, the Red Fort Grounds in Delhi and the Maidan in Calcutta are good examples of open land in crowded localities which really serve the recreational needs of the people. Another excellent example is the municipal garden at Muzaffarnagar in UP.

Playing-fields are often equally neglected. One of the pleasures of Western cities is that there are municipal swimming-pools, tennis grounds and sports fields in abundance. In India,

Had The Doctor Lost His Tongue?

by Jeet Singh

I WAS released on a month's parole yesterday (July 27, 1982). And to-day I undertook a very special mission: To thank the doctor who had helped me breathe free air after 1½ years. I was moving through the crowded bazaar of Haldwani in a rickshaw when I realised my presence was not felt. "What difference will it make to anybody whether I am hanged or acquitted or sentenced to a life term." I thought.

Accepting my plea of self-defence, the Hon'ble High Court observed: "... the accused had the right to shoot the deceased " Now, when the Supreme Court has rejected the State's request for the leave to appeal against the judgement, I wish to toast the occasion with a number of short stories. True plots have leaked from my pen. But I have thought it wise to blend the stories with imagination to make them colourful and camouflage the characters.

Somebody requested me for a lift and I soon realised that he was my comrade in "the government guest house" where, besides free accommodation, clothing, body-guards, transport and "ornaments" (leg irons), I was entitled to some special previleges as I was an income-tax payer. The benevolent government had given me an orderly-cum-cook and a separate cell. Unlike those in Class C, my food was cooked in *desi ghee*. It is said (I do not know whether it is true or false) that Pandit Nehru had served his term in the same cell. Co-prisoners felt that it was a hallowed room.

Often sentries came to get their fortunes told by me (my reputation as a palmist had spread throughout the jail). It was a luxury to talk to them since I preferred their alcoholic fumes to the foul breath of other prisoners. My friendship with the sentries got me special privileges. I was allowed to keep a stock of my own eatables like biscuits and fruits. The jail had double lock-ups. The inner lock-up was opened only for two hours in the morning and two hours in the evening. My friendship helped me to avoid the inner lock-up and stay outside for the whole day.

The jail had no electricity, no water supply and no windows. The latrines were never cleaned. Today I wonder what percentage of inmates suffer from incurable ailments because of poor hygiene I am sure that a number of post release deaths can also be attributed to this lack of sanitary facilities. The only source of water was a hand pump which moaned and groaned as prisoners tried to operate it.

We were served only two meals—no tea, no breakfast. The meals in Class C invariably consisted of six chappatis and a soupy *dal* that never had a grain of dal. "The jailwallahs enjoy our rations," some had the necessary strength to grumble aloud. Every chappati was burnt on one side and left uncooked on the other. They ate because they knew they must eat to live.

The weighing and distribution of rations were done by prisoners. A large part of it found its way into the houses of our "jailors". Sometimes my *desi ghee* was substituted by a cheaper brand. It was cheap enough to irritate my tonsils.

In the evening we were asked to stand in formation and pray. After the compulsory official prayers, the Sikh prisoners would conduct their own evening prayers *(Rehras)*. "Forsaking all other doors, Lord I have come to thy door. It is for thy honour to protect me, I am thy humble servant." This was followed by *Ardas: Prothim bhauti simar ke Guru Nanak live dhiye*... (after praying to God, who dispenses justice by the sword, think of Guru Nanak...) Then we begged God to give us the gift of His worship, the gift of divine knowledge, the gift of bathing in the holy waters of the Golden Temple. At last the most important thing: complete acquittal was begged. An armed Sikh sentry, who guarded the gate and who never entertained visitors unless they "warmed" his pockets, would conveniently forget his duty and come in to take part in the prayers enthusiastically. The Sikh sentry would invariably recite a *shabad* (devotional song).

Kashmira Singh (who was alleged to have shot dead a magistrate) would shout "Victory be..." and the entire jail would echo "to sword and free kitchen". This was a unique scene of secularism. Everybody, Sikh or of any other faith, would participate enthusiastically and the shouting would continue for some time. Then came the hour of debate on divine knowledge: "Man is not bad but the circumstances make him so. If a poor man's heart will burn, the smoke will reach heaven and suffocate the gods!"

The general feeling about the courts was one of hopelessness. We talked about the pervasive corruption. The general opinion was that it is fashionable nowadays to take a bribe with one hand and convict with the other. I am sorry that for fear of contempt of court I cannot reproduce some of the interesting facts. The fresh men never admitted their crime since they believed that two or three plain-clothes policemen were always present. If someone asked them a second question, they became suspicious and answered the questions in a defensive manner.

The frequent visitors were more confident. They tried to boost our sinking morale: "Don't worry, Sardarji, I have committed four murders and now my ten-year-old son has committed one. He is not even half your age." What solace!

"...I fired four shots at the magistrate; the fourth one drained the life out of him...." Kashmira Singh enjoyed repeating the incident.

Soon we were at the doctor's residence. I carefully brushed aside all the dust that had gathered on the box of sweets that I was going to present him.

The doctor promptly responded to my knocking. "Oh, he is waiting for me," I thought. "And why should he not? I would also expect a token of gratitude if I were in his place." The doctor opened the door and said nothing. His face was screwed up as though he was suffering great pain. He then stepped aside without saying a word. I walked in thinking that I was welcome.

I shattered the silence with "Thank you, doctor sahib. It is with your blessings and by your grace that I am out." The doctor looked horrified and I concluded that a patient must have died. "You see, a doctor must not be blamed for every death," I tried to console him, "Sometimes, a patient dies because he neglects all precautions and does not take the prescribed medicine."

The doctor blushed silently. It was difficult to comprehend the cause. "Come on, doctor sahib, share your grief with me," I offered sympathetically. Alas, his condition became worse and I could see tears in his eyes.

"Please do accept a token of gratitude," I said, as I forced the box of sweets into his trembling hands. "I will take your leave," I said. His favourable report had given me freedom and I could not understand his strange behaviour. On my way back home, I dropped in at the Post Office to collect my mail.

That day I had an important letter. It was from my High Court advocate. It read: "...the doctor has stated in his medical report.... the illness is minor. It can be treated in jail. There is no need to grant parole for this reason." How was I paroled the next time? That is another story. ■

The Pill Is "In"

by Julie Bijalpita Chatterjee

A TINY pellet Smaller than the size of a pea automatically swallowed by millions of women all over the world night and day, as a routine like brushing teeth or drinking tea! And the potency that lies hidden in that little globe is remarkable This miniscule globule is the *Pill* a modern day miracle possible after years of dedicated research one of the most effective preferred and foolproof methods of contraception today

An Ancient Quest

A babe in a house is a well of pleasure for the affluent coterie perhaps but certainly not so for the hungry millions who eke out a hand to mouth existence in our country day in and day out and at times even pray for the "daily bread to fall from the sky The basic problem is more mouths and less food But this is not a novel problem this quest for limiting the number of emaciated bellies Neither is this problem unique to our country merely a result of scientific miracle making (including the fall in mortality rates due to the discoveries of antibiotics and penicillin) But like most ideas that seem very new birth control is in fact very old It was there in an Egyptian papyrus 4 000 years ago In Greece 2 400 years ago it was a hotly debated subject and the first documented methods in our own land go back to 1,600 years The need for limiting the size of the family is as old as the idea of mankind itself

The search for something like the pill has been there ever since our princesses drank concoctions of bark and roots of magic herbs in ancient India The pill has a dramatic history—an eccentric professor of an American university went chasing an unknown "magic herb in the uncharted hilly Mexican terrain The search yielded the lumpy black roots of the *cabeza de negro* a vine with heart shaped leaves and tiny coloured flowers The hormone progesterone could actually be manufactured in kilograms from this root and the myth of the "magic potion' was shattered—and what emerged was the embryo for a new method of contraception

The Hormonal Orchestra

The action of the pill can best be explained by saying that when you take the pill your brain is fooled into thinking that you are already pregnant Regular intake of the pill builds up the levels of ovarian type hormones and the pituitary gland— that little pea sized organ at the base of your brain which controls hormonal activity —does not think it any longer necessary to send out the hormones that would stimulate the ovaries The normal cycle of ripening and release of eggs is totally suppressed making the oral contraceptive pill *the* most effective method of reversible family planning

In addition there are certain back up effects The slippery mucus—which normally flows from the cervix during mid cycle and is easily penetrated by sperm is transformed by the hormones present in the pill into a scanty thick material that actually acts as a barrier to sperm In addition the lining of the uterus changes making it less amenable to support and nourish a fertilised egg should such fertilisation take place by the remotest chance! Thus even if the primary action of the pill (preventing e g release from the ovary) were to fail it back up mechanisms would still inhibit pregnancy Indeed even after accounting for the possibility of forgetting to take tablets the failure rate is only 1 pregnancy per year in 100 pill users and, for women who take the pill regularly the failure rate is only 1 pregnancy in a year for 1,000 pill users This is many times lower than for all other methods of contraception except sterilisation But pill taking unlike sterilisation is an entirely reversible method Fertility is restored when the pill is stopped

The normal method of taking the pill is continuously for 21 days, followed by a 7 day break During this 7 day rest period, when the pill is withdrawn, the body responds to the lowered hormonal levels just as it would have at the end of a normal menstrual cycle The uterine lining is shed The lining is thinner and has been caused in a different way by the pill so that the bleeding is less often darker in colour and usually less painful than the normal menstrual period

Side-effects And Risks

The usual first reaction of people about the pill is concern about possible side effects and to a greater degree the feeling that it is an unnatural control of the normal body process The latter is certainly not true It can be argued that since the pill simulates pregnancy and child bearing is what nature intended its regular taking is perhaps a more natural thing than going through cycle after cycle of regular ripening and release of eggs without fertilisation

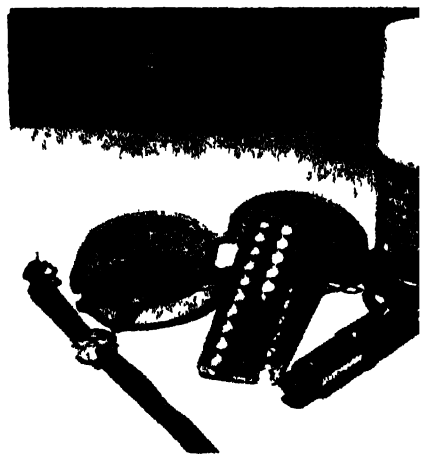
On the other hand there are a few side-effects These are rare and often inconsequential but for these reasons pill taking must always be with proper medical supervision Side effects which have sometimes been noticed include nausea headaches breast tenderness or tingling gain in weight vaginal discharge leg aches and cramps and mild depression When any of these side effects appear, before you decide to give up pill taking your doctor will probably advise you to give it a try for 3 months When bleeding or other minor side effect occur they often settle down in course of time

However for all there are certain risk factors which are serious Women with a history of disorder of the circulatory system are not advised to go on the pill The basic problem of thrombosis which is the formation of blood clots in the arteries or veins— which has sometimes appeared with pill users has been blamed perhaps unjustly on pill usage In fact, thrombosis is more likely in pregnancy, too It is believed that the risk factor of thrombosis is not normally a serious deterrent to pill taking But, sometimes there are other considerations which add to the risk The most important one here is smoking Heavy smokers should certainly not take the pill although it is said that the added risk of pill taking is less than the harmful effects of 15 cigarettes a day If you are a smoker you should anyway consider giving up smoking for the Pill taking can come later

The pill is essentially a combination of the two hormones oestrogen and progestogen These are female sex hormone produced by the ovary Oestrogen is produced throughout the menstrual cycle while progestogen is produced only in the second half of the cycle and prepares the body for pregnancy The hormones present in the pill are artificial and contain oestrogen and progestogen in amounts that are thought necessary to inhibit ovulation yet the dosage is to be kept down to a minimum to reduce the possibility of side effects

The Triphasic Pill

In the Triphasic pill the hormone dosage is regulated over the 21 days of pill taking The first 6 tablets contain the smallest amounts of oestrogen and progestogen The next 5 tablets have larger amounts of both hormones The last 10 tablets have smaller amounts of oestrogen but larger amounts of progestogen This system of hormonal control which comes closer to mimicking the hormonal changes in the natural cycle has been found to be more effective The three phase administration of the pill make it possible to have a considerably lower total monthly intake of artificial hormones with a corresponding re

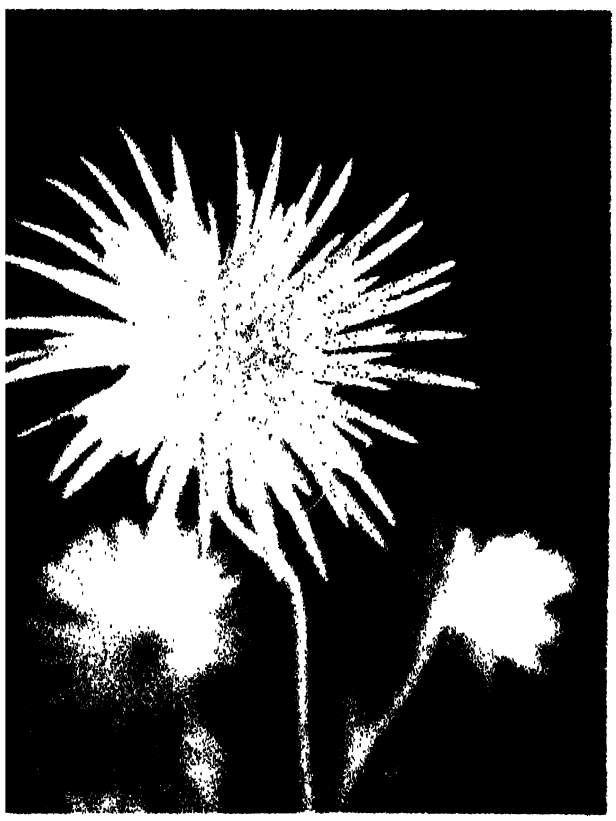


duction of the risk of side effects When the Triphasic pill reaches the Indian market which should be quite soon—it will be an obviously popular contraceptive method

With more and more women realising the necessity for small families it is little wonder that contraception is not a banned idea any longer And of all the modes offered in this sector it would not be unjust to have a soft spot for the pill Though the condom, the diaphragm the intra uterine devices and vasectomy/ligation are effective enough, the pill wins through sheer convenience There are few instances where the normal pill user suffers from discomfort or distress There is no irritation —as there often is in the case of loops and IUDs The condom can at times, prove unwieldly and take away some of the charm off a honeymooners' exercise And vasectomy and ligation are not recommended for newlyweds as operations are meant for couples who have no inclination to enlarge their family and can be difficult to reverse—but the pill is above all this and far more dependable and reliable than most of the other modes ■

The Third Eye

A Hobby Par Excellence



Photographs and Text by Chander P. Dhawan

PHOTOGRAPHY has been an interest of mine since my school days. But it was my close friendship with P.N. Mehra which boosted this hobby considerably. It was his criticism and guidance which put me on the right track.

I am a metallurgical engineer working with Tata Iron and Steel Co. Ltd., Jamshedpur. Photography is a hobby I have pursued with a passion. It is a very creative pastime and an excellent outlet for the stresses and strains of modern life.

I have always used a Rolleicord. I've never had a fancy for possessing different kinds of cameras and gadgets. I strictly believe that the less the number of gadgets one has, the less the confusion. The camera, after all, is merely a tool. Ultimately, good photographs depend on the eye of the photographer and his handling of the subject. I click the shutter whenever something appeals to me aesthetically. For me, a photograph's merit may be judged on the impact it has on the viewer. I take pictures in available sunlight; I have probably used a flash only twice in my entire photographic career.

I was conferred the honour of AFIAP from Switzerland about 22 years ago. I have won several awards and certificates from competitions and salons. My articles and photographs have appeared in the *Amateur Photographer* (London) and in many Indian magazines as well. ■

"What Kills You Is The Waiting Between"

by Anjali Ewing

Kabir Bedi, India's striking export to the international film scene, talked to the *Weekly* on his recent visit to Bombay.

I FIRST look into his eyes—light grey, smiling. The handshake is firm, warm, but I am uncomfortable. I sense him towering over me, this handsome man with thick, dark, glossy hair and kempt beard and moustache. But the sense of unease dissolves quickly as we sit across each other and as he talks effortlessly, smiling now, serious now.

You've been coming back to India very often. Is there something special about this trip?

No, not really. I've come to attend a family wedding in Bangalore with Susan (his fashion-designer wife) and Adam (their 16 month-old son).

You've just finished the Bond film, *Octopussy*. How did you get the role?

Well, George MacDonald Fraser, who wrote the first draft for the film, had done the screenplay of *Ashanti*. He thought I would be ideal for the role and recommended my name to Director John Glenn. The call came to my agents, William Morris, on my last day with them. I was switching over to the Robert Littman agency (which manages the careers of Alan Bates, Gene Wilder, Vittorio Gassman and Paul Scofield, among others). That posed a problem. One agency got me the film, the other negotiated the deal. Both wanted their money. In the end they agreed to split the commission.

Why did you leave William Morris?

They worked well for me in Europe but in Los Angeles it was a stable full of thousands of actors and I was totally lost in the shuffle. Robert Littman is ex-William Morris, so in a way I have never left them. But all said and done it's a do-it yourself business.

What was it like working in a Bond film?

Great fun. It's not often one gets to work in a film which is like a well-oiled machine. After all, it's their twelfth.

What did you think of Roger Moore?

Roger's a strange person. Very cheerful, very jovial, yet very aloof. Professionally he's a joy to work with but personally I relate better with Michael Caine.

Michael's supposed to be a good friend of yours. Do you have many friends among the Hollywood stars?

It's funny, but actors in LA seem to meet each other very infrequently. One meets up with the directors, but the stars are busy shooting on location in different parts of the world. LA is Lotus Land—it's important not to get too involved in its hype. Susan and I are close to Brenda Vaccaro, Roddy McDowell-- and Michael and Shakira, of course.

Why did you leave India?

I realised that even if I did do well here and I *would* have been successful—I wouldn't be happy. In a way I've never left India. I feel no sense of separation at all. My friends are here, my roots are here. I feel completely Indian. But I wanted to establish an international name for myself and, in some way, to be a bridge between India and the West. At all times India has been my point of reference.

You weren't offered a role in Gandhi?

How could I? I fell squarely between the two worlds. I look neither Indian nor English.

Aren't you fed-up with doing roles where you either wear an Arab's grab or a turban?

I can only take what's offered to me. Besides, I accept these roles for my survival.

With so many co-productions between India and the West, do you think there might be more roles for you?

It should certainly open up a lot more doors. Do you know I was signed up for *The Far Pavilions*? I was to play Khodad --the Master of the Horse. We had the full deal worked out on that. Then the Bond schedule overshot by a week. The producers of both the films sat together and locked their heads and minds to come to an agreement. But there was nothing they could do and so I withdrew from the film. It is one of the biggest disappointments of my career -- not being able to do the role. It's the irony of this business. You wait for six months on your butt for a role and because of a week's overlap you lose a tremendous opportunity. Omar Sharif will be doing the part.

Are you and Omar Sharif constantly clashing over the same roles?

We're not constantly clashing, as you put it. After all, he is a full generation before me. Strangely enough, he is better suited to the role of the *Far Pavilions* character because he's older. I don't see any competition between us. I look upon him as a trail blazer who's made my work easier.

Are you still known in Italy? Do they still remember *Sandokan*?

They are not tearing my clothes but they are still shaking my hand! The power of television is so extraordinary. What television does is absolutely awesome. The only way to get known in the West today is through television—except if you're playing Gandhi. The Bond film will give me that kind of exposure. The first target is visibility—only then can you get known.

But you are rather low key, aren't you?

It's not for lack of trying, I can assure you. Unless you're selling or promoting something, no one is interested. It's not like in India where the magazines say "Hey, let's do a story on or interview with Kabir. We haven't done him for a long time." There is this thing called TV Cue which is one of the most cruel systems ever devised. It's a rating poll where people are asked to recognise faces from pictures shown to them. And you can't get a decent TV role if you have no cue.

Are you happy?

Yes, I am. It's not as if there haven't been moments of disappointment or self-doubt or times when I haven't made mistakes. But it has been well worth it for the experience and wealth of knowledge I have gained. Besides, I'm well on my way to establishing an international name. America remains the last challenge.

You live in LA. What is it like living there?

I've lived four years in LA. Although it is one of the biggest film capitals in the world, it's just like a provincial town. It looks at its own navel. London is infinitely more cultured than LA but I need to be in LA. People don't care what you do, how you survive. I still have to audition for roles and face rejection. It's part of the ego beating an actor has to take. What kills you is the waiting between roles when you are spending your savings, depleting your reserves, with no guarantees in sight. You have to have the attitude of a bulldog.

How much are you worth?

A lot as a person. I live well, I live comfortably. I don't live extravagantly.

It is a pity we haven't seen your films here. We've seen Persis Khambatta in *The Wilby Conspiracy*...

My *Thief Of Baghdad* came to India and was a success here. *Ashanti*, of course, was banned. And I've gifted *Sandokan* to Indian television.

Why, won't they buy it?

I don't know. I own the rights for its distribution in India and I'd like it to be a gift from me. But I've been waiting three months for them to approve of the gift. They're looking a gift horse in the mouth. (laughs)

We know so little about the work you've done abroad. Why don't you talk about the roles you have done since 1976?

O.K. In 1976 I played the lead role in *Sandokan*, an Italian-German-French co-produced TV series. It was a big hit and made me a superstar in Italy. In 1977 and 1978 I did two feature films for the same director—*The Black Pirate* and *Sandokan Resurgent*—both lead roles. In 1978 I also did *Thief Of Baghdad* with Clive Donner. Then in 1979 came Richard Fleischer's *Ashanti* with Michael Caine and Rex Harrison. I had another starring role in *Fugitive From The Empire* (1980). And in 1982 I did the lead role in Sarky Mouradian's film, *40 Days of Musa Dagh*, about the Turkish massacre of the Armenians..

We heard the film was going to be shown at the Festival. What happened?

Wasn't it? I must find out what happened. It's going to be shown in Cannes.

in May. Anyway. I've also appeared in guest starring roles on television for *Dynasty* and *First Lady Of The World* (the Eleanor Roosevelt story). And, of course, you know about *Octopussy*.

What about acting in Hindi films? Have you been offered any roles?

It doesn't make sense—financially or timewise—to make a film here I would seriously consider a role if it had dramatic possibilities and the film maker promised to finish it within six weeks or so.

What about a commercial film?

Yes, even a commercial film if I had a good role and it was being made on a tight schedule. I can't fault commercial cinema after doing James Bond!

I believe you once did a regional film here...

(Surprised) Yes. I was the first star from the North to do a film in the South It was a Malayalam film and I even learnt to speak my lines correctly. But I made them promise they would dub my part because I wasn't sure I was good enough. The film was never completed; I believe due to politics in the industry some people sabotaged its production and finance. I'll tell you an interesting story. While finishing the Bond film in London, someone told me an Indian film maker was shooting at Pineood studios. An Indian at Pinewood studios! So I went to have a look. There was this massive blue set .. do you know who it was? Kamal Amrohi shooting the last of *Razia Sultan*. Before I left India, he had signed me up for an important role in the film, the second lead to Dharmendra. He asked me why I had left, why I had deserted him. So I told him it was better this way otherwise I would have been working on the same film for five years. He agreed with me and wished me luck (chuckles)

What are the projects in hand now?

After Bond there's nothing yet. There is one project in the offing on the life of Kahlil Gibran And I am going to produce a mini TV series with internationally-known names from television and the screen. I don't want to say too much about it at this stage because nothing has been finalised. All I can say is that it has an Indian background and it will be shot entirely in India in the winter of '84.

Do you model or act on the stage any more?

No, never, though I have been approached by a big industrial house here in Bombay for a major ad campaign. But I'm not telling who. I'm not going to give them an ounce of publicity until they've signed on the dotted line!

Weren't you Cosmopolitan's Bachelor of the Month once?

Yes (taken aback).

Were you a bachelor?

Well, I had divorced Protima I told Cosmopolitan I was divorced and the they said that made me eligible.

Did you get any offers?

Oh! Hundreds of letters but I never had time to investigate the offers But it was more a tribute to the power of *Cosmopolitan* and the reach it has

When I met you as a little girl you looked like a foreigner to me. You look more Indian now.

It could be. But it may be that you've grown up

Maybe.

Lady Chatterly's Lover

Forbidden, But Not Forsaken

by Bijalpita Julie Chatterjee

FOR having published *Lady Chatterly's Lover*, Penguin Books were prosecuted under the Obscene Publications Act 1959 at the Old Bailey in London from October 20 to November 2, 1960. Twenty-two years later, the film is still banned in India. Banned perhaps for the same reasons as the book was: because the people who matter do not appear to understand sex as Lawrence conceived it—"Sex is the root of which intuition is the foliage and beauty the flower." It is indeed a great pity that sex today is only a dirty word for a bit of titillation and obscene pleasure instead of the "flickering, glowing or blazing flame of strength and communication" that all great artists felt it to be.

Set against the backdrop of World War I, *Lady Chatterly's Lover*, raises many questions in our minds—but asserts one single truth—that material civilisation does not provide us with enough sustenance to appease our quest for happiness. The laws of life are those of lushness, fertility and creativity. Any attempt to go against the grain of Nature is bound to lead to destruction. The film makes this point lucidly and succinctly. Now in the eighties, when the threat of a nuclear holocaust looms large and we split hairs about the censorship of obscenity, *Lady Chatterly* becomes vastly topical and relevant.

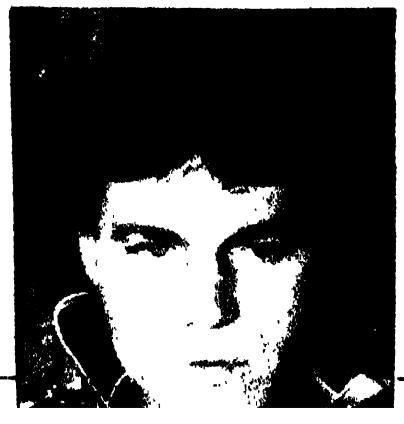
The narrative is deftly handled. Film Editor Eunice Mountjoy presents the story of Constance Chatterley's love for Oliver Mellors (her crippled husband's gamekeeper) with wonderful tenderness, a tenderness that is the hallmark of great love, love that is "honest and healthy"—as Lawrence visualised it, love that celebrated the victory of the "life-force", love that transcends all barriers of social class, creed and economy. Starring Sylvia Kristel in the lead role, and Shane Briant and Nicholas Clay as Sir Clifford and Oliver Mellors, the film is able to capture the spirit which Lawrence had charged his novel with.

The film achieves success; a different kind of success of course than what the book is capable of. The screen version succeeds by working on two planes simultaneously. First, through the rich simplicity of its structural design—this pattern is reflected most significantly by means of the setting. The photography by Robert Fraise is wonderful and the camera operation by Bob Smith has done justice to the vibrant verdant lushness of the woods which collectively become a single character by themselves; second, through some brilliantly analytical and technically almost perfect love-scenes.

The film concentrates on a tiny portion of English soil—the manor Wragby Hall and the woods surrounding it, and it is creditable for Just Jaeckin, the director, to have realised the elemental force Lawrence had seen in the woods. This is where birth, growth and the annual cycle of fertility take place; it is also where Constance and Mellors find a new life together. One of the most beautiful scenes is Constance's meeting with Mellors in the woods. The scene is pregnant with the promise of fulfilment. Accidentally emerging upon Mellors bathing, she is dumbstruck by his "beautiful" body. Wide-eyed, for the first time, she learns what sexual arousal can really mean. The viewer is as rapt as her. She comes back to the manor and in the privacy of her bedroom *finds* herself. This is one of the most powerful scenes in the realm of twentieth century cinema and it would hardly be an exaggeration to say that Kristel succeeds in raising sex to sublimity. She more than once shows her power as an actress. Also in the woods, Constance finds a balm to all her wounds (inflicted upon her by material civilisation), just as Siegmund had in *The Trespasser*, and Ursula in *Women in Love* or Anna in *The Rainbow*.

There are certain other scenes which remain imprinted long after the lights come on. Perhaps the most effective of these is the one where Sir Clifford awakes from a nightmare, and prodded on by an almost superhuman will drags himself up the stairs to Constance's bedroom. She is of course, far away in the heart of the woods, sharing in beatific joy with Mellors. Clifford's countenance, wrenched with pain and humiliation as he clutches the empty bed-clothes, is a perfect piece of cinematography—a reassertion that cinema is often able to achieve greater communication by sheer technical superiority.

HE IS MY LADY'S LOVER. Nicholas Clay, who plays Oliver Mellors in the film, Lady Chatterly's Lover is seen here in John Boorman's Excalibur.



As far as the plot goes, the mystery is solved by a single brief shot: the niggling question that lurks in Mrs Bolton's mind, "Who is my Lady's lover?" is answered when she sees Mellors, with gun, garters and a baggy jacket, and his dog nosing about like a shadow beside him in the indistinct half-light of dawn. That is all. Jaeckin knows where to stop; that is perhaps his greatest plus point. He is concise to the point of starkness and intelligently leaves the audience craving for more.

More significant scenes in the film are expectedly those between Constance and Mellors. Their meetings are treats for them—and, perhaps, more a treat for us? The pastoral scene where Mellors and Constance bedeck each other with flowers—campion buds, lilies and forget-me-nots—and celebrate the joy of consummation, one almost sees a Keatsian quality in the texture of the film that can be traced as far back as Spenser in "Faerie Queene". One is apt to think of Goya's *Nude Maja* and compare Kristel's beauty with hers.

The softness that comes across in the scenes can be contrasted with the harshness, tensions and cruelty that is exposed in the "Trial Scene" where Clifford, in all his perversity, tries to cater to his ego by commanding Mellors to whip the poachers. Clifford is admittedly incapable of lovemaking but even if he were able to make vigorous love (had his limbs all been perfect) one is tempted to wonder if he could ever love like a *man*. He is much too much the baronet, too full of his baronetcy to have the sensitivity that Mellors possesses without a title to his name. Mellors' character unfolds further in the beautiful scene at the summer house where Constance first comes to see the chicks hatch in the coop. Here the camera refreshingly follows the gamekeeper's strong, sinewy arms. He holds the chicks with surprising tenderness—that same tenderness which endears Lady Constance to him.

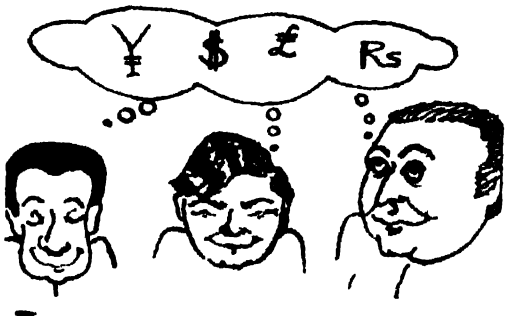
In the final analysis the film is a cinematic achievement for both the director and the cast—a team which was able to grasp and transcreate Lawrence's idea of love. There is a magic in *Women in Love* and *The Trespasser*. Here that magic is missing. Here Alan Bates is also missing. "He made a smashing Birkin and a devastating Siegmund. How would he play Mellors?" I wonder, as I watch the credit lines... But that is another story.

The Asiad Chrontickle

by Suresh Lala

EVERY once in a while an event occurs that lifts a nation above mediocrity. And it was undoubtedly so a few weeks ago, when an event of such monumental proportions occurred in our country. Mainly, Amitabh Bachchan, whom we all know and love so dearly, recovered from a very serious illness. This however did not completely overshadow another phenomenon which commenced on the 19th November 1982—the IX ASIAD. Truly, our Prime minister, whom most of us know and love so dearly, could not have received, indeed expected, a better birthday gift...

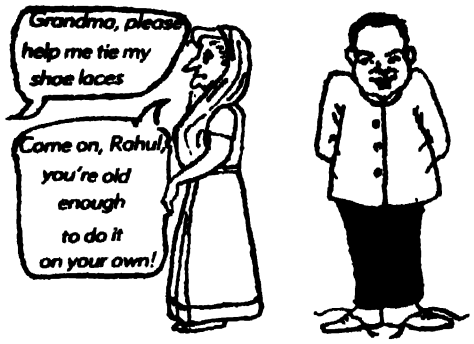
SURELY this spectacle would not have been possible without the blessings and efforts of Panditji, Rajivji, Zail Singhji, Butaji, Amitabhji, Bapuji and Appuji. For, it was barely two years ago when the guardians of our nation, which we all know and some of us love so dearly (the nation, not the guardians), decided that it was about time that some of them should be given an opportunity to satisfy their yen for sport, and that most of them should satisfy their yen for YEN...



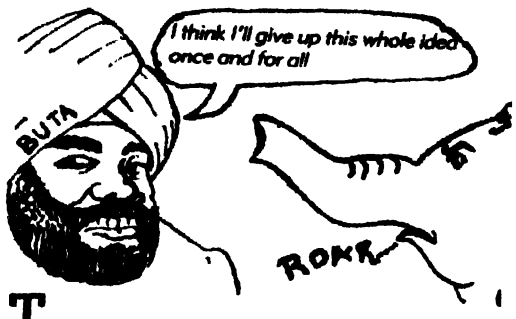
AND thus began one of the biggest organisational tasks the country has ever faced since our beloved Raj Narainji, whom few of us know so well and most of us thank the Lord for that, attempted to distribute sweets during his now forgotten victory at Rae Barelli.

Every little detail had to be attended to...

every loose end tied up.



THERE was however one aspect of the organisation which left much to be desired...



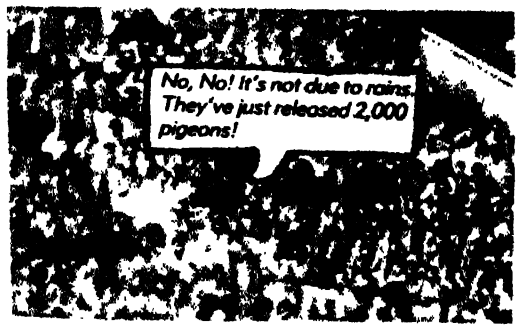
THIS led Butaji to a very emotional refrain...

PEOPLE arrived in the capital from different nations and various walks of life.

THEY came due to various reasons...

THE Opening Ceremony was indeed a spectacle which will definitely find its place in books of hysteria. It was enthralling to watch the participants of the various nations marching past...

... THE release of 5000 Balloons, and...

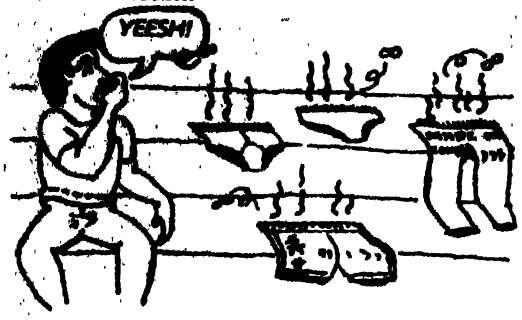


... THE choir bursting into the Anthem of the Games...

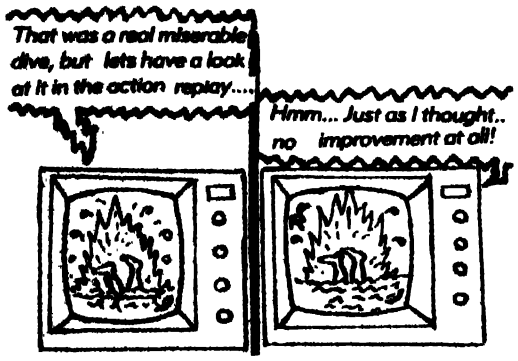
...GIANI Zail Singhji...

...AND last but not the least, our own Gita Zutshi muttering the OATH...

THE events began with the Chinese gymnasts stealing the honours in the various exercises, while their Chinese supporters egged them on, much to the chagrin of the other viewers...

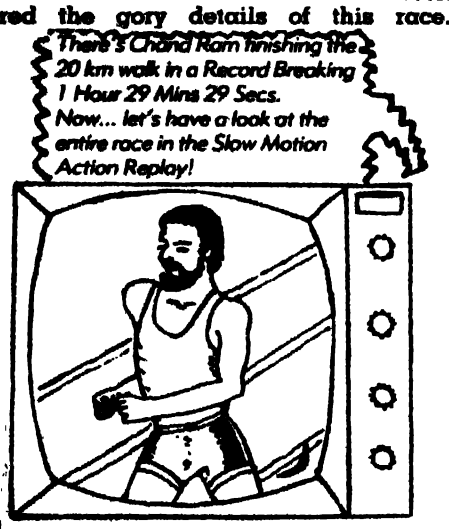


IN the Diving Competition, our two young lady divers made a real splash...

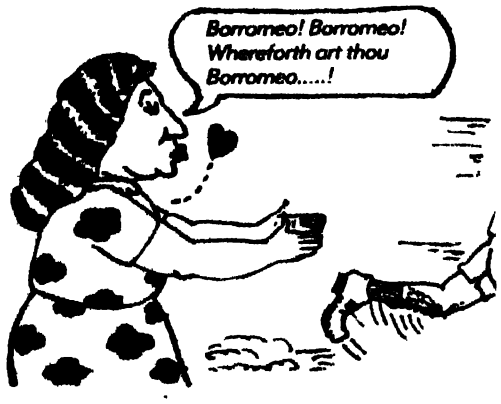


...as a result of which we hope they will DIVERsify into some other sport.

INDIA'S 20-km walk national champion Chand Ram set the pace when he walked all the way to the first gold medal in the track events. Television viewers were fortunately spared the gory details of this race...

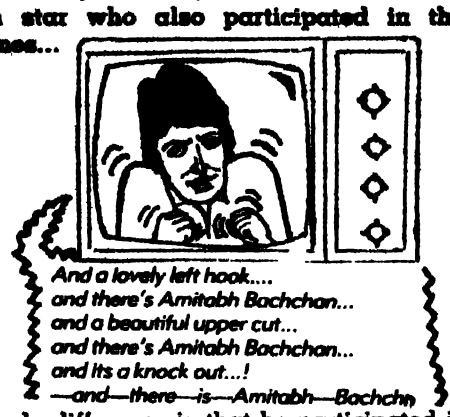


CHARLES Borromeo, the star of the 800 m race probably had a stunning driving force which enabled him to forge ahead to victory...



A VERY special mention for that shapely starlet of the 100 metre dash—Lydia de Vega. This budding Filipino film star stole the hearts of the crowds, and considering her statistics (34-26-36), wouldn't you like to make a dash and METRE.

There was, however, a well known Indian film star who also participated in the Games...



... only difference is that he participated in the audience.

Meanwhile, a powerfully built pub owner from Birmingham, Gian Singh Cheema, lifted two Bronze medals in the 100kg category. We are quite certain his strength has been acquired due to constant exercise at work.

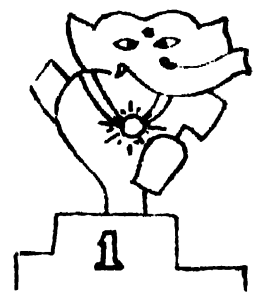
AND considering the trouncing we received at the hands of Pakistan in the men's hockey finals, maybe we would have been spared the trauma of such a miserable defeat if the Pakistani men's team were playing against...

...our women's hockey team.

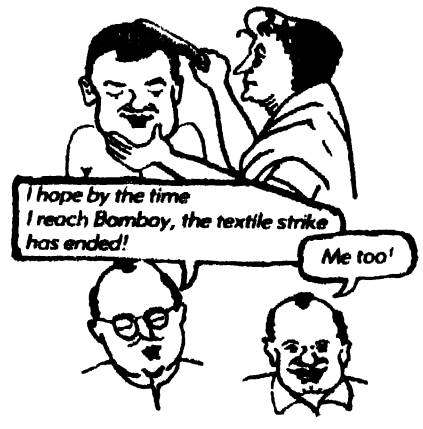
Well, seriously, folks, the GAMES were certainly an organisational triumph for our country. For once, politics took a seat in the last row. Though, after much bickering, politicians were allotted seats in the front rows. No untoward incidents were reported (they did occur, but weren't reported), due to the very TIGHT security...

CONSIDERING the overall performance of the Special Organising Committee, there were a few more victory ceremonies we would like to have witnessed.

...AND a very special Gold Medal award...



...FOR refusing to perform dirty tricks. The conclusion of the games now raises many pleasant and not so pleasant thoughts in the minds of many who have had to get back to the old grind...



The India Craze

by Vaiju Mahindroo

EVER since M.M. Kaye's *Far Pavillons* (translated into French as *Pavillons Lointains*) met with such phenomenal success, India has become an up market commodity again, and there has been a spate of books using the Raj background—most of them disastrous, almost all of them hurriedly dashed off to cash in while the India craze lasts.

One such number has recently been written by a somewhat gushy Paris schoolteacher called Irene Frain. The book, titled *Le Nabab* has been number one on the French bestseller list since its publication a few months ago and has turned its author into an overnight celebrity. Needless to say the cash register has not stopped ringing.

The story is simple enough: An impoverished sailor from Brittany goes to India and becomes a mercenary fighting for one rajah or another. He returns to his native Brittany rich as Croesus and is ennobled by the king of France. In India, Rene Madec, for such is the sailor's name, is given the title of Nawab and thence the title of the book.

Ms Frain spent a total of one month in India during which time, she says, she fell in love with the country. Her lack of first hand knowledge of the places and people she writes about is perhaps the book's greatest failing. Her situations are contrived and overly romanticised. One finds all the traces of exotica—the bazaars, the colours, and sometimes rites and customs—that characterise cheap romances. The Indian characters, from Sarasvati, a high born Rajput "who knows everything about the art of love", to Ananda Rangapillai, a betel-nut merchant who really lived in Pondicherry during the 18th century and who has left behind extensive memoirs, have a false, hollow ring to them. The book remains a pot pourri of adventure, romance and exotica—historical fiction of the worst kind.

The success of the book is really the success of one of the most intense media blitzes ever witnessed in the history of publishing in this country, except of course for the redoubtable duo of Lapierre and Collins. Just before the publication of the book Ms Frain accompanied eight well known French journalists (among them Jaqueline Piatier, culture editor of *Le Monde*) on a two week junket, officially titled "A Voyage Of Discovery", to India. Their route wound its searching, weary way to such little known places as New Delhi, Bombay, Agra, Jaipur, Udaipur, Khajuraho. The junket

resulted in handsome write ups—a full page rave review in *Le Monde*—that put Ms Frain firmly on the road to success. The enthusiastic response the book has received reveals the kind of ignorance that exists in France about India. Even the most discerning critics are in love with the India of maharajas and princesses, of intrigue and adventure, and any attempt to break away from this cliche-ridden path meets with firm resistence from publishers who feel that any other type of book on India just will not sell.

"Madec wrote his memoirs about the years 1776-1785. But his most colourful and interesting adventures went unrecorded. For instance he made very little reference to his amorous adventures. There was a reason for this. He wanted to be rewarded and recognised by the king of France and therefore could not be totally frank about his life and his follies. As a result there are several blanks in his memoirs. I have tried to fill in these blanks," explains Frain.

She began work on the novel in 1979. "I had written a history of maritime Brittany and the adventures of René Madec took up three or four pages in that book. Well, I started documenting in 1979 and the actual writing took 18 months. I started writing in the summer of '80 and I finished the final version almost a year ago. I know this novel is based on reality, but one cannot say where history ends and fiction begins. But I have tried to be meticulous with my documentation, while reserving a large place for my imagination."

Did the characterisation of the Indians pose too many problems? "Not all," says Frain "I drew my inspiration for Sarasvati from Meerabai, whose life I admire so much. It was actually the English that posed the biggest problems."

Frain says she tackled the Indian characters rather gingerly: "I told myself: I am not Indian and I should not get confused. I therefore tried to manipulate things with great caution." Well, Frain just wasn't cautious enough, and has gone overboard with almost everything.

The publishers, Jean-Claude Lattes, are giving the book a tremendous publicity boost. "This is the only book we've spent so much money on," said Christine Royer who has handled all the radio spots, book signing parties and public appearances for Ms Frain. A well known travel agency registered enormous sales with six package tours to India titled "In The Footsteps Of Rene Madec". The book is to be seen in the hands of every secretary returning home on the Metro and Ms Frain has become the presiding expert on India giving bits of advice on India in all the popular magazines: Shopping Indien and Les Adresses d'Irene Frain, where she tells you to visit the shops behind the Taj hotel in Bombay if you want a bargain in carpets. Wrong advice, at that.

France Inter, the national radio station, has made a radio play out of the book, which is avidly lapped up by idle housewives dreaming of romance and adventure in the early hours of the afternoon. And it doesn't stop there. Ms Frain is now proposing an English translation of the book which ought to hit the stands in a couple of months. Which means that another section of the western public is going to swallow the stuff. The only problem with Ms Frain's kind of writing is that it reinforces all the age old myths and beliefs about India, adding to the appalling ignorance that already exists about that country. Evidently India's loss will be Ms Frain's gain. ■

IRENE FRAIN

BOOK REVIEW

"LE NABAB" by Irene Frain; Jean-Claude Lattes.

Temple Architecture

by Devangana Desai

THE temple town of Bhubaneswar, with more than thirty elegant temples of the early medieval period, deserves special monographs. More than a quarter of this book is, however, devoted to Indian temples in general—their evolution and styles—before it comes to the temples of Bhubaneswar. Such general material is available to readers in many books on the Indian temple of which, ironically, the author himself provides a good list.

Mr Rao tries to suggest that these temples mirror the temple art of the Chalukyan centres at Aihole and Pattadakal in the Dharwar region. One may perhaps agree with him when he says that the Gupta influence on Orissan architecture was non-existent. But his central thesis is questionable. After all, the influence of the Pasapatas is quite strong in the temples of Jogeshwari, Parel, Elephanta and Ellora.

No matter. The descriptions of each of the important temples of Bhubaneswar, its ground-plan and the 315 photographs bring alive the beauty and grace of the temples and their sculpture. Those who have not visited the town will certainly like to do so on seeing the wealth of artistic material in the book. ■

BHUVANESVARA—Kalinga Temple Architecture by P.R. Ramachandra Rao; Akshara, Hyderabad; Rs 125.

The Stranger, The Enemy

by R.P. Noronha

NO one will ever know why the nilgai fawn with a broken hind leg lected to make Govardhan's *bir* (pasure) her home. It was a singularly insuitable place for the purpose, with deep nala on one side, the Banjara huts on the other, and no access to the jungle except through half a mile of ultivated fields. But she did, and nevitably she was discovered within wenty four hours. Fortunately for her, ne of the younger Banjara dogs nade the discovery at a time when old .uppu, killer and thief, was watching iim. Before the young dog and a couple of his friends could carry out heir obvious and murderous intenions, Luppu arrived like a thunderbolt o enforce his right to priority. There is "pecking order" in dogs as well as chickens. There were a few yelps of pain and the fawn was left to him. .uppu is a somewhat diluted Banjara log but he retains the characteristics of the breed, killer instinct and quickness. His jaws were an inch from the awn's throat before the last yelp had died away. And then it happened. The awn turned and licked his nose without making the least effort to get up and run. Not that running would have helped, considering her broken leg. The lick was something quite outside .uppu's experience. He checked, his aws snapped shut but the throat remained intact. He growled. The awn licked his nose again.

I too have a dog, a labrador by courtesy. Govardhan's *bir* is generally good for a partridge or two and Rocky oves nosing them out of the tall grass so that he can look reproachfully at me when I miss. Behold me therefore that evening with Rocky on the fringe of Govardhan's *bir*. Suddenly he stiffened, his head held high, testing the wind. Then he moved tensely into the *bir* and I followed him. Twenty paces later his voice was raised in pained protest, there was an angry growl from another dog, and suddenly Rocky was in sanctuary between my legs. There is nothing weak about his sense of self preservation. I paused and thought and arrived at the wrong conclusion. One of the village dogs had littered in the *bir*—as they often do—and was warning off trespassers. Since she was there, the partridges would be elsewhere. I detoured along the nala, and Rocky regained his spirits when he picked up the scent of a spur fowl.

Float Fishing

A couple of days later I was fishing in the la next to Govardhan's *bir* and as usual Rocky snored at my feet. There is something hypnotic about float fishing. You watch the float tensely for the first few minutes and nothing happens and you realise that this day is going to follow the usual pattern of fishing days. You close your eyes and think great thoughts—what lesser people call sleeping. And of course there is a sudden and explosive jerk, your rod disappears into the water before you can grab it but not before your eyes are open enough to savour the bitterness of its disappearance. Today it didn't happen. Certainly I went to sleep. But the rod did not disappear, most probably the float didn't disappear either (this I cannot swear to). What did disappear was Rocky. I awoke to his anguished shriek and opened my eyes in time to see him hit the water, forcibly propelled by an angry Luppu. A nilgai fawn with a lame leg stood uncertainly beside me, staring with film star eyes at the commotion in the water. Then it licked my nose. I have had grand children licking my nose (something to do with the salt in sweat, I suppose) but I still don't like it. I had no time to express my displeasure. Luppu was back in two shakes of Rocky's tail. He gave me a brief but dirty look and fortunately decided that I was innocent of evil intent. The next moment he had shepherded the fawn back into the *bir*. Rocky took a long time to come out of the water. Charitably, it was a warm day.

My grandchildren do not agree that I am more intelligent than Rocky, which proves how stupid they are. Rocky agrees with them, which proves how stupid *he* is. We went home in an atmosphere of mutual disapproval nothing explicit, but disapproval implied in my silence and the absence of enthusiasm in his tail. That night he sneered at the potato curry I cooked and I ate the chapatis he had his eye on. For a long time pictures of Luppu and the fawn chased each other across my mind, like a cinema film. I have lived most of my life in the jungle, long enough to learn that there is no law of the jungle, nothing but the most categorical individual freedom, tempered only by fear of fang and claw. There was no precedent for a killer dog adopting a lame and eminently edible fawn. "That Luppu!" I thought, "Getting soft in the head!" and so drifted into sleep.

A formal complaint was lodged against him the next evening by Hamara Gang, the village children who have made me their Godfather (in the Mafia or gangster sense). "He's gone off his nut!" said the spokesman, indignantly. "Every time we get near Govardhan's *bir* he rushes out and we have to run like hell to save our skins!" By now I knew the reason for Luppu's behaviour but the fawn's life hung on my silence, so I explained that old dogs and old men do get irritable at times. The explanation was considered unsatisfactory and I was told so without inhibition. Only by copying Luppu's behaviour was I able to get rid of the children. Three days later there was another complaint. The grass in the *bir* had ripened and Govardhan went to have a final look before fixing the date for the cutting. He returned in some haste with a new rent in his dhoti and trouble on his mind. As usual he came to me. "That dog is mad" he said, "he chased me out of my own *bir*, me, his owner, as if I was a thief!" That was not strictly true, Luppu has never acknowledged any master. Govardhan continued, "Now the grass is ripe and it has to be cut, and this... ... ... dog will not allow anyone to enter the *bir*! You must come tomorrow with your gun and if he gives trouble again, finish him off. We'll start the cutting at seven." I agreed because my presence might—might perhaps—prevent the murder of Luppu and the fawn. Like Micawber I always hope that something will turn up. In the event it did.

When I reached the *bir* in the morning, the women who were to do the cutting had already arrived. They lined up as usual along one side of the field and waited for the signal to start. Suddenly one of them, obviously in the final stages of pregnancy, collapsed and began screaming. In our village women are encouraged to scream as loudly as they can when the labour pains start, as this is supposed to make the delivery easier. The other women immediately surrounded the patient. The men moved unobtrusively away. A woman went to the Banjara huts and returned with a pot of water on her head. Time passed, fifteen minutes, half an hour, then we heard the thin high wailing of a baby having its first look at the world and voicing its disappointment. Relieved, our group, the men, began talking all at the same time, as people do when acute tension relaxes. It did not relax for long. There was a sudden flutter amongst the women, immediately followed by squeals of dismay and then by giggles, and finally by full throated laughter. A woman, still laughing, came to summon the baby's father. We followed him. The baby had been laid in its mother's arms and standing over both was the nilgai fawn. Yes, you guessed it. She was licking the baby as if it had been her own. Luppu, disgusted at this display of sentiment, was nowhere to be seen.

The fawn, now two years old, is still with us. She never leaves the cultivated area of the village, and everyone abuses her violently when she grazes on his crop. But no one goes beyond abuse, for she is no longer a stranger, and only the stranger can be an enemy. ■

In the chilly seasons when people shake and shiver, let's show you a way to keep snug and warm.

Decorate your home with coir. It's India's wonder fibre, and it looks gorgeous.

During monsoon and winter, coir decor (wall panelling, false roofing, carpeting) maintains a comfortable warmth in your home.

And in summer, it cools your room down. Coir is also an excellent noise muffler. So, in your coir home, the maddening bustle of city noises will seem very far away.

Is coir expensive?

Coir is one of the least expensive decor materials.

And it requires very little maintenance. Coir is moth proof. Coir doesn't gather dust — the dust just slides through

So no need for expensive dry or vacuum cleaning.

Coir isn't just gorgeous, it works for you.

So take a very practical decision. Decide on coir for your home.

Enter the world of coir

Coir Board

Naxalite

by Amrit Ray

(Translated from the Hindi by Rupert Snell)

What can we do, where can we go? We have a grievance against fate for keeping us alive.

FIRE is raining down from the sky. The earth scorches, like a burning griddle. And then, these hot dust-storms. The body is charred by the gusts of summer wind, as though all the water inside you were burned dry. Ants bite in their millions — you know, those little red ones What can you do, where can you go. Sitting, lying down, there's no relief.

The mind is numbed and runs mechanically along its single track, its sole reason for living. That's all there is left in this place now

Earth has split open. Ponds and pools have all dried up The broom of death has clean-swept trees and twigs, flowers and leaves. Everything is brown as far as the eye can see The ground is brown, the sky is brown.

All the houses have their doors closed tight. What people there are on the road are all hurrying to hide from the sun No time to talk now later When the rain comes, when life returns

THIS house we live in is very old. Nobody knows how old The walls are cracked here and there, even tumbling down in some places The thatch has started to come loose and a salty deposit is always crumbling away from the walls

Winter, summer, monsoon — there's no comfort here in any season. In winter everyone gets feverish shivering fits, in the summer burning whirlwinds spring up within the house and in the monsoon more rain pours down inside than outside And all the time you have this feeling of apprehension, wondering when the house might fall down

It's quite impossible to sleep soundly at night. They say that the foundations are subsiding: for all I know, the whole building might subside at any time We really ought to leave — but where could we go? The walls may be crooked and the foundations may be sinking, but it is our only home.

There are three of us living here. Added together, our ages make one hundred and seventy-eight years Our hair has turned white, our sight has become dim Or is becoming so. For us, life is another word for a kind of peevish irritation We don't know the reason for it, but it's there all right: a permanent crease on the brow Perhaps it's because we're not young any more, or perhaps we've a grievance against fate for keeping us alive — why don't we die...

→

LAST year the neighbour's mad dog bit me. I had to have fourteen injections — I was riddled like a sieve. This neighbour is my sworn enemy. The women in his family are very black and ugly. I've given up sitting on the verandah; a black, acrid smoke is always blowing over from there. Perhaps that's what has blackened all the women's faces.

But there is one thing that I really do enjoy watching: the freestyle wrestling bouts that the father has with his sons. There are three boys, all of them out of work. They make a regular round trip to the Employment Exchange; even if they don't get anything else to do, at least they have this diversion ready at hand.

The youngest, Meghnad, who has only got a B.A., applied for a job as a peon in our office; but the manager told him there wasn't much hope because applications had been received from better qualified people.

The eldest, Bajranad, went and lay down on the railway line after a family row. But the workings of the Good Lord were such that the train which was to deliver him from this life came off the rails a mile up the track, and countless other people went to a heavenly destination that none of them had booked for.

The middle boy, Shankhnad, apparently sits in an upstairs room making bombs. I live in constant fear of an explosion.

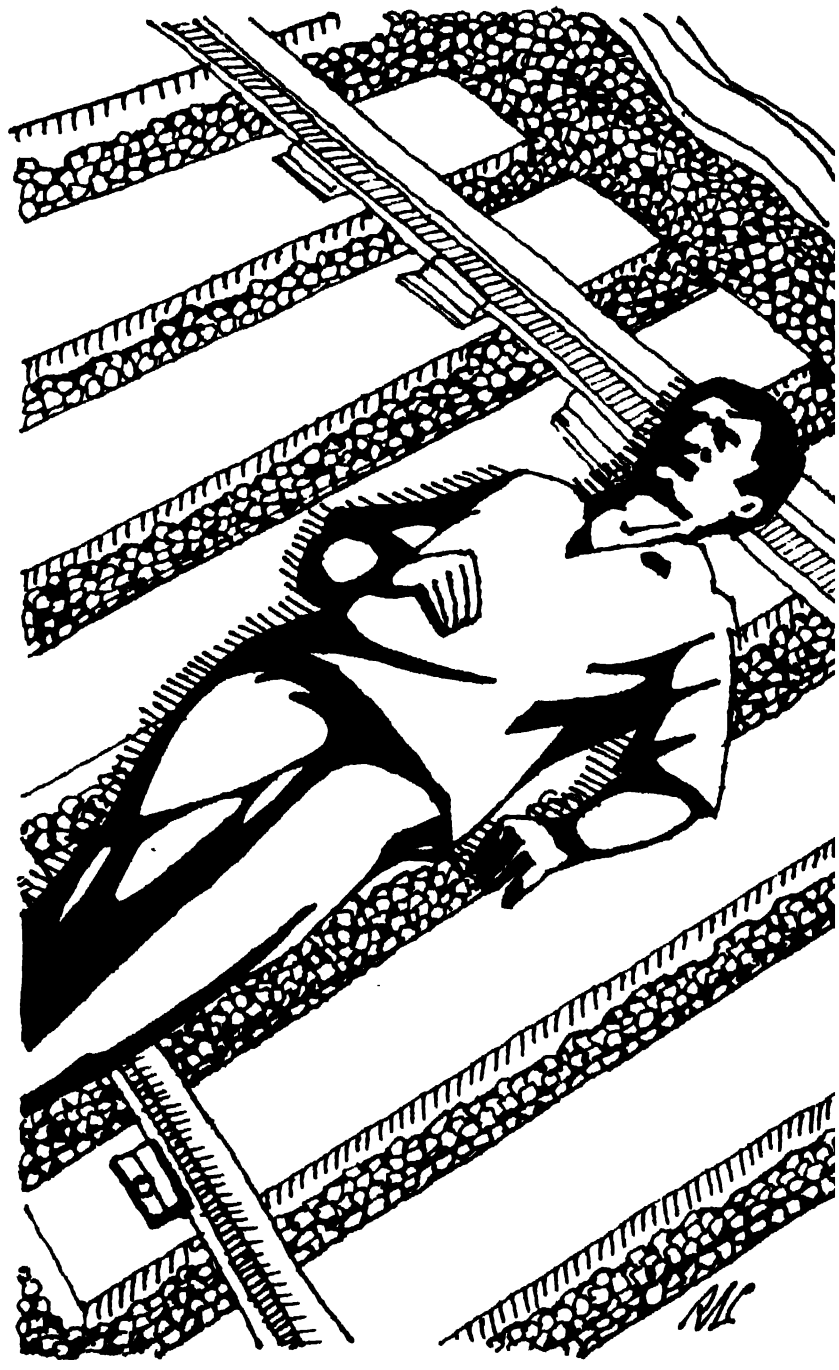
Actually, they're all right, all three of them. Bright. And physically strong, too. It's all a trick of destiny. The thing is that destiny goes by car, like all big shots. And you need a car to catch up with it.

IT'S very hot. The garden's all drying up. Vini has planted roses mostly: they're in a bad way in this heat, withering on their stems. I can see that many of them are so dried up that they look as though they're made of paper.

Vini entrusted them to me as she left. Come, why don't I go and tidy them up a bit before the sun gets too high. I pick up the pruning shears and go out into the garden.

Really, how horrible these lifeless, paper-dry flowers are! Even the few remaining blooms with any life in them are spoiled by their company. There's nothing we can do about the heat, and the rain won't come until it's ready; why don't I just cut back these dead flowers...

(Amrit Ray is the son of Prem Chand. The original story was first published in a collection entitled Sargam.) ■



This is a time suspended between life and death: a twilight hour lingering over a whole century, in which the sky is covered by the long day's dusky dirt while night sits on her balcony enticing us with her luring glances; we are about to climb the stairs towards her but we hesitate, for that is a night with no morning.

First, there's my old mother. She resents me and she resents my wife.

My wife's name is Vinita. She resents me and she resents my mother

And there's me. I resent my mother and my wife.

In other words, everybody resents everybody else. Resentment is a long thread which binds us all together.

My mother's complaint is that her son has become a slave to his wife. Where was she, this woman, when this man (myself, that is) was twelve days old and spent all day and all night lying on the cot sleeping or crying. I try to tell that old mother of mine that this woman was not even born then, but it's useless to say anything because the old lady's deaf and every sound that knocks at her door comes away unanswered

Vini's complaint is, why did you ruin my life by marrying me when you knew what your mother was like. I try to tell Vini that all that's a matter of history now, and that the old woman is a guest who won't be with us for very much longer. What about the rest of us, Vini says. old people live a very long time. If they didn't live a very long time how would they be old, I answer. Vini says, that's not what I mean. Then I get annoyed and ask her what she does mean. I know Vini won't say anything, but I know what she wants to say. So I say, just bring me a pinch of that rat poison...

My arrow finds its mark. Vini begins to cry. Then, in accordance with the rules of professional boxing, I let fly a shower of blows in quick succession — left, right — and spread her flat on the ground.

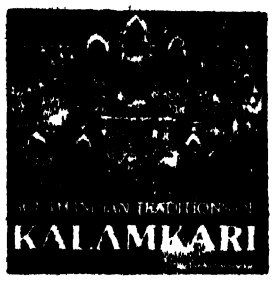
A banner of victory flies on my face. I turn round and try to see the halo which attaches itself to all incarnate saints, but I can't see anything, because as I move round the back of my head moves round too — the same problem a dog has chasing his own tail. But still, I feel pleased with myself that Vini's sitting there shaken and sobbing.

I don't know why I've got a complaint against Vini. And what's the use of knowing anyway? I've got a complaint, that's enough: not everything can have a name. Before you can give something a name you have to be able to identify it, and all identity has been lost — of people, of relationships. There's just this complaint which survives; perhaps it's because Vini is Vini, why isn't she Sarala whom I longed for more than my life, and left behind for fear of society — but who was never really forgotten; or perhaps it's because I feel that Vini shouldn't get older even if the years do go by, why does her body age and slacken day by day...

The Weekly Pick

South Indian Traditions of Kalamkari; Lotika Varadarajan; Perennial Press

A book to be proud of. For the author, publisher and collector—alike. The cover is charming—and shows a beautiful and rich piece of Kalamkari art, painted in the 17th century. The weaving traditions, motifs and colours are dwelt upon exhaustively, and the historic techniques and processes are clearly explained.



There are a few new points made by the author. It is very heartening to learn, for example, that Dutch collectors imported these fabrics from Tanjore centuries ago. The black and white prints are superb and the colour plates surpass all expectations. Techniques and processes, as well as contributions from designers, are included in the latter portion of this remarkable book

Photography: Monochrome, Creative, Colour O.P. Sharma; Clarion; Rs 65

Very compactly formulated, the book is a guide more for the amateur than for the professional photographer.

In 5 parts, the book discusses the camera, the development of photography as a creative art, processing, experimentation and detailed discussion on colour photography. The black and white photographs are of a fairly high standard and each composition is analysed. The use of light, lenses and background is thoroughly exhaustive. The author, who has held one-man shows, contributed a special effect in solarisation and has won many other awards, apart from the Pentax World Contest Award does a service to all of us who would like to begin to take pictures—the right way!

Zoroastrianism A Beleaguered Faith

Cyrus R Pangborn—Vikas Rs 75

There has been a revival of this Faith in recent months... what with Zubin Mehta coming down for the *Parsi Panchayat Meet* and the new film he is making on Zoroastrianism—little wonder that many theosophists of the younger generation are reading voraciously on the subject.

This book is fairly well constructed with *A Brief Chronicle of Zoroastrianism* and discussions on *Scriptures and Doctrines* and *Cultus. Navjote* and *Nahn* are dwelt upon particularly with great care.

Julie

Travolta Goes Rocky

A low-budget 1977 sleeper that was based on a magazine article, *Saturday Night Fever* took in some $ 145 million at the box-office. For his long-planned sequel, producer Robert Stigwood persuaded John Travolta to repeat his role as Tony Manero in *Staying Alive*. The star agreed, but on the condition that he be allowed to map out the film's story line. Not missing a trick, Stigwood also hired Sylvester Stallone to direct the film. In the sequel, Travolta graduates from white acetate suits to warm-up outfits that show off his director's influence better. Six days a week for four months prior to filming, he followed the rigorous training schedule that Stallone used to hone his body for *Rocky III*

Secretive Chaplin

A historic three-hour Charlie Chaplin film, culled from a treasure trove of 300,000 feet of long-hidden Chaplin rushes, out-takes, abandoned projects and sequences he cut and which have never publicly been seen until now, is being screened on British television in what has been hailed as a milestone in movie history. London-born Chaplin usually worked without a script and invariably destroyed all the footage he did not use in the master negative. The film, screened under the title *Unknown Chaplin*, was discovered in the vault of his Swiss home.

Amit's Hot Line

Amitabh Bachchan has applied for a permit for a private wireless radio set. The application was made to the Communications Ministry of the Union Government. Such wireless sets are provided to persons whose work requires urgent communication facilities. According to the rules the applicant has to state which parties he wishes to be in touch with. Amitabh has given three names: Mr Prakash Mehra, Mr Manmohan Desai—and Mr Rajiv Gandhi!

—Mid-Day

It's A Dog's Life

In this dog-eat-dog world you just cannot turn your nose at a job—or so Walter Matthau discovered filming *The Survivors*. Matthau plays an out-of-work guy who takes to driving a cab, pumping gas and promenading the pooches of the Guccied classes. "I like dogs, OK, if they don't smell and they don't bite me," said the jowly actor of his four-legged friends. "These dogs were trained professionals, but frankly I didn't like them because they all smelled." The dogs declined to comment on Matthau's aroma, but who could fault his *esprit de corps*?

No Debacle

Prime Minister Mrs Indira Gandhi has said that her party's reverses in the recent Assembly polls in Andhra Pradesh and Karnataka could not be termed a debacle.

In fact, she observed, it has provided the Congress(I) an opportunity for self-improvement and "renewal of our commitment to the people".

In her reply to a letter by Kailash Dua, an England-based architect, city planner and urbanist, Mrs Gandhi said she was not worried about losing or winning elections but the stability and unity of the country.

Expressing disappointment at the party losing the majority in the elections, she observed, a setback or victory was part of the democratic system

St. Aldates College, Oxford

Specialists in GCE studies for entry to UNIVERSITIES or the PROFESSIONS

NEW STUDENT ADMISSIONS

Applications for places at St. Aldates College are invited from students of either sex wishing to prepare for the General Certificate of Education (GCE) at 'A'-level for University or Professional Career entry. 'O'-level tuition is also available.

St. Aldates is Oxford's largest independent College specialising in GCE 'A'-level studies. The College is a member of The Conference for Independent Further Education (C.I.F.E.), approved by the British Council, and is an official GCE examining centre.

The minimum entry age to St. Aldates is 16 years. Personal attention is paid to the progress and welfare of overseas students and congenial and friendly accommodation is provided in the College's own Hostels or with carefully selected Oxford families. A sound knowledge of English is essential for College entry.

The exclusive teaching policy of the College is *'non-cramming and small classes'*. This ensures the all-important teacher/student involvement in examination success and develops the community spirit that encourages students to take full advantage of the unique cultural opportunities that the famous University City of Oxford has to offer.

To meet students' needs courses start in September and January.

The College GCE PROSPECTUS will gladly be sent on request. Early application is advised.

PREMIER ADVERTISERS

ONE MAN WHO DID NOT GET 'LEFT BEHIND' IN THE SERIES WAS SYED KIRMANI: he is seen above brilliantly catching Mudassar Nazar (39) off Kapil Dev in the Faisalabad Test that proved the turning-point of the series. Except for one vital catch he missed in the First Test, Kirmani (like Wasim Bari for Pakistan) took all that came to him behind the sticks, at times even looking like bringing off the impossible. And the impossible is what he was expected to bring off in the picture at right in which he makes a valiant attempt, at Faisalabad, to hold a glance by the indomitable Zaheer Abbas, whose that batsman—who went on to hit 168—had not quite found the rhythm of his shots. Maybe the series would have taken a different turn if Kirmani had held on to this one—still, by and large, the Tests certainly saw Kiri distinguish himself. Only, Kiri's batting powers(like those of our stalwarts) would seem to be on the decline: he was not quite able to handle an Imran Khan bowling at his swiftest. Mercury, according to Bejan Daruwalla, is supposed to favour Imran: the series certainly saw him bowl at 'quicksilver' pace!

Where India Lost Out

IT WAS RARE TO SEE MOHINDER AMARNATH *(left)* so comprehensively beaten in the series, but here he *was* clean bowled by Mudassar Nazar for 22 in the Faisalabad Test. The surprise packet of the series was Mohinder: of the Indian batsmen, he came nearest to the line of the ball, being able to withdraw his bat at the last moment. The helmet, therefore, certainly made a difference to Mohinder Amarnath's technique which, however, can be pronounced as truly tested only after he comes to grips with West Indies pace in February-March. In contrast to Mohinder—a batsman Sunil acclaimed as India's finest prospect at the end of the 1975-76 West Indies tour—it was noticed that Skipper Gavaskar *(below left)* tended to 'follow' the moving ball into the hands of the slips. In other words, Sunil (like Mohinder) did not always successfully withdraw his bat at the last fractional moment.

THE OLD LEFT ORDER CHANGETH. The Indo-Pak series put the seal on the decline of India's spin. It saw a raw Maninder Singh *(left)* take over from a seasoned Dilip Doshi *(right)*. After getting in among the tail in the First Test, Doshi rarely put the Pak batsmen on their mettle. He was easy meat for a Zaheer Abbas who had written virtual *finis* to the careers of Prasanna, Bedi and Chandra, late in 1978. Pakistan, in fact, may now be pronounced as the unhappy hunting-ground of Indian spinners: Chandra, Bedi, Prasanna and now Doshi have been cut to size there! Only Venkataraghavan has yet to play a Test in Pakistan—that is why you may find him included now in the India team to West Indies!

Photographs by Amiya Tarafdar

WHAT did one flea say to another?
Ans: Shall we walk or take a dog?

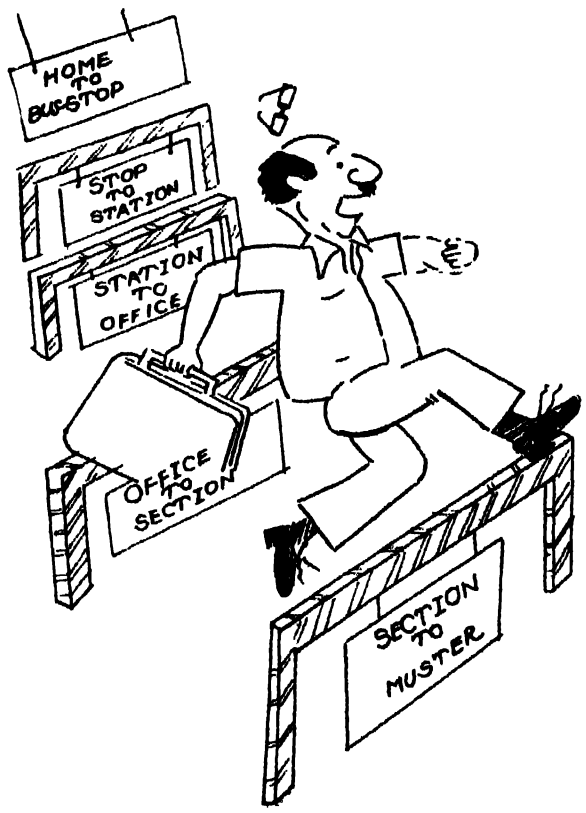
WHAT did the big firecracker say to the smaller one?
Ans: My pop is bigger than your pop.

WHY do cows wear bells?
Ans: Because their horns won't work.

"I CAN see you are run-down," said the doctor.
"How?" asked the patient.
Doctor: "By the tyre marks on your chest."

CORPORATION Inspector: "When did you realise that your roof was leaking?"
Tenant: "The other day at dinner, when it took me nearly three hours to finish my soup."

A MAN once visited his doctor and told him that he thought that he was turning into a pack of biscuits.
"Square ones with holes in them?" asked the doctor.
"That's right, doctor".
"You are crackers!" said the doctor.

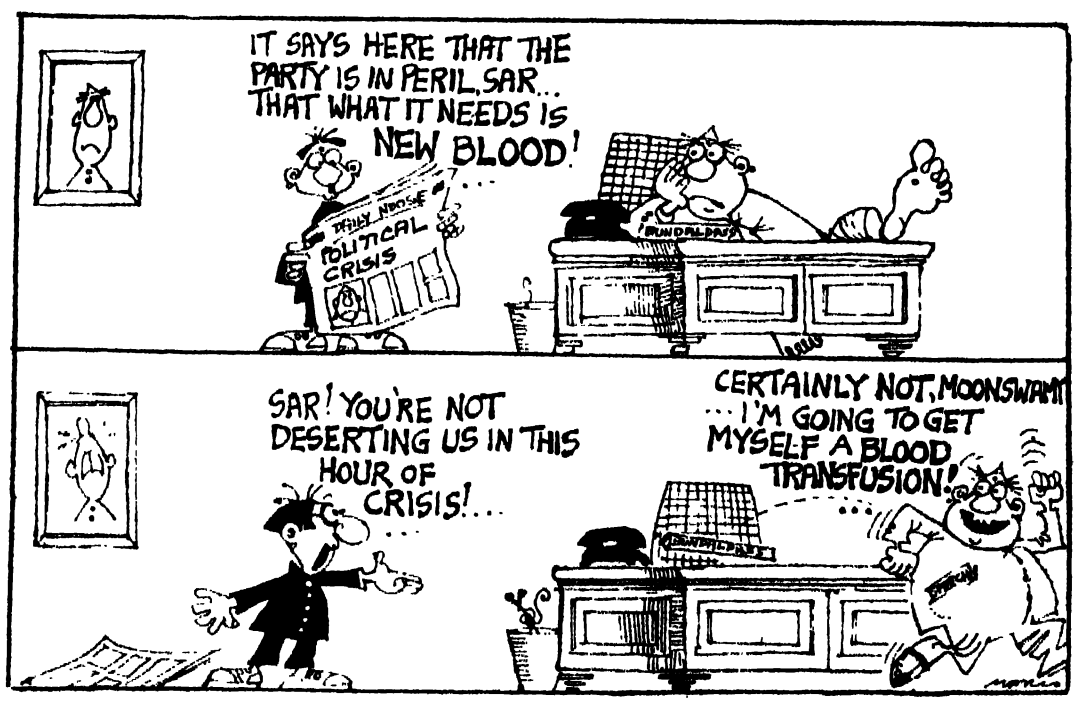


"Don't mark me absent, sir. I have come!"

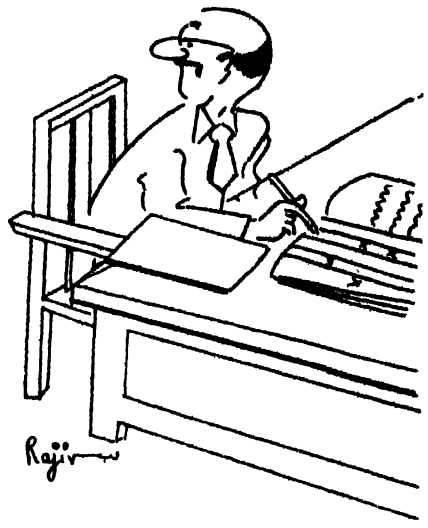
"LANDLADY," said Earl, "there's a dead bedbug in my bed!" "Go to sleep," said the landlady, "it is not going to hurt you."

"I am not afraid of it," said Earl. "It's the twenty thousand coming to its funeral that I am worried about at the moment."

THE HONBLE MINISTER BUNDALDASS • morris



THE pilgrim arrived home from Lourdes and was being checked at the Customs.
"What's in that bottle?" asked the officer
"Nothing but Lourdes water."
The officer opened the bottle, tasted it and said "Madam it's gin."
"My God," said the pilgrim, "a miracle already!"



IN a U.S. Western town, a notice runs thus: "In this town, last year, 4029 died of gas, 2 inhaled it; 27 put a match to it; 4000 stepped on it."

MANY years ago, the four Marx Brothers thought they would try to crash the business world. They rented an office and put in a telephone. During the first four weeks of their commercial operation the phone rang only four times.

"I guess," Groucho told his brothers, "if we want to keep real busy there is only one thing to do—from now on let's begin accepting wrong numbers!"

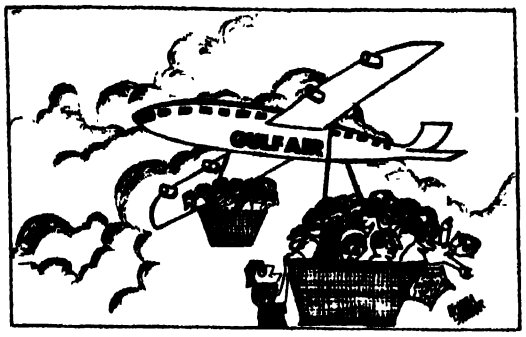
AN eight-year-old girl came home from school to announce to her mother that she planned to marry a schoolmate.

"That's fine. Does he have a job?"

Reported the girl, "Yes, he erases the blackboard in school."

"MY wife worships me," said a husband to his friend.
"Oh! Is that so?" wondered his friend.
"Yes, she places burnt offerings before me everyday," said the husband.

WOMAN: (calling her husband) "John, come in and get your roast-duck, apple pie and champagne."
Man: "Are you trying to kid me?"
Woman: "No, only the neighbours."



ULCERS: Something you get not from what you eat, but from what is eating you.

"DO you find writing a thankless job?" one man asked his writer-friend. "On the contrary everything I write is returned with thanks," replied the writer.

"HELLO, Ruth, do you still love me?"
"Ruth? My name is Helen."
"Sorry, I keep thinking this is Wednesday."

A GENEROUS host was overheard telling his friend,"I drank to his health so often that I ruined my own."

"WILL YOU donate something to the Old Ladies Club?"
"Sure, help yourself to my old mother-in-law."

"PROFESSOR: How would you punctuate this sentence — "Mary went swimming and lost her bathing suit."
Student: "I would make a dash after Mary."

"MY mother-in-law has disappeared from home," said a son-in-law to his friend. "Have you given a description to the police?" asked his friend.

"Yes, but they wouldn't believe me," moaned the son-in-law.

WIFE: "Dear, you have got an express delivery letter at home, marked—'Private and personal'."
Husband: "And what did it say?"

SHE: "Do you love me?"
He: "Yes, dear".
She: "Would you die for me?"
He: "No, mine is an undying love."

MAN in Pub: "And when I was in Africa, very early one morning I shot a lion in my pyjamas."
Second Man in Pub: "How did it get in there?"

LADY: "I'd like a pair of crocodile shoes, please."
Salesman: "Certainly, what size does your crocodile take?"

SOCIAL worker: "And have you lived all your life in Dublin, Mr Roots?"
Mr Roots: "No, not yet."

GUEST to Lift Man: "Why do you keep calling me 'son'?"
Ans: "Well I brought you up, didn't I?"

DINER: "Call the manager. I have never seen anything tougher than this steak."
Waiter: "You will, if I call the manager."

"WHAT makes you look so pale and sad?" an older friend asked a romantic boy

"It's terrible," confessed the youth. "She's the most wonderful girl in the world. And finally I got up enough courage to ask her to marry me, and she refused."

"Cheer up!" said the friend. "A woman's 'no' may often turn out to mean 'yes'."

"I know," said the youth mournfully. "But this one didn't say 'no', she said 'Aw, phooey'."

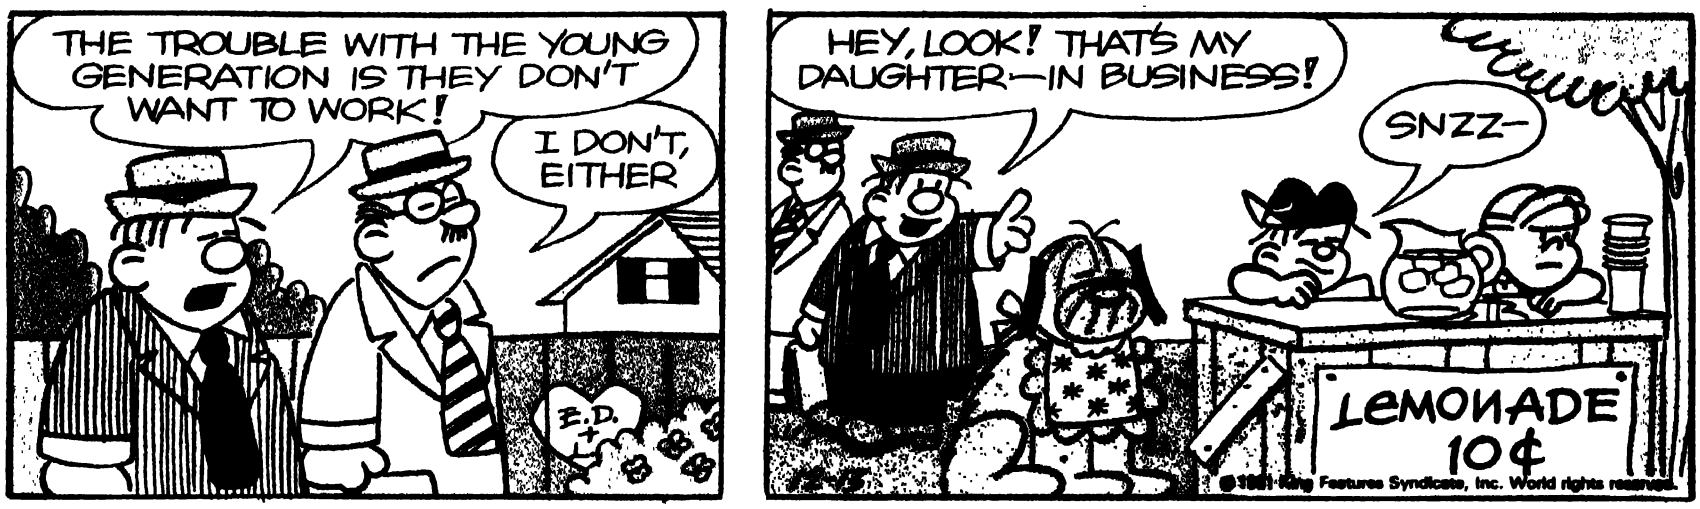
HUBERT **by Dick Wingert**

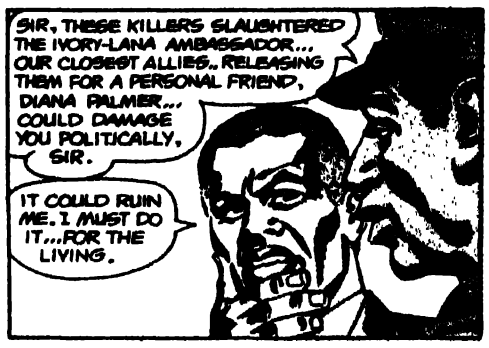


PHANTOM
by
LEE FALK

WHY AREN'T YOU COMING WITH US, UNCLE WALKER?*
NO ROOM FOR HERO. YOU'VE GOT A FULL LOAD. GOODBYE, DIANA...
OH, DARLING..ALL THESE KILLERS.. YOU MADE IT LOOK SO EASY...
* FOR THE GHOST WHO WALKS.

SEE YOU AT THE TREE HOUSE!
BYE BYE..

SIRE..YOU'RE EXCHANGING THESE KILLERS FOR THE HOSTAGES?
NO COMMENT.
SORRY, PRESIDENT LUAGA. NEWS LEAKED OUT.

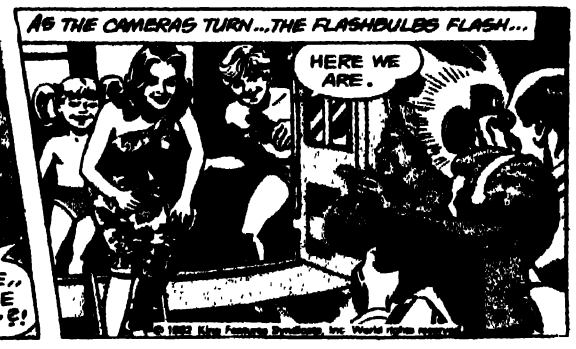


SIR, THESE KILLERS SLAUGHTERED THE IVORY-LANA AMBASSADOR... OUR CLOSEST ALLIES.. RELEASING THEM FOR A PERSONAL FRIEND, DIANA PALMER... COULD DAMAGE YOU POLITICALLY, SIR.
IT COULD RUIN ME. I MUST DO IT...FOR THE LIVING.

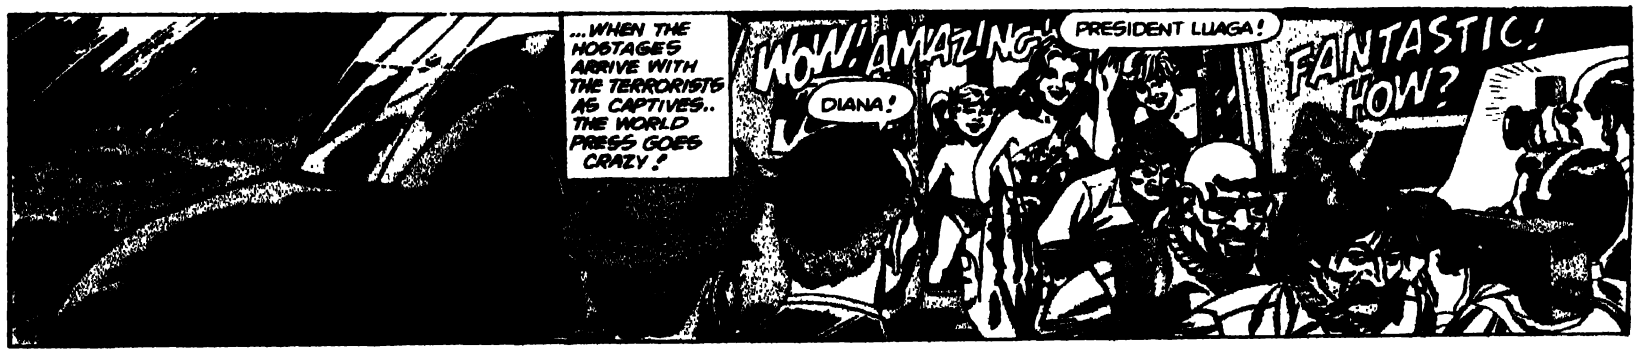
HEY, PREXY.. HOW ABOUT TAKING OFF THESE CUFFS...
HAVE RESPECT, YOU VERMIN! THIS IS OUR PRESIDENT!

..THE CHOPPER WITH THE HOSTAGES!

THOSE ARE THE OTHER TERRORISTS.. THE LEADER... PABLO...
WHERE.. ARE THE HOSTAGES?!
BARRY 6/29

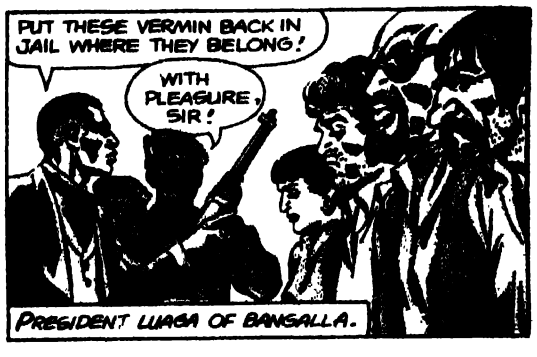


AS THE CAMERAS TURN...THE FLASHBULBS FLASH...
HERE WE ARE.



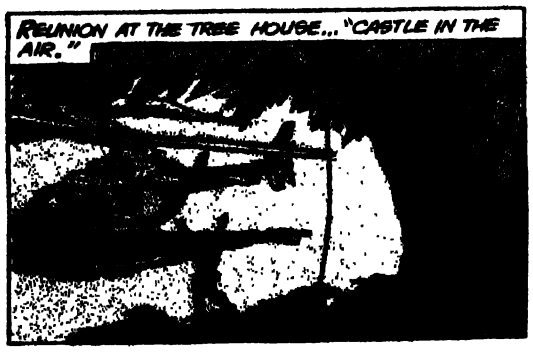
...WHEN THE HOSTAGES ARRIVE WITH THE TERRORISTS AS CAPTIVES.. THE WORLD PRESS GOES CRAZY!
WOW! AMAZING!
PRESIDENT LUAGA!
DIANA!
FANTASTIC! HOW?

MRS. PALMER-WALKER.. HOW DID YOU DO IT?
NO INTERVIEWS. SORRY.



PUT THESE VERMIN BACK IN JAIL WHERE THEY BELONG!
WITH PLEASURE, SIR!
PRESIDENT LUAGA OF BANSALLA.

I SAW A FEW FAMILIAR MARKS. AM I RIGHT IN THINKING ME...
RIGHT! HE DID IT ALL! HE'S WAITING FOR US AT THE TREE HOUSE.

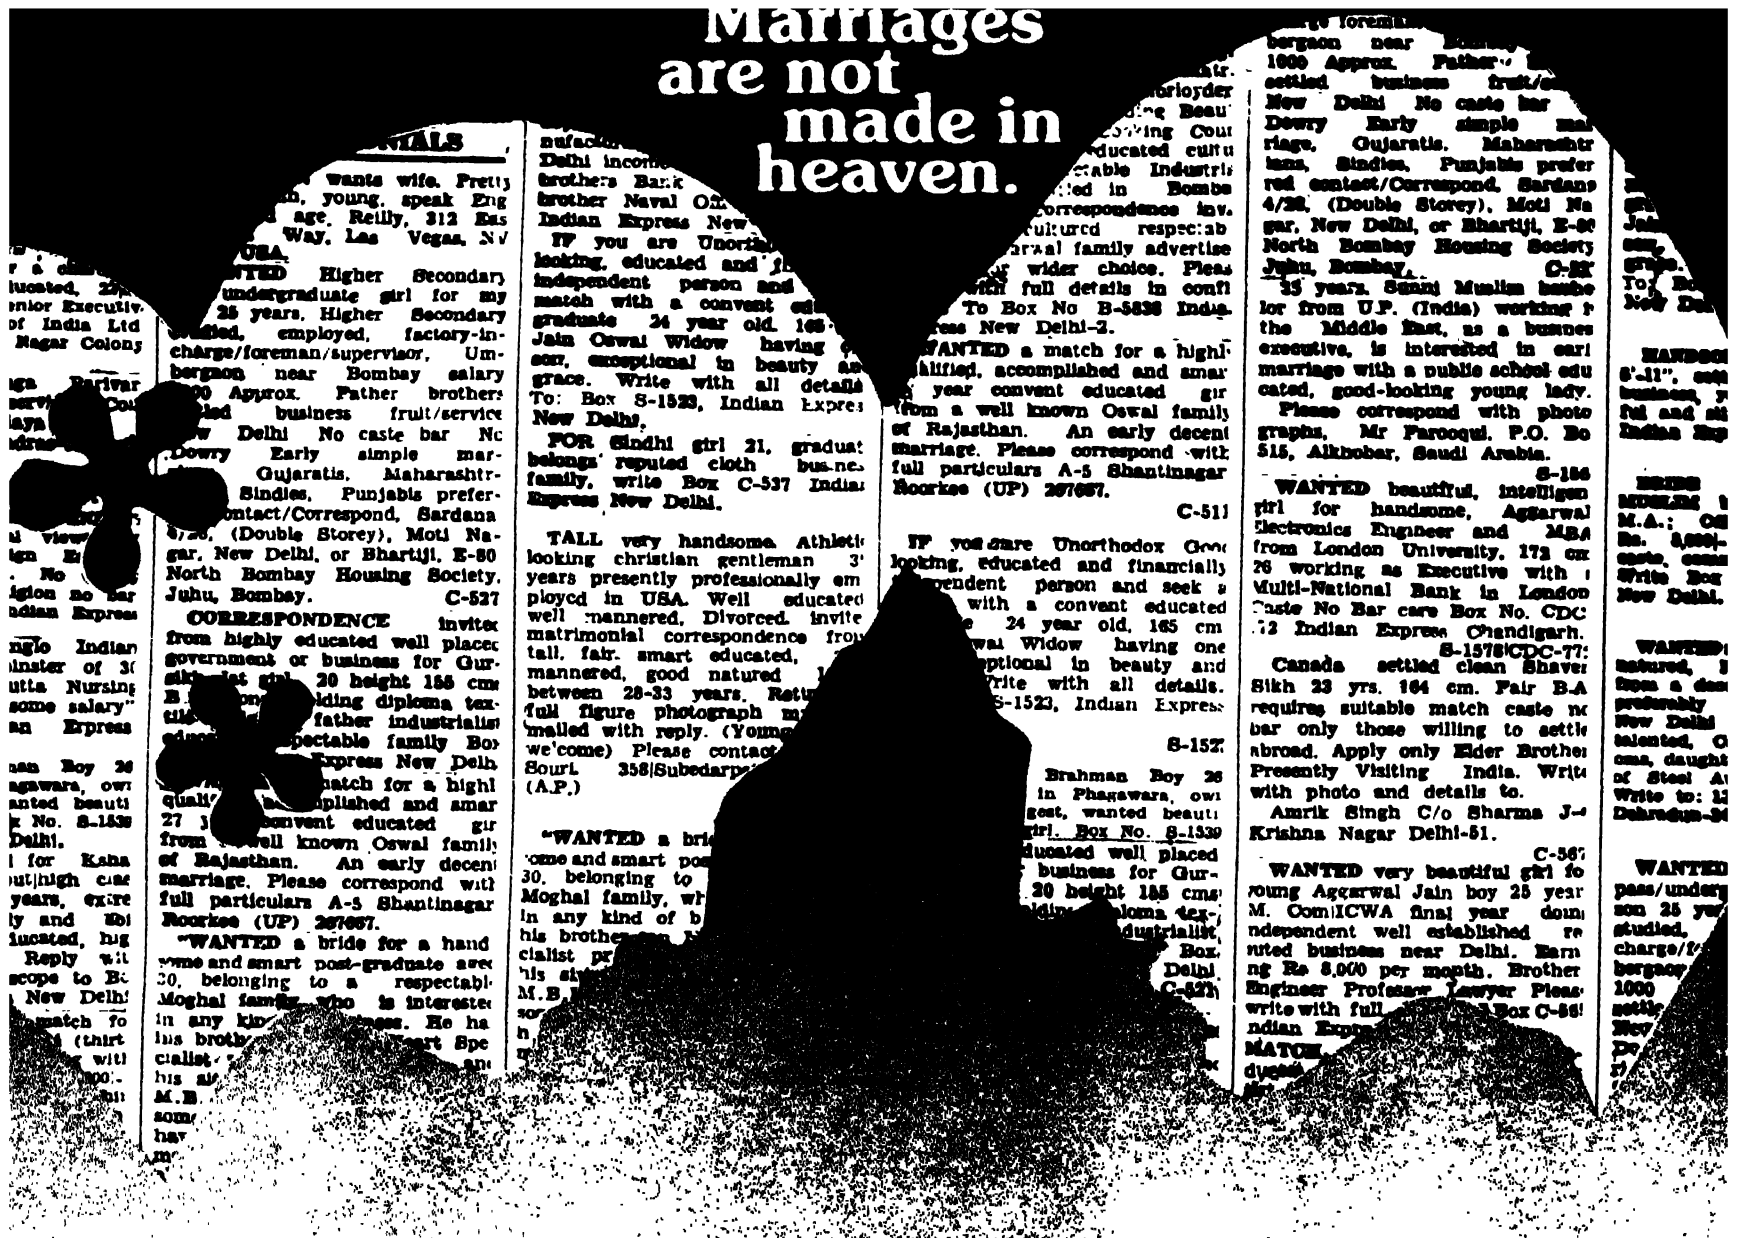


REUNION AT THE TREE HOUSE... "CASTLE IN THE AIR."

DADDY.. DADDY..
HOW CAN I THANK YOU? YOU NOT ONLY SAVED YOUR FAMILY, YOU SAVED MY POLITICAL CAREER...
YOU'RE THANKING ME?
9-5

YOU WERE READY TO SACRIFICE YOUR CAREER TO TRADE THE TERRORISTS FOR MY FAMILY.
WHAT'S ANY CAREER WORTH... COMPARED TO THAT!
CONT'D.

Marriages are not made in heaven.



Launched on October 10th 1982, the All-India Matrimonial Column of the Indian Express is rapidly becoming the nation's most sought-after match-maker. And with good reason.

From the towering heights of Srinagar to the balmy sun-kissed South, the Indian Express is read by over 5 million people.

With opportunity knocking at over a million homes earning over Rs.1000/- per month you can't go wrong.

Every Sunday the Indian Express will carry your message in its 10 live editions simultaneously at just Rs.45/- for 15 words and Rs.3/- for every extra word.

Next Week For You

S.K.KELKAR

CAPRICORN
(Makara)
Dec. 21-Jan. 19

Absorb new ideas, cultivate new associates and start a new way of life. Those keen on starting a new industry or venture will find unusual cooperation from seniors as well as juniors coming their way. Clear all domestic backlog by midweek. Don't shirk your responsibilities. Consult seniors before committing yourself on anything.

AQUARIUS
(Kumbha)
Jan. 20-Feb. 18

You are lovely and pleasant in the eyes of others. Financial and technical assistance will be at your disposal but be pursuasive. Alongside your normal routine you must indulge in a lot of social work, it will boost up your career. You will make a new friend early in the week. Midweek is good for an outing.

PISCES
(Mina)
Feb. 19-Mar. 20

The week promises new developments in your career/ vocation. In next couple of weeks try to build up new financial assets as well as goodwill among your colleagues. This will make your tasks easy. Make special efforts to secure a new job that comes within your grasp Follow your hunches they will serve you well.

ARIES
(Mesha)
Mar 21-Apr 20

Undue risks both in personal life as well as in career must be avoided at all costs. Do not trust new friends and newer schemes. It will be more prudent to carry on with the routine in the next couple of weeks. Secret information coming your way early in the week brings new business deals. Take counsel with seniors.

TAURUS
(Vrishabha)
Apr. 21-May 20

In this and the next week, all important jobs concerning finance should be put through in order to avoid indefinite delays and postponements later on. Your social circle will widen and you will be inclined towards making as many new friends as you can. Your companionship will be much in demand early in the week.

GEMINI
(Mithuna)
May 21-June 20

Job and business activities will tend to dominate this week. New friendships and new acquaintances will help you to expand business activities in and outside the country. From next week onwards you will take on new social activities and will make every single effort to be successful in them. Clear all backlog by the weekend.

CANCER
(Kataka)
June 21-July 20

A week when you must streamline your career activities. You can recoup your earlier loss of prestige and money in the next few weeks. Industrialists and politicians should look into their prospects and be ready to strike a new deal in the near future. The early part of the week brings a lot of excitement.

LEO
(Simha)
July 21-Aug. 21

The going will be slightly tricky in this and the next week, You may have to take on thankless tasks and responsibilities in the early part of the week. They may result in fatigue and ill health. Follow your hunches, they may bring a windfall. New associates will be a great help. The weekend is hectic.

VIRGO
(Kanya)
Aug. 22-Sept. 23

As far as possible, leave no scope for misunderstandings with your friends and family. Do not pick quarrels on filmsy grounds. Midweek is a good time to seek reconciliation. Confide in seniors and elders so that they may take off the burden of heavy responsibilities from your shoulders and you find yourself free.

LIBRA
(Tula)
Sept. 24-Oct. 23

The dullness of the past few weeks will recede in the background and you will be called upon to act speedily and quickly on important projects in this and the next week. Make adequate arrangements for spare funds in the next few weeks. Travel proposals suddenly materialise midweek and you find yourself on tours.

SCORPIO
(Vrishchika)
Oct. 24-Nov. 22

This is going to be a wholly busy week. This is also a pleasant time to clear backlog and push through your interests. Physicians and artists make headway in their career. A windfall may come your way early in the week. Your social activities midweek help you to strike a new business deal. Keep the weekend for friends.

SAGITTARIUS
(Dhanu)
Nov 23-Dec 20

Put aside the domestic chores and pleasures this week and be ready to plunge headlong into job activities and business affairs. The eligibles can look forward to setting in life sometime in the coming weeks. A promotion is in the offing. There may be a pleasant family get-together early in the week.

STAR FOCUS

Love In 1983-III

Virgo: Basically, you are trustworthy and look forward to a stable and simple love. This year promises the fulfilment of your wish. Right from the early part of the year, you have tremendous opportunities to develop kindly relations. Around May you take several steps forward. July is the right time to express your feelings to the opposite sex.

Libra: You will terminate old ties and start a new relationship. The basic reason for this is that your present companion does not suit you emotionally. But your interest in love may begin to fade by the middle of the year. A coincidence brings a dashing personality into your life around July. You will hold him/her very dear. September may be a trying month.

Scorpio: Saturnic trends are going to operate in your solar horoscope this year. You will be more philosophical, realistic and controlled. There will be very little scope for romance and love. However, a brief interlude with the opposite sex takes place around July/August. But, it is doubtful if the relationship will last long. You are likely to be brusque and may give up the friendship.

Sagittarius: An enjoyable year for most of you. The first half will be devoted to legitimate duties and responsibilities. In the second half, from July onwards, your hobbies, pastime interests and social activities will keep you busy. In August, you will achieve wonderful heights with the active co-operation of a member of the opposite sex and hold him/her very dear.

Birthday Forecast

Sunday, February 13

You can look forward to a year of achievement. You may go abroad in March for technical training or otherwise. A small windfall comes your way in April-May. Move cautiously between July and September.

Monday, February 14

Much depends on how firm you are about your resolutions between July and September. Financially, the current month is pretty good. You will travel widely in March and October.

Tuesday, February 15

A progressive and rewarding year. Accomodate others by assimilating their views. August and September are tricky months bringing a lot physical, mental and financial pressures.

Wednesday, February 16

A year when you can strengthen your interests, hobbies, studies and research work. Your love life is at its best until the end of May and again in October. Tackle seniors and elders intelligently in July-September.

Thursday, February 17

Scientists and scholars will put through many pet theories and schemes successfully. Do not allow relatives to interfere in your career in July-September. April, October and November are excellent for great achievements.

Friday, February 18

Make it a point to stand on your own feet. This way you will secure more than the anticipated success in career. Do not pay too much heed to cantankerous elders. You can ignore their advice if you want to.

Saturday, February 19

Your solar chart points to stability, greater security and unique opportunities this year. New methods tried out in 1982 will work out well this year. Barring August and September, you will do well financially.

NEW! **Instant Nespray The 5-Second Milk**

Just Drop, Stir and Serve

It's easy to make

Drop 3 tablespoons of Instant Nespray into a glass of cold or warm water Just stir and your glass of milk is ready in 5 seconds.

So nutritious

Instant Nespray is specially fortified with vitamins A & D. It's the richer, creamier, tastier milk, for those growing up years.

Dissolves instantly even in cold water

This Week's Bridge

Hyderabad Nationals-I
Robi—Suku Tops

THE 24th Winter Nationals were played recently at Hyderabad, 12th to 25th December, conducted by the Andhra Pradesh Bridge Association.

All previous participation records were broken at this National, perhaps accounting for the relatively sub-standard conduction of the Tournament. This was rather surprising, since the A.P.B.A. is one of best organised Associations in the country, and, in the past, they have conducted mammoth events very well. The most glaring defects, I felt, were the shortage of Assistant Directors, and the absence of volunteers to provide basic amenities to the players.

The 1982 Winter Nationals were a personal triumph for two of India's greatest ever players, Robi Roy and Sukha Ranjah Ghosh of Calcutta. Robi won an incredible 4 events—the Team of Four Duplicate, Open Pairs, Life Master Pairs and Mixed Pairs. Suku won the first three named above, both the Pairs events with Robi, and did not play the Mixed, otherwise for all one knows, they might well have tied in that event too.

The premier event of the Winter Nationals is of course the Team of Four Duplicate event for the Ruia Trophy. In recent years this has been a hotly contested event, but this time, AGARWALA's team, consisting of Subhas Agarwala, Krishna Kedia, Robi Roy, Suku Ghosh, Govind Singha and Sudhir Ganguli were awesome throughout, and won most of their matches by huge margins. Their win in the Finals was certainly the most lopsided in recent memory—they won by some 140 imps over 64 boards.

In forthcoming columns I shall describe several hands from many of the events. Today's hand is not spectacular, but the true student of the game will appreciate the finer points of matchpoint play as demonstrated by two masters.

None Vul, West dealer.

	♠ K74 ♥ KQ762 ♦ J93 ♣ 84	
♠ A1052 ♥ A5 ♦ A74 ♣ KJ107	N W E S	♠ Q83 ♥ J4 ♦ KQ10862 ♣ 93
	♠ J96 ♥ 10983 ♦ 5 ♣ AQ652	

At those tables where East-West were playing a Strong No Trump, the auction went 1NT : 3NT. At many tables North led a small Heart, so declarer came to 11 tricks in comfort. At one table, 12 tricks were made. Where Suku and Robi sat West and East, the bidding went:

West	North	East	South
1D	1H	3D	3H
D'ble	P	P	P

The One Diamond opening was forced by system, since Suku-Robi play a 13-15 No Trump. This enabled North South to compete effectively, and Suku was in a fix at his second turn. His choice of a Double would not occur to most players, even experts, but it is easy to see in retrospect that it is the best action on his cards. The Double announces a balanced or semi-balanced hand, 16-17 points, with not too many Diamonds! Perfect.

Now Robi had a tough decision—he had too little in defence, too many Diamonds, but finally the Jack of Hearts and the doubleton Club tipped the scales towards the Pass.

Note that 3 No Trumps fails on accurate defence. North leads the King of Hearts and continues with the Queen, while South plays the *ten* and *eight*, beginning an unblock at the same time telling his partner his precise holding. When all the Diamonds are played, North Keeps K7 of Spades and 762 of Hearts. South keeps the 93 of Hearts and the Ace of Clubs, forcing the declarer to concede one down.

Robi led the nine of Clubs. Declarer won the Ace, and misjudged the Hearts—if he had played for a 2—2 break, he would have easily made 8 tricks. But he chose to create his Diamond ruffs by playing a Diamond off the table. Suku jumped up with Ace as Robi played the King. A low Spade was ducked to Robi's Queen, a second Club went to Suku's ten, and he now cashed the Ace of Spades before playing another Club. Whatever declarer now did, Robi's Jack of Hearts was promoted, for down two, 300 to the maestros.

Observe that one down would have beaten all those who went down in 3NT or 5 Diamonds, but wouldn't have beaten those who stopped in a Diamond partial, for 130, or a Spade partial, which scores 170!

AVINASH GOKHALE

SANTANU GHOSH'S TEAM comprising S. Ghosh, A. Mukherjee, A. Brahmachari, S. Kantha, S. Banerjee and D. Roy won the Calcutta zonal of the Illustrated Weekly Centenary Bridge Trophy *and will represent the zone in the all-India final to be played at the Cricket Club of India, Bombay, on February 19 & 20. (Not seen in the picture are S. Ghosh and D. Roy.)*

This Week's Chess

King Overwhelmed

ALEXANDER misses his way under time pressure and just gets a draw from an overwhelming King side attack in the first game. In the second game Koshy courts disaster by trying to hang on to material. Both the games were played in the Bhilwara I.G.M. Tournament, New Delhi.

Ravi Sekhar-Alexander

1.c4, g6 2.Nc3, Bg7 3.g3, Nf6 4.Bg2, 00 5.Nf3, c6 6.Rb1, d5 7.b3, d4 8.Na4, Re8 9.00, e5 10.d3, Nbd7 11.b4, b5 12.Nb2, Rb8 13.Nd2, bxc4 14.Nbxc4, Nd5 15.Bxd5!?, cxd5 16.Na5, Re6, 17.Ba3, Bf8 18.Qc2, Bh6 19.Ndb3, Qb6 20.Nc5, Qc7 21.Bc1, Bf8 22.Bd2, Reb6 23.Nab3, Nxc5 24.bxc5, Ra6 25.f4?!, Bh3 26.Rfc1, Re8 27.Rb2?!, Rf6! 28.f5!?, Rxf5 29.c6!?, Ba3 30.Ba5, Qc8!? 31.c7, Bxb2 32.Qxb2, h5! 33.Nc5, Rg5 34.Nb7, b4? 35.Nd6, Qg4 36.Nxe8?...

Position No 381: 36...Qf4! 37.e3, Rxg3ch?! 38.hxg3, Qxg3ch 39.Kh1, Qf3ch 40.Kg1, Qg3ch 41.Kh1, Qf3ch; ½:½.

6.Rb1) The position can arise from English or Reti Opening. Regular here would be 6.d4, d5 7.Qb3 converting into Neo-Grunfeld or Komeri Variation of Grunfeld Defence.

8.Na4) It would be a kind of King's Indian Yugoslav Variation now with colours reversed if the Black Pawn were on c5 instead of c6.

15.Bxd5) An exceptional situation when White has to give up his King Fianchetto Bishop for the Knight which threatens... Nc3.

22...Reb6) Black cannot win a Pawn on c5, i.e. 22...Nxc5 23.bxc5, Rxb1, Qxc5 (or 24...Bxc5 25.Rc1) 25.Qxc5, Bxc5 26.Rc1 wins a piece

25.f4?!) Riskily trying to divert Black's attention to King side to secure progress of his passed c-Pawn.

27...R86!) Thwarts White's intention of 28.fxe5, Qxe5 29.Bf4 with the threat 29...Rxf4!; and in any case Black threatens the same with 28...exf5 etc.

30...Qc8!?) Stronger is 30...Qe7! e.g. 31.c7, Qf6! (threat 32...Rf1ch etc. mating) 32.Nd2, Rf2 33.Nf3, Bxb2 34.Qxb2 Qxf3!; or 33.Rb8, Rg2ch 34.Kh1, Qf2!; 35.Rxe8ch, Kg7 36.Rg8ch, Kh6!; winning

34...h4?) Correct is 34...Qf5! 35.Nd6, Qf4! threatening 36...Rxg3ch etc.

36.Nxe8?) Now White should win with 36.c8Q!, Rxc8 37.Rxc8ch etc. But, curiously enough, he was playing fast though not under time pressure.

37...Rxg3ch?!) 37...Qxe3ch 38.Kh1, Qf3ch 39.Kg1, hxg3 etc. wins.

Koshy-Kupreichik

1.Nf3, d5 2.d4, c6 3.e3, Nf6 4.Bd3, Bg4 5.Nbd2, Nbd7 6.h3, Bh5 7.c4, e6 8.00, Bd6 9.e4, dxe4 10.Nxe4, Nxe4 11.Bxe4, Nf6 12.Bd3, Bc7 13.Be2, Qd6 14.g3, 000 15.Be3, Qb4!? 16.Qb3, Qa5 17.c5, Bb8 18.Qc4, Nd5 19.Bd2, Qc7 20.Ne5...

Position No 382: 20...g6! 21.g4, f6 22.f4, g5 23.gxh5, gxf4! 24.Nf3??, Qg7ch 25.Kh1, Qg3 26.Qd3, Rhg8; 0-1.

3.e3) The regular order of moves is 3.c4, Nf6 4.Nc3, e6 (Semislav Defence) 5.e3.

7.c4) The Colle System 7.c3 (to be followed by e4) is not effective when Black's Queen Bishop is out.

15.Be3) After 15.Bf4, Qe7 16.Bxc7, Qxc7 White's d-Pawn comes under pressure.

15...Qb4?!) When I asked Kupreichik, he was not definite about how he would have dealt with 16.a3; 16...Qa5 (16...Qxb2? would be too rash) 17.c5 (17.b4?, Qf5 18.Kg2, e5!), Bb8 18.b4, Qc7 19.Ne5 should give White a more active game.

20...g6!) A strange way of offering the Bishop to open the g-file.

22.f4) If 22.Nf3, Bxg4! 23.hxg4, g5! and 24...h5.

24.Nf3??) 24.Bxf4!, Nxf4 25.Rxf4, fxe5 26.Qxe6ch, Qd7 27.Qxd7ch, Rxd7 28.dxe5, Bxe5 29.Re4; or 24...Qg7ch 25.Kh1, fxe5 26.Bxe5, Bxe5 27.dxe5, Qxe5 28.Bg4 seems to offer even chances.

26...Rhg8) Mate is inevitable after 27.Ne1, f3!; or 27.Rg1, Qxh3ch 28.Nh2, f3'.

LETTERS TO THE EDITOR

Bravo!

Sir--Your special Republic Number ("Our Freedom In Peril", January 23) was superb. I particularly liked the article by RGK. ("India's Darkest Hour").

We Indians who boast of being citizens of the world's largest democracy, carry in our heart the blackest malice for the country. We enjoy freedom without responsibility. As our population grows and resources come under increasing pressure, our ideas of living and the political system itself are bound to change radically.

R.B. Chauhan
Bardoli

Bravo Mario

Sir—Mario's cover for your special Republic Number was superb.

B.N. Bose
Jamshedpur

Sir—We enjoyed the articles on the Chandod murals ("Murals To Mahadeva") and "The Crowd In India"in the January 23 issue of the WEEKLY. But we missed the articles on films and sports. Please don't drop them.

Kirit Parikh
Bombay

Madhok Misleads?

Sir—The Government should take strong action against Mr Balraj Madhok who has tried to mislead the average Indian citizens and attempted to create destructive attitudes in them ("Muslim Minorities: Pampered or Persecuted?" January 9).

Akhter Rasheed
Digboi

Sir—Both the sides have argued in an explosive manner. This bodes no good for national integration. We expect a renowned magazine like yours to publish articles to promote communal harmony. You must publicise examples like Tamil Muslims accepting Ayappa Prasadam and Hindus and Muslims visiting Shirdi.

Arif Mohammad Khan
Madras

Sir—Muslims are not the only minority community in India. How is it that the Parsis and Christians have learnt to live with the Hindus? A Parsi retires to the Fire Temple or a Christian to the Church, for a prayer without insisting that his prayer shall be publicised by means of a loudspeaker. They do not claim separate marriage laws for themselves. Nor do they insist on a national status for their language.

Syed Shahabuddin's claim that, being a minority community, the Muslims were denied the plums is preposterous. What about the Parsis who are also in a minority but enjoy a distinctly better standard of living? This is the reward of their resourcefulness and enterprise. Anyone can scale the ladder of success in the country given the right inclination and approach.

Pradeep C. Kambli
Bombay

Sir—Congratulations Mr Madhok for speaking up for the Hindus who are the most tolerant people in the world!

Dr M.G.K. Murthy
Hyderabad

Sir—The article by Syed Shahabuddin was most risible. There is absolutely no denying the fact that Indian Muslims are a pampered lot.

When 70 per cent of our population grovels below the poverty line, it is futile to ask: "Who is poor or who is rich?" Muslims alone are not the sufferers.

Most Muslims are prosperously engaged in trade and commerce. In fact, the Rs 400 crore export-oriented leather industry is in the hands of the Muslims. Just a glance at the North Arcot belt (called the dollar area) in Tamil Nadu will prove this point.

N. Mohan
Madras

Sir—After reading Balraj Madhok's article, I came to a conclusion that it is not the Muslims but Madhok who has no respect for other religions. He does not write in defence of Hinduism but to denounce Islam and to abuse Muslims. By doing so he is disrespecting the very spirit of Hinduism.

Madhok is against cow slaughter. Very good! But what about the slaughter of the other poor creatures?

Shaheen Nazar
Gaya

Sir—To open such issues for public action requires guts and conviction.

Syed Qamar Ahmad
Gaya

Tweedledum Tweedledee

Sir—Sujata Anandan's report from Trivandrum ("When Government Fiddled While Trivandrum Burned", January 16) presented a clear picture of the unruly happenings that marred the New Year's Eve. The Kerala Chief Minister and the Home Minister seem to have misread the mind of the illiterate or half-educated Muslim. He knows he can bank on the support of his "co-religionists" and his habit of sporting a knife makes him a bully.

J.S. Sekhar
Trivandrum

Sir—The tragedy in Kerala is that no ministry can displease the Muslim League (which has 14 members in the Assembly) *and* survive
Under the circumstances the imposition of President's rule is the only way out. May I propose the formation of a 3-man Commission consisting of Judges from outside Kerala?

C.M.K. Nair
Bombay

Sir—Sujata Anandan is wrong in attributing that I was a party in organising protest demonstrations at Trivandrum on December 30. I never associated with the demonstration and Muslim League Party was also against any such activities.

I had appealed through All India Radio asking people to refrain from protests, as Government acted promptly and effectively on the unfortunate incident at Alleppey (December 28), which was widely covered by Kerala papers.

C. H. Mohammed Koya
Deputy Chief Minister
Kerala

Mr Karunanidhi Protests

Sir—I am one among those who believe and respect the articles that appear in your magazine. But I hereby refute the contents of the article ("It's MGR vs DMK", January 16) on page 9 para 4 which has direct reference to me. The contents are utterly false and malign my reputation.

In the above article it has been falsely quoted as "Mystery lurks behind Karunanidhi's dark glasses, too. The grapevine has it that his eyes have been affected by a dreadful disease and that the self-confessed atheist went to Tirupati and offered a pair of golden eyes to Lord Venkatesvara".

When I met with a car accident my left eye got hurt and I had it operated in the year 1971 when I had been to America. It is known to one and all and the news had appeared in all newspapers at that time.

Further, I would like to state that I am a very firm believer of the ideals which I profess and stand for the same at all eventualities. But your article falsely says that I have offered a pair of golden eyes to Lord Venkateswara of Tirupati which is highly derogatory and against my ideals and also shatters all my hopes that I had all these years on the genuineness and authenticity of your magazine.

I request you not to publish such baseless stories maligning the reputation of others as well as your magazine.

M. Karunanidhi
Tamil Nadu

"Nominating" MGR

Sir—You have "naturally" featured glamorous Jayalalitha on the leading pages ("MGR Deserves A Nobel Prize", January 16), preferring her to the rich cultural heritage and beautiful temples of Tamil Nadu. But it is ridiculous to compare MGR with Mother Teresa!

S. D. Sinni
Bombay

Sir—The Jayalalitha piece was pure hero-worship. About 200 crores and odd rupees are required annually to implement this scheme. Where does this huge amount come from? MGR has opened arrack shops! It is just like robbing Peter to pay Paul!

V. Krishnamurthi
Tamil Nadu

Sir—Jayalalitha's fawning on MGR is ridiculous. She even compares MGR with Mother Teresa in humanitarian work. MGR is disbursing public money in the midday meal scheme which at one time was effective in most part of India by the grace of American-aided CARE. But none suggested that CARE be honoured with a Nobel Prize!

J. Mathew
Calcutta

Cricket "Cracks"

Sir—Our debacle in Pakistan reminds me of a limerick:

Cricket rules I know not,
But here is some food for thought:
We can't play Pakistan eleven
At one time, and get even;
So let's play them one by one,
what?

Maj D.V. Dongre
Bombay

The Well Of Loneliness

Sir—Louise Bernikow's piece on "Loneliness In America" (January 9) was thought-provoking. The family is society's fundamental unit. It acts as a shock absorber against emotional bumps and grinds. In the highly mechanical life that we lead, artificiality rends the very fabric of love which binds people together.

Ironically, Americans are facing the problem of loneliness *after* achieving economic prosperity. That should serve as a warning to us who are in a heedless pursuit of self.

Sudheer
New Delhi

Pharaoh's Gold

Sir—Partha Basu's article on the Howard Carter's discovery of Tutankhamun's tomb (January 16) is of great

significance to lovers of archaeology and history. You should have had the Pharaoh's mask on the cover. Please give us more such articles on ancient civilizations like Sumer, Babylon and Greece.

Sunil Kumar Jha
Bhilwara

Avatar In Andhra

Sir—A Telugu saying has it that even a docile lamb turns violent if it is tortured too much. That is what happened to Telugu Desam ("The NTR Torando", January 23). The power-hungry Chief Ministers may not have been ashamed of humiliating themselves but the people of Andhra Pradesh were!

Mr Nanadmuri Taraka Rama Rao, who took no interest in politics has had to turn himself into a Messiah to save the honour of six crore Andhras.

Maddela J. Edwards
Bangalore

Sir—NTR's main plank is regionalism. In this he surpasses the Thackerays and Karunanidhis. Recently he spoke to the IAS and IPS (most of whom do not know Telugu) in chaste Telugu with dramatic gesticulations as if he was enacting the villain's part in a movie!

Ms T. Manjari
Secundarabad

Hypocritical!

Sir—S.S. Shergill in his letter to the Editor (January 2) quoted Jinnah to berate the Hindus without a shred of evidence or proof. The Sikhs, in fact, enjoy the best representation in services and fields of economic activity in relation to their population. Their representation in higher posts is most significant. Even the lawless elements among them are a pampered lot.

Earlier, the Hindus provided men and resources for the organisation of the Sikh faith and contributed to its growth, power and prestige.

And if Jinnah had such an affection for the Sikhs as Shergill makes out, why did they have to suffer the inhuman atrocities at the hands of the Muslim League National Guards in Pakistan (where Jinnah reigned supreme)?

Shadi Lal Sahni
New Delhi

Well-Done!

Sir—Darshan Singh Maini's stark expose of the politics in Punjab deserves high praise ("The Punjab Imbroglio", January 9). I fully agree with his rationally drawn conclusions.

Krishna Pachegonkar
Aurangabad

Hurrah

Sir—Long live father Prousch! (A German Scholar-Dancer's Fifty Years", January).

The Illustrated Weekly Of India

VOL CIV / FEBRUARY 13, 1983 ESTD 1880

REGD No MH by South-25
Registered as newspaper in Sri Lanka

8 COVER STORY: ***More Nilly Than Willy, Arabs Close Ranks.*** War is not only hell, its consequences are hellishly unpredictable. How unpredictable is revealed by G.H. Jansen. A report on how the gains made by Israel on the battlefield by its invasion of Lebanon have been all but neutralised by a till recently unthinkable closing of Arab ranks.

12 POLITICS: ***Fresh Drive To Oust Bihar CM.*** Following the Congress (I) setbacks in the South, the Chief Minister of Maharashtra, Babasaheb Bhosale, has already been replaced. Now all eyes are on Dr Jagannath Mishra, the Bihar CM whose tenure has been the subject of heated controversy. By a Special Correspondent.

21 IN THE STATES: ***Dada's Difficult Task.*** Govind Talwalkar, Editor, *Maharashtra Times*, assesses the Herculean task that awaits Vasantrao Patil, the new Chief Minister of Maharashtra.

22 Also: ***Antulay: Down And Defiant.*** Vithal C Nadkarni interviews A.R Antulay who lost the race for Chief Ministership.

23 ***Battle of The Ballot*** by Rafique Z. Hazarika

19 Also: ***Tripura: The Battle For Survival.*** The tide of refugees has radically altered the population mix of Tripura by H.S. Sethi.

18 Plus: Jyoti Jafa on the recent Assembly elections in Tripura.

46 SPORTS: ***A Disturbing Moment For Indian Cricket.*** Many Indian players were unhappy about Skipper Sunil Gavaskar's failure to involve himself with the fortunes of his team in Pakistan. It was as though 11 individuals were on view. R. Sriman reviews the recent Indo-Pak series which saw our cricket touch rock bottom.

27 ECONOMY: ***Businessmen's Pre-Budget Blues.*** Vadilal Dagli analyses the effect of the mounting budgetary deficit. And a Special Correspondent on ***Expenditure And Revenue: Some Vital Aspects*** of the country's defence needs.

16 INVESTIGATION: ***The Politics Of Opium.*** Until recently, India controlled the world's supply of licit opium. But the Super-Power patronage of the illicit cultivation of the deadly flower in South-West Asian countries has virtually robbed us of the market, says Dipak B.R. Chaudhuri.

25 CULTURE: ***Kayyankali: The Art Of Fighting.*** Kayyankali predates its glamorous martial art cousin, Karate, by some 40 centuries. Unfortunately, this art is practised in but a few villages in the remote districts of Kerala. By R.C. Vaidyanathan.

30 THE MINORITIES: ***Struggle Against Authoritarianism.*** Asghar Ali Engineer reveals the discontent that is simmering among the Bohras

43 HAPPENINGS: ***Letter From Calcutta.*** Sumita Sandilya follows up on the deaths in Dum Dum's notorious jail; profiles the award-winning film-maker, Utpalendu Chakravarty, and investigates the latest "dramas" at Writers Building.

40 WILDLIFE: ***Operation Tiger.*** Gautam Sabbarwal writes about the hernia operation on Ashok, a full-grown tiger at the Delhi Zoo—a first in India

35 PHOTOFEATURE: ***Uphill.*** The saga of James Menezes, a 36-year-old man afflicted with cerebral palsy. Wonderful photographs by Jamshyd Sethna.

53 VIEWPOINT: ***Indian Graffiti.*** Is there a clean white wall to be found anywhere? People take perverse pleasure the world over in desecrating walls. But the Indian writing on the wall is peculiarly our own, says Shamshad Husain.

45 HEALTH: ***Oh, For A Good Night's Sleep!*** Break that sleeping-pill habit and find the root cause of your sleeplessness. Julie Bijalpita Chatterjee on how to beat insomnia.

32 PAINTING: ***Mystic Art.*** Jean Letschert Aschary-acharya is a Belgian artist who paints in the language of spirituality. By Christine Merllie

42 ENCOUNTER: ***Towards A "World Music".*** Romita Torcato reports on the East-West music "Encounter" which was held recently in Bombay.

34 TRIBUTE: ***The Pizzicato Of Pollens.*** Ashok Mitra on Bishnu Dey, the noted Bengali poet who won the 1971 Jnanpith Award.

49 FICTION: ***Nightwatch*** by Sathya Saran

Next Issue

Future Of The Kitchen Cabinet(s)?

Call it Camelot or kitchen cabinet, every leader of Government has a special circle of advisers and trouble-shooters. Mrs Gandhi is no exception. Now, however, the role of the kitchen cabinet(s) at the Centre is being widely debated following the Congress (I) reverses in Andhra Pradesh and Karnataka. Is Mrs Gandhi radically altering her style of functioning? Is the "ring of power" being disbanded or it is being regrouped and revitalised? A tantalising analysis.

Sex And Hinduism

In Christian ethos, sex is tainted by sin, while to a Hindu it is worship: a necessary element for the spiritual release of both the man and the woman. The Hindus are thus well equipped to enjoy it, says P.K. Nijhawan.

HOODED ISRAELI ARABS carrying a Palestinian flag during a procession in the Israeli-Arab village of Sahknine to mark the death anniversary of six Israeli Arabs shot by Israeli troops. As the author points out, war is not only hell, its consequences are hellishly unpredictable. The consequences of Israel's invasion of Lebanon could never have been visualised by that nation.

Setback To Israel

More Nilly Than Willy, Arabs Close Ranks

by G.H. Jansen

For all the gains made by Israel on the battlefield through its invasion of Lebanon in June 1982, that offensive has produced the following developments: a tougher Egyptian and Saudi line; a closing of Arab ranks; the Jordanian-PLO *rapprochement*; and the Reagan Plan. In fact, President Reagan has a crucial role to play within the next two or three months. If he is unable to put the brakes on the Israeli colonisers, then the whole peace process in the Middle East will collapse. The Lebanon invasion has thus, in sum, led to the coming together of forces in the Middle East that can only be interpreted as a setback to Israel.

War, as an American General sapiently remarked, *war is hell*. But it can also be a great accelerator of every sort of process in the body politic because, like the prospect of being hanged, it concentrates the mind marvellously.

The Israeli invasion of Lebanon was no exception here: it was hell—especially for the innocent Lebanese and Palestinian civilian victims—and it has accelerated the development of the policies of Arab Governments towards each other and towards outside powers. In the aftermath of the Sabra-Chatila massacres, there has been a very considerable rearranging of Arab attitudes and relationships, some of them most unexpected.

Thus Egypt—and, to a lesser extent, Saudi Arabia—have hardened their line towards Israel and, consequently, to the United States, Israel's patron; Iran and the PLO have suggested that the Arab boycott of Egypt should cease and that she should be welcomed back to the Arab family; Jordan and the PLO have drawn together and are trying to work out joint moves towards a negotiated settlement of the Arab-Israeli dispute. None of these things would have come about but for the Israeli invasion—and they are the last things that Israel would have liked to see happening.

Even before the Israeli attack in June 1982, Egypt's enthusiasm for the whole Camp David process—specifically the normalisation of relations between itself and Israel—had cooled off very noticeably. Israel was already complaining that trade and tourism had dwindled to a one-way flow from Israel to Egypt and that

Egypt was stalling on the many schemes for economic, social and cultural cooperation that the Israelis had eagerly proposed But, after the invasion, this disobliging distancing has changed to almost a full-scale "boycott"—the word used by the Israelis

The Egyptian Ambassador was withdrawn from Tel Aviv as a sign of disapproval and it was made known that he would return only when Israeli troops were out of Lebanon, trade and tourism were blocked off—even from Israel—so much so that even Egyptian Christians were not allowed to make the Christmas pil grimage to Jerusalem and Beth lehem, politically, Egypt announced that it would not resume its discus sions on Palestinian autonomy with Israel before Israel stopped colonis ing the West Bank and withdrew troops from Lebanon Egypt went further in this direction when it announced in December, that it would resume these talks not only after the above two conditions were fulfilled but also only after Israel indicated its willingness to talk peace with Jordan and the PLO

The gap between Egypt and Israel is so wide that the Egyptian Minister of State for Foreign Affairs was, if anything, understanding when he characterised their relations as "a cold peace", and Israeli President Navon went further, using the words, "a frozen peace" But what Egypt has refused to do is to take what seems like the final, logical step—to break diplomatic relations with Israel and to pull out of the Camp David process, probably because the US would be mightily displeased and could reduce or cut off financial and military assistance, and also be cause, almost certainly, Israel would invade and reoccupy Sinai

Similarly, Saudi Arabia has tried to stiffen Lebanon's attitude against Israel by threatening that there would be no Saudi (and hence no Gulf State) aid to Lebanon until the last Israeli soldier leaves The Saudis also stipulated that any Lebanese agreement with Israel should not contain any element likely to draw Lebanon away from the Arab fami ly—as happened with Egypt—and the agreement should not be tied to any plan for settling the Palestine problem in other words, no exchan ge of Israeli concessions on Lebanon against PLO concessions on a peace settlement

Tough talk indeed, but directed at Lebanon rather than at the Arabs' →

ISRAELI TROOPS standing outside a dye-marker during operations on the outskirts of Beirut, Lebanon, in August 1982 This was during their push forward to flush out PLO strongholds in the city The position in February 1983 is that Iraq and the PLO are prepared to stop boycotting Egypt—a closing of Arab ranks unthinkable eight months ago, before the Israeli invasion

primary target, the US, which supports Israel in every possible way. Indeed, until recently, Saudi Arabia was helping the US build up its oil stockpile by exported quantities far in excess of its budgetary needs.

Because Egypt has done something more than talk against Israel and has imposed sanctions on her—albeit passively and negatively—it became possible, even acceptable, for the PLO and Iraq to say that Egypt should return to the Arab family and that the Arabs should return to Egypt. A startling volte-face for the PLO and Iraq, because the PLO is a full member and Iraq was a half-member of the "Confrontation Front" of radical Arab regimes that condemned Egypt to the iciest outskirts of Gehenna after Anwar Sadat's visit to Jerusalem.

Besides the change in Egyptian policy towards Israel, there are three other reasons for the surprise move by the PLO and Iraq.

Firstly, in the absence of Egypt from the Arab family, its headship passed, more nilly than willy, to Saudi Arabia which, despite its close financial ties with the US, has not brought to bear on the Americans the degree of pressure it could, and should, have done, especially after the Israeli invasion. Its huffing and puffing against Lebanon—and Britain also—can be seen as just so many confessions of its self-imposed impotence vis-a-vis the US. Egypt, because it would be a returned prodigal, could possibly try to provide stronger leadership to the Arabs.

Secondly, Egypt could be more useful to the Arabs precisely because it has been close to the US, since it has risked alienation from the Arab world by making peace with Israel under the auspices of—and to the great satisfaction of—the US. The Americans should be under an obligation to stand by their best, proven Arab friend. The argument continues: Iraq and the PLO have both become moderate, both want to ingratiate themselves with the West (for varied military, diplomatic and political reasons) and so are befriending the West's friend, Egypt, by trying to confer on it respectability and acceptability.

Something Unthinkable

But nothing is simple in the Middle East and so the third reason for the friendly approaches of Iraq and the PLO to Egypt is an exactly opposite thesis to the second one. According to this argument, Egypt deserves to resume the leadership of the Arabs just because it is now out of favour with the US owing to the very antagonistic attitude it has been adopting towards Israel, an attitude that has deprived the Camp David process of both content and momentum. Egypt has set the worst possible example to other moderate Arab countries—to Jordan especially—that were supposed to join in the peace process.

ARABS CLOSE HANDS. A surprising, almost revolutionary post-invasion innovation has been the decision of the PLO's Yasser Arafat and his Fateh group within the PLO to join hands with Jordan in order to exploit the small opening offered to them by the Reagan Plan. Picture shows Jordan's King Hussein *(left)* and the PLO's Yassar Arafat *(right)* meeting.

Consequently—and contrary to the generally accepted opinion—the US has been trying to prevent Egypt from returning to the Arab fold because, if that happened, it would give the Arabs the "wrong" lead, which is why, at the Fez summit, it was not the Arab hard-liners but Saudi Arabia that blocked attempts to bring Egypt back in. Critics say that the Saudis did this partly at America's behest, partly to preserve their own position of leadership. Therefore, if the US and Saudi Arabia want to keep Egypt out in the cold, Iraq and the PLO could argue that that must be a good thing to oppose. Especially if, just perhaps, Egypt actually is still close to the US.

Whatever the real motivation, the fact is that Iraq and the PLO are prepared to stop boycotting Egypt—a closing of Arab ranks unthinkable 8 months ago, before the Israeli invasion.

Another surprising, almost revolutionary, post-invasion innovation was the decision by Yasser Arafat and his Fateh group within the PLO to join hands with Jordan in order to exploit the small opening offered to them by the Reagan Plan, announced on September 1, 1982.

The decision to do so came easier because the Israelis rejected the Plan immediately and *in toto*, refusing even to discuss it. Therefore, the PLO argued that there must, necessarily, be something good in it for the Palestinians. True the Reagan Plan rejected the idea of an independent Palestinian State on the West Bank and in Gaza, which is the PLO's cherished goal; but it also rejected permanent Israeli sovereignty over those areas, called for a halt to Israeli colonisation of the West Bank and said that the future status of Jerusalem was negotiable, which the Israelis say has been settled for all eternity.

As a compromise, the Plan proposed a self-governing Palestinian entity "in association with Jordan". So the first thing to do was to define that "association". The very idea of doing so was curiously opposed by Syria, which was hoping that the PLO, expelled from Lebanon, would have to move to Syria, where the Assad regime could bring it under its complete control. Instead, the PLO moved its headquarters to Tunis; and Arafat and Fateh showed every sign of taking advantage of the physical distance between Tunis and Damascus to put an even greater political distance between themselves and the Syrians.

One way of doing this was to close the gap between the PLO and Jordan, Syria's favourite enemy. With some prompting from Syria, this move was also opposed by the more radical groups within the PLO but, by sticking to his guns, Arafat now has 4 of the 8 PLO groups, plus Fateh, on his side; and Fateh, on its own, controls 85 per cent of the PLO's membership, guns and money.

Counter-Proposal

In prolonged talks between King Hussein and Yasser Arafat, it has been worked out that Jordan and the PLO will counter-propose to Reagan an "association" that will be a federal arrangement between an independent Palestinian State and Jordan. It has further been agreed that this compromise will be presented to the US by a joint delegation of the Jordanians and the Palestinians—the latter not being members of the PLO but approved by it—to get around the short-sighted refusal of the Americans to deal with the PLO.

These two momentous decisions will have to be given formal approval by the PLO's National Council (the Palestinian Parliament) that meets in Algiers on February 14. Arafat has almost certainly got sufficient affirmative votes lined up.

These positive developments were accelerated not only by the Israeli invasion but by the increasing speed of Israel's colonisation of the West Bank. Arafat, Fateh and the others have at last realised, almost too late, that, if they do not reach an agreement, there will soon be no Palestinian territory to negotiate about.

This is where President Reagan has to play his crucial role. If in the next 2 or 3 months at most Reagan proves unable to put the brakes on the Israeli colonisers, then the whole peace process in the Middle East will collapse.

It was the Israeli invasion that produced all these developments: a tougher Egyptian and Saudi line; a closing of Arab ranks; the Jordanian-PLO *rapprochement*; the Reagan Plan and, if it fails, a most dangerous situation in the Middle East—none of which the Israelis like.

War is not only hell, its consequences are hellishly unpredictable. ■

AFTER ANDHRA, IS IT NOW THE TURN OF BIHAR? Dr Jagannath Mishra is seen at the Power Ministers' Conference in New Delhi, August 1982. "Ever since Dr Mishra joined the State Government in 1972, the Irrigation and Power portfolio has been his undisputed monopoly," notes the author.

Fresh Drive To Oust Bihar CM

Come 1983 and the Bihar Chief Minister, Jagannath Mishra, faced a fresh challenge to his position—the most serious one mounted so far. The new year saw the Bihar dissidents suddenly step up their activities. Dr Mishra is now thus under fire from within his party rather than from a weak and fragmented opposition. In a span of 30 days, Mrs Gandhi received half a dozen representations from party office-bearers, MLAs and MPs. Each petition carried the same message: *Remove Dr Mishra or else...*

By A Special Correspondent

Sailing across clouds of disarray, adversities, lawlessness, instability and lust for power hovering over the State of Bihar, our dynamic and well-construed Chief Minister (Dr Jagannath Mishra) *has emerged as a shining sun to whom countrymen are gazing with an eye of appreciation steadfastly .. The poor and the downtrodden see him as an incarnation of God as he, with his wit and great strains, helped them come out of the social dirt to a clean and airy atmosphere.*

A FEW readers will probably find it difficult to believe that the literary mush quoted above is actually part of an extraordinary advertisement which appeared in an English daily published from Patna. Advertisements often tell a few elegant lies. This one, with its rhetoric and grammatical errors, is in a category apart.

Professional copywriters, of course, have no cause for worry: it is the handiwork of an amateur, the Managing Director of a Bihar-based private company, eulogising Dr Jagannath Mishra on his return from Moscow. Bihar's unique Chief Minister had somehow managed to become a member of the Indian delegation which attended the October Revolution celebrations at Moscow in December last year.

Dr Mishra's well-publicised trip to Moscow and the 2-1 judgment delivered by the Supreme Court on December 16, 1982—clearing the Chief Minister of charges of corruption and forgery in the celebrated Urban Cooperative Bank Case—obviously came as a godsend to Mishra's supporters. The court judgment, in particular, gave the sycophants a much-awaited opportunity to flood Patna with posters, booklets and slogans.

As if this were not enough, the Public Relations Department (PRD) of the Bihar Government willingly obliged the CM by publishing the text of the orders of the two Supreme Court judges who absolved Dr Mishra of all blame. Justice V.D. Tulzapurkar's dissenting note, of course, does not find a place in the PRD booklet. The Pradesh Unit of the Congress(I) also bought space in local newspapers to publish the two favourable judgments. Once again, the dissenting note was conspicuous by its absence.

His Motto?

It is clear that Dr Mishra and his band of sycophants cannot tolerate any kind of opposition. A critical press deserves to be silenced and a dissenting Supreme Court judgment must be shamelessly ignored: this appears to be the motto of Bihar's arrogant Chief Minister. In this scenario, sycophancy in all its dimensions has become an accepted way of life. Yes-manship is only a component of the culture of sycophancy which is being practised by more and more spineless and greedy individuals. Such a culture is probably necessary to boost the spirits of Dr Mishra, who is often bracketed with Abdul Rehman Antulay and Gundu Rao as Chief Ministers whose record in office has done most to harm the party's reputation.

Not surprisingly, one thing Dr Mishra is extremely fond of is silence. His cronies have been instructed to ensure silence by distributing lolly or by displaying muscle power—just in case. And Dr Mishra has much to hide. His balance-sheet of notoriety is indeed stupendous: the Bhagalpur blindings; the Supreme Court strictures; oppression of Harijans and Tribals; caste carnages; Biharsharif; Phulwarisharif and the Bangalwa riots; attempts at forgery; public admonitions from Mrs Gandhi; and the classic Press Bill. Such is Dr Mishra's record of bungling that the most painstaking reporter is bound to miss a few of the CM's choice acts of callousness. For a complete inventory, the reporter is compelled to turn to dissidents inside the Ruling Party who are, at the moment of writing, moving heaven and earth to oust the Chief Minister from his exalted chair.

By all accounts, 1983 will be an extremely troublesome year for Dr Mishra. His heart knows this bitter truth and yet he is busy covering the truth with a coat of synthetic lies. In a lengthy 10-page official handout entitled *Bihar, A Balance Sheet of Achievements* by Dr Jagannath Mishra, the Chief Minister says:

The profits outweigh losses and we bid farewell to the past year (1982) *with reasonable pride and a sense of achievement... Political reverses here and there, however, do not reflect the general will of the people—and the faith of the common man in the Congress(I) remains unshaken... The sun is once again peeping through the horizon and the national panorama is dotted with achievements.*

Dissidents' Contention

Dr Mishra has also apparently discovered a brand-new, modern version of the *Bhagvad Gita*. He says in the handout:

Today, we in India have another Bhagvad Gita, *another doctrine of action in the shape of the revised 20-Point Programme... which is the* Bhagvad Gita *of economic rejuvenation.*

Non-implementation of the 20-Point Programme is, however, among the major charges that the Bihar dissidents have levelled against the Chief Minister. The dissidents contention is that Dr Jagannath Mishra, obsessed with thoughts of his own survival, has been consistently neglecting the welfare of the State.

Perhaps in response to this serious allegation, Dr Mishra sent Mrs Gandhi, on January 5, 1983, a five-page typed note on the implementation of the 20-Point Programme, describing in graphic detail the progress made on each front—bonded labour, agriculture, forest policy, etc. A spokesman for the dissidents describes Dr Mishra's recent note as an "exercise in tall talking and boasting". Said the dissidents' spokesmen: "All that Dr Mishra

has been doing is trampling the historic Congress under his feet and trying to convert the Congress (I) into the Congress (Jagannath) in the State."

Picking their cue from the Congress (I) debacle in Andhra Pradesh and Karnataka, the Bihar dissidents suddenly stepped up their activities in the first month of the new year. At the moment of writing, Dr Mishra seems to be facing one of the most serious challenges of his career which has predictably come from within his party rather than from a weak and fragmented opposition. In a span of 30 days, Mrs Gandhi has received half a dozen representations from party office-bearers, MLAs and MPs. Each petition has carried the same message: *Remove Dr Mishra or else*...The rebels also seem to be bent upon causing as much embarrassment as possible. This objective has been achieved simply by releasing to the press copies of petitions sent to Mrs Gandhi. Besides, practically each MP who happened to visit Patna in January inevitably called a press conference to express disgust and anger over the state of affairs in Bihar.

Here is a sample. K.K. Tiwary, a Congress (I) MP from Bihar, released a statement on January 24 which said.

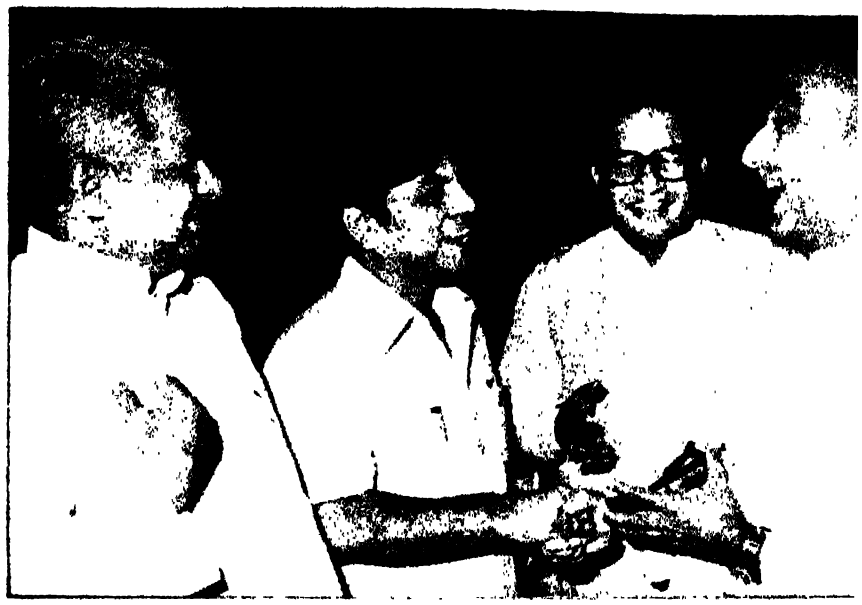
All those Congressmen who are committed to the leadership of Mrs Gandhi should fight to the bitter end the hegemonism of Mr Mishra.

This Tiwary statement was suitably splashed on the pages of local and national dailies. What seemed to have angered Tiwary, in particular, was Dr Mishra's ham-handed interference in the party's forthcoming organisational elections in Bihar. Said Tiwary:

Jagannath Mishra is precipitating a showdown with the Party High Command by openly flouting the directives of the party. His bid to obtain authorisation from the District Congress (I) Committees is a calculated move to confront the High Command with a fait accompli *and prove that Bihar is his pocketborough and the writ of the Congress (I) High Command does not run here.*

Jagannath Mishra has survived many crises during his tenure. After the blinding of Bhagalpur prisoners stirred the nation's conscience and

⟶



SOME GET-TOGETHER, THIS! In the picture at the Chief Ministers' Conference in New Delhi, July 1980, are *(l to r)* Haryana's Bhajan Lal, Maharashtra's Abdul Rehman Antulay, Bihar's Jagannath Mishra and Union Agriculture Minister Rao Birendra Singh. Dr Mishra, like Bhajan Lal, has so far proved a master in the art of holding on to the Chief Ministerial *gaddi*.

A Record Of Failure

THE blinding of prisoners by Bhagalpur policemen and the obnoxious Bihar Press Bill have ensured Dr Jagannath Mishra's place in history's gallery of the Great Abominables. But this is not all. The Chief Minister has a lot more to his credit.

Before entering politics, Jagannath Mishra taught Economics at Bihar University. Under the supervision of Dr Hargovind Singh, Mishra completed his thesis in 1964. There are allegations that Mishra's thesis was actually written by his supervisor. The research guide was, of course, amply rewarded: Dr Mishra made Dr Singh a member of the Bihar Public Service Commission and, later, Vice-Chancellor of Magadh University. If Dr Mishra had had his way, Dr Singh would have also become Director of the prestigious A.N. Singh Institute. As this could not materialise, Dr Mishra finally decided to clear his *guru's* debt in a novel fashion by getting him elected to the Bihar Legislative Council.

Dr Mishra's interesting relationship with economics and economists does not end here. His ex-students remember him as a competent lecturer and a dependable guide. Dr Mishra's elder brother, ex-Railway Minister L.N. Mishra (who died in a controversial bomb blast at Samastipur in 1975), was also an economist. Besides Dr Mishra's wife, who is an Economics Honours graduate, the CM's daughter, Sangeeta Mishra, stood second in her BA Economics Honours examination in 1981.

But her performance was plagued by a controversy which matched the scandal surrounding her father's thesis. Sangeeta's question-paper setters and examiners were handpicked by Dr Mishra. The CM allegedly went to the extent of ordering University officials to place his daughter second lest the manipulation became too obvious. Once the controversy became public, an inquiry had to be instituted. But the findings of the inquest never saw the light of day.

Ceaseless Experimenter

The CM has been consistently utilising his knowledge of economics to produce truly exceptional results. Economics, for the layman, is the art of producing and consolidating wealth. Dr Mishra is successfully transforming this art into a modern science. But, going by the law of probability, there is still a chance of the Supreme Court's establishing the allegation that Dr Mishra minted crores by patronising the Urban Cooperative Bank.

Dr Mishra has also been experimenting with new laws of economics. At the CM's farms at Baluabazar in Saharsa district, labourers are paid Rs 2—or its equivalent in paddy or sugar—as remuneration for a day's work. These poor farmers cannot even ask for justice in a court of law. According to the Bihar State Minimum Wages Act for Agricultural Labour, the minimum daily wage for an 8-hour stint is Rs 4.50 plus meals during working hours. But can the poor, unlettered and brutally exploited landless workers ever dream of taking a Chief Minister or his henchmen to court?

Knowledge of economics has indeed helped the CM and his family tremendously. Ever since Dr Mishra joined the State Government in 1972, the Irrigation and Power portfolio has been his undisputed monopoly. Not because he ever had intentions of providing water for each parched field during Bihar's scorching summer or lighting up the dark villages with a myriad electric bulbs but because the contracts for the multi-crore-rupee Kosi River project are controlled by the Minister for Irrigation and Power. An Estimates Committee of the Bihar Assembly has already found that some of the choicest contracts have gone to Dr Mishra's brothers and relatives A decade after the first serious inquiry was held to probe irregularities and charges of graft and nepotism, the Kosi River project is crying for fresh attention from official investigators. However, as long as Dr Mishra occupies the CM's chair, inquiries are unlikely to serve any useful purpose. In the past, the learned Doctor of Economics had used his clout to prevent investigators from getting to the root of the corruption plaguing the project.

The Perfect Alibi

Meanwhile, the law-and-order situation in Bihar has been rapidly deteriorating. On the one hand, we have scores of undertrials languishing in hellish prisons for inordinately long periods and convicts who continue to be detained after the expiry of their terms. (The plight of some of them has already been publicised.) On the other, there are instances of warders letting out hardened criminals to commit murder. In July last year, the warders of the Sahibgunj Jail (in the Santhal Parganas district) released four undertrials to murder an adversary. The deed done, the undertrials returned to the safety of the prison; a prison, all things considered, is the perfect alibi. Notorious criminals have been caught watching movies at theatres. And at least one undertrial was discovered watching a football match with rapt attention. The lucky undertrial was accompanied by his pet monkey!

The nexus between hoodlums and politicians is so deep-rooted in Bihar that often the Judiciary's reputation has been tarnished. Politicians are said to have prevailed upon judges and magistrates to grant bail to dangerous criminals. If a magistrate cannot be bought, cajoled or intimidated, then the services of a pliable doctor are promptly requisitioned: criminals are often let out on parole for medical treatment. In this scenario, toughs known to be associated with the Opposition are arrested or liquidated in false encounters. Hoodlums who assist the Ruling Party in capturing booths receive VIP treatment. Inside jails, they lead the lives of princes. Once freed, they continue to assist their patrons. *Goondas* come in handy not only for capturing booths during elections but also for terrorising weaker sections of society.

Dr Jagannath Mishra hopes to whitewash his notorious innings with a single Supreme Court verdict. But his greatest alibi and prop during his tenure has been the powerful tenant at 1 Safdarjung Road in New Delhi. Dr Mishra should, however, not forget that Mrs Gandhi is an expert at calling the bluff at the most inopportune moment—and winning. She has a record of destroying Chief Ministers who failed to prove their worth. Dr Mishra is indeed an innocent if he is not already aware of Mrs Gandhi's panther-like skill at stalking her quarry and felling him before he can cry for mercy.

Mrs Gandhi shed a few copious tears in the Lok Sabha, it was taken for granted that Dr Mishra would be asked to step down But the Chief Minister survived the public outcry and even dared to say that blindings enjoyed the sanction of the local population

The next serious challenge came in the form of communal riots in Bihar sharif As Biharsharif burnt, Dr Mishra was lobbying in Delhi Finally, Mrs Gandhi had to fly to Biharsharif and use her charisma to restore a semblance of sanity

Demand Ignored

There was a faint demand to remove Dr Mishra before things got out of control in the State Mrs Gandhi ignored the demand and her popularity plunged downwards among Muslim and Harijan legislators The Prime Minister's pardon had another inevitable effect every scandal or act of callousness which went unpunished thenceforth made the CM appear more invincible

Kedar Pandey, who dared challenge Dr Mishra around this time had to leave the Railway Ministry almost in disgrace A firmly esconced Dr Mishra gradually became more corrupt and arrogant than he was at the beginning of his term Congress (I) victories in several by elections helped him tremendously It seemed a measure of his self-confidence and arrogance that he introduced and went ahead with the Bihar Press Bill to discipline those who still had the temerity to find fault with his Government

But now Dr Mishra's happy days appear to be numbered. The rash of dissident activities has been finally noticed by Mrs Gandhi herself and it is perhaps with her tacit approval that some of Dr Mishra's trusted lieutenants have been cut to size The President of the Bihar Pradesh Youth Congress (I), Chandan Bagchi, who is one of the pillars of the Mishra axis, was recently sacked from his lucrative post by Youth Congress (I) Chief Tariq Anwar Emboldened by Dr Mishra's victory in the Urban Cooperative Bank Case, Bagchi had promptly reconstituted the committee, removing the nominees of Tariq Anwar. Anwar retaliated by dissolving the new committee and sacking Bagchi on the ground that he had crossed 35

Fight To The Finish

It is well known that Anwar, the young and vocal Muslim MP from Bihar, is in the anti-Mishra camp Over the last one year, he has been working in collusion with Kedar Pandey and Sitaram Kesari, both from Bihar and both opposed to Dr Mishra (Kesari left the Central Cabinet on January 25 to work exclusively for the party and Kedar Pandey was subsequently dropped by Mrs Gandhi) Tariq Anwar, however, remains a strong contender for the Chief Ministership of Bihar

It appears that the dissidents enjoy the blessings and the support of at least 10 MPs The dissidents and their mentors feel that Dr Mishra must be removed if Bihar is to be saved from the ignominy of Andhra and Karnataka Immediately after the debacle in the South, Mohammed Shakoor, a Whip of the Bihar Congress (I) Legislature Party, told reporters· "I am convinced that, if the present leadership is allowed to rule Bihar till the next elections, no power on earth can save the party."

It is interesting that such statements, once issued, have not been contradicted. This is ample proof that Dr Mishra's detractors have made up their minds to fight to the bitter end. A political war consists of many battles and, to date, Dr Mishra's scorecard does not present a cheerful picture

Dr Mishra's one-man rule, bereft of discussion or debate and blunted by nepotism and administrative incompetence, can be ended if Mrs Gandhi so desires With a movement of her little finger, the Prime Minister can remove Dr Mishra from his gilded *gaddi* She, and she alone, matters Neither the press nor the Opposition nor the dissidents can dethrone Dr Mishra A dutiful press has already done its best today, Jagannath Mishra stands totally exposed before the people of Bihar The Opposition is sadly not in a position to force the issue, perhaps till elections are held In the given circumstances, only Mrs Gandhi can clinch the issue. But will she?

Factor In His Favour

The most important factor operating in Dr Mishra's favour is his 2-1 victory in the Urban Cooperative Bank Case Opposition leaders have already described the court verdict as a moral defeat for Dr Mishra but, technically, the CM stands vindicated. That Justice Baharul Islam, one of the two judges who declared Dr Mishra innocent, resigned his post within a matter of days to contest the Lok Sabha election from Barpeta on a Congress (I) ticket is another matter. The Chief Justice of the Supreme Court, Y.V. Chandrachud, can still, at his discretion, send Dr Mishra's case for review.

Whether the Chief Justice sends the case for review or not remains, at the time of writing, to be seen. It is also difficult to predict the treatment that Dr Mishra receives from Mrs Gandhi in the wake of the "Second Kamaraj Plan" But one thing is clear: that, as long as Dr Mishra remains in power, he will continue to be a target of Mrs Gandhi's probing eyes. Till now Mrs Gandhi had been patiently treating Dr Mishra on a par with the Assam agitation. she had kept both problems pending in the vague hope that they would somehow be resolved in the course of time.

But there is a catch. This tactic may not eventually work in Dr Mishra's case As in Gujarat—where the dissidents, tired of waiting, formed a new party—Dr Mishra's detractors may also choose to declare their "independence" in Bihar Mrs Gandhi cannot be unaware of the conspiratorial relationship between Gujarat and Bihar

Gujarat has already dealt Mrs Gandhi's party a humiliating blow. Will the Bihar dissidents now follow Gujarat in a classic re-enactment of the great revolt of 1974? ■

Your domestic gas installation is as safe as you want it to be

Our self-closing spring loaded cylinder valve and matching click-type regulator is designed to ensure maximum safety to you

WHAT YOU SHOULD DO

- Turn off all the knobs of the gas stove before switching on the regulator
- Light the match/lighter near the burner while turning the gas stove knob
- If the burner does not light turn off the knobs of the gas stove and the regulator Call your HP Gas Dealer immediately to rectify the defect
- In case you smell the gas
  - — Extinguish all flames in the vicinity
  - — Turn off all gas knobs of the installation
  - — Open doors and windows for ventilation and allow the gas to disperse
  - – Remove the regulator from the cylinder fix the nylon cap on the cylinder valve and turn it clockwise
  - — Do not operate any electrical switches
  - — Contact your HP Gas Dealer immediately for help
  - — Remove the cylinder to an open space/balcony before the dealerman arrives

REMEMBER Gas smell is a warning of a gas leak. An odour is added to LPG to enable immediate detection of a gas leak.

- Turn off the regulator knob when not in use
- Keep the cylinder vertical No source of heat or flame should be close to the cylinder rubber tubing or regulator
- Extinguish all naked fire/flames in the kitchen while replacing a cylinder
- Place the gas stove on an elevated platform with the cylinder on ground level

WHAT YOU SHOULD NOT DO:

- Do not repair or tamper with the gas installation
- Do not permit any unauthorised person to attend to your gas installation
- Do not spill the liquids on the gas burner while preparing food This can extinguish the flame and cause safety hazard due to gas leak
- Do not use a rubber tube of longer length than the maximum permitted viz 1 5 metres
- Do not remove the rubber tubing or shift the gas installation on your own

INSIST ON YOUR HP GAS DELIVERY MAN·

- Checking the condition of your gas stove, rubber tubing and regulator before replacing the gas cylinder
- Lighting the burner to check the flame for consistent burning
- Checking with soap solution for any suspected leakage of gas
- While replacing the defective rubber tubing, ensure that it covers the full length of the nozzles of gas stove and the regulator

For any servicing/repairs to your gas stove, please call your HP Gas Dealer. Mechanic services are available at a nominal service charge of Rs. 3/- plus cost of spare parts replaced

The Flower That Kills

The Politics Of Opium

Until recently, India was practically the monopoly supplier of licit opium to the pharmaceutical industry all over the world. But the super-power patronage of its illicit cultivation in South-West Asian countries has now virtually snatched the market from us.

by Dipak B.R. Chaudhuri

THE recent finding of clandestine opium poppy cultivation in a Minister's Doon valley fields attracted nationwide interest in opium India and Turkey are the only two countries approved by the international community for regulated cultivation of this crop

The Government of India maintains strict control over cultivation of opium in selected districts of Madhya Pradesh, Rajasthan and Uttar Pradesh Not even an "aries" (1/1000th part of an acre) of land can be cultivated without a licence from the Narcotics Administration

Until recently, India was practically the monopoly supplier of licit opium to the pharmaceutical industry all over the world But now the supply of illicit opium in the international market surpasses total production of licit opium and opium-derived chemicals

A huge stockpile of more than 1,800 tonnes of opium has been forced on the Government of India due to an unprecedented surplus of opiates To meet this situation, the export price of opium has been progressively reduced from US $6 during the year 1978-79 to US $4.25 per unit of morphine per kg during the year 1981-82 with 25 per cent incentive rebated on orders in excess of the average of the past two years' contracted purchases of respective buyers. In 1980-81, 444 tonnes of opium were exported, while in 1977-78, we exported 978 tonnes. The final export figure for 1981-82 may stand at 585 tonnes.

In 1977-78, the licenced area under poppy cultivation was 63,665 hectares. According to a statement tabled by the Finance Ministry in the Lok Sabha on October 8, 1982, cultivation in the crop season of 1982-83 will be licensed in only 31,500 hectares — excpected to yield 840 tonnes of opium at 90°C. This means, we have more than halved the acreage.

Wide Cultivations

The poppy *Papaver somniferum* is the main source of the non-synthetic narcotic. It was grown in the Mediterranean region as early as 300 BC and has since been cultivated in countries around the world, including Hungary, Yugoslavia, Turkey, India, Burma, China and Mexico.

Requiring only a moderate amount of water during its growth cycle, the plant does best in a warm, not too humid climate. Customarily, it is planted around October. It grows three to four feet tall on a thick stalk and produces several blossoms and egg-size seedpods. About two weeks after its blossoms fall, the pods are lanced by hand until the white latex-like sap turns brown and coagulates into a gum. This gum is collected by scraping the pods. Usually, this gum is allowed to harden, after which it is powdered or moulded into tablike forms.

A more modern method of harvesting is by the industrial poppy straw process of extracting alkaloids from the mature dried plant. The extract may be in either liquid, solid or powder form. Most of the poppy straw concentrate available commercially is a fine brownish powder with a distinct odour.

The principal incentive for opium production is a relatively high return per unit of land. The principal constraint is that the operation is labour-intensive, especially at harvest time.

Fifty per cent of Indian production comes from the Mandsaur district of Madhya Pradesh. The Chittor district of Rajasthan, Ujjain and Ratlam are other areas for licensed opium cultivation. There are a few cultivators in UP mainly to feed the old Government Opium Factory at Ghazipur.

If one takes a day train on the MG section of Western Railway between Ratlam and Chittorgarh during early spring, one can see poppy plants in full blossom on both sides of the track.

The Opium *Mukhiya* appointed by the Narcotics Department is responsible for collection from licensed cultivators in his village. Opium cultivation holdings are generally very small. In order to avoid diversion of opium to illegal trade channels, the Government was earlier offering a better pricing to those cultivators who were showing better yields from their plots. The current base price is Rs 130 per kg at 70°C. One who produces more than 60 kgs per hectare, gets Rs. 300 per kg for the additional quantity. Unfortunately the smuggler pays more than Rs 450 per kg.

Illegal Trade

The Western media is quite frank about the massive cultivation of opium in the golden triangle between Burma, Thailand and Laos and the close connection between the smugglers and various war lords and insurgent factions. But the illegal cultivation and trade in South Western Asia, according to International Drug Control experts, is now on a much larger scale.

This new region is known as the "golden crescent" and consists of Pakistan, Afghanistan and Iran. It has surpassed even the "golden triangle" as a source of supply of narcotics. According to one US official estimate, the quantity of illicit opium produced in these three countries in 1978-79 was between 1,200 and 1,600 tonnes. Between 120-160 tonnes of heroin were spinned there while the total legal US consumption of heroin was 3 tonnes. According to a survey conducted in March 1982 by the National [illegible] committee, Pakistan alone can outproduce the [illegible]

[illegible] visit of the Carter [illegible] Afghanistan, were [illegible] growing

THE SEEMINGLY INNOCUOUS POPPY FLOWER contains the source for some of the world's most powerful drugs, viz morphine, a most effective pain killer; codeine, a derivative of morphine, also used medically; thebaine, a stimulant; its derivatives, oxycodone, etorphine and diprenorphine, hydromorphone, a highly potent semi-syntnetic analgesic; and heroin, the most addictive narcotic today.

Soon after the petals fall off the immature fruits of the opium poppy are selected and incised slightly. The white juice that oozes out is dried. It coagulates and turns brown after exposure to air. Some forms of opium may be black. Raw opium is often sold in the form of small lumps, cakes or bricks that may be powdered or further treated

Photographs by Aditya Arya

Under American pressure, Shah [illegible] Pahlavi banned the cultivation of opium. Inspite of the existence of one million opium addicts there. The fall of the Shah and the breakdown of strong central governments both in Afghanistan and Iran have increased poppy acreage and [illegible] smuggling. The opponents of the governments in both countries are using poppy and heroin revenue for their own [illegible]

The USA, which was so concerned about poppy cultivation in the Pathan-dominated border between Pakistan and Afghanistan in the late '70s, is now keeping mum. It is believed that opium cultivation is financing the arms purchases by anti-Kabul resistance forces and [illegible] market. Some believe that even the former United is also taking advantage of the [illegible] opium supply. Afghanistan's [illegible] laboratories in Kabul [illegible] started producing morphine base, [illegible] stage and conversion of opium [illegible]

The increasing [illegible] West Asian countries and [illegible] super power patronage may be the reason for the shrinking market for India's licit opium.

The official myth in India is that the number of opium-addicts in the country has gone down. The Government of India has rigidly controlled domestic consumption and has a monopoly over trade and processing. According to one US estimate, only ten per cent of India's total opium gets diverted to the illicit trade. But Armed Forces recruiting authorities are claiming rejection of large numbers of candidates from Punjab and adjoining areas because of drug addiction.

In Punjab, the migrant agricultural labour from Bihar and eastern UP are given opium by landlords as if as a part of remuneration. Opium addiction amounts a kind of bondage. Opium tea is a popular drink among the younger people. The State Governments of Punjab, Haryana and the district authorities of Ganganagar (Rajasthan) are aware of large-scale opium and morphine addiction. The Punjab Health Directorate has conducted a survey on the drug habit. The increase in this domestic consumption cannot be accounted for from the distribution of domestic-produce which is strictly controlled by the Central Government. It is almost common knowledge that Pakistan is encouraging the smuggling of Afghani and Pakistani opium to Indian [illegible] Sectors by different channels including Afghan refugees.

According to figures available, during 1981, 1.5 tonnes of Pak opium was detected along the Indo-Pak border as against only 470 kgs seized during 1980. If the detections are 10 per cent of the total, the magnitude of the opium being smuggled into Punjab can be imagined.

The Pakistani objective can be well visualised. There have been allegations in the West that USA's alleged [illegible] cultivation of opium poppy in Pathan areas on both sides of the Durand Line is not only encouraging proliferation of the [illegible] in Afghanistan but also deliberately endangering the moral and physical health of India's traditional fighting men in the North-Western border States. The Pak-American conspiracy also [illegible] for the drastic fall in the demand for opium of Indian origin through licit channels.

Unfortunately, Indian vigilance has not been enough so far to stop the illegal import of opium and the increasing use of it in the border States.

Tripura After The Elections

Another Red Dawn In The East

Though the electorate in Tripura has chosen another spell of CPM rule, in actual terms the recent Assembly elections have been a reversal for the Marxists and a leap forward for the Congress(I) - TUJS combine, which has made a dent in the Left Front's bastion in the tribal belt.

by Jyoti Jafa

IT was carnival time in Tripura. Red flags and the Communist hammer-sickle and star symbol appeared everywhere. Jubilant parties of proles and peasants beating drums danced, tossed *gulal* and burst crackers celebrating election victories. Bus-loads of triumphant party workers led processions through the streets. The police and the CRP curbed large crowds around Umakant Academy on Agartala's Akhaura road while vote-counting continued.

Although it was a foregone conclusion that Tripura's ruling CPI (M) party would win, in actual terms the 1983 Assembly elections have been a reversal for the Marxists, and a great leap forward for the Congress (I)-TUJS combine. Despite terrorist threats and boycott notices, no clashes marred the polling or counting. Eighty per cent of the voters turned out in urban areas, and 50 per cent in tribal belts. CPM secured 39 seats, Congress (I) 14, TUJS 6, Independents 2, and Amra Bengali one.

The electorate has chosen another spell of CPM rule because Nripen Chakraborty's government did a lot for Tripura's development, and it stands united unlike other parties. But tribal welfare measures alienated Bengali votes. The Mandai massacre and the June 1980 *danga* in which nearly 1,500 people died, created distrust and insecurity which still persists throughout the State.

Tripura Upajati Juba Samiti (TUJS) was launched in 1967 because tribal chiefs were not acceptable to CPM members. Up to 1977 Tripura had a Congress ministry. Former Chief Minister Sukhomoy Sengupta enacted the 1974 Land Reform Act to restore alienated tribal lands with effect from 1969. But this Act went into cold storage till a CPM government came to power in 1977 and tried implementation by paying compensation to non tribal buyers. In Orissa, no compensation was given by the government for illegally acquired tribal land.

Tension And Insecurity

One can feel tension and insecurity throughout the State and blame the Marxists. But the real problem is that Tripura's ethnic composition has changed too rapidly. Now there are only five-and-a-half lakh original tribal inhabitants, while Bengalis total 18 lakhs. But 70 per cent of the land belongs to 30 per cent of the people, while 70 per cent have to live in towns.

Tripura is surrounded on almost all sides by Bangladesh, with just a short 70-km border with Assam and Mizoram. Immigration was inevitable. Bengali was the official language in Tripura since the 15th century. Rulers enjoyed Zamindari rights in Commilla and welcomed Bengali refugees after the 1947 Noakhali riots on humanitarian grounds. Tagore was a personal friend of four progressive Tripura Maharajas. Non-tribals feel insecure because they lost everything in East Bengal. *"Aar kafobar refugee hobo?"* is the Amra Bengali's slogan. They have resisted CPM inspired tribal land restoration. As yet only one Amra Bengali candidate got elected from Pecharthal, a Scheduled Tribe reserved seat! This was possible because descendants of Bengalis employed by Maharajas, called Laskars, intermarry with tribals and classify themselves for advantage.

There is no difference in TUJS' demands or Marxists' tribal policy. Autonomous district councils have been granted, Kakbarok is recognised as an official language, restoration of tribal lands and creation of tribal land reserves which successive Congress regimes had eroded has been conceded by Nripen Chakraborty's government. No one can answer why Bijoy Hrankal was not expelled from the TUJS before the 1982 Congress (I) poll alliance or why Chief Minister Nripen Chakraborty befriended him. An admirer of the MNF leader Laldenga, Hrankal's objective was always independence, his method armed struggle. Until his disappearance in September 1982 he was the Assistant General Secretary of TUJS and Commander in Chief of Tripura Sena, with 6,000 trained activists.

TUJS President, MLA Buddhadev Barman believes that extremists were harboured by the Left Front government, and that is why the TUJS-Congress (I) combine has secured 20 seats this time. His Chakma friend Sroto Ranjan Khisa, who escaped the 1949 Chittagong carnage said, "The Government of India is sending trucks full of soldiers. But not a single terrorist is arrested. How was the Mana thana looted? Nobody tried to stop terrorists from grabbing weapons." Police records show that 24 weapons were looted from Mana, only after a sentry was shot dead. Cases have been registered and investigation continued into all recent episodes of terrorism.

Many blame Congress (I) defeats on TPCC (I) President Ashok Bhattacharya, who often remains absent in Delhi. Agitated by phone calls and complaints of harrassment from Congress (I) workers, lawyer turned MLA, Mr Bhattacharya swore, "You cannot imagine how violent CPM can be! They say either you become red or we will make you red! You think this is a popular government? This election is rigged."

Merger With India

Former civil servant, Raj Kumar P.K. Dev Barman feels Tripura is unstable because "we are getting extinct like Red Indians." Tripura's historic kingdom dates back to 2,300 years. According to the Mahabharata, King Tribhuvan attended Yudhishtir's Rajasuya Yajna. Maharaja Bir Bikram Manik Singh-Kishore Dev Burman accepted a merger with India after creating tribal reservations. "Refugee influx was sustained by the people of Tripura, but this is forgotten today. The Government of India could not help because partition cut off our road and rail links throughout Bengal. Even steel and cement came by air, courtesy Bharat Airways and Kalinga Airlines. Refugees kept coming and the Government started reserving tribal areas. Tribals not being educated, had no land record, so they started shifting away from towns into the interior. But even there exploitative Bengali shopkeepers set up bustees like Mandai. Immediately after Independence, against all our advice to General Cariappa, the 1st Tripura Rifles was disbanded without pension or any other benefits. These ex-soldiers were won over by Dasarath Deb and formed a disciplined Communist cadre in the 50s. Insurgency actually began then. Government supporters were butchered. It was the same frightening pattern you see in Bolshevik Russia and Mao's China. We are heading for a Marxist enclave in the East."

Tripura's deplorably dilapidated Vidhan Sabha building, once a Rajbari, presents a sharp contrast to the well-preserved Kunjban Palace where Tagore often stayed, and Governors now camp. Governor H.M.S. Burney clarified doubts about his correspondence with the Government of India regarding army deployment during elections.

TRIPURA'S CHIEF MINISTER, Nripen Chakraborty, has again led the CPI(M) to victory, but this time with one short of a two-thirds majority.

"You have been in the North-East long enough to understand counter-insurgency requirements. At no time did I contemplate or even suggest using the army for election duties. People are free to make irresponsible statements to the press. Tripura is remarkable in many ways. I am not saying that we don't have problems here. Our resources are limited. Bengali influx has created assimilation problems. Terrorist activity is planned, motivated and sustained. Therefore we cannot dismiss it like an ordinary crime or dacoity. There are militant secessionist groups on our Mizoram-Chittagong border. I hope extremists will allow the new Government to concentrate on development. Tripura has had a remarkably clean and efficient government under Nripen Chakraborty. I have not received any allegation of corruption like in Nagaland and Manipur. Our main hurdle is communication."

"Is the railway line from Assam to Tripura progressing?"

"We are doing our best to convince the Centre to extend the railway line from Dharamnagar to Agartala but I suppose railways have their own priorities. Ports have to be linked, industrial and producing areas serviced first. But there is justification in feeling that communications must be improved in this part of the country for strategic, psychological and practical reasons."

Nripen Chakraborty remains the Chief Minister but people are keenly watching the Congress (I) Pradesh President, Ashok Bhattacharya, former Chief Minister Sukhomoy Sengupta, and Maharani Bibhu Devi to see who becomes the Opposition leader. Alarmed by recent trends, former Maharaja and MP, Kirit Bikrama Dev Barman decided to use his considerable influence to revitalise Tripura's Congress party. His dynamic young wife got 9195 out of 16,264 votes cast in Matabari's constituency's four-cornered contest. She feels Congress (I) could have done much better had candidates been selected more carefully.

Theory Of Non-violence

Surrounded by mementos of the past, paintings of Tripura's former rulers, priceless Chinese bronzes, historic arms and armour, the former Maharani said: "I dislike the word 'feudal'. This word borrowed from Western political phraseology does not give a true picture of traditional Indian princely values. I have joined politics because my husband and I feel concerned about our backward people. I have equal regard for Bengali settlers also. Every day people are dying, there have been clashes throughout the elections. Whilst CPM pursues violence as a theory, the Congress (I) pursues non-violence."

Chief Minister Nripen Chakraborty smiled and said that he had agreed to see me "not as a journalist but as a guest in our State". Carrying detention scars from British days and the Nehru regime, the 76-year-old Marxist freedom fighter indulges in Orwellian double think.

"I came to Tripura in 1950, and not in 1930. We had to go underground. Let us not go into my biodata. My brother's family was here, so they gave me shelter. Earlier also I was underground in Bengal. The united Bengal concept of compartmentalising is creeping in everywhere. Coexistence is just a formality but how can you expect Bengalis who are a very advanced national group to understand Tripura's tribals, who are really very backward and vice versa."

"How is it that the same people who are accepted as bonafide citizens and voters in Tripura are considered foreigners in Assam?"

"Why do you involve them in this controversy. People forget we are one country."

"What made you a Marxist?"

"In early childhood there was the influence of Vivekananda and Ramakrishna

Paramahamsa. They taught us to serve suffering humanity. Our generation came in contact with Gandhi, Tagore and the idea of service to mankind grew. I don't believe in God, but we must give basic necessities to every one."

"Have you been able to bring about any qualitative change in the living standard of Tripura's poor people?"

"How can one man do it? Prices are controlled from Delhi not from Agartala. In 1980, even when I won the first election, a half-starved, half-naked daily labourer was paid only one rupee fifty paise. Today he earns Rs 15 because we implement the Minimum Wage Act, but his condition remains the same."

"Don't you have resources for development and welfare schemes?"

"Tripura is a very poor State. It has the highest population density ratio in the North-East. Unemployment is increasing. There is no land for expanding cultivation. Improved agriculture is not possible without irrigation. Potential is there, but we are completely dependent on Central subsidies. We have gas. We want to set up a paper mill, which can be run with our own gas. We can produce thermal power too. Right now I am in favour of agriculture based on development. We have rubber, jute, coffee and tea plantations, fruits and canning plants. Gradually we can industrialise with gas."

"Apart from shortage of funds what's your main problem?"

"Providing employment and restoring public confidence."

"It is alleged that CPM is encouraging terrorist activities in Tripura. Your patronage of Bijoy Hrankal is criticised?"

"Tell me one thing. In 20 years has the army been able to root out rebels in Nagaland or Mizoram? I don't want to alienate people further. Our own citizens must be given a chance to realise their own mistakes, but the CPM is not responsible for extremists' activites. I can give you printed literature which will prove that it is the Christian missionaries who want an independent Christian state in the North-East, with headquarters in Shillong.

"Intelligence branches have copies of a pamphlet titled 'Church Grows Out Of Peoples' Movement', which says it is a happy sign that young men have formed the TUJS to fight for tribal rights. Christianity is a comparatively new influence in Tripura because Maharajas had banned all missionary activity until 1937. Tribal Christians feel that Tripura's administration approximates a Communist cadre."

"The Chief Minister and the Chief Secretary are a committed bachelor pair who would win hands down in any Wills Filter Cigarette 'Made For Each Other Contest'," snapped a Kuki student.

Bungled flights resulted in a surprise meeting with Namboodiripad at Agartala airport. Putting down his copy of *The Cause You Serve*, this veteran Marxist proceeded to instruct me about local, district, regional and Supreme Soviet affairs.

"What are you really working for?" I asked.

"True democracy." Quoting the example of the German Democratic Republic, Namboodiripad assured me that elections are held in many Marxist countries. "Poland has had martial law only for one year. Otherwise it had an elected government. In India we shall have to evolve our own system without blindly copying anyone. We stand for national unity, but in India specially some system of regional autonomy on the pattern of Soviet Socialistic Republics will have to be worked out. We could give tribals autonomous regions in Tripura under the 7th Schedule, which Indira Gandhi was not conceding."

"Would your Marxist system ensure civil liberties and preserve *Habeas Corpus*?"

"Of course. Unless there are attempts to undermine and overthrow duly elected Governments. Terrorist activities require different handling."

Namboodiripad also feels that the anti-Bengali AASU movement is motivated and manipulated by foreign powers. For the time being secession fever has not spread but terrorism is increasing in Tripura. ■

The Battle For Survival

The exodus of Bengali refugees from neighbouring Bangladesh has radically tilted the State's population balance—the "original" Tripuris now comprise barely 20 per cent of the total population. This has resulted in tensions which have often led to violence.

by H. S. Sethi

TRIPURA, India's tiny north-eastern outpost, seems to have been suspended between Assam and Mizoram on the one side and protrudes into the vast expanse of Bangladesh on the other. It is this peculiar geographical position which has given to this tiny State an assortment of tribes and communities and which accounts for the confused and confounded conflicts that beset its people.

Tripura is a small State with big problems. With an area of hardly 10,477 sq kms, it nevertheless has a long international frontier of 839 kms with Bangladesh and a short national boundary of 162 kms with Assam and Mizoram. At any time Mizoram could shake this delicate balance by the shoulder. And any upheaval in Bangladesh sent not only shock waves into Tripura but also waves of Bengali refugees. "It has been like a locust invasion. They have eaten up everything—food, culture and now threaten the very existence of the State and its original inhabitants," said a tribal leader of Kanchanpur.

Indeed, Tripura, which was surplus in food in 1949 when the princely state merged with the Indian Union is deficit today and her beautiful crafts and handloom products have yielded to commercial and imported goods. And this is all due to the phenomenal influx.

Before the Partition, the tribals constituted 70 per cent of the population. In the two decades between 1951 and 1971, its population rose from 6.45 to 15.56 lakhs, reducing the tribals to a minority of 29 per cent, and playing havoc with the identity of its 19 tribes and their way of life. According to the 1982 census, the population was 20.60 lakhs and one would expect the tribals to constitute about 20 per cent of the total population.

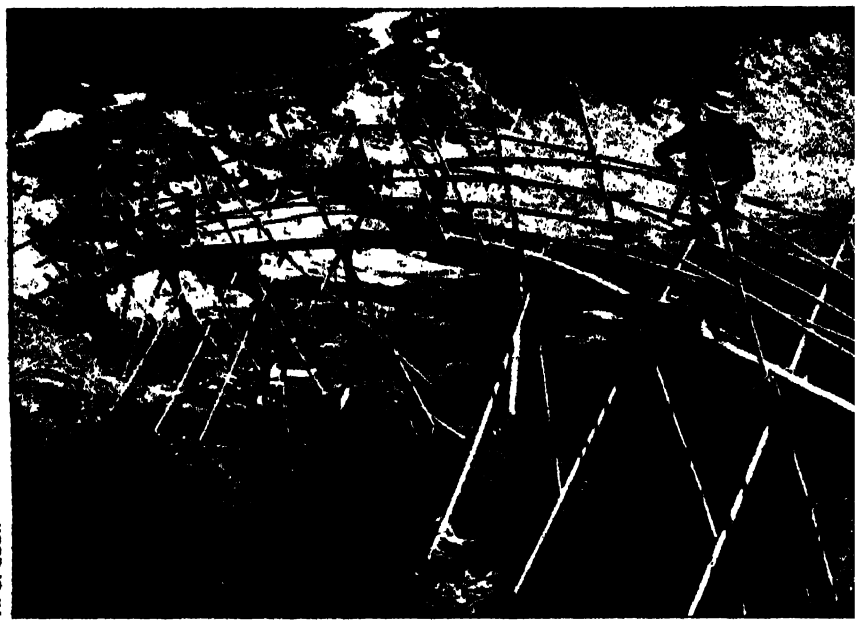
No one left his home and hearth unless driven by extreme poverty or insecurity. A combination of both these factors had determined the times of influx in the State. The major influxes were in 1942 and 1946 when there were communal riots in Dacca and Naokhali. After the States integration with India in 1949 a virtual flood of Bengalis poured into the State in search of fields and pastures new.

In 1971, one of the factors that had provoked the war with Pakistan was the atrocities by Pakistani forces and consequent influx of refugees into India. The refugees, then given shelter in Tripura, were more than the total population of the State some of whom stayed for ten months, while many stayed on even after the liberation of Bangladesh. A large number did return to "Sonar Bangla" with fond hopes and dreams, but once back home, they found that the liberation meant nothing to them.

India, Land Of Hope

Cheated by the promised land, they came back. They had seen the route to India already and some had even forged links with corrupt forest and revenue officials. However, the Bengali brothers were there to help. So, like others who had been sent back to Bangladesh after earlier waves, they kept on sneaking into India and do so even today.

The influx was not limited to Bengalis. Two years ago the Bangladesh army made an organised bid to weaken the Shanti Bahini, consisting mainly of Chakmas, by replacing these tribals in the Chittagong hills with Bengali plainsmen through a queer resettlement plan. As their houses were looted and burnt, the tribals crossed a flooded Feni to enter India. There were people with broken limbs and children with stomachs punctured.



H. S. Sethi

CROSSING THE TROUBLED WATERS. How long can the CRPF maintain its uneasy vigil? The political problems of Tripura, exacerbated by ethnic and economic chasms, demand political, not military, solutions.

It was well nigh impossible to seal the border with Bangladesh completely. After all, the BSF had only one post after nine kilometers of boundry line and the border, though marked by pillars, had houses which had rooms on one side and the compound on the other side of the frontier. Even so, according to Chief Minister Nripen Chakraborty, they were able to push back some 3,000 infiltrators every month.

But all Bengali settlers were not sneakers. Some of them had in fact been invited by the Maharaja of Tripura long before the territory merged with India. The Maharaja then enjoyed *zamindari* rights over the part of East Bengal called "Chakma Rosanabad". A large number of the State's Bengali settlers came from this region and had been paying land revenue.

"They now tell us to go back. No, never. I will die but will not get uprooted again," says a young Bengali receiving treatment for injuries sustained in an attack by tribals.

Thus the stakes in Tripura today are too high. It is a battle for survival.

Increasing Militancy

And tribals as well as Bengalis know that it is the fittest who will survive. Further, many have not forgotten Mao's dictum that power flows from the barrel of a gun. Hence, in Tripura one comes across the peculiar phenomenon of three major militant organisations—one of Bengalis and the other two of tribals facing each other as well as the government of the day.

On the one hand was the Proutist-backed "Amra Bengali" comprising of mostly traders and owners of land that once belonged to the tribals. It was a force to reckon with in the non-tribal areas. On the other hand were the tribals of the State, named after its principal tribe "Tripuri", engaged in the "Tripura Bachao" movement. ⟶

H. S. Sethi

A "MINORITY" IN THEIR OWN STATE According to Chief Minister Nripen Chakraborty, over 80 per cent of the population lives in poverty while over 70,000 youth are on the musters of the employment exchange

---

The two tribal militant organisations—the Tripura National Volunteers (TNV) and the Army of Tripura People's Liberation (ATPLO)—were far more violent The ATPLO led by Binada Jamatia, was more powerful and had announced the formation of a "People's Government of Tripura". It had imposed taxes at the rate of Rs 5 per year on each family and Rs 5 per month on each government employee and a revenue of Rs 35 for each kanal of land For not paying the tax, businessmen Sovaram Reang was shot dead by extremists on October 3, 1982, at Kathalchera village soon after a CRPF post was withdrawn from the area

The TNV, led by Chuni Kolo, is smaller but no less dangerous. It was this group that had shot dead the sentry at the police station of Manu on the Agartala-Silchar highway on September 3, last year and had escaped with a booty of 17 303 rifles and other weapons. As a sequel to this, posts in North Tripura were withdrawn and some reinforced with the CRPF.

They also ambushed an escort vehicle on this highway on December 22, last, killed a sub inspector of Tripura Police, three CRPF men and the civilian driver and took away a machine gun, two self-loading rifles and grenades. The TNV thus could boast now of a sizeable arsenal

It is difficult to distinguish a friend from a foe in the area cut for hostile activity and inhabited by people sharply aligned one way or the other That explains how the ATPLO and TNV, whose combined strength reportedly does not exceed 300, could pose a problem for the security forces who otherwise were doing well.

Perhaps June 5, 1980, will go down in Tripura's history as its blackest day. The tribal extremists had on this day burnt half a dozen villages inhabited by Hindus of East Pakistan who had taken refuge along the Lembuchara Agartala road 20 years ago and wiped out a bulk of the population. Unofficial estimates put the casualty figure at 500.

The Chief Minister had however stated that the killings were in fact started by Amra Bengali and had blamed the press for not reporting both sides of the story. He told a meeting of MPs in New Delhi in August 1980 that upto 1,400 people had died. Conditions then were such that the State had to request the Centre for additional CRPF hands to set up "fixed pickets" to enable the scared farmers to do the harvesting.

The representative organisation of the tribals was the Tripura Upajati Juba Samity (TUJS) that demanded deporting all those who entered the State after October 15, 1949. In plain language, a 20 per cent minority insisted on turning out the remaining 80 per cent population.

The TUJS was set up in 1967, among others, by Bejoy Kumar Hrankal the brain behind the tribal jingoism against Bengali domination. In 1978, he created the TNV by hand-picking some 40 members from the TUJS. Hrankal helped TNV forge links with the MNF and created a new situation with sinister implications for Tripura.

Even otherwise, in the pulls and pressures of communities and political parties, the law and order situation had considerably deteriorated. Armed gangs of 15 to 30 persons went about looting and committing dacoities. The warring communities burnt each others' houses and shops. The CRPF alone claimed to have extinguished over 50 such fires last year.

Passengers on buses could not be sure of reaching their destinations. Fifty two passengers of the Kailashanr-Agartala bus were looted midway at Longtrai in July 4, 1982. Some were attacked with choppers, some with bullets. Two days earlier, another bus from Amarpur to Agartala had received the same treatment.

Violence On The Increase

Political murders were not uncommon. The Pradhan of Jamirchera Gaon Sabha, Gandhi Kumar Tripura (CPM) was allegedly kidnapped and murdered by the TNV in April 1982. CPM workers were too scared and the body was brought with the CRP's aid. The Chief Minister had stated that 20 CPM workers (including Legislator Gautam Dutta) had been killed by his political opponents. Similarly the TUJS blamed the CPM of murdering its workers. In a memorandum to the Prime Minister, it stated that it was not involved in violence and was "only struggling for the survival of tribals in their own state".

All such murders and violent incidents in Tripura were usually followed by *bandhs* and processions, necessitating all the bandobast. Tripura Police, though 6,000-strong was thus hardly enough to meet the requirements.

Indeed even the Chief Minister had been asking for more CRPF units from time to time. As a results, there were four CRP battalions to supplement the two Tripura Armed Police battalions in the State. In fact, the CRPF, with its 52 posts spread in the interior, had been a stabilising factor in the strife torn state.

The scare in Tripura on the eve of the Assembly poll this January had to be seen to be believed. And it was not for nothing. In December there were as many as six ghastly ambushes on the Agartala-Assam highway, the lifeline of Tripura, killing a dozen persons. Education Minister Dasharath Deb was lucky to survive two of these attacks but his two security guards were killed. Obviously the purpose was to stall the poll.

The situation was thus explosive. One had to, in this context, give credit to the Prime Minister for resisting pleas of the Congress (I) and others to impose President's rule before the elections. However, with the induction of six more battalions of the CRPF and one of the BSF, the inhabitants felt secure and elections passed off rather tamely.

A special feature of the elections was the Congress (I)-TUJS link-up. While some like Chitta Basu (MP) attacked the move as opportunistic and one that gave respectability to an organisation with secessionist tendencies, the TUJS firmly denied the allegation and the Prime Minister defended it as an arrangement which was meant to keep the extremists under check.

There was no doubt that the TUJS had expelled Hrankal and had basic differences with him. Whereas most TUJS leaders were Hindus, Hrankal was a Christian. The Hindu leaders of the TUJS alleged that the church was forcing people to adopt Christianity and was helping Christian tribals only. They hated the church's attempts to teach English and introduce Roman script for Kakborak, the tribal language. Even the Home Ministry at one stage drew the State's attention to a "vigrous proselytization" in its north-eastern region. The Chief Minister had, in fact, reportedly said that he had evidence that missionaries got money from as far away as Texas to incite trouble.

But Hrankal who was close to the Mizo Christians, enacted a drama to hoodwink the State and escape to MNF headquarters in Chittagong hills. For a time it appeared as if he and his wife had been kidnapped by extremists from his home on August 15, 1982 when the police were busy with bandobast. He thus celebrated his independence when he was supposed to be under house/arrest—on bail, facing four cases for alleged murder, dacoity, activities to overthrow the government, etc. Hrankal right now was posing a danger, for already he had written a letter to TNV and ATPLO to unite.

Alarmed by these developments, the Centre had placed Jampui Hills on the Mizoram-Tripura border under the Armed Forces Special Powers Act. The Chief Minister was unhappy; he probably thought that that would further erode the Marxist base in the tribal areas.

There was a time when Nripen Chakraborty was the undisputed leader of the tribals, though ethnically he was not one of them. In fact after his shifting to the state from Kakadwip in West Bengal some 30 years ago, he had led the tribals against the maharaja. But that was an old story. For according to the Dinesh Singh panel and even according to State documents, the tribes had generally remained outside the development process.

The Chief Minister himself had in a published article admitted that "No less than 83 per cent of state population now live below poverty line and no less than 70,000 youth are on the live register of employment exchanges, waiting for jobs". But, added Mr Chakraborty, "what can the state do so long the Central Government remains in the hands of bourgeois landlord parties. Tripura could hardly mobilise 10 per cent of the resources it needs."

This did not mean that the State had made no progress. "The biggest achievement of the Left Front," according to the Chief Minister, "is in the removal of illiteracy, in making education free at all levels and giving mid-day meals to 1.75 lakh children".

The Marxist government had distributed considerable land to the landless by releasing it from the reserve forests, had restored democracy at village level and had formed cooperatives to eliminate the traditional exploiters like moneylenders and contractors.

"From the days of the armed struggle to the days of parliamentary struggles, the people of Tripura—both tribals and non-tribals had drawn their lessons through blood and tears and rallied around the red flag and the Left Front," says the Chief Minister.

Yes they have done so once again—through blood and tears. But how long, the man in the street asks, must he go on learning lessons. ■

In The States

Dada's Challenging Task

by Govind Talwalkar

BOMBAY: Mr Vasantrao Patil, the new Chief Minister of Maharashtra, is beholden to Mrs Indira Gandhi as she is his leader. But he should also be thankful to the opposition which dethroned his party in Andhra and Karnataka.

The rout in the South was a warning to Mrs Gandhi to desist from installing bullies or simpletons as Chief Ministers. The policy of having lightweights having no political or caste base as Chief Ministers has misfired. This would have continued but for the resounding defeat in the States adjoining Maharashtra. So Vasantrao's road to Bombay has been paved through Hyderabad and Bangalore and that, too, by the opposition!

Vasantrao Patil is not a sophisticated or articulate politician. He is earthy. He participated in the freedom movement, built a cooperative empire and he has experienced vicissitudes of political life for four decades. After tasting power for a while he had to wander in wilderness. So one expects him to have done some introspection. Although he has a rural background, the captains of industry vouchsafe for his grasp of industrial problems.

The Chief Minister inherits a bad legacy handed over to him by Antulay, who with his brashness and penchant for unscrupulous as well as questionable means, has vitiated the political atmosphere in the State. Babasaheb Bhosale's regime was lack-lustre. One feels sorry for him since he did not ask for the post he was given. Also, he did not receive adequate support from the High Command.

Between the two Chief Ministers the Congress (I) in the State was reduced to a shambles and became on object of ridicule. Despite its overwhelming majority it could neither govern nor provide a "Government that worked". Antulay corrupted the administration, under Bhosale it lost direction and sense of purpose. Bhosale did not interfere but he could not spell out policy.

Vasantrao Patil, therefore, has to regain the lost ground which is not insignificant. If the Assembly is to run its full term (elections will be held in 1985), the Chief Minister has only one and a half years to show results. For all his undoubted organisational skills, he faces a herculean task. The Party, as it is constituted today, is completely enervated. It is packed with carpetbaggers and soldiers of fortune. If it is not disciplined from above (or if not *allowed* to be disciplined) all of Dada's organisational acumen will come to naught.

It can easily be surmised that Mrs Gandhi accepted, but reluctantly, Vasantdada Patil's candidature. That, too, only after the debacle in the South was she compelled to change her attitude. Mr Patil will have to put up with this constraint. Mrs Gandhi has probably thought it fit to make the best of a bad bargain and to stem the onslaught of the opposition which is headed by Mr Sharad Pawar. Behind Vasantrao's choice lurks the shadow Pawar's threat.

That Sharad Pawar is "threatening the ruling party" may sound incredible. But this *is* true for a number of reasons: Pawar stood apart and did not join the Indira Congress. Nor did he humiliate himself as Y.B. Chavan and Vasantrao Patil did. This is fetching him political dividends. Recently in student union elections held at 4 universities, the candidates backing Pawar won by handsome margins. These youngsters will undoubtedly be drafted as volunteers at the time of elections. Pawar has fanned out in all the districts of the State. And the response to him has to be seen to be believed. He has a rapport with the youth, middle-classes and farmers. Pawar will not hesitate to make electoral adjustments with the Janata as well as the BJP. Age and health, both are in his favour (in contrast to Y.B. Chavan and Vasantrao Patil). He may not be as charismatic as NTR, nevertheless his challenge is formidable.

Antulay will cause no serious problems but he will prove to be a nuisance. On the governmental level Vasantrao Patil will have to face the challenging task of suing for industrial peace while ensuring industrial progress. The spectre of draught in some parts of the State will have to be exorcised. Although Vasantrao Patil may be sympathetic towards the textile workers, one does not expect him to intervene in the strike which is fizzling out. Besides, he will not oblige Dr Datta Samant, who, first in league with Rajni Patel, and later with Antulay, tried to dislodge him from the Rashtriya Mill Mazdoor Sangh.

The Scarcity conditions and problem of drought will worsen with advancing summer The Government will have to be vigilant about this.

The Chief Minister has little time before he goes to the hustings and it will be a tall order to ask him to produce fundamental policy changes. The industrial sector in Maharashtra has been neglected for many years now. Political leaders have neither the aptitude nor the knowledge of industrial problems There is very little promotional activity. Gujarat, on the other hand, although politically unstable has ceaselessly promoted industry. Thus, some of the units are shifting to that State. Indeed, there is a long queue to get there. The Maharashtra Government is satisfied with the wealth of Bombay and does not recognise that minus Bombay, the State is on a par with any backward state in the country. Will the Chief Minister change all this?

As elsewhere in the country, corruption is rampant in Maharashtra. Indeed, Antulay opened its floodgates. If in anticipation of the elections Vasantrao Patil starts bestowing no objection certificates on the builders, or if he allows the distilleries and sugar cooperatives to amass black money, his party will find it hard to face the electorate even with its financial muscle.

Change is crackling in the air. And the results in Andhra and Karnataka have served as a catalyst for it. The ruling party *will* have to radically change its attitude and behaviour in order to adjust itself to this new milieu. He who bets that this can "easily" be done is indeed a bold man!

Vasantrao Patil has been compelled to accept Mr Ramrao Adik as Deputy Chief Minister. Creation of this post signifies that the Chief Minister is not politically strong and has not been backed by the high command whole-heartedly. So the seeds of discord and strife are already sown at the very start of the new administration. That Adik who had never won a popular vote in any election should be appointed as a Deputy Chief Minister does not speak of his political clout but that even to this day the criterion of loyalty holds good.

As to the ministry there are as good as eight members who were loyal to or just in the good books of Antulay. It may be that the High Command for one reason or another does not want to rub Antulay too hard or perhaps it might have thought that elevation to the Cabinet would impel his favourites to desert him. Vasantrao Patil has said that Antulay was a paper tiger. It is to be seen whether this is so or he remains a man-eater.

The newly installed ministry does not start on the sure and firm ground. It seems to be participaing in a three-legged race. ■

INHERITING A BAD LEGACY.Vasantdada Patil has his work cut out for the next one-and-a-half years. Incidentally, he has swapped his Lok Sabha seat with his wife's Assembly seat.

Antulay: Down And Defiant

by Vithal C. Nadkarni

IF the size of the crowd outside his house is any measure of a politician's clout, Mr Antulay should be a worried man. At 9 am on a sunny day, there is just one man on the former Chief Minister's doorstep. Wrapped in a *chaddar*, he is lying on a mattress—fast asleep! At your approach he bats open a bleary eye and turns over with a huge yawn.

The devotees that throng outside the shrines of the reigning political deities are obviously busy elsewhere—they are showering marigolds and shouting *zindabad* at the ministerial bungalow on Foreshore Road which houses Shalinitai Patil and her husband, Vasantdada Patil, the newly installed Chief Minister of Maharashtra.

(A day after his nomination, "Dada" and "Tai" had 8,000 visitors. They served 2,000 cups of tea and 500 meals for outstation guests!)

Inside Mr Antulay's Marine Drive flat three white metal chariots are on display. They show Sri Krishna preaching the Gita to Arjuna and evoke the words used in Babasaheb Bhosale's resignation. The burly Maratha CM, who barely lasted an year in office, said "he had worked in the tradition of a *karma yogi* described in the Gita and he was stepping down in the 'same spirit'."

Political pundits are scathing in their assessment of the *yoga* and the *karma* parts of Mr Bhosale's tenure. But they also marvel at the nonchalance of Barrister Bhosale as he sat through the stormy Congress (I) Legislature Party meeting, a transistor glued to his ear, engrossed in the commentary of the Indo-Pak test match going on at Karachi! He was apparently more keen on the number of sixers and lbws than the tally of hands and heads claimed by the rival factions bitterly fighting for the Chief Minister's *gaddi*!

At this moment, Mr Antulay makes an entry. He wears a disturbed look. He has had a late night following a press conference at which he denounced the election of the leader of the Maharashtra Congress (I) Legislature Party as "a fraud inflicted upon the Congressmen and the people in the State".

To add to his worries some of Mr Antulay's closest supporters have begun publicly to distance themselves from him. (Some have warned him "not to take all his supporters for granted".)

Does he feel betrayed? "So far as the MLAs are concerned, in all conscience I cannot say so. Whatever the AICC observers may say, the fact remains that the overwhelming majority of the MLAs and rank and file workers are with me. They were *not* for Antulay the CM but they were and have been with Antulay the person!" he asserts. At the same time he also admits that "some of the leaders *have indeed* ditched me". Does that spike his plans? "As I said earlier (at the press conference), the true state of the nation, the *factual* position, is not intimated to Mrs Gandhi correctly. I'll make my own humble effort in that direction, I'll go, meet and talk to all the groups and Congressmen. I shall visit each capital with *advance notice*. If need be, I will hold public meetings, to gauge and assess the true feelings. I am aware my actions have so far been misrepresented but that should not deter me from taking an action which is just and proper and in the interest of the party."

Cynics scoff at Mr Antulay's version of *"The Pilgrim's Progress"*. A wag likens it to the story of the Cat's Pilgrimage.

Stories of a "Sharad Pawar-Antulay axis" against Vasantdada's rule in Maharashtra have already begun to circulate. However, knowledgeable sources dismiss them as being "planted". According to them Mr Antulay will be the proverbial albatross around the neck of Sharad Pawar who has made a reputation and gathered a sizable following precisely by swimming *against* the tide of political opportunism.

Mr Antulay himself bristles at the suggestion. "At the Press Conference I said: 'Patience thy name is Antulay', I would add that 'Patience *and loyalty* thy name is Antulay'."

Does this not contradict his own actions? Actually at his much-awaited press conference, he dropped no bombshells nor did he *really* "burn his boats"! Most of his diatribes were directed against the two AICC observers, Sports Minister Buta Singh and Petroleum Minister Shiv Shankar.

But by castigating the High command, was he not attacking Mrs Gandhi? By branding them as "authoritarians adopting totalitarian methods" was he not criticising the Prime Minister? Mr Antulay is noncommittal. "I was objecting to the manner in which the observers treated me."

But why did he not withdraw "his hat from the ring" when he was so advised at the CLP meeting? According to Mr Antulay, the "advice came too late". By then he had already announced his candidature to a news agency (due to "affectionate pressure" of his supporters). Earlier, when he met the Prime Minister, he claims to have been told that "personally she had no objections to his candidature but some of her colleagues did. She would talk to them".

"There was no question of Madam's green signal," says Mr Antulay, "since she had publicly said that she would support no one and the choice would not be imposed from above. So if anything, I awaited her disapproval, which never came! Thus my followers forced me to announce my claim to the CMship. I owed it to them..."

What about the stories in the press that Kamlapati Tripathi was against Mr Antulay's claim because of the court verdicts? "I don't go by press reports! If I did, I would have gone to jail long ago! I waited for *official* intimation. And if the observers had shown a modicum of courtesy and at least *talked* to the so-called suspended MLAs (who he insists are not legally debarred), the whole fiasco could have been averted. But the observers who had a longstanding animus against me came prepared to mussle and humiliate me. They did not even ask me to the dais as they had done earlier when Giani Zail Singh was canvassing support in Bombay. I was told I am an ordinary MLA. But the treatment I got was that given to a person less than an MLA (who has *some* rights!)."

"NUISANCE VALUE ONLY". Such is the opinion of quite a few politicians in the ruling party about Mr Antulay. The latter, however, refuses to see the writing on the wall

The new Chief Minister is unfazed by Mr Antulay's fulminations. After his swearing-in ceremony, Vasantdada referred to Mr Antulay as a "paper tiger" (without actually naming him). He has also refrained from calling on the former CM. In the murky world of opportunistic politics no tears are being shed at changes in Mr Antulay's fortunes. Says a senior Congress (I) leader: "If Saheb (Yashwantrao Chavan) could be broken, what of Antulay?"

Perhaps he is ignoring the changed political climate in the country. The loss of the Southern citadels has certainly put Mrs Gandhi on the defensive. Moreover, would Mr Antulay have defied the directives of the High Command had Mrs Gandhi again got a massive mandate in the South?

Most observers credit Mr Antulay with "nuisance value only". His tours round the country "to propagate my programme for uplift of the poor" are bound to keep the tabloids busy. But can he achieve more than that? Only time will tell...

B. SHANKAR adds: Antulay returned from Delhi on January 30 and hinted that evening that he may be in the running. Subtle hints had been dropped to the State Legislators that Vasantrao Patil, who had recently quit as one of the General Secretaries of the AICC, had received the approval from the party leadership and that Antulay had to be kept out at any cost. The other contenders for the post, Ramrao Adik, Pratibha Patil, Y.J. Mohite and the reluctant S.B. Chavan, were considered to be "lightweights" about whom Dada had no fears.

Antulay announced his candidature at 11 am on that very day. He went from his Marine Drive residence to the MLAs hostel in Bombay to camp in room 320 which was booked by the dissident, Bhaurao Patil. A handful of his supporters gave him a noisy reception there. Apparently he made up his mind then and there. Thus, by the time the Central Observers Buta Singh and Shiv Shankar landed in Bombay at noon, the battle was on.

That the observers, who were representing the High Command, were ill-disposed towards Antulay was apparent to all, but he did not withdraw from the race. The voting was held and late at night, the observers announced that Vasantdada Patil had polled the highest number of votes. It is believed that Pratibha Patil stood second (although Antulay maintains that he got the highest).

With characteristic bravado, the next day Antulay held a press conference and denounced the elections. He demanded a repoll and said he would win it hands-down if a secret ballot were held. He also sent a telegram to the AICC (I) giving his uninhibited views on the election.

The text of the confidential telegram which this writer got to see, warned that the election would demoralise the party in the State. And the debacles of Andhra Pradesh and Karnataka would be repeated in the 1985 elections. For Mrs Gandhi he had the usual platitudes but said that the observers were acting in her name and he was sure that she would never have sanctioned their behaviour and conduct.

Battle Of The Ballot

GAUHATI: The Brahmaputra Valley is exploding with unprecedented anti-election violence. Till the time of writing, more than 19 persons have been killed, 12 of them by police firings. Even so, the poll campaign is raging with militant fervour in anticipation of voting on February 14, 17 and 20.

Within the city of Gauhati at each road junction and educational institution, armed CRPF are stationed, equipped with wireless sets. Yet every day there are fresh cases of bomb explosions ever since the ghastly murder of Mr E.S. Parthasarathi, Commissioner of Upper Assam. The armed forces and the administrative machinery have tightened the security measures so that Assam now looks like a State under seige.

Despite the ubiquitous presence of armed men in khaki, anti-election agitators are able to burn wooden bridges and disrupt surface communications with administrative centres or kidnap and assault of members in the pro-election camp. Though the party candidates admit that the raging violence has vitiated the electoral battle, they argue that only restoration of democratic authority can settle the basic issue confronting the people.

With equal consistency the agitators contend that elections without a settlement of foreigners issue would be a farce and are trying to drive home the point by launching the 18-day "final phase" of their campaign to thwart the poll. Significantly, they are also planning to form a no-man's zone extending over a radius of 50 yards around each poll ing station.

The six-party Left Democratic Alliance in the poll fray says that "it will be a wholly Government-managed election but still we are participating to end the President's Rule and restore the democratic process in the State".

It is plain that the Opposition parties in Assam are divided and their politics revolves round personalities rather than principles or policy. The Congress (I) has thus an edge over the Opposition candidates. Official favours apart, the party has already four Assembly seats in its bag. "No doubt elections will be held on schedule—only the voter turnout will be poor in some pockets in the Brahmaputra Valley," says Harendra Nath Talukdar,Assam PCC (I) Chief Adds Sarat Sinha, a former Chief Minister and leader of the Alliance: "What concerns us most is that Mrs Indira Gandhi had never taken any keen interest in finding out a solution to the three-year-old foreigners issue in the State; otherwise today we could have moved freely to ascertain the wisdom, the will and the mandate of the people of Assam."

SETTLE OUR DEMANDS! The opposition parties in Assam are divided and their politics revolves round personalities rather than principles or policy.

Although a few election posters have appeared in the Brahmaputra Valley, no significant open election meetings are being held. The party candidates and their workers have complained to me of the abominable behaviour of agitators towards them.

Incidentally, the BJP, the Janata and the two Lok Dals, in persuance of their decision to boycott the poll, are preparing the ground for a showdown with their leaders coming to Assam to make speeches.

The men in uniform have the unenviable task of maintaining the peace in an atmosphere surcharged with violence and yet ensuring that they do not unwittingly further fan the flames of discontent against the Centre.

The air is so rife with rumours that everyone wonders whether elections will be held at all

Rafique Z. Hazarika

Communalism:
The Widening Gulf

HYDERABAD: That the gulf between Hindus and Muslims is growing wider each day was sadly proved by the communal riots that rocked two of the southern States, even before the new year had a chance to get off to a good start. While the Kerala riots (*Weekly*, January 16) were sparked off by the inept handling of the Nabi day processions in Allepey, those in Hyderabad, suspected to have been preplanned, were triggered off by certain communal elements taking advatage of the tension prevailing in the State during the Assembly elections on January 5. But while the Kerala riots claimed only one life,those in Hyderabad claimed 15.

The riots proved to be a testing time for the newly installed NTR Government. Though they have been ascribed to a clash between the BJP and the Majlis (Muslims) in the Chandrayangutta constituency of Hyderabad, the events that followed confirm the prejudices shared by the Hindus and Muslims and the suspicions widely prevalent within the two communities. Why, otherwise, should a Muslim Telugu poet—a splendid symbol of communal amity—Ghulam Yaseen, be brutally murdered along with his wife and son?

Several Muslims this correspondent spoke to strongly felt that the riots were deliberately engineered by the Hindus in order to scare away the minority community. The Hindus, however, were equally strong in their condemnation of the Muslims who, they believe, engineered the riots. Strangely enough all the Muslims agreed that the riots were actually planned by certain Marwadi and non-Telugu businessmen settled in Hyderabad. (Some of them even charged that the very same non Telugu businessmen of Hyderabad had secretly financed the Telangana agitation of 1969, in order to get rid of the competition from Andhra businessmen

The Government also seems to have unwittingly contributed to the alienation of Muslims, who allege that they have been given a raw deal in the fields of education, employment, bank loans etc. To corroborate their point of view, they stated that the Muslims had sought the State Government's permission to start a College of Technical Education in Hyderabad. They sought no financial assistance and even offered to serve a reasonable number of seats for non-Muslims. But, the Government insisted on reserving 70 per cent of the seats for non-Muslims a condition that was totally unacceptable to the promoters

CHARGED WITH UNCERTAINTY Communal riots are generally the result of a weak Government at the Centre and the States. The recent riots in Hyderabad proved a testing time for the NTR Government

The proposed institute has been practically written off and several Muslims have lost the benefit they could have derived had such an institution existed

The Indian press, according to the Muslims, has also played a part in widening the gulf between the two communities. There were allegations that the English dailies in the city refused to publish their letters to the editor and deprived them a means to air their grievances, giving the Hindus a distinct advantage over them. While the Urdu papers published these grievances, it was not enough to communicate the problems to non Muslims as Urdu papers are read only by the Muslims.

The dominant feeling that emerges from discussions with both educated and uneducated Muslims is their sense of insecurity. It is this sense of insecurity that is exploited by the communal elements, especially during the periods of political instability. The recent communal riots in Hyderabad took place when the political atmosphere in the State was charged with uncertainty.

In the final analysis, the lack of strong political leadership, a not-so-responsible press and an unwillingness to understand the aspirations, hopes, problems and feelings of other sections of the society, appear to be the chief villains behind the recurring communal riots

WELL MATCHED Generally, a clear victory is extremely difficult for either contestant Only when one of the adversaries begins to show signs of exhaustion do the umpires call off the game

Kayyankali: The Art Of Fighting

The practice of *kayyankali* has been reduced to annual sporting events at Onam-time in Kerala. Rarely is this art ever used for combat, says the author.

by R.C. Vaidyanathan

KANDU braced himself, tensed, in anticipation of the attack His sparring partner advanced towards him slowly and in a classic martial art style, lunged for his face with his fist Kandu deflected the blow in a swift movement. Mayan realized his opponent was equally adept in the art He aimed a blow on Kandu's chest Kandu sidestepped neatly, then drove his extended fist into Mayan's jaw A second later he was gasping for breath They fought smoothly, circling each other, their timing and rhythm in perfect unison Neither was the better for a victory. Both were tough, greatly skilled Only when the umpires called for a halt did they pause and separate. This was martial art in its purest form—*kayyankali*—whose object is merely to bring the foe to a point where he is forced to admit defeat. Its strength lies in the deft use of fists, quick reflex actions and courage—talents that are not easy and never were.

In some ways *kayyankali* resembles karate, the most popular martial art today One might well believe that both *kayyankali* and karate share a common origin But while karate survived and thrived, *kayyankali* is almost dying out, in its present form, merely a sport, rarely used for combat.

Even before the advent of Christianity into the continent, the pervasive Buddhist influence in South East Asia had carried Indian martial art forms to China—the weaponless combat technique of kung-fu, widely practised by the Chinese, is very similar to those employed by *kayyankali*. Over the years the art acquired a new vitality and there were several variations of the same theme. It was the Japanese who, after their invasion of Okinava, soon devised a method of turning the ancient art to military advantage. And thus it has survived over the centuries in the form of karate. In fact, the techniques described by the Buddhist scriptures as well as the *Agni Purana* are startlingly similar to those employed by karate—proof enough of the fact that *kayyankali* predates karate by some 40 centuries.

Legend has it that an Indian prince, closely observing every movement of wild animals and birds, evolved the art that found wide acceptance as another military weapon It prospered under the Chera rulers of Kerala who made endless use of it in their wars against the Chola kings *Kayyankali* was as essential to them as a gun to a cowboy.

However, as the Chola and Chera dynasties came to an end, royal patronage of the art disappeared and it began to die out. It barely survived by way of staged contests to test the skill of the learners. It became an annual feature of sporting events, clearly encouraged by *Naduvazhis* and local chieftains In fact, its commonest nickname—*Onathallu* means, literally, a fight conducted as part of the great harvest festival of Onam It served to whet the appetite of peasants and rustics for some form of activity and drew sport lovers from all around to a performance of the art

Loss Of Interest

Soon, however, *kayyankali* slid by stages into a rare event, performed sometimes on Onam day or not at all Its decline was hastened by a general loss of interest in it by the younger set, until now when it is practised only by a few surviving veterans They can be counted off on the tips of one finger—Kavasseri Gopalan Nair and Kunju, Ayakkad Lakshmanan, Manjapra Veerandi, Kannambra Kandu, Tharur Kandu and Varikunnu Karuppu Naikkan. →

EAGER ANTICIPATION. Contestants group into lines on either side of the arena and greet their adversaries (Cherivanakkam) *in the traditional manner.*

However, there is at least one village—Kavasseri—to which this tradition means more than just reminders of an era past It is the birth place of one of the oldest patrons of this art, who fights relentlessly to preserve it Kavasseri Gopalan Nair, today at 82, is considered to be the doyen of Kayyankali art. He began his career in fighting at the age of 25 under the guidance of Kavesseri Thandan Kunjukutti Aasan when he defeated the reigning champion (Chelakkara) of that time who had won 31 contests in a row.

Nowadays *kayyankali* contests usually begin in the afternoon usually at 3 o'clock on Onam day A team might consist of a dozen to 20 men who change from their usual *dhoti* to the traditional fighter's vestment called *kachcha*

The two groups position themselves in a line facing each other with 20 metres between them This formation is known as *cheri* Their position is determined by the direction from which they come This kind of formation is known as *cheruparyalil* The space between the *cheris* known as *kalam* is the spot reserved for the men to engage in the fight In the two *cheris* stand the men with skill and daring Behind them are the supporters, spectators and *thallukars* who do not fight that day The *chairvukars* (umpires) are chosen by popular consent from among the members of the *cheris*, so the *thallukars* sit on the ground with their hands on their knees The umpires are also experts in *kayyankali*

As the contest begins, two members of each team step forward and observe the *cherivanakkam*--a mode of greeting adversaries in the manner of ancient days. The observance stresses the unity of the *kayyankali* practitioners. Next, there is a parade of strength called *aarthuvili*, another tradition, its purpose being to infuriate members of the rival team With arms swinging and taunting insults the contestants run and leap into the air, slapping their thighs, letting out a joyous war cry They hop before the rival team and scamper back to their places. Promptly taking up the challenge, the adversaries imitate and retort with stinging venom- -stepping up the tempo

As the dust settles, the two *chairvukars*, clad in *kachcha*, walk down to the centre of action A young *thallukaran* detaches himself from the main body and enters the arena Bending down, he reverently touches the feet of the umpire of his *cheri* and waits Meanwhile a member of the opposite *cheri* does likewise *Cheri* leaders select each contestant In time, contestants grasp each other's palms and raise their hands high above the head in a gesture of friendship This introduction over, they move apart It is time for the fight to begin

Set Of Rules

A specific set of rules govern the fight—while hitting above the waist is allowed, biting, grappling, and gouging are banned Barefoot, a *thallukaran* in the process of fight, guards himself by tucking one hand close to the chest as a protective shield while the other remains clenched. There is menace in the air, once the fight begins. Both adversaries are equally accomplished There is always danger, either sought or unasked for. Each move of the opponent is met by an equally skilled action by the other, each exchange superbly timed because to slacken means to be hurt. The minutes race by with exhortations, imprecations and endearments flying back and forth from among the crowd. Quick eye movements combined with instant reaction is very essential—the contestants are taught to coordinate these actions from an early age.

No matter how great the effort neither opponent can hurt the other they are well-matched. Their foot work is intricate and they seem to possess a sixth sense that tells them where the next blow will be aimed Not until one of the contestants shows signs of exhaustion, is the duel stopped Each bout is split into several rounds known as *vara* More than four *varas* are not allowed

The sporting spirit is very apparent in the game. When one team wins more than one bout and comes challenging again, the leader of the challenged *cheri*, even if aged, enters the arena to meet the challenge and save his side Tension develops if the match is uneven But the challenger, because of his discipline and respect for the other *aasan* withdraws from the game, letting the elder man retire gracefully This spirit binds all exponents of the art together and makes it possible for the tradition to be passed from one generation to the other

The actual *kayyankali* match is split into two parts, one for youngsters, the *poththallu* (apprentice fight) and the main one for those adept in the art. Though, in theory, anyone who wishes to compete can do so, in practice, only groups belonging to areas like Kavasseri, Attipara, Alathur, Kuttanoor, Manjapra, Thunippadam, Kalleppadam, Pattiparamba and Pazhambalakkode perform the art

Kayyankali fighters are fiercely protective about the methods and technique of their art and details are passed on only by word of mouth, generally from father to son. Certain of its more valuable forms are kept secret The entire early training consists of exercises designed to develop a student's reflexes, make his body tough and build up his endurance and stamina. In the next few stages, the students learn certain stances and positions as also to shape their hands into a fearful tool. *Kayyankali's* power comes from an array of more than seven basic techniques of attack and with an equal number of tactics that provide the defence

The normal duration of a *kayyankali* match is three hours. At the end of it both the winners and the losers are presented with souvenirs by local men of substance and standing One cannot but admire the expertise of the *thallukars*, whether the victors or the vanquished ■

Businessmen's Budget Blues

The weakness in the economy is unmistakably mirrored in the Government finances. At present, the Central Government Budget is of the order of Rs 30,000 crores, which is about 20 per cent of the national income. The Budget estimates for 1982-83 had placed the deficit at Rs 1,365 crores. In the context of the IMF loan, it was believed that a deficit of this order might not destabilise the economy. As things stand now, it seems that the deficit may not be Rs 1,400 crores but nearly twice that figure.

The *Weekly* presents two viewpoints on the Union Budget.

by Vadilal Dagli

UNCERTAINTY has assailed the Indian economy all over again. While economic factors continue to cause worry, non-economic factors have destabilised not only the Indian polity but also the Indian economy. The drive towards non-productive expenditure and dispensable luxuries has become particularly pronounced. This has created distortions in the economy.

On the eve of the Budget for 1983-84, the business community, as usual, is keeping its fingers crossed. But this time the worry is not so much about the taxation burden as about the stop-go credit policy, relatively high interest rates, power shortage and the labour situation (which indeed has become Problem No 1 of Industrial India). The business community hopes that the Government will now abolish interest tax on bank advances, which banks naturally pass on to borrowers—as a result of which the cost of borrowing goes up in near recessionary conditions.

Businessmen also hope that the Union Finance Minister will not impose fresh taxes on what are termed luxury goods, like refrigerators, household appliances, electronics and man-made fibres. At a time when consumer resistance has developed to such an extent that, in many commodities, a buyer's market has emerged, businessmen expect that there may be a selective reduction in excise duties, at least in such items as sugar, textiles and, of course, if politically permissible, refrigerators. In the field of direct taxes, they would hope that the maximum ceiling for personal and corporate taxation should be fixed at 50 per cent.

After a year's boom, the capital market is in a subdued state. If the dividend tax is abolished and long-term investment in shares and debentures is included in the saving schemes which attract tax concessions, a new investment climate may be created at an opportune time when the capital market is expanding its base with the opening of stock exchanges in places like Pune.

The Cash-Flow Position

But businessmen are most worried about the cash-flow position. It is not that credit is not available, it is that it is delayed and the cost of credit, both official and under the counter, has been going up.

Then there is the Credit Authorisation Scheme under which banks are supposed to refer to the Reserve Bank all credit proposals of the order of three crores of rupees or more. While the Reserve Bank rarely vetoes a bank's decision, its involvement causes costly delay. If you have nationalised most of the banks and have issued guidelines for loans, what is the point in referring a credit proposal to the Reserve Bank? As one businessman asked. *In what way is the Reserve Bank official more competent than the chairman of a nationalised bank in processing a loan application?*

If businessmen are in a state of nervous tension, the Finance Minister is not likely to be free from it either. Pre-Budget objective conditions have made his task unenviable. On the agricultural front, the year 1982-83 would be remembered as one of the worst drought years in the recent past. Foodgrain production is likely to record a sharp decline of 11 million tonnes—to 122 million tonnes. As a result, the country has had to resort to foodgrain imports.

Contracts for the import of four million tonnes of wheat, costing nearly Rs 800 crores in foreign exchange, have been signed. The overall agricultural production is likely to fall by more than eight per cent. Marked deceleration in the rate of growth is witnessed on the industrial front. Industrial productior is unlikely to increase by more than four per cent, as against 8.6 per cent last year. Unusual and prolonged labour unrest and indefensible failure in capacity utilisation of power plants (which led to widespread power shortage) contributed to the depressing developments on the business front.

In a number of States—namely, Bihar, Gujarat, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu and West Bengal—power cuts (ranging from 30 per cent to 100 per cent) were effected. While announcements are loftily made that, by the end of this decade, power generation would be almost trebled, the immediate prospects continue to be bleak. No Minister ever announces that the capacity utilisation in a power plant, which is less than 50 per cent, will be raised even by five per cent during the following year. We talk of the banquet tomorrow because we believe that the half-fed will stop grumbling about their present plight.

Price Stability

The only satisfactory development in this otherwise depressing scenario is the price stability. During the year ended January 8, 1983, the Wholesale Price Index for all commodities recorded a nominal rise of 1.8 per cent. This is creditable. However, it is noteworthy that, while the wholesale prices increased by less than two per cent, the All-India Consumer Price Index number for Industrial Workers increased by more than seven per cent. Also, the price stability did not extend to basic necessities like rice, wheat, *urad*, *tur*, vegetables, milk, meat, *vanaspati* and edible oils. The prices of these commodities increased in the range of five to 25 per cent *(see table below)*. So the time has arrived to prepare a price index for five to six items of basic necessities.

Rise In Prices Of Basic Necessities

Commodities showing rise of more than five per cent	Percentage variation in the index number of wholesale prices (Base: 1970-71 = 100) during the year ended January 1, 1983
Urad	17.8
Wheat	14.0
Rice	12.4
Vanaspati	10.8
Arhar (Tur)	10.7
Milk	9.7
Vegetables	9.3
Maize	7.3
Edible oils	6.6
Meat	6.2

Perhaps the most disturbing developments are on the foreign exchange front. Government media proudly present the data on nominal rise in exports without mentioning the fact that it is not this rise in exports but the balance of trade and the overall balance of payments which is critical for the nation's economic well-being. Trade deficit, for the third year in succession, is likely to exceed Rs 5,000 crores. To have a trade deficit of Rs 5,000 crores is to invite tensions in our external relations during the remaining part of the decade.

The decision to opt for the Rs 5,000-crore IMF loan, I thought, was the correct one. But even this massive loan has not been used for productive purposes. We fritter away scarce foreign exchange reserves to finance such monstrosities as the Asiad, import of Colour TV and other non-essential imports. We have spinelessly encouraged dumping by foreigners in our own courtyard.

In the context of a recession in the Western countries, we should not have →

liberalised our imports India's liberal import policy enabled them to export industrial raw materials and engineering goods at throwaway prices which have destabilised four industries built up at a considerable cost Soda ash, steel and polyester fibres are but classic instances where we witnessed a trade war ironically encouraged by our own Government

Rice vs Colour TV

Our foreign exchange reserves are in the neighbourhood of Rs 3,800 crores which is equivalent to three months imports Only two years ago we had reserves which could finance almost six months imports Because of developments beyond our control the foreign exchange content of our Defence expenditure is likely to increase in the near future For the coming financial year a foreign exchange budget with clear cut priorities should be formulated so that we may not face the unacceptable situation in which rice is exported and Colour TV is imported!

The weakness in the economy is unmistakably mirrored in the Government finances At present, the Central Government Budget is of the order of Rs 30,000 crores, which is about 20 per cent of the national income The Budget estimates for 1982 83 had placed the deficit at Rs 1,365 crores In the context of the IMF loan it was believed that a deficit of this order might not destabilise the economy As things stand now it seems that the deficit may not be Rs 1,400 crores but nearly twice this figure

While the Government expenditure is increasing at a faster rate, the Government revenue may show a shortfall During the first six months of 1982-83, the tax collections amounted to Rs 7,262 crores or 40 9 per cent of the Budget estimates of Rs 17,740 crores, as against 44 6 per cent of the actual collection of Rs 15 389 crores during the corresponding period last year The Central Government expenditure would increase by more than Rs 1,700 crores than the budgeted figure due to provision of loans to State Governments to clear their overdrafts There was also an increase in expenditure of about Rs 600 crores because of natural calamities

There cannot be two norms of fiscal discipline one for the Centre and the other for the States When the Central Government merrily goes on resorting to deficit financing, it has no moral right to ask the States not to take overdrafts Although the terms, deficit financing and overdrafts, seem, on the face of it, to be different their meaning is the same

True, prices are stable today But the gap between aggregate demand (as reflected by the growth of money supply) and aggregate supplies (as reflected by the growth of real national income) has been widening Thus there exists a considerable potential for inflation in the coming few months During the year 1982-83, money supply is likely to increase by about 15 per cent, whereas the rise in real national income may not be even one per cent In other words, demand will rise at the rate of 15 per cent while the supply will be almost static It is against this background that the Finance Minister will have to formulate the Budget for 1983-84

The scope for taxation being limited, the Union Finance Minister should announce an across-the-board 10 per cent cut in Government expenditure This should also include Defence and Social Welfare In the inflationary situation, neither Social Welfare nor Defence can be looked after efficiently If there is a cut of Rs 500 crores in the Defence expenditure, the efficiency of the Armed Forces would not be adversely affected, provided the Defence expenditure was managed with the sense of patriotism of the *jawans* who defend our borders

Why Not?

It may also be necessary to convert State Electricity Boards into joint sector Power Corporations where the Government holding will be 51 per cent and private shareholding 49 per cent If power plants owned by the Tatas can achieve capacity utilisation of 90 per cent, there is no reason why public sector power plants should not increase their capacity from 45 per cent to at least 65 per cent This could be attained only if the concept of the joint sector is implemented in the power sector

The Government should consider the indexation of income tax This would help ensure a stable pay-packet not only for white-collar workers but also for the mass of industrial workers whose salary crossed four figures years ago

How do businessmen view the future? When I asked an industrialist about his plan for investments, he replied

This is not the time to make any substantial investment Economic factors against new investments are so powerful that no wise man will extend his commitments Already, the power shortage is with us Then the cost of plant has trebled in the last ten years At most we invest in balancing equipment so that our output increases by 15 to 20 per cent

And this industrialist's views on fiscal incentives available for ploughing back the profit are revealing He said that enough incentives--both in terms of investment allowance and depreciation--amounting to about 30 per cent of the gross profit are available But he asked *Where's the profit?* The rising cost, on the one hand, and near anarchy on the industrial and political fronts, on the other, have made investors not only cautious but shy Businessmen no longer ask whether we have a Government that works Their demand is modest *Please let's have a Government that does not obstruct* ■

Expenditure And Revenue

Some Vital Aspects

The country's Defence expenditure has increased from Rs 1,199 crores in 1970-71 to Rs 5,100 crores at present. Out of each rupee spent by the Government, 17 paise are earmarked for Defence. If the Government further enhances military expenditure, it should be made to give a detailed justification, lest the quest to meet legitimate Defence needs should degenerate into militaristic jingoism—something a poverty-ridden nation can ill afford.

by A Special Correspondent

JUST as you cannot have the cake and eat it, you cannot, experience shows, give a heave to the economy and still come up with a balanced budget The problem of reconciling these competing objectives becomes all the more intractable when an economy is sagging as miserably as ours is at the moment being in desperate need of adrenalin shots The makers of the coming Budget will therefore have to strive hard indeed to combine the financial discipline of the accountant and the imagination of the economist

The purpose of this exercise is not to indulge in prognostications—which not unoften go awry—but to consider some aspects pertaining to expenditure and revenue the two sides of the balance sheet Let us start with expenditure

Corruption has assumed such gargantuan proportions that it is now universally regarded as a major blight on the nation's economic health If all the breast-beating on this score in the highest echelons of power is not just playing to the gallery, why should the coming Budget not be utilised to bring in a much-needed measure State Funding of Elections? This would considerably loosen, if not completely break, the vicious monetary nexus between business, politics and crime that constitutes the bedrock of corruption

Knowledgeable sources (which include S L Shakdhar, the former Chief Election Commissioner) place the amount required for State Funding of Elections at around Rs 100 crores The heavens will not fall if this amount is added to a total budgetary expenditure which is already in the region of Rs 30,000 crores The powers that be have yet another opportunity to demonstrate that they can rise above the common instinct of time serving politicians and act like statesmen

Descending from these lofty heights of politics to the more mundane world of book keeping, the most important expenditure item is obviously the Annual Plan Old Keynes still makes sense Considering that industry has suffered from a certain lack of demand, a reasonable step up in the Annual Plan outlay recommends itself not only to take care of continuous erosion because of inflation, but also to generate income through development expenditure Will the increase over the current year's outlay of Rs 11,000 crores be commensurate with the need?

Tight Resources Position

The Government is beleaguered by a tight resources position because of additional expenditure (mainly on account of the Asian Games), lack of buoyancy in tax collections and the continuing indifferent performance of public enterprises Of the Rs 2,851 crores for which supplementary demands were made in July and October last year, nearly half the amount was attributable to additional expenditure of the Central Government (the rest was for helping the States in respect of their overdrafts)

Moreover, by mid December, less than eight months through the year, Government borrowing from the banking sector had exceeded Rs 5,008 crores and the IMF ceiling for the entire year Worried that it may forfeit its claim to the next loan instalment of SDR $ 600 million due in April, the Government has virtually turned off the expenditure tap, withholding release of even Plan funds

As the financial year closes, speculation is rife as to how much more the deficit would be than the figure of Rs 1,365 crores anticipated in Pranab Mukherjee's last Budget Speech In all likelihood, it will exceed Rs 2,000 crores This is scarcely the scenario against which one could expect a sizeable increase in Plan expenditure The Cassandras, of course, insist that we might be on the threshold of an unproclaimed Plan holiday

Yet another major expenditure item is subsidies—on fertiliser, food, exports and controlled cloth—which have been reduced lately but still total Rs 1,270 crores The green revolution is threatening to peter out Apart from the unhelpfulness of the monsoon in recent years, a fresh reason is the hike in fertiliser prices of 40 per cent in June 1980 and another 20 per cent in July 1981 Nutrient is now priced beyond the reach of many small and marginal farmers and there has been a slowdown in fertiliser consumption Fertiliser prices should be cut—as they were in 1976 and 1977

If the price of nutrient were to be reduced by about Rs 150 per tonne, it would cost the exchequer around Rs 100 crores more by way of fertiliser subsidy The purist, brought up on the notion that a subsidy is synonymous with bad economics, would throw up his arms in horror at the suggestion that the fertiliser subsidy burden should be increased But the need to boost agriculture is compelling if the economy is to be lifted out of the present morass Moreover, there is scope for compensating downward adjustment in other subsidies

For example, the main beneficiaries of the supply of subsidised foodgrains through the public distribution system are the urban people, including the middle class, the well-to-do and the rich Some

tudies show that the system only marginally benefits those who need it most: he floating population of the urban poor nd the poorest of the poor in the interior f the countryside. The articulate sections of the population have thus become abituated to being cossetted by the overnment, which is too politically motivated and, therefore, too timorous to inker with this incongruous policy.

If subsidised foodgrains were to be upplied only to those whose monthly ncome is, say, below Rs 500 a month, it would lessen the demands of what is now n artificially bloated public distribution ystem. This would not only reduce the urden of food subsidy but also obviate he need for foodgrain imports, which are upposed to be for the public distribution ystem and have already cost the exchequer $1,052 million in the last two years.

There is, again, a case for a cost-enefit analysis of the export subsidy. This may not be a popular stance to dopt at a time when export promotion is egarded as a principal tenet of economic olicy. But a detailed note of dissent to the Tandon Committee Report pertinently points out that the schemes of Cash Compensatory Support and Duty Drawback are susceptible to widespread misuse and often fail to yield results that would justify their burden on the exchequer.

The Most Sensitive Item

Defence, perhaps the most sensitive item of Budget expenditure, never gets debated properly, partly because of the popular fallacy that security considerations render Defence beyond the pale of discussion, partly because most of those who sit in Parliament hail from the rural areas and are simply incompetent or not sufficiently interested to discuss a sophisticated subject. Barring the consideration that details of weaponry and other military equipment may not be divulged, the financial implications of Defence expenditure should be subjected to a threadbare discussion, as is done in the House of Commons. The country's Defence expenditure has increased from Rs 1,199 crores in 1970-71 to Rs 5,100 crores at present. Out of each rupee spent by the Government, 17 paise are earmarked for Defence. If the Government further enhances military expenditure, it should be made to give a detailed justification, lest the quest to meet legitimate Defence needs should degenerate into militaristic jingoism; something a poverty-ridden nation can ill afford.

The resources constraint puts a special obligation on the Government to prune its non-development expenditure, which is now almost 10 paise in a rupee. The common man, inured to Governmental extravagance and ostentation, has ceased to expect any austerity under the present political-bureaucratic culture.

Here are examples of the "austerity" supposed to be practised by the Government: Secretaries would be entitled to First Class air travel on their foreign trips, but they would have to make do with single rooms instead of full-fledged hotel suites; "except for one Special Assistant, Private Secretaries and other Personal Staff will not be entitled to accompany Ministers on foreign trips"; the number of free calls has been reduced from 1,500 to 1,000 per quarter; petrol consumption by staff cars is to be reduced by 15 per cent. Long live tokenism!

On the revenue side of the Budget, the illogical pricing structure of petroleum products presents a possibility. While petrol is priced at Rs 6.07 per litre, diesel costs less than half of this Such a big differential—unique in the world—does not make sense According to one estimate, an increase in the price of diesel by Re 1 to Rs 4 per litre would put another Rs 1,500 crores into the Government's coffers, since diesel accounts for about 40 per cent of the total POL consumption. As for the resultant inflationary ripple, it should, hopefully, be absorbed by the economy The entire exercise, after all, is one of difficult choices.

Taxation, the major instrument of revenue raising, is already at a satiation level. A further increase in taxes would only lead to more evasion, more corruption and more litigation. Nor would it lead to any meaningful increase in revenue

Tell-Tale Trend

The trend noticed in the last few years is tell-tale. Despite the massive doses of additional taxation, the percentage of tax revenue to gross domestic product has remained stagnant, being 15 per cent in 1975-76, hovering between 14.6 per cent and 16.3 per cent till 1979-80, and again levelling off to 15 per cent in 1980-81 Further, the inelasticity of yield from excise duties and the corporation tax is evident from the fact that they grew by only 0.86 times and 1.05 times, respectively, of the rate of growth of the national income between 1975-76 and 1980-81.

On the contrary, recessionary tendencies in various sectors of industry add up to a case for some concessions. The persistent demand for reduction in corporation tax, delinking of the depreciation allowance from outdated historical costs and excise rebate on additional production compels attention on grounds of economic reality.

On the side of direct personal taxation, while those in the lower brackets do not perhaps merit a third consecutive dose of relief in income tax, it would be worth while for the Government to examine whether the enormously high rates of income tax in the higher brackets as well as the extortionate levies on wealth, inheritance, gifts and capital gains do not lead to more of institutionalised corruption and less of socialism

The million-dollar question on the revenue side, of course, is whether the Government will even now effect tax reforms and prove that all the reports of committees and commissions it is saddled with are not an unmitigated mockery. The questions that have come up from time to time in this context include simplification of the Income Tax Act, progressive exemption of bona-fide savings from income tax so that it becomes, in effect, a consumption tax, a re-trial for expenditure tax as an adjunct to an income-tax system and replacement, in a graduated manner, of the system of excise duties and sales tax by value added tax

Government revenues depend in no small measure on the performance of public enterprises. Last year, public enterprises yielded a net return on capital of Rs 2,482 crores (or 10 per cent). This year, a further improvement is claimed. Their gross profit between April and September 1982 was Rs 1,330 crores, compared to Rs 915 crores in the corresponding period of 1981 Likewise, the net profit in the two comparable periods showed an increase from Rs 48 crores to Rs 73 crores.

However, the improved financial position is almost entirely because of hikes in administered prices Moreover, if the profits of the ONGC and Oil India are taken out, the public sector is still a doddering loss-maker, particularly its two giant limbs: coal and steel In fact, the Government has been compelling public financial institutions to divert funds to banks so that they could, in turn, bail out the more red-faced units. An amount of Rs 500 crores has reportedly been doled out by banks in recent weeks. These points are unlikely to find mention in the forthcoming Budget Speech.

Three Clear Avenues

Regarding the foreign exchange component of development, the climate for bilateral and multilateral official assistance has been deteriorating, which means that correspondingly greater reliance will have to be placed on commercial borrowing abroad Fortunately, interest rates in the international money market have been falling The Budget is also likely to make an attempt to smoothen the rough edges in the scheme to attract the funds of non-resident Indians The policy on private foreign investment needs to be re-examined with a view to making it less restrictive

Since assistance to development plans of the States figures as a major expenditure item in the Central Budget—Rs 4,000 crores have been earmarked for this in the current year—resource mobilisation by the States acquires relevance. The Sixth Plan clearly draw attention to three avenues:

- One, Improvement in Performance of State Electricity Boards and Increase in Power Tariff
- Two, Improvement in Performance of State Road Corporations and Increase in Bus Fares
- Three, Increase in Irrigation Rates.

If any meaningful effort has been made in this context, nobody has heard of it.

FINANCE MINISTER PRANAB MUKHERJEE

Dawoodi Bohras

Struggle Against Authoritarianism

There is seething discontent among the Dawoodi Bohras due to the authoritarianism of the head priest of the community. However, of the one million strong Bohra community, only 25,000 have dared to openly support the reform movement, says the author. The 4th All World Dawoodi Bohra Conference organised by the reformists is currently being held at Pune.

by Asghar Ali Engineer

IT is unbelievable but true that Dr Khatija from Baroda who was happily married for ten years was divorced by her husband because she refused to curse her brother in the presence of the *Amil* (a local representative of the Bohra high priest) for taking part in their reform movement. Her marriage was shattered and the two children face an uncertain future.

Four professors in a theological seminary, Al-Jamiatus Saifiyah, in Surat were severely beaten and spat upon by their own students at the provocation of the Rector of the seminary (who is a brother of the high priest) because they were reported to have clandestinely grown critical of the ways of the high priest and his powerful establishment. One of these professors, Sheikh Sajjad Husain, was later fatally assaulted by the same students. The remaining three were kept almost under house arrest (through intimidation and terror tactics) for more than two years until they were rescued by some supporters of the reformists.

A large number of women whose husbands had supported the reformist youth organisation (The Bohra Youth Association) in protesting against the questionable ways of the Bohra priesthood were dragged out of their rooms in Goliakot (where a holy shrine of the Bohras is situated, some 70 miles from Udaipur) and publicly molested by hired *goondas* at the instance of the powerful coterie of Bohra priests. These women ran into the nearby jungle to save their lives and honour. Some took shelter in Bohra homes nearby.

An old man supporting the reform movement died of acid burns in Udaipur. His son who was in the orthodox camp in order to earn a livelihood was compelled by the local priest to marry on the day of his father's funeral. He was forced to celebrate as his father was being consigned to *jahannam* (hell) for defying the high priest and supporting those clamouring for reforms.

A mother was separated from her son and even her letters didn't reach him, a brother was unable to attend his sister's wedding, a mother lying on the operation table was not allowed to see her son, another mother had to content herself with watching her daughter's marriage through binoculars from an adjacent house. Scores of such instances can be cited.

THE NATHWANI COMMISSION, comprising retired high court judges, leading lawyers and university teachers, ruled that reformist Bohras were being persecuted by the priestly class. Picture shows the author, Asghar Ali Engineer, addressing a seminar on the commission.

Nathwani Commission

The Nathwani Commission comprising retired high court judges, leading lawyers and university teachers submitted the following report:

"Our enquiry has shown that there is largescale infringement of the civil liberties and human rights of reformist Bohras and those who fail to obey the orders of the Syedna and his *Amils*,at the hands of the priestly class. Even in purely secular matters they are subjected to *Baraat*, resulting in complete social boycott, mental torture and frequent physical assaults. *Misaq* (the oath of unquestioning obedience to the Head Priest) which every Bohra is required to give before he or she attains the age of majority, is used as the main instrument for keeping the entire community under the subjugation of the Syedna and his nominees."

Why this revolt in the community? What are the issues involved? To understand all this, a short historical background of the Bohra community would be in order. The Dawoodi Bohras, about a million strong, are primarily a business community and, besides India, live in Pakistan, Ceylon , Burma, Thailand, the Yemen (a section there is of Arab stock), East Africa and now also in the UK, USA and Canada. They were converted in the 12th century in Gujarat to the Shi'a Isma'ili faith (they were known as Dawoodi Bohras later) through a peaceful proselytising mission led by two Arabs. The Bohras are strongly steeped in Gujarati culture and generally speak Gujarati (except in Thailand where most of them have taken to Tahi).

OBEISANCE TO THE SYEDNA, the head priest of the Dawoodi Bohra community. The Syedna resorts to extreme measures of repression to perpetuate the hegemony of his family, says the author.

The Bohras, a heterodox Shia sect were persecuted by the Sunni rulers and developed a strong centralised organisation headed by the Da'i (a summoner to the faith). In the face of persecution, sometimes tending to be severe, the Bohras developed strong ties of loyalty towards their religious organisation. It stood them in good stead throughout their hoary past. However, things began to change with the advent of the British rule. A section of the community, at the turn of the century, began to demand secular education which was sought to be suppressed by the then high priest, who perceived it as a dangerous erosion of his religious authority.

Excommunication

The father of the present high priest, Syedna Tahir Saifuddin, on succeeding the high office, shrewdly manoeuvred the situation in his favour and subsequently began to suppress the reformists by excommunicating them. He also brought under his control a considerable number of charitable institutions and greatly increased his financial powers. He began to live in a palace and styled himself as *sultanul Bawahir* (king of the Bohras), an epithet the present high priest still flaunts in the countries of the Middle East. His sons and daughters began to call them-

selves princes and princesses. The community was now saddled with a "king" who kept on tightening his control over it, ultimately reducing it to mere slavery.

After independence he used his financial resources to make strategic donations to some Muslim institutions as well as to the ruling party while at the same time tightening his hold over the community. As Prof Theodore Wright Jr—an American scholar who studied the problem—puts it, the high priest manoeuvred the external democracy successfully in order to frustrate attempts at internal democracy.

The Issues Involved

The powerful priestly establishment coerces the community into paying more than Rs 10 crores to it through various taxes It will come as a surprise to many that the Bohra priestly establishment levies on its followers, seven different kinds of taxes. Tax is levied, strange though it may seem, even on the foetus *(hamal)*. The dead, of course, are no exception. One must pay for one's dead ancestors too! So it is literally taxation from the cradle to the grave. Those in arrears cannot get their son's or daughter's marriage solemnised or their dead buried. There are numerous instances of dead bodies being stoned if attempts were made to bury them without the high priest's permission. For burial in some cemeteries in the centre of the city,"pugri" as high as Rs 25,000 is charged.

In order to maintain its stranglehold over the community, the very effective method of social boycott is used. The people are made to fall in line even on purely secular issues like voting or contesting elections, establishing schools or other secular institutions. At the time of election the high priest's men go around coercing Bohras to vote for the particular party that suits his interests. Even written *firmans* are issued. The high priest claims that the Bohras are his slaves *(abd-e-Syedna)*, must submit to his authority ungrudgingly and must prostrate in his presence.

The reformists are waging a battle against this kind of total servitude to a religious authority. Firstly, it is very important to draw a line between what could be considered legitimately religious and what is secular. While one can seek the guidance of a religious authority in what could be termed as the religio-philosophical sphere (depending on one's disposition), no one can legitimately claim to wield authority as far as secular affairs are concerned. Moreover, there is no concept of priesthood in Islam. Even in religious matters, Islam gives complete freedom to an individual subject to the limits set by God *(hudud allah)*.

The reformists advocate the principle of democracy as far as the secular affairs of the *Jamaat* (community) are concerned. The *da'i* (head priest) in the earlier period played a protective and supportive role, not a repressive and coercive one. The reformists feel that the head priest, while enjoying certain religious prerogatives, must be responsible to the community in all other matters. He should not only be accountable to the community for the funds he collects, he should play a dynamic role in guiding the destiny of the community This can be done only when he places the interest of the community above that of his family.

The high priest—and there is ample evidence to bear this out-not only refuses to be accountable to the community, but persecutes all those who advocate the principle of accountability. In order to perpetuate the hegemony of his family he resorts to extreme measures of repression as pointed out earlier. This has created a reign of terror within the community.

The Bohras, the reformists feel, given proper leadership, could play a very significant role, both in Muslim and national affairs. However, the present religious leadership has turned it into a very static and obscurantist role which is doing great harm to the community. In the name of religion the Bohras, otherwise a progressive and dynamic community, are being coerced into adopting medieval practices again. The Bohra women are being compelled to wear the veil (they are now not allowed to take part in a marriage or other functions without the veil) and men to grow beards and wear caps (of a particular Bohra variety)

Again, in the name of religion, leading institutions of the community like the Bombay Mercantile Cooperative Bank owned by the Bohras, are sought to be destroyed. The Bohra priesthood has been following a dubious principle of either controlling an institution or destroying it completely. It also collects lakhs of rupees from the community in the name of building mausoleums and other religious shrines (the funds so collected are also, more often than not, allegedly misappropriated). There is no effort worth the name to build educational, medical and other institutions The mausoleum called *Rodatut Tahera* over the tomb of the preceeding high priest in Bhendi Bazar, Bombay, was built at the cost of Rs 4 crores while the project for Saifee Jubilee Technical High School whose foundation stone was laid in 1962 at the hands of President Radhakrishnan is still languishing Now crores of rupees are being collected from the community to build a garden in front of the *Rodatut Tahera* by demolishing three buildings While the money collected from the community is being squandered, hundreds of Bohra families live in utter poverty in the slums of Bombay. Charitable plots donated by Bohra philanthropists have been used for constructing ownership flats which are sold at lucrative rates.

Very few dare to oppose the authoritarianism of the Bohra priesthood Those who do, have to pay a very heavy price, sometimes even risking their lives The present writer has himself escaped three attempts on his life. Instances of marriages dissolved and children separated from their parents are by no means uncommon. Today though a large number of Bohras are sympathetic towards the reform movement, they fear the consequences of opposing so powerful a lobby as their priesthood and therefore even rich and powerful families fight shy of showing any defiance. The result is that out of a million there are no more than 25,000 open supporters of the reform movement However, there is seething discontent within the community. Total suppression of intellectual freedom in the name of primordial traditions is sapping the moral vitality of the community.

The reformists stand for freedom and democracy and are totally opposed to any form of authoritarianism. They expect the enlightened sections of the Indian people to support them in their fight In fact, the reformists feel this fight is part of the general fight in the country against corruption (today it is very difficult to disentangle religious corruption from political corruption as the one tends to complement the other) and rapid erosion of moral standards. ■

VICTIMS OF BRUTAL ASSAULT, these reformists paid a heavy price for defying the head priest and his traditions.

THIS OLD MAN, Rajab Ali, succumbed to the injuries inflicted on him.

UNITED WE STAND... The 3rd All World Dawoodi Bohra Conference being addressed by Mr K.A. Abbas. The fourth conference is currently being held at Pune.

Mystic Art

3

by Christine Merllie

JEAN LETSCHERT ASCHARYACHARYA belongs to that secret yet non-sectarian fraternity of mystics who are convinced of the advent of a New Age. For this fraternity, even the notion of renaissance is outmoded, and forerunning signs show that the 21st century will be the age of a radically new universal culture. At present, many artists participate individually in a process of cultural cross-fertilisation, secretly motivated by the urge for synthesis and the need for a holistic approach to life

Fifteen years ago, Jean Letschert, a Belgian artist, was looking for a language which appeared to be lost in the West but was still alive in India. This was the language of spirituality, more specifically, it was the language of *tantra*, with its idiom of *yoni* and *lingam*, of triangles vertiginously merging into one another, with its vision of the perpetual union of Shiva and Shakti

In fact, a deep study of *tantra* led him to recognise that *tantric* art and the *tantric* way of life is not something limited to Indian culture All the esoteric traditions of the world have their own specific *tantras* Jean Letschert Ascharyacharya's concern is to reveal the symbolism of universal *tantric* philosophy through his art His paintings tend to confront the onlooker with the cosmic laws of the universe as well as the psychic rhythms which animate the human soul

His life, however, is modelled on the patterns of the ancient *rishis* of India In the western ghats of Kerala, he is the head of an ashram initiated by his spiritual master, the late Nataraja Guru It is essentially a mystic art school, where art is taught as a *sadhana* instead of as a profession This school is known internationally as the World Academy of Wonder (WAOW)

Jean Letschert translated his first spiritual discovery in the field of artistic expression into a veritable mystique of symmetry This came as a result of disciplines connected with balancing opposites and stopping the mind Also, the ascending and descending energy, known in India as Kundalini, but which he simply calls the Power of Inspiration, together with the principle of growth that motivates all forms of existence, have been, for him, a constant source of revelation and transformation

The paintings of that period all have an abysmal dimension irresistibly drawing even the common man to his own psychic depth

But J L Ascharyacharya did not stop at making symmetry his "style" Always renewing himself, his later creations have been a blending, an infiltration, of symmetry and asymmetry, motion pervading stillness and stillness at the core of motion.

In the painting, *Transfiguration through the Lingam*, nature (or the outer world), with all its varied dynamism, enters the meditative *yogi* through the senses, reaching the heart, which is identical to the sun of the outer world It is through the realisation of this coincidence within his soul that man becomes transfigured like the butterflylike seer who ascends through the upper part of the *lingam*—a whole meditation brought into art form

Jean Letschert Ascharyacharya is now 43 and feels that his art is still in its infancy ■

The Pizzicato Of Pollens

by Ashok Mitra

IN several of his poems, Bishnu Dey, would refer to the dialectics of suffering. One is riven by passion, but one has the inheritance of rationality too. It is a perpetual battleground: emotion is in combat with the intellect, one's inclinations cut across the syllogisms of one's dispassion. But you must not throw in the towel, this is merely the process—the only process in fact—of creative work. A poet, or a musician, or an artist, for that matter, even a daily labourer in a non-alienated milieu, each one experiences this process. You suffer while it is on, but once the denouement is reached, it is bliss, it is like, as he said, the pizzicato of pollens.

Bishnu Dey proved the point in his poetry. He was a well-honed man. He had a deep grounding in classical poetry and literature, Western as well as Eastern. That did not however mean that he must divest himself of his adoration for either Pound or Eliot. And why should he limit his range, his ardour for Louis Aragon and Mayakovsky was no less strong. He would straddle it all, and would emerge, with his own style and decor, the cavalier who conquers, always. Whatever he wrote had the stamp of elegance, not one misplaced phrase, not one discordant rhyme. Each poem, whatever its length or theme, was a sculptured whole. It would perhaps contain layer after layer of allegory, it would perhaps crowd a lot of awareness of history, given the expanse of his intellect, even the geography would be pretty eclectic. But you could never fault his craftmanship: what would finally emerge is a chiselled creation, with not a spot of cloud between the idea and the execution. The burden of history, the concourse of geography, the tyranny of grammar, the claustrophobia of a mindless tradition, never mind, he would waft his way through. He must have suffered, and suffered a great deal, in arriving where he did. There would, however, be, not the faintest trace of this travail in the finished work: smooth, elegant, it would flow like a liquid spasm. Very few in Bengali poetry could match his sophistication in handling metrical forms, from sonnets to villanelles, he knew the technology of each and all, and he knew which technology was appropriate for which particular mood or matter.

But all this was still waffle. A creative individual, be he a poet or a craftsman, to sustain himself, must claim and possess, Bishnu Dey concluded, a relevance. The escape hatch of the early metaphysical poets, the recourse to comparative statics, where you assume the rest of the universe stays still while you indulge yourself, held little appeal for him. And this precisely was the focal point of the agony of suffering. Why are you handed this magic box of imagination and skill and discipline and mastery of expression, do you weave an idle tapestry of words which would dazzle the gentry with its lustre and its riches, but for which the dazzle itself is the end-point? Must not poetry proceed beyond, must it not have an objective correlate? The most important tool for you, a practising poet, is the vocabulary, the structure of words, which is a gift of your milieu. Language is a social form, and must you not return the compliment: to society? Is there any point at all in indulging, while in a vacuum, for indulgence's sake? Must you stylise your cleverness, so that all that happens is a permutation of words followed by another such morose permutation, and yet another? Rather than that, should not a creative mind own up, must he not learn to repay what he owes to society? And society implies people. The poet is able to cultivate his arts, because people grant him his franchise. The ingredients of this franchise—the leisure, the accoutrement of language and imagination, the ambience of the environment—each is the outcome of abdication and sacrifice, conscious or otherwise, on the part of the masses.

Bishnu Dey, fairly early in his career, arrived at his choice. The poet's allegience is to his people. The masses provide the context of his endeavours. They are currently stuck in the mud of poverty and squalor, they go hungry and are without clothes and shelter. This situation is an outrage. It is as much the poet's avocation, as anyone else's, to trace the roots of the social and economic exploitation which reduces the masses into such hapless victims of history. The poet must therefore put his poetry to use. The poetry must analyse, but it must, at the same time, be a cudgel and an instrument. No part of this proposition is of any outlandish genre. In the early pastoral phase of civilisation, poetry was, after all, indistinguishable from music and chants. The enchantment had a communal goal, the invocation of the gods, the appeasement of the demons, the wishing of bliss, each had a pragmatic social context, be it the sowing of crops or the gathering of the harvest or the eradication of epidemic. There is little reason why the coordinates for a poet would be socially any different now.

Render unto the people what belongs to the people. Arguing the syllogism out within himself, Bishnu Dey slipped, casually and comfortably, very much in his own manner, into the fold of Marxism. His integration, he felt, was thereby complete. He stayed the stretch. Slightly away from the masses and yet a part of the masses, became his credo. The grafting of faith into technology led to the shedding of some of the superficial smartness of the earlier phase; his poems acquired a depth whose only comparison can be with vintage wine. In his younger days, he would, half-mockingly, parody the grandeur of epics. By the time Marxism ceased to be an anti-body and dissolved in his stream of consciousness, there was no occasion for parody, the granite of epic came to define his poetry, the lines would flow in a taut discipline, ordinary everyday words would don a separate majesty: poetry has a purpose, history has a direction, creation is a collective endeavour, you cannot create if you are not a part of the whole. Bishnu Dey, charm and wisdom and sophistication and all, was at peace with himself; his poetry reached its quest.

The spate of external recognitions over the years failed to disequilibrate him. He remained an intensely individual man, but his craft and art were given to the people. During the past few years, his creativity came to a surcease because of an intense physical affliction, and his passing in December has deprived Calcutta of yet another one who, at least for four decades, defined its milieu. What is it that explains this milieu, is it brittle, is it delicate, is it lyrical in the conventional sense? Do we have to abide by these questions, or do we simply chant, in soft murmurs, as Bishnu Dey did.

Yet this boldness. If you tear away all spring's
Gathered songs, break into bits
these preserved flowers,
Throw away the leafy shade of the riverbank trek, if you
Burn out this soft grassy sleep in mountainous cold,
Yet this boldness, yet I go on with this singing

This boldness, he did not have the least doubt, is what the exultation on history is about. This boldness, he would tell his fellowmen, is the fulfilment for which each of us keep watering our roots:

In the pain of fruitful labour, or I might say, in keen expectancy
Standing close together on the eddying bridge of tension
We have our inheritance
In the daily footstep of actor and the act done,
We dig, spin and weave and husk
Each and all, and if we, each or all of us, trample the grain
Some more, some less,
The good and the evil of it is for each and for all, some less, some more.
It is our history, counting minute by minute
Its wave spanned over life and death
In our livelihood, in our living, in the patterning of the mind and the body
In proper and improper work, in no work—despite some residue
As a basin of water freezes and the ice cracks the pot. ■

The Third Eye

UPHILL

Photographs and Text by Jamshyd Sethna

JAMES MENEZES was born 36 years ago into this wonderful world severely handicapped by cerebral palsy. After years of concentrated therapy and exercise, his body has reached its limit of improvement, and though it takes him much longer to perform various physical functions than it does an average person, he is able to eat, drink, bathe, dress and use a typewriter with minimal assistance from his exceptional and devoted parents.

He seems relatively unscarred from the trauma of various forms of rejection that have undoubtedly been inflicted on him; in fact, he seems to understand the horror and fear which his presence provokes. James is a journalist of sorts; he has had one of

his articles published in the *Express Magazine*. Apart from his writing, he types out 25 letters per day in Italian—standardised appeals for donations which are mailed to various addresses in Italy—for which he is paid 20 paise for every letter he types. He has been doing this for 15 years, and the only other source of income for the family apart from the pittance his father receives as pension from the Indian Railways (which just about covers the rent for their tiny room) comes from the tuitions he gives to two schoolchildren in his neighbourhood

The telephone he is entitled to as a disabled person has taken a long time coming but they have not given up hope. Life for this brave family has been an experiment in love and caring, from which James has emerged with his self-respect and dignity intact ■

Camels among date palms in Rajasthan —Photo by A.G.H. & J.B. Bradshaw

Bonanza From Dates

AT the Oil Technological Research Institute (ORTI), Anantpur, Andhra Pradesh, a technological breakthrough in the extraction and processing of oil from the seeds of the date palm has been achieved. At present the seeds are thrown away after the fleshy pulp is eaten.

In the newly developed process, the seeds are powdered in a grinding mill mechanically and cooked in a steam kettle. The seed flour with 8.2 per cent oil content is then processed with a solvent—hexane, for instance. This yields 6.4 per cent oil (as in the case of groundnut cake).

The saturated date seed oil contains fatty acids and yellow-coloured. It can be refined and bleached to a lighter shade. The refined oil is edible. The raw oil is suitable for the manufacture of soaps. The deoiled cake containing a high percentage of protein can be used as animal feed.

The technology has a vast export potential, espeically in the West Asian countries.

A POTATO PLANT treated with Paras *(right) with a normal plant.*

The Touch Of Plenty

SCIENTISTS at the Hindustan Lever Research Centre (HLRC) in Bombay have recently developed an exotic chemical called "Mixtalol" or "Paras" (the legendary touchstone) which increases food production by enhancing the rate of photosynthesis in cereals and vegetables.

Mixtalol is a chemical extracted from agriculture wastes. It is made up of long-chain aliphatic alcohols (C_{20}-C_{34}) that can be sprayed on the crops. Even a spray of 1 ppm (parts per million) concentration has shown a remarkable increase in food production. The wonder chemical can be produced in large quantities for the country's needs. It is also within the economic reach of every farmer in the country. Unlike normal fertilizers which provide nutrients for plant growth, Mixtalol increases the plant's capacity to produce carbohydrates through accelerated photosynthesis.

"The compound Mixtalol was discovered in 1978 and since then a number of pot and field experiments have been conducted to prove its efficacy on different crop plants," says Dr K.K.G. Menon, Director at the Research Centre. "It is also environmentally safe and completely nontoxic." About 2,000 monitored field trials conducted on paddy, wheat, maize, different vegetables, etc, have shown considerable yield increases (paddy—23%, wheat—18%, maize—33%, bajra—21%, vegetables—20-80%).

Mixtalol is supplied in bottles with either 0.24% or 1.0% of active ingredient in a solublised form which can easily be diluted in water to obtain 2 ppm level which has proved to be the most effective concentration. The diluted Mixtalol of specific strength is sprayed on the leaves of plants to a drip point at different stages of growth. The first spray on crops has to be done at the age of 30-35 days followed by a second spray—three to four weeks after the first spray. One bottle of Mixtalol (Paras) containing 250 ml liquid is sufficient for one acre. It has been observed that in some of the vegetables, even three applications can be made which have been proved beneficial on the yield of such plants. The third application is made two weeks after the second spray.

The concept of using a chemical in *minute* doses to increase the physiological efficiency of plants is new to the farmers who should be trained for the optimum use of the product. Says Dr Menon: "The dilution of the stock solution of the Mixtalol is very important as the product works in very minute does and if the dosage is changed, the farmers may not get the full benefit."

However, it has been shown that Mixtalol does not harm the crop at any concentration. The volume of spray to cover the foliage to a drip point is necessary. Also, precautions have to be taken so that no contamination of weedicide/fungicide takes place during dilution and spray of Mixtalol. The spraying also should not be done during flower initiation stage of the plant.

The Space-Age Cooker

HAILED as the "greatest discovery since fire", the micro-wave oven has revolutionised the conventional concept of cooking. Preparing food is much easier and less time-consuming today, thanks to this space-age cooker now catching on rapidly in the Western world. Japan alone is producing more than 800,000 micro-wave ovens a year.

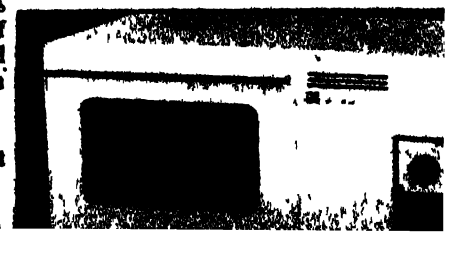
Micro-waves are waves of energy (short wavelengths—from 25 millimetres to a metre—and high frequencies—300 million to 100 thousand million cycles per second) similar to those sent out by television and radio stations. When micro-waves fall on non-metallic objects they cause a heating effect.

Micro-wave cooking can also enhance the flavour of food because it is fast and can cook with little or no water. The natural colour is also preserved. Left-overs can be brought back to the original fresh-cooked flavour in just a few minutes. Many precooked frozen foods can be on the dining table piping hot in six minutes. It takes only one minute to cook a slice of bacon (that too on a paper towel without burning it either) to crisp perfection.

The discovery of the micro-wave oven is interesting. One afternoon in 1945, an American scientist, Percy Spencer, laid a chocolate bar beside a radar vacuum tube he was testing in his laboratory. Moments later, lo and behold, the candy bar was a melted mess! A brain-storming idea to the researcher. He put the popcorn kernels before a radar horn antenna. The kernels danced into fluffy white popcorn. The egg, he placed later near the horn exploded with a bang!

Microwave ovens have been installed in India by some big hotels and catering institutes since the total cooking time with microwaves is of the order of only three minutes, with practically no wastage of heat. The State-owned Electronics Corporation (ECIL) has now developed and introduced the microwave oven for the first time in India. The EC microwave oven is most ideal for hotels, restaurants, canteens, homes and even hospitals. However, its cost is prohibitive at present.

—D.K. Dixit



That's Business

From Our Special Correspondents

MR S.M. Datta, Director, Hindustan Lever Limited, never fails to propagate his pet idea that industry should participate in agriculture. He does not, of course, imply displacement of the agriculturist. What he means is that the process of bringing more and more land under the plough has reached a stage where the arable land left in the country is now mostly of a marginal quality. Since the individual farmer is either unwilling or unable to till this land, joint stock companies could step in with their management skills, technology and financial resources. Such an initiative in extending the frontiers of cultivation would be akin to the help the Government expects of the corporate sector in industrialising the backward districts of the country. But the snag, according to Mr Datta, is that the present land ceiling laws do not allow large-scale farming operations by joint stock companies.

Mr Dutta's other favourite theme is that widespread underutilisation of capacity and, therefore, a scandalously high capital-output ratio necessitate a moratorium on fresh public investment—which means a plan holiday. "For the next two or three years the task of the Planning Commission should be to devise ways and means to utilise the existing idle capacity."

Alarming Trends

With businesses and banks becoming security conscious, competition in the burglar alarm business is becoming stiff. For instance, Steelage Industries is trying to outsell its main competitor, Globe Detective Agency, by devising a new burglar alarm system which will function on the basis of an automatic telephone link with the nearest police station. The present alarm system, marketed by these two companies and in use in some major banks, including the Reserve Bank of India, does not have this facility.

Says a representative of Steelage Industries: "The conventional alarm system sends ear-splitting alarms clanging through the premises and thus often leads to a burglar using his weapon. The new system will be less jarring, setting off an alarm only in the security-room or in the nearest police station or both." But will the police cooperate?

The new system is similar to the one marketed by Chubb Lock and Safe (UK), which holds 30 per cent of Steelage Industries equity. Nearly 60 per cent of the components will be manufactured in India with Chubb know-how. The burglar alarm system will be custom-made since requirements will vary from institution to institution. It will cost anything between Rs 15,000 and Rs 20,000.

BGC Bonanza

THE way the Bombay High gas continues to burn out must be grating to the sensibilities of energy conservationists. Therefore, it is interesting to learn from Mr Sudhir Jalan that the Ministry of Petroleum and Chemicals is "considering favourably" a proposal to allow the Bombay Company, which supplies piped domestic coal gas in some parts of the metropolis, to partake of the bonanza from Bombay High.

A noted Calcutta-based industrialist, Mr Jalan is a Director of the Bombay Gas Company. He says: "Permitting us to lay 30 km of pipes to connect our Lalbagh plant with the Bombay High gas has all the advantages: energy being wasted would be tapped; we would be able to supply gas at a cheaper price; our capacity to supply gas would increase four-fold, so that we would also be able to meet the needs of surrounding textile mills which are using coal and furnace oil. Above all, pollution would be averted."

However, as President of the All India Employers Organisation, Mr Jalan is circumspect to the extent of being mealy-mouthed in his utterances. He tends to toe the Government line on the ticklish issue of determining a representative union which is at the base of perpetual industrial strife in the country. Like his senior colleague, Mr Naval Tata, President, Employers Federation of India, Mr Jalan favours a check-off or verification

MR SUDHIR JALAN, Director, Bombay Gas Company.

as against a secret ballot. Why? "Because we feel that at present it would be premature to introduce a secret ballot." This is a strange piece of sophistry in a country that runs on a secret ballot system.

Mr Jalan questions my contention that he is toeing the ruling party line by pointing out that his industries are mostly in West Bengal where the Marxists rule the roost—and they favour a secret ballot. But it is well known that industrialists tend to put their eggs in the big political basket at the Centre. Incidentally, Mr Naval Tata has received an award from the Union Labour Minister, Mr Veerendra Patil, for his services to the cause of industrial relations.

"Wine Lady"

From a gold medal in his MA to wine-making is an unusual journey which Mrs Achala Joshi has accomplished with notable success. Relying entirely on books for know-how, she runs a business with an annual turnover of 60,000 litres and is the first to commercialise "honey-wine".

Mrs Joshi and five other women have been given the 1983 Institute of Marketing Management-Cinni Fans awards for best women entrepreneurs. Cinni fans are manufactured by Messrs National Winder, a Varanasi-based small-scale company operating in an industrially backward area of eastern UP.

MRS ACHALA JOSHI, winner of the 1983 Institute of Marketing Management-Cinni Fans award for best women entrepreneurs.

Nicknamed "wine lady", Mrs Joshi says that she realised the potential of wine during her several foreign trips as an exhibition promotion executive. Since India abounds in aromatic food, she decided to give the people their own wine. Followed experimentation with recipes picked from Italian books, these had to be modified to suit the Indian climate. In 1974 she set up the first winery in Maharashtra with a capital investment of Rs 1,800. By 1976, Mrs Joshi's one-room enterprise was producing about 500 litres of wine.

Quality is important. She ensures this by visiting her supply farms in Bangalore at least twice a year. She selects "sound grapes" which are carefully handpicked by about 100 women. Honey-wine, an innovative product, has proved a success. The 1,000 litres that she made the last time sold out in ten days. Mrs Joshi is now trying her hand at orange wine. Out of every 100 bottles sold, 95 are of the "sweet variety", two-thirds medium sweet and hardly any of the dry variety.

Buoyant Capital

In 1980-81, nearly 200 companies raised Rs 113 crore of capital. The following year 350 companies raised Rs 453 crore, showing a spectacular improvement which is largely attributable to convertible debentures coming into fashion. The buoyancy has continued in the current year. The latest figures show that in the eight months till November, 301 companies had raised over Rs 300 crore. But there is a worrisome aspect. The small man is still unable to attract capital. Public issues of the lesser known companies often remain undersubscribed.

The authorities confess that they too are worried—but evidently not overworried. It appears that some public financial institutions have been tentatively asked to consider how the newcomers could be helped to overcome their handicap. Quite obviously, such help would have to take the shape of buying shares or underwriting the loans.

The Government has, however, acceded to a major demand that various chambers of commerce had been drumming into its ears for quite some time. Guidelines issued in February 1981, following the recommendation of the standing committee of the presidents of the stock exchanges, had stipulated that all shares of a face value of Rs 100 and above should be broken into shares of Rs 10 by December 1983. The stipulation has now been withdrawn on the ground that it involves cumbersome procedures.

Work on the opening of new stock exchanges is progressing apace. A stock exchange should start functioning in Rajkot in March. Ludhiana and Jaipur will follow in April and May, respectively. As regards the question of excessive speculative activity in our stock exchanges, the authorities do not seem to be one bit concerned.

Boiling Way To Awards

Mrs Baldawala, another award-winner is Director Industrial Boilers Limited Bombay, looking after marketing. Her firm, set up in 1977, manufactures mainly steam boilers. In the last five years it has registered a growth of nearly 40 per cent. The firm is among the six registered with the Petroleum Conservation Research Association as the steam boilers produced by it are "multi-fuel" operated. Apart from coal and oil, they operate on husk, bagasse, wood or any waste product. Their efficiency is 82 per cent as compared to the 50 per cent of old boilers.

MRS D.B. BALDAWALA, Director, Industrial Boilers Ltd.

After obtaining a B Com degree, Mrs Baldawala ventured into marketing for a company engaged in commissioning boilers. Subsequently, she stepped into industrial boilers—a family business. "I do not know whether it helps being a woman, but I have always been successful in booking orders."

The other award winners are Miss Deepa Tandon, who has been marketing tea for J.N. Tandon and Company of Calcutta; Mrs Sushila Rao, Assistant Director, Personnel and Administration, Indian Airport Authority of India, Madras; Mrs Rajinder Bali, Area Manager, Punjab and Sind Bank, Delhi; and Mrs Lila Feroze Poonawalla, Export Manager, Vulcan Laval Limited, Pune.

OUT FOR THE COUNT Ashok is administered Ketamine (far left) an ideal anaesthetic for felines He is held down by five people throughout the operation which reveals a hernia 7 cm in diameter (left) During the operation there are a few anxious moments when the tiger stirs and has to be given another dose of anaesthesia (below left) With the hernia removed Ashok is back in his display cage at the zoo ready to lead a full life

IN the Delhi Zoological Park s Veterinary Hospital Ashok was the centre of attraction Lt Col B R Shetty Officer Commanding 44 Military Veterinary Hospital (President s Bodyguard) Rashtrapati Bhavan Dr Desai Director Delhi Zoological Park Dr Mandal Dr D G Wakode Veterinarian Delhi Zoo and others were looking at Ashok with tense faces Ashok is a year old tiger who is suffering from an umbilical hernia He is to be operated upon by Dr Shetty

Ashok s hernia showed up when he was a few months old Initially Dr Mandal had noticed a small bulge no longer than 2 cm on the abdomen As Ashok grew the bulge also increased and Dr Shetty decided an operation would be necessary

Hernia in tigers is a very rare occurrence Normally in the wild a tiger afflicted with this condition would either die due to twisting of the intestine or would eventually be killed by its mates due to its weak condition Prior to Ashok there had been only one such case and the tiger was operated upon when he was still a cub Thus the operation on Ashok became an unprecedented feat because it was to be performed on a full grown tiger With a Master s degree in veterinary surgery Dr Shetty has had a lot of experience operating on a wide variety of domesticated animals but this would be first operation on a tiger ■

OPERATION TIGER

Ashok, a one year old tiger at the Delhi Zoo, was operated for a hernia, the first time such an operation has been performed on a full-grown tiger

by Gautam Sabharwal

WHEN THE TWAIN MEET. Peter Michael Hamel (Germany) and Chattaraj (India) in a jugalbandi at one of the closed sessions at the NCPA.

Towards A 'World Music'

by Ronita Torcato

Although purists may maintain that an East-West music encounter results in kitsch, many musicians and composers firmly believe in a transnational, timeless music—the music of the whole world.

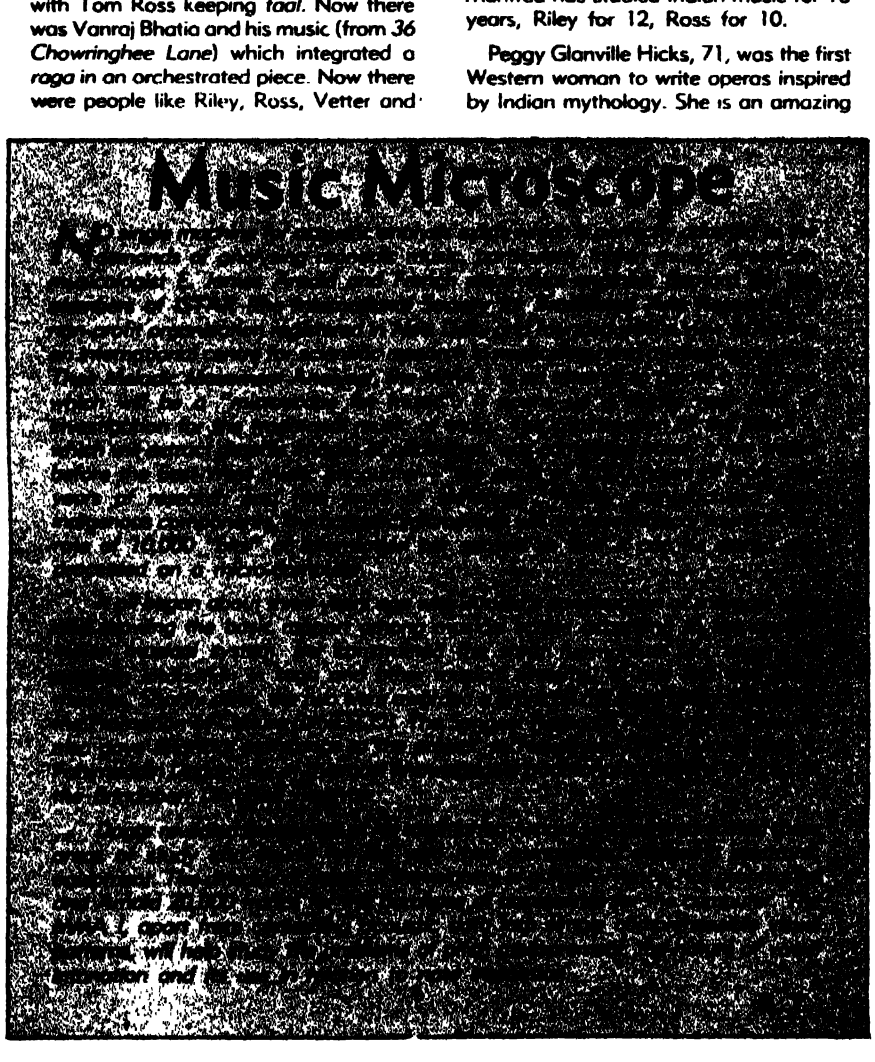
THE East-West Music Encounter, organised by the Max Mueller Bhavan and the Sangeet Natak Akademi, and co-sponsored by the Alliance Francaise, the Indian Council for Cultural Relations, the British Council and the Time and Talents Club, is the first of a series of dialogues involving composers, musicians, choreographers, dancers, theatre experts and philosophers who would be invited to participate in "an inquiry into the possibilities of creative work and thought drawing from Indian and Western sources".

The idea of musical encounters was not uncommon in days gone by. As far back as the fifth century, there were as many as 200 professional musicians from China and Korea working in Japan. Korea and China also had close musical contacts between themselves. Our own country had gifted immense cultural riches to South-East Asia. For nearly 2,000 years, two great Hindu epics, the *Ramayana* and the *Mahabharata*, have provided rich material for serious drama in a Muslim country—Indonesia. In recent times, however, Asian countries under colonial pressure began to look towards the West. Today, happily, there is a growing awareness that there is much more to give and take from Eastern traditions than Europe. Although purists may maintain that any blending of diverse music cultures may well result in kitsch, many musicians and composers believe in a different philosophy—a transnational, timeless music; the music of the whole world.

Cross-Cultural Compositions

And it was such people who gathered at the NCPA between January 15 and 22—musicians and composers like Terry Riley, Frank Bennet, E. James Arnold and Thomas Ross (US), Joachim Krebs, Heinz Klaus Metzger, Michael Vetter, Peter Michael Hamel and Walter Zimmerman (FRG), Roberto Laneri (Italy); Peggy Glanville Hicks (Australia); Andre Eshpai (USSR); Dr Neil Sorrell (UK), Bernard Bel (France); and our own Vanraj Bhatia and Zakir Husain—people for whom the ultimate objective of cross-cultural composing is the realisation of an East-West synthesis

The Encounter was divided into three sections closed sessions for participants and observers, mini theatre performances and ticketed performances in the Tata theatre. The Encounter is not the first of its kind. Such a meeting it may be recalled, was held, about 19 years ago in Delhi under the aegis of the ICCR, the Max Mueller Bhavan and the Sangeet Natak Akademi That conference had concentrated on theoretical deliberations and the presentation of papers. The present Encounter laid stress on the analysis and performance of cross-cultural composing. Indian and Western music concerts at the first Encounter had been mutually exclusive with recitals by Yehudi Menuhin, Balasaraswati, Ravi Shankar and M.S. Subbulakshmi. Now there was Zakir Husain playing the *tabla* with Tom Ross keeping *taal*. Now there was Vanraj Bhatia and his music (from *36 Chowringhee Lane*) which integrated a *raga* in an orchestrated piece. Now there were people like Riley, Ross, Vetter and Hamel who have been able to fuse Indian musical traditions with their own.



Serious Search

The slightly self-conscious pose of two decades earlier has changed into a serious search. The earlier conference was basically an inquiry into the ways and means of attaining a "world music"; the present Encounter focussed on "what has been done and how". "The first wave—the in-between music wave—is over," says Dr Georg Lechner, Director, Max Mueller Bhavan. "Now there is a new wave of people who are united in a sincere desire to learn about musical cultures other than their own." Junius Manfred has studied Indian music for 18 years, Riley for 12, Ross for 10.

Peggy Glanville Hicks, 71, was the first Western woman to write operas inspired by Indian mythology. She is an amazing woman. Two thirds of her brain is plastic, the result of a tumour operation performed some years ago. The operation left her blind and deaf for several years Today she is left with a slight sense of taste but no smell; mercifully she has regained her sight and hearing Dutch-born Nienke Krijgerm has been studying Carnatic music and Sanskrit for the past three years; Isaac Sequeira, professor of English literature at Osmania University, Hyderabad, makes liberal use of music to illustrate his lectures. These were just some of the participants at the Encounter whose purpose was presentation, discovery, re-discovery and dissemination...

Indeed, the Encounter is marked by a deep sense of communion between participants intent on examining the tools, materials and aesthetics of existing cross-cultural music. The Encounter also incorporated the philosophical and ethical issues concerning these endeavours. Some of the ideas emerging from the day-long discussions:

The self can be enriched by studying diverse musical cultures to as deep an extent as possible.

The artiste-musician should not be discouraged by rejection from the public; the greatest works have always been ahead of their time.

The idea of international contacts and meetings must be taken seriously, responsibly and with regularity.

Participants found the works of Riley, Ross, Hamel, Vetter, Peter Muller and Vanraj Bhatia most meaningful. The Indian participants in particular felt that Indian music was not being accorded its due place in educational curricula as opposed to the West where music enjoys favourable status. To cite just two examples: the Wesleyan University in the United States and the Free Music Centre in Munich (the FRG also has two other major music centres).

Future "encounters" will focus on music "that offers a meaningful synthesis". Dr Lechner hopes to organise the next one in '86. Whether a musical fusion and the attaining of a universal music is possible, only time will tell. As Dr Lechner says, "We have a long way to go and we are only at the beginning. I believe there is a time for everything. A time for the seed, a time for the blossoms, a time for the fruit and a time for dying..." ■

Letter From Calcutta

Death And Disease

MISFORTUNE of a kind that cannot be averted by administrative streamlining or political stratagems seems to dog West Bengal's ruling Left Front. Mr Pramode Dasgupta's death in Beijing left a vacuum in the Marxist organisation that will not easily be filled. But if the coalition committee's chairman passed away in the fullness of years after a lifetime of rewarding service, that cannot be said of Mr Sankar Gupta whose life has surely been cut off at the height of promise.

The Power Minister was only 42. His political consequences lay in the fact that as Mr Jyoti Basu's political secretary, Mr Gupta had gained invaluable insight into the business of administration and was reputedly one of the few CPI (M) politicians to have established a relationship of cordial efficiency with civil servants. The Left Front is not so lavishly endowed with administrative talent—especially without Dr Ashok Mitra—as to be able easily to replace Mr Gupta.

To cap it all, the Chief Minister's heart condition seems likely to have a permanently crippling effect on his former briskness. Earlier, the Labour Minister, Mr Sambhu Ghosh, had also suffered a heart attack and at the time of writing is hospitalised in Orissa. Truly can it be said that the gods do not look kindly on the Left Front which is additionally handicapped by not having encouraged second rank leaders to take over from the now ailing old guard

Azad Hind

TIME was, when brightly coloured banknotes issued by the "Azad Hind Government" and bearing splendid portraits of Subhas Chandra Bose in martial uniform were freely sold on Calcutta pavements, to be eagerly bought by the naive and the sentimental. Those sad scraps of paper have long disappeared, but the elaborate ceremonies on January 23—Netaji's 83rd birth anniversary—proved that the legend rides as strong as ever Its survival owes much to the Bose family's indefatigable organisation, but also something to the Bengali temperament's dogged instance on looking forward to the past.

So powerful is the emotional attachment that it is difficult to rid the suspicion that there was some political calculation behind Mr Zail Singh's one-day visit to pay homage to Netaji.Having worshipped at one shrine, a political one, the President turned to do reverence at another equally unique Bengali institution—the sacred Kali temple at Kalighat. Both were exceptional events. After all, the Centre has not in the past shared Calcutta's enthusiasm for Subhas Bose; the Congress was even more lukewarm about his policies. Secondly, the spectacle of a stalwart Sikh being received and anointed by the Kalighat *pujari* must also mark some kind of a record.

Both gestures make sense, however, in the light of the CPI (M)'s known indifference to folk mythology or religious ritual. The Congress, therefore, needs must strike a different posture, one moreover that hopes to exploit Bengali sentiment. It should be remembered too that Netaji's nephew, Mr Sisir Kumar Bose, is possibly the West Bengal Congress party's most respected, if inexperienced, MLA.

SANKAR GUPTA

Price Of Madness

EVEN more horrendous revelations since we last described conditions in Dum Dum jail highlight the law's extreme callousness, and the cruelty of those who enforce it Three more non-criminal lunatics, a repugnantly pejorative description, have since perished in that dread jail, two from acute diarrhoea and one from a lung infection. Dum Dum's toll so far this winter now stands at six

The facts have to be seen in the light of reports presented by the chief reporters of *The Statesman* and *The Telegraph*, as directed by the Calcutta High Court The latter included photographs of naked lunatics waiting in an open courtyard for their rations. The general picture of filth, squalor, inhuman degradation and sexual abuse is abominable

But mad people are worst off because they cannot stand up for even minimum rights. The Lunacy Act of 1912 decrees that non-criminal lunatics should be kept in prison until a free hospital bed is available, that means forever. Apparently, 1,250 mental patients are languishing in West Bengal jails. They are surrendered to the mercy of untrained staff and other prisoners who rob them of clothes, bedding and food.

The law says that they should not be jailed for more than 30 days but no one pays any attention to that restriction. Nor has the State Government taken any notice of the West Bengal Jail Reforms Committee's recommendation that a hospital be set up with accommodation for at least 2,000 mental patients who can receive expert medical and scientific treatment

Chokh

THE West Bengal Government can take pride in having arranged the finance for Mr Utpalendu Chakravorty, the bearded 34-year-old director, whose *Chokh* won the special jury prize at the recent New Delhi festival for "the vigour of its expression and its human commitment and the uncompromising sincerity with which it depicts the struggle for justice against social oppression and corruption"

Once inclined to Naxalite politics, the young director says he is now "neither a Marxist nor a Communist nor a revolutionary" He dismisses all that as "cheap talk, just words", and is contemptuous of film makers who are described as "committed" but copy Western technical innovations that are not understood by Indian audiences His own view of what the cinema needs is far more down to earth Mr Chakravorty would like the authorities to break the stranglehold of "tycoons and bad business men" who control cinema halls and the distribution network, and suggests that the Government should invest in a chain of cinema houses and also provide time on television to screen new-wave films. This because films that have been financed by the Government, and even award-winning films, are often not publicly shown nowadays.

He has some trenchant criticism of censorship, the calibre of officials, of the quality of Indian films and of the organisers of the Ninth International Film Festival. Of himself he says "I am not a teacher of the people. I am a student of the masses" But now that this angry young man has been recognised and rewarded by the establishment, it will be interesting to see how long his anger lasts.

Storming The Citadel

MANY strange and undignified scenes have been witnessed in Writers' Buildings but few can have matched the rumpus on January 19 when a Congress (I) MLA, Mr Abdul Mannan, stormed the nerve centre of the Left Front Government with four Chhatra Parishad rowdies in tow The invasion came at the end of a hide and seek battle with the police down several streets, the engagement had its ludicrous moments as, for instance, when policemen had to beat a hasty retreat because their tear gas guns would not go off Once inside the secretariat, the five men set up such a noisy hullaballoo outside the Chief Minister's chamber that they soon attracted a sizable crowd.

West Bengal's Home Secretary, the Police Commissioner, the Assistant Commissioner of Police responsible for Writers Buildings and Mr Jyoti Basu's political secretary,all intervened in angry outrage. An inquiry has been promised to find out why the security guards let the demonstrators in, no one should be surprised if low-ranking police heads roll But there is no suggestion of any investigation into the cause of the quarrel. the alleged murder of a Congress (I) worker in Bankura District

Great Guns

CALCUTTA'S Republic Day parade naturally could not match New Delhi's pageantry But the show was impressive enough and attracted large crowds, though many among the humbler watchers wondered why several tanks had the names of places in Bangladesh painted on them Some speculated that the hardware had been captured from the Pakistani army, others guessed that these were the sites of Indian army victories in the 1971 war In either case, the flaunting of "Jessore" and "Khulna" was not, perhaps, the most tactful of gestures, given the sensitivity of our eastern neighbour

Eternal Panacea

IT is an old British axiom to set up a Royal Commission for any matter that exercises the public By the time its report is published everyone has forgotten what it was all about The Left Front's solution for similar dilemmas is to appoint a committee One such was created some years ago to coordinate digging operations for the underground of the future and ensure that the work did not lead to the total collapse of Calcutta's already threadbare telephone system Nothing came of it and no one remembers it Now the State Government has set up another committee with Mr Prasanta Sur, Minister for Municipal Affairs, as chairman to bring some kind of order into traffic confusion The new committee will, we are assured, meet every month and suggest remedies.

A laudable venture no doubt, but the problem would disappear easily enough if only enough traffic policemen are posted at every crossing and if they are persuaded to do their duty. I have seen intersections with no less than six constables on duty chatting amiably among themselves with not even a glance at the streams of cars I have also seen policemen's stands at busy junctions empty for hours on end When policemen appear, more often than not it is to bully drivers into parting with small sums of money against threats of prosecution Honesty, a sense of duty and a more efficient disposition of the force would be far more to the point than Mr Sur's new committee. ■

MAKE MONEY ON SHARE MARKET

In 12 weeks you could be dealing in shares as [illegible] than 3 million other investors and professionals

HOW IS THIS POSSIBLE?

Simply through a unique 12 week home course in easy lessons, which tells you step by step what are shares, how to buy and sell them, balance sheets, share market mechanism, its anamolies and pitfalls, why share prices rise and fall, price trends and how to identify them and locate investment opportunities with prospects of multiplying capital from 2 to 10 times or more, thereby beating inflation And how to apply your lessons to current share market conditions You also get a list of selected growth shares with prospects of capital appreciation Your questions answered Written for the layman, by G R Mansukhani the well known consultant in shares and commodities

Even without previous know how and with as little as Rs 1000, you could be profitably dealing in shares in 12 weeks' time!

WHY DEAL IN SHARES?

The share market assumes greater importance now, as never before, because of restrictions on landed property and gold And with inflation raging, fixed deposits, pensions, insurance and other safe investment plans have ceased to be ideal investments for economic security.

India s share population is rising But today at 3 million it is only 0 5% of the country s population, as compared with 6 to 12% of other countries

Our share population could therefore increase very rapidly, thereby creating big demand for shares and its market services and vast opportunities for the more knowledgeable investors and professionals And as Disraeli has said ' the most successful man in life is the man who has the best information'

Satisfaction guaranteed, else money refunded For details please send 50 paise self addressed envelope(23x10cms)

"To bed, to bed, to bed"

Oh! For A Good Night's Sleep

by Julie Bijalpita Chatterjee

EACH night 60 per cent of the urban executives or office-goers have difficulty sleeping. Many of them are reliving the fights they had during their tea breaks some of them are compulsively rehearsing board meetings, and some others, worrying over managerial decisions. If you are an office-goer and if you find that you are not able to tempt the sandman to sprinkle sleep in your eyes, then perhaps it is time you thought of the actual nature of your problem. Try answering these questions. **How long did it take you to fall asleep last night? How often did you awaken? How much sleep did you get? Did you take a sleeping pill? Did you take much alcohol in the evening? If you keep a sleep log daily then it will certainly help you analyse the root of your problem.**

On the other hand, you might be suffering from what is generally known as *pseudoinsomnia*, where you *think* you are not sleeping enough. Many people have taken sleeping pills or have gone to a specialist because they were really worried about sleeping less than the conventional 8 hours. If you are imagining insomnia, and taking recourse to those dangerously habit-forming pills then you might really need to have your eyes opened. Sleep needs are as personal and as varied as food!

Churchill, the Mahatma, Edison and Einstein, in order to achieve what they did, hardly slept three or four hours regularly every night. Your sleep is *your* bio-mechanism and need not necessarily conform to the 8-hour schedule!

Surprisingly enough, there are many amongst us who have their full rest in four or five hours.

What is important is that you awake rested and refreshed. The amount of sleep needed varies with age, the type of life you lead and upon individual body metabolism. The newborn infant sleeps all the time and a total of 12 to 13 hours a day upto the age of three. During childhood and adolescence more sleep is often needed to meet the requirements of the growing body. If you are in your late fifties or early sixties, then you may just need four to six hours. Older people worry if they do not sleep as much as they once used to, often forgetting the fact that they are also less active than in their thirties. One of the main reasons why middle-aged people turn to the frequent sleeping pill is the *false-alarm syndrome* which prompts them to hanker for sleep that they don't in fact require!

Sleeping Pills, Addiction, Side-effects

It all starts the same way. And there's always the first time, like the first drag you may have taken of the *grass* in college, or the first cigarette you spluttered over at ten in the locked-up bathroom. This too begins on the night you've had a particularly fiery argument with your spouse or are trying to induce sleep after 5-nights-in-a-row late night parties. So what do you do? You pop in a pill! Your first defense against insomnia, also your first step to another habit. But this is a bad one. Cavalier dispensation of sleeping drugs can be habit-forming and dangerous. And it may surprise you to know the reasons for disenchantment. **Sleeping pills don't actually help you sleep, they have dangerous side-effects and, most disastrous of all, there is a gradual drug dependency.**

The main ingredients of almost all sleeping pills—antihistamine, bromides, scopolamines, have all been known to produce harmful side-effects, including circulatory and respiratory disorders and a host of mental, physical, nervous and digestive disorders. For post-operative periods or during a nervous breakdown they may be effective and quite harmless, but the moment you begin to rely on them you are in trouble. In the long run, as any physician will point out to you, these so-called safe and effective wonder drugs are a sure way of complicating your already stress-filled life-style.

Addiction is equally alarming. Every sleeping pill, if used regularly for two weeks, loses its effectiveness. The body develops a tolerance for it with the result that the victim, who has by this time become a slave to the pill, resorts to ever increasing doses. What finally and almost inevitably *does* happen is tragic, the addict often suffers from increasing side-effects and to counter the dullness (both psychological and physical) brought about by these pills will indulge in amphetamines during the day, thus creating an unnatural, artificial, difficult to-break, vicious sleep-wake cycle which only becomes more established and impossible to break as the years go by.

And make no mistake. It is very very difficult and very trying indeed to break the sleeping-pill addiction. Anxiety, twitching, sometimes convulsions and nausea may arise if a long-standing addict tries suddenly to break the habit. Though many people have successfully tapered off their allowances on their own and come out of the drug habit as it were, it is undoubtedly advisable to do this under medical supervision. Of course withdrawal is not going to be easy, but the benefits are worth the effort.

How To Sleep Without Pills

"Oh sleep it is a gentle thing"—how the Ancient Mariner longed for it, how Lady Macbeth was divorced from it. At some time or other, in the course of our lives, sleeplessness is an inevitable symptom we must all suffer. But *persistent insomnia* may very often indicate that something is wrong. Don't laugh. But the causes may be as simple as too much coffee, poor bed time habits or even improper and uncomfortable bedding. With chronic cases the problem may be a little more complex. It may be asthma, ulcers, migraines, diabetes. The most common cause however is stress. Reduce the tensions and there you are. The rewards are longer sleeping hours.

Golden Slumber

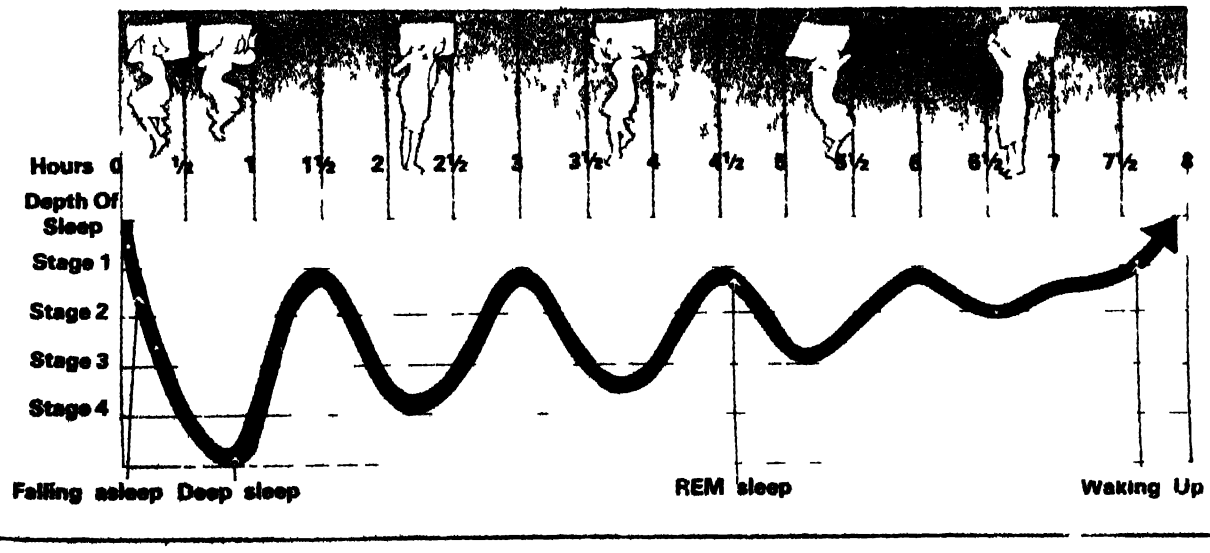
There are several things you *can do to ensure better sleep. First, do without the bed-time cup of chocolate, the after dinner coffee or the late evening cola. Remember caffeine is taboo for insomniacs. You might in fact be suffering from a low intake of B vitamins, so increase your consumption and you might discover the reason for your insomnia.*

Regular exercise should definitely help. But be careful not to engage in vigorous activity like an after dinner run if you are a poor sleeper. That only increases your metabolism and may heighten your state of activity in the body resulting in a longer time for sleep onset. For similar reasons it is suggested that you don't have an enormous meal late at night, as the body takes a longer time to settle down if it has to adjust to increased energy intakes just before bed-time.

Taper off your day's activities before retiring. Save arguments for the early part of the evening. Go to bed as soon as you feel sleepy, take a warm bath and a warm glass of milk with honey. Try and avoid homework at bed-time because if you don't woo sleep you can't win her. And as a last resort try listening to Bach or Ghulam Ali. My experience tells me you'll be out like a light! ■

Stages Of Sleep

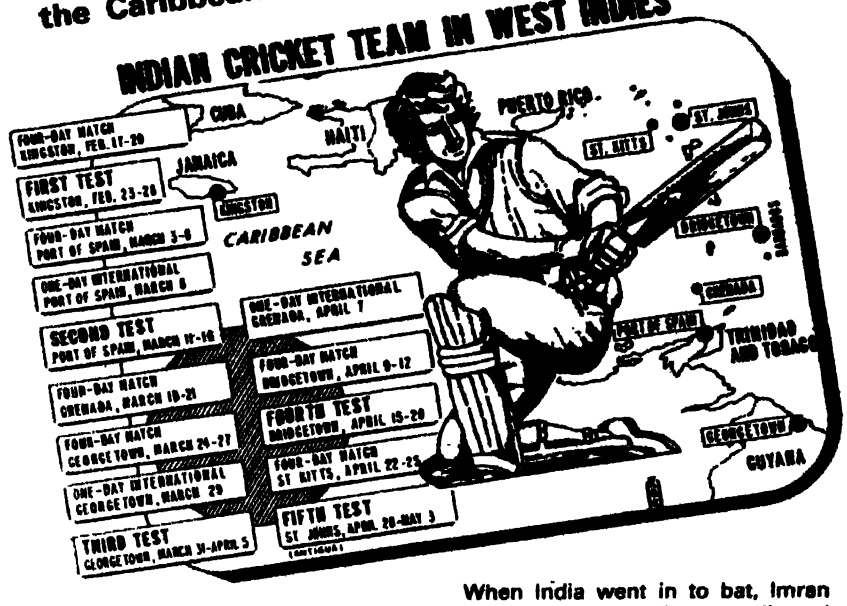
There are four main stages of sleep. The first two correspond to light sleep and the next two to deep sleep. Fairly regular swings from light to deep sleep occur and these are probably associated with changes in the chemical behaviour of the brain. At the first stage the eyes are shut prior to sleep. This is followed by some tossing and turning and eye rolling passing into stage two. During deep sleep, which is stage four, the person often reverts to a lighter sleep called REM (stage three). In this *Rapid Eye Movement* period the eyes flicker in a spasmodic manner and the person is dreaming. Dreams will be recalled only if the waking up period is soon after REM.



A Disturbing Moment For Indian Cricket

by R. Sriman

The Imran blitz that rocked India on their tour of Pakistan is only a foretaste of the bitter medicine in store for us in the West Indies, where the pressure will be on our batsmen from *both* ends—ends likely to be manned by 'fasties' Michael Holding and Andy Roberts, with Joel Garner bringing up the powerful rear. With India's stalwarts clearly beginning to feel the effects of age, there are genuine apprehensions about our prospects in the West Indies. However, a fresh tour means writing on a clean slate and, who knows, our cricketers—at the best of times unpredictable—may proceed to prove their detractors wrong in the Caribbean!



A PAKISTAN victory in the recent series against India was very much on the cards: what no one foresaw was the inglorious manner in which Gavaskar and Co were routed. No one was really expecting India to retain the rubber, won by them back home against Asif Iqbal's team in 1979-1980, especially as Pakistan had convincingly beaten Australia before our tour began. But now all Pakistan watched in utter disbelief as India folded up pathetically—so pathetically that it turned out to be a "No Contest".

There was nothing to suggest by the end of the First Test at Lahore that India would be routed so badly as to lose the next 3 Tests in a row without the semblance of a fight. It was total surrender, Gavaskar and his men proving no match whatsoever in *all* departments of the game. Two men principally shaped the big Pakistan triumph: it can be stated that Imran Khan's devastating fast bowling and Zaheer Abbas's superlative batting mattered most, without the slightest intention to detract from Pakistan's magnificent teamwork.

Even so, it is not exactly a credit to India that they went down meekly to a two-man annihilation squad. In fact, before the tour began, even the most optimistic Pakistani supporter rated the prospect of the series 50-50, basing his assessment on the wonted strength of India's batting, noting that so talented a performer as Madan Lal had been coming in at No 10. It was freely suggested that the Pakistani attack might not find it all that easy to contain India's batting might. In the event, the Indian batting was no more than a paper tiger, crumbling inexplicably, not just before the fiery pace of Imran Khan, but also before the none too hostile medium pace of Sarfraz Nawaz who, at 36, was only a poor relation of the nippy giant who had once mesmerised Australia at Melbourne with a 7 for 1 spell. Even the innocuous leg-spin of Abdul Qadir posed problems for India.

Spearhead Blunted

As for the Indian attack, it sadly lacked any penetration. Its spearhead, Kapil Dev, who had created a tremendous impression on his maiden tour here late in 1978, struck his true form far too late. After the series had been won and lost, his career-best feat of 8 for 85 (at Lahore in the Fifth Test) was akin to the old Indian proverb of attempting to perform *suryanamaskar* after the eyesight had gone. For some strange reason, Kapil could not get his most potent weapon, the outswinger, working earlier than at Lahore—to be precise, the second time at Lahore. In the result, with their main attacking force ineffective, India were at a total loss to contain the powerful Pak batting battery. Match after match, it became a joke as the Pak batsmen scored at will until, at Hyderabad (Sind), the Indian team became the laughing-stock of the entire cricketing world when Mudassar Nazar and Javed Miandad batted on and on till they equalled the world record stand of 451, put on by cricket's most illustrious twosome, Don Bradman and Bill Ponsford.

If the batting and bowling were very much below par, the fielding was atrocious: Sunil Gavaskar and his men fielded even worse than the notorious India team of the mid 1930s. Recent India teams had made a name for themselves for their fielding alone. In fact, the gilt-edged fielding had matched the famed spin attack of the late 1960s and the early 1970s.

Indeed, but for our poor outcricket, perhaps the series would have taken a different turn. For, when the Indian captain, Sunil Gavaskar, won the toss in the First Test at Lahore and put Pakistan in to bat, the gamble might well have come off had not Mohsin Khan, who opened with Mudassar Nazar, been dropped behind the wickets when he had not opened his account. Two other batsmen were similarly dropped before they scored: in one case, it did not prove costly; in the other, it did. Thus did Pakistan go to a big total of 485 aided by 5 dropped catches in all.

When India went in to bat, Imran Khan produced a fiery spell and claimed the wickets of Arun Lal, Dilip Vengsarkar and G.R. Viswanath off only 17 balls for such a poor total that there was talk of an Indian follow-on. This possibility was averted by a fighting stand between Sunil Gavaskar and Mohinder Amarnath.

Psychological Bluff

In the process, Mohinder proved how wrong the Indian selectors were in neglecting him for three years, after his glorious performance in Australia with Bishen Singh Bedi's team. Thanks to Mohinder Amarnath's unbeaten century, India were able to force a draw.

Few, at that stage, were prepared for the dismal Indian show in the next 3 Tests. At Karachi, in the Second Test, it was the turn of Imran Khan to put India in to bat on a wicket which seemed full of runs. Even making allowance for the fact that the National Stadium wicket at Karachi is quite fast, it was a psychological bluff to which Imran Khan resorted. Gavaskar was foolishly run out and, with Vengsarkar out to a brilliant slip catch and Viswanath falling in a debatable manner to Abdul Qadir—the ball went off his glove but he was declared caught behind—India were 3 down for 48. But for Kapil Dev's bold knock of 73, India would have found it difficult to reach even the 169 they did.

Abdul Qadir, in whom Imran places implicit faith and trust, ended up with 4 for 67—a creditable performance for one who was not included for the First Test in the belief that he would not be successful against the Indians. Abdul Qadir has an unorthodox run-up and his wrist spin has not evoked much praise, much less fear. Yet he has been consistently among the wickets. He does not even wear spike-shoes. Still, however unconventional he may be, he is a successful bowler and that is what matters.

India created quite a flutter when Madan Lal took 3 quick wickets for only 15 runs, but there the success story ended. For Mudassar Nazar (who had opened the innings) and Zaheer Abbas were concerned in a big stand. Zaheer survived a confident appeal against Kapil Dev for lbw—the Indians were very much out up about this decision. Pakistan went on to pile up 452. India buckled under the Imran blitz in the second innings, folding up for only 197 and thus losing by an innings and 86 runs. Dilip Vengsarkar and Madan Lal alone batted with any degree of confidence. Imran Khan had the astonishing figures of 8 for 60.

Cribbing Against Umpiring

It was bad enough to lose to Pakistan by such a big margin; but worse followed, with the Indian Manager, Fatehsinhrao Gaekwad, credited with a statement in a leading Karachi daily in which he slated the Pakistani umpiring in the Second Test: he specified 3 cases—the dismissals of Viswanath and Mohinder Amarnath and also the negation of the lbw appeal against Zaheer Abbas. Matters reached a head when not only did the Indian Manager not deny the report but another leading Lahore daily blasted the Indian attitude of cribbing against umpiring when they were so convincingly beaten. Imran Khan himself joined issue with a statement that the cribbing about umpiring was tantamount to taking away the credit of the Pakistani performance.

There was, at this stage, definite apprehension that cricket relations between the two countries would be badly damaged. The Pakistan Cricket Board President, Air Marshal Nur Khan, then made the dramatic move of inviting two famous Indian cricketers, Tiger Pataudi and Polly Umrigar, unilaterally to Pakistan as "Observers"—to see for themselves from television replays whether anything was really wrong with Pak umpiring.

Luckily, better counsels prevailed: men in authority at *both* ends kept their cool and nothing untoward happened outside the cricket field. Sunil Gavaskar himself issued a statement that there was no complaint about the umpiring.

—Amiya Tarafdar

IT WAS HIS CLASSIC SQUARE-CUTTING and free stroking that fetched G.R. Viswanath (*above*) a hurricane hundred—and India a historic win—in the Port of Spain Test early in 1976. However, in Pakistan, Viswanath seemed rarely to be able to get into position to play this shot that always marked him out as a 'cut' above the rest.

Meanwhile, the Third Test at Faisalabad also turned out to be a fiasco from the Indian point of view. Again India were put in to bat. They lost 4 wickets for only 82 runs, but spirited batting by Syed Kirmani and Madan Lal, after a bright spree of hitting in his typical fashion by Sandeep Patil, enabled India to end up respectably at 372.

Pakistan amassed 652, falling only 5 short of their highest-ever Test total, thanks to a great 287-run stand between Zaheer Abbas and Javed Miandad. The batting machine, Zaheer Abbas, was simply unstoppable. To have hit 6 consecutive centuries against a touring side is a mind-boggling feat. India barely managed to avoid the innings defeat, Skipper Gavaskar carrying his bat through with 127 and Mohinder Amarnath playing yet another gallant knock. Pakistan won by 10 wickets.

At Hyderabad (Sind), Imran Khan won the toss and elected to bat on a wicket shorn of grass and reputedly very slow. Mudassar Nazar and Javed Miandad figured in that world record stand of 451. India caved in for 189 and 273. Pakistan thus won the series most convincingly.

Doshi Scurvily Treated?

Brilliantly as Imran Khan bowled and superbly as Zaheer Abbas and Javed Miandad batted, admirably supported by that wonderful grafter, Mudassar Nazar, India lost ignominiously as much because of their poor batting, bowling and fielding as because of the unimaginative captaincy of Sunil Gavaskar, who had had no trust in his spinners at Karachi, where both Dilip Doshi and Maninder Singh were played and both were brought on to bowl only after the batsmen had been well set. There is no better way of making a batsman set than by offering the harmless medium-pace stuff of Mohinder Amarnath, who does not bowl over such long spells even in domestic cricket these days.

At Hyderabad (Sind), the main spinner, Dilip Doshi, was humiliated by almost not being asked to bowl before lunch. Even the one over he bowled during that session was under the captaincy of Kapil Dev, who was temporarily deputising for Sunil Gavaskar. When Doshi was eventually dropped from the team for the Fifth Test at Lahore, it was clear that Skipper Gavaskar did not think much of his front-line spinner who had over 100 Test wickets to his name. Doshi did not disguise his feelings of disgust, nor did many other players feel happy over Sunil's failure to involve himself with the fortunes of his team. It was as though 11 individuals were on view. The teamwork built up assiduously over the years—by Tiger Pataudi first and then by Bishen Singh Bedi—was totally absent.

This indeed has been a sad tour and the players were in a state of mental shock after the shattering defeats at Karachi, Faisalabad and Hyderabad (Sind). The much-vaunted depth in batting was sadly exposed. The quality of the bowling was equally exposed and there was nothing to write home about the fielding. To cap it all, the team's most useful all-rounder, Madan Lal, was not available for the crucial Hyderabad Test because of a heel injury. His presence may have enabled India at least to draw that Fourth Test so that the series could have been kept alive at Lahore and Karachi. Alas, this was not to be.

All in all, a most disastrous series, especially on the eve of a most difficult tour of the West Indies. This is a highly disturbing moment for Indian Cricket. It is really difficult to visualise what is in store for us in the Caribbean. ■

EVEN A STROKE-PLAYER of the flair of Sandeep Patil (*below*) was reduced to groping mediocrity by the quicksilver pace of Imran Khan. Still, if Patil fails to make the trip to the West Indies, India will certainly miss him. As a batsman who—like Kapil Dev and Srikkanth—habitually plays 'on the rise', Patil will always remain a chancy proposition. But, once he finds his bearings, he is still capable of reducing the fastest bowling in the world to a state of despair.

KOHINOOR
And no
two moments
will ever
be the same

Nightwatch

by Sathya Saran

It was unbearably cold. She watched at her window the shapes that rose and fell, rose and fell, and chanted around the fire...

SHE woke up in the night to hear the wind howling. How it roared and shrieked ... as if it were going to rush the little house into the valley below. She gritted her teeth and tried to go back to sleep, willed herself to go back to her dream ... but the wind intruded.

When Sheila first came to Mussorie, the wind had been there of course. It had thrilled her then. After her long years in the plains there was something romantic in the fact that the curtains were always billowing, the trees constantly whispering. Only in the harshness of the winters she had wished the wind would blow softer... The shrieking torrents that rushed through the cracks of their wooden house scared her on long, cold nights.

But these days, the wind shrieked all the time. There was some theory about deforestation being the cause of the increased fury, but all she knew was that it made a mess of her nerves

She remembered now her evening battle with Mala, who had been quite unreasonable, really, but perhaps she had overreacted too. She always did, these days. But surely it was silly of Mohan to agree to Mala's going for that picnic. After all, she should have been consulted. A moonlight picnic indeed, and Mala saying she had been to one before, without her knowledge, and would go again. And her friends—Sheila distrusted those friends Mala was so secretive about.

She got up from her bed and walked the cold floor to Mala's room. The door was closed. She pushed gently and peered in. Mala sat on her bed, reading. The girl looked up, startled. The book fell from her hands. "Gosh Mummy, you scared me!"

"What are you doing? It's almost 2.30!"

"I woke up some time ago and couldn't go back to sleep. So I thought I'd do some reading," Mala said. There was a sulky note in her voice, but she was obviously minding her manners.

Mala looked at her where she stood. There was no welcome in her gaze, and Sheila felt an intruder there, in her daughter's room. The girl had circles under her eyes, she certainly needed her sleep. Perhaps she had been unduly rough on her. After all, the picnic was to take place within sight of the compound gates. "Mala," she said suddenly, "I think you can go for that picnic."

→

Illustrated by P. B. Kavadi

"Mum - my!" With a leap Mala was across the bed, hugging her.

Tears filled Sheila's eyes, stupidly. *Softy*, she mocked herself as she hugged her daughter back "You must not stay too long, and promise you will wear a coat"

THE sun was streaming in through her window and the wind had died down when she woke again. She lay in bed, trying to remember if she had indeed spoken to Mala the night before

"Wake up, sleepyhead," Mohan called from the next room "Mala has prepared a lovely breakfast for you and you don't want it to get cold, do you?" So, she *had* spoken to Mala the night before

As she hurried out of bed Sheila felt apprehensive again Mohan was going to Delhi tonight on one of his official trips and she wished she had not given her consent for the picnic. She hated to be alone And yet she could not be sure what she dreaded more,being alone in the house or being alone with Mala. The last time Mohan had gone out of station she had had a terrible row with the girl, over something she did not even remember now. She checked her throughts This was no way to feel about your own daughter But where is the girl I loved? she thought miserably

Despite her forebodings, the day went pleasantly enough, as it always did when Mala was in good spirits Only, that was not quite so often now, Sheila thought dryly to herself Mala was cheerful only when having her own way, one little "no" and the world collapsed around their heads "Adolescence," Mohan said every time she tried to put her foot down and contain Mala's tantrums "Growing pains," he called them at other times, but Sheila knew he was being indulgent She had also passed through adolescence and surely her mother had never had to face tantrums like the ones she weathered

Mala was being quite mysterious that morning She had gone to the Mall shopping basket slung on one arm. "Getting some groceries for the picnic, Mom. Do you want some too?" she had yelled from downstairs while Sheila was packing Mohan's suitcase Usually she made such a fuss to go shopping with her "I hate those messy stores, they are so crowded," she'd protest and Sheila would have to drag her along

"Just get me a loaf of bread for Daddy's sandwiches," she had called back, thinking—when it's *her* picnic—then stopped herself short again This would not do, she was turning into a nag

By evening, the cold had set in again She shut the windows and felt herself getting tense again as she battled with the latches against the rising force of the wind The happy mood of the day was gone with the sunshine The long night would tick slowly by, she thought, watching with an increasing dread the sunset beyond the mountains The clouds formed mock peaks against the sky, closing in on all available space The place was getting on her nerves, she ought to take a holiday

The moon rose slowly that night, flooding the slopes with a silver light and even her nameless tension could not dispel the haunting beauty

"A perfect night for a picnic," she said across the dining table to Mala Mala nodded, eyes bright with excitement. *The circles under her eyes are darker tonight*, Sheila thought, *and tomorrow they will be darker*. Dinner was a fiasco, with Mala too excited to eat and Sheila thinking of the loneliness ahead.

THEY came when Mala was in her room, putting her coat on At first Sheila thought it was a branch knocking against the roof, but when the sound persisted, she opened the door

The cold rushed in, filling the house with its presence. A group of girls stood outside, huddled together. "Is Mala ready?" one of them asked

"Come in," she said, opening the door wider. But the girls only shuffled their feet and continued to huddle across the doorway "No thank you, Aunty, we are loaded"

Her eyes focussed on a shape on the floor and she discerned a large gunny bag at their feet. "What a lot of stuff for a small picnic," she said, laughing "What's in it?"

The girls looked at each other—then at the bag As if she had asked them to reveal state secrets, she thought

"Eats," said one "A *dari* to sit on, and extra blankets," another added. At least they won't be cold, Sheila thought

"Ready," Mala announced, coming down from her room, her black plastic bag heavy on one arm Her right hand was bandaged at the wrist "Oh, the can opener slipped when I was trying it out," she volunteered, seeing Sheila's eyes on her wrist

"Did it bleed much?" Sheila asked, then, seeing her daughter's eyes cloud over with irritation, she changed the topic "More eats?" she asked lightly, looking at the black bag, and one of the girls tittered in the dark

"Bye, Mummy, I'm off .." And they were gone into the night before she could say all she had wanted to say about their being back soon, about taking care to keep warm.

She could see them from her bedroom window, she realised with a start. She had been making a fuss, really. Just a girlish get-together, Enid Blyton style After all, other mothers had said yes to the picnic. Only had the boys been waiting elsewhere, while the girls collected Mala?

She went to bed, refusing to worry, refusing to hear the whispers that screamed fear inside her head every time she was alone in the house...

And awoke with a start. The house was quiet What had woken her up? Mala, she should be back The clock showed 10 30 in the luminous dial She moved to to the window

The shapes were there. Sitting in a ring They had managed to get a small fire going—she could see them in the fire light, sitting shoulder to shoulder, huddled in woollens They seemed to be clapping and swaying The familiar rhythm eluded her for a moment, then she got it it was one of those names-of-things games—where your chanted names to the beat of handclaps Girlish games never changed, she thought with a smile as she went back bed again.

As she lay in bed, holding her mind steady for sleep, she could hear the chanting, almost *Be quick, pause, be quick, pause, be quick, foul and fair, fair and foul, be quick*... then high pitched laughter as a voice faltered, and murmured consultation. Then the voices started again. *Foul and fair, be quick, rotten air, be quick, fair and foul*... rising

in speed and pitch – till the shrillness woke her, and only the wind howled outside

Eleven o'clock, the timepiece said—she had dropped off for 20 minutes and dreamt all the voices! She leapt out of bed and peered into the darkness beyond the window. The fire burned brighter now and the girls were still sitting around it. They were eating, she saw them reaching out and picking things from the baskets in the centre They should be home soon enough, she thought Once the food is over the fun is done "Finish the food, and the mood," she remembered. She tried to spot Mala in the circle, to see if she was eating, but the shapes were too indistinct, wrapped in their shawls and blankets, to be recognisable

What a night, she thought—till this child returns, I can't get any sleep. She caught sight of her face in the dressing table mirror How pale she looked and how lined her skin had become . those circles on either side of her mouth made it look so drawn She smiled—lifting the mouth in a curve -and her face transformed itself into youth *Why, Mala looks like me*, she thought -noticing the resemblance for the first time. The idea gave her pleasure and, still smiling, she lay in bed again

And slept To dream of cries in the night, strange knockings and maniacal winds that toppled trees, picked them up again to lightly carry them across the meadow and hurl them into the valley below . while shapes rose and fell, rose and fell and chanted around the fire...

Mala—she came awake once more. Surely it was Mala knocking. She rushed to the window, but the shapes were still there around a fire that had almost burnt out And they were dancing. Not Western style, but with strange, jerky movements, round and round the fire. Something nagged her memory—she had seen such a dance somewhere.. But she couldn't remember At a school function? A Shakespeare play? A film? She let it be, watching the dancers. The clock struck 12.30. She ought to go down and fetch Mala,she thought Mohan would be angry that she allowed her out so late after midnight

But the thought of the cold outside kept Sheila standing where she was. And she could not be a spoilsport. She watched the dancers again Round and round, up and down, round again.. she realised with a start that they were moving further away The fire was outside the circle now - between the dancers and the house

The girls were moving towards the edge of the meadow, not knowing they did so in their preoccupation with the rhythm. Again the dance movements nagged her memory, then panic took hold. The girls would fall off.. the wind would blow them over ..

She could almost see one of them toppling over and disappearing into the void, and she could see the shocked reaction on the other dancers' faces..

She throttled a scream at the image, grabbed a blanket from her bed and rushed out of the house, the wind roaring behind her

The long run into the night sobered her a little --and she arrived panting but sane, to the edge of the area lighted by the fire. The girls were still dancing, holding sticks in one hand, jerking their bodies up and down. No wonder they felt no cold, she thought

The circle broke, the dancers quietened And formed a line. They stood with their backs to her, now clutching their sticks in front of them. She could hear a slow chant begin—*try, try, try, ...* the words said. Some girl guide song, she thought, the tune so eerie! It rose and fell like the wind, the voices rushing over the words.

The girls started moving forward, one step at a time, still chanting their song. *Try... try... try...* and as they rushed forward in one gasp, the wind howled and pushed and she heard the words clearly this time ... *fly... fly... fly...* and saw the brooms on the sticks...

Sheila screamed in the dark—hurrying the bodies to the edge of darkness, hell-bent on madness, over the brink.... ■

Next Week For You

S.K.KELKAR

CAPRICORN
(Makara)
Dec. 21-Jan. 19

Concentrate on your career. Travel prospects are bright for businessmen and scholars. Sportsmen and artists will be at their best in their fields. Do not gamble heavily. Professionals will attend seminars and social functions, mid-week. Do not neglect health anytime otherwise you are likely to miss important functions.

AQUARIUS
(Kumbha)
Jan. 20-Feb. 18

Use tact in building up your financial assets in the next four weeks. An elevation of status awaits those in service. Scientists and research scholars will exhibit their skills and intelligence well and may come in for a public reception and honour. Keep your impulses under tight control while appearing before the masses.

PISCES
(Mina)
Feb. 19-Mar. 20

One of the best weeks this year. The going will be very smooth and easy. You develop confidence in yourself. Promotion by a stroke of luck comes to those in service, initially for a temporary period, later made permanent. The week brings domestic bliss. Do not quarrel with neighbours on Tuesday.

ARIES
(Mesha)
Mar 21-Apr. 20

This is an ideal time to look into your assets and liabilities before you plunge into new activities. Make adequate provisions for the extra funds that you will require in July and November. Do not allow yourself to be provoked while you are making a public speech. Accord elders the due respect. Take care while driving.

TAURUS
(Vrishabha)
Apr. 21-May 20

Do your best to clear up all important jobs without loss of time. Call a halt to your social activities gradually over the next few weeks. Industrialists should make all efforts to install new machinery and equipment either on Monday or Wednesday. An outing midweek refreshes your senses and relaxes you.

GEMINI
(Mithuna)
May 21-June 20

In this and the next week you can confidently go in for all sorts of expansion. Pay greater heed to group activities and secure the approval and sanction of the authorities concerned before you go in for any harebrained schemes. Journalists, writers and those connected with the media or travel, fare well.

CANCER
(Kataka)
June 21-July 20

Your confidence will be restored and you will easily and with success push through many pending schemes of work. Politicians and social workers can gain lost ground and begin to look forward to a most active phase in the next couple of weeks. The opposition will be quietened by engineering a plot for their defeat.

LEO
(Simha)
July 21-Aug. 21

You are better advised to conserve your physical energy at least for the next week or so. A new business deal should be kept pending for a while. Your service conditions will show signs of improvement from the end of the week. You will have to struggle hard to secure financial assistance for your schemes.

VIRGO
(Kanya)
Aug. 22-Sept. 23

It is upto you to decide whether it will be advisable to involve yourself in others' affairs. Newcomers and strangers will tax your energy as well as finances to better their own prospects. Do not spare your funds too easily. All pending Government jobs should be cleared by midweek. Contact banks for financial assistance.

LIBRA
(Tula)
Sept. 24-Oct. 23

Greater responsibilities and onerous tasks slapped on you early in the week will keep you on your toes. Strangers should be well-screened and their credentials suitably scrutinized before promising or committing to them any assistance. The younger set meet several bright people who make good friends.

SCORPIO
(Vrishchika)
Oct 24-Nov. 22

Business and career prospects are brighter now than in the past couple of weeks. Utilise the leisure at your disposal to plan new schemes and projects in consultation with experts. Industrialists and factory owners will be in a compromising mood and will settle long-standing disputes.

SAGITTARIUS
(Dhanu)
Nov 23-Dec 20

Sports, entertainment and outings will keep you extremely busy in the next four weeks. The settlement of a marriage and other important issues will bring great happiness. Your financial position becomes secure by the end of the week. Midweek is good for outings and recreation. News comes from abroad.

STAR FOCUS

Your Finances In 1983-I

Capricorn: The financial position is satisfactory this year. Investments made in the recent past will yield substantial dividends and you may reinvest them in sounder terms. However, you are likely to be unusually extravagant in the fields of romance and luxury goods, especially between July and October. Keep a tight control on your purse, for you will need the funds.

Aquarius: The year brings better financial luck than the last year. You will, however, become a self-willed miser and pinch all your pennies. July to September is a period when money slips through your fingers unwittingly, on undesirable expenses and harebrained schemes. However, you will restore your position in October/November.

Pisces: This year, since the emphasis is on augumenting status and building up popularity and good-will, a major part of your income will be diverted towards the publicity necessary and its trimmings. Remember, that your plans for raising funds may fail between May and August. In September, you become conscious of your emptying coffers and engineer novel schemes.

Aries: You must be extremely cautious and careful about your finances. Besides, certain failures in your project, industry and business may bring additional burdens on your depleting funds. Industrialists and factory owners may face unexpected difficulties due to strikes, an uncertain political situation and Government policies. Raise funds from reliable sources.

Birthday Forecast

Sunday, February 20

Give a lot of thought before making decisions and once made stand by them, things then will certainly work to your advantage. Indeed, your imagination and intuition will help to develop new lines of business in the early and later parts the year.

Monday, February 21

The next twelve months form a period of rare honours and achievements. In the first half, try to restore your position and from August onward you will make rapid strides.

Tuesday, February 22

A stormy sailing this year. Frequent changes and instability will affect your career, profession or business. Maintain status quo and face up to the situation patiently.

Wednesday, February 23

Adopt a realistic attitude to life and do constructive work in your field. Those in service may receive a promotion in July or by the end of the year. Eligibles may marry next year after acquiring a comfortable job.

Thursday, February 24

Be sporting and gay and secure the help and co-operation of all those around you. Family members and loved ones will extend assistance to your schemes. July, August and October are tricky months.

Friday, February 25

More than average success can easily be predicted this year. Near and dear ones must be handled with utmost care. Don't be too optimistic and don't let ambition dull your senses. Take care of your health in November.

Saturday, February 26

Astrologers, mystics, dancers and musicians will prosper. So also cosmetic dealers. Writers and artists may go abroad in June or after December. July and October are tricky months.

The Weekly Pick

Sin Cities Of The World

F.D. Colaco vala, Orient Paperbacks, Rs 12.

It is rather shocking that Orient—usually sticklers for "proper" manuscripts have accepted such unforgiveable *trash!* It is not as if the content is poor—the fault lies with the technique. A book dealing with the night life of London, Paris and Amsterdam could be titillating porn; in any case, it must be crisp. This one is neither naughty nor readable. Almost every page blighted by literals and outrageously bad grammar. Don't expect much and you won't be disappointed.

The Unrepentant And Other Stories

Vera Sharma, Writers Workshop, Flexiback, Rs 30.

A fairly impressive collection as a first volume of short stories. Two of the more outstanding ones are *The Unrepentant* (already published in the *Weekly*) and *Nothing Venture Nothing Win*. Unfortunately, the subbing errors take away from the quality of the work. The author has a fairly down-to-earth style and a direct approach, although sentiment is not missing. There is an ironic twist at times that adds substance to the story as in the case of Nandita in *Nothing Venture* .... who finds her idealism lost in a real world.

Better Kung Fu

Jyoti Sarup, Orient, Rs 28.

The martial arts have taken the youngsters by storm in India during the last decade. What with every school boy aspiring to be a *blackbelt*, a book like this may go a long way to train the potential *dada*. The book is well-illustrated and the author systematically explains the techniques in *Hand Training, Exercises, Dodges and Blocks, Strikes* and *Self-Defence and Counters*. The leitmotif that runs through the book, however, is the basic philosophy of this art—Kung Fu should be used for self-defence—never to kill

Julie

ET Not For Children!

The council for children's film rating in Sweden has advised the censor board to restrict the film, ET, *The Extraterrestrial*, to movie-goers above the age of 11. Censors believe young children might be agonised by a "threatening and frightening" atmosphere which they say prevails throughout the film. American television news commentators have ridiculed the ban while other Americans are upset at learning small children are not allowed to see this smash hit created mainly for kids by director Steven Spielberg.

—AP

Lata Bad For The Heart!

India's melody queen, Lata Mangeshkar, may rule the heart of countless fans, but the heart of one of her audience in Dubai probably could not take the excitement of hearing her live. As Lata captured the audience with lilting numbers, the man, identified as a doctor, had a heart attack. A tragedy was averted because of the presence of another doctor in the audience who promptly rendered first aid.

—PTI

Fox Bags Olympics Film

Twentieth Century-Fox has been selected to produce and distribute throughout the world the official film of the 1984 Los Angeles Olympic Games. Fox owner Marvin Davis presented Peter Ueberroth, President of the Los Angeles Olympic Organising Committee (LAOOC), with a cheque for $ 1 million for exclusive film, cable, video and other exploitation rights. The 90-minute documentary is supposed to cost more than $ 5 million.

—Mid-Day

Coppola In The Red

From the day he bought it in 1980, Francis Coppola's Zoetrope Studios has been the unwilling star of a financial *Perils of Pauline*. Flush with the success of *The Godfather*, Coppola overextended himself to buy the dilapidated old Hollywood General Studios for $6.7 million. Heavy investment for new equipment and renovated sound stages, coupled with two major box-office disasters, put him even deeper into the hole. Ever since, Coppola has struggled to keep up payments on an 8.1 million loan from Security Pacific National Bank in Los Angeles, but the bank's patience has apparently expired—and with it Coppola's control of the studio. Barring a last-minute repreive, Zoetrope will be put up for public auction on February 14.

—Newsweek

Raj Kapoor Sued

A case under Section 153 has been filed in the court of the Chief Judicial Magistrate, Mathura, against film maker Raj Kapoor for allegedly hurting the sentiments of the Thakur community and spreading hatred against it in his latest film, *Prem Rog*. The court has fixed February 18 for a hearing.

—Indian Express

Jackie

New Courage

Rajiv's men are facing a tough time—especially after the election debacle in the South. Mr Kuldip Nayar notes a revealing encounter recently between the haughty Arun Nehru and the previously meek Chief Minister of UP, Sripat Mishra. Mr Nehru, while addressing the UP Chief Minister, called him 'Sripat', something he had done earlier without causing offence to Mishra. This time, however, Mishra was offended and he repliedly curtly: "Call me either Sripatji or Mr Mishra, but not just Sripat." Amazing what a few election defeats can do to Congress (I) men!

—The Sunday Observer

One Big Sham

For the Indira Congress to talk of another Kamraj plan is a mockery. We have seen that far from giving up office voluntarily, its senior leaders including Mrs Gandhi have been most anxious to retain and recapture power even when there was an adverse judicial or electoral verdict.

—K.R. Sundar Rajan

More Ways Than One...

Dr Subramoniam Swamy uses a novel technique to introduce me to everyone: "What is this we are hearing about you? Is it true?", he asks me. Translated in simple language what he wants all his friends to know is whether I have been fired from my job. No point in going into details of my departure from *The Hindustan Times*: They'll never believe what I say anyhow. I nod my head. He emits sounds of sympathy.

—Khushwant Singh

Short-lived Triumph

A stolen kiss has landed a Railway employee behind bars for one year.

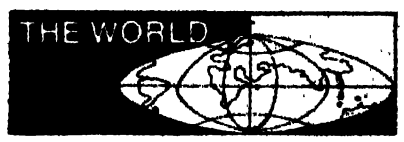
Additional Chief Metropolitan Magistrate J.M. Malik, today held Satya Singh guilty of kissing a young girl in his wife's office on May 27, 1979 thereby outraging her modesty.

Malik sentenced Singh to one year's rigorous imprisonment and a fine of Rs 1,000 or a further period of six months in case of default.

Observed the judge, "The triumph of the wicked is short and they have to be sternly dealt with."

—Indian Express

Goldie



Cause Of Controversy

Sabine Meyer is the cause of controversy between the famous conductor Herbert Von Karajan and his Berlin Symphony Orchestra. After a US tour in the recent fall, where she got a reputation of excellent performance as second (guest) clarinet, Karajan wanted to give Sabine Meyer a one year's trial contract with the Berlin orchestra. But the all-men orchestra ensemble vetoed the move. In consequence Karajan declared he would conduct only the contracted six annual concerts and stop the additional concert tours, recording performances and TV appearances with the Berliners.

—AP

An Ambassador Remembers

Ambassador Parviz C. Radji has just published his diaries and in them he recounts one memorable dinner where the Princess Margaret was the chief guest. Margaret enters the drawing room of the ambassador's house and sees a photograph of the ambassador being presented to Mrs Gandhi at a state reception in Tehran flanked by the Shah and Empress Farah. "Is that Mrs Gandhi?" asks Margaret. Radji confirms. The Princess looks thoughtful for a moment and then says loudly, "Dictator". The ambassador is left "wondering whom in the picture she really has in mind".

—The Sunday Observer

Who Was He?

There is a legend that everyone in the world remembers exactly where he or she was when the news came of the assassination of President Kennedy. It is true for me: I heard the radio in a house in Chelsea, London at nine pm; just 10 hours later I was in Houston, Texas in time to see Oswald die.

When Mahatma Gandhi was shot I was no longer in India. I had come off a railway train in the Dorset station at Sherborne, where I was taking a son to school. Sherborne is a very, very long way from New Delhi and the house of Mr Birla, the last place Gandhi ever saw.

At the barrier the Dorset collector took my ticket. He said he had heard the news on the BBC radio.

"They made quite an item of it. He must have been an important old geezer. I wonder who he was."

—James Cameron

On The Record

I.F. Stone, 75, journalist: "The first President I shook hands with was Calvin Coolidge. In those days the President would shake hands with any high school class that arrived in Washington. There was so little for him to do. Reagan is very similar to Coolidge."

—Time

Gigi

by Shamshad Husain

THIS is not a treatise on the famous Wailing Wall in Jerusalem where thousands of Jews annually shed tears on the occasion of Yom Kippur, commemorating the tragedy of the Eternal City being razed to the ground by the invading hordes of the Assyrian monarch, Nebuchadnezzar

It is a lamentation for the walls of our country's countless edifices that tell their own tale of woe

When prehistoric man, very akin to his supposed ancestor, the ape (according to Darwin), took refuge in caves, his artistic imagination impelled him to draw bisons, antelopes, mastodons and boars on the walls of his dwelling

The Aztecs and the Incas of America have not only left a wealth of engravings and paintings on gigantic rock surfaces but also on the stony ground of their arid habitat

The murals and frescoes executed by Indian artists in the caves of Ajanta, Ellora and Elephanta are another link in the history of wall-painting Italy, too, was the home of exotic wall paintings during the Renaissance

One cannot ignore the contribution of King Asoka, the protagonist of Buddhism, who left lofty pillars and rock edicts to instruct the citizens of his empire which, as luck would have it, are lasting memorials to the doctrines of Dhammapada

Artful Misappropriation

In our own times, our eyes alight on our neighbour China, where walls are specially erected for the purpose of sticking bills, posters, slogans and public opinions The same holds true for many advanced Western countries

But India is a land of diverse peoples, cultures and ideologies where the fundamental right to freedom of expression and propaganda has been artfully misappropriated

While passing through alleys, lanes, roads, streets, avenues and even highways, one cannot fail to notice the walls on either side, richly embellished with advertisements for every article under the sun From toothpaste to hair oils, these bills even sing the praises of a local dairy, a bookstall, a prolific commercial painter or a messianic doctor who cures by electropathy

This is not the be-all and end-all of the story because many other salient features must be mentioned

Cine posters beat all others in the race for publicity and one wonders if this is a potent reason for the unequivocal and unquestioned popularity that films enjoy in our society

In a democratic country like India elections matter, and their aftermath counts Our walls therefore provide a complete electoral list and lament over the failure of unsuccessful candidates till the paint fades

Every Tom, Dick and Harry who man oeuvres to contest elections, ranging from the local colleges and university, to civic bodies and even parliamentary polls, considers it his privilege to exploit the vast resource of wall publicity

Thus the walls are permanently adorned with names of contestants in elections, and since elections have become an everyday feature in our lives, our walls proudly bear the brunt of our democratic enthusiasm and the crusade for the cause of "Truth"

Zealots espousing the cause of moral resurrection, communal fanatics, striking workers, sports fans and even antagonised rivals scrawl pithy and revolutionary slogans on the walls, giving vent to their pent up feelings

Even our historical monuments, especially the Taj, which stands shuddering on the banks of the Jamuna, plagued by industrial effluents, dolefully anticipates the day when the foul fumes of the Mathura oil refinery will smear its majestic face with the soot of human callousness and apathy

The Taj and myriads of mosques, temples, palaces and mausoleums bear witness not only to the aesthetic love of art that brought them into being but to the art of vandals that manifests itself in charcoal, pencil and pen scrawls, adding to the chequered beauty of these monuments!

It will not be too much to say that "where there is a wall, there will be a scrawl", because well-painted walls and even dirty ones entice wall-scribblers For the expression of such "extravagant" vandals, the Great Wall of China might not suffice, and even our snow-capped Himalayan wall is not safe from the impress of their "passionate" pictography

Our university walls present a pathetic sight, for the ravages of time and tide and the campus elections have turned them into "a book where men may read matters" When temples and mosques are not spared, the "temples of learning" must also resign themselves to the mercy of God against such souls who have thrown all propriety and prudence to the dogs In fact the university shows unity in diversity, especially the universality of such "wise" persons who proudly imprint diverse matters on walls and expect the students to read them although they might not have enough time to glance at their books

Erect Special Walls

Can we not import something else besides pornography, fashions, scientific methods and social trends from the West? Erection of special walls, poster sites and signboards at strategic places would not batter our democratic pattern but boost it instead Then, probably our skilled sign-painters and commercial calligraphers would be better able to engage and employ their skill in producing exotic posters

The beautiful, clean and picturesque city of Shanghai, with impressive posters at strategic places, presented a pleasant sight to a newly-married couple on their honeymoon in China

The husband a connoisseur of art, copied a striking pattern from one of the posters and requested his wife to knit the same on her sweater Wearing her new cardigan with the Chinese monogram knitted on the front, the couple went out shopping Peals of laughter greeted them everywhere they went They ducked into a restaurant to escape the mirth of the passers by but faced the same experience inside Losing his temper, the young man implored the manager of the hotel to explain the reason for the public's mirth The manager explained that the monogram on the cardigan read "Fresh milk available here" It was an advertisement for a nearby dairy

Last but not least, an anecdote on wall writing which proved its merit A wall near a local office was the source of a pungent stench of urea and ammonia that was poured on it by passers-by and even the people who worked in the building

One day a wise man scribbled this slogan on the wall "Mark! A dog is urinating by the wall" Ever since, the wall has ceased to be a depository of toxic human effluents ■

Professor, it simply reads "Vote for .."

Can you tell me, love, where are the doors and windows which were here when we left for the movies?

VOTE
VOTE FOR
VOTE FOR
VOTE FOR

THE election meeting went on and on, and people began drifting away. The speaker went on, till finally there was only one person left. Then he stopped, went up to the man and thanked him for his steadfast support. "Oh, me?" asked the man, "I stayed on only because I have to lock up."

THE husbands of the ten best dressed women are never on the list of the ten best dressed men.

A LADY died and went on to the next world. There she began looking for her husband who had gone on earlier.

"He was named Joe, and he promised me that he would turn in his grave if I so much as kissed another man", she said.

"Oh! Him, I know him. He is called 'Whirling Joe' around here", said one of the people there.

"I AM going to have a little one," said the girl so gay and frisky. And the boyfriend fell and fainted. Then she told him she meant whisky.

A MAN rang his doctor. "Doctor, my son has scarlet fever."
"Then you have to keep him away from others in the house" said the doctor.
"But you don't understand, he has kissed the maid," said the father.
"Well, that's bad. We have to quarantine her too," said the doctor.
"And doctor, I have kissed her too," said the father.
"This is getting complicated" said the doctor, "it means you may have also got it," said the doctor.
"Yes, and I have kissed my wife too".
"Damn it," said the doctor, "now I'll catch it too."

A LADY whom God did well endow
Got caught in her room window
When she offered much gold
For relief she was told
"The view is better than ransom."

A GIRL's conscience does not really keep her from doing anything wrong. It only prevents her from enjoying it.

THAT prim old lady rarely went out, but that day she wanted to buy some things urgently. After her shopping, as she walked home, she saw what appeared to be a respectable restaurant. There was a rush inside and she had to share a table with a pretty young lady who was almost finishing. The young girl lit up a cigarette while waiting for her bill. The old lady controlled herself for some time, but seeing the young thing puff away, really lost her cool.

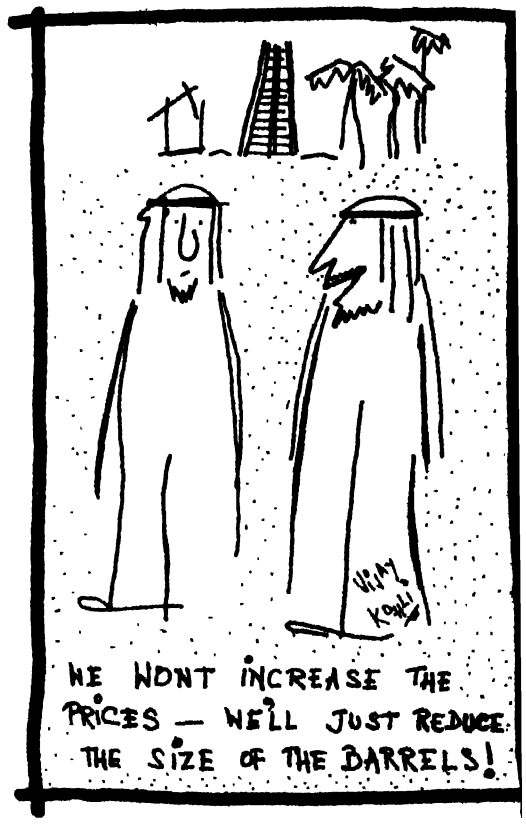
"I'd rather commit adultery than smoke in public," she snapped. "So would I," said the girl, "but I have to get back to work in half an hour."

A SERGEANT called out to his men, "How many of you are interested in music?" Six men stepped out from the ranks.

"OK," he said, "Come and help move the piano in the Colonel's house."

THE wife was so angry after their quarrel tha she refused to talk to her husband. That day pas sed. The next morning the husband was foun furiously rummaging in all the cupboards an shelves. She held back for some time, but the could not resist asking, "What are you searchin for?" "Thank God," he said, "I've found it. It wa your voice."

IT was in Kohima during the fifties when ther was curfew after dusk and no one was allowed t leave town. But still, people used to ring up th gate to see if they could get through. Fed up c these calls, the Malabar Special Police that used t do guard duty hit upon a ploy. When the phon rang, the guard used to lift the receiver and say, "8454 Raman Nair, No Hindi no English," an put the phone down.

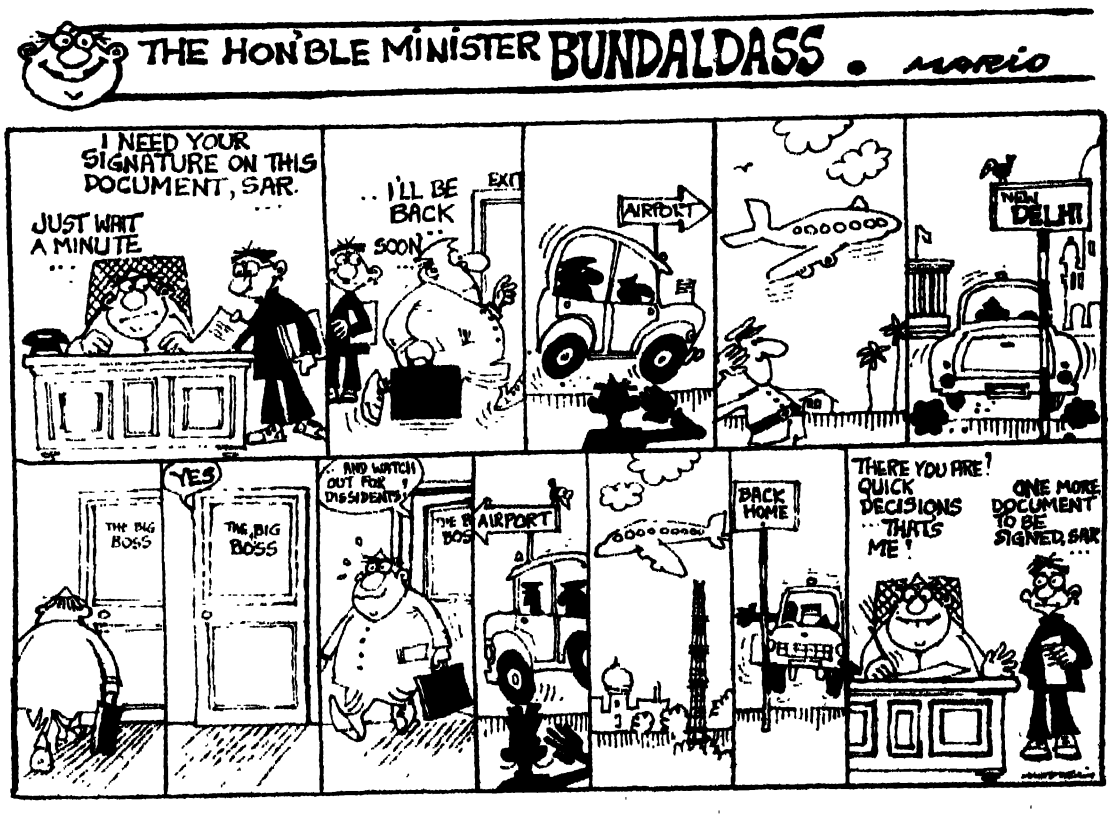


HARD luck—Having a wife, a mistress, and note from the Bank-all overdue.

THE wife was angry with her husband fo staying out late.
"Didn't I hear the clock strike three when I hear you come in?"
"No, my dear, It was striking eleven but I held th gong so that it won't wake you up."

AND another husband explained a simil situation to his friend thus "And as I crept int the bedroom my wife woke up and asked "Is tha you, Fido?" Thinking it was our dog, she e tended her hand and I had the presence of mind t bend down and lick it."

THE king was fed up of his court jester who wa for ever finding out puns. One day, he shouted "Off with his head," and the poor jester was le off. But friends intervened, and finally the kin agreed to show mercy, if the jester would sto punning. When they got the assurance an brought the jester back before the king he cou not resist saying, "No noose is good noos."



THE rich doctor and his wife were strolling in the park when a stunning young girl passed by, and waved to the doctor.

The doctor waved back to her, and explained, "A professional acquaintance." "Yours or hers," asked the wife.

THAT representative of the people was keen only on one thing, getting more jobs for the people of his caste. One day, as the House met and discussed various matters, he drowsed. The subject of discussion came to the number of ostriches in the zoo. Our representative woke up and heard the answer "16". Immediately he jumped up and asked "How many are of—caste?".

THAT pretty young thing was on her first voyage, and her diary went thus:
Monday—The Captain invited me to sit at his table. He is handsome.
Tuesday—Captain invited me for a stroll on deck, and made advances which I rejected.
Wednesday—Captain told me that he would sink the ship if I did not accept him.
Thursday—Saved the lives of 1600 people.

A MAN went to his vet as his horse was not well. The doctor heard the symptoms, and handed over a packet.

"This contains a powder. Feed it to the horse, and let me know how it is after three days" said the doctor.

The man hesitated, and said that he did not know how to give the medicine to the horse. The doctor advised him to roll a cardboard into a tube, put the powder in, place one end of the tube, in the horse's mouth, and blow in. The man left.

He did not come in to see the doctor even after a week. The doctor thought of it, but supposed the horse was better. A few days later, as he walked down the market area, he spotted the man. To his horror, the man looked aged, ill, and had a rasping cough. He called to him, and when he came near, asked him what the matter was.

The man whispered hoarsely, "The horse blew first"

AN old lady was advising her neighbour, a single man, about the evils of drink. But he protested that he did not drink that much.

"But I saw your wheel barrow outside the inn the other day," she said. In answer to that, he pushed her small car and left it outside the local bordello.

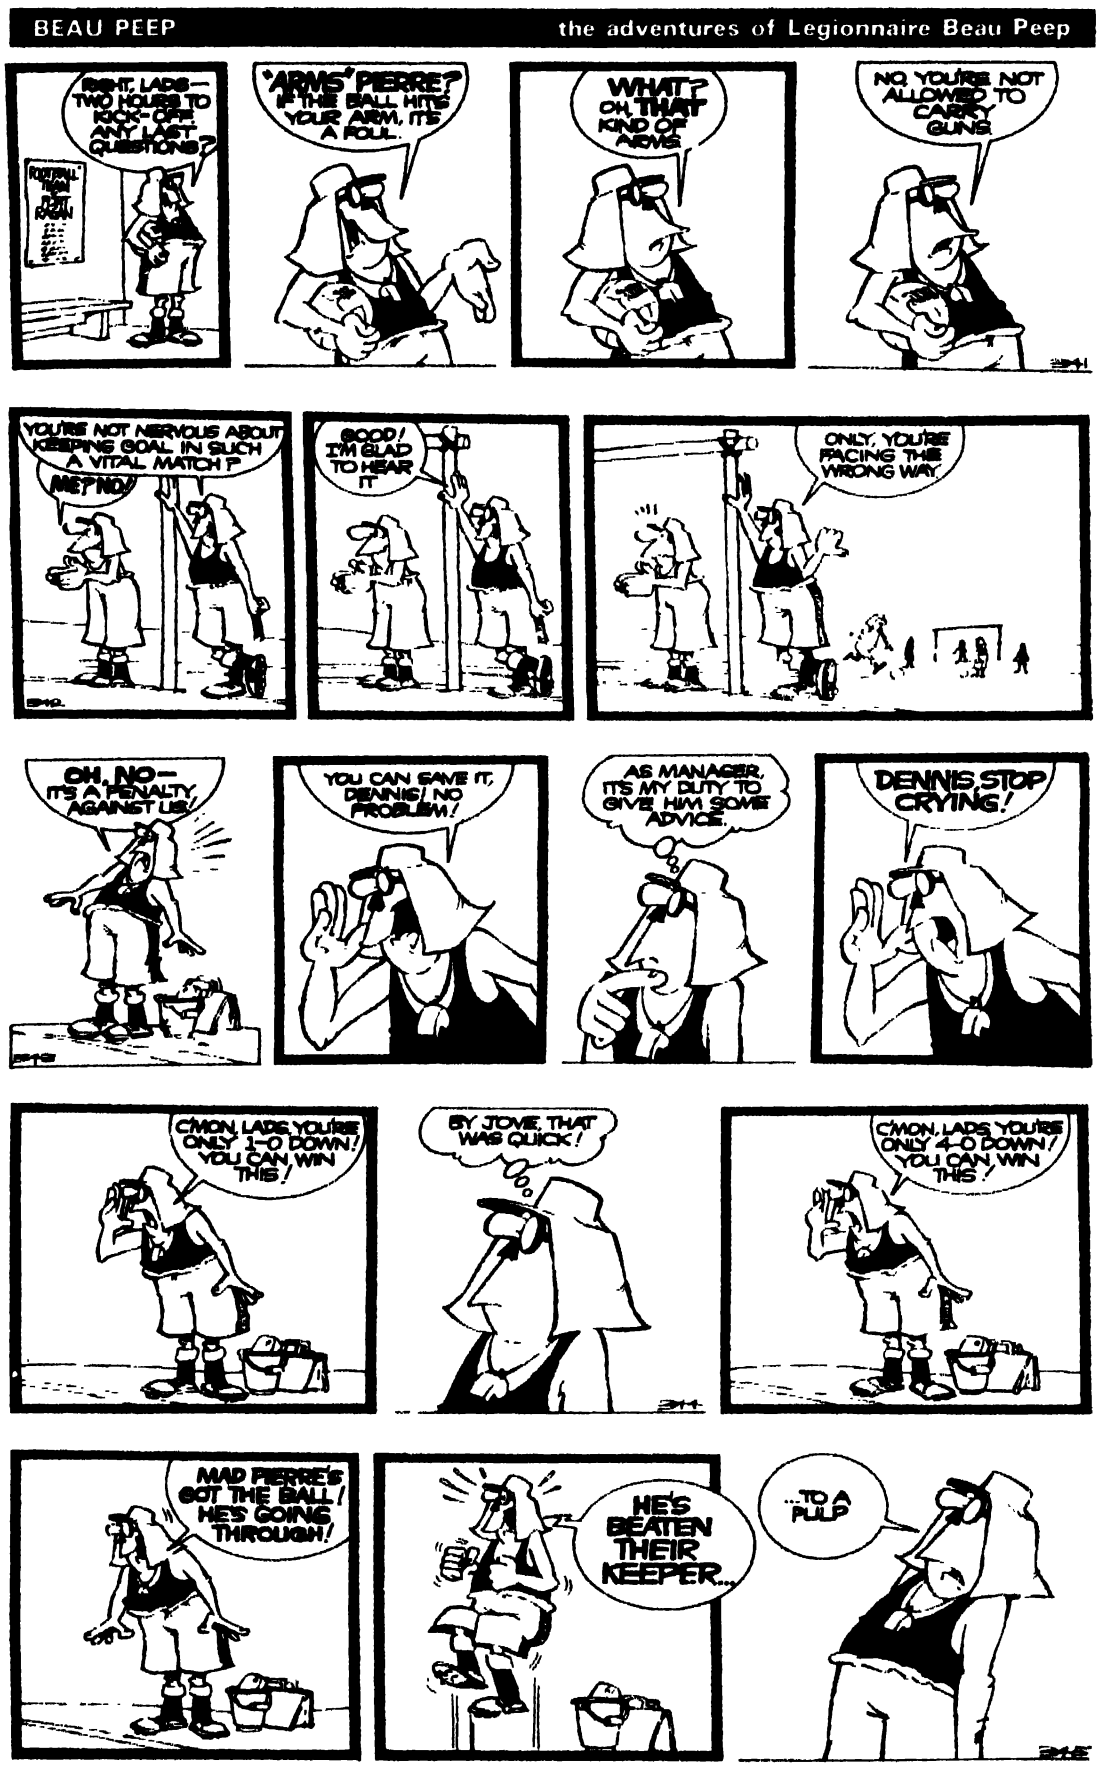
"MATE drunk today" wrote the Captain in the ship's log. The Mate protested that it was only that day at a party, but the Captain said, "It's true, isn't it?" The Mate had no answer. But then it was the Mate's turn to write the log, and he wrote "Captain sober today". The Captain saw red, but the Mate said, "It's true, isn't it?".

NAPOLEON had his Josephine, Antony had his Cleopatra, Romeo had Juliet, and Heinz had his tomato.

"LOOK at your marks," said the father waving the progress card the son had given him, "In my days nothing short of 60 per cent satisfied my father." "I'm sorry," said the son, what you've in your hand is an old report of yours I found in the writing table."

AN optimist is a man who looks forward to marriage. A pessimist is a married optimist.

(Compiled by T. C. Krishnan)



Nirlon is a multi-faceted company providing intermediate products vital to industries at home and abroad. Nirlon is in constant touch with world markets, exploring new avenues, exporting more and more.

Being a registered export house, well-known in the USA, UK, Italy, France and Australia, the Middle and Far East, export figures rose to Rs. 5 crores in 1982! This belies the global recession.

What does Nirlon export? Nirlon V-Belts, marine products, art silk, and synthetic fabrics. Nirlon has won the Award for Excellence in Exports.

We back our innovative spirit with our management team, technology and R&D breakthroughs... unleashing further growth.

6 hours after birth, your baby gets his first "oral vaccine". From you.

You've to hand it to Nature.

For the thoughtful way she puts protective "antibodies" in mother's milk. Breast-feeding plays an important role in imparting immunity to the new born against gastro-intestinal and other diseases.

Naturally nourishing.

Nature also strikes the right balance of body building foods (protein), energy foods (carbohydrates, fats) and health guardians (vitamins) to make mother's milk ideal for the new born. (For instance, breast-fed babies don't usually suffer from scurvy, a vitamin C deficiency.)

A breast-fed baby feels more safe and secure too. Because you cuddle him close while he suckles to satisfy his hunger.

Popular worldwide.

Breast-feeding is now getting more and more popular even in the West as its nutritional and other benefits are getting more widely appreciated.

But what if you're not able to breast-feed for reasons of health or, maybe, because your milk is not sufficient for your baby?

Of course, you must choose the best alternative for him.

Spray dried Amulspray.

Nutritionally well balanced with prime-quality protein, easy to digest fats and carbohydrates and the right blend of essential vitamins and minerals.

It's easy to mix in previously boiled warm water; no need to make a paste first.

Economical.

And, Amulspray is the most economical among tinned baby foods.

Because it is made by the modern milk complex that pioneered India's "white revolution".

But be sure you use boiled water and hygienically sterilised teapoils and feeding bottles. And, follow the directions for use on the pack strictly, to avoid overdilution and ensure adequate nourishment.

Free! Amul Baby Book

Contains 13 fact-filled chapters on Pregnancy, Antenatal Care, Confinement, Breast-feeding, Outside Feeds, Change-over to Solids, Baby's Routine, Baby's Progress, Prevention of Illness, First Aid, Common Ailments, Emotional Problems of Childhood, and Care of a Sick Child. In English, Hindi, Marathi, Gujarati, Tamil, Telugu and Malayalam.

Write to Post Box 10124, Bombay 400 001 with your name and address and postage stamps worth Rs. 1.25 ★.

A message in the interest of your baby's health from the makers of

AMULSPRAY

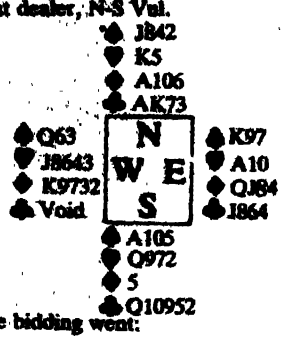
This Week's Bridge
Hyderabad Nationals—II

AGARWALA, consisting of Subhas Agarwala, Krishna Kedia, Robi Roy, Sukha Ranjan Ghosh, Sudhir Ganguli and Govind Singha won the Ruia Trophy comfortably, steamrolling SENGUPTA by over 140 imps in the Finals.

In the semi-finals, AGARWALA met Tamil Nadu's NAGAPPAN.. In a one-sided match, the former were troubled after they jumped off to a big lead in the first segment.

This deal was bizarre.

West dealer, N-S Vul.



The bidding went:

West	North	East	South
Manikant	Suku	Nagappan	Agarwala
3C	P	3NT	P
P	D'ble	P	P
RD'ble	P	P	P

South, Subhas Agarwala, was naturally puzzled by the bidding, and before making his opening lead, asked for the meaning of the Three Club opening bid. Told it was a normal pre-emptive bid, he led his two of Hearts. The King fetched the Ace, and when declarer played Diamonds, North won, switched to a Club, and North South soon had 1400 in their column, down 4 Redoubled.

East West obviously had a gigantic misunderstanding. Manikant Shah thought they had agreed to play a Polish style Three Club opening, showing a weak 5-5 in two suits excluding Clubs! Nagappan was equally sure they were playing normal preempts.

One more hand from the first segment saw Robi with his back to the wall, but emerging, as usual, on top. Try defending, as North, with Robi, West, declarer in a bad slam. This was the bidding:

West	East
Robi	Ganguli
	2C
2D	3D
3H	4NT
5C	6H

2C was Acol, artificial game force. 2D was a denial, 0-7 points, and the rest was Natural. Your hand as North is:

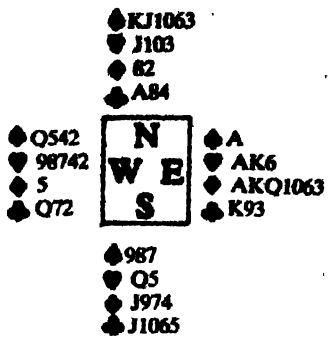
♠ KJ1063
♥ J103
♦ 82
♣ A84

You elect to lead a low Spade, and dummy comes down, on your left:

♠ A
♥ AK6
♦ AKQ1063
♣ K93

Robi wins dummy's Ace, cashes the Ace of Hearts on which your partner follows with the five, and starts on the Diamonds. On the Ace of Diamonds every one follows, on the King Robi sheds the seven of Clubs, on the Queen he sheds the Queen of Clubs. How do you defend?

Young Ian Albuquerque of Madras was North. A very fine player, Ian was perhaps overawed at playing against Robi, because he missed the bus. He ruffed, and continued with a low Spade. This was the whole hand:



With no choice at this stage, Robi discarded a Club from dummy, won his Queen, crossed to the King of Hearts, ruffed a Diamond in hand to set up the suit, crossed back with a Spade ruff, and claimed.

What Albuquerque should have done was ruff the Queen of Diamonds, and exit with a trump, the safest defence. Declarer can come to six trump tricks, four Diamond tricks and the Ace of Spades. On the run of the Diamonds South gives partner a count of the Spades, so no accident can occur in the discarding. Note that Robi had played very skilfully in cashing only one top trump. If the Jack of Diamonds had fallen doubleton, he would have cashed a second top trump and played for the man with two Diamonds to have only two trumps. When the Jack did not fall, Robi played for Diamonds to be 3-3; if they had been so, he would now have cashed the second top trump and claimed, discarding all his Clubs in time.

By not cashing the second top trump, Robi gave himself an important slight extra chance—that of misdefence. It takes a great player to spot that chance.

LAWS OF DUPLICATE BRIDGE/VII.

(Laws extracted verbatim from LAWS OF DUPLICATE CONTRACT BRIDGE 1975, promulgated by The World Bridge Federation, courtesy the publishers, WADDINGTONS PLAYING CARD CO. LTD, LEED, ENGLAND. For details of this and other books please write to me).

Here are a few extracts from the section 'Conduct and Etiquette':

Conduct and Etiquette:-

A player should maintain at all times a courteous attitude towards his partner and opponents. He should carefully avoid any remark or action that might cause annoyance or embarrassment to another player, or might interfere with the enjoyment of the game. Every player should follow uniform and correct procedure in calling and playing, since any departure from correct standards may disrupt the orderly progress of the game. Furthermore, the following are considered breaches of propriety:

(a) The use of different designations for the small call.
(b) Any indication of approval or disapproval of a call or play.
(c) Indication of the expectation or intention of winning or losing a trick that has not been completed.
(d) A comment or act during the auction or play calling attention to a significant incident thereof, or to the state of the score, or to the number of tricks still required for success.
(e) Volunteering information that should be given only in response to a question.
(f) Looking intently at any other player during the auction or play, or at another player's hand as for the purpose of seeing his cards, or observing the place from which he draws a card (But it is not improper to act on information acquired by inadvertently seeing on opponent's card).
(g) Varying the normal tempo of bidding or play, for the purpose of disconcerting the other players.

AVINASH GOKHALE

This Week's Chess
Queen In Distress

LOSS of the all powerful Queen is often tantamount to loss of the game. In position No. 303 the Black Queen unexpectedly succumbs to a Pawn attack. In position No. 304 the Rook attack on the Queen, based on a double check, also comes as a surprise.

Both these games were played in the World Chess Olympiad in Luzern (Switzerland). 4-player teams (with two reserves) from 92 countries participated in this event in Oct/Nov. 1982. In a 14-round Swiss the Soviet team took the first place with 42½ points out of 56, ahead of Czechoslovakia 36; USA 35½; Yugoslavia 35; Hungary and Bulgaria 33½. India, 28½, tied for the 42nd to 45th places with Italy, Singapore and Uruguay.

Karpov (USSR)—Portisch (Hungary)

1.e4, e5 2.Nf3, Nf6 3.Nxe5, d6 4.Nf3, Nxe4 5.d4, d5 6.Bd3, Nc6 7.00, Be7 8.Re1, Bf5 9.c4, Nb4 10.Bf1, 00 11.a3, Nc6 12.cxd5, Qxd5 13.Nc3, Nxc3 14.bxc3, Bg6 15.c4, Qd7 16.d5, Bf6 17.Ra2, Na5 18.Bf4, Rfe8 19.Rae2, Rec8? 20.Ne5, Qf5 21.Bd2!, Nxc4.

Position No 303: 2.g4!, Nxe5 23.gxf5, Nf3ch 24.Kg2, Bh5 25.Qa4, Nh4ch 26.Kh3, Bxe2 27.Bxe2, 1-0.

2...Nf6) Petrov's Defence.

8...Bf5) MCO and 'K.urs Dyebutov' consider only 8...Bg4, (vide Karpov-Portisch, 24.10.82).

12.cxd5) The game referred to above went: 12.Nc3, Nxc3 13.bxc3, dxc4 14.Bxc4, Bd6 15.Bg5, Qd7.

14...Bg6) The purpose of this move is unclear. 14...Rfe8 and 14..Bg4 seem more reasonable.

19...Rec8) An ungainly retreat. But even after 19...Rxe2 20.Qxe2 White's space advantage is enormous; e.g. 20...Bc3 21.Qe7!

21...Nxc4) Hoping for 22.Nxc4, Qxd5 with two Pawns for the Knight. If 21...b6 22.g4, Qc2 23.Qxc?, Bxc2 24.Bxa5 wins a piece.

22...Nxe5 or 22...Qc2 23.Qxc2, Bxc2 24.Nxc4.

Ribli (Hungary)—Unzicker (W. Ger.)

1.c4, Nf6 2.d4, e6 3.g3, d5 4.Bg2, dxc4 5.Nf3, c5 6.00, Nc6 7.Qa4, Bd7 8.Qxc4, Rc8 9.Nc3, b5 10.Qd3, cxd4 11.Nxd4, Ne5 12.Qd1, Qb6 13.a4!, bxa4 14.Nxa4, Qb8 15.Bf4, Bd6 16.Nc3!, Nc4 17.Bxd6, Nxd6 18.Ra6, Qxb2?? 19.Na4, Qb8 20.Nc6!, Bxc6 21.Bxc6ch, Ke7 22.Qa1, Rhd8 23.Rb1, Qc7 24.Qa3, Rb8 25.Rxb8, Qxb8 26.Nc5, Rc8 27.Rxa7ch, Kf8.

Position No 304: 28.Rb7!!, 1-0.

3.g3) Catalan Opening.

5.Nf3) 5.Qa4ch, Nbd7 or Bd7 6.Qxc4 is the main line.

5..c5) MCO also gives 5.. b5! 6.a4, c6 7.00, Bb7 8.Nc5, Qc8.

Koshy-Ravi Kumar, New Delhi 1982, by transposition: 1.c4, e6 2.Nf3, Nf6 3.g3, d5 4.Bg2, Be7 5.00 , 00 6.d4, dxc4 7.Qc2, b5 8.a4, b4! 9.Ne5, Nd5 10.e4, b3! (if 11.Qxc4?, Ba6) 11.Qd1, Nb4 12.Na3, Ba6 13.Be3, Nd7 14.Nxd7, Qxd7 15.Re1, Nd3 16.Re2, Qa4 17.f4, c3! 18.bxc3, b2! 19.Rb1, Oxd1ch 20.Rxd1, Bxa3; 0-1.

8.Qxc4) 8.dxc5, Bxc5 9.Qxc4, Be7 10.Nc3, Rc8 11.Rd1 is recommended in 'Kurs Dyebutov'.

10.Qd3) Not 10.Nxb5?, Na5 11.Qa4, (or 11.Qd3, c4) Qb6 12.Bd2, Nb7 and White loses the Knight on b5.

18...Qxb2??) Now Black's uncastled King comes into trouble. Preferable was 18.00 19.Nxe6, Bxe6 20.Qxd6, Qxb2 21.Na4, Qb8 22.Qxb8, Rxb8 23.Rxa7 and all Pawns being on the same side White's extra Pawn is difficult to utilise.

25...Qxb8) Also after 25...Rxb8 26.Bf3 Black remains entangled, e.g. 26...Ne8 27 Nc5, Kf8 28.Ra7.

27...Kf8) If 27...Rc7 28 Nb7, Ne8 29.Ra8 traps the Queen.

28.Rb7!!) 28...Qa8 loses to 29.Rxf7ch and 28...Nxb7 to 29.Nd7 dbl.ch.

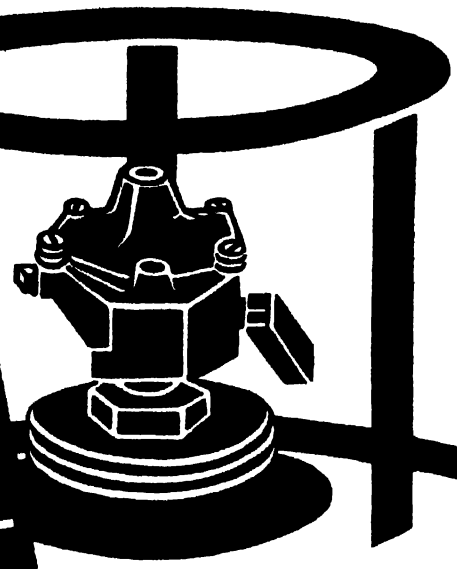
EVERYDAY PRECAUTIONS FOR AN EVERYDAY CONVENIENCE– COOKING GAS



Cooking gas is a boon in the kitchen. To keep it that way, these simple precautions are all you have to remember.

To prevent Gas Leaks:

- Keep cylinder upright. If horizontal, the liquefied gas can escape and leak.
- Change rubber tube immediately if you spot cracks/pores. In any case, change it every two years. Use only a good quality tube.
- Close cylinder valve and burner knobs when not in use.
- Always strike the match first, then switch on the burner.

Ensure that your Delivery Man:

- Closes the cylinder valve before unscrewing the security nut/ pressure regulator.
- Does not hammer-open the cylinder cap or valve.
- Changes the rubber washer in the pressure regulator every time.
- Checks joints and tube with soap solution. If gas leaks, soap bubbles will appear.
- Lights the burner and checks for proper working after changing the cylinder.

And in spite of all this, if you smell gas, act quickly:

- Close cylinder valve and burner knobs.
- Extinguish all naked flames–even agarbattis.
- Open all windows and doors to disperse the gas.
- Do not switch on or switch off lights/fans.
- If gas odour persists, call your Indane distributor immediately.

Remember, cooking gas is the safest fuel for cooking today–if handled correctly. So take care. Don't mishandle it.

In case of any difficulty contact your Indane Distributor or the nearest Indianoil Customer Service Cell.

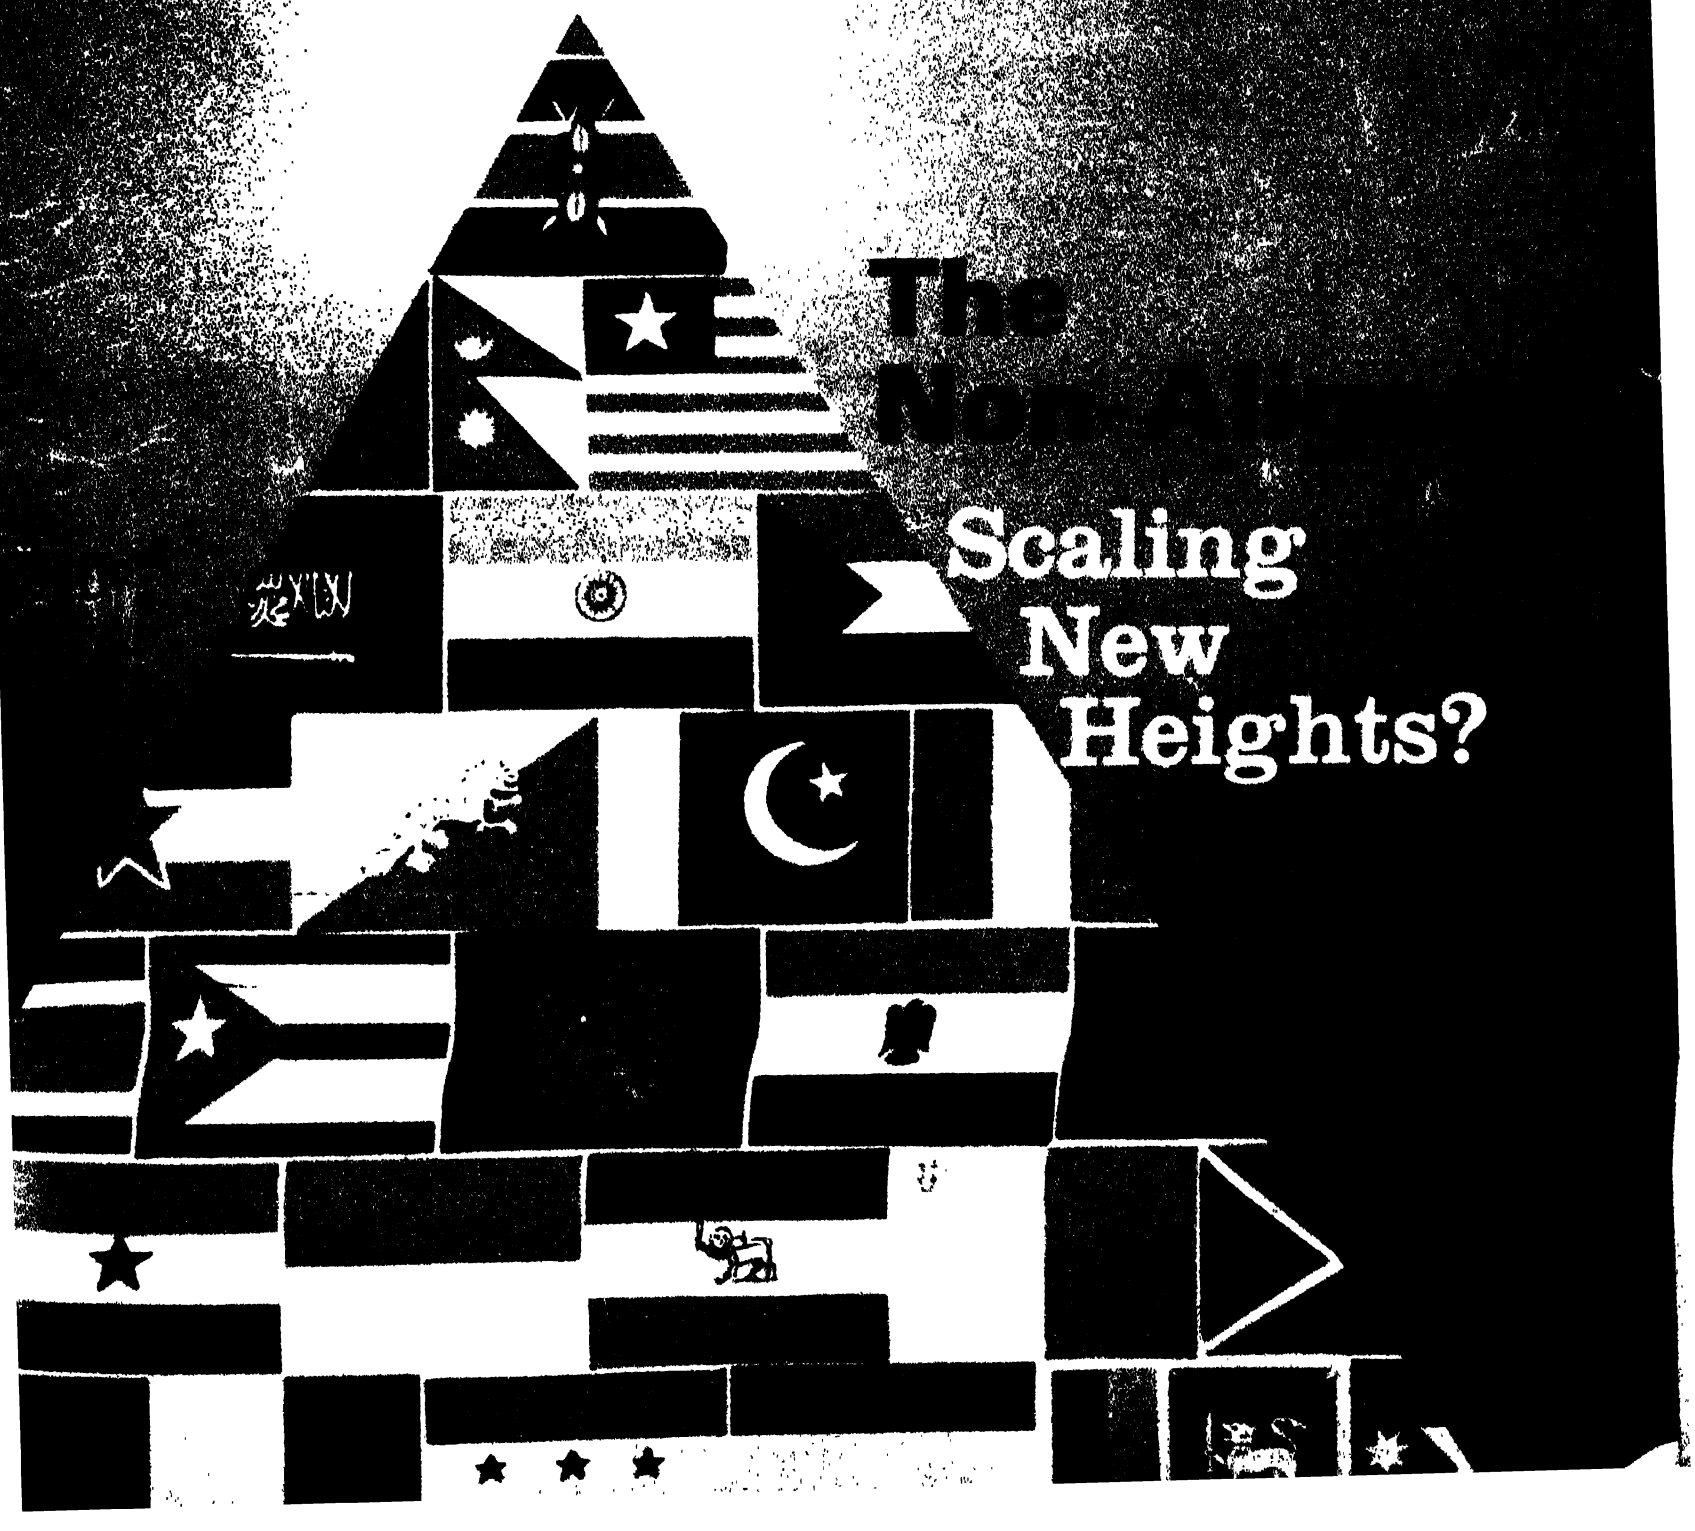
The Non-Aligned Scaling New Heights?



It costs nothing, is guaranteed pure and available when your baby is hungry.

Come to think of it, mother's milk is a white miracle. Perfected by Nature herself.

It has just the right balance of body building foods (protein), energy foods (carbohydrates, fats) and health guardians (vitamins) to nourish a newborn properly.

Guaranteed hygienic.

Your baby drinks it direct from the breast; no risk of contamination. It comes at the right temperature. Whenever your baby needs it

And it is full of protective "antibodies" that prevent gastro-intestinal and other diseases. Also, other good things like anti-scurvy vitamin C, for instance.

Safe and secure.

A breast-fed baby feels more safe and secure, too. Because you cuddle him close while he suckles to satisfy his hunger.

Breast-feeding is now getting more and more popular even in the West as its nutritional and other benefits are getting more widely appreciated.

But what if you're not able to breast-feed for reasons of health or, maybe, because your milk is not sufficient for your baby?

Of course, you must choose the best alternative for him.

Spray dried Amulspray.

Nutritionally well balanced with prime-quality protein, easy to digest fats and carbohydrates and the right blend of essential vitamins and minerals.

It's easy to mix in previously boiled warm water: no need to make a paste first.

Economical.

And, Amulspray is the most economical among tinned baby foods.

Because it is made by the modern milk complex that pioneered India's "white revolution".

But be sure you use boiled water and hygienically sterilised utensils and feeding bottles. And, follow the directions for use on the pack strictly to avoid overdilution and ensure adequate nourishment.

Free! Amul Baby Book

Contains 13 fact-filled chapters on Pregnancy, Antenatal Care, Confinement, Breast-feeding, Outside Feeds, Change over to Solids, Baby's Routine, Baby's Progress, Prevention of Illness, First Aid, Common Ailments, Emotional Problems of Childhood, and Care of a Sick Child. In English, Hindi, Marathi, Gujarati, Tamil, Telugu and Malayalam.

Write to Post Box 10124, Bombay 400 001 with your name and address and postage stamps worth Re 1.25 p.

A message in the interest of your baby's health from the makers of

AMULSPRAY

made by India's foremost milk complex.

From Reader's Digest

Two indispensable reference works to help you

Improve your English and extend your knowledge!

Write Better, Speak Better

An invaluable reference for the whole family.

This big book provides more than 700 step-by-step self-improvement techniques to help you deal with people effectively and confidently — in person or on paper, at home or work, in the classroom or on the speaker's platform — whenever or wherever what you say or write is important.

For the businessman...
If you are in business, you'll find that *Write Better, Speak Better* is filled with money-making ideas: how to turn a customer inquiry into a sale, participate successfully in a business meeting, deal with credit problems, handle a job interview.

For the student...
There's lots of concrete help for students — from organizing an outline and writing a book review to tips on taking written exams and mastering the basics of grammar.

For the homemaker...
And for the many roles today's homemaker must play, here's plenty of how-to information on taking care of social correspondence, dealing with stores, training the children to develop good speech habits, being a good hostess, taking a more important part in community activities.

730 pages • 6" × 9" • 60 chapters • Easy-to-read, 'here's how' style • Hundreds of useful examples • Scores of fun-to-do tests and quizzes • Over 700 step-by-step guides, short-cuts and tips

FREE: Booklet "Anecdotes for All Occasions"

Price: Rs.169.00

Great Encyclopaedic Dictionary

A revolutionary three-volume work of reference which combines the functions of Dictionary and Encyclopaedia.

Here is a work that bridges the gap between dictionary and encyclopaedia. It is a work of reference that covers an encyclopaedic range of subjects — with the brevity and conciseness of a dictionary.

Illustrated
Whenever a subject can be explained more clearly in visual form, a drawing or diagram accompanies the text. There are more than 2,000 illustrations.

Authoritative
It is the joint achievement of no fewer than three distinguished editorial teams: the editors of Reader's Digest, a team of editors from the Oxford University Press, and a group of eminent specialists including etymologists, philologists, and many others. The result is a work that speaks with authority, and meets the needs of a fast-changing world.

Volumes I and II — Knowledge in a nutshell
The latest, the best, and the most lavishly produced of a long line of famous dictionaries compiled by scholars of the celebrated Oxford University Press.

Volume III — Word power equal to any situation
29 Specialist Dictionaries, all illustrated, covering topics usually ignored by all but the most highly priced works: Theatre, Cinema, Radio, Television, Legal & Medical Terms, the Arts, the Sciences, Sports, Fishing, Food, Idioms, Names, Proverbs, Myths, Religions, Slang, Government and many others.

3 volumes over 1,720 pages • 9¼" × 5¾" • Extra-strong, cloth-backed helicon binding

Price: Rs.299.00

LETTERS TO THE EDITOR

The House Mrs G Lives In...

Sir—K.R. Sundar Rajan's article "Can Mrs Gandhi Do It" (February 6) was interesting. The idea of a "Great Cleansing Operation" is indeed fabulous. But no major surgical operation on this earth can cure the most dreadful disease: rampant corruption in the Congress. None can isolate corruption from the Congress (I) politician. Both blend perfectly into each other. That is why Antulay, the founder of a well-named Pratisthan could still shine in the political firmament of Maharashtra. Look at the manner in which Chief Ministers of Congress (I)-ruled States are selected: it is only *her* choice that prevailed. And she says the electoral debacle in South was caused by false propoganda against her party!

S. P. Bhalerao
Pune

Sir—Your beautifully printed cover showing Mrs Gandhi rearranging flowers in her "home" was apt.

A. V. Gemini
Bombay

Beautiful Blueprint

Sir—The cover of the issue of January 30 of the WEEKLY showed NTR's blueprint for a Ram Rajya.

Chitrak
Hegde
Ganeshgudi

Sir—The cine-star named NTR

has now regressed
into a political avatar.
It was film craze,
of the Cong (I) villans,
or was it the bruised pride
of the Telugu tribe,
that helped him display
his popular might?
Having driven out and humbled
the multi-headed female Ravana,
NTR now enaets
Rama's drama
entitled: "Dramayana".

(Scene I)...

Enter Telugu desam,
the land of rice and payasam
where exists
N.T. Drama Rajyam!

(... to be continued)

"Valmiki II"
Secunderabad

Rama Or Ravana

Sir—G.S. Reddy's NTR's Ram Rajya is biased and partial and it has been written with malicious view to defame and disfigure NTR's immense popularity and his new Government.

M.S. Chaitanya
Hyderabad

Sir—What I liked most about NTR is his plain admission that he had made enough money in the past and that he was joining politics for the service of the people. Most of our past rulers wooed the *gaddis* just for power and pelf.

Prabhakar S. Harsole
Indore

Sir—NTR thinks all his actions have the people's mandate. The banishment of English from professional colleges was certainly not in his election manifesto. He is turning Andhra into a Telugu jungle. He should be thoroughly exposed by the Telugu intelligentsia.

V. Narasimham
Hyderabad

Sir—The hero has been sending a stream of promises without bothering about their fulfilment. This invincible CM of Andhra Pradesh seems to be honest and determined but clearly lacks the experience of politics. Does he have a grove of wish-fulfilling trees and a herd of *Kamadhenus* to back up his promises?

Tirumal Mundargi
Shorapur

Sir—The people in Andhra Pradesh have opted for a viable alternative to the Congress (I). They used their right to vote as an opportunity to express their displeasure with the Establishment's economic and political policies.

The multi-party system has come to stay in our country. One should not panic just because a State-based party makes it to the office. The multi-ethnic, multi-lingual and multi-religious character of our society will ensure our national unity.

Deven Vineet
Nashik

Sir—In his "Mistry Dawn Of NTR's Ram Rajya", G.S. Reddy has painted a rather pessimistic picture of Telugu Desam. But the film star-turned-politician deserves all praise for dethroning the powerful Congress (I) from its own bastion.

The so-called Telugu "atma gouravam" has been restored with a stroke, with Mr Ramarao fulfilling one of his poll promises: the formation of a Ministry without the interference of the Delhiwallahs. Unlike his predecessors, the Chief Minister, is visiting New Delhi as a reputed diplomat. By elevating the educated youth to the Assembly, Mr Ramarao has managed to keep most of the professional politicians (who have soiled their hands with several misdeeds) at bay!

Govardhan R. Jilla
Bombay

Deluded Star-Gazers?

Sir—The Webster's Dictionary has rightly defined astrology as a "so-called science" ("The Future Of Astrology: Soothsayers Of The World Unite!", January 30). What a pity in almost all South Indian Hindu marriages the matching of horoscopes is the most important factor! Astrology is a lucrative business. Newspapers encourage it with their weekly forecasts. Why don't they devote that space to some informative articles or literature? The Press Commission has made the right suggestion: "kill" astrological predictions in the dailies and periodicals!

Deepti Chaddha
New Delhi

Sir—The article was quite interesting. In view of the growing disbelief against their so-called science, Astrologers have arranged this seminar as a last ditch battle. It is well known that their calculations were belied several times. If the author quotes the events of 1936, 1943 and 1945 were predicted well in advance by Mr B.V. Raman, then how is it that the astrological charalatan failed to forewarn the major disastrers that happened there after? In fact, the predictions of astrologists in 1961 and 1982 (Conglomeration of Planets) were totally absurd.

T.R. Raghukumar
Dharwad

Distorted View?

Sir—Surinder Suri's findings seem to be distorted by his pedantic prism ("The Crowd In India", January 23). Should an intellectual given to mental masochism be told that the concept of "collective responsibility" in this country remains a euphemism for "no responsibility"? Or is it that our unconscious obsession with anything circular reduces us to a numerical circle—a zero?

Anuraj
Haryana

Prayer Power

Sir—"The Need For Prayer" (January 6) is relevant for all times. In this age of distrust and fear, strife and strain, chaos and confusion, our only hope lies in prayer. The Bible says "Truly, if you have faith, and don't doubt, you can do things like this and much more. You can even say to this Mount of Olives, 'Move over into the ocean' and it will. You can get anything—anything you ask for in prayer—if you believe."

Indra Sen Chaturved
Gangapur City

Biased

Sir—In his article "Foreigners Stand Between Poll And Peace" (January 23) H.S. Sethi tries to win over the readers with opening quotes from Gandhiji. But in the latter half of the article his true motives emerge. In fact the non-Assamese people are actively participating in the current agitation. The mockery of the elections and the present violence in Assam incited by the Government is nothing but anti-national activity. Can there be any bargaining with the Constitution?

G.K. Barua
Ludhiana

Timely

Sir—"Why Businessmen Are Nervous" (January 30) by Virendra Agarwal in WEEKLY is timely.

Krishn
Amroha (UP

Sanskrit vs Tamil

Sir—"Rediscovering Tamil Nadu" (January 16) by R.G.K. is full of sweeping statements. The word separatism, racism and anti Brahminism are thrown at the Dravidian movement without understanding the spirit behind the movement. Viewed from the right perspective the Dravidian movement is an attempt by the Tamil people to reassert themselves after a long period of very subtle cultural domination by the non-Tamil and anti Tamil elements and vested interests. When the historically and culturally significant originality of Tamil and the distinctive elements of Tamil civilisation are purposefully overlooked and a false picture is painted of it as being largely dependent on Sanskrit for its sustenance, those who are interested in truth and facts have got to oppose it. The latter day infiltration of Sanskritic element into Tamil has done more harm to Tamil than good. Original and beautiful Tamil words are wantonly replaced by Sanskrit words and then the new words are paraded as the wonderful contribution of Sanskrit to Tamil.

Wherever there are common elements between Tamil and Sanskrit it is invariably assumed that Tamil has borrowed them all from Sanskrit. Why aren't the Sanskrit people interested in truth and cannot go further back to find out that it could have been the other way about?

R.G.K. speaks of the Tamil word "Ilakkanam" and "Ilakkiyam" as derived from Sanskrit "Lakshana" and "Lakshya" respectively. It is a

out-dated argument of the 19th century that has long been proved false. They are purely original Tamil words with roots firmly established in the language.

Again R.G.K. advocates "Akashvani" for the Tamils. We have a beautiful word "Vanoli" for it. Why should we borrow unnecessarily? Why didn't the Hindi people use "Radio"? Why did they coin the word "Akashvani"? By the same token, we have coined our own word.

The origin and history of Tamil goes further back than that of Sanskrit. The sources of what is called Indian culture and heritage today belong *not* to Sanskrit but to Tamil. Many are not able to digest this and that is why they try to suppress anything that proves Tamil to be greater or older than Sanskrit. Again it is the Sanskrit-lovers' jealousy of Tamil's greatness and originality that makes them destroy the distinctive characteristics of Tamil by coating it with a superficial layer of Sanskrit. And so any attempt by the native Tamil people to scrape away the ugly, unwanted coating and establish their distinctive identity is met with the cry of chauvinism and separatism. It is not that the Tamils are anti-Brahminic, but the Brahmins are anti-Tamil.

Your Affairs:

From this week the last letter on this page will be called "Your Affairs", an innovation wherein we shall welcome your views, comments and experiences on diverse matters of topical and human interest, not necessarily related to the articles featured in the WEEKLY.

—Editor

Is It Cricket?

Sir—By now cricket-watchers all over—specially TV-viewers with the advantage of close-ups—must be familiar with two bowling "tactics": one, a most unhygienic and nauseating habit of smearing the ball with one's own saliva and the other inelegant and not a decent looking one of rubbing the same on the front of the trousers before the run-up.

Surprisingly, not one viewer seems to have objected to the obnoxious practices. Maybe they are necessary "in the interest of the game" and to get the batsman out. But surely the top cricketing authorities and rule-making bodies could think of alternative methods to achieve the same result by more hygienic and elegant methods. Else we will have no moral right to protest against bus conductors etc, issuing tickets enriched with their saliva!

THE FACT THAT NEARLY 100 COUNTRIES find it worth their while to call themselves "non-aligned" is a tribute to the far-sightedness of Nasser, Tito and Nehru *(above)*, three pillars of the movement

All Set For The Summit

by K. Natwar-Singh

Secretary-General, Seventh Non-Aligned Summit

The author makes the point that, when the chill winds of the Cold War swept the earth, when shrill rhetoric made dispassionate, balanced and objective appraisal of world issues difficult, Jawaharlal Nehru came up with an alternative way to tackle the ills of the world: India would not be a camp-follower. We were willing to stand up and be counted. We would judge each issue on its merit, bearing in mind our vital national interests. We would join no military bloc or group. Nehru preached the gospel of peace, of co-existence: *Either we co-exist or we co-perish.*

And now, under the chairmanship of Indira Gandhi, we will, concludes the author, have a creative summit: the collective will and wisdom of so many statesmen will discover fresh avenues of tangible and beneficial cooperation.

We propose, as far as possible, to keep away from the power politics of groups aligned against one another which have led in the past to World Wars and which may again lead to disasters on an even vaster scale. We believe that peace and freedom are indivisible and the denial of freedom anywhere must endanger freedom elsewhere and lead to conflict and war....

The world, in spite of its rivalries and hatreds and inner conflicts, moves inevitably towards closer cooperation and building up a World Commonwealth. It is for this One World that Free India will work, a world in which there is the free cooperation of free people and no class or group exploits another.

—Jawaharlal Nehru, 1946

A UNIQUE event will take place in New Delhi in the first half of March: to the Seventh Non-Aligned Summit will come 98 full members, observers and 18 guests; 70 Heads of State and Government have already accepted Prime Minister Indira Gandhi's invitation to attend the Summit. They will address themselves to pressing problems that beset mankind. Their discussions, deliberations and decisions will inevitably attract worldwide attention and interest. Never in the history of mankind will so many world leaders have spent so much time in one Capital.

Jawaharlal Nehru enriched the vocabulary of international relations by providing the concept of non-alignment to it. He made the political processes coherent and noble. His name will be on every lip during the Summit. His life-enhancing vision, his soundness of judgment, his political foresight, his subtle and shrewd understanding of the temper of the times are now ungrudgingly acknowledged by all. When the chill winds of the Cold War swept the earth, when shrill rhetoric made dispassionate, balanced and objective appraisal of world issues difficult, Nehru came up with an alternative way to tackle the ills of the world.

India would not be a camp-follower. We were willing to stand up and be counted. We would judge each issue on its merit, bearing in mind our vital national interests. We would be non-aligned, not neutral. We would not be a client state. We would join no military bloc or group. Nehru preached the gospel of peace, of co-existence: *Either we co-exist or we co-perish.* He denounced the arms race. Cooperation and conciliation, not confrontation and conflict, could make the world a bearable place to live in. He was a path-finder. He raised the level of international political, diplomatic and economic dialogue. He did not speak in vain.

Issues At Stake

That nearly 100 countries find it worth their while to call themselves non-aligned is a tribute to the far-sightedness of Nehru, Nasser and Tito. One does not join a club with dwindling membership or put money in a bank on which there is a run. This is not to suggest that the Non-Aligned Movement faces no challenges from within or without. Differences do exist. These are discussed openly and freely, not brushed under the carpet. However, there is broad consensus on major political and economic questions. No one wants to transmit the divisive scenario of the UN General Assembly to NAM deliberations.

What are the issues before the New Delhi Summit? Peace, Disarmament and Development. The three are indivisible and also indispensable for the welfare of the human race. They encompass the lengthy political and economic agenda of the Summit.

The Seventh Summit meets at a critical time. The international political landscape does not look inviting. The Cold War appears to be staging a comeback. The arms race continues unabated. The economic horizon has not been darker for half a century and the new international economic order remains a distinct goal. The world needs political first-aid and economic "blood transfusion". It needs something more—a climate of peaceful co-existence and constructive cooperation.

I have no doubt that, under the chairmanship of Indira Gandhi, we will have a creative summit: the collective will and wisdom of so many statesmen will discover fresh avenues of tangible and beneficial cooperation.

PRESIDENT HOSNI MUBARAK of Egypt delivering a May Day speech at the Labour Federation in Cairo.

Will They Guard The Ramparts?

The Seventh Summit of the Non-Aligned in New Delhi will be attended by a small army of 3,000 delegates. What can the Summit do to make the movement more effective and more respected? One, the present designation of the movement as *non-aligned* is totally false and misleading and should be changed. Two, the movement will continue to be fat, flabby and impotent until its membership is restricted to the truly non-aligned—a quarter, at most, of the present 98. Three, India could impress on the Seventh Summit that there should be less talk about every issue under the sun and, instead, practical decisions on how to tackle a few selected crises: Palestine, Kampuchea, Central America and the Indian Ocean as a Zone of Peace.

CUBA'S FIDEL CASTRO whose place in the Non-Aligned Movement is the subject of much controversy.

by Godfrey Jansen

The author's *Afro-Asia and Non-Alignment* was published in London and New York. Godfrey Jansen has attended Bandung, Belgrade and several other Afro-Asian and Non-Aligned Conferences. He will also be attending the Seventh Summit in New Delhi and assessing the Conference for the *Weekly*.

NO fewer than 98 countries will be attending the Seventh Summit Conference of the Non-Aligned Movement as full members; and, in addition, 11 countries and 8 international organisations have been invited to observe. a total roll-call of 112 representatives present. India would have done a lot better and would have saved the Indian taxpayer a fair amount of money if it had sent invitations only to those Governments truly trying to follow a non-aligned policy—these probably number no more than 200.

Though there is within the non-aligned movement a yawning gap between appearance and reality, it remains, potentially, the most intelligent, serious and sincere of all international groupings—*potentially*. This is so because, even though it is called a "movement", it is not an assemblage of parties committed to an ideology, like the Socialist or Communist International: they aim at revolutionising the scheme of things, while the hard-pressed Non-Aligned Governments would be grateful to contrive survival against nuclear annihilation and world hunger.

The movement is not based on geographical contiguity—like the OAS or the OAU or the ASEAN. It is not a geopolitical military alliance—like the NATO or the Warsaw Pact. Nor is it merely a gathering of countries that, over the centuries, have become rich (like the EEC) or of those who, over the centuries, have become poor (like the Group of 77).

In short, the base of the non-aligned movement is not some accident of history or geography or economics. Its base is a deliberate choice made by certain governments to follow a particular type of foreign policy—it is a grouping of the *like-minded*. But, alas, the majority of the present members are not like-minded and do not follow the same policy, which is why the movement today is, like the eunuch in some Ottoman harem, fat and flabby and impotent.

Therefore, this axiom may be propounded: non-alignment is too valuable, too challenging, too courageous an idea and policy to be left to the present non-aligned movement and especially not to its summit conferences.

Non-alignment, in truth, is a very simple idea. It is not "neutrality", not even "positive neutrality", nor "neutralism", nor is it "equidistance", as between the Super Powers. Non-alignment is simply the determination of countries that are independent—and, what is more, *feel* themselves to be independent– to follow an independent line in their foreign policy, deciding each foreign policy issue on its merits, and consequently sometimes siding with one Super Power, sometimes with the other, and oftentimes agreeing with neither.

If we test this definition against the membership of the Seventh Summit, then the result comes out as follows. there are 20 odd countries out of the 98 that are too small or whose policies are too obscure or erratic to be taken seriously or into account; of the remaining 78, perhaps 17 or 18 at most really try to be independently non-aligned, about 20 lean to, or are allied to, the Eastern Bloc; around 25 are close to, or allied to, the West, and somewhere in between are 10 countries that may be called "moderate", those who would like to be more independent.

However, the non-aligned movement, perhaps not wholly for its own good, has become expressive of something more than a stance in foreign policy. It emerged from, and then took over, the earlier Afro Asian movement. the non-aligned summits were begotten by the Asian Relations Conference, held in Delhi in 1947, and the Asian-African Conference, as it was called, in Bandung in 1955.

Global Trade Union

So the non-aligned are the black, the brown and the yellow ex colonials. Yugoslavia remains the only uncoloured member. It is also a global trade union of the economic have-nots. So, if what should be determinant policy is combined with the character of the actual membership, the movement becomes an expression of solidarity between the newly independent countries, beset with chronic problems of underdevelopment and maldevelopment, aspiring to independence and equality, both political and economic.

The sole true founding father of non alignment was Jawaharlal Nehru, because his foreign policy from the start was structured on non-alignment and because India began practising that policy from 1946—earlier than Burma, Ceylon, Indonesia, Egypt or Ghana, who gained independence a few years later. And it was Nehru who set the movement's targets for its first two decades in the 1950s, they were, primarily, colonial- →

TWO RESPECTED AND INFLUENTIAL LEADERS within the movement today: Indira Gandhi in Asia and Julius Nyerere in Africa. The movement today probably suffers from the fact that, in its early years, there were too many big men among its leaders: the Founding Fathers of Non-Alignment were also the Fathers of their Nations. But now the story is different.

Five Non-Aligned Criteria

Cairo: June 1961

1. **A country should follow an independent policy based on peaceful co-existence and non-alignment or should be showing a trend in favour of such a policy.**
2. **It should consistently have supported movements for national independence.**
3. **It should not be a member of multilateral military alliances concluded in the context of Great Power conflicts.**
4. **If it had conceded military bases, these concessions should not have been made in the context of Great Power conflicts.**
5. **If it were a member of a bilateral or regional defence arrangement, this should not be in the context of Great Power conflicts.**

ism and racialism; in the 1960s, they were peace and opposition to black politics; then, in the 1970s, the focus was on economic development: while, in the 1980s, the emphasis seems to have returned to peace, disarmament and *detente*.

In its earlier years, and then again more recently, the movement has had a special aroma of its own—the smell of self-righteous sanctimoniousness, what may be called the *wishy-washy goody-goody* factor. Dealing with the great problems of war and peace and feeling that they alone, in their "area of peace", were holding apart the truculent Super Powers, the non-aligned were apt to fall into self-congratulatory sermonising that the aligned (and some of the non-aligned) found very irritating. This aroma faded in the 1970s, when the smell of hunger took over, but, with the return of the Cold War, the *W-W, G-G* factor is returning. Thus the Indian Foreign Minister recently said that the movement "symbolises the will of humanity to survive" and "as a force in terms of irresistible world opinion". If only it were!

Very Large Hot-Air Blimp

How did the non-aligned movement come to be what it is?

At present, the movement resembles nothing so much as a very large hot-air blimp, with 98 persons in the passenger cabin. This is just about the last thing that should have happened to a movement that is a grouping of the like-minded, of Governments that agree on a particular policy idea: they should have produced a fairly exclusive club restricted in membership to the like-minded.

This was a battle that was joined as far back as June 1961 at the Preparatory Conference for Belgrade, held in Cairo. Presidents Tito and Nasser, entirely on their own initiative, invited 19 Governments to this meeting and even some of these were not non-aligned according to the five-point definition of non-alignment produced by the Conference itself—countries like Morocco, Ethiopia and Saudi Arabia. Cuba was a new member—an addition that was to have far-reaching consequences. India wanted 15 more countries to be invited to Belgrade—of which some were non-aligned—but this was opposed by Yugoslavia and Egypt because of their bilateral antagonisms.

LUSAKA 1970: Mrs Gandhi with President Suharto of Indonesia. For three years starting with the New Delhi Summit, Indira Gandhi will be Chairman of the Non-Aligned Movement, taking over from Fidel Castro.

Finally, only seven invitations were issued to new members and only two were actually accepted. The three African states that were asked all declined, because 12 of the 17 new African countries established in 1960 formed themselves into what was called the Brazzaville Group that was strongly pro-French, anti-Asia and anti-non-alignment.

In however restricted a fashion, the Cairo meeting established that membership of the movement could be diluted by the addition of friends and neighbours of those issuing the invitations. Yet, despite the dilution, the first and best-known and most influential non-aligned summit, Belgrade, had a restricted membership of only 25 and was effective for that reason.

Fateful Dilution

The really fateful dilution of the movement came when it was decided to invite all the 32 members of the Organisation of African Unity, established in 1963, to the Second Non-Aligned Summit in Cairo in 1964. This blanket invitation went out simply because the Charter of the OAU stated, quite untruthfully, that its members, including the Brazzaville Group, "unreservedly adhered to the positive policy of non-alignment". Yet 10 of the more honestly aligned Africans did not go to the Cairo Summit where the membership was 47—nearly twice that of Belgrade.

After this massive breach of non-aligned like-mindedness, the membership increased virtually indiscriminately, and rapidly, particularly after the Third Summit at Lusaka in 1970, at which 53 states were present; followed by the Algiers Summit of 1973, with 75 in attendance: Colombo in 1976 with 85; and Havana in 1979 with 92 states attending.

What should and does cause concern is the alleged manoeuvrability within the *(non-aligned)* movement which most certainly makes it soft and vulnerable. A study of the voting pattern in the United Nations would clearly indicate that the consensus arrived at in the non-aligned conferences is not at all reflected in the world forum.

In effect, after 1964, the movement was not that of the non-aligned but of the Third World have-nots: it should really be renamed. Its membership was also increasingly taken over from the Asians by the far more numerous African states—at Havana and again at New Delhi, the African states were, and will be, almost twice the number of the Asians.

How does a movement based on a specific idea function with a completely unspecific membership? The answer is easy: the motivation is hypocrisy and the method is consensus and reservations to consensus. In short, Governments say one thing when agreeing to the overall unanimity or consensus, expressed in the declarations and the resolutions at non-aligned conferences, but say and do something else, even the exact opposite, in more serious meetings, like the UN General Assembly. There Governments have to behave responsibly, because Governments are individually identified with, and are accountable for, their votes. As the Indian Foreign Minister put it recently:

What should and does cause concern, however, is the alleged manoeuvrability within the movement which most certainly makes it soft and vulnerable. A study of the voting pattern in the United Nations would clearly indicate that the consensus arrived at in the non-aligned conferences is not at all reflected in the world forum.

Consensus: Its *Mantra*

So long as the movement gives greater importance to the size of its ever-increasing membership—rather than to the quality of that membership—and puts the unity of this motley assemblage above its integrity, consensus is probably the only way in which these conferences can express themselves. "Consensus" is one of the *mantras* of the movement, yet this is what the Havana Conference had to say about it:

Consensus has a certain indefinable quality hard to express in words, although we know instinctively what it means.

"Indefinable"? Not at all. There are many words for it in English—"expedient", "duplicitous" and, above all, "hypocritical". Yet, even though "consensus" is only a thin veneer of unanimity, there are some Governments who, to their credit, take it seriously enough to breach it by submitting "reservations" to particular parts of the final consensus document. Thus, after the Foreign Ministers' Conference in Belgrade in July 1978, nearly 250 separate reservations were tabled by 37 Governments including India, with Argentina being the most "reservationist". And six Governments—Bhutan, Nepal, Peru, Singapore, Zaire and Kampuchea—tabled a blanket reservation "on the paragraphs which may be incompatible with their policies", a real *reductio ad absurdum* of the consensus idea. Little wonder that the Havana Conference cautioned that "reservations should be avoided as far as possible because they tend to weaken the consensus". But they do, at the same time, reduce its hypocritical content.

With a membership that now includes two-thirds of all the countries on the face of the earth, the concerns of the non-aligned movement have undergone a similar inflation. Its ever-larger conferences take on too many issues and talk too much about them in longer and longer communiques. The most influential Belgrade Summit produced a historic 300-word *Statement on the Danger of War and an Appeal for Peace* of which the whole world took note, because it could—due to its brevity; and, in addition, there was a declaration of about 3,500 words; and not a single resolution. Cairo produced a declaration of over 8,000 words. After Lusaka (10,000 words) there were both declarations and resolutions, so Colombo produced 40,000 words and Havana 56,000 words—a 140 pages of a normal non-fiction book.

Which busy, conscientious politician or diplomat or journalist would have the time or the energy to plough through this swamp of repetitions and platitudinous verbiage? And, with the increase in verbiage, the rhetoric inescapably increases too: Lusaka produced *A Declaration on Peace, Independence, Development, Cooperation and Democratisation of International Relations.*

Non-alignment is too valuable, too challenging, too courageous an idea and policy to be left to the present non-aligned movement, especially to its summit conferences.

Confronted with this compendium of the good, the true and the beautiful, the rest of the world would be entitled to ask: *Who do the non-aligned think they are? And whom do they think they are addressing?*

The success—that is, the real seriousness and usefulness of the Delhi Summit—can be assessed with mathematical exactitude: if it limits itself to a declaration, without resolutions, and if that document is no more than 10,000 words long (over twice the length of the Belgrade document), then it will be a success, and not just a factory for more hot air for the non-aligned blimp.

If the non-aligned movement is so blurred in its membership and so downright dubious in its practices, the challenging question can be asked: *Then why do so many different countries choose to join it?*

Obviously for many different reasons. After a certain point, when the membership of a movement passes the 50 mark, the question becomes: *Why not join in?* The element of fashion comes into play—*Everybody's doing it*—to quote the words of a popular song—*Let's fall in love* with non-alignment; and just about every Third World state has done just that.

After all, there is no membership fee and, even better, thanks to consensus and reservations, no binding obligations. No fewer than six positive advantages flowing from non-aligned membership can be listed: it ensures political freedom and independence and contributes to national self-respect; alliance member

alignment permits freedom of expression and action; it keeps a small nation from getting involved in larger and irrelevant conflicts; it makes local problems easier to solve; it eliminates the need to divert resources to the military obligations of alliances; and the non-aligned can bid for economic or military aid from *both* sides in the Cold War.

In theory, all these are, indeed, solid and valuable benefits but, in practice, they accrue only if non-alignment is really adhered to; but "national self-respect" is not increased if—as is the case—many countries tied in with one or other of the Power Blocs pretend to be non-aligned.

However, if the movement has made converts, it has also lost some of the previously faithful—Egypt most notably and Afghanistan, also Kenya, Somalia, South Yemen, Sudan, Zaire and others. The losses definitely outnumber the gains. And yet those "lost" do not quit the movement and are not pushed out. Perhaps they stay out of a sense of shame, a reluctance openly to admit that they are no longer as independent as they once were. Perhaps their Super Power sponsors prefer that they should remain inside the movement to watch it, weaken it, perhaps even to subvert it. And the consensus device would help them to do this because if it represents, as it does,

In effect, after 1964, the movement was not that of the non-aligned but of the Third World have-nots: it should really be renamed. Its membership was also increasingly taken over from the Asians by the far more numerous African states—at Havana and again at New Delhi, the African states were, and will be, almost twice the number of the Asians.

In the 1950s and the 1960s—when many countries, inexperienced in independence, were emerging into the harsh world of international affairs and power politics—the movement very usefully provided a protective corral while they learnt the rules of the game. Further, the very size of its present membership that detracts from its integrity nevertheless amplifies the noise the non-aligned might choose to make on any particular issue—and they have made some useful noises. The demands and the advocacy of the Afro-Asians and the non-aligned did undoubtedly speed up the process of decolonisation in the 1950s, the 1960s and the 1970s. And, in the 1970s, the economic needs of the Third World, or the South, would not have been given as much attention if they had not been expressed loudly, *en masse*, in the Group of 77, now actually numbering 120, which the non-aligned claim was a direct product of their movement.

The non-aligned movement was the one claimed for it by Nehru—that its physical expanse represented the "area of peace", an actual buffer zone physically separating the two Power Blocs from which their arms and bases and soldiers would be excluded. That is still a vitally important function and, therefore, it can be argued that the area of peace should be expanded and the buffer zone should be widened, even if this means that the membership of the non-aligned expands to 98 or even more.

Only, what becomes of the "area of peace" if more than half of the non-aligned are not functioning as buffers but are actually bastions and outposts, overt or covert, for one or other Super Power? The buffer zone is now as full of holes as a sponge. Yet, even so, perhaps their membership of the movement could act as a brake on those covertly aligned by holding them back from collapsing into full-scale alliance: and it could also act as an attraction, a temptation, for the aligned non-aligned to pull them away from a position of dependence and junior partnership.

Perhaps it is the self-respect of non-alignment that has prevented Saudi Arabia and the Gulf States, so closely tied to the United States, from granting to it the military bases the Americans so badly want in that crucial area. It was undoubtedly the pull of non-alignment that helped draw Iran, Iraq and Pakistan out of military alliances.

the lowest common factor, then a country or a group of countries that stubbornly insists on its viewpoint can, for instance, weaken a condemnatory resolution out of recognition, though it is more difficult to impose a positive strengthening.

The aligned among the non-aligned are so because they want to be so, not because they absolutely have to be so. Membership in the movement and the force of example and of contiguity might just possibly stiffen their backbone. But does this hope justify their remaining in a movement that they certainly dilute and weaken, perhaps subvert?

Why is the Non-Aligned Movement what it is?

To judge by its outward aspect, non-alignment is alive and well and living within the non-aligned movement. It certainly meets often enough. This Seventh Summit convenes 22 years after the first one; the Foreign Ministers meet at least every 18 months and ministerial meetings of the Coordinating Bureau are held about once a year.

These latter began as far back as 1974, when the need was felt for a body to follow up the decisions of the Summit Conferences; the arrangement was formalised when, at Colombo in 1976, a permanent Coordinating Bureau was established, composed of the Permanent Representatives at UN Headquarters of 25 countries: which, typically, has been increased to 36. Though the non-aligned say, with a touch of pride, that they are not a Bloc and do not have a headquarters or a secretariat, the movement now does have a loose and formal structure that should provide continuous momentum towards the movement's goals. So far so good.

But in its real, inward aspect, things are not so good. Yugoslavia has a special position in the movement: it is one of the founders and has been one of the most sincere exponents of the idea and policy, but it remains the only full member from the European continent. It is, therefore, somewhat marginal and this gives it the ability to look at the movement in detachment and to evaluate it with down-to-earth realism. And the Yugoslav expert on non-alignment is Leo Mates. In a recent lengthy analysis of the movement's history, he wrote:

... was trying to arrive at a rounded version of its goals... it took a long time to do it... there was always progress, although more in the sense of defining goals than attaining them. Then, after the concept was completed, the debate (roughly 1973-1976) still absorbed the full attention of the non-aligned and hopes were rising. Thereafter, a period of disappointment set in... the period of crisis begins when the goals are finally set and it becomes necessary to pass on to actions and achieve results in the field... at the Havana Summit, some of the fundamental policies and goals formulated in Belgrade were openly questioned... the movement as a whole did not permit itself to be depressed or unbalanced by early failures to obtain its goals.

The non-aligned are the black, the brown and the yellow ex-colonials—Yugoslavia remains the only uncoloured member. It is also a global trade union of the economic have-nots.

"Failures". So there it is, from a most knowledgeable, most sympathetic inside observer.

Why? Many reasons, both internal and external to the movement. Lack of leadership, for a start. The movement today probably suffers from the fact that, in its early years, there were too many big men among its leaders: the Founding Fathers of Non-Alignment were also the fathers of their nations

They Have Lasted It Out

Who are the respected and influential leaders within the movement now? In Asia, Mrs Gandhi: in Africa, Nyerere; and in Latin America, Castro, who should not be in the movement at all.

However, of even these leaders, it may be said that their chief quality is that they have, quite simply, lasted out. Mrs Gandhi and Nyerere have been much too preoccupied with the internal problems of their countries to provide much leadership abroad—indeed, for a decade or more, India's foreign policy has been in *purdah*, from which it has only recently emerged. While Castro was only too ready to provide leadership, his influence has been wholly malign in that he wanted the non-aligned to become aligned.

Secondly, the movement was split by internecine squabbles and wars. It was bad enough that the pro-East and pro West camps—which have been present in the movement from the beginning—should tussle with each other (and this reached its apogee at Havana) but that they should take to the field of battle in Kampuchea, and the Gulf, and the Sahara, amounts to an internal haemorrhage.

Thirdly, the movement suffers because the record of achievement of too many of its Member Governments is absolutely minimal even at the basic level of maintaining law and order, to say nothing of the poor becoming poorer. A somewhat arrogant pre-Nasser Egyptian Prime Minister once said that, without Egypt to provide the digit in front, the Arab League was Zero plus Zero plus Zero equals Zero. There are very many zeros in the non-aligned membership: who puts in the digit? →

ADJUSTING HER HEADPHONES is Indira Gandhi at the Fourth Non-Aligned Summit in Algiers. "With a membership," says the author, "that now includes two-thirds of all the countries on the face of the earth, the concerns of the Non-Aligned Movement have undergone a similar inflation... Colombo produced 40,000 words and Havana 56,000 words. Which busy, conscientious politician would have the time or the energy to plough through this swamp of repetitions and platitudinous verbiage?"

Externally, the two Super Powers have not looked overly kindly on the movement.

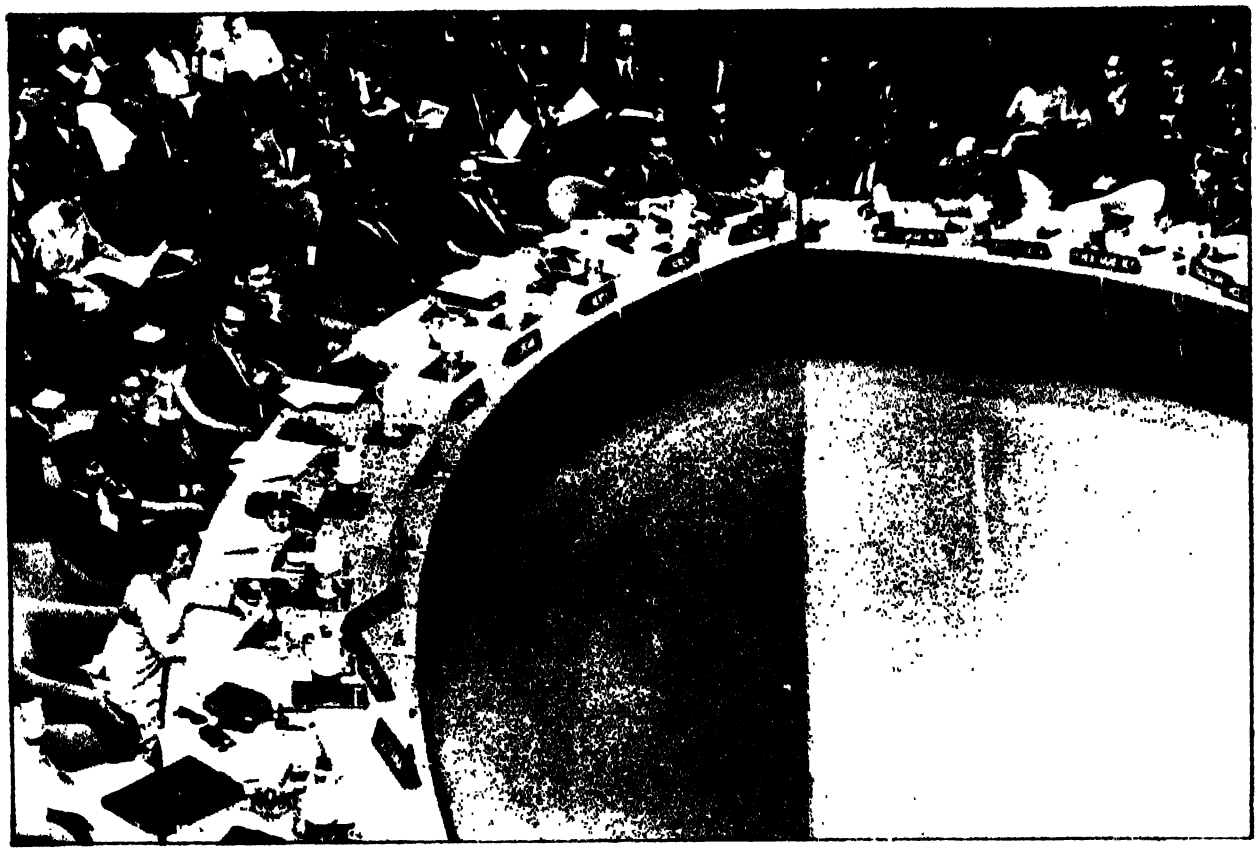
Why should they? Particularly now with a return to the bipolarity of the Cold War.

From the start, the US attitude towards non-alignment was the crude *If you are not for us you are against us* and are, therefore, "immoral". The present American attitude is slightly more sophisticated in that the US says it wants Afghanistan to return to its non-aligned position. But, naturally, the US works through its fifth column within the movement to give it a Westward tilt.

And Russia does the same through its fifth column. The Russian position has always been more subtle than that of the Americans: *If you are not against us you are for us.* So, in the early 1950s, Russia gave blanket approval to the non-aligned. This changed in the mid 1960s: in a speech by Brezhnev in February 1976, the Soviet Union made it clear that its approach to Third World and non-aligned countries was going to be selective: with approval and aid going to its aligned friends within the non-aligned—Cuba, South Yemen, Ethiopia, Kampuchea, Vietnam and so on. So the bipolar crunch is once again on the middlemen.

Fourthly, the non-aligned have been singularly unsuccessful in their attempts to bring about a mediated settlement of their own or others' disputes. They got nowhere in the Iran-Iraq war and they were not even allowed into Lebanon when they tried to do something about the Israeli invasion. But at least they tried and should go on trying.

Above all, the failure of the non-aligned has been a moral failure, a failure to express independent judgments on issues that is the essence of non-alignment. That is not, of course, realistic politics, but then non-alignment is supposed to be based on something more than mere "realism".



The movement suffers because the record of achievement of too many of its Member Governments is absolutely minimal even at the basic level of maintaining law and order, to say nothing of the poor becoming poorer. A somewhat arrogant pre-Nasser Egyptian Prime Minister once said that, without Egypt to provide the digit in front, the Arab League was Zero plus Zero plus Zero equals Zero. There are very many zeros in the non-aligned membership: who puts in the digit?

The moral weakness was there from the start. At Belgrade, only 7 out of the 25 leaders present condemned Russia's wholly condemnable resumption of atomic tests. The non-aligned play safe and speak out boldly when a Big Power misbehaves flagrantly (like the US in Vietnam) but they become mealy-mouthed if any doubts, however specious, can be raised about an issue. They have not said what they should have said about the Russian invasions of Czechoslovakia and Afghanistan or the US interventions in Central America and West Asia. The Foreign Minister of Sri Lanka, Shahul Hameed, has put it very clearly.

What could be called the decline of the moral influence of the non-aligned movement has been caused partly by the apparent decline in our own moral standards.

Less than a year after Belgrade, the have-nots quite rightly decided that their economic plight was just as serious as their political problems and stated this at the Cairo Economic Conference of July 1962. The have-not group formed there re-emerged as the 77 Group at UNCTAD in Geneva a year later. It took another decade for the non-aligned movement as such to give proper priority to economic problems at a Foreign Ministers' meeting in Georgetown in 1972. But just four years later, at Colombo in 1976, an organisational high point was reached when an *Action Programme for Economic Cooperation* was announced to 29 countries named as "coordinators" to put forward ideas on no fewer than 15 subjects—from Raw Materials to Tourism to Sports.

Earlier on, at the Algiers Summit in 1973, an Economic and Social Development Fund was agreed on and formally established as the Solidarity Fund at Lima in 1975, with a Charter of 10 Chapters and 63 Articles. But today, eight years later, the Fund has not yet been established in practice.

The Havana Summit declared that in 1979—five years after the UN called for what was styled a New International Economic Order—"the economic situation faced by the developing countries continues its pervasive deterioration". The non-aligned have discovered that it was easier for the haves to yield the political power of colonialism than the profits of neo-colonialism. As the realistic Leo Mates puts it:

The most serious challenge to the future of the movement was, in the past, the slow progress and the insignificant success in the endeavour to reshape the economic order. This is likely to be the most trying test in the future also.

That may seem an unnecessary, even an impertinent question to ask about a movement whose Seventh Summit will be attended by a small army of 3,000 delegates. Obviously, this movement will continue and expand—doomed to continue and doomed to expand, the critics may say. But what can be done to make the movement more effective and, especially, more respected?

Three measures can be suggested, the first of which is entirely practicable:

- The present designation of the movement as "non-aligned" is totally false and misleading and should be changed.

- The second measure is, quite frankly, a counsel of perfection and of despair: the non-aligned movement will be fat, flabby and impotent until its membership is restricted to the truly non-aligned—a quarter, at most, of the present 98. A Credentials Committee could be established to apply the five criteria of non-alignment to each state and to expel, or better suspend, the membership of those not meeting these criteria; and then to reinstate those who later on come round to fulfilling the criteria yet again.

Zaire is a prime subject for expulsion: a few weeks after a Ministerial Committee discussing the Israeli invasion of Lebanon called on all members to break diplomatic relations with Israel, Zaire re-established relations and then concluded a military agreement. If such blatant defiance is not punished, then the non-aligned movement truly has no political or moral basis.

It would be both normal and honest for the movement to have a fluctuating membership, for clearly the policies of countries undergo change according to changing circumstances. Very few countries can even be expected to be non-aligned for ever, because it is a peculiarly difficult and demanding policy. But who would grasp the nettle of inflated membership? Burma perhaps, a founding state that left it in disgust, if it can be persuaded to return and wield the *dah*.

- The third reformist measure which India could enforce on the Seventh Summit is to have less talk about every issue under the sun and, instead, practical decisions on how to tackle a few selected crises: Palestine, Kampuchea, Central America and the Indian Ocean as a Zone of Peace—and perhaps one or two others and no more. The economic issues can be given a decent burial.

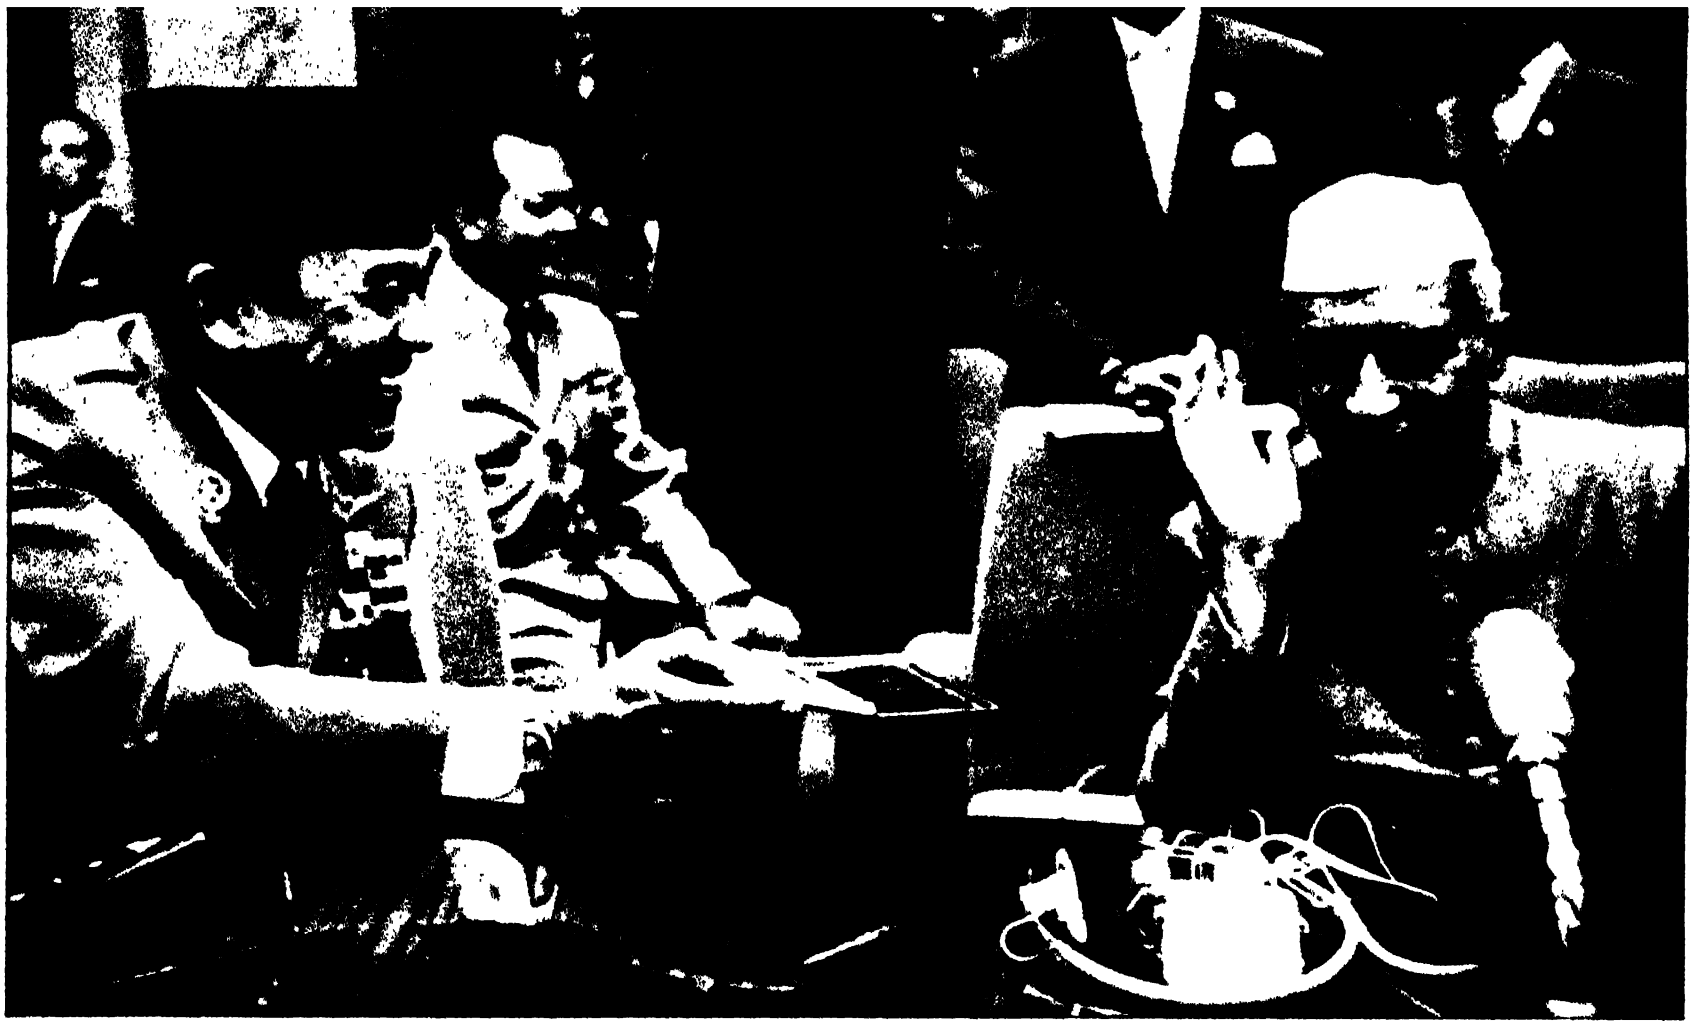
The Last Word

The decisions to take action on these issues can only be the result of frank and forthright debate, however embarrassing this may be to either Super Power or any member, even the host country. Why, for instance, was the reference to Diego Garcia dropped from the resolution on the Indian Ocean passed by the Foreign Ministers' Conference in New Delhi in 1981? That deletion was an act of political and moral cowardice—all too familiar in the movement today. Let the Sri Lankan Foreign Minister have the last word:

We are a moral force in international politics: we do not impose our principles by force of arms but by force of morality and reason—and thus exert our influence in world opinion. We must, therefore, be irreproachable in the practice of our non-aligned principles.

A nice combination of good sense and of the *W-W* and *G-G* factor. ■

BEFORE THE NON-ALIGNED are the findings of a recent seminar in Delhi on disarmament. This seminar brought out the spine-chilling fact that the world has 50,000 nuclear weapons with a destructive power equivalent to a million Hiroshima bombs. In other words, today there are three tonnes of TNT for every man, woman and child inhabiting this planet. On armament, the incredible sum of a billion dollars a day is being spent. Once and for all, the non-aligned have to determine their attitude on a matter of such great moment to the whole world.



TWO CHARISMATIC LEADERS, President Sukarno of Indonesia and Prime Minister Jawaharlal Nehru of India, at the historic First Summit in Belgrade, 1961. From 25 countries at that First Summit, the NAM membership has shot up to 98 for the New Delhi meet.

The Dangers Ahead

It is a measure of the weakness of the Non-Aligned Movement (NAM) that it has not been able to dislodge the apartheid regime which practises brutal repression and oppression of its Black citizens... Morality, like charity, must begin at home. If NAM is to carry conviction abroad about its moral stances, it must first bring to bear the moral sanctions against its erring members. If it wants its credentials for world harmony to be taken seriously, it must close its own ranks.

by J.D. Singh

THE eve of the Seventh Non-Aligned Summit in New Delhi provides an opportune moment to reflect on the state of health of the movement and pose some basic questions about its validity and relevance in an international climate that has vastly changed since Nehru, Tito and Nasser launched it on the world stage. From its fast-growing membership, it is apparent that the Non-Aligned Movement (NAM) is alive and kicking; it is in good and robust health. From 25 countries at the First Summit in Belgrade (1961), the membership has shot up to 98; and three other countries are knocking on NAM's door for admission. It has thus nearly scored a century.

However, its very popularity involves certain risks which it can ignore only at its peril. Unless adequate and proper safeguards are taken, its overplumpness can lead to its destruction. Already, membership credentials have been thrown overboard in admitting nations that can hardly be called "non-aligned" in the strict sense of the term. It would be invidious to mention names, for the list of such countries, ranging from distant Cuba to neighbouring Pakistan, is too long to bear repetition here. Suffice it to say that NAM's unchecked and indiscriminate growth has inevitably led to a diffusion of its basic character and converted it from a strong moral force to counter the activities and the designs of the two Power Blocs into a flabby grouping of all sorts of regimes—a kind of "non-White" version of the United Nations, though NAM, it is true, has as members some "White" countries like Yugoslavia.

Before turning to such explosive issues as the seating of Kampuchea at the coming summit, let me briefly refer to another risk on the ideological or moral plane that NAM is facing in the wake of the increasing tendency on the part of its members to play the role of a Third Force in world affairs. This tendency manifests itself in the moves being made to formalise NAM into a Bloc, with a permanent secretariat and office staff and all the other paraphernalia. Such an alignment would surely be the very antithesis of the term "non-alignment" and would violate the concept as propounded by its founding fathers.

Nehru's View

Jawaharlal Nehru, for one, dismissed the idea of a Third Bloc quite early in the history of the Non-Aligned Movement. When some members of the Indian Parliament propounded the idea of a Third Force, Nehru quite frankly told them:

I have not been able to understand what it means. If by the term is meant a Power Bloc, military or other, I am afraid I do not consider it desirable, apart from the fact that it is not feasible either.

Nehru's plain speaking has not, however, discouraged members of NAM in recent years from moving, albeit gingerly, towards the formation of a distinctive grouping. Non-alignment may not yet have become "a doctrine of power politics played by the powerless nations against, or in league with, the powerful countries", as one commentator has put it. But, unless NAM's elite—and the mantle of leadership is about to be worn by India for the next three years—act with foresight and wisdom, the movement may come face to face with such a danger in the not too distant future.

The disadvantages arising from such a grouping of developing countries antagonistic to either the Soviet or the US Bloc, or to both, should be obvious, while its advantages are not easy to discern. Neither in the political nor in the economic struggles can the developing countries make any worthwhile progress without the sympatny and the support of the rich nations. North and South must thus act in unison for World Peace, Economic Progress and Social Development.

The tardy progress towards a new international economic order, even though it has been paid lip-service to by world leaders, underlines the need for greater, not lesser, North-South cooperation. Increasing South-South exchanges are important. But since the countries of the South, at their current stage of development, are mostly producers of primary commodities and are in stiff competition with one another for the markets of rich nations, they are forced to be dependent on the North for both trade and aid. This dependence cannot be done away with overnight: it will take the South many years—nay, decades—to reach a reasonable level of economic development and, even then, it will continue to require sophis-

→

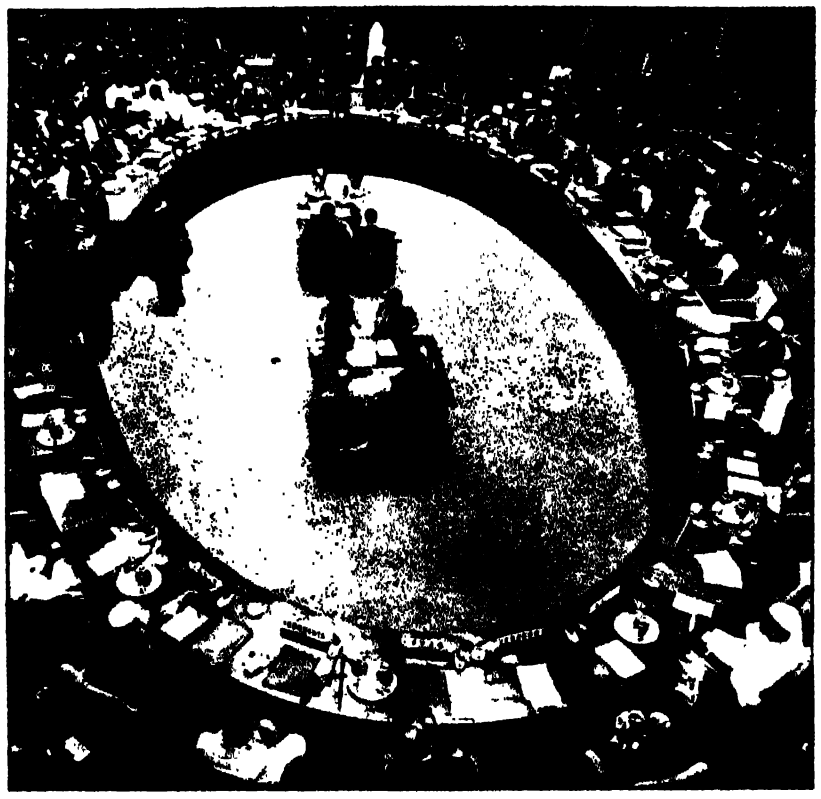
ticated technology and transfer of resources from the North.

The Non-Aligned Summit can—it must—explore ways and means of strengthening and broadening cooperation between member countries. But it cannot afford to set up a Third Force or Bloc claiming to function in rivalry to either of the major Blocs. The creation of such a force would only heighten the antagonism between Power Blocs, which will be contrary to the fundamental principles of NAM—the Promotion of World Peace and Economic Development.

One other major plank of NAM at the time the concept was first evolved—the liberation of countries from colonial rule—has largely been fulfilled in the intervening period. While the ugly face of racialism still manifests itself in different parts of the world and while economic exploitation is still rampant, a large number of Asian and African countries have attained political freedom in the past three decades. South Africa is perhaps one major example today of colonialism and racialism put together. The White minority regime there has not only denied political freedom to the African majority but has extended its colonial grip to South-West Africa.

It is a measure of the weakness of NAM that it has not been able to dislodge the apartheid regime which practises brutal repression and oppression of its Black citizens. South Africa remains defiant in spite of the opprobrium its hated policies have earned from the civilised nations.

NAM's career has been marked by other failures—the failure to resolve the West Asian crisis; the failure to end the war between two member nations (Iran and Iraq) that has gone on for 2½ years; the failure to prevent the induction of Soviet troops into



Afghanistan (an original founder) or to secure their expulsion.

A number of member nations are in open hostility, if not at war, with each other. While NAM swears by disarmament and condemns the mad arms race, its own members continue to waste billions of dollars in procuring weapons of destruction from the West or the East. While NAM's abhorrence of nuclear weapons is enshrined in all its documents, its own members have acquired or nurse nuclear ambitions.

Morality, like charity, must begin at home. If NAM is to carry conviction abroad about its moral stances, it must first bring to bear the moral sanctions against its erring members. If it wants its credentials for world harmony to be taken seriously, it must close its own ranks.

The Kampuchea Issue

Unfortunately, sharp divisions prevail in NAM's ranks over several major issues. Kampuchea is an example. Only a small number of nations (including India) recognise the Heng Samrin regime, while the majority do not. The Havana Summit in 1979, unable to reach a *rapprochement* between the opponents, sought to steer clear of the controversy by a negative vote: to keep the seat vacant. The issue will bedevil the Delhi Summit too. The rival regimes of Hang Semrin and Pol Pot have staked their claims to the seat. Only by a skilful act of tightrope-walking can the Delhi Summit preserve a semblance of sanity in its ranks.

With the dramatic change in the international environment in the past three decades, the very relevance of NAM is being questioned. NAM was the product of the intense cold war in a bipolar world dominated by the Soviet Union and the USA. The world is no longer bipolar: it has become multipolar. The East-West *detente*, the Sino-Soviet cleavage, the Sino-US moves towards a *rapprochment* and the rebellions within the member nations of the rival Power Blocs—in Hungary, Czechoslovakia and Poland in the Soviet camp and the peace movements and opposition to the location of sophisticated American nuclear weapons in Western Europe—have made for a sea change in the world climate.

The days when John Foster Dulles dubbed non-alignment as "immoral" and Soviet leaders suspected it to be a mere facade of *de-facto* alignment with the West are over. Both the East and the West have come to accept, or at least tolerate, non-alignment. The aligned countries in Europe and elsewhere are no less shrill in their clamour for world peace than the non-aligned.

While non-alignment as a principle of foreign policy has served many developing countries in the past, non-alignment as a movement has reached a phase where it could either become counter-productive or self-defeating. ■

What I Mean By Genuine Non-Alignment

—Morarji Desai

by S. S. Bankeshwar

Question: *What will be the outcome of the forthcoming Non-Aligned Conference?*

Morarji: I am not a prophet. It all depends upon how Indira talks at the Conference

Don't you think that the non-aligned movement has lost all its original significance after the detente between the Super Powers? The Super Powers do not fight against each other except through their proxies on the soil of the non-aligned countries.

You are totally wrong. As long as Blocs remain, the non-aligned movement *has* to be made stronger.

The Janata Party had declared that it stood for a genuine non-aligned foreign policy. However, there was hardly any change in our foreign policy during Janata rule. Our foreign policy continued to be pro-Soviet and pro-Arab.

You are wrong again! There *was* a change. We were equal to all. That is why Moshe Dayan came here to explore the possibilities of establishing full diplomatic relations with India. I told Dayan, quite frankly, that we would like to have full diplomatic relations with Israel only when it vacated the Arab territories occupied by it. China wanted to normalise its relations with India only because it found that we were truly non-aligned. China sent feelers through the Romanian President. I told the Romanian President that

we did not want intermediaries, that India and China should have direct talks.

China then proceeded to remind me of the "Hindi-Chini Bhai-Bhai" days. I told China frankly that it was our slogan, not theirs, that we supported them right from the beginning in the United Nations, even at the cost of our friendship with the United States, that they betrayed us, they invaded us and took possession of over 15,000 square miles of our country. This, I said, was the price we paid for our friendship with them. "You give back our territory and we shall be friends again."

Then Russia objected to our attempt to normalise our relations with China. I told Russia that our attempt to normalise our relations with China would not be at the cost of our friendship with Russia or any other country. We want to have friendly relations with all countries in the world—that is what non-alignment means.

The non-aligned countries remain non-aligned even when one of their own members is attacked. For instance, all the non-aligned countries remained non-aligned when India was attacked by China. India has no role to play to end the Iran-Iraq war, because all these three countries are non-aligned! India has no role to play to end the Israeli-Arab dispute, because Israel does not recognise us as a truly non-aligned nation! India has no role to play to end the Afghan crisis, because the Afghans do not consider India to be non-aligned! In fact, we don't have any role to play in any international dispute in the world, because no country considers India truly non-aligned

The non-aligned countries do not form a Bloc You are again mistaken The non-aligned countries cease to be non-aligned if they take sides. They should play a mediatory role to end all international disputes—without joining the Military Blocs of the Super Powers—and bring peace in the world

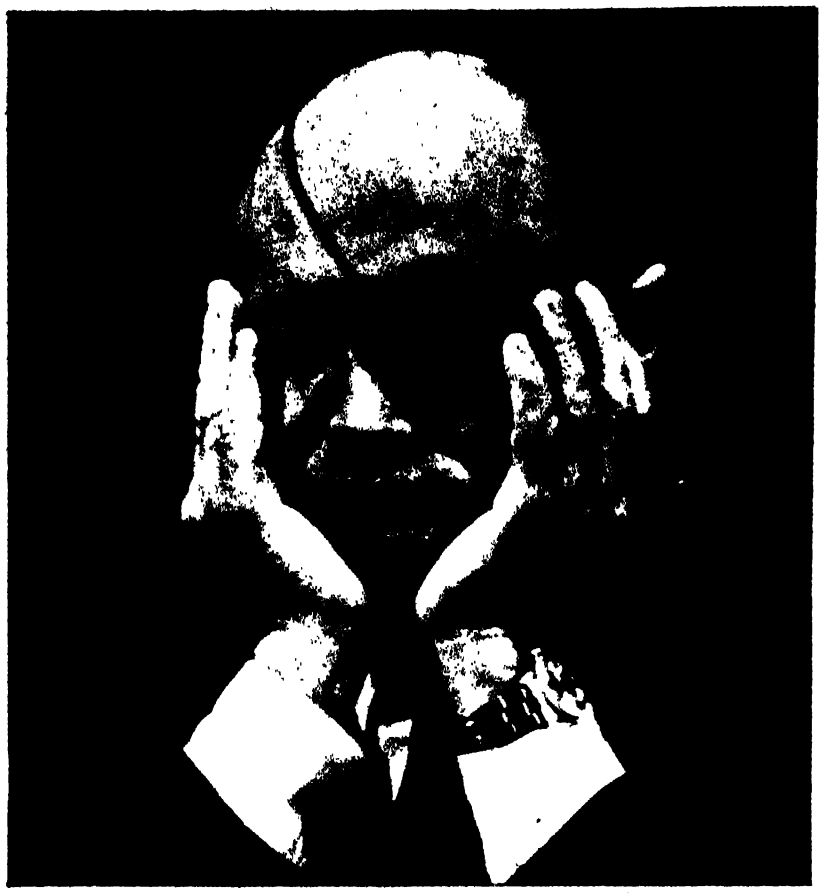
A recent article recalled that you had declared at your very first press conference after becoming Prime Minister that you would consider establishing full diplomatic relations with Israel. But nothing of the sort happened.

I have not read that article. But what the writer says is a total lie: let him prove it. All I said was that, when peace is established between Israel and the Arab countries and when Israel gives up the Arab territories occupied by it, India will have full diplomatic relations with Israel. Even the Arab countries appreciated my stand. Indira just wanted to create a rift between me and the Arab countries by disclosing that I met Moshe Dayan. Jawaharlal made a mistake in not establishing full diplomatic relations with Israel when it was founded. Now it is difficult to establish full diplomatic relations with Israel unless it gives up the Arab territories occupied by it. Moshe Dayan said that the Arab countries wanted to destroy Israel. I said that we would stand by Israel in that case.

May I have your comments on the expulsion of the Israeli Consul because of a controversial interview. Whatever the Israeli Consul said in that interview was nothing but the truth. Harsh truth always hurts, hence whatever he said in that interview hurt us.

I agree. I did not find anything controversial in it at all. Our Government just wants to please the Arabs.

The Arab countries deal with the multinationals which have branches in Israel.



INDIRA GANDHI, according to Morarji, "just wanted to create a rift between me and the Arab countries by disclosing that I met Moshe Dayan" *(above)*... "Dayan said that the Arab countries wanted to destroy Israel I said that we would stand by Israel in that case."

Why can't they boycott these multinationals? Why do the Arab countries not break off diplomatic relations with the USA, the UK, France, Japan and other countries which have full diplomatic relations with Israel?

They cannot afford to do so. We were wrong: we should have had full diplomatic relations with Israel from the very beginning. As I said earlier, now (after 1967) it is difficult to do so unless Israel vacates its aggression against the Arabs.

Is there a single non-aligned country in the world today which is independent of the Super Powers in the matter of its defence and economic development? Is there a single country which is universally and unanimously recognised as a non-aligned country as such? The non-aligned countries cease to be so unless they are recognised as such by the Super Powers in particular and all countries in general. Switzerland is an exception, but Switzerland is not a non-aligned nation it is neutral. Don't you think the entire non-aligned movement became a big joke when Cuba was admitted into the non-aligned camp?

Yes, you are partly right. The admission of Cuba into the non-aligned camp was a big mistake. I don't agree with you that the non-aligned countries are totally dependent on the Super Powers for their defence and economic development. The non-aligned movement is a great force provided it is genuinely non-aligned. If all countries become genuinely non-aligned, there will be no war and there will be complete peace in the world.

Don't you think that all this talk about morality, ideology and high principles guiding a country's foreign policy is just hogwash?

No, our foreign policy *must* be based on ideology and pragmatism. *Dharma* and *Truth* alone should guide our foreign policy. Pragmatism based on untruth is wrong There cannot be any conflict between Ideology and Pragmatism provided we follow the path of *Truth* and *Dharma* National interest should be supreme, but not at the cost of *Truth* and *Dharma* or at the cost of some other country.

We are very vociferous when any aggression is committed by America or Israel But we are/were silent when any aggression is/was committed by Russia against Hungary, Poland and Afghanistan Has not our stand on the Soviet aggression against Afghanistan isolated us from all non-aligned countries?

You are quite right But I, for one, have never hesitated to condemn aggression, whether it is committed by Russia or America or China or Israel Yes, our present Government is totally isolated from all non-aligned countries because we are not following the genuine non aligned policy advocated by the Janata Party, which was appreciated by all countries in the world

Turning to domestic affairs, V.P Singh as UP Chief Minister resigned because he failed to control the menace of dacoits. On the contrary, the Chief Minister of Madhya Pradesh, Arjun Singh, welcomed, entertained and gave a reception to the dacoit, Malkhan Singh, who surrendered to him. Malkhan Singh's entire gang was about to be smashed by the police when he offered to surrender Are we not demoralising the police? Malkhan Singh says that he has always supported the Congress (I) and will continue to do so. Has Malkhan Singh changed or has the Congress (I) become a party of dacoits?

You are right, still you should welcome such surrender, provided they have really repented for the sins they have committed. They should be punished, they should not be lionised as heroes. The dacoits must feel the shame of what they have done and should not be made out to be heroes in the media I don't believe Malkhan has changed Leopards don't change their spots If Malkhan has said that he always supported the Congress (I) and would continue to do so, and the Congress (I) admits him into their party, it would only mean that the Congress (I) is supported by the dacoits!

If you commit one murder, you may be hanged; but if you commit hundreds of murders and establish yourself as a notorious dacoit, you are entertained, given a reception by the Chief Minister and made a hero!

It is all wrong. That is why the law-and order situation is becoming worse day by day everywhere in our country Can you call a Government which surrenders to the dacoits a 'Government that works'? Is this Government working for the benefit of dacoits at the cost of our people and our nation?

Our new President said in an interview with a Bombay periodical that Dr Radhakrishnan may have been very good at English but he was never respected by our masses.

(Laughs) Now did he really say that! Still I am not at all surprised—it is typical of him

Is not Gandhian Socialism a contradiction in terms? It is as ridiculous as Capitalist Communism Gandhiji was all along opposed to socialism, as it stands for the abolition of all private property and advocates the ownership of all means of production. He was opposed to Government monopoly He stood for competition, as consumers are the ultimate beneficiaries in a market economy

You are right Everybody wants to exploit Gandhiji's name

The most developed countries in the world today—Japan, Taiwan and Singapore in Asia, West Germany, France and England in Europe, and the United States —have moved away from the disastrous path of socialism while we, in India, still cling to this outdated concept

What you say is partly true These countries believe in Practical Socialism and not in State Capitalism Socialism is not Communism, Socialism minus Democracy is Communism

You are well known for asking counter-questions How come you have not asked me a single counter-question?

I ask counter-questions only when meaningless questions are put. I want to put the questioner in his place

Rajaji had a unique knack of disarming his critics by his humour

Asking counter-questions is my idea of humour!

In the case of every human being, a time comes when his heart conflicts with the head on an issue Which should prevail: head or heart?

Both head and heart should go together harmoniously In my case, such a conflict has never arisen. If at all such a conflict arises, *Truth* and *Dharma* should prevail

What is your advice to our politicians?

When wealth and power are lost, nothing is lost; when health is lost, something is lost; but, when your character and credibility are lost, everything is lost Our politicians should learn this simple philosophy of life ■

Close Encounters Of The Electronic Kind

Like the glowing eye of Cyclops, the video stands in the corner of the darkened den. The pictures flitting across it are pure porn—purple enough to give Miss Grundy a heart attack. But the viewers glued to the screen couldn't care less. For them purpler the better. That is blue (or purple) video, the other side of the technological marvel, which is muscling out the 8mm movie as the principal purveyor of porn across the globe.

by Vithal C. Nadkarni

AS I grope along the dark passage, my hostess hisses: "Mind your step! Mind your step!" I recoil. But too late. I've already missed the step and my balance too! With a strangled yell, I clutch at the curtains as I crash headlong into the "room with the video".

The result of my precipitous "entry" is a stampede. Fellow guests in the room mistake me for a cop. And not wanting to be caught watching "naughty pictures", everyone is in a tearing hurry to clear out! In the ensuing melee I am forced to sacrifice a cufflink and a bit of epidermis off my elbow. But it is worth it. I have the room to myself—to regain my breath and bearing in privacy.

And, of course, there is the video. It stands like a glowing beacon in the corner of the darkened den. The images flickering on its screen are pure porn —of the electronic kind. A muscular Casanova is cavorting with a pair of luscious blondes, in full colour and stereophonic sound.

Nothing is being left to your imagination. From the steamy close-ups to the amplified grunts and moans, all is mercilessly exposed on the screen. Curiously, the overall effect is hardly titillating. The self-absorbed passion of the revellers, their very single-mindedness, is vaguely funny.

Also, the colours keep shifting. At a particularly "candid" sequence, the screen begins to flicker alarmingly. From garish greens and candy-floss pinks, the image suddenly turns black and white! Then, moments later, with a furious burst of static, the picture reverts to its old technicolor glory! All this makes the antics even more comical.

Frothing Frenzy

Moreover, the Casanova and his ladies are utterly at your mercy. You can "stop" them at will. You can even "rewind" them, so that from a frothing frenzy, the triad can be brought to heel in a hilarious anticlimax. With a flick of a knob you can arrest any sequence and rerun it any number of times, at variable speeds.

But wait. Why am I talking about Casanova? It's only a tape, running through a much (ab)used cassette. (It is an "Akai", I found out later) which is lodged in a "National" video machine.

The screen is by "Sony". And the action we are witnessing was originally shot in some dingy studio in Hong Kong or Hollywood. It was probably copied or pirated in Chembur or Cuffe Parade, Bombay. The anonymous people we are seeing are only electronic ghosts. By christening them "Casanova and his ladies" we are investing them with heroic identities. And putting our fantasies and fears under their sway (no pun intended).

The essence of pornography is that it dehumanises the participants ("sexed beings" to use Angela Carter's phrase). At its grossest, it reduces an act of love to an anatomical absurdity. At the same time it cons the viewer into a response. We are thus degraded to the level of behavioural pigeons, tricked into putting forth appropriate reactions—shame, disgust, lust *et al*—by the electronic "stimuli".

By now the "guests" are sheepishly filing back into the room, one by one. Having paid 100 rupees each for the night's "entertainment", they are all eager to rerun the bits they have missed even though, according to the middle-aged man next to me, many of them have already seen the "show" three or four times!

The man who says this reminds me of Humbert Humbert, the lecher from *Lolita*. I assume that he is chained to a dull job and a waspish wife. And since he has scruples enough not to exorcise (or exercise) his libido with a live Lolita, he is seeking the "safe" outlet: a vicarious trip on the video.

However, my assumptions prove wrong. He turns out to be a successful businessman, happily married to the hostess. He confides in me that he is "actually bored to the gills with the blue films". But that does not prevent him from leasing out his video and claiming the prerogative of a free show.

The triangle on the screen now becomes a rectangle: the satyr and his blondes are joined by a black Amazon. There is not even a pretence of a story or plot. With a happy squeal the giantess just flops among the "lovers"...

The average age of our viewers is barely 35. So it is not just "dirty old men" who watch blue video. But whoever comes—young or old—for these close encounters must have the money and time to spare (and, of course, the inclination!). A senior police official I met knows the type: the person who habitually patronises blue videos usually leads a life devoid of challenge or thrill; he makes an easy buck and is not averse to spending it. But the same official also says that it *is* difficult to generalise.

Indeed, during my visits to video sessions (as a bogus customer, I assure you) I met all kinds of people—ranging from clerks and salesmen having their big night out to bored businessmen and bureaucrats!

The action on the screen gets kinkier. Now a handsome hound is added to the fray. I watch the viewers. No one seems to mind. Everyone is utterly glued to the fluroscent screen of the idiot box which seems to have become a sort of window to a perverted menagerie...

According to video buffs, on any given weekend, Bombay has "at least 100 blue video shows going". However, the initial enthusiasm for blue movies among video owners is reportedly on the wane. Most owners of VCRs and VTRs I met were rather blase about blue movies.

Their reaction reminded me of the so-called "Scandinavian surfeit effect". Initially, when hard-core pornography was legalised in the Scandinavian countries, the skin-flick halls ran to capacity crowds. Gradually, however, familarity bred contempt. And hard core porn is no longer a booming business.

One tangible result of the video revolution is that it has made blue movies much more accessible. Moreover, it has simplified and (rendered inexpensive) the entire operation. Customs officials lament that video cassettes are so compact and so easy to conceal that it is difficult to check their influx. ("Insiders", however, allege that customs are themselves the biggest source of cassettes. Each cassette reportedly fetches Rs 600 to Rs 1,500 in the black market. It is then leased out at Rs 75 to Rs 100 per session).

The host whispers to me, "Just look at all that S/M: They are really cruel, these Hong Kong filmmakers..." On the screen, the black Amazon is flogging the Nordic blondes (using a red whip and an exaggerated violence that makes her jiggle most alarmingly!). If it were not for their deadly earnestness, these sado/masochistic games would be hilarious. I try to imagine what a MAD magazine parody of such a scene would be like: Don Martin would probably show the Casanova losing his dentures at the climactic moment (or the silicone draining out of the Amazon!).

Obviously my fellow viewers are not thinking of MAD magazine (if anything, it will be *Hustler* or *Playboy*!). Some of them are positively squirming around in guilty concupiscence. This is their weakest moment: when they are ready to exchange an "electronic encounter" with a real-life, flesh-and-blood kind. Indeed, one ingenious joy-house at Juhu was operating upon this very principle, until recently when it was closed by the police.

Ice-breaker

In fact, even now the video is used as an ice-breaker at many a private orgy. According to experts-that-be, it is "ideal for creating the ambience, loosening inhibitions and taboos". But this is equally true of the good old blue movies (The older hand-cranked projectors, however, have the obvious disadvantage that the projectionist cannot join the fun and games without interrupting the show).

Suddenly, without warning, all activity on the screen screeches to a halt. The picture is frozen, soundless. As the seconds tick by, the

Amazon's arm remains hanging in mid-air. Like two wet white fish stranded on a beach, the blondes go on cringing mutely on the rumpled bed...

I glance at the host. Is he using a remote control box? It's difficult to tell in the dark. "I thought only Doordarshan showed interruptions!" grumbles one viewer. With that the spell is broken. Everyone laughs and begins to talk... This reminds me of a line from Carter Brown thriller, "Laughter is the death-knell of sex..." With a muttered oath the host goes over to the video to restart the show. While he is fiddling with the knobs, I slip out of the room...

Loopholes abound in the legal briar which is supposed to keep the video wolf (of the lewd variety) at bay. "We know a lot of people in Bombay watch video, not necessarily blue," says a senior police official. "We also have reports that in some cases admission rates are charged. But in 9 out 10 instances, the films screened are not pornographic. Exhibiting films without a licence is the offence committed. Should we ban such activity or legalise it? Should we exclude hotels? What should be the legal framework and guide-lines? How to obtain compliance with the provisions. The entire matter is being scrutinised at the highest level."

Meanwhile the show(s) go on. A fellow scribe from *Shree*, a Marathi weekly, tells me that blue videos are routinely added to the "gift hampers" that shuttle around the corridors of power. He says some pious folk replace the revealing labels on the cassettes with chaste jackets—fashioned from handspun silk or sturdy rexin! Some maintain permanent collections. First editions made on imported tapes and exotic locales are much in demand. According to Bashir, a hawker from Dadabhoy Naoroji Road, Bombay, "the pirated shows on inferior tapes won't cost you much. But they also lack the kick of the *asli mal* (real stuff)!"

Bashir had a clutch of cassettes with exotic names: *Candy Goes To Hollywood; Lady Godiva's Run; School For Swedes*. The films are valued as "originals". They bear credits and titles and feature some of the well-known "personalities" from the $4,000,000,000-a-year porn industry in the United States. The "actress" from *Candy* is reportedly as good as Linda Lovelace (who, 10 years after she made *Deep Throat*, is a penniless, disillusioned matron nursing a child and a grouse against the men who "constantly exploited" her!)

Since I met him last, Bashir has allegedly shifted his operations to the Mohta Market area. He also said some of the air-conditioned warehouses in Bombay are used as video theatres because "you can't lease out the machines freely in residential localities (*baal bachchewali basti*)". And if you do, you should be careful not to go in a crowd. "Go one by one or in twos to avoid attracting the attention of the neighbours," advises Bashir. "Normally the neighbours don't bother (keep them happy; invite them sometimes and never make a nuisance of yourself!). But there is always the fear of a police tip-off. A friend who 'arranges' blue film shows in the Dadar area was once chased by cops in plain-clothes. He escaped by dropping the portable projector."

But arrests made are few and far between. "Establishing an iron clad case involves great expense and legwork. And, of course, information, which is almost never forthcoming," says an Assistant Commissioner of Police. "A number of infiltration attempts by the police have produced just one case so far. We are also hamstrung by the law. Holding a risque screening for free *private enjoyment* is not a crime! Remember the ruling in the cabaret cases? What can the police do?"

Should we then leave pornography alone, as some "experts" suggest? According to them porn offers a 'safe" outlet and absorbs anti-social sexual aggression. But that is clearly a specious argument. By that reckoning, America with its flourishing porn biz, should have a negligible rate of sexual offences. Instead, there is a rape every 12 minutes (half the victims are under 18 and a quarter are under 12!) Furthermore, some 2,80,00,000 wives are battered every year in the country.

The number of Ghashiram Kotwals* is probably far more in India. Ours is *also* a violent society, but in a different way. Moreover, the connection between the spread of porn and the increasing incidence of rape is yet to be established here. Many feel that pornography is still a luxury, restricted to the few, from the higher and middle echelons. "Seventy-five per cent of the population which grovels below the poverty line would rather have a cold brown vada chutney than a hot blue video cassette," says one social worker.

"But the point is no one's asking them. All you get is an increasing dosage of sex and violence in your daily life. Look around: you can see in hoardings, in print, in films, everywhere..."

All this does raise a lot of questions. How do we draw the line? Can one man's porn be another's corn? By what yardstick do we regulate public taste? Perhaps what we need are not erotic nor electronic but enlightened encounters. ■

How LIC Rooks Policy-Holders

Since its creation, the LIC has tended to treat the policy-holder like a stepchild. He is being made to pay through the nose while his returns on the investment stand at next to nothing.

by N.L. Bapat

SPECIFICALLY to protect the interest of the policy-holder and to guard him against the malpractices of the private companies, the Life Insurance business was nationalised. When the Life Insurance Corporation (LIC) was created on September 1, 1956, an express promise of a better deal was given to the policy-holder on the floor of the Lok Sabha by the Government. Has the LIC kept that promise during the last 25 years?

In 1956, the LIC accepted Oriental rates based on the 1925-35 mortality experience. Only a minor refinement was introduced in that it accepted a lighter mortality table. Since 1935, all the basic factors on which premium rates are based were undergoing vast improvements. Still, up to 1980, the LIC refused to reduce its premium rates. Even the 1980 reduction was like throwing dust into the public eye, as will become obvious as you read on.

Between 1925 and 1935, the average expectancy of life was 27 years in India. By 1980, it had gone up to over 60 years. During 1925-35, the death-rate was 36 per 1,000. It was just 12 in 1980. Most of the life insurance is taken by the educated urban people. Among them, the average expectancy of life and death-rate were still better in 1980 at 65 years and 10 per 1,000. Since 1963, the LIC's own actuaries were continuously pointing out that the actual death strain had been only 44 per cent of the assumed.

Naturally, the maturity claims were growing and the death claims falling. The LIC was collecting premium on more policies till their maturity than what it was believed when premium rates were finalised in 1956. Owing to rising interest rates, the LIC was also collecting more revenue on its life fund than what it did in 1956. In 1956, the LIC earned interest at just 3.7 per cent, against 7.5 per cent in 1980. Only the expense ratio had shown an adverse movement, but it was as little as 1 per cent between 1956 and 1980. Hence policy-holders expected a substantial reduction in the premium rates.

'Startling' Reductions

The group of insurance experts appointed by the Administrative Reforms Commission had recommended in 1967 itself that the LIC should reduce its rates *immediately* by 50 per cent and examine the possibility of a further reduction in *further* detail. Against this background, the reductions announced by the LIC in April 1980 make startling reading.

The LIC has announced somewhat fair reductions in premium rates of only those plans which are not popular. Without-profit insurance-plans are not opted for nowadays. Thus new premium rates on a whole-life-without-profits plan are lower than old ones by 10 to 17 per cent, depending on the age of the insured at the time of taking insurance. In 1981-82, the LIC sold over 21 lakh new policies. The number of policies sold under this plan was as small as 1,000.

On the other hand, some insurance plans are in great demand. Here, the reduction in premium is too small to

mention. In 1981-82, out of over 21 lakh new policies worth Rs 3,478 crores sold by the LIC, 13.33 lakh worth Rs 1,747 crores were under endowment assurance with profit plans. The premium reduction here is between 1 and 5 per cent.

A quick computation shows that a premium of Rs 8.45 per Rs 1,000 would be sufficient if one bought a whole-life-without-profits policy at the age of 20 against the new rate of Rs 13.60. Thus, even the new reduced rate is almost 50 per cent higher. It may be added that, while making the above calculations, benefits accruing from only higher-interest rates have been taken into account. Benefits flowing from higher life-expectancy and lower death-rate have not been included. As shown above, those benefits are quite substantial.

Revealing Comparison

Comparison of the LIC's premium rates with those of Postal Life Insurance (PLI) is informative. If an individual obtains a policy of Rs 10,000 from the LIC at the age of 21, he pays a monthly premium of Rs 45 for a period of 19 years. For the same policy of the same duration, PLI charges only Rs 32.50—that is, 28 per cent less. However, all cannot obtain a PLI policy. Those who can do so have been rigidly classified and categorised. Hence, for a majority of the policy-holders, there is no other way but to buy an LIC policy. The LIC is thus in a monopolistic position and exploiting its consumers—namely, policy-holders.

Almost all LIC Chairmen say that policy-holders would be compensated through an increased bonus. But here, too, the policy adopted by the LIC is unduly harsh on policy-holders. The LIC's own actuaries in their second (p.2) and third (p.4) valuation reports have stated that the present basis for arriving at the bonus is stringent. The current policy of the LIC is to squeeze the surplus available for distribution as bonus to policy-holders from both ends: by *assuming* income to be lower than actually received and expenses to be much higher than actually incurred.

Thus, in the latest 12th valuation, it is stated that the average gross rate of interest per annum earned was 7.54 per cent. However, for the purpose of calculating surplus, it was assumed as 3¾ per cent. As a result, the income from interest is shown less by Rs 204 crores than the one *actually realised*.

On the other hand, the actual average renewal-expense ratio was 15.51 per cent. It is assumed as 30 per cent. Hence the expenses were raised by Rs 29 crores. By the time the 12th valuation was taken up, the accounts had been audited and finalised. The income had been actually realised and the expenses had been incurred. There was thus no need to *assume* lower income and higher expenses. Both were known for certain.

In this way, the surplus was reduced by Rs 233 crores and the quantum of bonus by as much as 63 per cent. Finally, bonus of Rs 24.80 per Rs 1,000 was declared. It could have easily been Rs 40. Last year, PLI declared bonus at Rs 31.

Slowly but surely, the LIC is assigning a smaller and smaller percentage of its income to its policy-holders by way of different benefits. During the first year after nationalisation—that is, in 1957—the LIC distributed 31.5 per cent of its total income to policy-holders. Last year, it was only 26 per cent. Even if the LIC had retained the same share for use to policy-holders, it could have declared 20 per cent higher bonus. Whichever way one may look at the problem, one reaches the same conclusion: benefits flowing to policy-holders are being reduced *deliberately* and *artificially*.

It would have been a different thing if the LIC had not been in a position to assign a bigger share to policy-holders in its growing prosperity. But, as shown above, the LIC can so assign a bigger share but has chosen not to do so owing to its monopoly of Life Insurance business.

There is no representation for the policy-holders on the Board of Actuaries entrusted with the responsibility of determining the surplus. All the actuaries on that Board are employees of the LIC. It is time this lacuna in the legislation was rectified and, statutorily, at least one actuary was appointed to represent the interests of policy-holders.

Unanimous decisions of the Board may be implemented straight away. But, if there is a difference of opinion, then the matter should be referred to a Board of Arbitration specially constituted for the purpose. On that Board, all interests should be suitably represented.

Some Service!

Recently, the high-powered Era Sezhiyan Committee set up to review the functioning of the LIC stressed the need to pass on maximum benefits to policy-holders either through suitably higher bonus or lower premium rates. Unless some such arrangement as suggested here is made in the statute, expert recommendations like those of the Era Sezhiyan Committee and the Administrative Reforms Commission would remain on paper, unimplemented.

About the service rendered to policy-holders by the LIC, the less said the better. As far back as in 1962 itself, the Calcutta Policy-Holders' Association passed a special resolution inviting the attention of the LIC to the poor service rendered by it. For a complete dicussion of this aspect of the LIC's working, the interested reader may refer to the 134th Report of the Estimates Committee chaired by H.C. Dasappa. The Report devotes a full chapter to discussing the various complaints against the LIC. The number of complaints received by the Central Office of the LIC is invariably in thousands. Last year, it was 11,345. And this did not include the large number of complaints received by the divisional offices of the LIC.

Never Forgets The Penalty!

Recently, the LIC withdrew the facility given to policy-holders of paying premium at any LIC office on the specious ground that it created confusion in its accounts. The remedy was streamlining the accounting procedure and not withdrawing the facility itself. Policy-holders were getting this facility right from the introduction of the Life Insurance business in India. It was very badly needed by those who are frequently transferred from one place to another in the course of their service.

Such policy-holders preferred to keep their policy records attached to only one office from beginning to end but would pay the premium to any LIC office near to their place of duty at the time of payment of any particular premium. The said LIC office would then transfer the premium amount to the concerned office. Now such policy-holders must send the premium either by bank draft, money-order or the like or get their policies frequently transferred.

In the past, both those remedies have been found to be very inconvenient, particularly as, most of the time, the LIC takes more than three months to transfer policy records from one office to another. Then the payment of premium is necessarily delayed. The previous office to which the policy was attached refuses to accept the premium as it does not have the records. The new office to which the policy is sought to be transferred also refuses to accept the premium, as it has not by then received the policy records. But the LIC never forgets to charge a penalty for delay in payment of the premium even in such cases where the responsibility for the delayed payment squarely lies on its shoulders.

The worst feature of the LIC's operations is the delay in settlement of accepted claims. Every year, without exception, such claims are rising both in number and in the amount involved. Such claims were worth Rs 9 crores in 1956, when the LIC took over from private insurance companies. Last year, the outstanding amount had gone up to Rs 63.10 crores—showing a 700 per cent increase in just 25 years. Within just 5 years from 1976-77 to 1981-82, such claims have gone up by 160 per cent—from Rs 25 crores to Rs 63 crores. In 1976-77, the absolute number of outstanding claims was 61,000. By 1981-82, it had more than doubled to 1.51 lakhs.

At present, over 4,500 *death* claims are lying unsettled with the LIC for more than two years. Two years ago, the number was 3,545. It shows that, instead of improvement, there has been deterioration. The representative of the Finance Ministry told the Estimates Committee that the position regarding outstanding claims made *"bad reading"*.

Apparently, the LIC has completely forgotten that, after nationalisation, Life Insurance has become a business as well as a public service. ■

Inside Pakistan Today—I

Women Are Not For Whipping

Strange, indeed, are the doings of Pakistan's mullahs, maulvis, and military rulers. The country's new laws have reduced women to helpless targets.

by Lopamudra

FOR the first time in Pakistan a few weeks ago a woman was publicly whipped at Swat, Peshawar. Her husband had charged her with infidelity. The woman was sentenced to five years' imprisonment and fined Rs 10,000. Her appeal to the Federal Shariat Court was set aside. That was not all. She was publicly given 20 lashes. Pakistani women organised a Women's Action Forum against this "cruel game" and voiced their protest to General Zia but to no effect.

Last year in September an 18-year-old girl, Fahmida, was administered 100 whips and her lover, Allah Bux, a bus driver, was sentenced to be stoned to death publicly. This sentence is, however, yet to be carried out

Fahmida, a Std X student of the Prince Karim Aga Khan School, had produced papers of her marriage to the driver, which were rejected on the ground that at the time of marriage she was pregnant.

Eight prominent women's organisations in Karachi formed a Women's Action Forum, collected signatures against the Shariat order and sent them to General Zia. Fahmida's sentence was suspended till the disposal of her appeal in the Shariat Court, but it is feared that, after Swat, it may fare no better.

Not content with corporal punishment, the mullahs continue to heap atrocities on hapless women. In October, a newborn child was stoned to death near a mosque in Karachi. A mullah on seeing a crying child on the stairs of the mosque, gave the *fatwa* (without making any inquiry) that the child was illegitimate, and should be stoned to death. The first stone was thrown by the mullah himself. Thereafter a mad crowd showered the child with stones. When a few passers-by tried to save it, they too were injured. The daily, *Dawn* further stated that witnesses were threatened with dire consequences if the news was leaked to the press. Fortunately, however, the press *did* get the information.

Strange are the doings of such mullahs, maulvis and military rulers. Dr Asrar Ahmed, one of the leading religious scholars, has petitioned the *Majlis-e-Shoora* (Federal Council) that since women are responsible for the growing rise in sex crimes they should not be appointed to Government posts or selected for the *Majlis-e-Shoora* and other institutions, but confined to their homes.

It is also proposed to reduce the marriageable age for girls in Pakistan under the Islamic law from 18 to 15. Besides, a demand has been tabled in the Federal Council to rescind the Family Law Ordinance which says that a man cannot marry a second time without the first wife's permission.

The Woman's Value

General Zia has further issued a law which fixes a woman's value as half that of man. According to this law, if a man is murdered, the victim's next of kin can demand either the death of the murderer or accept in lieu of it 4.36 kg of gold as compensation. If the victim is a woman, only half this quantity of gold is to be paid.

There is also a strong movement all over Pakistan for keeping women in *purdah*. Yet another indignity is an order instructing female TV announcers to keep their heads covered. In fact, a popular TV announcer was sacked for failing to comply with it. The mullahs propound a ridiculous justification: if women remain bare-headed, they emit rays that harm men.

An inevitable consequence of these harsh rules (of confining women within the four walls of their homes) is the phenomenon of kidnapping. Even worse is the actual sale of girls by their parents, another common occurrence.

Not only is crime against women in Pakistan on the rise, with an ever-increasing number of rape incidents and wife-burning, but it is *only* the women who are the helpless targets of new laws.

Only recently a lawyer, Ansari Barni, had filed a petition in Pakistan's Federal Shariat Court that women's appointment to the posts of judges, etc, should be declared illegal. Fortunately, the full bench of the Federal Shariat Court gave a decision that it is not against Islam to appoint women as kazis, judges and magistrates.

Though the women have won this battle, there is no end to the prejudices against them. Two separate medical colleges have been opened for women. But according to a prominent teacher, Anita Gulam Ali, the girls graduating from these colleges will get fewer opportunities than men to further their career.

At present only 11 per cent of the total population of women in Pakistan is literate. Of the 65 lakh school-going children, only 20 lakh are girls.

Women doctors, lawyers, professors, judges etc, are being continually discouraged from providing serious competition to their male counterparts. In the same strain, women athletes have been forbidden to participate in international sports competitions, the Asiad being the most recent example. ■

THEIR PROTESTS ALL GO UNHEEDED.

In Pakistan, industrial growth is hampered by the stranglehold of finance and the interference by bureaucrats. The country's foreign exchange budget is heavily in deficit and inflation rages at the rate of about 10 per cent. Peshawar, however, is prosperous. But, ironically, this prosperity springs from its convenient location (adjoining the tribal areas), trade in heroin and hashish, and the poor Afghan refugees, concludes the author.

by M.K. Rustomji

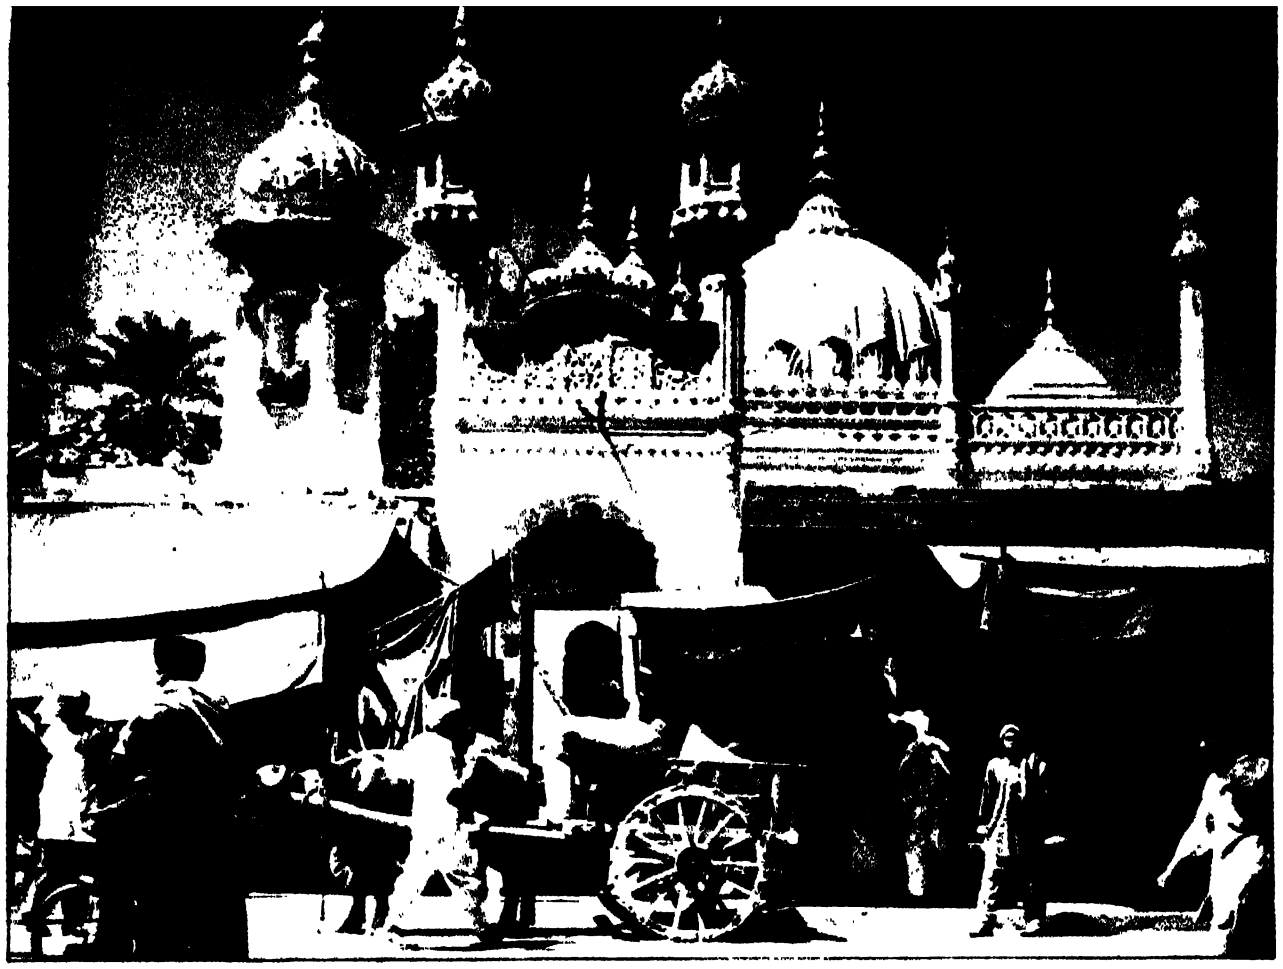
THE latest management techniques and how they can promote the economy and well-being of Third World countries such as India and Pakistan were outlined when I addressed the Pakistan Planning Commission in Islamabad in December. In both countries, the stranglehold of finance and the interference by bureaucrats, at Delhi and Islamabad, is responsible for delaying decisions and consequently industrial growth. It is only when chief executives with experience in industry are put in charge of industrial enterprises with full authority and without being continually interfered with by the Centre or by a financial adviser and chief accounts officer is it possible to make progress and avoid unnecessary delays. I was surprised at the little knowledge which the Pakistan Planning Commission had of India's industrial development although it seemed well up on advances in other countries.

During a ten-week lecture tour in Pakistan, I found that it had made considerable progress over the years, especially when one considers that, at the time of partition, there were hardly any industries in Pakistan and that many people on both sides of the divide feared the new country's imminent collapse through sheer lack of experienced personnel.

The remittances from almost three million Pakistanis working in the Gulf, Saudi Arabia, England, the United States and other parts of the world help sustain Pakistan's economy in a big way. This is a large number, especially when one considers that the whole population of Pakistan is a little over 80 million or about one-eighth of India's. Official remittances now amount to the staggering sum of about $2.5 billion a year. The Government is also very lenient as far as the imports of foreign goods are concerned. Pakistani nationals working abroad are allowed to import large quantities of foreign goods without paying customs duty when they return home. There are, thus, plenty of gleaming imported cars, electronic gadgets and cosmetics in the streets and homes of Pakistan. Emigrants often sell such duty-free imports to the general public at a high profit.

Inspite of the remittances, the foreign exchange budget of Pakistan is heavily in deficit and the yawning gap is filled by borrowing overseas. Inflation is at the rate of about 10 per cent, but wages are also increasing, if anything, a little faster.

There are hardly any beggars in the streets of the major cities. Very few



A GLIMPSE OF PESHAWAR. This street scene shows one of the city's most beautiful mosques with tiny shops and buffalo-driven transport carts

Inside Pakistan Today—II

Peshawar, A Boom City

people go barefooted and visible signs of destitution are hard to come by. Punjab and Sind, which are the major provinces of Pakistan, are fertile and surplus in food.

Much of the power in Pakistan is hydel but the enormous finds of gas at Sui in Baluchistan are now being exploited and Sui gas is piped to towns as far away as Karachi, Lahore and Islamabad. Pakistan does not seem to suffer from power shortage to the same extent as India.

Most Prosperous

Peshawar is the most prosperous city in Pakistan and real estate values there are higher than anywhere else in the country This is due mainly to three factors. Firstly, Peshawar adjoins the vast tribal areas of Pakistan. It has been decided, some time ago, by the Government that the normal laws of Pakistan do not apply to the tribal areas. As a result, goods intended for Afghanistan, which enter Pakistan at Karachi, are diverted to Peshawar and sold in the customs-free tribal areas A little Hong Kong, dealing in duty-free goods, has thus sprung up about 20 miles from Peshawar and it accounts partly for the affluence of the people of Peshawar.

Secondly, trade in heroin and hashish, running into many millions of dollars, flourishes in the tribal areas near Peshawar and is a contributory factor. Many little factories, engaged in the manufacture of heroin, have sprung up in the city's vicinity.

Finally, many Afghan refugees have brought in large amounts of money and have further boosted Peshwar's prosperity. Besides half the cost of maintaining some two million poor Afghan refugees in tents is borne by the Pakistan Government and the other half comes as gifts from abroad.

The Karakoram Highway

Although the Chinese keep a very low profile in Pakistan, the Karakorum highway which they have built and which is almost 1,000 miles in length right up to the Chinese border is a most impressive engineering feat. This road is very broad and passes through some of the most difficult terrain in the world and at times it traverses terrain as high as 16,000 ft. It has helped to open up large areas of Gilgit and Hunza, which were previously cut off from civilisation and which now have heavy trucks running right through them. The traffic near the Chinese border is relatively small and, for many months of the year, this roadway is out of use because of heavy snowfall. But it is still much cheaper to bring goods into Pakistan through Karachi than through the Karakoram roadway

A dramatic example of how the army acts in Pakistan to solve the country's problems is the way it broke a very serious traffic bottleneck recently Goods were not flowing smoothly to Karachi, the country's main outlet to the outside world. So the logistic cell of the army moved in; it purchased several hundred heavy trucks from West Germany, Japan and Italy in short order.

A familiar scene on Pakistan's highways today is the sight of these enormous trucks, usually with trailers, carrying goods from Rawalpindi, Peshawar and Lahore to Karachi. Many senior retired service personnel are now heading most of the big public sector enterprises in Pakistan.

The Russian Presence

Symbolically, the Russian presence is marked by what is far and away the biggest single industrial enterprise in Pakistan today. the steel works sited about 30 miles from Karachi. This is a million-ton Russian-designed steel plant which was set up during Bhutto's regime and it has already cost the Pakistan government almost $3 billion. The main raw materials for the steel works—iron ore and coal—will come mainly from abroad but a considerable amount of prospecting work is being done and it is hoped that, in the years to come, Pakistan will be self-sufficient in iron ore and coal Even so, due to the high initial capital cost of the project, it will produce steel at a much higher cost than the imported product and remain a white elephant.

Beautiful Islamabad

Islamabad must be one of the world's most beautiful capitals Designed and laid out by the famous American architect Stone the site is scenic The beautiful foothills of the Himalayas can be seen from almost every part of Islamabad.

Islamabad struck me as being a town for the rich. There were big affluent bungalows everywhere but there appeared to be little accommodation available for the working and the lower middle class people. People in this category commute daily from Rawalpindi, which is about 15 miles from Islamabad, as accommodation there is very much cheaper than in Islamabad

Islamabad is growing fast and already has a population of almost 300,000. Lahore was also suggested as a site for the capital of Pakistan, but Islamabad was finally selected as it was felt that Lahore was too near the Indian border.

Tourists are negligible in Pakistan and the big hotels that were built in some of the major towns have a low occupancy rate There is very little in the country that can keep the tourist amused in the evening. Alcohol is not easily available and the usual cabaret shows are no longer staged. While alcoholic drinks are forbidden to Muslims, Christians, Parsis and other non-Muslims can consume alcohol provided they obtain a permit from the Government. I was given to understand that a considerable amount of Indian-produced alcohol is being smuggled into Pakistan and sold in some of the major towns.

A feature of present-day Pakistan is the building of a large number of new mosques Islamabad is building one of the biggest mosques in the world, financed by Saudi money, and, the plan is, this mosque will be a centre of Islamic knowledge and will be fully air-conditioned.

Other features are the loud sounds—five times a day—of the *muezzin* calling the faithful to prayer through very powerful microphones.

An Indian Town

Karachi is almost entirely an Indian town, for the vast majority of its four million residents come from India. I was very surprised to find that so many families in Pakistan are divided—with close relations in India In fact, I was told both by Piracha, the Pakistan Ambassador in India and Sharma his counterpart in Islamabad, that over 1,000 people a day apply for visas to visit India and Pakistan through their respective Embassies in Islamabad and Delhi.

I met the Indian trade team in Lahore, and the members of this team were very hopeful that the present very small official trade between India and Pakistan will soon increase.

The riots which occasionally erupt in Indian towns are very prominently featured in the Pakistan papers.

Kashmir is a subject which most Pakistanis feel quite strongly about The nomenclature for the two Kashmirs in Pakistan is significant—one is Azad (Free) Kashmir and the other is Occupied Kashmir.

People seem to be very hopeful that the thawing of relations between Pakistan and India will continue and that the impediments to the movement of people between the two countries will in future be considerably eased, specially after the setting up of the Pakistan Consulate in Bombay in the mansion where Jinnah once lived. ■

4 cold, calculated ways to keep the summer heat at bay.

From Bajaj. Who else ?

Buy Best. Buy Bajaj.

Bajaj has a lot of ways to fight the summer. Every year.
From fans and ice creamers to water filters and mixers (so you can make deliciously cold lassis and milk shakes). All conforming to the strictest ISI standards. All backed by the largest network of 3500 dealers.
For swift after-sales service, not that you'll ever need it.

A Mockery Of Democracy?

by Sujata Anandan

Gauhati:

THE Indian Airlines flight from Calcutta to Gauhati has very few passengers on board: a Catholic priest returning from his home-town in Kerala to his parish in Tezpur, a Services' family on its way to Jorhat (the father being Air Force personnel posted there), a businessman returning from a conference in Calcutta and a journalist flying in to report on the turbulent situation in the State barely fill up a quarter of the aircraft.

As the plane circles over Gauhati Airport and finally touches down, the silence and the tension become very apparent. There are only armed CRPF personnel, who throw a half-ring round the aircraft and watch warily the two passengers who get off and walk towards the Arrivals' Lounge. At the entrance, there are more guards; and still more outside. The roads are lined with men in khaki carrying loaded rifles. In fact, the place looks like it is under siege. Even during the 1962 war, I am told, there were not as many armed guards deployed in the State as now. They are here to see through the elections, a supposedly democratic process carried out under armed escort. The CRPF presence in Assam is indeed pervasive.

At many places, the CRPF has been accused of actually perpetrating the crime. At yet another district town, CRPF men opened fire arbitrarily, killing four, when a group of men attempted to decamp with bullet-cases and other ammunition stocked there by the guards.

These, and other similar incidents, have made the CRPF notorious, indeed extremely feared, in Assam.

There is also a difference in their attitude, a difference in their reaction to their surroundings, that sets them apart from the Assam Police and other CRPF battalions elsewhere in the country. They have been instructed, a CRPF jawan tells me, by their officers and the administration that the Assamese are not unlike the Naga and Mizo insurgents in the neighbouring States.

No One Spoke...

Ironically, the only means of defence against the CRPF bullets that the Assamese have exhibited so far have been gunny-bags filled with stones and rolled at the jawans from certain vantage points—so inadequate as to be almost pathetic. The CRPF men, who fear that they will be ambushed and attacked, tend to react strongly—in fact, too strongly—to even the slightest provocation from the Assamese. They never relax: not even at roadside *dhabas* and wayside inns. Nothing moves them, not even women. They sit with one hand close to their guns and eyes darting suspiciously all around, each newcomer subjected to unnerving scrutiny. They are in direct contrast to a battalion of Assam Police.

In fact, the tension in Gauhati before the last phase of the elections was so great as to be almost tangible. Not a single soul stirred on the streets—no loudspeakers, no election propaganda, no election posters: except in the predominantly Muslim and Bengali areas, no carnival spirit. There was none of the paraphernalia generally associated with elections. Transport was practically impossible, all available vehicles having been requisitioned by the Government for election purposes. No one spoke, not even a whisper. The town looked as though plunged in deep mourning.

The tension arose not just from the presence of the CRPF—this being the least of the people's fears. The bigger factor was the AASU call for an Assam Bandh until the conclusion of the elections. Any Assamese distantly associated with the polling found himself hounded, his people killed, his children murdered, bombs exploding in his car and his home: a heavy price to pay under any circumstances. So they preferred not to exercise their franchise if this bought them peace of mind and safety—which it did.

In fact, this feature alone explains, to a great extent, the poor turnout at the elections all over the State. While a majority of the Assamese are with the agitators, fears of reprisals made most others reluctant to participate in the process.

At one village, a contesting candidate was abruptly cut off by close family members the moment he filed his nomination papers: they feared society more than they loved him. At another village, the in-laws of a contesting candidate were wounded by their neighbours, their house was set on fire and their property was looted. They sought shelter in the candidate's home and remained confined indoors even after the elections.

Such fear permeates even the villages in the interior. Voting was moderate only in the Bengali Muslim and Bengali Hindu areas. The extremely poor turnout at the Assamese-speaking Muslim villages would have one believe that this sector of the State's population has totally cooperated with the AASU Movement. On the day of the elections, the villages appeared totally deserted, doors and windows were shut, curtains were drawn. No children played in the fields, not even dogs ventured outside.

The only people in and around the polling-booths were polling officers and the CRPF guards. However, groups of young, tough-looking men stood or sat at a distance, three to four furlongs away from the polling centres. They effectively cut off approach from all directions and watched out for anyone who attempted to cast his vote: this apparently was enough to discourage even the most courageous from inviting the wrath of the agitators. One will never know now how many villagers willingly or unwillingly sacrificed their right to vote.

On the other hand, the elections themselves have made a total mockery of democracy. And they have set several undesirable precedents—they have been the bloodiest elections in Indian history. They have also been the most expensive—reluctant polling officials were brought in from Delhi and Bihar on the promise of large compensation in the event of death or injury while on election duty: Rs 1,00,000 to the family of each gazetted officer killed; Rs 50,000 in the case of non-gazetted officers. Also, the Workmen's Compensation Act was to be applicable in the event of injury or disablement. Bihar officials were promised payment of full salary to their next of kin till their retirement age in the event of their death. And they were all flown in a specially chartered Indian Airlines plane. These expenses alone run into crores.

The incentives were sufficiently attractive to make the officials realise the gravity of the situation they were being placed in. Said an IFS probationer on polling duty at a suburban booth in Gauhati: "There was no question of refusing. We were all on tour when we got the directive from the Home Ministry. All we can do is pray and hope for our safe return. (Several polling officials and guards have reportedly made a beeline towards a temple near Gauhati, the presiding deity of which supposedly grants every wish. "Please God, let us return safely!" seems to have been their collective prayer.)

The IAS probationers brought in from Delhi (there were two women among them) were placed under heavy CRPF guard. Barriers were thrown all around their residential premises and all approaches were blocked off. While most of the Assamese State officials went underground, others were arrested under the NSA, guarded round the clock and later forcibly taken for polling duty.

Far From Free Or Fair

Despite all these measures, however, one gets the impression that the elections were not entirely free and fair. To begin with, the electoral rolls of 1979 were not revised and several legitimate voters found themselves unlisted. There were no polling agents at practically every polling centre. Officials from outside the State were unable to read the electoral rolls, which were entirely in Assamese. They were provided with Assamese interpreters who mostly failed to turn up. At places, Assamese CRPF guards helped out but, where these guards were sympathetic to the cause and refused to read and tally the rolls, the officials were helpless. It is very possible that several genuine voters were turned away by the overcautious officials. At other centres, where officials were less particular, there was enough scope for foulplay. In fact, a social worker—a dedicated Congress (I) worker—who toured the districts of Assam alleged that, wherever the genuine voter turnout was more than 25, there was large-scale rigging.

Even if the elections were totally free and fair, they have served no purpose. The voting was moderate only in the areas occupied by the Bengalis and the immigrants. The turnout was extremely poor in the Assamese Hindu and Assamese Muslim areas and, at a fair number of polling centres, there was no voting at all.

How Will They Rule?

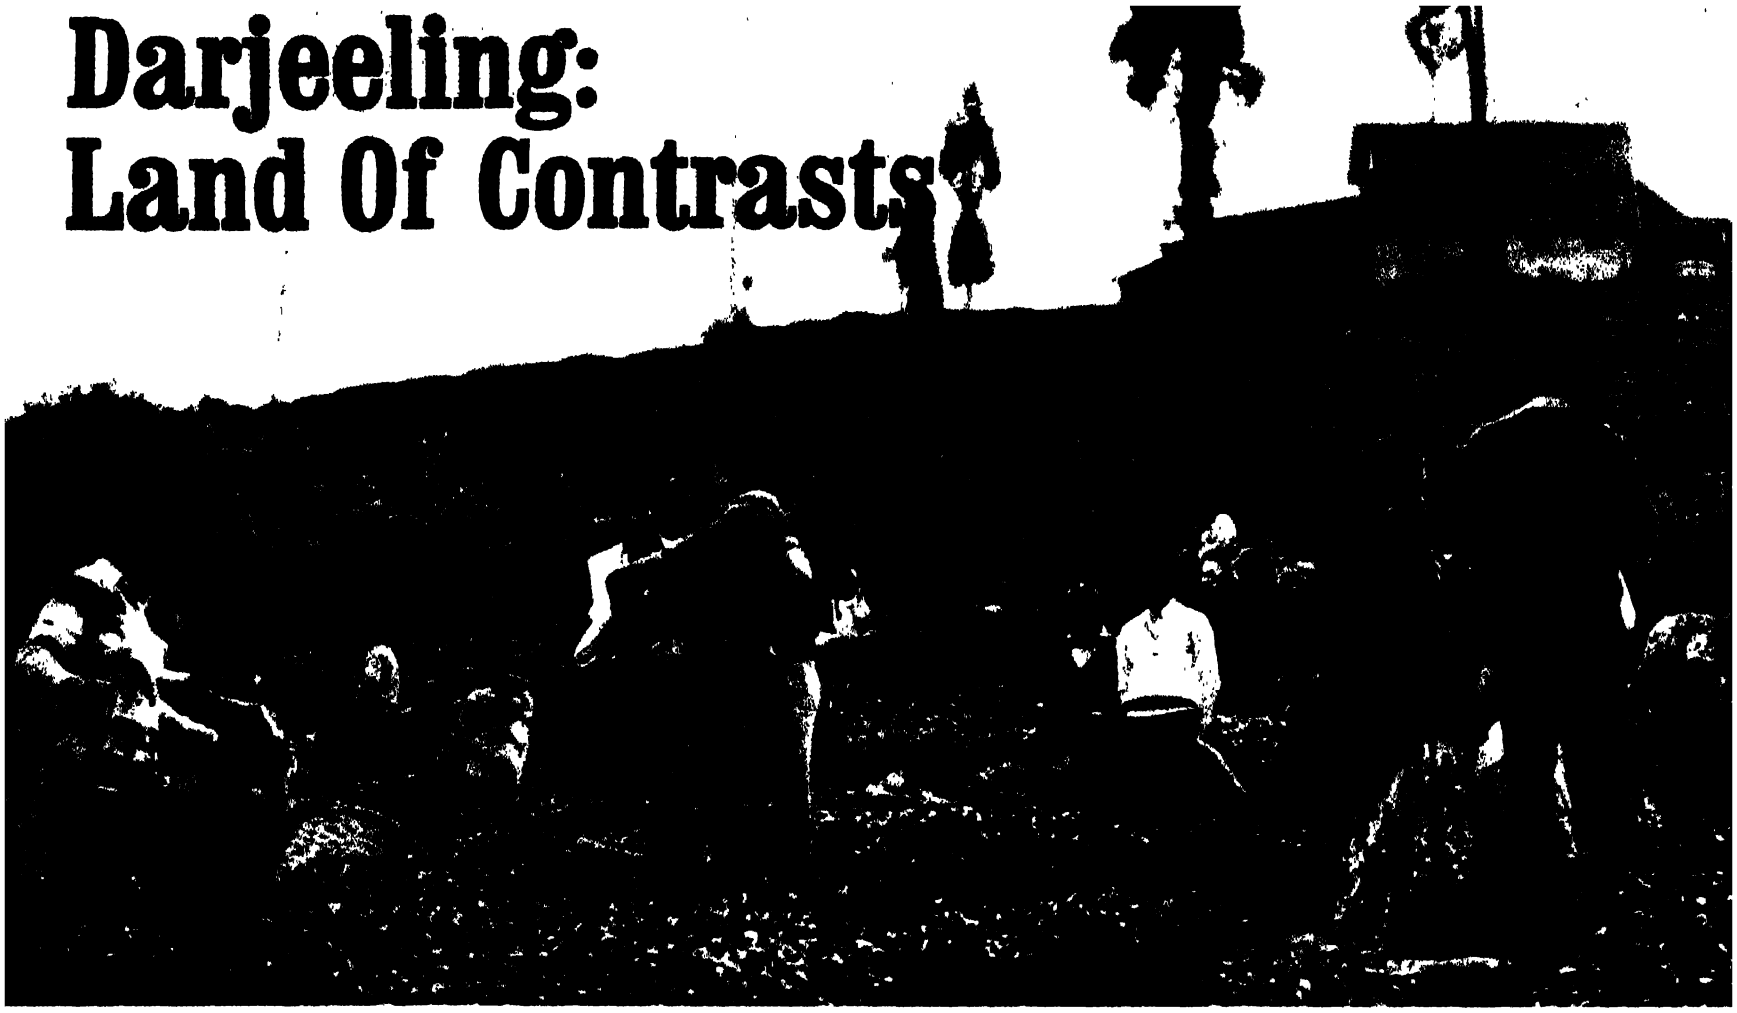
Under the circumstances, even if a Ministry is constituted, it can be nothing but a farce. Although the Chief Electoral Officer has opined that the casting of even a single vote makes an election legal, the leaders do not have a popular mandate, nor do they have the confidence of the people. An AASU call for a *bandh* is instantly obeyed, while the administration's call for normality is totally ignored. How will these "elected" leaders effectively rule the State?

The imposition of elections on the State, at the expense of so much life and property, may conceal a totally different pattern. This became apparent with the gradual withdrawal of the CRPF from the State and the rapid mushrooming of army camps all over the countryside.

Perhaps the AASU leaders would have been wiser to allow the Assamese to contest the elections—since they enjoy a good deal of support—and, on the strength of their majority in the Assembly, they could have bargained for their position with the Centre. ■

WOMEN SATYAGRAHIS being escorted by the police after arrest for picketing at the DC's Court, Gubli, in Gauhati.

Darjeeling: Land Of Contrasts



While Darjeeling fascinates and attracts, behind its beauty lie ugliness and neglect which has caused the town to be as hated as it is adored.

by
Gautaman Bhaskaran

WROTE Mark Twain: "The one land that all men desire to see, and having seen once—by even a glimpse—would not give that glimpse for the shows of the rest of the world combined." That land is Darjeeling, hidden among the towering snow-capped ranges of the Kanchenjunga. But this Shangri-La, discovered and developed by the British in the early years of the 19th century, is a land of contrasts. It is today as beautiful as it is ugly, as adored as it is hated and as well-cared for as it is neglected.

The winding way up the 7,000 feet to Darjeeling has breath-taking sights to offer. The deep and absolutely green ravines, ornamental, terraced tea estates, pretty Nepali women offering hot beverages, well-mannered monkeys that almost come up to you and say a hello, delightful mountain springs and a refreshing breeze all leave you fascinated. But the bad patches on the road, the missing guards, particularly at places with awesome falls, and the recklessness in some drivers take away some thrill from the three-and-a-half hour journey from Siliguri (412 miles from Calcutta) to Darjeeling.

The resort, popularly termed the Queen among all, is one of the few places on earth from where a clear view of the Kanchenjunga is possible, provided, of course, the clouds yield. You might walk on the Mall, dotted with the most colourful woollens, lovingly knitted and sold by the Bhutias, or you might take a ride on one of those tortured-looking ponies up to Lal Kuthi, the scene of many films, but the lofty mountains would keep you company, forever. Better still, the nowy peaks looks ethereal from Tiger Hill (a little up and away from Darjeeling) with the rays of the rising sun adding a hundred colours to the background.

The town itself is no less impressive, particularly after sunset, when a million lights cast a radiant glow all around, giving almost a fairyland look. The buildings, stately and so very British, rise elegantly above the slopes, and there are areas that make you feel that you have landed in the midst of an English town. Even the Land Rovers, that serve as taxis here, are from those days of the Empire on which, many thought, the sun would not set. The curio shops display some of the most exotic items, more to attract the foreigner than the Indian, and the posh hotels add glamour to the top region of Darjeeling. Lower down the bazars, Indian and congested, sell anything from woollens to vegetables.

For the tourist who is in an expensive mood, the West Bengal Tourism Department's Tourist Lodge (with a double room over a hundred rupees a day) is

ideally located on the Mall. *Sailabash* is the State's economy hotel with a double-bedded room not costing more than Rs 50. This and the youth hostel, also run by the State Government, are a little away from the main attractions of the hill station. In the private sector, Oberoi's *Mount Everest* and *Windemere Hotel* are three-star joints with rates to match. The *Central Hotel* has a two-star rating. More reasonably priced, however, are *Hotel Polynia, Ambassador Hotel, Broadway Hotel, Capital Hotel* and *Tiffany Hotel.*

Darjeeling has, of course, much more to offer. The Dhirdham temple, built on the lines of the famous Pashupatinath temple in Kathmandu, the Ghoom monastery, sacred among the Buddhists and built as early as 1875, draw large numbers of those with a religious bent of mind. For the adventurous, the ropeway from Darjeeling to Singla Bazar provides a thrilling ride over dark forests, happy valleys and silvery rivers. From Darjeeling, the bicable ropeway, carrying six at a time, descends to a height of 800 feet; the distance is eight km and the time taken to cover it is roughly 45 minutes. But it can take more, given the hill station's precarious power position; one can remain suspended in midair for hours, the only entertainment, other than staring at the co-passengers, being perhaps a good look at the zoo down below.

The Zoo

The Zoo is a pleasant place with Siberian tigers, leopards, yaks and Himalayan black-bears. Close by is the Himalayan Mountaineering Institute, with pictures of many of those who have conquered some peak or the other. Models of a high altitude camp and several implements used in the sport make an interesting study. The Tibetan Refugee Centre, established in 1959, where magnificent woollen carpets are made, and the Lebong race course, the highest anywhere in the world, are some of the other tourist attractions. All these can be seen in a day by taxi, which charges Rs 15 per front seat, and Rs 12 per back seat

Outside Darjeeling, just a three-hour drive away, is Marik lake, surrounded by tree-lined avenues and vast lawns. Boating on the lake can be refreshing and a meal at the Day Centre there even more so. One, however, wishes that the toilets there were better maintained. Normally, visitors to Mirik do not notice such things, their minds preoccupied with the coming trip to Pashupatinagar, on the other side of the border is Nepal.

In fact, tourist operators entice you to visiting Mirik by offering that bonus shopping at Nepal. And all for Rs 35 per front seat in a taxi and Rs 30 per back seat. Ironically, while tourists are freely encouraged to import anything they want to from Nepal, the Customs check being a formality, the authorities in Darjeeling never fail to highlight their efforts at curbing smuggling. In fact, so rampant is smuggling in Darjeeling that many shops there have an inner room where prospective buyers are entertained

Such inefficiency is not restricted to anti-smuggling operations alone. Take, for instance, the toy train, over a hundred years old. While tourist brochures harp on the so-called joy ride on the train from Siliguri to Darjeeling, it is more a relic than a utility Soon after Independence, a liberal number of truck permits for the route were issued and the train lost much of its freight. But natural, since while it took just about three hours by road to reach Darjeeling from the plains, a rail trip consumed eight hours. This state of affairs could certainly have been avoided by dieselising the section and speeding up the train. Besides, lack of toilets in second class coaches, poor lighting and an inadequate number of ticket-checkers may yet serve a death blow to the tottering train.

→

ALL THINGS BEAUTIFUL AND UGLY. Clockwise from above: The congested bazaars sell everything from woollens to vegetables. The magnificent woollen carpets (right) are made at the Tibetan refugee centre. The Ghoom monastery (below), held sacred by the Buddhists, was built in 1875. The bicable ropeway (below left) carries six at a time and when there is a power cut tends to remain suspended in midair for hours. The delightful lake flowers (below far left) add to the scenic beauty. The ornamental terraced tea estates (above far left) are an inherent part of Darjeeling. The Darjeeling Himalayan Railway (above left) celebrates its centenary this year.

Like the toy train, neglect is writ large elsewhere, too. There are practically no street lights, and it is to the credit of the locals that law and order has not deteriorated. The downtown areas are dirty, noisy and congested. Imagine traffic jams in hill stations! One reason for this can be that the town has no "land use plan". Anyone owning a plot anywhere in Darjeeling can raise any structure. Besides, one can build a flat in an office area and vice versa. However, a committee from Jadavpur University in Calcutta is now studying the "land use plan" and is expected to submit its suggestions soon

More alarming than all these is the town's water problem. The two tanks at Senchal, built in the 1930s, have a capacity of 32 millions, enough for the 20,000 population in those days. But it is woefully inadequate for today's 60,000 plus about 80,000 in the tourist season. The town has free supply of water till April 1, after which in case of inadequate rainfall, it lies at the mercy of the plains. A third lake was built some time ago, but much to the people's chagrin, it developed leaks. Even if it is repaired by the next monsoon, the tank will not be of use till 1984, only by then will it be sufficiently full for water to be pumped down to Darjeeling. The third lake, with a capacity of 18 million gallons, is not the ultimate answer to the resort's chronic water shortage.

The power crisis is another irritant that threatens to drive a tourist away. Usually, the authorities do try to maintain a reasonable level of power supply during the season but the fluctuating voltage can be a damper. Besides, there are many who prefer to visit the hill station in the off-season, when the town is less crowded and more ideal ■

THE DARJEELING ZOO is an interesting place with Siberian tigers, leopards, yaks and Himalayan black bears.

THE DHIRDHAM TEMPLE of Darjeeling is built on the lines of the famous Pashupatinath temple in Kathmandu.

BETTER SAFE THAN SORRY

A badly designed,
substandard voltage
stabiliser can damage
your expensive equipment
like Refrigerators,
Air-conditioners, etc.
So pick on the reliable
Nelco Voltage Stabiliser.
It's India's most popular
voltage stabiliser.

Letter From London

Sympathy For Asians

by Taya Zinkin

"A NATION will be judged by the treatment it gives its minorities," said Mahatma Gandhi. But the evidence about that treatment is often contradictory, anecdotal and inadequate, so that a fair judgement is hard to make.

Moreover, the majority often does not understand the sensitivities of the minorities. Individuals, when they are in a minority, tend to get a distorted view of the way society treats them—this is certainly so in the UK. On the other hand, I have never forgotten the story I read in an American newspaper, years ago, in which an applicant afflicted with a severe stutter told his parents after he failed the interview as a radio announcer: "In this b-b-b-bloody c-c-country a Jew d-d-doesn't have a ch-ch-chance."

I was reminded of this story at a recent meeting when an Indian lady concerned with the improvement of race relations said that Indians were discriminated against by one of the major British banks. She gave as her proof the fact that before a girl of her acquaintance employed by this bank went to India for a holiday she had to sign a form accepting that, if she did not return on time, she would get the sack. This form was not given to the British staff.

I followed this up with a senior official of the bank concerned and found that all staff going on holiday were liable to the sack if they did not return on time. He himself, apart from circumstances clearly outside his control such as a shutdown of airports, would be dismissed if he did not come back punctually at the end of his holiday. Indeed, in this particular bank it was customary for British staff to have to split the annual holiday in two. However, in the case of Asians or Africans going home on leave exceptions are made allowing them to take their entire leave in one go. In cases of delayed returns for the kind of reasons so frequently accepted in India itself, such as marriage, death, etc, warnings had to be issued that failure to return to duty would warrant sacking unless the excuse was cast iron. No big organisation can function when its staff is erratic. The bank had intended no racialism in reminding this girl of her obligation.

However, this does not mean that Britain is free from racialism. Far from it. But how far it affects the individual often depends on his (or her) behaviour. I once knew a young Indian who had a dreadful time in a Quaker boarding school. This, especially given the Quaker ethos, was shocking. But he did contribute to it by his own obduracy. School boys make life difficult for nonconformists.

By contrast, I met the other day an Indian woman doctor studying for her FRCS; she is a surgeon in England's leading heart hospital and assured me that she had never had any problems although she is the only woman heart surgeon in Britain. People ask her sometimes whether she does not fear that being a woman might put patients off, but the fact that she is Indian is never mentioned. She exudes the quiet competence of the truly dedicated and it has its effect on all around her.

At the risk of arousing a spate of angry correspondence, I would say that, on the whole, Indians are much less discriminated against than Pakistanis or Bangladeshis or blacks, though there is some discrimination, especially at first recruitment to jobs. Sometimes it is difficult to decide whether there is some discrimination, especially at first recruitment to jobs. Sometimes it is difficult to decide whether there has been discrimination or not. When a friend who has been driving in India for donkeys' years (and anybody who drives in India must be a very good driver indeed) failed his driving test in London he was convinced that the examiner failed him because of the colour of his skin. It is possible. But his wife whose skin is of the same colour passed her test the first time, and he himself passed the next time. So he may have just had a bad day or a disgruntled examiner.

The worst treatment occurs in immigration, though immigration officers can behave badly even to the whitest of Britons, as happened to my husband whose passport was once stamped "not allowed to work". He got many apologies but it was still unpleasant. It is worse on occasion for Indian visitors. A few years ago a young Indian friend was coming to spend a holiday with me and was put through the appalling indignity at Heathrow of having the customs officer open her suitcase, spread its contents around, poking inside each of her sanitary napkins. Another humiliation which has a racialist slant to which Indians are subjected when they land in Britain is the detailed scrutiny of their credentials even when, like another friend, they are air hostesses of Air-India coming for a month's holiday in Britain so that there could be no question of her being an illegal immigrant. Many immigration officers are courteous and helpful, but one always remembers the ones who are not.

Anything that can be done to reduce the harassment of Asians coming into Britain is to be welcomed. I was delighted, therefore, to read that a policy committee of the Labour Party has produced a policy document laying down the changes they would like the Party to make if it should be elected next time. They want to get rid of the provisions which prevent Asian women from bringing their foreign husbands into Britain if they themselves were not born in Britain and of those which prevent families established in Britain from importing any elderly but dependent parents. They also suggest the setting up of a machinery to speed up clearance for the entry of wives and children of people settled in Britain and the issue of entry vouchers for the 30,000 odd British passport holders, mostly from East Africa, who are waiting in India. Very sensibly they also want to make it possible for people suspected of being illegal immigrants to appeal against deportation *before* instead of *after* deportation.

This does not mean that they want to make immigration generally easier. They argue that the control of immigration should be linked to economic planning so that people who do not have existing family ties in Britain could immigrate only when economic conditions produce a labour shortage. At a time when Britain has more than three million unemployed this makes sense.

Before there were three million unemployed there were understandable fears that any large amount of unemployment would produce a severe worsening of racial tension. This does not seem to have happened. Tension exists, discrimination exists but they are no worse than they were. ■

Calcutta's Blighted Tube Rail: Too Late, Too Slow

by Kalipada Basu

IN the wake of partition in 1947, Calcutta was flooded with some 2 million refugees from East Pakistan. Over the years, with the expansion of industry and trade, people from all over the country, especially from the neighbouring States, have continued to pour into the city in search of employment.

Local transport in Calcutta therefore plays a significant role though it has some peculiar problems. The aggregate road surface in the metropolis is only 6 per cent of its total area compared to 11 per cent in Bombay and 22 per cent in Delhi. Trains in Calcutta do not reach the heart of the town, as in Bombay.

West Bengal's first Chief Minister, Dr B.C. Roy, the architect of modern Bengal, evolved plans to build satellite towns at Salt Lake, Kalyani and Durgapur and disperse some offices outside Calcutta but could not implement them fully.

He also realised that there was no scope for widening or building more roads. So he revived the idea first mooted during the Raj to construct an underground rail network and also a circular railway, and invited a team of French experts to make a survey. But nothing materialised.

In the meantime transport had become a nightmare in Calcutta. Population in the Metropolitan area swelled to seven million in 1971. It is expected that the figure will go up to over 135 lakh by the end of the century. About 200,000 vehicles move daily on Calcutta roads making millions of passenger trips. Besides, 416 trains leave Howrah and Sealdah daily and an equal number of trains reach these two railway stations. The trains carry about 2.5 million passengers. Buses, trams, mini-buses, taxis, cars, jeeps etc carry about another 2.8 million. The locations of the two big railway stations are such that commuters cannot enter the city proper by train, but the present number of vehicles cannot carry even half of the commuters to their destinations.

A Km An Hour!

Traffic jams on Calcutta roads are so bad that sometimes a bus or a motor vehicle takes one hour to travel one kilometre! The average speed of a vehicle is no more than 10 kms per hour. People hanging from footboards on buses and trams is a common sight. It is very difficult to get in a bus or tram in peak hours. Thousands of people walk for miles in the limited pedestrian space the city offers. Vehicles are parked on both sides of roads, in the absence of either car parks or appropriate parking space.

Finally, in the '60s, Russian experts were invited to make an on-the-spot survey and to report whether the soil in Calcutta was suitable for the construction of a tube railway. They favoured the proposal. So the Metropolitan Transport Project (MTP), under the Ministry of Railways, was launched in 1969.

The MTP decided that Calcutta Tube Rail would be divided into three parts: (a) North-South from Dum Dum to Tollygunj (16.43 kms), (b) East-West from Salt Lake to Ramrajatala (17 kms) also linking with Sealdah and Howrah and (c) North-South from Dakshineswar to Thakurpukur (27 kms).

India had no expertise in building an underground railway and resources were limited. Hence it was decided that work would start, at first, from Dum Dum to Tollygunj. The foundation was laid on December 29, 1972 by Prime Minister, Mrs Indira Gandhi and the actual work began in 1973. Originally the estimated cost of the project was Rs 140 crores and the target date for completion was 1983-84.

The 16.43 kms route length from Dum Dum to Tollygunj will have 17 stations—15 underground and 2 surface. The average inter station distance would be 1.02 kms, and the travel time was fixed to 33 minutes from Dum Dum to Tollygunj with the speed varying between 30 to 80 kms per hour. The rakes will consist of 8 single class coaches carrying approximately 2,500 commuters per train. So far the Railways hope to operate a 2.5 to 3 minute frequency service.

The tube rail will have some uncommon features. The tracks will not be of a conventional type—wooden, iron or cement sleepers on a bed of clinkers. Instead it will rest on rubber pads fixed on concrete sleepers and a bed of concrete. This will reduce sound, jerking and dust.

The trains will be electrically operated, though power will not be generated through the overhead traction wires as is common. Instead a third rail supported on porcelain insulators and placed along the track will supply 35 MW of power. A permanent standby arrangement will be incorporated to supply electricity in case of accidental power failure.

The underground stations and tunnels will be fully air-conditioned and ventilation will be ensured by forcing in air through grand fans. The air being fed inside will be scrubbed and sprayed with chilled water. This will make the incoming air not only cool, but also dust and smoke-free.

Advanced systems of "Cab Signalling" with Automatic Train Protection (ATP) will be introduced. The ATP will ensure stoppage of any train behind another in case of track obstruction within a minimum unsafe distance. Panels of lights inside the driver's cabin would indicate whether the track ahead is occupied as well as the speed to be maintained. Small antennae on board the train will receive signals and transmit them into the driver's cabin. If the driver fails to react to the signals, a computer on board the train would provide a foolproof system for safety. At the same time contact between each train and the main control centre will be maintained with radio telephones.

Two construction methods have been adopted, one is the "cut and cover" and the other is tunnelling. While rock tunnelling is done by blasting with explosives and is relatively easy, tunnelling in soil is a complicated, slow and costly process and requires great skill. Hence, the cut and cover system is preferred.

Tunnelling is being done at two places, Chitpur and the Shyambazar 5-Point Crossing. There are 19 rail lines at the Chitpur rail yard, it is, therefore, very difficult to apply the cut and cover system here. At Shyambazar 5-Point, tunnelling has had to be resorted to because if the cut and cover system would have been adopted, traffic dislocation in the north of the city would have been a certainty.

The cut and cover system is relatively easy and less costly. All normal traffic movements are maintained during construction work. But many of the existing train lines have been shifted.

The British were the pioneers in the construction of underground railways. They laid underground rails in London in 1863. By now 53 cities in the world have this system of commuting; and in 14 cities underground railways are under construction. The Calcutta Metro Rail personnel visited some of the cities and the experience of these tube railways is being applied here.

Cost Escalation

Though the work on the MTP started in 1973, the escalation in the prices of cement, stone-chips and steel coupled with court injunctions against land acquisition has delayed the progress of the network. Periodic shortages of cement and steel also hampered progress. To date, only 35 per cent of the work at a cost of Rs 136 crores has been completed. Now the track between Dum Dum and Shyambazar (3.77 kms) in the North and Esplanade and Tollygunj (7.55 kms) in the South will be ready, hopefully, by 1984-85 and between Shyambazar to Esplanade (5.11 kms) by 1986-87. Not surprisingly, the total cost of the project because of delays has gone up from Rs 140 crores (originally estimated) to Rs 560 crores (1980-81 prices).

For all that, MTP has something to show for its pains. Two stations—one at Maidan and another at Park Street—have been completed. They were, in fact, opened to the public in April, 1982, and 200,000 of people visited the two underground stations. In the North, one km elevated track at Dum Dum too has been completed.

Trial run of specially built coaches commenced on the 1.5 kms of track (one km elevated and the half km underground) in the Dum Dum sector in September 1981. Two trains (four coaches each) were used. They will run 200,000 kms over a period of two years. The coaches of one train are loaded with stones as a substitute for passengers and another is run empty. More coaches are on the way. By the end of 1984, a skeleton service maybe run with seven rakes of four coaches each. The Metro Authorities are very eager to do so—perhaps less to help the commuters than to boost up their own morale!

Significantly, the foreign exchange requirement for the project is only Rs 26 crores. Only three Russian and one Hungarian engineers are helping the Indian engineers and workers. The MTP has provided jobs to about 4,000 regular employees and several thousand other workers are on the payroll of ten contractors.

When completed, the Calcutta underground trains will carry 1.5 million (or 15 lakh) commuters daily. But will it solve the transport problem in Calcutta? The answer is in the negative. In a city like Calcutta only a "network of underground rail", as in London or New York, can help ease and not congestion track corridors.

Hence, the other two schemes—Salt Lake to Howrah/Maidan and Dakshineswara to Thakurpukur alongwith the circular railway—if taken up immediately—may hold out some hope for the harrassed commuters. ■

HEADING FOR COMPLETION. Specially built Metro coaches are now on trial at Dum Dum

Letter From Calcutta

Student Power

IF young Bengalis in Calcutta are turbulent, they are a shade more so across the border. General H.M. Ershad would, therefore, have been well advised not to stir a hornets' nest by provoking Bangladeshi students. They might have tolerated his suppression of democracy but will brook no closer tampering of what are seen as their rights.

Yet this is just what the Chief Martial Law Administrator seems bent up on doing. A committee set up by the military regime recently recommended (as it was no doubt asked to do) that students' organisations with political ties should be banned and police permanently posted in campuses. This will mean liquidation of about 30 unions among 35,000 students in eight universities. Now a report by Dhaka's Institute of Social Studies indirectly supports the proposal by claiming that "students are becoming increasingly embroiled in politics, finding almost no time to mind their studies". Explaining why only 15 per cent of students graduated in January, the report accuses 80 per cent of being rabble-rousers and political muscle-men who spend years on end in the same class.

For the time being, however, students are worried less by the threat of political illiberalism than by General Ershad's plans to make Arabic a compulsory school subject, official encouragement of the Islamic Chaatra Shibir and attempts to interfere with the February 21 Language Movement Day celebrations when several students were shot down by the Pakistani police in 1952. Riots between the Shibir and the 14-party Democratic Chhatra Sangram Parishad, and protests by Dhaka's Central Students' Action Committee, have for the moment stayed the General's hand.

THE LIBRARY OF CONGRESS (WASHINGTON D.C.) gate, one of the four entrances to the Calcutta book fair.

THE SMALLEST CAR at the colourful Vintage Car Rally.

Heil Hitler

IT was interesting to note that the 50th anniversary of Nazi ascendancy in Germany was obliquely remembered in Calcutta. This was during the annual Vintage Car Rally, a colourful and nostalgic event arranged by *The Statesman*, when participants are encouraged to dress up in period costume. As usual, the emphasis, appropriately enough, was on traditional Bengali zamindari attire: crinkled dhoties, embroidered Kashmiri shawls, women in crimson and gold Benarasi sarees heavily festooned in jewellery, and one elegant group with liveried attendant bearing a hookah on the dashboard.

But amidst all this splendid finery, a 1934 Mercedes Benz flew what looked like an authentic National Socialist flag, the car's interior occupied by khaki-uniformed stormtroopers with Swastika armbands. The second acknowledgement was a 1939 Opel Cadet with a Nazi Swastika painted on the door and which the commentator rather naively announced was to bring the entry good luck.

Milked Dry

THE Haringhata dairy, about 20 miles from Calcutta, is only one of the many creations of the late Dr B C Roy to have fallen on evil days. Though supposed to supply 35,000 litres of milk every day, it often provides none at all; even when milk is available, it is frequently diluted, sometimes with water from roadside taps. At the Bethuadahari chilling plant, a supervisor was recently suspended for similarly adulterating milk: he was unlucky enough to be caught just when the Government had belatedly decided on firmness.

That unusual mood also explains disciplinary action against 250 employees of the Belgatchia milk depot (scheduled to provide a daily 180,000 litres) for unauthorised absence during the Durga Pujas. Belgatchia has 3,000 workers but only 750 of them are employed in production; with 250 taking French leave, supplies dried up. The time office with its cards and punching machine was long ago closed down at this depot; in Haringhata, bottles are regularly smuggled out and illicitly sold. The machinery is outdated, delivery vans not in running condition, spares are not available, files relating to staff problems mysteriously disappear, and the Deputy Milk Commissioner has reportedly been ill for a long time.

But now the Left Front Ministry has sanctioned Rs 19.5 lakhs for a new bottle filler and promised 18 new vans. If it can persuade the men in dairy and depot to work, greater Calcutta's 775 milk booths might even boast adequate supplies with no need to cancel so many of the 87 scheduled delivery routes.

Portals Of Learning

THIS year's Calcutta book fair was imaginatively different in its lay-out with four impressive gateways representing four important libraries: they reproduced in perfect detail, the pillared portico of the British Museum in London, the entrance to the Library of Congress in Washington and, in order to keep the political balance, the facade of Moscow's Leningrad Library. The fourth entrance copied the Jaykrishna Public Library built and endowed in Uttarpara, in Hooghly district, by the Mukherjee family which made its fortune serving the East India Company and became pioneer philanthropists.

But the Jaykrishna Library, like the much bigger National Library in Calcutta, is today in a sorry state, without adequate trained staff, short of funds, and lacking the proper facilities for storing priceless, rare volumes and manuscripts. There is a curious contrast, in fact, between the book fair's popularity and the neglect of our libraries: it may not be too cynical to suggest that while the fair's promoters organise it as a commercial event, the thousands of visitors are far less interested in bibliography than in an evening's outing amidst bright lights and decorated pavilions.

And Never A Drop

THE coming summer will probably find Calcutta in the grip of a water famine though, officially, the city is said to enjoy a high 200 litres per head per day. But this does not take into account a population increase of several additional millions, or the 2,280 recorded slums to which an already short supply of water is being diverted under the Bustee Improvement Scheme.

Conditions have worsened because tubewells at the Garden Reach waterworks, expected to provide 35 million gallons a day, are defunct, while sub-soil changes, frequent breakdowns, poor maintenance, regular thefts of equipment and Calcutta Metropolitan Development Authority, (CMDA) delays in repairing pipes compound difficulties. But the real problem is antiquity: built in 1864, the Palta waterworks originally had a daily capacity of only six million gallons but are now expected to supply 140 million. Worse, about 25 leaks every day result in a 30 per cent waste. When recently, the CMDA was asked to lay some new pipes, it was discovered that the diameters at either end varied!

Mr Prasanta Sur, the Minister for Urban Development, says the master plan for sufficient supplies will cost Rs 1,332 crores, but West Bengal cannot afford more than Rs 425 crores. Happily, however, the State Government has turned down the World Bank suggestion of a monthly water tax of Rs 20. We are already penalised heavily enough for services and facilities that just do not exist

North Side Story

THE tragic upsurge of violence in Calcutta's Cossipore suburb in the North, illustrates what a violent turn the so-called eve-teasing can take, especially if other vicious interests intervene. The Cossipore troubles began when a 16-year-old girl committed suicide, allegedly after being manhandled by local toughs. Two gangs went to war on communal lines, and battle was fully joined when one of the original miscreants, arrested and then released, was beaten to death. Other lives were lost in police firing.

Communal passions conceal deeper issues: the men were fighting for precinct supremacy and for dthe preservation of organised gangs and their profitable criminal activities. To cap it all, Cossipore is said to have had a corrupt police officer who turned a blind eye to the first signs of disturbance. The pattern is sadly familiar: this grim version of the romantic musical *West Side Story* is regularly repeated in the seedy industrial townships along Calcutta's eastern, northern and southern fringes. On the west, Howrah, across the Hooghly river, is in a worse mess.

Island In The Sun

I CAN only hope that Bangladeshi reports of a new 250-sq-km island surfacing in the Bay of Bengal, about 16 kms from the coast, are either proved false or that the island disappears as mysteriously as it has appeared. Otherwise, disputes over possession are bound to vitiate relations just when they are beginning to look up. There was enough acrimony over the last such sighting which India claimed as South Moore island and Bangladesh as Purbasha; Dhaka also then insisted that there were two islands. That claim, however, suggests a ray of hope. If India keeps South Moore (or Purbasha), as it is determined to do, Bangladesh can have the new accretion. Honour will be saved, and General Ershad can claim a glorious victory at home.

Sumita Sandilya

In The States

"Return Of The Native"

by B. Shankar

"V" FOR VASANTDADA'S VICTORY. Dada's triumphant return has wiped out the ignominy of his earlier ouster by Sharad Pawar.

BOMBAY: The Centre, they say, is never happy if a communal lobby dominates a State. Divide and rule is its guiding principle. Sharad Pawar, in a way, obliged Mrs Indira Gandhi in 1978, when he walked out of her Congress and toppled Vasantdada Patil's ministry in Maharashtra. The Maratha lobby was then vertically split. Sanjay Gandhi took advantage of the fact when he handpicked Abdul Rahman Antulay to head the State Government after Mrs Gandhi's political comeback in 1980.

After the dust settled down, Patil vowed that he would come back as Chief Minister of Maharashtra, if only for a day, to wipe out the ignominy of his ouster. And he has made it—not entirely by quirk of fate. He is about the only Maratha leader in the Congress (I) who has a political base of his own, is widely respected and is an able administrator. The Congress (I) desperately needs him to improve its image and win the elections in 1985.

At the residence of his wife, Shalini Patil, at Nariman Point, "Dada", as he is known to all, spoke to this reporter about the task he faces as successor to the lacklustre Babasaheb Bhosale. Delegations of industrialists, armed with petitions and bouquets, waited in an anteroom for his *darshan*. He obliged them all and listened to everyone patiently, including a woman who wanted a recommendation for her son's admission to a local college!

During the interview, Dada, who is now 65, coughed a few times and said apologetically, "I just started coughing a couple of days ago. It will go away soon." He appeared keen to dispel rumours that his health was run down.

Question. How do you feel after becoming the Chief Minister once again, after a gap of four-and-a-half years?

Answer: No Chief Minister (of Maharashtra) has ever come back like I have. I feel that I was destined to return and I have been sent to do something. It is the wish of the people and I hope I can fulfill their expectations. I will try to help the people of the State and the party, too.

How do you see the administration and law and order in the State? Do you think they have become slack in the past few years?

Of late there was no such thing as a Government in the State. Of course, there was a Chief Minister, Secretaries and Ministers too, but no Government as such. My first task will be to restore the confidence of the people in the Government so that they think that here is a Government which listens to us, pays heed to our problems.

The officials should not think that because they work from morning to evening, everything is alright. The criteria should be how the people benefit.

The administration has become very loose and slack. Two, four, six, eight month old files are coming to me for none bothered to dispose them off with a clear-cut decision.

Regarding the law and order situation, it is generally okay now. Of course, there was some trouble sometime back but it is better now.

What about the drought situation in the State and the water shortage?

The drought situation is acute. Earlier, about 7,000 villages did not have water. A survey was carried out some time back and it showed that the water levels have gone down and now about 17,000 villages are facing chronic water shortage. We will have to launch a scheme to provide quick relief. I will be touring the areas shortly.

What about the textile strike? You are a former leader of the Rashtriya Mill Mazdoor Sangh and you should be able to come up with a solution. You met Samant recently. Have you any plan?

Yes, I met Samant and heard what he had to say. I want the strike to be resolved soon and I will try to get the mill-owners and Samant together. I can't say much now. Let the report of the tripartite meeting be released.

How do you propose to deal with the crisis within the party? There has been a lot of dissidence recently, the rebels are defying even the High Command?

Trouble has been going on for quite some time. There are various groups within the party—those who were with Madam in 1978, those who joined later and those who come in after 1980. Earlier, these things counted a lot and Madam did not want to hurt those who had been with her all long. Not that she wants to do so now but this does not mean that she does not give any importance to the late-comers. She wants to carry all of them with her. All of us must work together. There will not be any trouble now.

But Antulay is raising his voice, he has gone to the extent of saying that the observers sent by the High Command were prejudiced against him. His supporters may create trouble.

It is to be seen (how much support Antulay gets). I don't think they will try to do anything and I will not give anyone a chance to complain. We will treat everyone equally, whether they were with Antulay or Bhosale.

Regarding the election of the new Chief Minister, I don't want to say anything. What Antulay says and what actually happened... I would rather not say anything. His closest supporters have said that the election process was fair. The people were not with him. Why should the observers be against him?

The image of your party has deteriorated in the State in the last few years. Do you think that the Opposition in the State forms a viable alternative to the Congress (I), especially the George Fernandes-Sharad Pawar-Bal Thackeray alliance? Will it affect your party in 1985?

Our image will improve soon. I can't say much about the Opposition. Alliances come and go and this particular one was formed to fight the Bombay Municipal Corporation elections. The Parliamentary elections will be held and you will see how we will win easily and well. By 1985 the situation will change a lot and we will talk about it when the elections come. I wouldn't like to say anything more now.

The neighbouring States, especially Gujarat and Karnataka, are attracting industrialists and many from Maharashtra, too, want to leave this State. The most important reason is the labour problem, especially in the Thane-Belapur industrial belt. How do you propose to tackle that?

It is true that Samant's style of functioning and his brand of trade unionism has alienated industrialists—they are troubled. I have seen unionism but Samant does not follow its norms. He just makes some calculations and then makes a demand for higher wages, however outrageous it may be. No agitation has gone on for such a long time and it might affect the industry. The industry in the State will have to be saved and kept within the State.

When there was trouble in Calcutta, during my last tenure, many industrialists used to come to me and say, "We want to set up factories here." Today they want to go away from Maharashtra. The trend has reversed and we will have to set it right.

Samant will destroy industry and destroy the worker too (industry *ko maarega* or worker *ko bhi maarega*). I will meet him soon and tell him to change his style of functioning.

It used to be said that Babasaheb Bhosale used to be less in Bombay and more in Delhi. Will you follow that pattern?

Well, I met the High Command and they did not tell me to report to them every now and then. Of course, it is my duty to keep them informed of the latest situation but there is no need to go there every second day. Beyond that, I do not want to say anything about my predecessors.

Will you meet Karnataka Chief Minister Ramakrishna Hegde to discuss the border issue?

There is no plan to meet him in the near future. If I meet him in Delhi sometime, I will talk to him.

One last question, which is rather sensitive. Your detractors say that your health is not very good and it may affect your work.

I know people say that. I work up to 12 hours sitting in the same place. I am up by six every day and I go to sleep at midnight. I work about 18 hours a day. Still if they say that I am not well, what can I do? It is true, I was not well sometime back, but now I am fine.

Mum's The Word

GAUHATI: Pressmen in this capital city of Assam have described the recently invoked Assam Special Powers (Press) Act of 1960 (Assam Act No III of 1961) on *The Assam Tribune* and *The Dainik Asam* as an attack on the freedom of the Press.

In fact, the State administration—after "curtailing" all the civil rights of the people of Assam—is now hellbent on forcing journalists working for these two leading Gauhati dailies to censor themselves or face risks of victimisation.

Incidentally, *The Assam Tribune* and *The Dainik Asam* published issues with blank editorial columns, soon after the Act became effective.

And despite restrictions on printing or publishing matter concerning the Assam agitation and allied activities, only *The Dainik Asam* fearlessly frontpaged in a single para the news of arrests of the six-member AASU-AAGSP delegation under NSA at Gauhati airport on their arrival from New Delhi.

Apart from *The Assam Tribune* and *The Dainik Asam* editorial staff, the city's other journalists and non-journalists as well, in a resolution, have expressed concern at the Government's "insidious" action and demanded early revocation of the Act. ■

Rafique Z. Hazarika

The Great Hops War

SRINAGAR: For hundreds of progressive farmers in the Kashmir valley who took to hop cultivation, lured by its high cash crop value, the manufacture of beer in the country has assumed crucial importance.

Hops impart a peculiar bitter flavour to beer and give it a refreshing aroma. Till the mid-1970s, hops were being entirely imported. In 1974, the Regional Research Laboratory at Jammu, introduced hops cultivation in the Kashmir valley where, under the peculiar agro-climatic conditions, the crop took root and flourished. Soon more and more farmers were taking to it.

However, it appears that the beer barons of India did not fancy this development—it cut down their import licences. They had an edge over the farmers in Kashmir since they are in a position to dictate prices. This could have had an adverse effect on the cultivation of this crop.

HOME-GROWN HOPS from the Kashmir Valley, will soon be able to meet the requirements of the entire beer industry in the country.

As more and more land was brought under hops cultivation, farmers began agitating for a ban on the import of hops in India. In this they were opposed, tooth and nail by the beer manufacturers but the farmers had the support of the Government of Kashmir. The former Chief Minister, Sheikh Mohd Abdullah, had exerted great pressure on the Centre for an imposition of a ban on the import of hops. The Regional Research Laboratory also time and again stressed that Kashmir could meet the hops requirements of the beer industry all over the country. After an intensive struggle, the Centre ultimately conceded the farmers' demand in 1981.

The beer barons, however, have not accepted their defeat. They are incessantly lobbying for a revocation of the ban.

Some time ago at a meeting of the Hops Board, which represents hops growers, beer manufacturers, the Regional Research Laboratory and the Central and State Governments, the manufacturers almost succeeded in their efforts by mounting a very strong offensive. Their plea was that due to inclement weather in early 1982, the hops crop was likely to be poor and insufficient for their requirements. They pleaded that the ban should at least be partially revoked. They even succeeded in convincing some people who had earlier stood for the ban. But the opposition was too strong.

It is believed that the machinations of these manufacturers were responsible for the split in the Kashmir Hops Growers' Association, a few months back. A rival organisation was formed but although no one has so far dared to call for a removal of the ban, the split has considerably weakened the pro-ban movement.

In spite of these developments, however, the Hops Board is firm on the issue of the ban, particularly since the supply is fast catching up with the demand. They had reached a compromise with the manufacturers to defer a decision until the crop had been harvested and the final estimates of the yield made. To the chagrin of the beer manufacturers, the crop turned out to be good, yielding 175 tonnes against 170 tonnes the previous year. As a result, a State Government spokesman said, the ban on the import of hops will continue.

The manufacturers have been very inconsistent in their arguments against hops. First they argued that Kashmir alone could not meet the demands of the entire beer industry. Later they insisted that Kashmir hops were not as good as the imported stuff since they contain excess alpha acid which renders them more acrid.

The Jammu Regional Research Laboratory, which is also providing technical know-how for processing the hops, maintains that the better quality of crops must necessarily contain more alpha acid. This will yield more beer per kilogram of hops. In fact, the laboratory is continuously attempting to introduce new strains of hops with still more alpha acid content, better aroma and greater yield. Since the use of hops products is more economical and popular than the hops itself, the laboratory has also developed technology for production of hops oil and other extracts. Encouraged by the prospects of the hops industry, even the banks have readily approved the grant of loans.

However, uncertainty about the ban still prevails since the Central Government has imposed the ban only subject to review from season to season.

However, encouraged by it, hops cultivators are demanding the highest possible price for their crops while the manufacturers dictate the lowest terms. And so the stalemate continues. ■

Suraj Saraf

The Man Who Talks Too Much

EATING HIS WORDS. Ever since he came to power, NTR has been making one announcement after another only to retract it later.

HYDERABAD: For the 30,000 State Government employees of Andhra Pradesh, number nine, which happens to be the lucky number of Chief Minister N.T. Rama Rao, proved to be the most unlucky one. On this day, February 9, they woke up only to be greeted by screaming headlines in the dailies which told them that their services were needed no more. The retirment age, fixed at 58 by Dr Chenna Reddy's Government, has been reduced to 55. Many pleas have been made to review this arbitrary decision. But the affected employees, who dreamed of happier days in the Ram Rajya, were asked to pack up and prepare the ground for their juniors to take over.

Among those affected are 10,000 school and college teachers. Their retirement by the end of February is bound to throw the entire academic year out of gear. With still three months to go before the end of the current academic year nd the completion of exams, the State Government has invited totally avoidable complications by its reckless decision. While several schools in the State are pulling along with an inadequate number of teachers, the latest decision of the NTR Government has, to mix a metaphor, added fuel to the fire. Should one say more to prove that this unilateral decision was taken was taken without doing any homework?

Whatever the compulsions that prompted NTR to resort to this dramatic decision on an issue affecting the lives of thousands of families, he is now placed in the unenviable position of finding at least Rs 198 crores to implement his decision. Though there is no official announcement on the cost implications of advancing the retirement age yet, the above amount is computed by taking the existing pay scales into consideration.

(A) Gratuity—Twenty times the last pay. Average per employee Rs 1,500 per month
1500 × 20 × 30,000 = Rs 90 crores.

(B) Every employee is entitled to encashment of six months earned leave On an average each employee will encash four months earned leave
Rs 1,500 × 4 × 30,000 = Rs 18 crores.

(C) The amount involved in commutation of pension will be Rs 90 crores.

Thus it comes to a total of Rs 198 crores.

Why NTR has committed himself to this colossal amount is puzzling. At no time did he even give a hint that his method of solving the unemployment problem will involve advancing the retirement age. Even as the Government was finding ways and means to at least partially fulfil the promises of Telugu Desam, NTR's dramatic announcement, involving another Rs 198 crores, dumbfounded the votaries of Telugu Desam.

Whoever has advised the Chief Minister to commit himself to this huge expenditure, has done a great disservice to the regional party chief. The financial position will become chaotic in 1983-84. Out of the Rs 3,500 crores allocated to the State's Sixth Plan, only Rs 247 crores remain in the kitty. This year's annual plan is fixed at Rs 825 crores Out of this, the State Government has to raise Rs 611 crores. The present indications are that the NTR Government will be able to generate only Rs 400 crores. Even if 50 per cent of the Rs 247 crores remaining with the Government (VI plan allocation) is utilised this year, the Andhra Government will still need another Rs 90 crores to take care of its annual plan. Add to this, the necessity of raising another Rs 198 crores in liquid cash. The situation appears grim.

The Telugu Desam Government has inherited an overdraft of Rs 80 crores from the previous Government. This amount has to be cleared by March this year. In fact, NTR promised the RBI that this amount will be paid in March positively. If the Chief Minister resorts to another overdraft to tide over the financial crisis, he will not be able to draw more than Rs 60 crores—the limit fixed by the RBI.

Given such a tight financial situation, it will be interesting to watch how NTR will cope with it without imposing additional taxes in the next financial year.

Unfortunately, the Chief Minister has become an object of ridicule through his announcements that are made only to be withdrawn as soon as they have been announced. The latest of these withdrawn decisions is the one which hiked the price of milk. Only two days later, however, NTR issued orders to restore the old price. Will the decision on retirement age also be one of those decisions that are issued only to be withdrawn later? ■

G. S. Reddy

DHOLA AND MARU from Sutrodhar's production of the famous Rajasthani ballad

Sutradhar's Pioneering Work

Indian Puppets Take Wing

by Reeta Sondhi

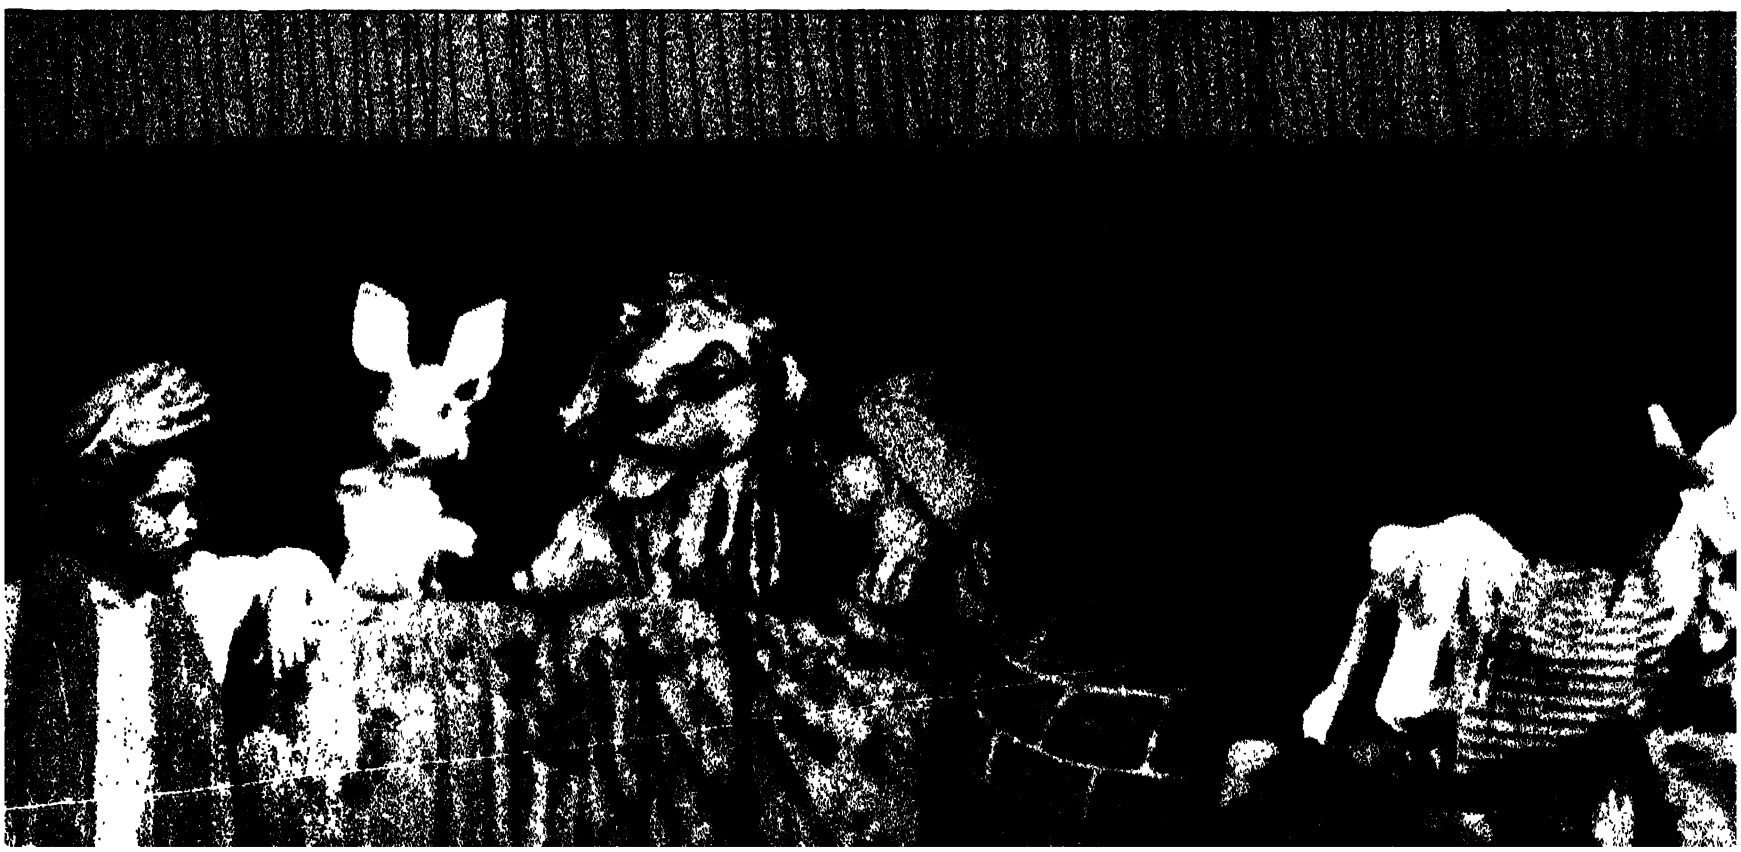
"OF India more than of any other country in Asia, it can truly be said that puppetry is indigenous theatre," says J Tilakasiri, the Ceylonese scholar on world puppet theatre.

Bharatiya Natya Sangh, established in the mid-50s to popularise and perpetuate Indian arts, formed a group called *Naiyka* for promoting theatre and other crafts, among them puppetry. It was meant to provide to traditional puppeteers a forum for inter-regional and international exposure. The group disintegrated just as BNS got disoriented and what remains of *Naiyka* today is a small production cum-sales unit at Mehrauli and a sales outlet at Rouse Avenue in New Delhi, of marginal tourist interest.

Then followed Sangeet Natak Akademi and the Bharatiya Kala Kendra, with great zeal and little persistence. But the Calcutta Puppet Theatre, Udaipur's Bharatiya Lok Kala Mandal and the Puppet Wing of the Darpana Academy in Ahmedabad, where Meher Contractor continues to do her good work in the field of educational puppetry, have survived. So have the names of such individuals as Devi Lal Samar, Raghunath Goswami, Leena Mangaldas, Chittoprosad and Prasanna Rao.

The country, however, had to wait till 1980 for its first professional repertory. Panna Bharat Ram, who was keenly aware of a gap in her cultural milieu, decided to brave a Rs 2-lakh budget to provide entertainment to the city's youngest generation soon after she became Executive Vice-Chairman of the Shri Ram Centre for Art and Culture. The repertory performs every week-end at the Centre—when not on tour—striving also to step out into the capital's municipal parks and streets. It is headed by 31-year-old Dadi Pudumjee, who has had his training at Ahmedabad's Darpana Academy, the Marionette Theatre Institute and Var Theatre, Stockholm.

Pudumjee's "Sutradhar" the holder of strings, proclaims its self-evident title in much the same way as the traditional drummer who announces nonchalantly the opening of his street shows in sharp contrast to the essential self-effacement of the unique entertainer who conceals



himself behind the screen or under a hooded black baggy uniform to merge into the dark oblivion of the rear curtain.

Self-abnegation, which perhaps is the keyword to all manipulation, has nevertheless proved a deterrent to the revival of the art, specially since the contemporary cultural environment nourishes only its superstars. Significantly, it is in Communist countries that puppetry, that offers gratification under cover, has thrived. Dadi Pudumjee maintains that there is a reaction against the elaborate theatre apparatus that countries like Czechoslovakia and the Soviet Union use in super-sized auditoria where they project their shows like minor marvels. Technical virtuosity, which curbs improvisation and mobility, achieves such a high degree of naturalism that it induces complete identification. This, in its turn, renders the young impressionistic minds totally captive.

In contrast, Pudumjee's theatre is simpler, more intimate and closer to his roots. He believes—with the Indian tradition—in the conscious distancing of his audience. To achieve this he employs conventional and unconventional methods of alienation: the customary narrator, the favourite singer, also, the innovative, unhooded manipulator who bursts upon the stage in a spontaneous celebration of the happy end. Finally, when good has vanquished all evil and it is time to go home, Pudumjee invites his little spectators backstage in order to help them lay their lingering ghosts.

THE MANIPULATOR IS VISIBLE, the repertory being influenced by the Japanese Bunraku technique. Seen in the picture (right) is the dancer Giarsibai and her puppeteers.

PAKHANDI SHER, (below left), with the rod and glove puppets—the Hare and the Lion.

MADHO AND THE COW, (below centre), rod and hand puppets in "Rangila Rakshasa".

MOTU KI MOONCH, (below right), the repertory's first production.

Sutradhar has a regular staff of seven manipulators and two musicians, besides the Director. Nathuram, who plays upon the ravanhatha, a bow and string instrument of considerable sophistication, comes from the Bhopal tribe of balladeers. Though his authentic music is an alluring complement to this folk-based theatre, integration at a more personal level, with a group essentially urban, has been traumatic. First, it was the shock of anonymity which he, as an accompanist, had to suffer—in his own environment as a ballad-singer he had grown up in the limelight. Second, it was a loss of caste. This latter is consequential to a special demand of Pudumjee's theatre, where human actors appear upon the stage masked or unmasked, alongside his puppets. And acting to the Bhopa, is taboo!

The Bhatt brothers, Jagdish and Puran, who belong to the Rajasthani community of puppeteers, have no such compunctions. Jagdish is a superb manipulator and Puran, an excellent craftsman. It is in fact, with Puran's advent into the repertory that Pudumjee has been inspired to work on some stock characters of the Rajasthan repertoire. The wide ranging movements that put these four-string puppets in a class apart, involves great dexterity in technique. They are very different from the inspid main puppets of

Photographs by Dadi Pudumjee.

GLOVE PUPPETS FROM PAKHANDI SHER the fox the pundit and the ram

a Rajasthani show The latter's single or double string operation is elementary Among the most popular of the exotic characters are the *nartaki* the *ghursavar*, the *kalabaz* and the *sapera* who provide entertainment in long interludes of extraneous showmanship But Pudumjee intends utilising them only as curtainraisers in short solo items

Vijay Prakash Shastri the percussionist takes care of the rhythm on the sophisticated *naal* and the legendary *dhup* Sushma Pandit Om Gosain Madhu Thappa Pushpa Gautami and Anil Saxena who comprise the rest of the team hail from versatile urban backgrounds Unlike traditional puppeteers they manipulate as well as deliver the dialogues simultaneously Their training entails the severe exercise of the deadpan face while voices register nuance and render characterisation Exercises designed specially for the shoulder neck, limb, wrist and finger joints are a part of the daily discipline Rehearsals which last about 10 weeks for their 50 minute shows lay as much emphasis on the study of human behaviour as on the specific technique

Pudumjee who has produced 6 plays to date wants to start a 3 month training course on modern puppetry There is also a plan to invite reputed international puppeteers as guest directors

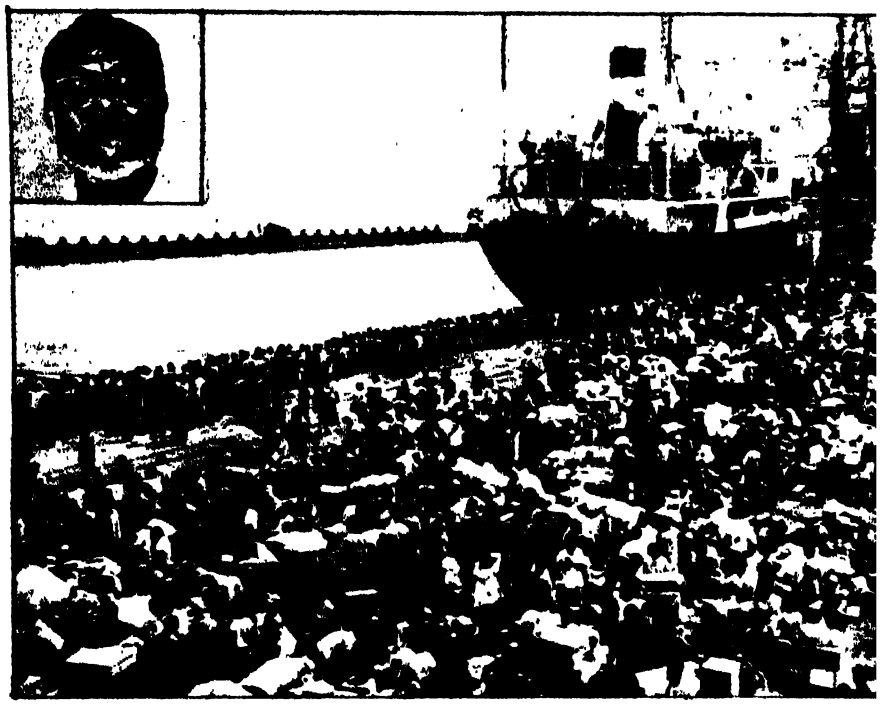
In the meanwhile the Centre's workshop continues to make colourful puppets in papier mache and thermocole packing They all have extraordinarily alive faces with eyes oozing emotion Pudumjee's perception and his skill elevate his work to the level of a sculptor's, the difference perhaps being in the restrictive demands of his medium and the limitation of his material The oversized noses on these slightly droll faces, which appears to be his Parsi signature, convey his sense of fun without degenerating into wanton caricature

Traditional Indian puppetry comprises basically four forms string, rod, hand or glove and the shadow puppets from the Southern States and Orissa Pudumjee is greatly influenced by the Japanese Bunraku technique where the manipulator keeps himself visible This he combines with the rod, hand-and-glove puppets, sometimes bringing into it the play of strings Though he has not gone all out for the elaborate southern forms he has adopted the idea of the *Tholu Bommalu* of Andhra Pradesh in a simplified version in his latest play *Rangila Rakshasa* He has captured the quicksilver quality of the colour stained perforated leather puppets in shadow and silhouette effect and "pasted" it upon a bamboo screen in a floral design to provide the permanent background of a jungle scene

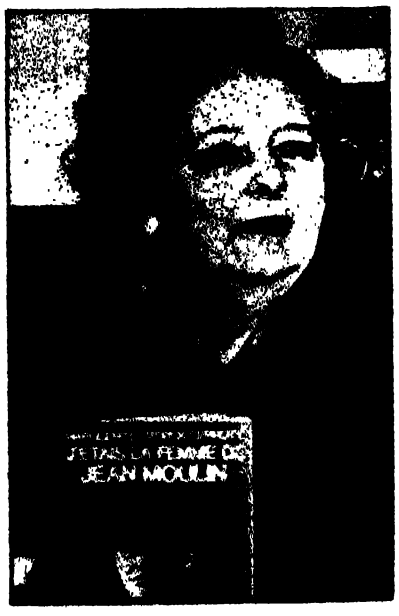
The highly successful *Rangila Rakshasa*, written by the well-known translator J N Kaushal, calls for two observations one, the need to employ good script writers two, the necessity of addressing exclusively, though intelligently, the child in the audience As points of contrast, one refers to *Ek Tha Jooto* and *Motu Ki Moonch Jooto*, which was evolved during rehearsals, gave contemporary theatre an original puppet—the shoe—yet it ended up being structurally very weak *Motu* which aimed at both the child and the escort fell between two stools The moral Do not try to exploit this inherently naive form for the family planning programme, please! ■

THE WORLD AROUND US

HAIL CHIEF. General Simha Pratap Shah, Chief of Army Staff of The Royal Nepalese Army, inspects the Guard of Honour which met him at the Defence Ministry in Whitehall, London.



"A NATIONAL CRISIS." This was how Ghana's Interior Secretary, Johnny Hansen, (inset), viewed Nigeria's expulsion of one million Ghanaians. Picture shows Ghanaians at Lagos port, with their belongings, waiting to go home.



NAZI SYMBOLS painted on the statue of Christ in the St Peter cemetery in Nuremberg, the West German city made famous by the post-war military trials. SINGING SENSATION Karen Carpenter, 32, died of a heart attack in Downey, California. Karen, with brother Richard, has sold over 80 million records and tapes worldwide, and the pair have won three Grammy Awards.

Technological Gap

by SK Aggarwal

Need For Modernisation

IT is creditable for our country to have built up, during the last three decades, a massive infrastructure of industry in all sectors—steel, petroleum, fertiliser, power and aluminium and so on but it was equally important for us to have consolidated our gains by modernising these enterprises and utilise their capacity fully Since replacement of equipment or modernisation of one plant means lucrative orders for another, our failure to do so on the requisite scale has taken a heavy toll of the country's industrial capacity with the result that, at any given time, capacity utilisation has been a mere 40 per cent. Operational failures or absence of effective maintenance systems continue to dog the industrial sector

What to talk of modernising our industries in the eighties, we are even bidding good-bye to whatever technology was acquired since Independence. The Government awarded the contract for the Thal-Vaishet fertiliser plant in Maharashtra to Haldor Topsoe, a Denmark-based firm, ignoring the Sindri-based Projects and Engineers India Ltd, the brain trust of the entire fertiliser industry within the country

In the power sector, we have entered into a package deal with Northern Engineering Industries (NEI) UK for the Rihand super thermal power station

It is said that if one totals up the power project tie-ups, equipment to install 5,460 MW of capacity is in the pipeline BHEL stands to lose at least a year's turnover as a result of these foreign collaborations.

The R & D Gap

Our expenditure on R & D is merely Rs 700 crores per annum ie, 0.78 per cent of the Gross National Product (GNP) of which the private sector's share is 10 per cent and the public sector's 90 per cent There is no attempt to adopt or improve upon the indigenous technology as the Japanese have done with dramatic results inspite of the fact that we have the third largest force of scientific and technical manpower in the world—just after US and USSR.

One of the most blatant and well known automotive sector. The Toyota Motor Company of Japan and a leading Indian auto firm started their operation simultaneously three decades ago. While the former has grown into a giant—making fuel-efficient, light weight fibreglass cars—the Indian company is still struggling with outdated models

Let us now examine the gaps in our agriculture and industrial sectors

On the agriculture front, we have done fairly well particularly in wheat production, although our performance is far from being optimum. The agricultural growth rate, which was 2.97 per cent during the 1950-69 period, has come down to 2.14 per cent This has not kept pace with our population growth of 2.5 per cent and is naturally causing concern.

The utilisation of irrigation facilities, created at enormous costs, is no more than 30 to 35 per cent. We have yet to reclaim even half of the 180 million hectares wasteland and bring the area under the plough. Mechanisation of small holdings is still a crying need. Soaring prices of inputs like seeds and fertilisers continue to retard agricultural growth.

There has been no worthwhile technological breakthrough in the production of rice—one major food crop Our rice productivity of 1,380 kg a hectare is one of the lowest among leading rice producers in the world. Pakistan's rice yield is 1,600 kg, Indonesia's 2,320 kg, China's 2,825 kg, Japan's 3,780 kg and South Korea's 4,150 kg The contrast is glaring.

The shortfall in oilseeds and pulses production is causing an avoidable drain of Rs 600 crores to Rs 800 crores a year in precious foreign exchange now for nearly a decade The average rate of growth of oilseeds production, which was 3.46 per cent during the period from 1952-53 to 1964-65, declined to 1.62 per cent between 1967-68 and 1978-79.

With oilseeds self-sufficiency as elusive as ever, rice bran can be used as a potential source of edible oil in the country. Japan, for instance, uses 80 per cent of its total bran oil output for human consumption as against 15 per cent in India. What is more, while Japan squeezes all its bran, India's actual output is one-tenth of the potential.

At the existing level of paddy output, the country has a potential of producing five million tonnes of edible oil a year. Against this, the current bran oil output ranges between 1,00,000 and 1,50,000 tonnes, the bulk of which is unfit for human consumption and hence is put to industrial use A measly amount of 15,000 tonnes is used as edible oil.

The main reasons why the output of rice bran oil has not attained its true potential are technological: (a) the method of dehusking the paddy is primitive and (b) the presence of the enzyme lipase which increases the free fatty acid content of the bran and renders the resultant oil unsuitable for edible purposes.

The first problem can be overcome through modernisation of rice mills by increasing the pace of replacement of "hullers" by shellers.

As for the second, scientists have already developed three techniques for stabilising bran: cold storage of the commodity, its admixture with anti-lipase chemicals and heat treatment. Why can't these methods be adopted nationwide?

The production of pulses has been the weakest link in the agricultural development programme. Except in 1975-76 when there was an all-time record in pulses production of 13.4 million tonnes against nearly 11 million tonnes in 1955-56, production has fluctuated between eight to ten million tonnes for the last two decades or so.

The decline in pulses output and the decline in per capita availability requires immediate attention. Against a nutritionally desired requirement of 60 gm per head per day, the availability of this important source of protein has slumped from 70.4 gram in 1956 to 30.1 gram in 1980!

TECHNOLOGICAL OBSOLESCENCE View of an outmoded textile mill shows the run-down condition of most of the textile units. Their production is far below their normal capacity.

The decline in pulses production is attributed to farming in marginal areas where the soil is infertile and irrigation facilities are inadequate. Besides, the plants of almost all pulses plants are very vulnerable to pests and fatality.

The Indian Agriculture Research Institute has developed new gram varieties but these are still in an experimental stage. But improved varieties of *arhar* the second major pulse crop, have been already developed. These varieties can ripen within a period of five and a half months instead of ten months. They need to grow on an exclusive scale.

In large segments of our industry today, 70 per cent of the machinery is old and needs immediate replacement. Productivity is low, costs high and quality poor. In our zeal to expand, we have even ignored our traditional industries such as sugar, cement, textiles, paper and jute which are so vital for our export earnings.

Modernisation in these industries has been slow due to five predominant factors: price control; depreciation based on historical costs; high rate of corporate taxation; doubling or even tripling of the costs of machinery, both at home and overseas, in the last decade; and, finally, lack of adequate credit on soft terms.

That is not all. Many owners have neglected the modernisation of their entreprises even during periods of prosperity and even siphoned off profits to invest elsewhere. This is particularly true of sugar, jute and textile industries

According to the Indian Sugar Mills Association (ISMA), out of a total 314 mills, 130 are 25 years old and more than half of them are incurring losses.

Sugar was the first industry to be made eligible for modernisation assistance. The modernisation funds requirement of the industry was estimated by the Sugar Inquiry Commission in 1968 at Rs 76.71 crores.

The present-day cost of modernisation is estimated at Rs 187 crores. In 1977 out of the assessed requirement of Rs 120 crores, nearly Rs 44 1 crores were sanctioned by soft lending institutions but only Rs 6.7 crores were actually disbursed.

The story of the jute industry is no different. India, once the monopoly supplier, is facing the worst recession and competition from Bangladesh Jute Synthetics.

In 1977, the industry had estimated its funds requirement for modernisation at Rs 250 crores of which Rs 100 crores were earmarked for imported equipment. The soft loans by Industrial Development Bank did not measure up to the requirement.

The Textile Plight

The textile industry is virtually a "slum". About 63 per cent of spindles and 82 per cent of the looms in a total of 700 textile mills are 15 years old.

The contribution of our textile sector in the country's export earnings has been Rs 700 crores to Rs 800 crores a year. But today, textile exports are declining. Not only is it facing competition from the rich nations, the industry is also loosing ground to the not-so-developed countries like Taiwan, Hong Kong, South Korea, Pakistan, Algeria and Philippines.

The cement industry has been reeling under burden of administered prices. Losses have generally overtaken retention prices. The inadequate return on capital employed and the absence of provision in the price structure for mod-

emisation has accentuated the problem. As a result, modernisation has been negligible and sickness is creeping in.

The impact has been evident on the rate of growth in the cement industry which has come down from 19 per cent in the first plan to 11 per cent in the second, 6.3 per cent in the third and 5.8 per cent in the fifth plan.

The industry has 27 units with 26.58 million tonnes installed capacity 71 out of 104 wet and semi-dry process kilns are operating at a very poor efficiency.

The capacity of wet and semi-dry process plants of 600 TPD and above in 18 kilns can be converted to dry process by incorporating the precalcinator know-how—enhancing the capacity to 1,500-1,800 TPD. The conversion cost is esti mated at Rs 279 crores.

The precalcinator know-how is being largely followed by Japan and has revolutionised cement production there. The technology can work on low grade coal and requires less capital investment.

The import of the engineering industry can hardly be exaggerated, its weight in the industrial production index is 29.85. It provides a base for any sound industrial structure. The engineering enterprises "grow old" faster—generally after five years Seventy per cent of the capacity in engineering industry is 70 years old. Only Rs 63.5 crores were actually disbursed for its modernisation out of a sanctioned amount of Rs 163.5 crores

Steel industry did fairly well during the '50s and the '60s, steel production during this period ie up to Third Plan rose from 1 45 million tonnes to 6.20 million tonnes.

But stagnation and sickness set in during the '70s with the production remaining static at 8.7 million tonnes. This has been due to gross underutilisation of capacity. As a result of poor production, we have been importing steel for the last one decade: over nearly one million tonne a year.

The latest technology which is being increasingly adopted in the West to modernise steel plants is continuous casting and direct reduction method. Direct reduction process for steelmaking can work with either natural gas or non-coking coal which is advantageous for India

The latest technology which is being increasingly adopted in the West to modernise steel plants is continuous casting and direct reduction method. Direct reduction process for steelmaking can work with either natural gas or non-coking coal which is advantageous for India as it has abundant well-dispersed non-coking coal reserves.

Other sectors in which we are woefully backward and need immediate modernisation is professional electronics and computer service. Electronics is vital for defence and the computer for all around efficiency of our industry.

All in all, the need of the hour is to utilise meagre resources to get the maximum utilisation of the existing capacity rather than fritter away funds in establishing new capital-intensive units ■

ICAR'S ACHIEVEMENT. The new variety of Arhar which grows in only five-and-a half months

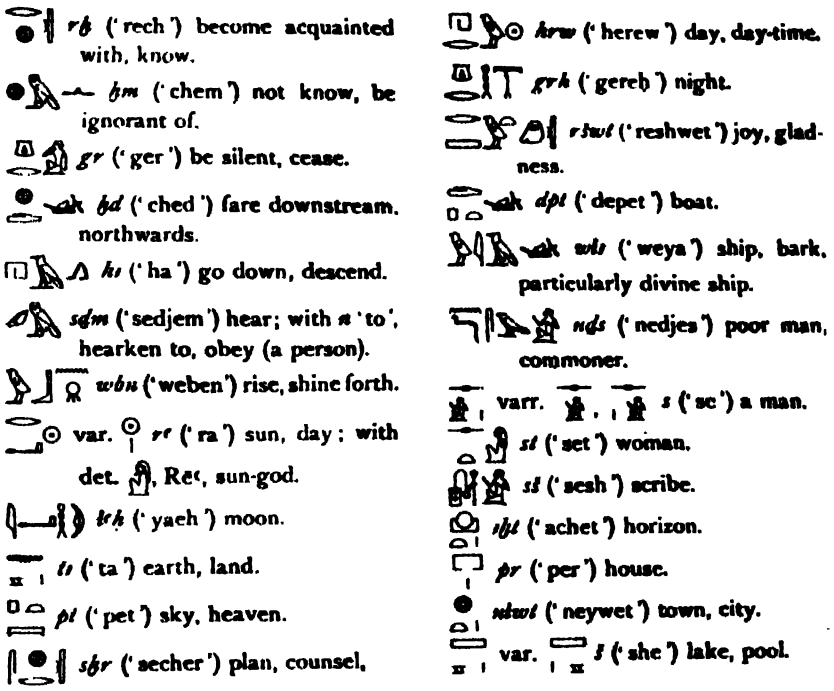
Breaking The Script

VOCABULARY



For thousands of years, hieroglyphics—the sacred writing of ancient Egypt—remained a mystery to the world. It was Jean Champollion who solved the riddle in 1822.

by Asoke Gupta

THE cradle of civilisation was in the near east, especially in Egypt and Mesopotamia (in Central Asia) and on the coast of the Aegean Sea.

The culture of ancient Egypt lasted for nearly 3,000 years, from the beginning of the 3rd millenium BC to the last century AD. This period gave birth to the most beautiful system of writing ever—hieroglyphics—which was used by the king and his priestly viziers. It appeared at a time when the human race was beginning to think in terms of history; this gave rise to the need to record names and dates. The discovery of writing thus constitutes the beginning of Egyptian history.

Hieroglyphic writing is based on the image of words. Words like "mountain" or "house" are written by using their respective pictures. Such picture writing was not bound to a language and was therefore universal.

'Sacred Carvings'

The word "hieroglyph" means "sacred carvings". This form of writing was a professional secret of the priests and was used to transmit the solemn proclamations of the king. With the advent of Christianity and the collapse of pagan religion, the hieroglyphic tradition flickered out. It resisted oblivion longest on the island of Philae, near the first cataract of the Nile, where fanatic Nubian clergy defended the cult of Isis in dilapidated temples. Here the last hieroglyphic inscription was recorded in 394 AD.

For thousands of years, the sacred writing of ancient Egypt remained a mystery to the world. No attempt was made to decipher this unknown language. But during the Renaissance, Western scholars became interested in hieroglyphs. In 1419, Leon Battista Alberti made a first attempt to reconstruct hieroglyphs from written descriptions. In 1499, Aldus Manutius wrote *Hypnerotomachia Poliphilli*, which contained hieroglyphic emblems. One of the most modern authorities on hieroglyphs was Giovan Pietro Della Fosse, who was fascinated by hieroglyphic problems. During his lifetime he wrote 58 books on the subject.

However, the most ambitious attempt to decipher hieroglyphs was made by Jesuit Althansius Kircher. He was a profound scholar of his time, author of books on cryptology, and for several years a professor of mathematics. According to Kircher, Coptic—which had been replaced by Arabic—was the last form of Egyptian hieroglyphics. Kircher also said that the knowledge of the Coptic language would be needed to decode hieroglyphs.

After Kircher, few attempts were made to decipher the sacred writing of ancient Egypt. However, interest in the subject remained high. The Great Seal of the United States, designed in 1790, depicts an Egyptian pyramid capped by an eye, the supposed hieroglyphic symbol of divine justice. This can be seen on the back of every United States dollar bill.

The Rosetta Stone

In 1799, an Egyptian labourer named Dhautopul was engaged in the construction of a fort for the French conquerors of a town in the Nile delta. While digging, his eye fell on an irregular slab of fine-grained black basalt, either lying on the ground or built into an old wall he was demolishing. It was covered with three bands of writing—demotic hieroglyphs, which had evolved from hieratic, a simple form of hieroglyphs and Coptic.

Although several translations were made of the Greek text, the discovery of the Rosetta stone did not make for an automatic solution. First, an attempt to read the meaning of the writing was made by Sylvestre de Sacy, a professor of Arabic in Paris. He tried to locate the meaning of the Greek text in demotic language but failed. He then handed over his research work to a Swedish diplomat, John David Akerbald. Using the same method of de Sacy he managed to solve many of the problems in just two months.

In 1814, the Rosetta stone came to the notice of Thomas Young, a British physician, whose hobby was science and who revived the wave theory of light on the basis of the discovery of the Principle of Interference. Young knew many modern languages. He made some progress with the demotic inscription and then turned to hieroglyphics. Though he had managed to read correctly six of the 13 signs he had identified, and three partly correctly, he admitted his failure to read the hieroglyphs.

Spell Broken

However, it was Jean Champollion, a young student of Grenoble, who solved the mystery. He made an intensive comparison of three kinds of writing. He proved that hieroglyphs represented sounds and that each hieroglyph was merely the symbolic expression of an idea.

It was in January 1822 that Jean Champollion brought out an almost complete translation of the hieroglyphs which gave the names of rulers of Egypt from Alexander to Anonius Pius. First he deciphered the word Ramses. Champollion knew the sun was called "Ra" or "Re" in Coptic, and that the three-pronged sign on the Rosetta stone hieroglyphics represented the complex words meaning "be born" or "engender"; that added up to birthday. It flashed before him that he was reading the hieroglyphic form of the name of the most famous Pharaoh—Ramses—and the name meant something like "child of the sun". At the same moment his eyes fell on another cartouche containing an ibis—known as the bird of God Thoth, the three-pronged sign and a shepherd's crook; he realised in a dazzling instant that this was "Thutmose", another well-known Pharaoh whose name obviously meant "child of Thoth".

The spell was broken and the mystery of hieroghyphs had been solved at last. In a fever of excitement Champollion rushed to his brother's office nearby, threw his papers on the desk and shouted, *"Je tiens l'affaire"*—I have got it.

Within three years he had arrived at an understanding accurate enough to enable him to translate an early Egyptian inscription of Amenophis III. He discovered that hieroglyphic writing was essentially the same as rebus, though overlaid with many refinements.

Champollion died in 1832 at the age of 41, less than ten years after his achievement. But he had had the satisfaction of having resolved the riddle which the silent Sphinx had guarded since time immemorial.

Solution Of Cuneiform

It is not only the dead men of Egypt who told their tales. Decipherers have also studied the annals of ancient Babylonia. Their decipherment of cuneiform is a more astonishing feat in a way than that of hieroglyphics because it was achieved without the aid of bilingualism. The solution of cuneiform was started by a 27-year-old schoolteacher of Gottingen, Georg Friedrich Grotefend, who had written a book on a universal language. Independently, an English scholar, Henry Rawlinson, found a series of signs that he recognised as the names of kings. He recovered more of the alphabet than did Grotefend, and this provided the key to the next and far more important step: the solution of syllabic cuneiform, the language of Babylonia and Assyria. In 1857, the Royal Asiatic Society sent a newly discovered cuneiform inscription to four experts—Rawlinson, Hincks, William Fox Talbot and Jules Oppert—with a request to work on it independently. The four sealed envelopes containing their solutions were opened at a formal meeting. In all essential points, their translations agreed.

Within 15 years the world was reading in shocked surprise the epic of Gilgamesh, in which a story of a flood parallels the Biblical narrative down to the detail of the release of a bird to check whether the waters had subsided.

James Princep, professor of Sanskrit at Oxford University, who died in 1840 at the age of 41, solved two important ancient scripts. He first unravelled the Pahlavi script and then turned his attention to the inscription of King Asoka who in the third century BC ruled the greatest empire that ever existed in India. They were written using the then unknown Brahmi alphabet in the common language of the people, Prakrit. In 1837, Princep saw a number of brief inscriptions on objects found in a temple near Bhopal and concluded that they meant somebody's "gift" to the temple. Equating known sounds of the Prakrit word for "gift" and of Prakrit proper names with particular letters, Princep worked out the the oldest known writing in India.

That's Business

From Our Special Correspondents

MR H.P. Nanda, Chairman, Escorts Limited, could perhaps lay claim to the title of Motorcycle King. Coming up from the rear, Escorts has overtaken Royal Enfield of Madras and Yezdi of Bangalore to emerge as the country's top motorcycle manufacturer, accounting for 55 per cent of the market in 1982. Technology is Mr Nanda's watchword, and he has been at it in collaboration with Yamaha of Japan.

Now Escorts is simultaneously moving towards a bigger (350 cc) and a smaller (100 cc) motorcycle compared to the 175 cc Rajdoot it has been making and marketing. Who will buy the Rs 20,000 two-wheel giant, whose booking will start in March? Mr Nanda is obviously aiming at the connoisseur and the army and the police.

As for the smaller machine, the idea is to improve mileage and cut prices without compromising too much on sturdiness, which is the hallmark of a good motorcycle. "Nearly 80 per cent of our market is in rural and semi-urban areas," says Mr Nanda. For the time being, he is not going in for mopeds, although these are also included in his new licence.

The technology is again from Yamaha—$ 500,000 down payment plus 3 per cent royalty. Perhaps the R & D at Escorts could strive to graduate from adaptation to innovation so that some day Mr Nanda might be able to say: "The technology is all ours."

However, it is about the Escorts Heart Institute and Research Centre that he can talk with pride, claiming that it will be the largest of its kind in the world. To be located at Okhla on the outskirts of Delhi, the Institute will be directed by two young New York-trained cardiologists, Dr Naresh Trehan and Dr Parves Ahmed (son of the late Mr Fakhruddin Ali Ahmed). Surely it is a blow, albeit a mini one, for reversing the brain drain.

Ostrich Complex?

A thesis propounded by Dr Subramaniam Swamy, economist-turned-politician, who cherishes his Scarlet Pimpernel act during the Emergency as a feather in his cap, evokes interest even if it does not carry conviction. It runs thus: repayment of the huge IMF loan will commence soon after 1983-84 at an annual instalment rate of about Rs 1,000 crore. This will aggravate the resources crisis. A massive dose of additional taxation is, therefore, inescapable. The current year will be a year of reckoning because scope for additional taxation during the run-up to the Lok Sabha elections next year will be limited.

Be that as it may, there is no respite from governmental gimmickry. If work expands to fill jobs, you have Parkinson's Law in operation. If everybody in a bureaucratic organisation finds his own level of inefficiency, you have the Peter's Principle in full cry. But if a government tries to hide its inaction and inertia behind a plethora of committees and commissions, what do you have—an ostrich complex?

Perhaps someone will come up with a more appropriate term. We do not need another committee of economists. What is lacking is not reports and ideas but the will on the part of the Government to take the requisite action. Nothing is to be gained by adding more wheels to the juggernaut when those in the driver's seat refuse to step on the accelerator.

SBM Survives Crisis

The strike in Bombay's textile mills is a year and one month old, and there is no solution in sight. Not only has it thrown the 2.5 lakh workers out of work but has also affected many ancillary industries. Such is the crippling effect of the work stoppage that most textile machinery manufacturing companies have had to resort to retrenchment, lay-off and salary cuts.

One exception seems to be the SBM Group of Industries which manufactures a full range of textile processing machinery. Though it, too, was affected initially by the strike, it started exploring other markets for its products. Thus, in December, it executed a Vietnam order worth Rs 55 lakhs. Last month, it started delivering machinery worth Rs 70 lakhs ordered by Bulgaria. The group had earlier executed orders worth Rs 1 crore from that country and for a similar amount from Indonesia. More foreign orders are in the pipeline.

One reason for SBM's survival—even progress—in these days of hardship created by the strike, recession and credit squeeze is its penchant for updating the technology, claims the SBM chairman, Mr A.J. Shetty. For example, its new stenter, ES-2000, has a device to save fuel up to 30 per cent. Also, it has ventured into project selling in silk and hosiery.

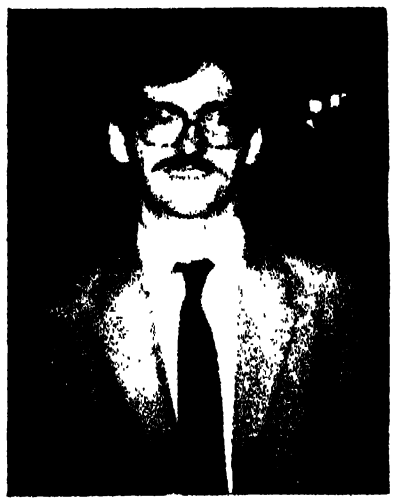
The group, which entered the textile machinery market rather late, has recorded an enviable average annual growth rate of 300 per cent, capturing 30 per cent of the local market as well as landing many foreign orders.

It has now entered into a joint venture with a Danish firm for making micro processors, automatic control systems, package dyeing, etc. This project will help not only SBM but also the European partner affected by a dull EEC market caused by severe recession in the West.

MR A.J. SHETTY, Chairman, SBM Group of Industries

Male Chastity Belt

Mr Patrick Murphy, Regional Director (Marketing), Pan Am is an unprepossessing, small-built man who nonetheless compels attention because of his fetching candour. Considering the nearly 0.5 per cent growth in tourist traffic in 1982, his remarks deserve notice. Mr Murphy does not mince words while attributing the recent sluggishness to the newly introduced visa system which is putting off many American and other tourists. First it was the Asiad, now the Non-Aligned Conference. Perhaps the security bit has been overdone. The tourist trade is hoping that the barriers will be again lowered after the New Delhi talkathon.



MR PATRICK MURPHY, Regional Director (Marketing), Pan Am

Neither is Mr Murphy mealy-mouthed about bemoaning the low priority India gives to tourism compared to countries like Nepal, Sri Lanka and Thailand. The other reasons he mentions are, of course, by now well-worn cliches: poor publicity and poor tourism infrastructure.

Could it also be that India lacks night life, being, in the eyes of many foreigners, the nearest approximation to a male chastity belt? Mr Murphy demurs. "Your cities may not be like Las Vegas, Singapore or Bangkok, but then India has so much more to offer which other countries don't." Anyhow, Pan Am has done pretty well in India, earning a revenue of $ 66 million, which may encourage the airline to add more flights.

One-Sided Trade

The South Korean economic miracle conjures up the names of three giant business groups; Daewoo, Samsung and Hyundai. The first is on a strong wicket vis-a-vis India, having increased its exports from $28 million in 1981 to 65 million in 1982. To an export list of steel, cement and chemicals have now been added ships, offshore equipment and chasses for railway bogies. Little wonder, therefore, that Indo Korean trade is so one-sided, our imports being $300 million and exports only $70 million.

"Now we want to have joint ventures in India as well as with Indian parties in third countries," says Mr Y.S. Hong, Daewoo's self-effacing manager. As the world's largest single garments exporter (its exports in 1982 touched $500 million), it is only to be expected that Daewoo would evince interest in our 100 per cent export units scheme for garments. It is talking to Siddhomal & Sons of Delhi. Explains Mr Hong: "With our technology we can bring down cost and jack up quality. Then, we have the expertise of the American market and you have contacts in the East European market. So both sides will benefit. The Indian party has also agreed to our holding controlling equity at 51 per cent, but the progress is slow."

What is the hitch?

"The minimum scale for us should be at least five to six million shirts a year, and at present it is not clear whether the required quota would be available through the Apparel Export Promotion Council." As for third countries, Daewoo and the Birlas are collaborating to set up a power mill in Zambia.

Reflationary Policy

Dr Freddie Mehta of the Tatas has been talking about the need for a reflationary policy provided there is an adequate foodgrains buffer stock. Now Mr M.L. Nandrajog, Secretary-General, Punjab, Haryana, Delhi Chamber of Commerce and Industry, has picked up the thread to explain a refinement. He says "Industry cannot lift itself by the boot-straps without incentives, particularly in the form of relaxation of credit curbs and lowering of interest rates. The inflationary impact of this reflationary policy should not cause economic distress to the common man provided there is an adequate buffer stock to ensure his basic necessities at reasonable prices."

Theoretically, Mr Nandrajog's idea is well conceived. But where is the sort of public distribution system he visualises? The business lobby will have to do better than this.

MR M.L. NANDRAJOG, Secretary-General, Punjab, Haryana, Delhi Chamber of Commerce and Industry.

Prayer Without Hope

Where the head is held high and the mind is without fear of the National Security Act.

Where the Ministers are not corrupt and arrogant and do not move about in imported cars while professing deep concern for the poor.

Where tireless striving does not stretch its hand towards bribes.

Where the Prime Minister is guided solely by reason and the interests of the nation, and is not preoccupied with establishing dynastic rule.

Where the heads of state do not go abroad with a large retinue of doctors, nurses and relatives for expensive medical treatment while tender children with bright eyes are dying for want of a few rupees worth of drugs.

Where essential commodities are available freely and at reasonable rates, and Government fair price shops do not mix pebbles and dirt with grain besides cheating on weight.

Where shaving cream tubes are not half-filled with air.

Where seats in medical colleges are not auctioned to the highest bidders.

Where cement earmarked for bridges and dams is not sold to building contractors for a huge profit.

Where the police, cowed by threats or lured by promotion, do not forget their duty and become the musclemen of the party in power.

Where the voice of freedom is not stilled by hired *goondas*.

Where patriotism does not make a mockery of itself by seeking *tamra patras*, pensions and seats in professional colleges for children and grandchildren.

Into that Heaven of freedom, my Father, let my country awake.

—**P.A.C. Rao (Bangalore)**

Breath

You showed me as a boy
who our people were,
pointing to the tyrewala,
the vulcanising man,
the tailor
and the library clerk,
and asked me not to forget them.
I nodded my head solemnly
and made my filial pact.

But then I went to school
to learn the declension
of every clever word,
and college
where they transformed straight
questions
into learned gestures.
The clouds
descending round my eyes
brought unseasonal rain.

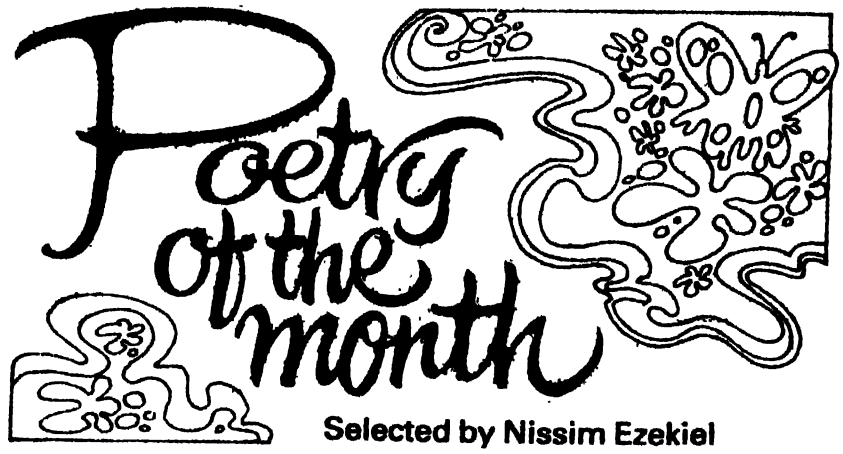
Meanwhile you trudged on
Sun Mill Lane
for thirty years
and lined your lungs with soot
as you took in the vapoured smoke
from Dhanraj Mill.

I remember
later how you leaned
against the table to breathe,
and on walks
your grip tightened on my shoulder
that I might pause
in your breathlessness.

Now that you have quietly
dissolved yourself
in this turbid smoke
and ride a wayward draft,
you will never more yearn
for elusive oxygen.

But I go scurrying around
collecting funds for the textile strike
and hope
that things will turn out so
that no fighting worker
will ever have
to bend to breathe.

—**K.K. Theckedath (Bombay)**



Selected by Nissim Ezekiel

Portrait In Grey

My grandmother's house evokes the indignity of age.
Its crumbling walls the ineptitude of resignation.
Her body is frail as loosened plaster.

The windows, once large, are closed to the seasons.
She opens the door each evening to a deceptive breeze
and sees through a shapeless cataract haze.

She prays to the faded photograph of the man she never loved
as she wipes the furniture cracked with the dust of years.
She mutters at her servant's desertion, loss of grace.

Her face has lost its contours, her memories their form.
She lives resigned to an endless mortality:
the morning ritual, the evenings of nothingness.

Her grandchildren are old enough
to remain unmoved by pocket money, slices of cake...

Grandchildren who snigger at her senile speech.
She has nothing left to fight their casual ways.

All that's left now is an irritation with misplaced keys.

—**Havovi Ankleseria (Bombay)**

Going Back

Every morning the sun's light rests
warm and honest on my shoulders.

Every morning my limbs grow handsome,
while a neat colour on my skin
announces large fulfilments.

But every evening the wind rushes
mad and cold about me, drawing off
all my beliefs, my hopes.

Every evening I stand, wide awake
and silent, watching the loss
while the night wind lives.

I long to go back to where I was
long ago, in another, safer country,
to a place deep within the night.

Firaq: With Contempt For Hindi And Happiness

by P.D. Tandon

As long as men have love for literature, high sensitivity and original thinking the name of Raghupati Sahai "Firaq" will shine with a lustre all its own. He died on March 3, 1982 and was a legend in his own time. He was a creative genius, who had a great impact in the world of letters.

Neither age, nor year of confinement to bed, due to illness, nor loneliness had in any way dimmed Firaq's extraordinary brilliance as a poet. He used to discuss problems with great vivacity. He was a determined detractor of Hindi, and loved Urdu more than most Muslims. During talks, his eyelids rolled in their sockets rapidly, and his countenance was lighted up with a vigour all his own. He was the greatest poet in Urdu in India and Pakistan. His creative poems are timeless and not topical or transitory.

I used to meet Firaq every now and then, but when I interviewed him the last time he was very brilliant, but very bitter and disgusted too. He was full of sadness, anger and helplessness and yet talked animatedly. I told him that I would like to put some questions to him and I would be glad to have his replies. He readily agreed, and said, "As many questions as you please."

Q. How has life treated you as a man and as a poet?

A. I had many personal misfortunes which made my life tragic. I had a very unhappy married life which led to the destruction of my home and family. My wife was a worm of human size, without any compensating factor.

As a poet I have no complaints against anybody. However, the destruction of literary culture has greatly distressed me. At times it makes me very miserable. In hating English, people destroyed other languages.

What is your concept of happiness? Are you a happy man?

I do not believe in happiness. I hate all who believe in happiness. A happy man is the most pitiable human creature, but I wish to avoid misery.

You were a teacher for long. What do you think of the teaching profession? And what do you think of professors?

My impression or half-impression is that in colleges and universities usually the teachers are not equal to grade fourth clerks, though the profession of teaching is indispensable.

Don't you think that is a rather harsh judgement?

Harsh only to those who do not know the reality. I have given you my opinion and I think I am right.

What do you think of the conditions in India today? Where is our civilisation going?

In our Indian civilisation decadence has set in incurably and we are incapable of producing things even slightly better than insects.

Firaq Sahib, what is your highest ambition now?

I hate ambitions and more than that I hate men of ambition, I consider ambition a contemptible instinct.

Would you be a poet again if you were reborn, and had a choice?

In a way poets and politicians are not high class people. If reborn, I would like to be a decent citizen. The noise about poetry is much worse than poetry itself. Poetry as a career is abominable.

Could you recall some of your saddest moments?

Since I am not a self-centred person, I do not bother much about sadness.

Please recount to me some of your happiest moments.

The word "happy" rouses murderous instincts in me. All self-respecting persons hate happiness. Only a fool deserves to be happy.

Will you please name the people you like very much?

I liked Jawaharlal Nehru, Lajpat Rai, Sarojini Naidu, Aurobindo Ghosh and Iswarchandra Vidyasagar.

Unconventional Poet

A Jnanpith literary prize winner Firaq was very unconventional and original. He continued to be his old self, despite age and illness. (To use his own phrase he was 'vindictively himself'.) Once a veteran journalist asked him about the influences that worked on him. Firaq stated, "I have never been influenced, I have influenced myself My story is the story of myself versus the universe. This is the triumph and the tragedy of my life."

Firaq was a creative artist. His powers of interpretation were enormous. He was hyper-sensitive. He once told me, "My mother used to say that from infancy I refused to sit in the laps of ugly men or women. Love of beauty was in my blood."

Firaq's genius as a great poet was never in doubt, but what lent lustre to him was his profound knowledge of the English language and his striking originality as a writer and speaker. When he spoke, he was passion personified. What he liked most in life, he once told me, was intellectual satisfaction. He had a supreme knack of making the worse appear the better reason.

A conversation with Firaq was a delight, even if you did not agree with his unusual and at times one-sided views. He was always involved with the things happening around him. He did not relish talking about himself. Yet, one day when I asked him when he discovered that he was a poet, when he composed his first poem and how he felt about it, he said, "I have not yet discovered the doubtful fact that I am a poet, though I have been writing poetry for half a century I have too great a reverence for the word 'poet' to believe that every verse-writer is a poet. Fortunately, I have more than half forgotten all about my first efforts at verse. The growth of my poetic mind and what little poetic power I have been able to evolve has been very slow. About two decades of painful effort went in to the making of those first poems of mine which won recognition from people competent enough to judge All genuine literary creations seem to be the result of the mysterious working of a writer's creative faculty. So has been the case with me."

Lonely Man

Firaq was a very lonely person. He always sought company He was at his best in the midst of intellectuals. He was frank about his personal life. He once told me that his love was not of the common type. It was a painful journey in search of pleasure. In his own words, "I sought love from youth, the sensuousness of my physical as well as imaginative personality. I was a plaything to storms of sexual passions from early boyhood. Sexual instincts and passions were tearing me to shreds, yet in the midst of all these tempests, I felt that I was seeking through sex something beyond sex and was stretching myself towards the ideal beauty."

Firaq was not a mere poet. He was vigorously alive to dynamic changes in modern life. He took a lively interest in political affairs. Once when he was in the Congress, he courted imprisonment He used to react to political happinings with great sensitivity.

"What makes you miserable and do you see any signs that justify hope?", I once asked the poet. He became pensive and after a few moments stated, "So far as India is concerned the confusion about aims and ideals is very trying. Then I feel that there are no opportunities in the present day Indian set-up for men of thought and fruitful ideas to prove effective. Even the more prominent of Gandhiji's followers who gave to his freedom movement what great or little strength it had and their successors who resembled them, are entirely unfit, to make the freedom they won yield results. We now need not Gandhi-ites but the Indian equivalent of the best talents in Europe, not for the freedom of India but for the building of India But do we have such Indians? Our freedom fighters cannot be our nation builders."

Firaq aimed at perfection He often felt dissatisfied with his poetic efforts. Ye yearned for the creation of more poems of such quality as *Midnight (Adhi Raat)*, *Shadows (Parchhaiyan)*, *Fireflies (Jugnu)*, and *The Cradle (Hindola)* He often wished he were less harrassed in his old age with economic worries, illnesses, loneliness and helplessness and to be able to leave behind him a few thousand more lines and a hundred poems of moderate length on the lines of the great English odes as well as in blank verse as in English poetry

During the last years of his life, however, he had no economic worries of any kind. He had more money than he needed and got more whenever he asked for it or felt that he needed it However, he could not escape, illness and loneliness. He was always surrounded by people and yet he felt a little lonely Once he told me, "Even in big gatherings, I feel very lonely. Once he told me, sometimes desolate. You can see loneliness reflected on my face." Whether his poetic longings were fulfilled or not he alone knew it. But he always suffered from divine discontent.

Firaq had, it seemed to me, worked up a hostility against Hindi. In season and out of season he denounced Hindi poets and writers. He comments against the Hindi language were violent, almost mad. Few agreed with him, but many enjoyed his powerful and amusing denunciation of the great Hindi language.

At my daughter's wedding, my nephew asked Firaq for an autograph. He took the book in hand but the moment he saw poet Sumitranandan Pant's autograph, he flung it aside angrily saying, "Will I ever sign on a book which carries the autograph of Sumitranandan, that Hindi poet?" All those present were shocked at Firaq's crudity, but he could often be rude and crude

Firaq had a very unhappy domestic life. He never concealed his feelings about it. He talked of it with cruel candour Once he told me, "I have disliked my home and my domestic life which has been one long tale of hatred, disgust and misery. Only by a constant and heroic effort have I saved myself from going to pieces Pandit Jawaharlal Nehru during one of his sojourns at my place advised me that I should patiently face this terrible trial and his words gave me great strength."

Firaq was a genius and he was aware of it. He had an ever-growing mind. Age had added an edge to his brilliance. His greatest contribution to Urdu poetry was 'his use of ordinary words to give expression to extraordinary nuances of thought and feeling'. Name and fame caused him embarrassment. He wanted to be one with the common man. Firaq considered innocence a great virtue and a blessing. His poems reveal a highly sensitive and original mind at work.

Firaq's sensationally original poems were universally recognised. As a poet he was really great and contributed much to Indian literature, but as a man he was very earthy. Often one wondered how such a genius who talked of beauty on such a high level could be so ordinary in human affairs However, he lived a life of vigour and powerful passions and was always "vindictively himself", concealing nothing, revealing everything about himself ■

The Weekly Pick

Forest Farming, J Sholto Douglas, Robert A de J. Hart, G. Shankar Ranganathan, Natraj Publishers, Rs 85.

With all the destruction of forests in the last decade for firewood, timber and other allied industries, trees have certainly been in short supply. The authors aim at increasing the *Prosperity For India* (as the sub-heading says) and discuss the role of forests in economic progress. The chapters *Revitalising The Rural Areas, Designing A Forest Farm, and Fields For Expansion Deserts*, are attractive even for a non-technical environmentalist like this reviewer. The use of forest resources, checking of pollution, stopping erosion and expansion of desertland are some of the pleasant side-effects that arise from forestry for better economy.

India And The Atom

Birla Institute of Scientific Research, Allied Publishers, Rs 50.

India's nuclear programmes and its achievements and failures are systematically covered in the book. The last four decades have witnessed great scientific efforts in the field of nuclear energy and this book presents the role of science in widening our horizons and utilising our natural resources. Nuclear technology for peaceful purposes and nuclear weapons and national security are expansively discussed.

Folk Tales Of Himachal Pradesh

Som P. Ranchan, H.R. Justa, Bharatiya Vidya Bhavan, Rs 15.

The book represents a small section of mythic material that .Himachal folk-culture is rich in feminine wisdom, motherhood, sympathy and freedom from demonic influences and evil. Folklore, myth, legend and reality are woven together and each story has a special message. Each shrine or holy place has a story behind it and the author brings out the essence of these through the characters, setting, and story-telling technique.

International Relations as a Social Science

Ekkehart Krippendorff, Radiant, Rs 75.

The author is well known for his exhaustive knowledge of International Relations and has written numerous volumes on this subject. This particular study examines war and the role of armaments, Soviet socialistic foreign policy and the world market apart from the other topics. The meaning of history and international politics is analysed, and his work is all the more interesting as he writes with the religious, social and even the anthropological background in view.

Julie

Return Of Leela Naidu

Leela Moraes (Leela Naidu a long time ago and recently Editor of the now defunct *Keynote*) is looking forward to playing Amrita Sher gil in a forthcoming film. Her preparation for this "role of a lifetime" includes a frantic search for a hair-dye to match the beautiful painter's hair down to the last tint. At least no one will be able to say she didn't take any trouble!

—Celebrity

India Amuses Goldie

Goldie Hawn is hardly a typical tourist. On her first trip to India, she and her boyfriend, Yves Regnier, spent four days at a camel fair in Pushkar, where they stayed in a tent, just like the locals. "Of course, I didn't buy a camel," the actress hastened to explain. One group of women was fascinated by Goldie's golden locks. "They had no idea who I was other than some weird blonde person," she says. We just began to communicate and laugh. Despite the poverty they are very happy people. I found myself laughing all through India."

—Newsweek

Bardot's Cruelty

Brigitte Bardot was cleared of defamation charges by a court which ruled she acted out of sincere "indignation" when she called a woman "a slut" because she thought the woman had beaten a cat to death. Bardot devotes her time to campaigning against cruelty to animals. The defamation suit was filed by florist Odette Giraud, who lost her demand for the token sum of one franc damages and 8,000 francs in court costs.

—International Herald Tribune

Danton Controversy

Danton, Andrzej Wajda's film about the French Revolution, has touched off a storm of controversy in Paris because it overturns traditional French teaching on the two key figures—Danton the corrupt and Robespierre the executioner. Many say the film is a thinly-veiled metaphor on the present situation in Poland. Many have drawn parallels between Solidarity leader Lech Walesa and Danton, and between General Wojciech Jaruzelski and Robespierre. Wajda himself told an interviewer for the Socialist daily *Le Matin* that even though he had planned to make the film four years before the Solidarity movement was born, "I could not have made this film had I not been to Poland in 1980 and also if I had not known Lech Walesa. The clash between Danton and Robespierre is exactly what we are experiencing today."

Jackie

Educational Aids

If the venture of six young men clicks, college students will be taking their lessons from a different professor—a tape-recorder.

The team led by Umesh Ashar, claim their "Ed-Aids", employing cassettes and printed material, will help students to learn "at will and at their ease".

Each subject is covered by a 90-minute cassette, in the form of question-answers. They have already turned out 1,500 cassettes, "teaching" Physics, Chemistry, Mathematics, Economics and French for second year Junior College Students. The system has been "experimented" in three Bombay colleges. Ed-Aids will be marketed through bookstalls.

—The Daily

Maneka Underground

If Rajiv Gandhi kept a low profile during the Delhi elections, one person who went completely underground was Maneka Gandhi. Flush from victory in Andhra, it was widely expected that Maneka and her Sanjay Vichar Manch would be quite vocal and prominent in the campaigning. It is believed that Maneka kept out of the elections because she felt if she did enter the fray she would have to publicly align with the BJP—something she is reluctant to do since she believes her party can exist and prosper independently. Moreover, Maneka is at present preoccupied with responding to the innumerable charges Mrs Gandhi's henchman Yunus has made against her and her mother. She is taking legal advice on whether she can haul Yunus up in court without doing too much damage to her own reputation.

—The Sunday Observer

Wages Without Work

You may not have your cake and eat it too, but you can draw your salary and still not go to work, if you happen to be a nurse in a Primary Health Centre in some rural area.

Ever since the Primary Health Centre of Kapulakanuparthi was started four years back, there has not been any doctor. The nurse is the only person on the staff.

But recently she has moved to Warangal, a more crowded town, and opened a private clinic of her own. While the Primary Health Centre of Kapulakanuparthi is now totally devoid of staff, the nurse continues to receive her salary and runs her own clinic.

—The Daily

From Small Places

A 38-year-old autorickshaw driver, N. Vasupal of Mysore has obtained a Ph.D. degree from Mysore University for his thesis "The Concept of Soul in Jain Philosophy".

When his scholarship to work under Indologist Dr A.N. Upadhya came to an end in 1977, he found himself jobless. He took advantage of a loan offered to him by the State Bank of Mysore and bought an autorickshaw to eke out a living.

Besides the degree, he was awarded two gold medals.

Goldie

Luxury For Luxury's Sake

If, as Maurice Chevalier once put it, the secret of success is to last, Marc Bohan of Dior has made it—he celebrated his 25th anniversary with the house. So, for that matter, have Givenchy (who celebrated his 30th anniversary last spring) Yves Saint-Laurent, whose 20th anniversary was last year, and Jean-Louis Scherrer, whose house also turned 20 recently.

At Dior, Bohan celebrated his anniversary with a collection that was like "Remembrance of Things Past." From the sharply outlined suits to the strapless long-torsoed evening bubbles, it looked like a clever updating of the late 1950s. The strong-backboned, well-pulled together collection was also more Dior than the shows have been in a long time if you associate Dior with luxury for luxury's sake.

—Hebe Dorsey

Barnard To Quit Surgery

Christiaan Barnard has announced that he will retire from active surgery at the end of the year because of worsening arthritis in his hands. The surgeon who performed the world's first heart transplant in 1967 told the *Sunday Tribune* newspaper of Johannesburg: "I can't pull my weight any more." He said the disease made operating increasingly difficult and painful. Now 60, Barnard also pioneered the "piggyback" operation, in which a second heart provides a booster for the patient's ailing heart. Barnard said he would participate in medical projects overseas after his retirement.

—IHT

"Incompatible"

The word is *incompatible* and it has Madrid and its top-heavy population of civil servants aquiver.

Being "incompatible" in today's Spanish political jargon means getting more than one monthly paycheck from the government. That, say the Socialists who came to power in October, is wrong. So under a law that took effect on January 1 there is now only one government job and one government paycheck per person, at most.

—Victor de la Serna

The Man-made Heart Is Here!

by Dr. Aspi F. Golwalla

"If a man can grow a heart, he can build one."

(Dr William Kolff)

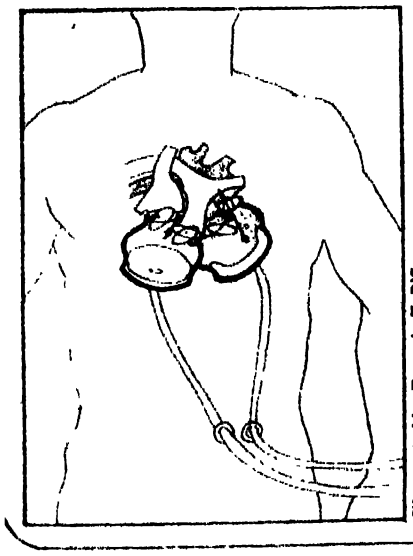
IN Salt Lake City, USA, hovering between life and death, was 61-year-old Barney Clark, a retired dental surgeon from Washington. In early 1979, two years after his retirement, an obscure viral infection damaged Clark's heart muscle which became flabby and dilated and unable to pump blood to the body. In such cases, the patient becomes bedridden, and eventually dies. In medical jargon this affliction is called *cardiomyopathy*.

There is as yet no effective medical treatment for this disease. Conventional drugs like digitalis and the water pullers (diuretics) were tried on Clark but proved ineffective after some time. The alternative was heart transplant, but Clark was too old for such a major operation. Only an artificial heart could give him a new lease of life may be of hours, days, months, or with luck, a year. Clark was courageous enough to try the artificial heart, and Dr. William De Vries, the 38-year-old brilliant heart surgeon from Utah, took up the challenge of transplanting an artificial heart in a human being. Clark was operated upon on December 1, 1982, and but for his artificial heart would not be alive today.

Akutu and Koluff had implanted a total artificial heart (TAH) in dogs for the first time in 1937. Because of the success recorded in animals with robot hearts, the possibility of implanting a man-made heart was eagerly anticipated. Dr. R. H Dastur in his book, *Are You Killing Yourself, Mr Executive?* had written in 1975, "Brother Coronary, do not despair, for in the next ten years you can discard your old, diseased heart, and have it replaced by a new glistening artificial one. Preserve your heart for the next ten years, for artificial hearts are coming, sooner than you think."

De Vries has made this fantastic dream a reality. The artificial heart called JARVIK 7 is devised by Dr. Robert Jarvik. It consists of a cumbersome 170 kilo power unit—more than double the weight of an average (75 kg.) man. Whatever Clark does or wherever he goes, he has to carry his new heart-on-wheels with him. Many would question if life is worth living by carrying such a heavy burden twenty-four hours of the day? Only Clark can decide. But he will go down in history as the first living man with an artificial heart.

THE ARTIFICIAL HEART and channels connecting it to the Heart Driver.



Illustrated by Francis H. D'Sa

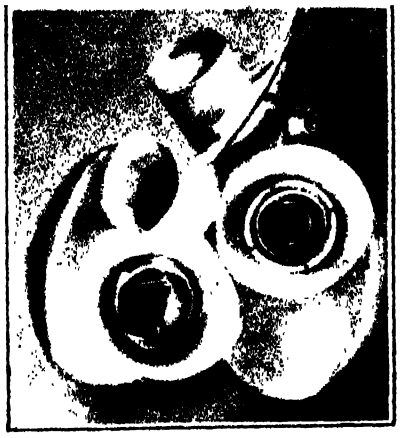
September 4, 1896 was historic in the annals of heart surgery, because Dr. Ludwig Rehn, head of the surgical department at the City Hospital in Frankfrut successfully stitched a wound in the heart of a young man who had been stabbed in a drunken brawl. In one stroke, Dr. Rehn dispensed with the doubts, prejudices and mysticisms that had surrounded the heart.

Nowadays to repair a hole in this vital organ or to change its incompetent and damaged valves has become commonplace, as also bypassing thickened and diseased coronary arteries with venous grafts.The surgeon can stop and start the heart as he pleases by having an artificial heart-lung machine take over its functions during surgery. In our modern throw-away society, the concept of life is to use and discard, be it clothes, furniture, and even worn out organs like the kidneys, heart, lungs and liver. Technically, grafting new tissues in the body is not a big problem. French Surgeon Plexis Carrel had transplanted the heart of a small dog into the neck of a larger dog in 1945, and it had beaten successfully for over an hour. For this feat, Carrel was honoured with the Nobel Prize.

Pre-eminent in this field, has been the Russian surgeon Demikhov who transplanted a heart from one dog to another, the second heart being placed parallel to the original, and beating in unison with it. The heart kept beating successfully in the new body for ten days, then stopped suddenly, and the animal died. The obvious reason was the body's rebellion against the new graft and its destruction. A lot of problems and difficulties encountered in spare parts surgery is due to incompatibility between the graft and its receiver.

Clinical application of Carrel's and Demikhov's feats was not possible until 1960, when Shumway of Stanford University reported a series of eight canine orthotopic transplants, that is, total removal of the animal's heart. Five of these eight dogs lived for 6 to 21 days. In 1964, Dr Hardy performed the first human orthotopic cardiac transplant by replacing the heart of a 65-year-old man dying of cardiac disease with the heart of a 96 lb. chimpanzee. But the operation was unsuccessful as the small chimpanzee's heart could not pump enough blood for the patient's 96,000 kilometre circulatory system.

Seven years after Shumway, the eminent heart surgeon Dr. Christian Barnard attracted world attention by performing the first human cardiac transplant in Cape Town, Africa, in 1967. However, heart transplants had to be abandoned until recently due to the high fatality rate—almost 98 per cent of patients died within a year of the transplant operation. This is because all transplant patients have to be given large doses of powerful immuno-suppressive drugs to prevent the body's tissues from rejecting the transplanted heart. In doing this, the drugs reduce the body's resistance to infections which were responsible for the majority of deaths.



THE JARVIK Total Artificial Heart, a prototype of which was implanted in Barney Clark's chest.

But recently, heart transplants have staged a come-back with the development of a new drug called cyclosporin. The new drug acts only on those white blood cells which are responsible for rejecting the "foreign" heart.

Significant progress has also been made on the artificial heart which eventually saved Barney Clark's life. Backed by over 20 years' intensive research, the Jarvik 7 was awaiting the US Food and Drug Administration authorisation, which has very strict criteria for choosing a patient on whom an artificial heart can be transplanted. The volunteer has to be a heart patient who would certainly die without surgery, and on whom conventional surgery has failed. TheJarvik 7 has successfully kept cows alive for long periods.

Made of plastic and aluminium, the Jarvik 7 is the same size as a natural heart but has a pneumatically powered pump connected by two 80 centimetre long tubes to the right and left ventricles (heart's lower chambers) of the TAH. These tubes emerge through the abdominal wall, and are attached to the heart driver which is about the size of a portable TV set. The ventricles contract when the air from the compressor is pumped into them and presses the diaphragm. Says Jarvik, "Eventually, we hope to develop an electric total heart which will give the patient complete mobility." Dr De Vries and his team performed the operation by making a 45 cm long incision through Barney Clark's skin and breast bone. He spread apart the ribs and found the dentist's enlarged heart flickering faintly and irregularly. A heart-lung machine was attached with one tube in the aorta (the main artery which carries blood to the body), and the other in the right auricle (heart's upper chamber). The machine pumped blood and maintained circulation while De Vries removed both ventricles, and stitched the robot heart to the two auricles he had left intact, the aorta and the pulmonary artery. A little later, the heart-lung machine was switched off. Clark was now living on Jarvik 7, and history was made.

Cures That Endure

It's your heart... handle with care

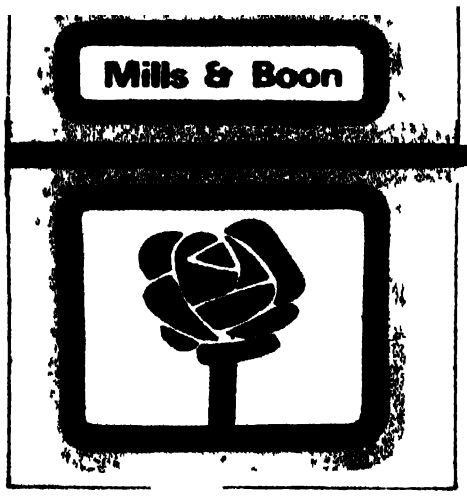
"ITS only heartburn!" The first symptom of heart disease is often strong chest pains accompanied by a burning sensation. And is often misjudged (unknowingly or otherwise) as an *indigestion* problem. The target spot is usually a persistent pain in the centre of the chest, just behind the breast bone. It may be discerned from the pain in the chest, arms, neck, spreading at times to the jaw; make no mistake, it may very well be a heart attack. And the cardinal rule is not to panic. But do not deny reality either or try to convince yourself or the victim that it is only a minor problem of the digestive sysem. Gently and firmly insist on taking him to hospital first.

In order to avoid this crisis state, it can be worthwhile to examine the reasons that usually lead to a heart attack. Of the cardiac disorders that plague us today, *hypertension* comes first on the list. The cause of this notorious disease is an increase in the pressure of the blood flowing in the arteries. This in turn is caused by a thickening of the artery walls and a consequent increase in the pressure of blood flowing through the thinning passage in the arteries. Worry, anxiety, tension, the increasing stress and strain of a rat-race existence certainly helps in aggravating the situation. The ace symptoms of hypertension are techycardia (palpitation), weakness and severe headaches accompanied by insomnia and giddiness. The most severe form results in cerebral haemorrhage and paralysis.

As in any disease,in hypertension too, tracing the origin is of utmost importance for correct treatment. If you believe in natural cures try the following. take four pearly pods (if small) and two (if large) of garlic, every morning religiously for the rest of your life. The odour should not bother you. And do not cook it, please, then the efficacy of the herb is ruined. There is another wonder cure for the condition. *Sarpagandha;* the powdered root of this herb is absolutely remarkable, and has a 4000 year-odd history of being used frequently in our subcontinent.

Of course, you must cut out the cigarettes and liquor from your life, and avoid *all* hydrogenated fats which should be treated as poison. Vigorous exercise and physical strain should be avoided, but do take the long walks recommended . the fresh air and gentle increase of circulation does wonders for your vital pump .. your heart.

Julie Bijalpita Chatterjee



The Rose Of Romance

Fantasies To Order

by Girija Prabhakar

INSTANT romance is yet another 20th century phenomenon and it comes in many different packages Of these, at 75, Mills and Boon is perhaps the oldest Even so romantic fiction, soon to be a mature 40 years of age was a fairly late arrival in this publishing house

Today, however the name Mills and Boon is synonymous with romance A recent foray into "keyhole crime', in an attempt to diversify its publications, having failed, the firm resolved to stick to what has always been and still is its forte—romantic fiction And, each new month is marked by the unfailing release of 23 new titles These fall into four broad series—Contemporary Romances, Best Seller Romances (favourites of yore), Doctor/Nurse hospital stories and Masquerade historical novels And together, they account for a worldwide sales far exceeding 250 million copies Interestingly, the books are both authored and edited exclusively by women, nearly all of whom make their home in the United Kingdom The head of the domain though, is a man--Mark Abbott, who became the company's Chief Executive and Managing Director in 1982

The Word *Romance*

What makes a book a romance? In a literary sense, the word *romance* would refer to works with an emphasis on the fabulous or legendary more broadly, it would apply to those novels which are of an allegorical bent Popular usage has however, endowed it with an entirely different connotation In this case *romance* refers to fiction whose prime concern is the *affaires de coeur* And these affairs of the heart remain Mills and Boon's chief interest

So if Jane Austen believed that 'a single man in possession of a large fortune must be in want of a wife" Mills and Boon believes, that a single woman, fortune or no fortune wants to be wooed and wed Accordingly every single Mills and Boon romance denotes a hundred and ninety two pages to the story of how a man meets a woman, how he courts her wins her love and then seals the pact with a ring on her finger It is a story divorced from the realities of life, a story which describes what seldom if ever happens, a story rooted in fantasy Yet, it is precisely because it allows the reader the luxury of a few moments in a world of make-believe that it is so immensely popular

The values that Mills and Boon preaches are the eternal values of love and marriage, values that 'transcend all national barriers", values that afford the reader "a form of security and reassurance' by the constant reiteration of the same All the same, says Mark Abbott, ' Mills and Boon does not aim to set standards ' For he feels, "that, that is something for society alone to do"

As a rule, all Mills and Boon romances share very many common traits First the hero is normally tall, dark and handsome with broad shoulders and lean hips While the heroine, usually, is the perfect English rose with a complexion that is peaches and cream fair hair blue eyes, and a delightful heart shaped face

Second they meet as strangers and almost instantly take a violent dislike to each other But then, as hate is akin to love, the denouement comes as no surprise The pair wind up madly in love with each other

Third, love conquers everything—even unforgiveable physical violence Sex is becoming increasingly important to Mills and Boon romances The word "bed' first appeared in 1971 "Crumpled sheets" followed a couple of years later And, nowadays, the heroine is left to brave the treacherous responses of her own body Publisher Abbott acknowledges this ' steamier" trend and attributes it to the prevailing environment, to which even authors are not immune

Mills and Boon books abound in superb markets but they are still taboo in the conventional bookshops of Britain "Literary snobbery" is the reason for this exclusion says Dr Peter H Mann, Reader in Sociology at the University of Sheffield Snobbery and feminism notwithstanding, market research surveys reveal that 84 per cent of British women, from a cross section of the country's female population, and only *two* per cent of Britain's men read Mills and Boon

In our own country over 40 per cent of Indian women read romantic fiction in English And in India, Mills and Boon, books are distributed exclusively by Macmillan India In fact Mark Abbott's current visit was prompted by the desire to explore and exploit the potential of the Indian market For, India is one of the largest publishing outlets in the world

Mills and Boon is certainly not the most elitist of romances and there are many who are quick to deride its quality But it is an established name and it fetches some of its writers a good income of some £ 50,000 a year Still others, who are more prolific writers, earn as much as a quarter of a million pounds per annum Not a bad proposition, that

All said and done, in today's dog eat dog world, Mills and Boon furnishes the reader with ready made fantasies Fantasies which afford her the satisfaction of dreaming of what might have been or of what the future holds, as even teenagers read Mills and Boon Fantasies which help the reader, including this writer, to relax and unwind in today's mad, mad, mad world ■

Taming Of The Bulls

On January 16 all roads lead to Alanganallur, a village in Tamil Nadu, for the festival of Jallikattu where the men prove their physical prowess and courage by taming fierce bulls.

by Prema Raghavan

MATADOR MACHISMO. Egged on by an enthusiastic public, including foreign tourists (above), the 300-year-old festival of Jallikattu is an exciting event in the life of the villagers. Left, a fierce bull with its proud owner.

MAN always wants to exhibit his physical prowess, valour, courage and ability. In fact, a display of masculinity always boosts his ego and so such macho games for men continue to thrive. From time immemorial, the villagers of Tamil Nadu have been proving their bravery by taming fierce bulls on Mattu Pongal, the day of harvest meant for venerating cows. The age-old custom continues till this day, egged on by an enthusiastic public,including foreign tourists.

At Alanganallur, a major village near the temple city of Madurai, the festival of Jallikattu is organised by the villagers two days after Makar Sankranti in liaison with the tourism department.

Crowd Of 30,000

Alanganallur Jallikattu has been held for the past 300 years; it is an organised form of bull taming in which bulls are let loose one by one into an inverted L-shaped arena where the bull tamers wait. It is different from Manju Virattu, where all the bulls are let loose at the same time into a big ground; it is a free-for-all and anybody can tame any bull and carry away the honours.

On January 16 all roads lead to Alanganallur. People come on foot, on bicycles and on overloaded bullock carts to be in time for the event. By 2 pm a crowd of 30,000, mostly villagers, has gathered around the arena. On either side of the arena, *machan*-type structures are erected for the general spectators, two special rostrums are also raised at vantage points—one for the tourists and the other for the VIPs. People perch themselves everywhere—on walls, rooftops, treetops and even on electric poles. Men in *dhoties* or half-pants, head and hair covered with dust, wait anxiously for the event to begin. Village elders and the proud owners of prized cattle sit near the entrance to the arena.

The bulls—150 of them—are bathed and decorated with painted horns, and *dhoties* and towels are wound round their necks which are already adorned with flower garlands. Owners hold them proudly in an enclosed space near the arena. Some bulls carry a garland of rupee notes. Some of them look so fierce that they instil fear in one's heart. Elders who are seated on wooden poles near the *wadi* entrance gate start waving towels and the crowd greets the bulls with wild catcalls and whistles.

The trumpet sounds and the temple bull enters the arena with all the honours, marking the start of the game; nobody catches it due to respect and custom.

The game is on. A bull is let loose. It gets frightened by the jeer of the crowd and charges ahead in a bid to escape. It runs so fast that the people are unable to catch it. A prized bull refuses to come into the arena. The owner has to drag it in. People howl and hoot, but it does not budge an inch. The bull tamers try getting near it but the fierce bull wards them off with its horns. An intelligent man lies flat on the ground and the bull is unable to pierce him. It charges ahead. People fall and get injured in the process.

Keen Competition

The sun is very harsh and the air is musty with the smell of dust and sweat. A man gets a hold on the hump of a fierce bull and succeeds in untying the towel The crowd roars. A foreigner calls him over and gives him Rs 100 for his bravery. Movie and TV cameras whirr as thoughtful film producers decide to use such scenes in their films. The foreign tourists, who wear garlands for the festive event, throw them in appreciation to the winners and they in turn toss them back. Scuffles ensue in the keen competition between the bull catchers and those witnessing the event. People become so enthusiastic that they block the way to the *wadi* and police have to step in to clear ther way for the bulls. The victorious heroes are carried on the shoulders of the enthralled public.

Suddenly, a bull charges into the crowd of onlookers and injures several persons, it then lifts a man with its horns and tosses him up in the air He falls to the ground almost dead. The injured people are removed immediately People are not worried about their injuries, they simply clean the oozing blood with a bit of cloth, tie it up and again get ready for another catch. There is stiff competition to catch the bull with the rupee garland for there is a Rs 50 prize for that one. The prize money is not much compared to the risk involved, but it is the honour which counts The heroes use the towels as a turban as soon as they make the catch. Some brave young men are able to catch a numbers of bulls. The elderly villagers cheer lustily for it takes them back to their own youth when they had caught bulls and been acknowledged as heroes.

Human Toll

The game comes to an end around 5 pm. The villagers return home chewing sugarcane on the way. This year's event left one dead and 150 injured—much the same as always. But the accidents and toll of human life never dampens the crowd. The pride in conquering the bulls or even having one of their bulls chosen for the event will be the talk of the village shanties till next year when, once again, a crowd will gather for the ritual Jallikattu. ■

They're both wearing the same thing. Daddy's T-shirt. The young one's T-shirt. Both made from Cashmilon, the amazing acrylic fibre. For a range of fabrics. For shirtings and T-shirts—light and comfortable. Totally moth-proof.

Cashmilon acrylic fibre can also be made into suitings and dress materials, hosiery and knitwear. All of them colourful. Light. Crease-resistant. Drip dry.

Next time you go to buy fabric, ask for Cashmilon blends.

THEY ARE COMING!

by SAMAR JHA

That night when the star fell, not many gave it even a curious glance. October was the month of falling stars, the time when the heavens gave their annual restrained display of fireworks, So the curved parabolic trajectory of the burning body did not raise many eyebrows.

It came in from the northern sky and traversed the vast inky expanse, disappearing somewhere in the north-east, leaving a trail of dying sparks. It left in its wake a few surprised star-gazers but no hint of the times to come.

THE two friends walked together on the tar road, the moon bathing them in a cool light. A mild breeze was blowing from the north. It heralded the coming of winter. There was a hint of dew in the air.

They were talking as they walked down the almost deserted highway, when suddenly one of them stopped short. He thought he had heard something from the fields beyond the road. "Did you hear that? It sounded like a groan to me." They stood and listened. They heard a distant moan clearly. Exchanging a surprised look, they hesitated for a moment then rushed down the embankment towards the field.

At a distance, they saw a body lying in an awkward position. When they reached the supine figure they were panting from the exertion. The man was unconscious and obviously in pain. "Surely he has not been hit by a passing vehicle," said one of the friends, more a question than a statement. The moonlight, the dark shadows and the sounds of pain conspired to evoke an eerie atmosphere.

The friends decided to be good Samaritans. They picked him up as best they could and struggled towards the highway. There would soon be someone along to give them a lift to the hospital.

They did not have to wait long. An empty cycle-rickshaw came down the road and they engaged him, promising to pay well for carrying a third person. The rickshaw quickly covered the distance through the deserted town and in a short time the friends and the injured man were in the Civil Hospital.

"What are your names?" asked the white-coated, stethescaped young man who was obviously in charge of emergency.

"Why do you need our names?" queried one of the men.

The doctor waved a few sheets of brown cyclostyled paper at them and said, "I am sorry but we have to complete a few formalities."

The names were reluctantly divulged.

"How is he related to you?" asked the interrogator, his eyes on the form.

"He is no relation. We don't know who he is. We found him lying near the road which cuts through Karimnagar and joins National Highway-2. We were taking a walk," said one of them, remembering the face of the man, first revealed clearly by the lights of a passing car: heavily lacerated, but still recognisable as that of an Adivasi. But how had an Adivasi come to these parts? They normally stayed away, unless they were lured into town to make some quick money.

"We have to inform the police," the doctor said, motioning to an attendant to do the needful.

The man had been carried into emergency on a stretcher and was now on the examination table. He was moaning softly. While the attendant proceeded to get in touch with the police, the doctor began a preliminary examination of the patient. The room was lit just by one bright lamp over the table. The man lay breathing heavily. A shot of morphine was given to counter the shock and the doctor began his clinical examination.

Pulse 120. Blood pressure 150/100. Temperature normal. Pupils slightly dilated. Except for superficial cuts and lacerations on the face, legs and arms, no other external wounds were visible. No broken bones, but the possibility of internal haemorrhage could not be ruled out. To be kept under observation, he decided. Just then, the patient stirred. He was mumbling something. The doctor bent over him. The whispered words became clearer: "Oh Durga... Oh Durga *maa*. Take me with you. I love you, *maa*. Take me with you."

"Do you want to say anything or see someone?" the doctor asked gently. Getting no response, he asked again and again.

Abruptly the man's eyes flew open and he stared, horror-stricken. "Where am I? Where have you brought me?" He looked around, rolling his eyes. The attendant, who had returned after making the phone call, put a restraining hand on him. "Leave me alone. Leave me alone. I want to go with them." The man was bare-bodied and had only a loin-cloth on. A shiver ran down his body and he fell unconscious.

It was then that the doctor noticed the metal ball. The man held it tightly in his right hand. The doctor had to prise it out from clutching fingers. And then he almost dropped it, out of sheer shock. The ball was weightless.

The strange spheroid was shown to the friends. "Does this belong to you?" the doctor asked. The two men cringed when they beheld the tiny object. Why did it look so sinister? What was it? "We have never seen it before," they said.

"Then this, too, is a matter for the police." Saying this, the doctor put the ball on the table and looked at it, shaking his head in disbelief. Could a metal ball be feather-light? The surface of the object was spotless. The people in the room did not care to verify the doctor's statement about its weightlessness. And they failed to notice that the ball was rotating slowly on an axis inclined to the vertical. There was no point of reference on its surface to convey the knowledge of motion.

→

A week later, on a bright sunny morning at the Ootacamund Radio-telescope Centre, ORC for short, the Director was glancing through some reports compiled the previous night. One caught his eye. He skimmed through its contents and blood rushed to his head. At such times, people said behind his back, he looked like a mandrill because of the blood and the blue veins standing out in his cheeks and temples.

The author of the report was summoned urgently from his home where he had retired two hours earlier after a hard night at the observatory

"Explain yourself," said the Director to the groggy scientist.

"I hesitated to put that down..." the unfortunate astronomer began.

"Then why did you? This is serious business, boy. What are you planning to do? Make a laughing-stock of the ORC?" he fumed.

"How could I ignore my observations? I took the readings thrice in the past week and every time the results pointed to the same conclusion."

The Director lost all patience. "By God, young man, do you want to tell me that you have observed the violet-shift? What will you tell me next, the sun revolving round the earth?" The astronomer squirmed in his seat. He knew that what he had reported had never been observed before. Scientists had known for long the phenomenon of red-shift in the spectrum of light, and radio-waves from stars and galaxies receding from earth at speeds close to that of light. But the violet-shift, that was an impossibility as far as known facts were concerned. It could only happen if the galaxies started coming back towards earth at light velocities, which would, of course, be a triumph for the oscillation theory of the origin of the universe. But even for that, the violet-shift had come too early by several thousand billion years. And the report spoke of only one light source displaying the violet-shift.

"Take away your report and don't let me see it again. There is no room at the Centre for inventiveness," said the Director coldly, pushing the papers towards the hapless scientist, who picked up the sheaf and walked out silently

That evening, an astronomer on the day shift, studying the same area of the sky reported an identical event And when a third report came, the Director sat up. He could not damn all his astronomers. They were a competent lot He went through the reports again, consulted senior, experienced scientists, made a few observations himself and the next day a tiny news item appeared in the papers with the heading, *Violet-shift Discovered* Very few people read it.

ONE news item that had caught the media's attention was the strange case of the "accident" victim. In spite of publicity, no one had come forward to establish the man's identity, which made him good copy for the papers The man's condition had deteriorated. Yet it was confirmed that there was no internal bleeding. All manner of investigations were done but every report was negative. What was wrong with him?

"Leave me alone, leave me alone... Why are you keeping me here? Let me go. I want to go back to Them. They have come to take me with Them. They are beautiful, oh they are beautiful. They are God. Shut off the light. Shut it off. They will kill you if you don't let me go. They will... They...."

The neuro-surgeon switched off the light. He had been unable to detect any signs of head injury The lumbar-puncture report was normal He considered the case for a while, scratched his ample baldness and wrote on the case-sheet, *Psychiatric Department*.

The metal ball recovered from the man had been handed by the hospital authorities to the police Since it appeared to be of no great value and was an intriguing object, the local police chief, who had a background in science, decided to send it to the scientists of the National Academy of Science. The laboratories of the Academy were situated in the outskirts of the city. Like its owner the "accident" victim, the ball, too, was kept under observation.

Its arrival created a flutter among the scientists Its physical properties were measured quickly, with growing disbelief at every stage. The material's hardness was found to be greater than that of diamond The sharpest tool could not scratch its surface. Elasticity was negligible. And, of course, its weight was zero. It almost appeared that the ball was smeared with a kind of anti-gravity paste. And yet, when it was dropped, it would fall slowly and come to rest on the ground. X-ray photographs revealed an assymetrical molecular structure, but no internal machinery as the scientists had expected.

The sensitive instruments of the laboratory had detected the spin, which was another puzzling factor. Where was it getting the energy from? Why did it spin at an angle to the vertical? Another strange finding with the use of sophisticated thermo meters was that the surface temperature of the ball was always a few degrees higher than room temperature All these curiosities perplexed the scientists and left them groping for answers. A number of hypotheses were propounded to explain the strange material. But none tried to interpret one attribute of the ball: it exuded a sinister quality which made a person avoid touching it. The ball came to be increasingly referred to in the campus as the "little devil".

It often falls upon a scientist to subsequently wear the mantle of honour for the very discovery for which he was initially belittled. A similar fate awaited the discoverer of the violet-shift. Reports had started coming in from other observatories confirming the existence of the phenomenon. Papers had even begun to refer to it as the Bansal Shift after his name.

The strange observations had thrown the astronomers' fraternity into confusion. No theory could explain the source displaying the shift Later observations had revealed an even more puzzling event—the light source was increasing in speed, approaching the maximum velocity permitted by nature, that of light. Such was the excitement created by this discovery that all the telescopes of the world seemed to be observing this one source.

Within fifteen days of its discovery, the first photographs taken on optical telescopes were available. Apparently, there was nothing to distinguish it from the surrounding stars and galaxies. Its colour, of course, was different. It was agreed that the source must be a quasar or quasi-stellar object since it was "visible" both to optical and radio telescopes. But what kind of quasar was this?

Within twenty days, more had been written about it than man's closest galaxy, Andromeda. Yet all the data gathered was foggy and unexplained. Like the metal ball with the Academy scientists, the astronomers, too, had an enigma on their hands.

Temperature measurements had revealed that the surface temperature of the source was lower than that of neutron stars. Then one night, a fresh set of optical exposures were taken. The photographs on special plates disclosed not one but a number of sources in a cluster; was it a glaxy coming through space? Attempts were made to measure the mass of each individual source but were given up because ridiculous results were being obtained. In every case, mass was found to be a few hundred tons only, which was absurd since the radio-waves emitted by the sources had the fingerprints of medium-sized stars.

As if to match the quandry of the star-gazers, the scientists at the Academy were increasingly befuddled by the properties of the metal ball. Geiger-counters had detected traces of gamma-rays emanating from the substance. As this could pose a health hazard, it had been put in a lead container. There was no explanation for the mysterious properties of the object. In fact, the riddle had deepened when it was discovered that the surface temperature of the ball was rising slowly, an imperceptible half a degree every two days. The angular velocity of its spin was also increasing. The source of energy for the ball's spin, temperature or the gamma-rays remained unknown.

An enterprising reporter, looking for the unusual, had got wind of the strange object and largely owing to his persistence the reading public was fed its first story of the metal ball belonging to the "accident" victim under the headline *Mystery Ball — Where Did It Originate?*

The condition of the Adivasi had, meanwhile, become worse. He was now kept in an isolated room of the psychiatric ward and guards had been placed inside and outside as he had at times become violent. Physically he seemed to have picked up, but most of the time he was either unconscious (it was not clear why) or in a trance. When he spoke in his native tongue it was always with an intensity that frightened his listeners. And he invariably said, "Let me go, let me go. If you don't leave me They will come and destroy you. They are very powerful. They are God. I curse you, the Gods will destroy you. Let me go. Leave me alone. Leave me..." He spoke of Gods. He spoke of "Them" as if he had met them. He attributed great powers to "Them". But, who were They?

Three months had passed since the light source with the violet-shift had been discovered. Now it was not one source, but at the last count over three thousand, all in a cluster but arranged in an orderly manner. They appeared to be in some kind of formation. The scientists had long ago discarded the theory that it was a galaxy gone berserk. The individual sources were not ordinary stars, that much was established. They were over 400 million light-years away, still too far away for closer study.

Then one night, without a warning, the mysterious sources suddenly disappeared all at once. The entire world of astronomers and astrophysicists was bewildered. The most sensitive instruments could not detect a trace of the sources that had intrigued the scientific community for more than three months. Here was a mystery that beat all the enigmas of the universe.

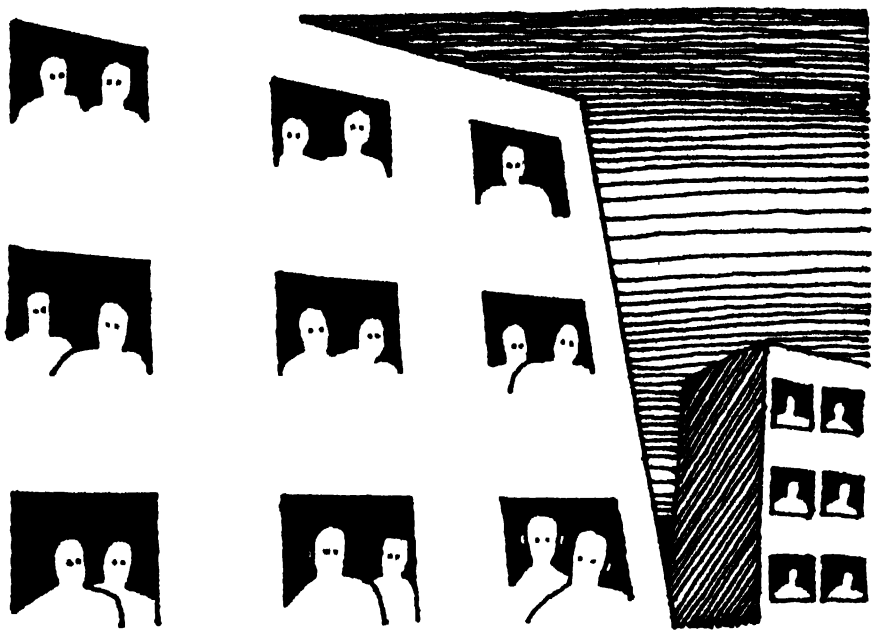
The general consensus was that for some reason the sources had exploded all of a sudden, most probably because of their high velocity. But there were fundamental doubts regarding this explanation. And the entire hypothesis exploded

in the faces of the scientists when suddenly after two days, the sources, more numerous now, reappeared again, much brighter, even faintly visible to the naked eye.

Quick calculations were made and the results shook the world—they were now half a light-year away from earth, travelling at the speed of light. How had they covered the enormous gap of almost 400 million light-years in just two days? The sources seemed to be heading straight for earth. Then it was that the first whispers of the truth began to nag the minds of the far-seeing.

The rantings of the "accident" victim, who had by now assumed the role of a prophet of doomsday, added to the doubts of the perceptive. The man was becoming more and more restless with each passing day. He now stayed awake most of the time. A haunted look on his face and his three-month beard gave him a frightening countenance. None could communicate with him any longer. He was kept in a padded room where food was served to him thrice a day. He was heard to mumble all the time, as if conversing. Some nights he would let out blood-curdling screams. Whenever anyone approached the room he would chant: "They are coming. They will destroy you. They are strong. They are God."

The doctors had all but given up trying to diagnose the illness. He was no longer reffered to as the "accident" victim. He was now the "mad man". As there was no progress in diagnosing his malaise, the routine Press report put out by the Registrar of the hospital was briefly: "no further change". Soon interest in this strange case was lost. The approaching



light sources and the puzzling behaviour of the metal ball held the attention of the reading world.

The temperature of the ball had started rising steeply, the spin becoming faster and faster, the spheroid developing a slight wobble. The scientists directly responsible had by now given up trying to understand their charge. But they continued to observe and record the condition of the ball. Incredulous scientists took readings of the increasing temperature. Now very few people agreed to go anywhere near the object. At least two scientists sought jobs elsewhere on account of the "little devil". It was as if the metal ball were a ticking time-bomb.

Independently, in many parts of the world, people arrived at the truth. The sources of light were nothing but spaceships. Aliens from another end of the universe were coming to earth. With what purpose, no one dared guess.

The Adivasi was their first "convert", perhaps won over by aliens in a surveyship which had preceded the main fleet. It was now that some remembered the falling star with a curved trajectory. The function of the metal ball was unclear but if it was an indicator of their level of technology, earth was in the stone age in comparison. All this was pure conjecture on available information, but almost everybody believed it. Fear and panic spread like forest fire.

"Let me go, let me go. I have to welcome Them. I have work before They arrive. They are coming. They are angry with you. They will destroy you." The gaunt, bearded figure paced the padded cell like a caged animal and beat the walls with his fists. His peculiar condition seemed to be building up to a crescendo. Whenever he was brought outside his cell he would peer at the sky, be it day or night.

IN the morning of the fourth of May, the Adivasi's heart failed him while he was screaming at the top of his voice. The same night, the metal ball became red-hot. The scientists were unable to go within ten feet of it, such was the intensity of its heat.

The fifth of May dawned upon the sun's third planet like any other day. But that afternoon, quite inexplicably, total radio blackout engulfed the earth. Excepting for cable transmissions, all other forms of communication broke down. The naive turned their eyes to the sun, looking for sun-spot activity. Most people, however, guessed the truth. Every home became a little island cut off from the rest of the world. There men and women sat, their eyes rivetted to the sky, waiting.

"They are coming," the man had said. They would destroy the earth. It would be the end of mankind. But why? And who were They? The stars twinkled, but gave no answer. ■

Amar Chitra Katha

Fascinating Picture Stories of the past. That teach so much about great people. Great events.

Yes. When a child reads Amar Chitra Katha — he takes a very important step on the road to learning about his heritage. The rich spectacle of India's past. Now vivid and alive in exciting picture stories. That entertain, even as they teach.

Page after page — a world of myth and legends, battles and bravery, great people and great events — unfolds with colour and imagination. Shivaji. Parashurama. Rana Pratap. The Rani of Jhansi. They all come to life in the 278 titles of Amar Chitra Katha. Available in 6 regional languages, as well as in English and Hindi.

Amar Chitra Katha. What more could a child ask for? It's not only learning history while having fun. It's learning to be proud of a great country. And keeping sight of the past — while preparing for the future.

Annual subscription of Rs. 84/- for 24 issues of Amar Chitra Katha to be sent to:

Partha Books Division
Nav Prabhat Chambers
Ranade Rd, Dadar, Bombay 400 028

(Rs. 3/- extra for outstation cheques)

Amar Chitra Katha

"I'M not the happiest person in the world, but I'm next to the happiest," murmured the supreme egotist as he took the sweet young thing in his arms.

"MY best friend dined with us on Sunday and was so impressed by my bride's cooking that he sent her a carving set."

"That was nice."

"No. He sent her a hammer and a chisel."

"PA," said Johnny, "what's a monologue?"

"It's a conversation being carried out by a man and his wife," growled his father.

JONES had occasion to reprimand his wife.

"I think, my dear, that you're an awful liar."

"Well, it's a wife's duty to speak well of her husband now and then."

A School inspector said to a pretty teacher: "Do you teach observation?"

"Yes."

"Then I will test the class. Now, children, shut your eyes and sit still." The inspector made a slow smacking sort of noise and said, "Now, children, what did I do?"

One little boy piped out: "Kissed teacher."

SHE: "Are you fond of nuts?"

He: "Sure. I'll marry you any time you want."

MOTHER: "Son, I don't want to see you going around with that wild girl any more."

Son: "Heck, ma, she ain't wild. In fact, anybody can pet her."

THE car skidded around a corner, jumped in the air, knocked into a lamp post, smacked three other cars, ran against a traffic island and stopped. A girl climbed out of the wreck.

"Oh boy, darling," she exclaimed, "that's what I call a kiss."

"It doesn't really matter if no bed is available."

"MAMA, do all angels fly?"

"Yes, Willie. Why do you ask?"

" Cause I heard Dad call the hired girl an angel. Will she fly too?"

"Yes, dear. Tomorrow."

MOTHER: "Why did you strike your little sister?"

Young Bobby: "Well, we were playing Adam and Eve and instead of tempting me with the apple, she ate it herself."

SHE: "I consider, John, that sheep are the stupidest things living."

John: "Yes, my lamb."

PUBLISHER to author: "I think this is extremely promising. You tell your story well, your characters develop convincingly, and you have a very dirty mind."

AN Englishman and an American were out on a walk. After half an hour's silence, the Englishman remarked, "Spring in the air."

"Why should I?" asked the American.

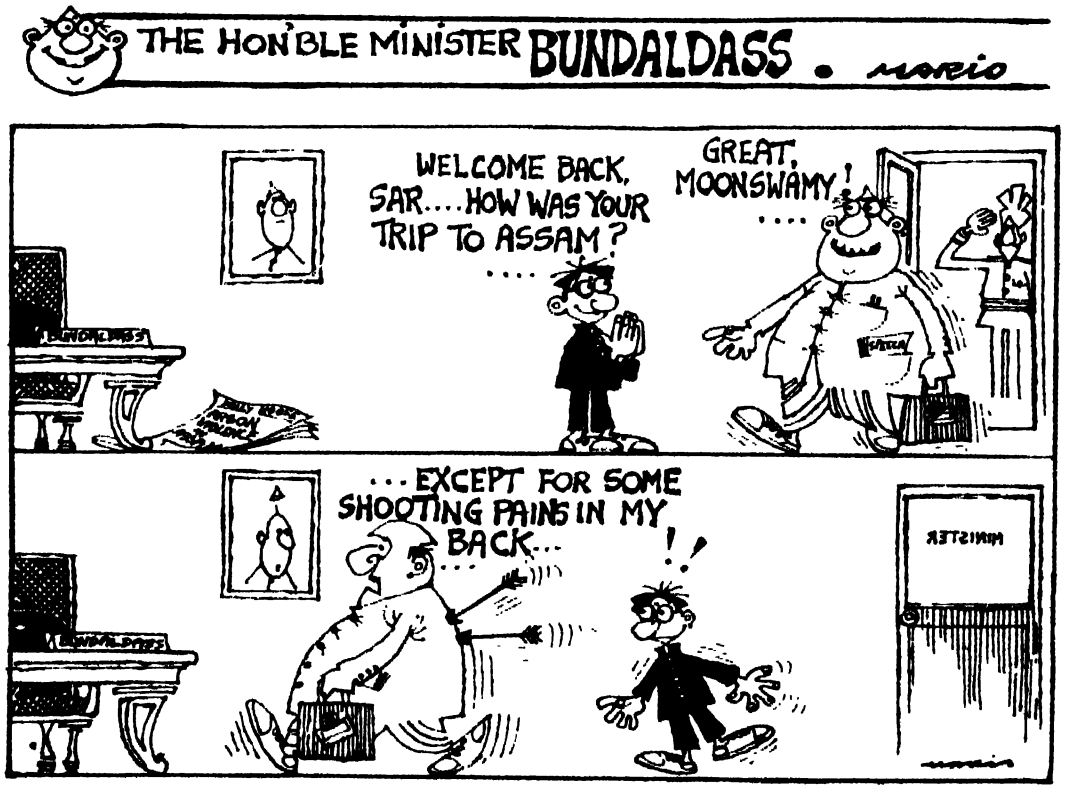
"SOME men thirst after fame, some after love, and some after money."

"I know something that everybody thirsts after."

"What's that?"

"Salted peanuts."

A MOTHER of a large family was explaining why she dressed her children alike, right down to the youngest baby. "When we had four children, I dressed them alike so that we wouldn't lose any of them and I dress them alike now so that we won't pick up any that don't belong to us."



HAS your son's college education proved to be of any real value?"

"Yes, indeed. It has entirely cured his mother of bragging about him."

MANAGER of shop: "Why didn't that man buy anything? What did he want to see?"

Pretty salesgirl (blushing): "Me. Tomorrow night at eight."

"I MUST have a holiday," said the pretty waitress, "I'm not looking my best."

"Ridiculous!" said the manager.

"It's not ridiculous," said the waitress. "The men are beginning to count their change."

"WHAT's the matter with Briggs?"

"He was getting shaved by a lady barber when a mouse ran across the floor."

"YOUR wife looks stunning tonight. Her gown is a poem."

"What do you mean poem? That gown is two poems and a short story."

TEACHER: "Tell me, what's more annoying than seeing a lot of banana skins lying on the pavement?"

Pupil: "Not seeing them, miss."

"WHY are you crying?"

"Father called mother a waddling goose."

"Well?"

"And mother called father a stupid ass"

"But why are you crying?"

"Well, what am I?"

TOMMY: "Dad, our teacher says that we are here in this world to help others."

Dad: "That's right, Tommy."

Tommy: "But, why are the others here, then, Dad?"

BOY (about to be spanked): "Dad, did grandpa spank you when you were little?"

Father: "Yes, son."

"And did grandpa's father spank him too?

"Yes, son."

"Well, don't you think it's about time to stop this inherited brutality?"

MOTHER: "How in the world do you expect to make a living?"

Son: "By writing."

Mother: "Writing what?"

Son: "Writing home."

"DADDY," asked Ram, "Is ink expensive?"

"No, what made you ask that?"

"Well, Mummy was most annoyed this morning when I spilt some on the carpet."

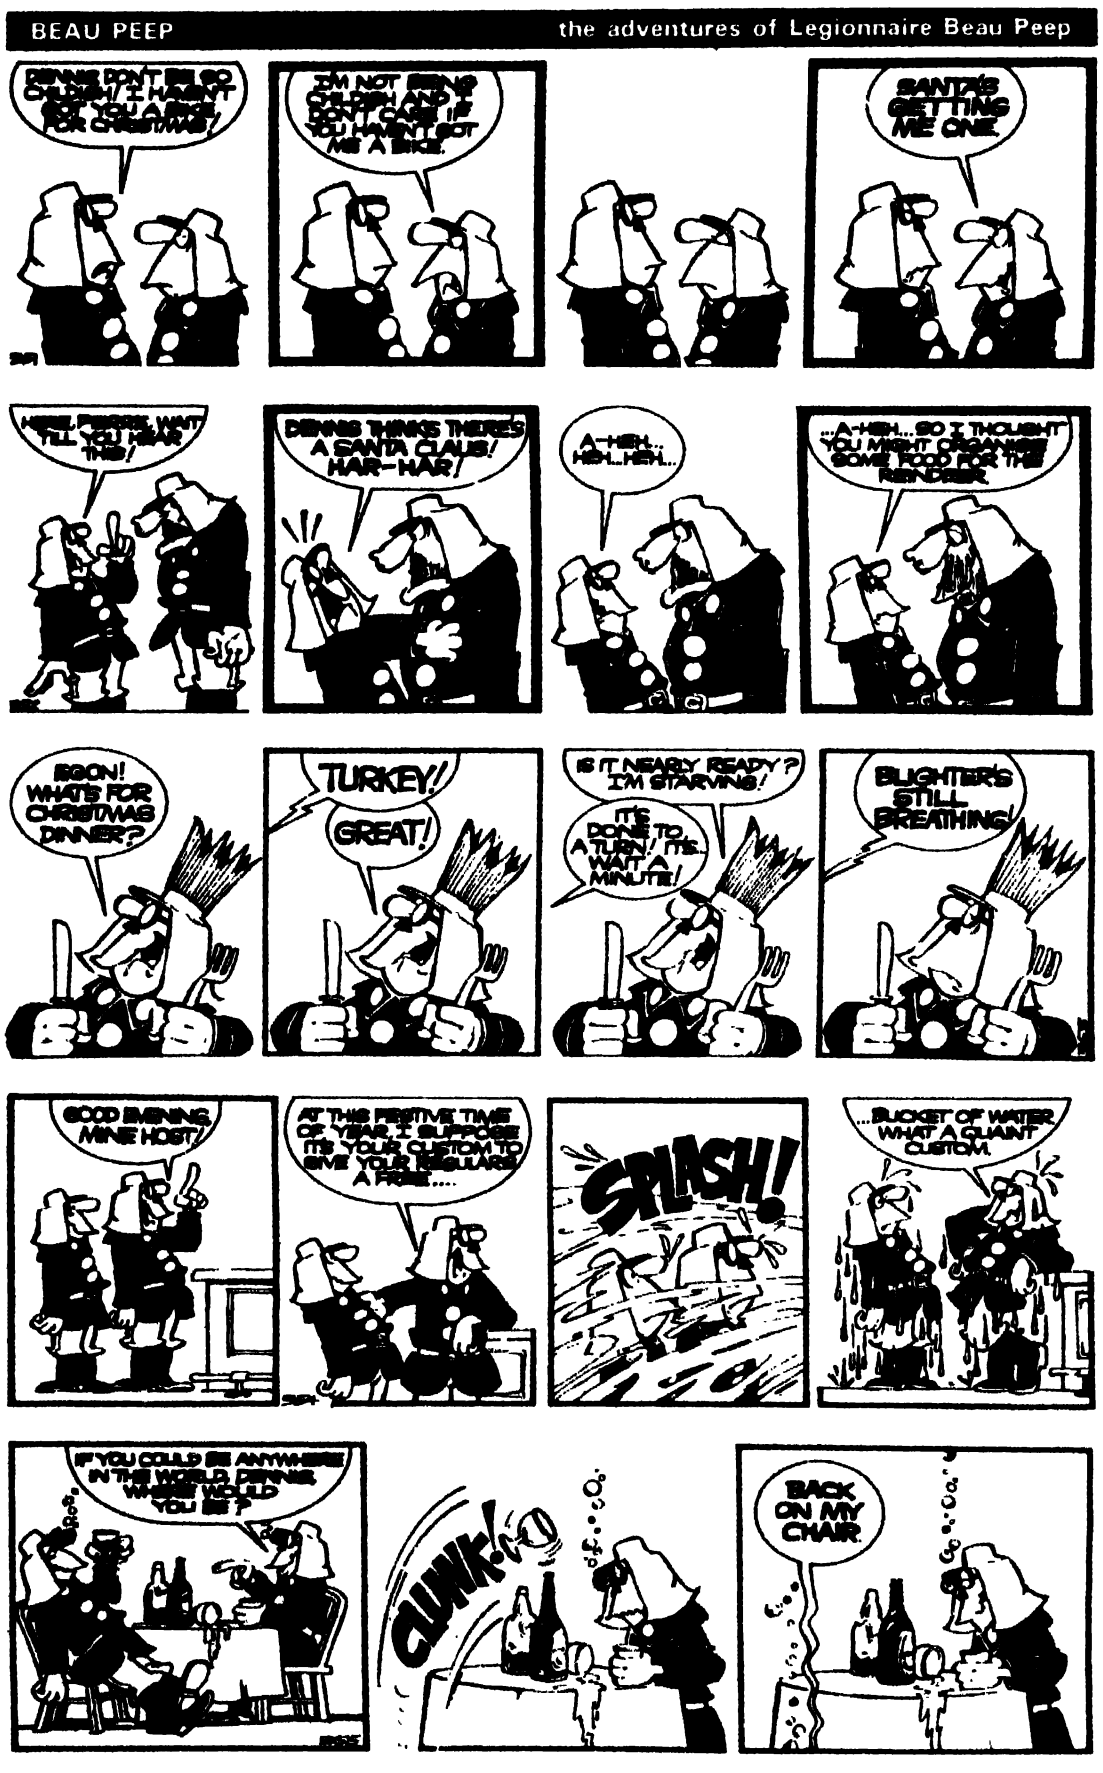
A DOCTOR coughed apologetically at his patient. "I don't like to mention it, " he said, "but that cheque you gave me has come back."

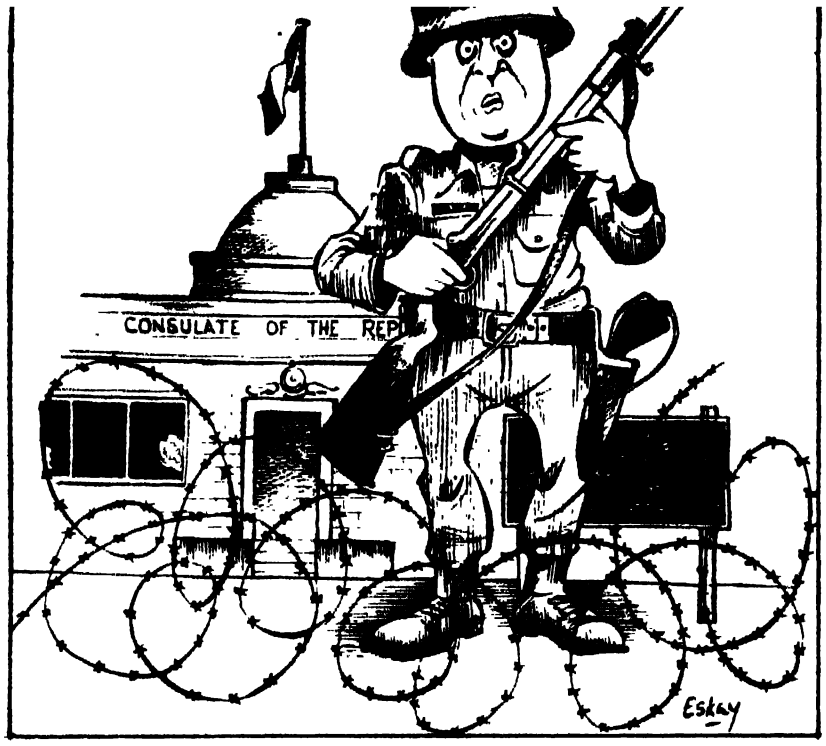
"That's all right," was the reply, "so has my rheumatism."

"WHY did you state you were a physician when you are an undertaker?"

"I never said I was a physician. I said I followed the medical profession."

Compiled by Pramila Rodrigues.





The Security Game

by H. Jesse Kochar

I HAD to get hold of a colour picture of Khomeini, so I decided to pay a visit to the Iranian Consulate.

First, the police contingent outside the building wanted to know why I couldn't do without a coloured Khomeini. It took me some time explaining to the blokes why a tinted Ayatollah is better than a black and white Ayatollah.

Inside, the Islamic Revolutionaries with wild eyes, short beards and long rifles frisked me, snapped a couple of my buttons, unscrewed my pen, inspected my watch and even ordered me to show the inside of my holed shoes.

That was my first brush with diplomatic security.

The fever apparently has spread to the entire local diplomatic community. There is a whisper in journalistic circles that the importance of a consulate increases in direct proportion to the padlocks, chains and guards outside. So the race is on.

The British Consulate, being a veteran here, was bent upon beating the Iranians, Americans and the Soviets at the game. The Royal Secret Service therefore sent the latest gadgets off its shelf. One of the gadgets now in use, lovingly called Maggie, is a TV-guided, remote-control door lock which automatically snaps shut the consulate doors if any Briton who wears a turban, or, looks darker than Princess Di is seen approaching the entrance.

Unfortunately, I know very little about the local Soviet security. You see, they haven't opened their doors and windows since they moved in. The other day a pigeon accidently pecked at the Consulate's secret ventilator. The people in the neighbourhood said they had never heard such a commotion in the Consulate before. The security hooters, set off by the pigeon, were heard half a kilometre away.

At a Press Conference that evening, the Soviet Consul blamed the local CIA boys for using homing pigeons to read his mail.

The Americans hate to lag behind the Soviets in the matter of security. They are convinced that besides Ronnie, their public library here is on someone's hit list. Last week I popped in there for an annual membership. Actually, it is a nice place to escape from the heat. But one has to bear with the tough guards, with their Bald-Eagle gaze who manage to upset library users.

For the timid visitors there is a huge blow-up of the gun-toting President.

Mr Brahms (Brahma Swaroop before he did his library science in Ohio) is in-charge of the Membership Desk. Being an ex-guard himself, he is even more security conscious than the guards. Staring at my application card Brahms launched his interrogation.

"Has your wife, child, father, mother or brother ever travelled to Libya, Afghanistan, USSR, Nicaragua, Angola, Kampuchea....?"

"Thaaamboa," I said, "Stop! no one in my family has ever travelled abroad.. except my father."

"To Libya?" Brahms was off the stool. (The noise of course woke up a couple of chaps dozing over *The New York Times.)*

"No, no," I said, "he was a contractor supplying goats to our jawans when the Chinese pounced on him. That's the only time anyone in my family ever went abroad."

"Aaahaan! China?" Brahms sang, "that is good, very good. Our friends after all..."

"Chineeez, our friends?" I remembered what they had done to our poor goats, I began to roll up my sleeves.

"No, no, no!" Brahms decided to retreat, "I meant, friends of my boss," and he jerked his thumb at the picture on the wall—a man with a ten-gallon hat and a red shirt; a lookalike of Ronnie.

In three minutes flat Mr Brahms made me a member.

Then, last week I went to the East German Consulate. Apparently the "Pigeon Affair" had also shaken them badly. As soon as I rang the bell a voice crackled above the door. The loudspeaker asked, "What do you want?"

I tried to locate the microphone but it was neatly hidden. "Comrade PRO, I want a copy of the GDR Review," I said.

There was a rustle near my feet. A copy of the magazine came sliding under the heavy door. ■

Vive L'Amour

by Madan Gupta

THE Vedas are a storehouse of knowledge not only of the religion and philosophy of the Hindus in ancient India, but also of their beliefs and behaviour. The Atharva-Veda, for instance, dwells at length on diverse subjects including the inevitable problems created by the much maligned, much misunderstood and yet much sought after goddess of love. The lack of male progeny which has incensed men and women over the ages is also not neglected. The Atharva-Veda gives detailed recipes for getting a male issue. Special foods, charms, mantras and special coitus techniques are recommended to ensure a male child. For instance it is stated that the consummation of marriage should take place on the fourth day. An amulet called *parihasta* should be used and the woman should take a special drink *garbhakarana*. Charmed food called *agamakrsara* (rice cooked with sesame) is prescribed for the fourth day after the menses. The ritual and the diet is not restricted only to the woman. Adam has also to play his part. Special mantras have to be recited by him in the act of coitus. If all this is diligently done, a son can be ensured to perform one's last rites.

The Atharva-Veda analyses a number of situations as far as relations between men and women are concerned: a girl pining to get married but unable to do so on account of physical defects, a spinster unable to find a husband, a co-wife wanting the attentions of the husband, a man unable to get his love reciprocated or a girl in a similar situation. Remedies are given for banishing discord and potions are suggested for taming the shrew. The most quarrelsome of women can be made to speak honeyed words by performing certain rituals and by reciting specified hymns. The eating of the flesh of cow, sprinkled over with some sour juice (*amla rasa*), is one of the remedies suggested for bringing harmony into a strife-torn household. To secure the love of a woman, a love spell with a sweet herb is recommended. In the rites for the consummation of marriage, is prescribed an amulet of the madhu tree, powdered and dipped in the fat of a bull. The mixture is to be charmed with the recitation of a hymn and is to be besmeared on the body on the nuptial night. The sweetness of the wood, *madhu*, would create love between the man and the woman.

All Is Not Black And Bleak

For the unfortunate lover whose love is not responded, life need not be black and bleak. A mixture of salve *(anjana)*, sweet wood *(madhugha)* and *kustha* will cause love and longing in the mind of the beloved. Similarly special hymns can help a lovelorn woman to force her man to love her. An amulet of the *sauvarcala* plant put on while entering the village in search of the lover and the flower of *Sankhapuspi* creeper tied to the head are also prescribed. The hymn in praise of *sauvarcala* states that the plant draws to the woman the eyes of the lover and brings tears in them. A spinster is advised to offer *ghee* to Aryaman in the morning before the crow caws and then place the *bali* (offering) within the corners of the house. From the direction that the crow comes, would be the direction which would bring the spinster her husband.

There is hope even for those who are barren. The *pumsavana* rite prescribes the recitation of special hymns to be accompanied by breaking of an arrow on the head of the woman. A potion, made out of plough-share *(phala)*, the milk of a cow which has a calf of its own colour, mixed with *yava*, *vrihi* and two *adhyandas* (*pamapnaka* plant) or with the leaves of *palasa* and *vidari (velapatvaska)*, is suggested for putting in the right nostril of the woman by the man, with his right thumb. The performance of these rites accompanied by the recitation of specified hymns may beget a barren woman progeny. All these rites are to be performed after the woman has laid aside the garments soiled by her menses and under the male constellation. Another prescription is the recitation of an appropriate mantra, offering ghee in the lap or the sex organ of the barren woman and feeding her on the flesh of the red she-goat, cooked rice, wine and water duly charmed.

For Greater Virility

For the passionate woman who is not fully satisfied by her male, there are rites and prescriptions to make the male more virile. An amulet of *arka* is suggested. By its magic power, the male organ *(sepa)* is made to suit limb to limb to that of the woman—to be as stout as that of a deer, an elephant, a donkey or a horse. The amulet of the *arka* tree is to be tied with its fibre. An amulet of the skin of a dark antelope along with the hair of the antelope is also suggested.

The Atharva-Veda holds that matrimonial happiness depends on the superiority of the husband! Perfidy—unmitigated, undiluted—undoubtedly. Male chauvinism at its naked worst. ■

Next Week For You

S.K.KELKAR

CAPRICORN
(Makara)
Dec 21-Jan. 19

A new friendship formed recently will help in the fixing up of a marriage or a new partnershhip. Group activities will bring you to the limelight in the next few weeks. Artists and sportsmen will be at their best in the early part of the week. A new relationship will be further strengthened and will bloom and thrive.

AQUARIUS
(Kumbha)
Jan 20-Feb 18

You will go in for a lot of show and pomp just to invite the attention of all those around you. Whether you like it or not you will be drawn into group and social activities. Business connected with fashion goods, ornaments and cosmetics will propser in the next six weeks. Clear the backlog by the weekend.

PISCES
(Mina)
Feb. 19-Mar. 20

In the next couple of weeks you must lay more emphasis on building up goodwill and developing new ties. Proposals for tours and travel abroad should be considered carefully. A marriage proposal will take concrete shape in the early part of the week. Sort out the various pending jobs and clear all backlog.

ARIES
(Mesha)
Mar 21-Apr 20

Businessmen are better advised not to invest or speculate in a big way and to hold back the opening of new branches for the next two months. Politicians and social workers should not count upon the support of followers and collegues. Do not be too generous with financial loans. Curb your expenses midweek.

TAURUS
(Vrishabha)
Apr 21-May 20

The lighter side of your personality will come to fore and you will mix freely in various and assorted groups of both the sexes. There will be some amount of mental tension while making new friends and getting to know new personalities. Give your schemes wide publicity. Clear all domestic backlog.

GEMINI
(Mithuna)
May 21-June 20

In the next few weeks you are likely to recede into the background. Tighten up your social activities and restrict expenses. Industrialists may face labour problems in the next few months, the seeds of which are likely to be sown in the next few weeks. Build up capital and secure new sources of finance.

CANCER
(Kataka)
June 21-July 20

Domestic life is blissful. Updating of the drawing room, gardening, overhauling of vehicles and many other domestic tasks keep you occupied. Sale and disposal of property may prove profitable. Those in service may take leave for a pleasure trip. Midweek finds you exhibiting your skills.

LEO
(Simha)
July 21-Aug 21

A brief romantic interlude brings pleasure. Friends from abroad keep you busy and you find yourself mixing business with pleasure Rare achievements bring scientists and research scholars into the limelight early in the week. Midweek should be reserved for disposing off important issues. Clear all backlog.

VIRGO
(Kanya)
Aug. 22-Sept. 23

Make the most of your opportunities now and do not waste precious time in building castles in the air. Industrialists can take important steps to widen and expand present activities in the early part of the week. Group activities bring you into the limelight. Doctors and judges will be at their best this week.

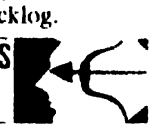
LIBRA
(Tula)
Sept. 24-Oct 23

Your romantic and sporting spirit gets the upper hand in this and the next few weeks. Do not involve yourself too deeply in matters strictly not your concern. Youngsters are likely to acquire a new profession, vocation or job. Seniors will be keen on celebrating a marriage or some other occasion.

SCORPIO
(Vrishchika)
Oct. 24-Nov 22

You will have to be necessarily secretive about certain moves in the personal as well as professional sphere. Strangers and newcomers keep you busy. You are inclined towards breaking existing ties but do not be too hasty. Secret information coming your way opens up new business prospects.

SAGITTARIUS
(Dhanu)
Nov 23-Dec 20



A lucky and fortunate period in your life begins this week. A marriage or some other happy event takes place in the near future. Sportsmen, artists and writers will be at their best this week and their skills will come in for much praise and applause. The early part of the week is financially lucky.

STAR FOCUS

Your Finances In 1983 — III

Virgo: Unlike the previous years, this year is luckier and brings far better prospects. A majority of your burdens will be reduced in July and thereafter your days will be carefree. Besides between August and October your hobbies and part-time jobs will add substantially to your finances. Sale and disposal of property and worn out machinery will be profitable.

Libra: You will off-load various responsibilities including those concerning finances. The emphasis should be on clearing debts by curbing domestic expenses. You will have to loan money to your family. This policy holds good until August. In October/ November money in the form of scholarships, awards and cash rewards come your way.

Scorpio: A year full of various restraints and constraints. Till July most of your plans will be shelved on account of unfavourable circumstances. After September things look up but you will be in an expansive mood and go in for lot of luxuries. Exert some control on your finances in the last quarter of this year and upto March 1984 or else you may go broke.

Sagittarius: A pleasant and happy-go-lucky year. You will be too generous and others will exploit your generosity in order to better their own prospects. Be on guard especially in mid-1983. Your spouse will strain your purse strings in August/September. The last quarter is excellent in every way. In October/ November money comes your way.

Birthday Forecast

Sunday, March 6

A most interesting twelve month period lies ahead of you. Eligibles will settle in life and career. Business will run smoothly. Finances are satisfactory. Move cautiously in July, August and November.

Monday, March 7

Judges, artists and writers have a splendid year ahead. Sportsmen too will make a mark in their career. Your financial requirements will be easily met, except perhaps in July, August and November.

Tuesday, March 8

The initiative, courage and efficiency at your disposal will help you to gain success in all the moves you make and the profits will be beyond expectation. Financially, you will do very well.

Wednesday, March 9

Slow but steady progress this year brings you much prosperity. Keep elders happy and pleased for you will secure some benefits from them. Maintain cordial relations with family members.

Thursday, March 10

Most of you can look forward to a propitious and interesting year. Those connected with the law, the judiciary and the army will be rewarded for their efforts.

Friday, March 11

This is a year full of achievements Gymnasts and sportsmen will do exceptionally well. Even businessmen and professionals will make rapid strides. The existing partnership should be maintained.

Saturday, March 12

This is going to be a year of steady progress. Do not act whimsical in and outside home in August, November and December. Conserve financial and physical resources throughout the year.

Versatile

More and more mills have started using the versatile high-crimped wonder fibre

Grasicrimp blended with **Polyester**

The inherent properties of Grasicrimp fibre invest the blended fabrics with a number of advantages

- Worsted feel, which closely resembles woollen fabrics
- Greater bulk and hence better warmth retention
- Greater fullness of handle and hence better drapeability
- Higher resistance to pilling
- Better crease recovery due to high crimp in the fibre
- High tensile strength and tear-strength
- GRASICRIMP blends give better productivity in spinning due to better cohesiveness
- GRASICRIMP blends are also more economical because of their greater dye-affinity
- GRASICRIMP is available in white and in various shades in spun-dyed form

Should you need to know more, please contact us or send your enquiries to:

A nutritionally complete feed should contain all the nutrients in the right proportion...

Cerelac provides a nutritionally complete feed –in one delicious form.

When your baby is about four months and ready for solids, consult your doctor about Cerelac. You'll find it reassuring to know that every Cerelac feed you give your baby is nutritionally complete.

Which means every Cerelac feed has all the necessary nutrients, proteins and calories he should get from a single solid feed. You do not have to supplement it nutritionally.

Cerelac owes this nutritional completeness—and taste—to its delicious blend of wheat flour, full cream milk and sugar. Cerelac provides proteins for body building, carbohydrates and fats for energy and all the essential vitamins and minerals for all round development.

Give your baby Cerelac—for his full, healthy growth.

Cerelac is so easy to make. Just add it to pre-boiled, warm water. Mix, stir and serve.

This Week's Bridge

Calcutta Invitation Tournament — II

THREE foreign and 13 top Indian teams were invited by the Saturday Club and the West Bengal Bridge Association to the first ever International Invitation tournament held in India

Pakistan, who had won universal acclaim by finishing second in the 1981 World Championships, played Tamil Nadu's Nagappan in one semifinal match Indonesia, a World class team, winners of the 1982 Far East Championships, played Anand Mehta

Since I was playing our semifinals match, I could not watch the Pakistan Nagappan match which was a ding dong battle Neither team ever had a substantial lead, and when the smoke cleared the desperately unfortunate Nagappan had lost by just one imp, over 64 boards This board, towards the end, was interesting

West dealer, Both Vulnerable

	♠ Q93 ♥ 92 ♦ AQJ109865 ♣ Void	
♠ K1062 ♥ AK8 ♦ Void ♣ AQJ1063	N W E S	♠ A754 ♥ QJ4 ♦ K3 ♣ K982
	♠ J8 ♥ 107653 ♦ 742 ♣ 754	

In the Closed Room Pakistan had bid briskly to the cold six Spades by West, and Jagannathan had judged remarkably well to take the save in Seven Diamonds, down 4, for 1100 to Pakistan

In the Open Room, Nachiappan West and Manikant Shah East also overcame preemption to reach six Spades, by East North, Masood, doubled for a Club lead, although that would have been at the cost of his natural trump trick Manikant Shah judged to remove to Six No Trumps, as East, leaving Zia, South, on lead

For once, Zia found the normal lead of a Diamond not foreseeing the void on the table With won his Ace and Manikant tabled his cards for 12 tricks, 1440 a swing of 8 imps to Nagappan I remember, on Vu Graph, the commentator speculating that had South not led a Diamond declarer would not have had his twelfth trick And so it seems but I have no doubt that Manikant Shah would have found the winning play

Win the Heart or Club lead and cash out 9 tricks, 6 Clubs and 3 Hearts ending in the East hand, leaving this position

	♠ Q93 ♥ Void ♦ A ♣ Void	
♠ K1062 ♥ Void ♦ Void ♣ Void	N W E S	♠ A7 ♥ Void ♦ K3 ♣ Void

Immaternal

North, who must keep three Spades is reduced down to his bare Ace of Diamonds A low Diamond from East goes to the bare Ace, and East's hand is high This squeeze, called the 'squeeze without the count' because no trick has been conceded earlier to 'rectify the count' works whenever North has any three Spades and the Ace of Diamonds

On the very last board, Manikant Shah, in a simple contract of One No Trump, hastily claimed seven tricks If he had played out the hand he would have easily made eight tricks to leave the match an exact tie, and force an 8 board replay Poor Manikant—he'll never forget that board!

In the other semifinals, Indonesia played Anand Mehta's quartet of Anand Mehta—Orlando Campos, Avinash Gokhale Jaggy Shivdasani Campos whose usual team Ruia couldn't come to Calcutta was a welcome addition to our team since we had only three players ourselves—Kejriwal joined us only on the penultimate day We jumped off to a 35 imp lead in the first 16 boards thanks to a laydown slam bid by Jaggy and I which Yasin—Munawar missed and a thin vulnerable game we bid which should have been beaten but wasn't

In the next 16 boards though Indonesia came roaring back picking up 37 imps A lazy bid by Anand Mehta caused a laydown slam to be missed overzealous competition by Jaggy and a razorsharp double by Lasut costing us 500 and a vulnerable game eluded us which on different competition was easily bid at the other table

The third set of 16 boards put the match away Jaggy and I and Campos-Kejriwal outscored Indonesia by an incredible score of 68 11!

Both Easts played this in 4 Hearts, doubled by South

	♠ Q42 ♥ J7 ♦ Q10653 ♣ Q103	
♠ 5 ♥ Q862 ♦ J42 ♣ KJ972	N W E S	♠ J1076 ♥ AK9543 ♦ K9 ♣ 8
	♠ AK983 ♥ 10 ♦ A87 ♣ A654	

When Kejriwal was East Lasut South led the Ace of Spades and continued with a low Spade Kejriwal ruffed in dummy entered hand with a trump and played a Club South won his Ace and tapped dummy with another Spade Kejriwal pitched a Diamond on the Club King, ruffed a Club to hand ruffed his last Spade with the Queen and claimed after playing the good Jack of Club ditching his Diamond as North ruffed

At the other table where partner had bid One No Trump on my One Spade opening I led the Ace of Spades and switched to the Ace and another Diamond This should have made life very easy for Ferdy Waluyan but he produced a confused line of play playing Jaggy for doubleton Spade and eventually went down when Jaggy was able to over ruff the fourth Spade!

Thereafter we were always ahead in the match picking up a 1400 from the hapless Waluyan pushing them over board in a vulnerable game and although in the last set Kejriwal misdefended to present Waluyan with a no hope vulnerable Grand Slam we ran out winners by 30 imps to meet Pakistan in the Finals ■

AVINASH GOKHALE

This Week's Chess

Fight In The g-File

THE games of position Nos 307 and 308 illustrate the use the g file after casting Both players work to open it, but it is White who succeeds in exploiting it combinatively

The first game was played in the Women's World Chess Olympiad in Luzern 46 3-player teams (and one reserve) participated in 14-Round Swiss system and the final placings were USSR 33/42; Roumania 30, Hungary 26 Poland 25½, GDR and China 24½, Sweden 24, Netherlands and India 23½

Liu (China)—Guggenberger (Columbia)

1 e4, e5 2 Nf3, Nc6 3 Bb5, a6 4 Ba4, Nf6 5 00, b5 6 Bb3, Be7 7 Re1, 00 8 c3, d6 9 h3, Na5 10 Bc2, c5 11 d4, Qc7 12 Nbd2, Nc6 13 d5, Nd8 14 Nf1, Ne8 15 a4 Rb8 16 axb5, axb5 17 g4, g6 18.Ng3, Ng7 19 Bh6, f6 20 Qd2, Nf7 21 Be3, Bd7 22 Kh2, Ra8 23 Rab1, Qc8? 24.Rg1, Kh8 25 Rg2, f5? 26 exf5, gxf5 27 gxf5, Nxf5 28 Qd3!, Nd8 29 Rbg1, Nb7 30 Bh6, c4.

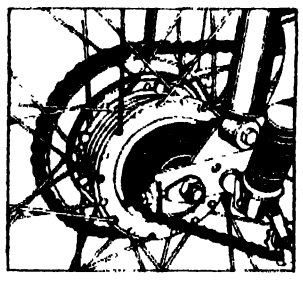
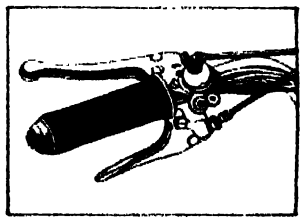
AND NOW...

Hero-Majestic
Deluxe Model

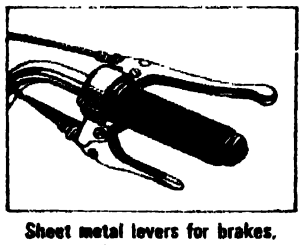
An Ideal Power-Packed MOPED
to carry two persons at most economical Price and minimum maintenance cost, with all the advantages of expensive two-wheeler automotives.



Better braking efficiency through increased brake drum diameter. Bigger axle dia, heavy duty bearings and new freewheel for more load carrying capacity. A 48 teeth sprocket (matched with 100 link chain) provides quicker accelaration.



New multiple electrical switch with Engine cut-off facility and dipper arrangement.



Sheet metal levers for brakes, choke and decompression with springs for positive return.

A re-inforced frame for shocker mountings and better clutch liner for greater wear-resistance, coupled with improved V-Belt for durability and detachable V-Belt cover for easy replacement. A modified silencer with detachable components for decarbonising and better engine performance.
At its price, Hero-Majestic outclasses any other moped. In quality, in economy, in looks, it offers you a lot more. Virtually noiseless air-cooled petrol engine with hard chromed cylinder and telescopic front suspension to ensure comfortable ride. Various attractive colours. A product of extensive research to suit Indian conditions.

Difference in prices in different states/destinations is on account of difference in freight.

The cost of moped with pillion seat will be less by Rs. 30/-.

Maximum Recommended Retail Price
Applicable in Maharashtra
Rs. 3292.63
Local Sales Tax and Octroi Extra

Another major breakthrough in moped technology.

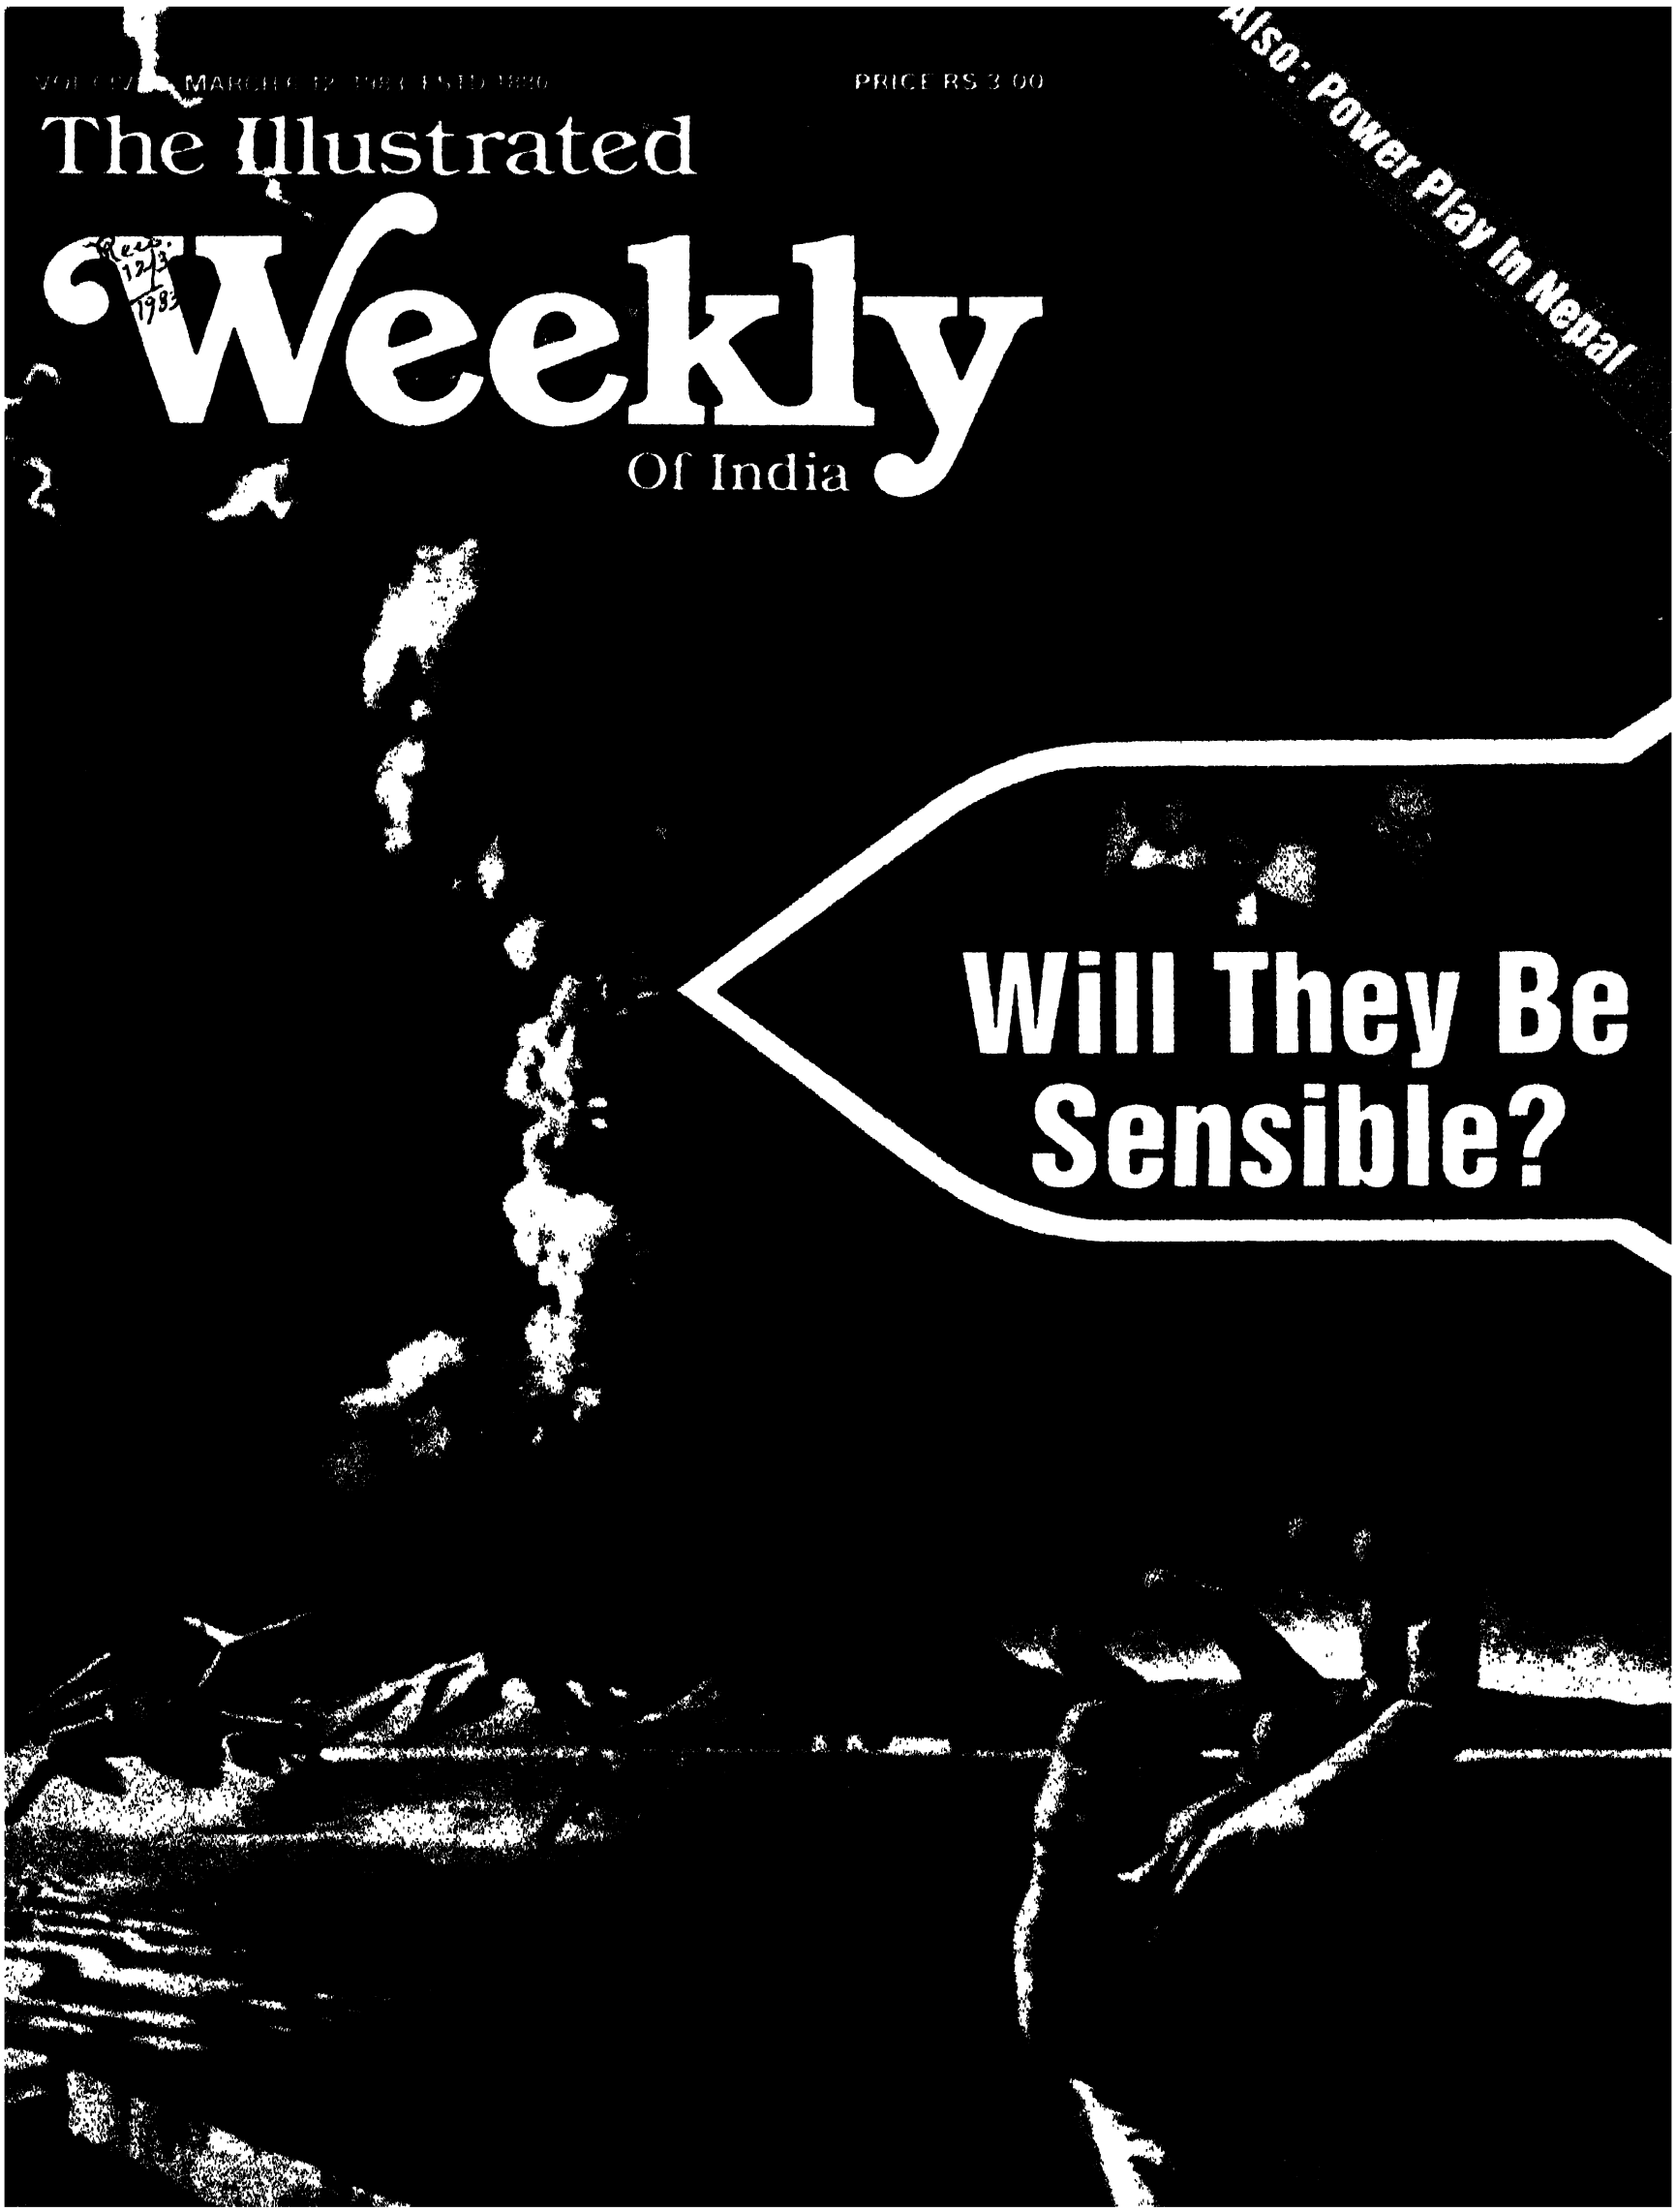
Will They Be Sensible?



All it takes is a relaxed mind and an unrelaxed diet.

That's right. Getting ready to breast-feed your baby is as simple as that. All you've to do is relax. And take in all those things that can help your body make more milk for your baby.

Stop worrying.

Worry can harm you. And, your baby. It can make you feel ill and, even worse, dry up the milk flow.

If you've a health problem, don't just sit and mope. Go see your doctor and discuss it. You can trust him like your closest friend.

Start a wholesome diet.

The dos and don'ts of a healthy diet don't need a libraryful of books or calorie charts by the dozen. Common sense is all you need. For instance, your baby needs plenty of protein for growing: the body building materials which milk, eggs and meat provide. Naturally, you should be eating and drinking protein-rich foods. The more protein you get, the more your baby gets, too. From you.

An important don't is an excess of carbohydrates. Because it can affect both the quality and quantity of milk.

Simple steps like these will help you to breast-feed your baby properly. In the remote case of a serious health problem, though, you must choose the best alternative for him.

Spray dried Amulspray.

Nutritionally well balanced with prime-quality protein, easy to digest fats and carbohydrates and the right blend of essential vitamins and minerals.

It's easy to mix in previously boiled warm water: no need to make a paste first.

Economical.

And, Amulspray is the most economical among tinned baby foods.

Because it is made by the modern milk complex that pioneered India's "white revolution".

But be sure you use boiled water and hygienically sterilised utensils and feeding bottles. And, follow the directions for use on the pack strictly to avoid overdilution and ensure adequate nourishment.

Free! Amul Baby Book

Contains 13 fact-filled chapters on Pregnancy, Antenatal Care, Confinement, Breast-feeding, Outside Feeds, Change-over to Solids, Baby's Routine, Baby's Progress, Prevention of Illness, First Aid, Common Ailments, Emotional Problems of Childhood, and Care of a Sick Child In English, Hindi, Marathi, Gujarati, Tamil, Telugu and Malayalam.

Write to Post Box 10124, Bombay 400 001 with your name and address and postage stamps worth Re. 1.25 p.

A message in the interest of your baby's health from the makers of

AMULSPRAY

made by India's foremost milk complex.

LETTERS TO THE EDITOR

The Bohras Protest

Sir—The article "Struggle Against Authoritarianism" by A. Engineer (February 13) is based wholly on an aberrant and erroneous belief. His Holiness Dr Syedna Mohammed Burhamuddin Saheb (T.V.S.) is a benevolent and revered diginitary. He is a personal friend of several heads of state. The Dawoodi Bohras love and respect him. His blessing is the most valued treasure that a follower can ever have.

Zoeb Baxamusa
Calcutta

Sir—The feature on Dawoodi Bohras distorts facts and truth. More, it deliberately avoids reference to the basis by which one is a Dawood Bohra. No one is *born* a Bohra. One enters the brotherhood *voluntarily* through the act of *Misaq* and so accepts the beliefs of the religious brotherhood. One such belief is that the *Dai* has complete authority over all areas of the life of the follower. This is because he is the guardian of the faith whose leader, the Imam, is God-given and chosen. The followers so obey all the orders of the leader.

The author and his ilk are not accepted by the *Dai* or the Community as members of the fold. They have either not given the *Misaq* or have forsworn it. The author's following of 25,000 "Asghariyas" is a figure that is exaggerated to earn a modicum of credence.

A million Bohras domiciled in all parts of the world venerate the *Dai* who is striving to maintain the identity of the Community and its own standards and morals and refuses to lower them to the corrupt standard set up by 20th Century ethics and morality which the world at large readily confesses has seen a steep decline. As a leader the *Dai* must lead. He cannot change fundamentals.

For the caucus of "Asghariyas" masquerading under the high-falutin title of "The Central Board of Dawoodi Bohra Community"—of which not a single Dawoodi Bohra is a member—the Nathwani Commission Report is a showpiece that gives them existence and an ego. It is the Marxist Manifesto of that breakaway new faction. But to the discerning who are aware of the facts and circumstances, the Commission from the very first seemed more a political charade than an exercise of justice. The Report rested solely on a series of allegations and confessions. The verdict was a foregone conclusion. The Commission's hyperbole on its sense of impartiality and search for truth came close to being fiction. The Commission was a grim perversion of the investigative system. It bordered on the ludicrous especially when the Commission's nasty impulse and anti-Muslim wrath was exposed. The Commission did not even succeed in gaining its political end.

The Bohras, the author admits, "are progressive and dynamic". Leave it to them and their good sense to decide whether they are being "turned into a very static and obscurantist role". We do not want non-Bohras to set themselves up as our guardians and sit on judgment on our beliefs and community way of behaviour and functioning.

Tyebally A.A. Davoodbhoy
Bombay

Travails Of The Tibetans

Sir—"Tibetan Exiles: Too Rich to Go Back" (February 6) K.N. Sud gives the impression that Tibetans in India are too rich to want to go back to Tibet. While Mr Sud's observations on the Tibetans in Dharmsala may have some truth," it does not follow that all Tibetans in Dharmsala, much less all Tibetans in India, do not want to return home. The longing for one's homeland is imperishable. You can never really substitute it with anything. Mr Sud also conveys the idea that Tibetans in India in general are affluent. This is far from the truth. Mr Sud has made the mistake of taking Dharmsala as the standard. This error would be as serious as taking the Tatas, the Birlas and the Dalmias to represent the average Indian. For a true picture of the Tibetans' economic well-being or plight (in India), one needs to visit the Tibetan "settlements" scattered all over India (by the Indian Government for obvious reasons)—in Karnataka; Norgeyling, Bhandara (Maharashtra); Fendeyling, Mainpat (Imp.); Phuntsokling, (Orissa); Kunphelling, (Sikkim); Dhargeyling, Tezu; Tenzingang, Bomdila; Chocphelling, Miao (all in Arunachal Pradesh); Sonamling and Changthang (both in Ladakh), etc, which would account for about 90 of the Tibetan exiles in India. The economic condition in these settlements is far from satisfactory; the daily struggle for survival is so all-consuming that there is little energy left in the people for anything else.

Mingyur Dorji
Madras

Panegyric To A Poet

Sir—Apropos P.K. Nijhawan's article "Chakbast: Poet For All Times" (February 6) we have denied Pt Brij Narain Chakbast the recognition he deserved richly. The noted Urdu litterateur's virtuoso pieces certainly would have died out, had Kali Das Gupta "Riza" not undertaken the painstaking task of reviving the poet's works.

Pt Chakbast is charged with plagarism, but I do not agree with the idea entirely.

Ashutosh Kumar Jha
Ranchi

Forgive Them...

Sir—In her article "Textbook Muddle: With An Absence of Malice?" (January 30) Sushila D'Cruz says, "Fr Nereus Rodrigues, Diocesan Inspector of Schools..... stated that He (Christ) had always identified Himself on a par with God. This is documented in the New Testament of the Bible, precisely in Chapter 14 of the evangelist, Mark."

I wasn't able to locate this anywhere in the Bible! My reading of the Bible seems to suggest that Jesus Christ never claimed to be equal to God. Instead, you have his words recorded: "My father is *greater* that I" *(John Ch 14 Vs 28)* Also, "Jesus said to them, 'Truly, truly, I say to you, *the Son can do nothing of his own accord,* but only what he sees the Father doing' " *(John Ch 5 Vs 19)*

If history should be taught as history and not as "religion" as suggested by Fr Rodrigues, it should be recorded that Christ never claimed to be equal to God.

Jaspal Singh
Calcutta

NTR's Ram Rajya

Sir—NTR's dramatic success will probably inspire other regional parties to rise against Congress (I).

However you have to be very optimistic to take NTR's promises seriously ("NTR's Rama Rajya—January 30). At the same time you also cannot ignore the former celluloid hero.

Jaydip Mishra
Rengali Dam

Silence!

Sir—Noise pollution has become the curse of modern times ("Scourge of Noise", January 30). According to a study, constant exposure anywhere above 100 decibles is enough to drive human being insane. Out of 1,200 factory workers, nearly one fourth were found to be suffering from noise-induced hearing loss in one or both ears.

The indiscriminate use of loudspeakers is a major "mental killer" in Indian society. No religious or social function is thought successful unless it is accompanied by blaring loudspeakers. Doctors say living in noisy environments is bad for heart patients and persons with psychological and nervous troubles. To check the use of loudspeakers and their volume action should be taken against those who violate the law.

R.C. Gupta
Ghaziabad

Indians in Britain

Sir—From Taya Zinkin's letter from London (January 30) one gets the impression that the three quarter of a million Indians are doing well in UK. Considering that not more than three quarter of a thousand Englishman live in India, the process of reverse colonisation is secure.

R.D. Sinha
Calcutta

Plain Speaking

Sir—In "Threats to Our Freedom" (January 23) K.C. Khanna has done some plain speaking. It is time we realised that the totalitarian powers threaten our liberty.

The Western countries do not wish to recolonise our land. Instead, 10 million Indians have flocked outside, most of them in the West. Notice how the US, after defeating Japan, helped it on its feet. So much so that the disciple today threatens the benefactor. In contrast, the Soviet Union has not freed Eastern Europe. It plainly exploits the Indian market. It has occupied Afghanistan. Its next targets? Pakistan and India!

Raju Bala
Dhanyakuria

Politically Biased

Sir—Dr Ashok Mitra's diatribe against the IMF loan is politically motivated (January 13). Mrs Gandhi has got into financial problems precisely because of socialist policies as recommended by socialist advisers like Dr Mitra.

K. Susrita
Calcutta

Tower of Babel

Sir—In "Foreigners Stand Between Poll and Peace" (January 23) the caption to the photograph of a memorial in Tezpur is inaccurate. It is a memorial to students who died in a language agitation not an agitation against foreigners.

Sanjoy Chodhury and Tridib Kr. Gupta
Tezpur

Perplexing Perfidy

Sir—I was perplexed to read James A. Nathan's "CIA's perfidy in Australia" (January 23). Why has the author dug up a 11-year-old story and presented it under a banner headline?

His thesis seems unconvincing, it is full of conjectures and clever insinuations. Even if we are to admit CIA's presence in Australia, so what? Is not the KGB also not operating there? What about the Pseudo-Leftists? They were very much there to fight for the survival of the Whitlam Labour Government.

The fact is that democracy and the electoral process work in Australia. And but for the wishes of the people expressed through the ballot box, the Whitlam Government would not have fallen. Why credit CIA with a job done by the people of Australia? Or does Mr Nathan assume that it was the duty of the people and also of the CIA to ensure the continuance of Whitlam Government?

Jaganmoy Mitra
Calcutta

Your Affairs

Sir- Any sensitive person will shudder at the haphazard way Dehra Dun is spreading. The once beautiful town is being choked with buildings which are sprouting like mushrooms—even on the roads and footpaths. The beautiful compounds and lush stately trees are disappearing fast and Dehra is sliding towards the dubious distinction of becoming yet another dirty town of Uttar Pradesh. Now they are even eyeing the Parade Ground for a stadium. This small open area in the heart of the town, besides enhancing the beauty of the surroundings, is the lung of the city! Here people of all classes, young and old and babies in their prams gather for a breath of fresh air. Dehra has enough vacant land. Any other suitable site should be selected for a stadium.

Please do not deprive us of the parade ground.

Padma Kumari Devi

Arms Reduction

Propaganda Befogs Prospects

The issue now central to arms reduction is the stationing of 572 Cruise and Pershing 2 intermediate range nuclear missiles in West Europe. Any compromise, the author feels, will only revolve around the informal understanding worked out by the two sides, viz the reported Nitze-Kvitinsky agreement. According to this, the US would deploy 75 Cruise missiles alone in Europe; while the Soviets could deploy 75 SS 20's.

by S. Nihal Singh

PROPAGANDA offensives on arms reduction, vigorously launched by both the Soviet Union and the United States, have tended to obscure reality. The crux of the problem is the stationing of 572 Cruise and Pershing 2 intermediate-range nuclear missiles in West Europe, beginning in December this year, if there is no arms agreement with the Russians.

The main battleground for the propaganda war is West Germany, where the missiles are first to be installed, because it goes to the polls on March 6. All the 108 Pershing 2 missiles and the 96 Cruise missiles are to be installed in West Germany between December 1983 and December 1985.

In fact, the propaganda war has assumed such proportions that the real issues have been pushed to the background. Do the United States and the Soviet Union want arms reduction, and, if so, on what terms?

The answer to the first question is a qualified "yes" on both sides. As for the terms, each side is seeking to obtain the best deal it can get. The importance of the outcome of the West German election lies precisely in indicating how far each Super-Power can go in pushing its case at the expense of its adversary.

The Russians have won an initial propaganda advantage, but the battle is far from over and, recently, has been lustily joined by President Reagan in his characteristic fashion.

First, the facts. It was a NATO decision to install the 572 Cruise and Pershing 2 missiles in West Germany, Britain, Italy, Belgium and The Netherlands starting in December this year in the absence of an agreement with the Russians. These missiles will be under the command of the United States, with the West Europeans exercising no control.

President Reagan's accession to the presidency merely helped to intensify the widespread unease in West Europe on the proliferation of nuclear weapons, and, is most dramatically illustrated by the anti-nuclear Green Party's acquisition of strength in West Germany. The President's pitch was that the US should negotiate with the Russians from a position of strength and he called the Soviets cheats and liars.

President Reagan's rhetoric and, more significantly, the whopping increase in the US defence budget were fertile ground for Soviet propaganda in West Europe. It was easy enough to paint Reagan as a warlike character with his finger on the nuclear button. To damp down this growing anti-nuclear sentiment, President Reagan proposed the so called Zero Option. He said the U would forego the deployment of all th Cruise and Pershing 2 missiles in Europe the Russians dismantled all their 34 SS20's and some older SS4's and SS5's.

Since the US knew perfectly well thc the Russians would not agree to any suc thing, the primary purpose of the propos al was to make it easier for the allie governments in West Europe to tackle th anti-nuclear sentiment in their countrie They enthusiastically espoused th American proposal.

The Russians, for their part, grasped central fact behind the proposal. If th people of the countries where the ne missiles were to be installed vehementl opposed them, the Americans woul have nothing to bargain with in seekin Soviet missile reductions. And, the Rus sians began working overtime to achiev this maximum objective.

UP IN ARMS. Above: An estimate twelve thousand persons, many womer formed a human chain around the nin mile fence at Greenham Common USA base near Newbury, England, to protes against the Thatcher Government's plan to allow the siting of 96 Cruise missiles a the base.

The arms reduction talks between the US and the Soviet Union, meanwhile, were not making much progress. The Soviets had little incentive to negotiate seriously because a delay would probably work to their advantage. And President Reagan was handicapped by his strong defence strategy from making genuine new proposals.

Against this background, Brezhnev's successor, Yuri Andropov, exploited his advantage to the hilt by making a new proposal. The Soviets would leave in their European part only as many SS20's as Britain and France had—a total of 162. Both Britain and France rejected this proposal, the latter more vehemently because it said it would amount to its independent nuclear deterrent being integrated into the NATO structure, something it has opposed since De Gaulle's time. Britain and France call their nuclear missiles, weapons of last resort against a nuclear blackmail.

These reactions, as well as the US opposition, were no surprise to the Russians whose proposal was directed at influencing West European public opinion. And Moscow followed it up with Andropov receiving the new head of the West German Social Democratic Party, Hans-Jochen Vogel, who came away from Moscow with the impression that the Soviets were serious about negotiations. He also suggested that the Russians might agree to reduction in warheads on each missile, which they have never confirmed.

With an eye on the March election, the Social Democrats had trimmed their sails on the nuclear issue although they had firmly supported the US position when in power. The visit of the Soviet Foreign Minister Andrei Gromyko, to Bonn, was chiefly to buttress an image of sweet reasonableness and to fuel the anti-nuclear sentiment in West Germany and further afield.

The concentrated and largely successful Soviet propaganda offensive had two significant consequences. The West European leaders, even the staunchest US supporter, Margaret Thatcher, began hedging their bets on the Zero Option. Secondly, the Reagan Administration came to realise that the Russians were running away with a propaganda victory.

President Reagan, meanwhile, had suffered a self inflicted wound by sacking the Head of the Disarmament and Arms Control Agency, Eugene Rostow. The Conservatives in the Republican Party had been gunning for Rostow for some time because they did not trust him and Reagan himself seemed to have had second thoughts on the value of keeping a target of attack from the right in an exposed position.

West European reaction to Rostow's dismissal was predictably adverse. It was also leaked at that stage that, under Rostow's guidance, his arms negotiator, Paul Nitze, had made an informal agreement with his Soviet opposite number, in Geneva, on the two sides having 75 intermediate range nuclear missiles each in Europe. This understanding was repudiated by both Moscow and Washington, and it was suggested, in the US capital, that Nitze had exceeded his authority.

Rostow's dismissal and the leak made it all the more essential for President Reagan to meet the Soviet propaganda offensive. While still pleading for strong defence and proposing a nine per cent real increase in the defence budget he submitted to Congress for the new financial year, he tempered his anti-Soviet tone. Reagan suggested that the US was serious in seeking a real arms reduction if the Soviets matched their words with deeds.

Additionally, President Reagan took two initiatives in the propaganda field. He formed a high-level committee with, his campaign advertising manager in the 1980 election, Peter Dailey, at present US Ambassador in Ireland, overseeing the task of putting across the American perspective on the nuclear question in West Europe. Second, he sent Vice-President Bush to underscore US seriousness on arms reduction. To heighten its effect, Bush unveiled an "Open Letter" from Reagan to the people of Western Europe promising to meet Andropov any time anywhere to sign a treaty banning *all* land-based intermediate-range nuclear missiles on earth. The proposal, of course, is strong on rhetoric and pretty thin in substance.

President Reagan also sent his Secretary of State George Shultz to the Far East. Although the main purpose of this visit was to revive a flagging Chinese enthusiasm for a strategic consensus with the US, Shultz tried to pick up some pieces from the fall out of Andropov's proposal in Tokyo and Beijing.

Both Japan and China are understandably worried that a compromise agreement on intermediate-range missiles in Europe would be made at the expense of stationing more of them in Asia, especially aimed at Japan. Since they are the only two countries in Asia that count for something in US decision making, it has been Shultz's effort to reassure them that any agreement with the Soviet Union would not be made at their expense, with what success remains to be seen.

This then is the state of the game today. There is little doubt that the two sides will try new propaganda tricks before the West German election in March. It stands to reason that serious negotiations will not begin until after the results of this election are known.

Once the West German election is behind us, where will the two parties stand? Even assuming that the US position is not dramatically eroded in West Germany, the Zero Option on missiles is dead. The American problem is that Washington cannot formally give up its position without a serious Soviet counter-proposal.

President Reagan also has a domestic problem. At a time of serious recession in the economy, with more than 12 million people unemployed, his big defence spending programme is not exactly popular. Although Reagan's political shrewdness has thus far helped him to retain the essence of his defence build up at the cost of some frills, he needs to convince his countrymen that he is a man of peace rather than war.

The Soviet objective is centred on warding off the deployment of the Pershing 2 missiles. As opposed to the slower Cruise missiles, the warning time the Russians will have in the case of the Pershing 2 is six minutes, which represents an unacceptable risk for them.

President Reagan's objective seems to be to achieve an arms agreement with the Russians by the end of this year. In tactics, he is seeking to emulate Richard Nixon by sending out signals for serious negotiations once he has buttressed US defence.

Whatever the harvest President Reagan would gather from such an agreement, should he decide to run again, the Soviets know that the compulsions of presidential election politics would almost rule out an accord in 1984, apart from the December deadline for the start of the missile installations. Since the Soviets are, for their own reasons, interested in an agreement on missiles, they will grasp an acceptable compromise if they can obtain one.

The essentials of a compromise have still to be defined. But it is clear that once the fog of propaganda is dispelled sufficiently for serious negotiations to begin, the contours of a compromise will revolve round a variation of the informal understanding worked out by the two sides, to the apparent chagrin of their Governments.

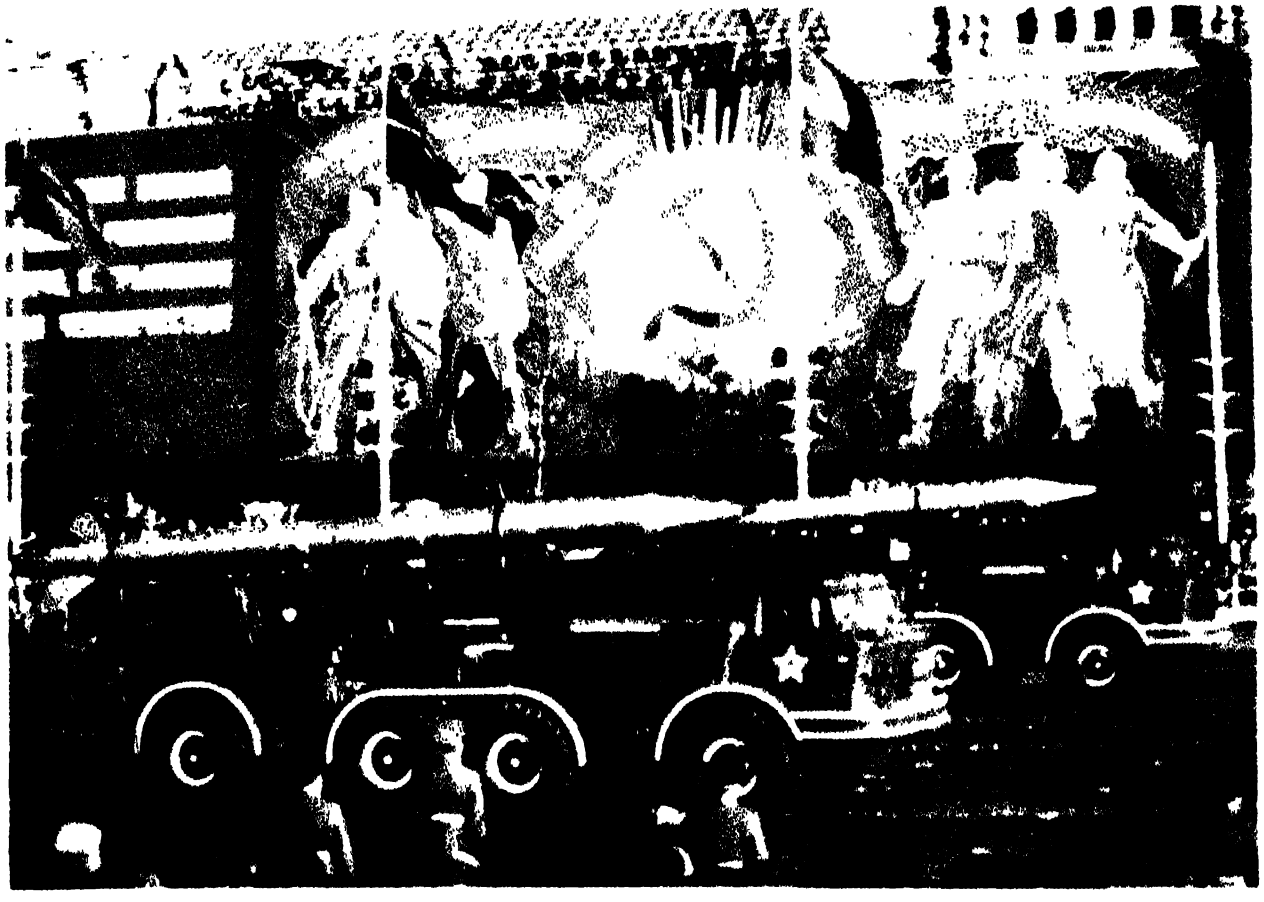
The reported Nitze-Kvitinsky agreement has the following components. The US would deploy 75 Cruise missiles and no Pershing 2s in Europe. Each Cruise would have four warheads and the US could also deploy 150 medium-range bombers.

The Soviets on their part could deploy seventy-five SS20's, each with three warheads, aimed at Europe and freeze the 90 or so SS20's they have in Asia. They would also be entitled to 150 medium range bombers.

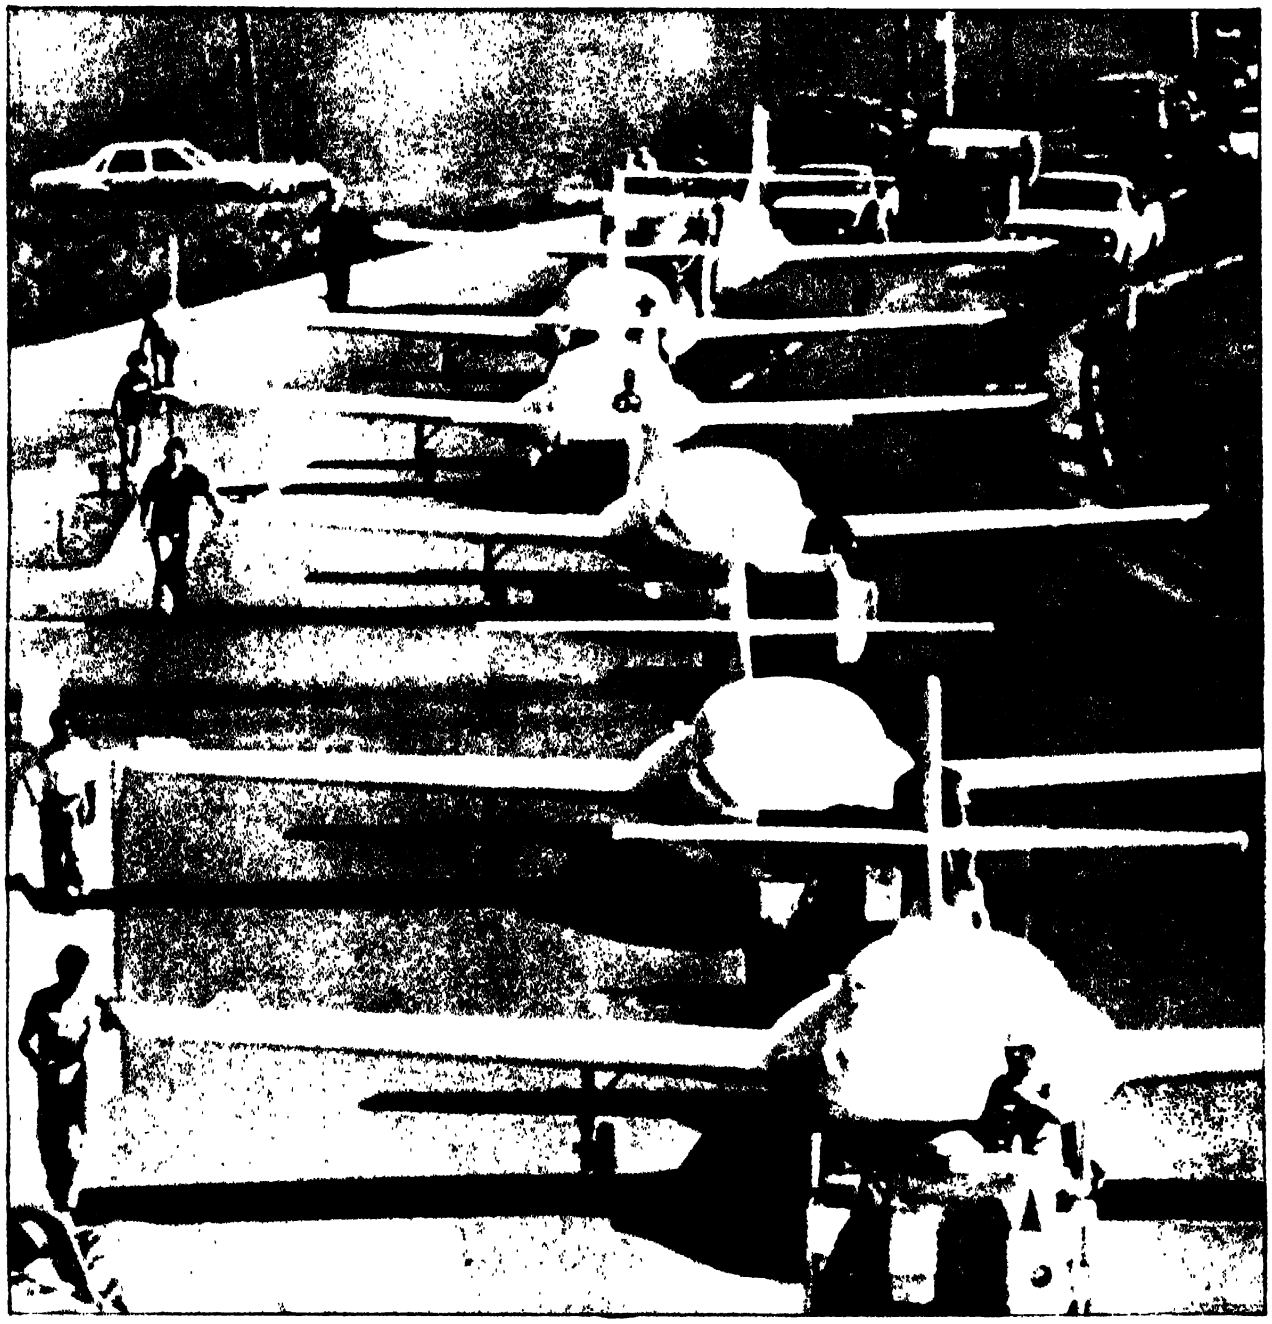
The Zero Option was never a serious proposal because it would not only leave in place the British and French intermediate-range nuclear forces but the following array ranged against the Soviets: F 111 fighter bombers stationed in Britain, US Sixth Fleet aircraft carrying nuclear weapons, the Poseidon missiles assigned to NATO defence and the proposed deployment of sealaunched Cruise missiles on attack submarines and surface ships. As Gromyko put it during his recent Bonn visit, the Zero Option would destroy "parity in armaments" evolved over many years.

Parallel Super Power arms reduction negotiations have been intermittently held in Geneva. One concerns medium-range nuclear missiles in Europe and is still led by Nitze on the American side. The other, more recently resumed, is in the region of the longer range strategic arms reduction talks (START). On the table at the latter talks are US and Soviet proposals.

Progress in the START talks will depend upon how quickly the two sides can agree on medium range nuclear weapons in Europe. The outlook is not as pessimistic as the furious propaganda unleashed by the two sides would imply. ■



PROOF OF THEIR AWESOME STRENGTH. Soviet armour and missiles, seen at this Red Square Parade, bear testimony to the USSR's tremendous military power and are a telling reminder of the proliferation of nuclear and conventional weapons.



JETS BOUND FOR PAKISTAN, which is a leading recipient of American arms.

Traffic In Death

Military aid is used by the Big Powers as an instrument for establishing their hegemony over the client states, says the author.

by Satyabrata Rai Chowdhuri

THROUGHOUT 1982, most countries of the world had to face a bewildering array of economic and financial problems ranging from high unemployment and falling production to sagging trade and huge debts. Though the recession has not been as severe as the Great Depression of the '30s, the persisting slump in output has raised questions on whether things can get worse. There are many who go by historical precedents and assert that it may last till the mid-'90s. If the prognosis comes true, the world might face the worst ever crisis in the near future. And the Third World countries will certainly be the worst affected.

At a time when almost everyone was afflicted with recession in varying degrees, the arms industry never had it so good as in 1982. In the secretive world of arms manufacture and sales, actual figures are not easy to get, but what is already known is staggering. In fact, the race for arms, particularly in the Third World, is fast outdistancing the search for peace. Hardly a week passes without the announcement of a new weapons deal somewhere in the Third World. This has triggered off a cycle of action and reaction in which each side now strives to better the arsenal of the other by acquiring some of the world's most sophisticated weaponry. This has raised the potential destructiveness of a war between two Third World countries to chilling heights.

As 1982 drew to its close, the world's principal arms suppliers to the Third World, like the United States, the Soviet Union and France, were competing for major arms deals. The year 1983 promises to be a happy year again for the industry.

The Reagan Administration is estimated to have sold nearly 30 billion dollars worth of conventional weapons to the developing countries during 1982. Pakistan is a leading recipient of American arms supplied to it mostly at highly concessional terms.

One estimate puts the money spent by developing countries on arms purchases in the past decade at over 268 billion dollars. 61 per cent of the Third World's weapons originate from the United States and its allies, the remaining 39 per cent coming from the Soviet Union and its allies, according to a report based on the United States Congressional Research Service.

In its first year in office, the Reagan Administration announced arms deals worth 250.3 billion dollars, excluding a number of sales below the level requiring Congressional approval. Above that, there was another 3 billion dollars-worth of private sales, adding to Washington's largest marketing operations for seven years.

Between 1976 and 1980, the United States signed arms agreements with Third World countries worth 49.7 billion dollars. The Soviet total in the same period was 42.8 billion dollars, said the report of the Congressional Research Service. However, the United States State Department maintained that Russian and West European arms sales were higher in most categories of weapons. American supplies included 7,446 tanks to the Third World countries in the past decade compared with 13,220 from the Soviet Union, the State Department said, adding that the sale of supersonic aircraft ran to 1,540 by Washington and 3,705 by Moscow.

But the report quotes White House figures to indicate that in the past ten years, America sold to Latin American countries 21 submarines, 38 warships, 15 supersonic and 185 subsonic planes. Washington also sold 50 military aircraft to Black Africa along with 35 tanks and 275 large field guns. In the Middle East and South Asia, it sold more than 10,000 armoured cars, 300 helicopters and 7,290 surface-to-air missiles.

Unstable Regimes

The combined efforts of major arms suppliers have ensured that we now have to live with a large number of unstable regimes having, among other things, 3,180 tanks, 54,555 artillery pieces, 6,630 supersonic warplanes and 35,735 guided missiles.

The situation is disturbing because military hardware provided by the Big Powers to the developing countries of the Third World, many of which are already riven by local tensions and hostilities, is a dangerous virus that has now infected the entire political, economic and social bloodstream of these countries.

Since 1950, the General Assembly of the United Nations has adopted a number of resolutions appealing for an overall reduction of military spending by the developing countries and utilising the funds thus released for their economic and social development. But Milton Leitenberg and Nicole Ball have recently prepared a list of 96 Third World countries to show that as many as 53 of them are devoting between 10 and 74 per cent of their national budget for military spending. Herbert Wulf and Peter Lock have also compiled an exhaustive register of arms procurement by the developing countries to suggest that there is a crucial connection between the increasing arms spending and underdevelopment of these countries.

More disturbing than this trend is the fact that the purposes for which arms are bought are usually not the same as the purposes for which they are sold, especially by the Big Powers. Moreover, the process of accumulating arsenals has been repeated over and over as existing weapons have been replaced by more

technologically advanced and more costly models and as technological developments yielded entirely new types of weapons to be accumulated in addition to the existing types.

Five countries—the United States, the Soviet Union, Britain, France and China—are primarily responsible for stocking the arsenals of a large number of developing countries with a variety of military hardware including modern horror weapons of infinite destructiveness The Chinese, who have entered the race rather late, have provided an estimated 350 million dollars of weapons to the Third World countries since the early 1960s. Nearly three-fourths of this total has gone to Pakistan which has been receiving from China MIG jet fighters, IL-28 jet light bombers, light and medium tanks and a wide variety of ground forces, communications and support equipment

Varied Motives

The motives of arms supply to the weak and developing countries have been varied and in some cases they have operated simultaneously Basically , the primary motive has been to preserve or create a kind of political order that permits the donor State to derive some definite short-term or long-term political advantages In other words, the State supplying arms seeks to affect and influence the foreign policies and power position of the other State to promote its own national interest

This motive sometimes encompasses a concern not only for ideologies, but also for specific political regimes and personalities In short, military aid is used by the Big Powers as an instrument for gaining access to or establishing hegemony over the client States Instances are not rare when the arms giver seeks to enhance its prestige around the world that may be gratifying to its national ego China's military aid to the African countries like Tanzania, Ghana, Guinea and Mali is a prime example of this motive

It is interesting to note here that although the diplomacy of arms aid has been characteristic of the cold war syndrome of the 1950s, between 1950 and 1970 exports of military hardware have increased sevenfold According to a study prepared by the Stockholm International Peace Research Institute (SIPRI), they are currently roaring along at an average of 7 5 billion dollars a year

By providing the countries of the Third World with such huge quantities of weapons, the Big Powers also incur some grave risks The SIPRI study underlined two such dangers in particular First, by developing a kind of control over and identification with the client States, they tend to get indirectly involved in local conflicts Secondly, such indirect involvement is likely to drag them step by step into direct confrontation with other Big Powers True, such a confrontation did not take place in Vietnam, but the danger was ever present

But why do some of the developing countries of the Third World acquire arms which they can ill afford? They justify their acquisition in the name of defence and security But curiously, they are anxious to stock their arsenals with "prestige weapons" which are of little use to them in localised conventional wars Pakistan, for example, acquired a huge quantity of sophisticated military hardware both from the United States and China But its army, trained to handle weapons of World War II vintage, lacked both support services and technical knowhow that were necessary to operate and maintain these arms Not surprisingly, these weapons became more a liability than a source of strength when war broke out with India

As pointed out by the SIPRI researchers "The complexity and sophistication of the Pakistani Patton tanks and F-104 fighters are said to have been a handicap to Pakistan The Pakistanis reportedly proved incapable of operating the automatic control needed to fire the guns of the Patton tanks, which considerably slowed down their offence"

Another such example is the Russian weapons supplied to Somalia The arms provided by the Soviet Union to Somalia between 1963 and 1966 largely consisted of sophisticated weapons MIG fighters and T-34 tanks These were of little use in prosecuting Somalia's border wars and the infrastructure of the Somali economy proved too weak to absorb the weapons Maintenance, interest payments and other costs were high and by the end of 1966 shipment of arms and other equipment were left to rust in port

Appalling Burdens

These two cases clearly illustrate one of the most appalling burdens that acquisition of sophisticated arms imposes on the developing countries Underlining this burden, the SIPRI study expresses concern that each year increasing quantities of resources in developing countries are devoted to the procurement of weapons from abroad The gross national products of all developing countries have grown at an average rate of 5 per cent a year since 1950 Their military expenditures have grown at an yearly rate of 7 per cent while their major weapon imports have grown at a rate of 9 per cent

The trade in weapons, the study says, also absorbs other kinds of resources In particular, the infrastructure of skilled manpower needed to maintain a major weapon in operational condition is quite considerable To repair and maintain a tank in an advanced country 400 man-hours are required per year For a destroyer, 45,000 man hours are required For each aircraft, four men are required full-time for operational maintenance and six men for overhaul These figures do not include the costs and the skilled manpower requirement for establishing repair shops, nor do they include the various support services necessary for an effective field organisation

Besides these running costs, the developing countries, once they start acquiring prestige weapons, have to divert a substantial percentage of their vital national resources to the development of military-industrial complexes Usually, this is done with the help of foreign financial assistance and technical knowhow

This dependence is economically unjustifiable, socially harmful and politically counterproductive As modern military-industrial technology is concentrated almost exclusively in the developed countries, the militarised developing countries inevitably become dependent on them for the flow of technology, capital goods and technical services with the result that the gap between the two groups in indigenous technological capability tends to become increasingly accentuated This is the price the developing countries have to pay for stocking their arsenals with modern weapons ■

The Nuclear Pulse That Could Paralyse A Nation

An electromagnetic pulse—EMP—from a nuclear blast high above the earth could burn out all power and communications, virtually paralysing a nation without killing one person Here, the author examines the EMP phenomenon and its implications And, because careful control of arms is impossible without communication, EMP, he says, makes the notion of a "limited" nuclear war "mere wishful thinking"

by William J. Broad

"ALL of a sudden a greenish-white flash lit up all of Hawaii," recalled a witness "The sky started turning pink, then orange, then red The heavens were filled with a ghastly light"

It happened one July evening during an atomic test in 1962 A rocket lifted off from Johnston Atoll a speck in the Pacific 800 miles southwest of Hawaii At a point in space 248 miles above the earth, the rocket turned into a ball of nuclear fire

Not just the heavens inspired awe that evening Something so unexpected happened that today two decades later, military planners still ponder its dark implications for the fighting of nuclear war

A second or so after the flash the Hawaiian Islands were plagued by problems with things electrical In widely separated parts of Oahu, 300 streetlights winked out, their fuses blown Burglar alarms started ringing and power lines went dead Honolulu headlines the next day attributed the breakdowns to a nuclear "shock wave" It was not so easily explained

Mysterious Agent

The mysterious agent was EMP, an electromagnetic pulse given life by nuclear blasts EMP is an intense burst of electromagnetic energy that can travel halfway across a continent at the speed of light and still pack enough punch to burn out electrical systems

Its disruptive power is frightening An EMP attack would be the ideal first step in a massive atomic assault against the United States A single Soviet warhead detonated 250 miles or so above Nebraska would blanket the nation with EMP having peak fields on the order of 50,000 volts per metre — almost certainly strong enough to shut down all power and communications Though the pulse would do no direct harm to humans, it would throw the United States and its armed forces into confusion

Recent changes in US defence policy have made this vision all the more menacing Today the Pentagon foresees the possibility of a prolonged or "limited" nuclear war This takes for granted exceedingly good communications throughout the military, especially between the president and his troops But EMP renders this assumption mere wishful thinking and turns the notion of limited nuclear war into fantasy

Understandably wrestling with the EMP threat is a top US priority To "strengthen and rebuild our communications and control system," President Ronald Reagan has earmaked $20 billion, much of it for grappling with EMP.

Sparse Hard Data

But with hard data about EMP still sparse, a deluge of dollars may not end the questions So like a physician treating a disease of mysterious origin, the Pentagon is trying to erect more than one line of defence Besides protecting communications links around the world, the Pentagon has assigned a top-secret mission to a special team in the vaguely named Joint Program Office to create an altogether new communications system that will work reliably amid the chaos of nuclear war

Considering that the events on Hawaii took place two decades ago, why has it taken so long to awaken to the threat? What do the Soviets know of EMP? Can the United States defeat the electromagnetic crippler? The answers are buried deep in the history of the nuclear arms race

The 1962 test a 1 4-megaton blast known as Starfish Prime, was one of the last held aboveground A few months later President John F Kennedy and Soviet Premier Nikita Khrushchev agreed to ban nuclear tests from the atmosphere and space, ending the possibility of observing EMP in peacetime Unfortunately, the US military misread the hints already at hand Military scientists knew there had been a strong electrical pulse on the Hawaiian Islands But they felt reassured by the fact that power failures had been scattered, not total, and that most telephone systems had gone right on working

By late 1963, military physicists had come up with an explanation for the pulse On earth the atmosphere quickly absorbs the gamma radiation and x rays unleashed by a nuclear blast In the airlessness of space, however, this high energy radiation travels unimpeded over vast distances at the speed of light A blast 50 to 500 miles above the earth sends radiation into the upper atmosphere, knocking myriad electrons out of air molecules The electrons twirl around and down the lines of force of the earth's

THE FEARSOME FOXBAT. In 1976, a Soviet pilot, Lt Victor Ivanovich Belenko (inset), defected with his MiG-25 to Japan. The plane (right), which relied on vacuum tubes, was the Soviet warplane most feared in the West. One year after it landed, the Pentagon revised its EMP bible, The Effects Of Nuclear Weapons, *to include the warning: "It may be advisable to design equipment with vacuum tubes rather than solid-state components."*

---

magnetic field. The spinning electrons act like a radio transmitter, beaming out a powerful pulse spanning the frequencies from zero to about 100 megahertz — a range that takes in everything from power-line frequencies to most AM and FM radio and many television channels. The higher the blast, the greater the area on earth covered by the EMP broadcast.

Semiconductor Revolution

The physicists who looked at EMP in 1963 were not particularly concerned, for they could not foresee the host of vulnerable devices waiting to be spun off by the semiconductor revolution. Vacuum tubes, still in widespread use in 1963, have thick metal parts, separated by a near vacuum, that can handle a high-voltage surge and operate as if nothing had happened. Solid-state devices, on the other hand, are built up of successive layers of silicon thinner than a human hair. Something akin to panic came in the 1970s when military engineers discovered that solid-state integrated circuits are a billion times likelier to be destroyed by EMP than vacuum tubes.

Physicists at the dawn of the EMP era also had faith that the pulse could be tamed, especially by shielding. Key systems would be covered with a thin sheet of metal that would siphon off the high-voltage surge. But there is no way to test the reliability of a coast-to-coast communications link short of detonating a warhead high above the atmosphere.

The implications of the shielding problem dawned on the military during the construction of the $5.7 billion Safeguard Anti-Ballistic Missile (ABM) system, started in 1969. Safeguard's nuclear interceptors were to confront Soviet warheads high above the atmosphere, sending EMP surges across most of North America. The military initially considered EMP a bothersome side effect. But after trying vainly to build an invulnerable transcontinental phone line between Safeguard and the president, military planners began to see EMP as potentially fatal.

Are the Soviets so careless? Evidence came to light shortly after Safeguard's demise that the Soviets are preparing for the pulse quite seriously. In 1976 a Soviet pilot defected with his MiG-25 to Japan. Then-CIA Director George Bush exulted that it was an "intelligence bonanza." The plane, an interceptor known as a Foxbat, had been clocked at three times the speed of sound, and was the Soviet warplane most feared in the West.

Peals of laughter soon rang throughout liberal circles when it turned out the fearsome Foxbat relied on old-fashioned vacuum tubes. But a few Western defence experts were far from amused. One year after the Foxbat landed, the Pentagon quietly revised *The Effects Of Nuclear Weapons*, its EMP bible, to include the warning: "It may be advisable to design equipment with vacuum tubes rather than solid-state components."

Some defence specialists, including George J Keegan Jr past chief of Air Force Intelligence, say the Foxbat indicates the backward state of the Soviet economy. But Edward Teller, an architect of the hydrogen bomb and an outspoken Sinophobe, points to the Foxbat as an example of Soviet superiority. "That plane was designed by a person as crazy as a fox," he recently told a group of electrical engineers at the Air Force Weapons Lab in Albuquerque, N.M.

Even if antiquated technology has been forced on the Soviets by their economy, the implications are eerie. Their radars, tanks, radios and planes may be more resistant to EMP than those of the United States. Soviet manuals and magazine articles are rife with such references to EMP as this passage: "To achieve surprise in a modern war... high-altitude nuclear explosions can be carried out... to destroy the system of control and communications and to suppress the anti-missile and anti-air defence radar system...."

Vacuum Tubes

Can the United States protect itself? Vacuum tubes cannot be used in every military device that has to function during a nuclear war. Energy-efficient, reliable, compact and cheap, solid-state devices are irresistible to designers.

One possible way around the conundrum would be to rely on shielding only in small systems that can be fully tested for EMP hardness, or impenetrability. So as transcontinental land-based communications lines lost their lustre, military planners turned their attention to airplanes. But can airplanes be made impregnable? The president and his generals have many airborne command posts from which they might orchestrate a nuclear war. The president has four specially designed Boeing 747s. The Strategic Air Command flies a fleet of two dozen Boeing 707s for the control of Minuteman missile fields alone.

Yet the doomsday fleet might not survive an EMP attack. The painful evolution of the presidential planes is a case study. In the early 1970s Boeing took three 747s off the production line and tried to protect and shield individual systems. Bundles of wire cabling and thousands of key electrical systems were wrapped in special metal shielding. Pulse-limiting devices were installed in important circuits. The upshot was depressing. Tests showed that up to 11,500 essential solid-state circuits would fail if the planes were hit by EMP from a nuclear explosion half a continent away.

A few years later, Boeing, with another 747, tried to make the aircraft's hull one giant shield. It worked but cost five times more than a commercial plane — so only one airborne command post in all the US military is considered reliably "hard."

There is intense debate over the theoretically maximum power of the EMP pulse. The Pentagon states it is 50,000 volts per metre no matter how big the bomb. (The Soviets once detonated a device more than 4,000 times bigger than the bomb that levelled Hiroshima.) But some French physicists, among others, envision a pulse of about 100,000 volts per metre. If they are correct, the nominal protections the Pentagon has tried to build into communications networks, missiles, radars and radios would almost certainly be useless.

As part of President Reagan's programme, the Air Force is now trying to

harden some satellites Shielding does not work well; much of the radiation that causes EMP in space passes right through a thin metal covering. So engineers are designing special circuits, filtering antenna inputs, and fabricating cables from aluminum and other metals with low atomic weights, since they release electrons less readily than copper Such limited protections will work only if the satellite is far from a nuclear blast — just how far, the Pentagon will not say A relatively small explosion of 2 megatons just outside the upper atmosphere at an altitude of 50 miles to 75 miles would damage an unprotected satellite in orbit 22,300 miles above the earth

Potential Nuclear Nightmare

At worst, EMP adds up to a potential nuclear nightmare The United States is frequently crisscrossed by picture-taking Cosmos satellites at a height of some 150 miles Just one of them, carrying a few pounds of plutonium instead of a camera, could knock out key US military satellites and, as radiation from the blast slammed into the earth's upper atmosphere at the speed of light, touch off coast-to coast pandemonium

In a worst-case scenario, the powerful surge of EMP would trip circuit breakers throughout the nation's network of power lines, silence telephone lines, lobotomize computer memories and throw the armed forces into disarray Civilian and military planes alike, their solid state controls and radios knocked out, would attempt, perhaps successfully, to make emergency landings Most of the military would be out of electricity and thus out of action Backup power would kick on deep within Cheyenne Mountain in the Colorado Rockies, the nerve center of the North American Aerospace Defense Command Yet here, too, chaos would rule

The president might get to his hardened airborne command post to learn too late, that the prediction of a 100,000 volt peak, with double the expected destructive power, was correct Even if his plane got off the ground, its radio range would be sharply reduced, the satellites used to relay its messages would be out of action

Perhaps the most troublesome parts of the EMP story will never be heard by the public Even today the Pentagon still will not declassify an old Air Force movie that describes EMP in outline

But what troubles nuclear physicist Theodore B Taylor are the nuclear effects other than EMP that Pentagon specialists have succeeded in keeping under wraps Strange and top-secret effects that might considerably complicate the fighting of a nuclear war have been brushed aside, he says Taylor, who directed the Pentagon's first effort to examine the exotic effects of nuclear weapons, and now speaks nationally in favour of a nuclear freeze, says that Pentagon officials have not admitted the threat posed by these nuclear spectres He counts roughly 50 exotic effects from a nuclear blast, including many types of EMP, gamma radiation, x-rays and electron effects from bomb debris The laws of classification, he says, forbid him from elaborating to the extent he would like

A point Taylor does feel free to address is the fallibility of human understanding "One of the most dangerous situations in the world occurs when people think they really understand the effects of nuclear weapons," he says soberly "I especially worry about the politicians" ■

(By special arrangement with Science 83)

On The Slopes Of A Nuclear Vesuvius

The more nuclear arms a nation has, the more insecure it becomes due to the increased risk of accidents, claims the author.

by Arun Kumar

IT is the early morning hours of a sultry August day The American President is sleeping after an exhausting late night discussion with his aides, probably about the Soviets' latest moves in the Middle East Everything is as fuzzy as usual, there being as many opinions as there are experts

At 03 02 hrs a coded message preceded by the special symbol is received in the White House Control Room It is from NORAD (the North American Air Defence Command), and decoded it reads

"CONDITION RED REPEAT CONDITION RED BMEWS (Ballistic Missile Early Warning System) HAS PICKED UP SEVERAL HUNDRED OBJECTS OVER THE NORTH POLE COMPUTERS PREDICT IMPACT ON USA IN TWELVE MINUTES - ICBM (Inter-Continental Ballistic Missiles) IDENTIFICATION PROBABLE sac (Strategic Air Command) ALERTED CD (Civilian Defence) SIGNAL HOLDING"

A messenger rushes to the President and the latter is awakened The President still thinks he is dreaming—there were some puzzling developments in the past two days all-right, but nobody thought anything serious was in the offing Meanwhile the special plane to take him to his nuclear hide-out is getting ready at the Andrews Air Force Base outside Washington What to do? Can it be an accidental launch? You can't expect the Russians to be very efficient after all He asks for the hot-line to Moscow An answer in moments flashes back—No, Kremlin does not know anything about it Could they be lying or is it a Chinese attack, nobody knows who is in charge there Hope those ICBMS are "unarmed" (i e without nuclear warheads) But if they are not, should he wait for "them" to score a clear "first-strike" or should he push the BUTTON for the USSR

Suddenly another flash from NORAD comes in—"HOLD HOLD OBJECTS IDENTIFIED AS METEORS NO ATTACK REPEAT RADAR OBJECTS ARE METEORS NOT MISSILES'

This happy ending "hypothetical" scenario appears in Ralph E Lapp's book "Kill or Overkill" published in 1962 One would say it was good science fiction, but is the American control system so inefficient as not to be able to distinguish between meteors and missiles? Moreover has it ever happened in real life?

To answer these questions let us for a moment return again to our hypothetical situation, and compound it by placing it in the years when there was no hot line to Moscow In this form this scenario occurred in real life on October 5 1960[2]—Mr Lapp a distinguished nuclear scientist certainly did not want to be hauled in by the American security services for disclosing classified information

The possibility of having such a hair trigger situation on hand today is more real than ever but with the Super Powers' capability of destroying the world several times over, this represents a terribly dangerous situation Yet the dillydallying in Disarmament negotiations is going on as usual, SALT I (whatever be its worth) has already expired, SALT II is not even worth the paper it is written on, and in general the arms race is showing no signs of abatement whatsoever

However, the ironical result of all this is that today an inverse relationship has been established between armaments and a nation's security—the more nuclear weapons a nation has, the more insecure it is, because of the proportionately increased risk of having accidents launching an accidental war, or simply losing a few bombs to some daring terrorists Churchill s prediction that "by a process of sublime irony, the world would reach a stage where safety will be the sturdy child of terror and survival the twin brother of annihilation" may thus come true any day but it will be in another way— 'terror and annihilation' will have precedence over safety and ' survival

We need not remain content with just philosophising in this context as there are enough spine chilling incidents of false warnings nuclear accidents etc which have somehow been able to penetrate the heavy veil of military secrecy and which when even simply catalogued tell their tale with stunning effect

False Warnings

• **Febuary 20, 1971**—NORAD accidentally released a message authorised by the proper code for that date directing all radio and TV stations to cease normal broadcasting[3] The order was to be issued only in grave national emergencies And NORAD is also responsible for launching a nuclear attack

• **1971**— On two occasions, US Polaris submarines accidentally released "Submarine Emergency Communications Transmitter Buoys signalling that they had been sunk by enemy action

It can be taken for granted that many more such incidents of false alarms have occurred which have never been reported to the outside world Obviously they have all been so far quite innocuous but if one of these had happened during the Cuban Missile Crisis or during the October 1973 world wide US military 'alert" the consequences could have been unimaginable The degree of international tension would make any hot line redundant as the parties may be too suspicious to believe the other side Moreover the hot line itself is not free from malfunctioning During the 1964 66 period six separate accidental interruptions were publicly reported[5] And what if an accidental attack is really launched? It would indeed take a high degree of self-control to "absorb ' the demolition of one American city and pardon the mistake like a true Christian What if after such a "mistake" the American President or his Soviet counterpart as the case may be, egged on by some hawkish vengeful elements in his cabinet, decides to let one of his side's missiles "stray' and commit a similar "mistake" in the territory of the other side? ⟶

A MACE MISSILE (below), overflew Cuba "by accident" in 1967 Spine-chilling incidents of such nuclear accidents and false alarms only support the author's contention that an inverse relationship has been established between arms build up and a nation s security

Let us again take up some of the reported incidents

• 1960—A US Matador missile after a flight towards mainland China from the direction of Taiwan crashed into the Straits of Taiwan

• 1967—A Mace missile overflew Cuba Khrushchev too once admitted to Nixon that an errant Soviet missile heading towards Alaska had to be destroyed in its flight

• During the 1967 Arab-Israeli War the US ship "Liberty" was attacked It took thirty minutes to discover that the attack ers were not Soviets One hour later, it was realised that the culprits were the Israelis !

• May 1968—An American Scorpion" nuclear submarine with 99 men aboard mysteriously disappeared Several expla nations were offered Probably the submarine had struck an underground moun tain or had been scraped by a surface-ship A malfunctioning torpedo may probably have exploded inside it But the most dangerous possibility was that of a Soviet attack on the submarine After four months of extensive search, the wrecks were found under 10,000 ft of water Reasons the submarine had simply dived to greater depths than was good for its health

• In 1946, the late Louis Ridenour, an imaginative and able nuclear scientist wrote a little play called "The pilot lights of the apocalypse" Its setting is a missile command post deep underground The American President visits the post and has the following colloquy with the officer in Command

"The President General, have you had any exciting times here you can tell me about?

Brigadier Yes, sir Every time a meteorite comes down—a shooting star, you know—our radar boys track it, shoot it down and send us an alert We have a few bad moments until we get a spectrographic report If it's iron and nickel—as it always has been so far—we know God sent it, and relax Someday it'll be uranium and then we'll have to push the button'

In the play the world's major cities are identified by lights on a board, and a red light flashes when a city is destroyed Suddenly, San Francisco turns red attacker unknown The Brigadier excited ly turns to his aides

'First we need an enemy Who s got the highest negative rating in the latest State Department Digest?"

The world is uncomfortably close to this hair trigger set up, and in real life, the button pushing decision is not going to be as neat as in the play where the defenders annihilated one enemy city in retalition and waited for the enemy's reaction Today pressing the button may lead to total annihilation Khrushchev's words in the World Conference on General Disarmament and Peace on July11 1962 ' (the accumulation of weapons) is reaching the critical point where as we used to say, the guns start speaking of their own volition and, as we can now say where rockets with thermo-nuclear warheads will start flying" remain as valid today as they were when first uttered And, when the identity of the attacker is not known then as Deng Xiaoping once pointed out to Cyrus Vance, ' the balance of terror however absurd but real is undermined

Undoubtedly, nobody wants accidents to happen and usually all possibilities are explored to formulate responses in advance But all the multivariate analysis and decision trees become shaking reeds under the overriding force of the mischievous Murphy's Laws, which read

1 If anything can go wrong it will
2 When things go wrong anywhere, they go wrong everywhere

If somebody is still skeptical, he should ask the astronauts of Apollo 13 for comments

To the above duo, Garett Hardin adds another law

The safer the system, the greater the risk, because when a system works well, human vigilance is relaxed, but then the failure of a few vaccum tubes or transistors would be determining the fate of a disproportionately large number of human beings

Personnel Factor

This is of course, not to suggest that men are infallible In fact as Hardin puts it, "if wishes were horses, beggers would ride If caretakers were priests, atomic energy would be safe " The commanders of a nuclear weapon base are supposed to release their missiles only when they receive a series of coded electronic signals originating from the head of their country But what if the commanders in anger or madness decide to go ahead all by themselves?

And this possibility of insubordinate behaviour is treated very seriously at least in the USA In each year from 1963 66 the annual report of the US Atomic Energy Commission (AEC) had the phrases, "Research was also conducted with the objective of providing improved devices for installations in nuclear weapons to prevent unauthorised employment "

The "Revolt of the Generals" of French forces in Algeria is an incident worth recalling in this context This revolt occured when the 4th French nuclear test was in progress, and the possibility of the nuclear device falling into the hands of the rebels was considered to be so real, that the scientists exploded the device *ahead* of schedule and without the per mission of the military commander of that site

A variation on the above theme can occur in the case of "unfriendly friends" For example, during the July 1974 Cyprus Crisis it was feared that the large number of nuclear weapons stationed there would be seized by the two warring factions The *New York Times* (September 22, 1974) reported that the US Sixth Fleet was asked "to be prepared to send in a Marine detachment aboard helicopters to recover the atomic warheads " Similar ly, countries like South Korea can indulge in political blackmail if the Americans make too much of an unfavourable noise Some of the nuclear warheads there are also vulnerable to seizure by the North Koreans, as they are stationed within 35 50 miles of the demilitarised zone

Coming nearer "home" can the one-man, i e the American President or his Soviet counterpart who has been given the right to pull the nuclear trigger, be completely relied upon? History warns that statesmen have often resorted to war to distract their countrymen's attention from their internal problems, and if one recalls Nixon's threat during the Watergate crisis "to go into the next room and push the button", one cannot say with conviction that such things will not happen in the nuclear age The experience with other kinds of personnel also points quite a gloomy picture In 1972, nearly 20,000 people had access to US nuclear weapons or responsibilities in their nuclear release process Out of these, about 3,65647 had to be removed later on the grounds of indiscipline, alcoholism, mental-illness, drug-abuse etc Similarly between 1972-73, nearly 1247 NATO personnel employed in similar capacities were removed for similar reasons Drug abuse alone figured in 20% of all such cases

In brief, the world is today undoubtedly sitting on the slopes of a nuclear Vesuvius, the possibilities of whose eruption is not to be taken lightly And the fact

KHRUSHCHEV'S WORDS "the accumulation of arms is reaching the critical point where rockets with thermonuclear warheads will start flying" are as valid today as they were when first uttered in 1962

remains so regardless of our inability to predict the mathematical probability of launching a nuclear war as this exercise would call for a detailed investigation of the design and operation of the com munication response system of all pro tagonists possessing nuclear weapons, which because of the heavy military secrecy is a hopelessly impossible task

Pure Accidents

One can also take up the cases of isolated and unambiguous accidents in this context which thereafter affect the lives and properties of the nationals of only one side In other words, if the picture of a bomber dropping a Hydrogen bomb on one of its own cities is easier and more palatable to conjure, one can have a go at this also

Let us again take up some of the publicly reported incidents

• January 23, 1961—A B52 bomber crashed in North Carolina, USA, with two 24-megaton A-bombs aboard When the Air Force experts reached the scene, they found that in one of the bombs five of the six safety mechanisms had been trig gered Thus only one switch had prevented the spread of fire and destruction over a wide area

• January 17, 1966— A B-52 bomber crashed near Palomares (Spain) jettisoning four hydrogen bombs One was recovered undamaged, but another fell in the Mediterranean Sea and could be found only after a 3 month underwater search The conventional explosives of the other two had detonated scattering plutonium over a wide area, necessitating the removal of 1,750 tonnes of soil and vegetation Needless to add, this last part was necessary because plutonium is the most toxic element in the world The "International Commission on Radioactive Protection" has laid down the maximum permissible amount of it in the human body at about four nanocuries or 0 0000000652 gms, 0 002 ounces of it is definitely lethal for man and since the minimum critical mass of plutonium in the nuclear weapon is about 11 pounds, it should theoretically suffice for 880,000 deaths Even if one per cent of this toxic potential is dispersed, it will cause 9,000 deaths in a short time, while less doses will cause more deaths in the long run with acute suffering

• January 23, 1968—A B-52 bomber crashed in Greenland The three hydrogen bombs aboard were never found!

SIPRI yearbook 1968-69, has catalogued a detailed list of 33 major accidents, in two of which nuclear bombs had fallen out while in 14 cases the nuclear-bombs had sustained damages According to Mr Lloyd J Dumes (*the Bulletin of Atomic Scientists,* May 1976) between 1971 73, three major accidents had taken place that involved nuclear weapons, in 20 cases nuclear-capable delivery systems were totally destroyed and in six cases these delivery-systems had sustained serious damages Apart from these, 150 accidents have occurred resulting in total destruction of smaller nuclear capable delivery vehicles Between 1950 1973 , 63 serious accidents were publicly reported, which makes an average of approximately 2 5 accidents per year Out of these only four have been attributed to the USSR and China , but if their experience has been anything like that of the West, the total number of serious accidents should exceed 100 In fact, in March 1960, a tremendous explosion was heard near Helsinki, which experts suspect, destroyed the Soviet ICEM base near the Soviet-Finnish border

It has been only our good luck that none of these publicly reported incidents resulted in actual detonation But how long can we wish for the non-application of the Murphy's Laws? The enormity of the threat can be gauged from those series of "readiness tests" conducted by the US Air Force on Minuteman III missiles between 1965-68, *all* of which had failed! In one case the failure was attributed to a substandard resistor in the launch power supply, while in another, one single malfunctioning capacitator had aborted the experiment But then, how can one be sure about the quality and the infallibility of the safety mechanisms in nuclear weapons?

Tartaglia, the great ballistics expert of the 16th century had in the preface of his book, "The Art of Projecting Bombs", guiltily written

"One day meditating to myself, it seemed to me that it was a thing blameworthy, shameful and barbarous, worthy of severe punishment before God and man to wish to bring to perfection an art damageable to one's neighbour and destruction to the human race "

It is only to be hoped that the "moral guardians" of our world will soon, in a similar spirit, decide not to legitimise their piling up of lethal arms through disarmament agreements, and will *actually* reduce the armaments ■

THE WORLD AROUND US

Power Play In Nepal

Ironic Twists And Turns

Fearing a revival of the Nepali Congress the ultra-nationalists are demanding the ouster of Premier S.B. Thapa for his moderate policy towards the late B.P. Koirala's group.

by Kedar Man Singh

KATHMANDU: Hardline votaries of the partyless Panchayat System of governance in this Himalayan Kingdom have reacted strongly to the first-ever convention in more than 20 years of the Nepali Congress held in Kathmandu recently

These so-called ultra-nationalists are angry with the Thapa Government for allowing the country's premier political party to hold the convention (between November 30 and December 2) despite the official ban on party political activity. They want Thapa to crush the Nepali Congress with an iron hand

Impartial observers, however, interpret the move as an allowance to the late Bisweswore Prasad Koirala's faction of the Nepali Congress to stage the conference as a significant liberal gesture by Harvard-educated and youthful King Birendra who exercises tremendous political power through the partyless Panchayat (Council) System under which members of the national legislature are elected on the basis of adult franchise

NEPALI PM S.B. THAPA, under pressure from the ultras to rescind the concessions given to the Nepali Congress

The extreme ultra-nationalists in the National Panchayat were beginning to breathe a little more easily after the death of the Nepali Congress's undisputed leader, B.P Koirala, in July last year Fearing a revival, they have now launched a virulent attack on Thapa's policy towards the Nepali Congress and openly demanded his removal in order to save the country and the Panchayat System.

But the three remaining stalwarts in the Nepali Congress -Ganesh Man Singh, Krishna Prasad Bhattarai and Girija Prasad Koirala (B P Koirala's youngest and only surviving brother) have since pledged that they would follow in the political footsteps of their late leader and try to make his reconciliation move a success Following his return to Kathmandu in December 1976 after eight years of self-imposed exile in India, Koirala was asking the rank and file of his partymen to adopt the path of "national reconciliation" which meant reconciliation with the King, to persuade him to amend the constitution and restore parliamentary democracy in Nepal The King had granted amnesty to the Nepali Congress activists earlier

THE MASK OF SWETA BHAIRABH near Hanuman Dhoka, in Kathmandu.

People's Verdict

In 1980 he held a national referendum that turned the verdict, by a narrow margin, in favour of the continuation of the partyless Panchayat System and against the multi-party parliamentary form of government that the Nepali Congress favoured. The National Panchayat was elected in May 1981 and is now the country's unicameral legislature No political party is officially represented in the Panchayat

Koirala died on July 22, a frustrated man but still believing that his goal of "national reconciliation" and change through steadfast peaceful endeavour is the only way to ensure stability and progress in Nepal He wanted to bring about an understanding between the monarchy and the democratic forces and often said "monarchy can be stabilised by democracy and democracy strengthened by monarchy."

In order to achieve the aims of their departed leader, the three stalwarts of the Nepali Congress evolved a two-pronged strategy On the one hand, they decided to support the Panchayat System in the cause of national economic development and, on the other, to continue their struggle for the restoration of full-fledged parliamentary democracy in the country but through "peaceful means" Thus the party's cadres were mobilised to go from door to door to explain to the peace-loving rural folk the importance of the "national reconciliation" advocated by the late B P. Koirala

Some 600 cadres and 250 observers attended the party's national convention in Kathmandu. They discussed at length the socio-economic and political situation in the country after the death of Koirala and also prepared a comprehensive programme to fulfil the dream of their leader

The local administration initially did not want the conference to be held in Kathmandu since it was planned to coincide with a 18-nation ministerial meeting sponsored by the United Nations Industrial Development Organisation (UNIDO), to discuss the prospect of aid to the world's least developed countries and Nepal in particular It felt that a party convention, at a time when ministerial delegations from India, Pakistan, Bangladesh, China and several other Asian countries were meeting, would be seen by the visiting dignitaries as evidence of internal political discord.

However Ganesh Man Singh, the most vocal and fearless leader of the Nepali Congress decided to hold it at his own residence and post militant students and party cadres of the gate. Eventually, the Thapa Government did not interfere with the convention, though it barred the Nepali Congress from holding a public rally at the "open air theatre", the usual venue of such political rallies in the heart of Kathmandu.

Photographs by author

B.P. KOIRALA, who died a frustrated man at his inability to bring about a national reconciliation.

Evidently, the Government gave the nod to the Nepali Congress to counter the growing influence of left-wing extremists in the organisations of students and teachers. They are also believed to have "infiltrated" massively into the Government-run development programmes, mostly in the educational field. Since the banning of party politics in December 1960, they took the opportunity to spread their tentacles clandestinely.

Ironically, even Mana Mohan Adhikari, the leader of the banned pro-Peking Nepal Communist Party and elder politician, is worried. He has cautioned that the emergence of left-wing extremists is a threat to national security and has moreover induced the Government to take a lenient attitude towards the Nepali Congress. He also said that the diehard fascist elements in the National Panchayat were opposed to any move towards its liberalisation and democratisation of the prevailing system.

The Thapa Government is well aware of the threat posed by the left wing extremists. It detained more than 35 of their student activists. They retaliated by launching a wall poster and leaflet campaign in Kathmandu to denounce "the unity between the Fascist Panchayat and the Nepali Congress". The *Rastra Pukar*, the pro-Congress Nepalese language weekly, published from Kathmandu, in its recent issue warned that the solidarity of the Maoist and Leninist groups of students and the banned all-Nepal Nationalist Students' Circle is aimed at fighting the democratic forces in the country.

The Thapa Government, in the meantime, has even returned the Nepali Congress's impounded property, including the four-starred party flag confiscated 22 years ago when the ban on all political parties went into effect. The restored property included party files, furniture, and documents.

Paradoxically, the ultra-nationalist diehards in the National Panchayat and their sworn enemies, the left extremists, have now a common goal: to oust the Thapa ministry.

Emboldened by the Nepali Congress's example, the National Democratic Party, led by Dr Dilli Raman Regmi, another banned party, announced its intention to hold a national convention. But the Thapa government decided that things had already gone too far. It barred Dr Regmi from doing so and also from holding a public rally in Narayani Zone, 140 kilometres south of Kathmandu in early January.

A couple of days later, another public rally in Jatpur district (280 kilometres south-west of Kathmandu) organised by the youth wing of the Nepali Congress to observe the anniversary of the "Reconciliation Day" was broken up by the Armed Police. The local administration was alleged by Girija Prasad Koirala, to have deployed 100 helmeted policemen to disperse merely 250 students and youths, including several girl students. Girija was among the 180 persons injured in the police crackdown on January 7. He claimed that the police launched a merciless attack on the unarmed students and that he himself was lucky enough to have miraculously escaped a serious "kidney rupture".

Bhattarai, however, was less strident. He said "Inspite of our sincere efforts to pursue a policy of reconciliation, the Thapa Government has responded with coercive action. Even so, we shall continue our door-to-door campaign to educate the people about the importance of the reconciliation move initiated by the late B.P. Koirala." But he demanded a public apology from the Government for its "barbaric act" and also an assurance that such "blunders" would not be repeated.

Despite renewed attacks from both the right and the left extremists, the Nepali Congress seems to be recovering from the trauma of B.P. Koirala's death. The national convention unanimously elected Bhattarai as the party's interim President until a new leader can be chosen more "democratically" by representative delegates from 75 districts of the kingdom. Some attempts were made to create a rift in the leadership but, thanks to the enthusiasm generated among the rank and file by the first whiff of freedom in many years, they came to nought. ■

GANESH MAN SINGH, the most vocal and fearless leader of the Nepali Congress. Singh's demand had always been for Constitutional Monarchism in Nepal.

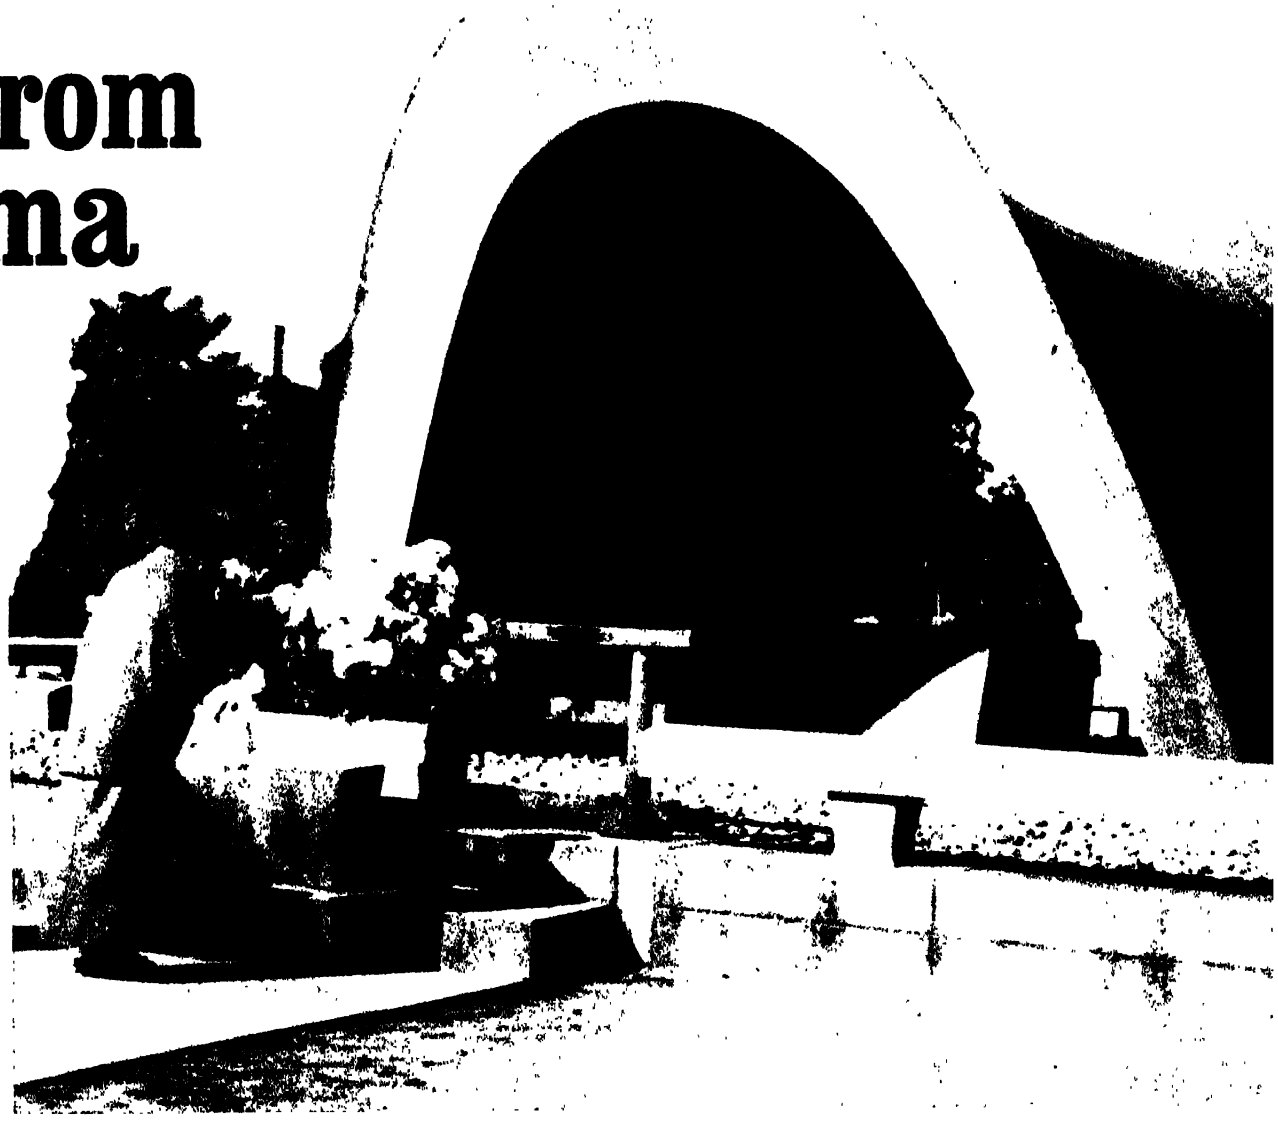
Letter From Hiroshima



Is the destruction of the planet by a nuclear holocaust written in mankind's history as its logical end? Was the destruction of Hiroshima and Nagasaki a mere error and will it be repeated again? Celebrated Italian novelist and political commentator Alberto Moravia went to Japan, the only country to have been subjected to atomic fire, to try and find the answers.

by Alberto Moravia

HIROSHIMA: Here I am, at Hiroshima, with startling news: I am no longer the same individual as before, a man named Alberto Moravia, an Italian, but a mere member of the human species. And apparently, a member of a species doomed to an early extinction

This truth flashed through my mind while bowing with a floral tribute in front of the memorial for the 200,000 victims of the atomic bomb. In that precise moment, the monument commemorating the most infamous day in mankind's history, brought about a major change in me In a flash, I realised that the monument wanted me to stop being a citizen of a particular nation, a determined culture, and become instead a simple member of the human species

There is nothing human wisdom can do against the appearance of the atomic bomb. Even the famous sentence of the Ecclesiast "nothing new under the sun" is no longer valid because the atomic bomb can achieve the destruction of the entire species It will be a great achievement if we live on for another twenty years, until the year 2,000. Therefore it must be strongly emphasised that once man becomes aware of belonging to a species, it means that he becomes conscious of death and the imminence of death.

The question facing mankind is whether there is some logic in history that pushes it inevitably towards the bomb. Or has the bomb been a mere error in the history of mankind?

The Japanese, the only nation to have suffered atomic death, are optimistic. On the monument for the 200,000 Hiroshima dead, they wrote these enigmatic words which, at first sight, appear a huge understatement "Rest in peace because we will not repeat the error"

But was the dropping of the atomic bombs on Hiroshima and Nagasaki really an error? There are some troublesome facts. The Supreme US Command had always been dropping leaflets on Japan warning the population of an impending air raid But in the event of the atomic bomb, there was no warning, no leaflets.

The interim committee in Washington, running "Project Manhattan",code name for the atomic bomb, and chaired by Secretary of War, Henry Stimson, recommended that the bomb must be used against Japan as early as possible, that it must be aimed at targets with a great concentration of not only military establishments, but civilian housing and that in no case should a warning be given about the bomb's destructive force.

End Of The World

The thought that comes to mind in the event of the error committed at Hiroshima, is that at a certain point in history, mankind might try to get rid of its own history, by committing suicide because of excessive tiredness, according to the poet Eliot, the man who best described in his work this great fatigue of our civilisation, who said that the world will not end with a bang but with a whimper. But Eliot was wrong. The world will indeed come to an end with a bang from a possibly not too large a number of atomic bombs.

Prof Shuichi Kato. who teaches Japanese history at the Tokyo Sophia International College and is a noted literary figure, told me that considering the continuation of the nuclear arms race, there was no reason to believe that an atomic holocaust could be avoided.

"It is highly difficult if not impossible, to avoid such a race and thus, implicitly, we continue heading towards disaster."

The United States, he explained, does not fear war since it has never seriously suffered from war on its own territory. The Soviet Union, by contrast, had suffered greatly during World War II and keeps arming itself to be ready for a possible new conflict.

Military Rivalry

Considering the military rivalry, the military-industrial-scientific complex is gaining importance in both countries thus fanning further the rivalry not only in the military, but also the psychological field, Kato says.

The industrial revolution, says the Professor, has strengthened or directly created a number of values such as rationalisation, efficiency, productivity, competition which may steer the world towards a nuclear war.

"We must achieve a nuclear disarmament," he says, "and to arrive at nuclear disarmament, one has to start with unilateral disarmament. To force governments to disarm unilaterally, it is necessary to launch and build up anti-nuclear popular movements."

Prof Kato said he was skeptical about the possibility of limiting the use of nuclear weapons in a conflict, though President Reagan had said there might be only a limited nuclear war.

Most influential Japanese religious, political and scientific figures believe, that there is nothing inevitable about a nuclear war. The majority of the Japanese believe that nuclear war can be avoided if popular masses throughout the world are fully conscious of the threat facing mankind and make political leaders share their apprehensions.

THE HIROSHIMA PEACE MEMORIAL for the 200,000 victims of the atomic bomb, bears the following inscription: "Rest in peace because we will not repeat the error"

Talking about war, Carl Gustav Jung, the celebrated Swiss co-founder of psychoanalysis told me many years ago that he saw German soldiers in 1914 leave for the war with flowers adorning their rifles. "They were going to die," Jung commented, "yet they were happy." They were happy about being united in a wedding of blood (Bluthochzeit) with death.

In other words, Jung wanted to explain that in the subconscious of the marching soldiers flourished a feeling of annihilation which Freud had called "the instinct of death." The soldiers "wanted" to die and as a result, some of the folly and absurdity of the First World War suffer no other interpretation than the one provided by Jung.

Such an interpretation, widespread in our decadent Europe, is nowhere to be found in Japan which is the only country to have been subjected to atomic death. In Japan, no one believes that a nuclear

war might be inspired by an instinct of death, but all consider that such a war is a problem which can, or cannot, be solved in a practical manner.

Most influential Japanese religious leaders, for example, think that the programme of an atomic war must be handled in a pragmatic way, though some of them are more pessimistic than others about the possibility of forestalling it.

Religious Values

The Reverend Shimizu, the rotund, astute and exuberant leader of the Tenri-Kyo Buddhist sect said that in his view the emergence of nuclear weapons indicated that science had now gone beyond the limit of its usefulness and that only a return to religious values can save humanity.

"Human life has been greatly improved materially by science," he said, "but the time of the usefulness of science for man is over. From being useful science has become harmful and dangerous like in the case of nuclear weapons and problems raised by genetic manipulations."

Shimizu rejected Western religious theories which consider the end of the world as certain and Western historical thought which seems to point logically to the inevitability of a nuclear war.

"Today, people are left alone and powerless in the face of these problems," he said, "they have no grasp of the reality, only the political leaders have that knowledge. Only the latter know what would happen, only the government leaders meet among themselves and talk about those problems. It can no longer continue like this. People must all be informed."

The celebrated Japanese Bonze Morimoto is less confident about man's possibility of warding off the threat of a nuclear holocaust thanks to religion, though he does not believe in the annihilation of the world the same way people do in the West.

Generalised Genocide

"In the East," he said, "our idea of time is one of a wheel, turning endlessly. Western religious thought is horizontal, Eastern religious thought is circular. The end of the world is a point of arrival in Western thinking. In Oriental thinking it cannot be the finishing point."

The atomic bomb, Morimoto said, was the most cruel weapon ever invented by man, against which religion could do nothing.

"It may destroy peace all around the world," he said, "short of the arrival of a Saviour, there will be a generalised genocide."

Masao Maruyama, an author who wrote a book on Japanese fascism, who witnessed the destruction of Hiroshima, having served as a soldier in a unit headquarters outside the city, believes that the first thing that should be done to prevent a world-wide nuclear holocaust is to abandon the idea that a nuclear balance of power was the only possible deterrent to nuclear annihilation.

"How does one know that there is such a balance?" he asks. Maruyama says another myth to be combatted is the attempt to minimise the atomic bomb's destructiveness. There should be an end to such talk as "a limited war, limitation of bombings to military targets, first-strike theories, strategic and tactical bombs etc," he said.

He said the Japanese Government itself tried to hide the truth from the population after the dropping of the American A-bomb on Hiroshima, describing the bomb as "a weapon of a new type" rather than identifying it as an atomic bomb.

"What is needed above all," the Japanese author said, "is for popular masses to put pressure on political leaders from below. If the leaders are scared and lose their heads, then there is no remedy."

He said that everyone should be made aware of the effects of nuclear weapons though, Maruyama admitted, incomplete, slanted and provocative information may in fact fan fears and thus help trigger a conflict.

He quoted one of Japan's 12th century thinkers as saying, "Many preach the need for profound knowledge so as to gain salvation. But I believe that the opposite is true. Only when we recognise that we are unknowing fools can we possibly save ourselves."

Maruyama said the world should be run by a genuine United Nations Organisation which would be composed of two chambers — an upper house composed of sovereign nations and a lower house elected directly by the populations of the entire world.

Prof Shigeto Tsuru, who teaches economics at Tokyo University, is one Japanese who believes a nuclear confrontation between the United States and Soviet Russia may be avoided.

"If the atomic war is started," he said, "it will come because unlike conventional wars, a nuclear war cannot be controlled. It will be started by mistake or by incident. In any way, I believe that the probability of an atomic war will be decreasing in the future, because the two Super-Powers will tend to increasingly resemble one another in many aspects."

Planetary Domination

Like Prof Tsuru, Prof Yoshikazu Sakamoto, Secretary General of the "International Peace Research Association" and political science teacher at Tokyo University, believes that a possible reason for a nuclear war might be the struggle between the United States and Soviet Russia for planetary domination.

"The possibility for a limited war is minimal," he said, "even in a conflict with conventional weapons, communications would be interrupted and then, it would become difficult to control the war and not to move from a limited war to a generalised war. A great amount of mental health is needed to avoid a nuclear war. Not everyone has it. For example, Hitler didn't have it."

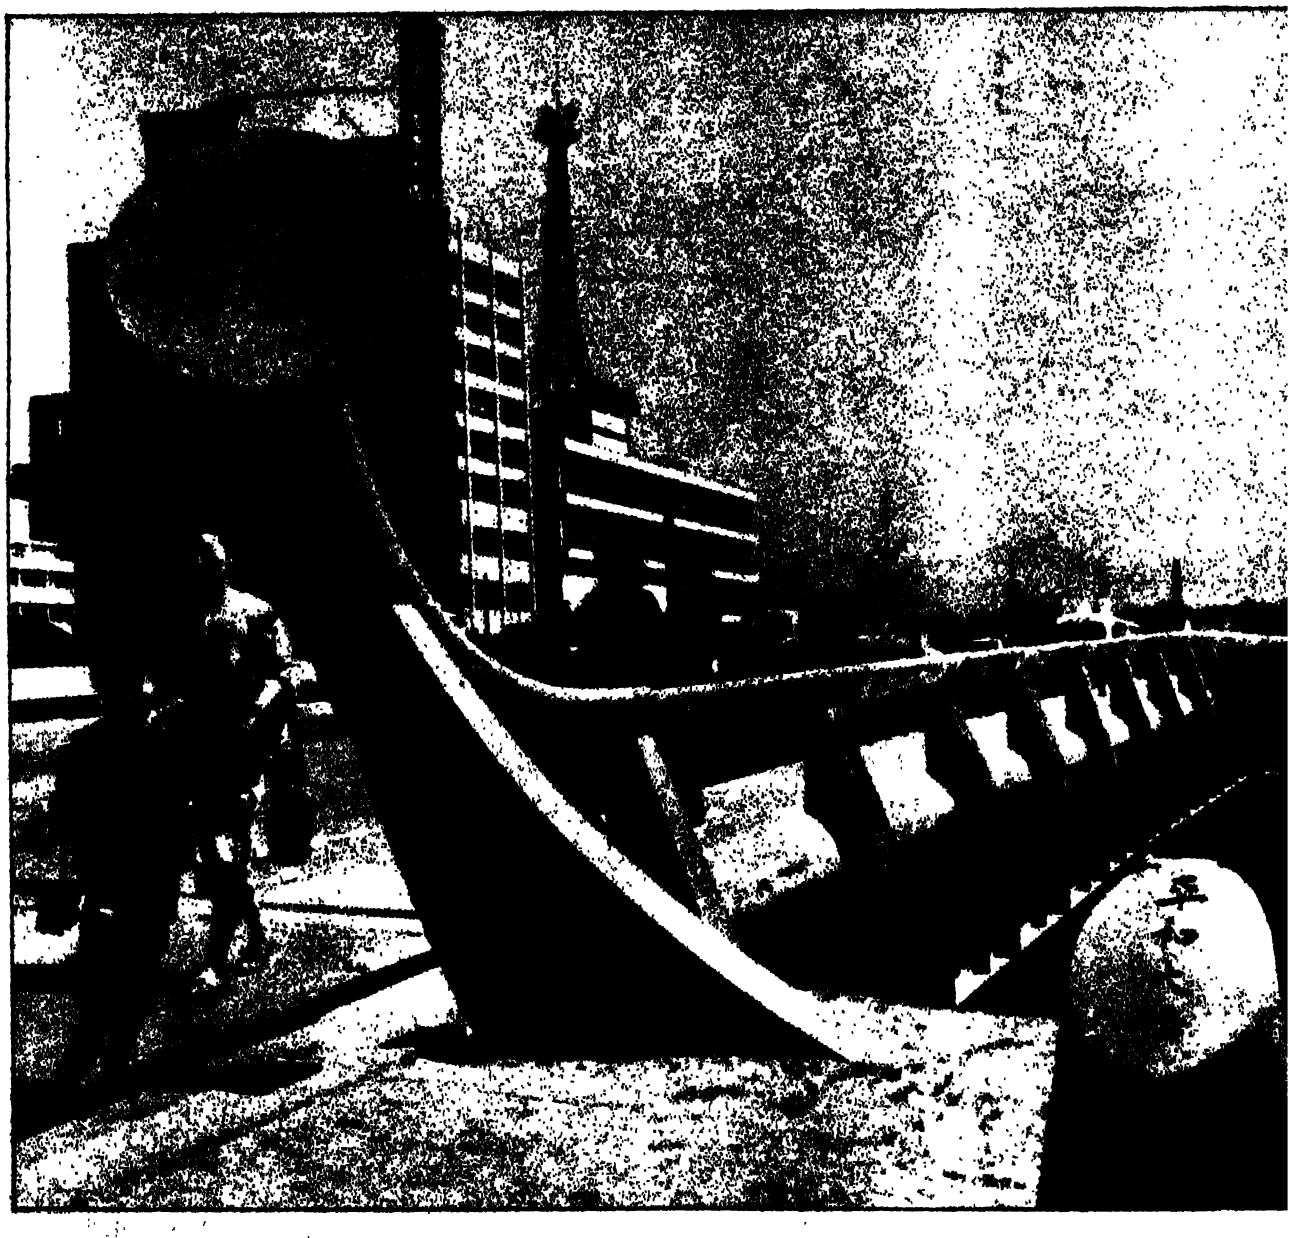
Wide-ranging talks with Japanese leaders lead to the following conclusions:

—A nuclear war is not a traditional war with winners and losers. But in the best of things it is genocide and in the worst case, the end of mankind, in other words, of the world.

—There is a good amount of mistrust as to the ability of political and military leaders. To these might be applied the conclusions reached by the "Independent commission on disarmament and security" headed by Swedish Socialist leader Olof Palme, that in a certain way there has emerged in leading circles a certain complacency about the dangers of a nuclear war and thus, about the dangers of the present international situation.

This tendency is above all, detectable among the military, the scientists, the diplomats and politicians who have to occupy themselves with nuclear danger. No one, the commission said, can at the same time plan a nuclear war and foresee the horrible events which would follow if their plans were put into effect. The human mind acquires individual tranquility by considering a nuclear war merely in a superficial or mechanical light, the document concluded. ■

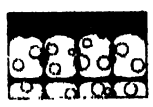
BUILDING ANEW. The reconstruction of devastated Hiroshima 20 years after the atomic explosion.



Colgate's trusted formula works to give you clean, fresh breath.... strong, healthy teeth every time you brush.

Here's how:

Odour- and decay-causing bacteria grow in food particles trapped between your teeth.



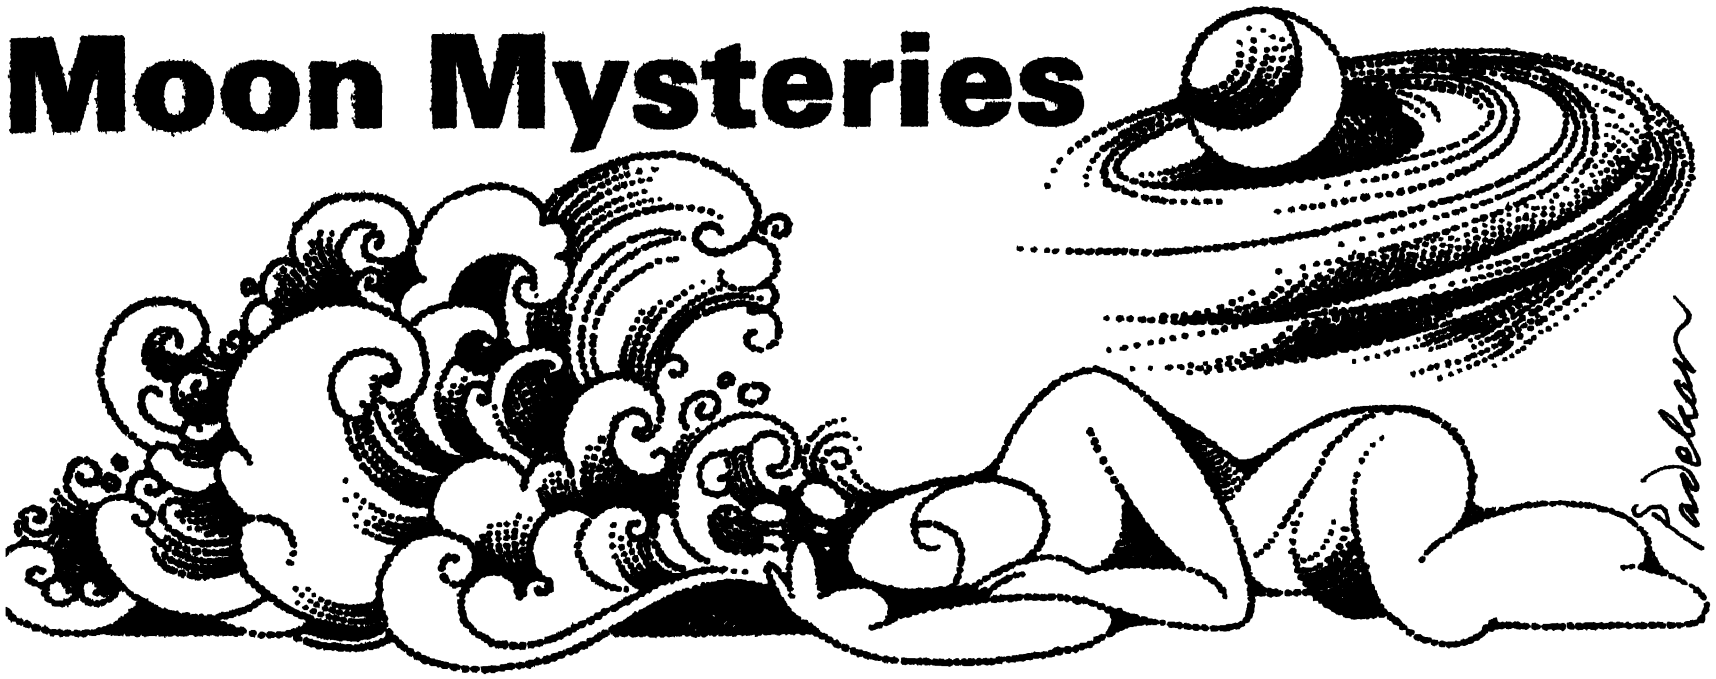
Colgate's unique active foam reaches deep to remove dangerous food particles and bacteria.

Result: Fresh-breath confidence, protection against decay, strong healthy teeth.

Remember to brush with Colgate Dental Cream after every meal: Stop bad breath... fight tooth decay.

You'll love its fresh mintv taste!

Moon Mysteries



The moon can cause insane behaviour, internal bleeding, crime waves, and more. According to hotly contested, controversial reports, moon madness exists. It agitates the body, helps plants grow faster, causes ulcers to bleed, and makes people commit murder. Or maybe it doesn't. Experts are arguing about what the moon does or does not do, with new evidence coming in all the time. The battle rages on over an issue of great importance to anyone interested in his own body, worried about when he can safely walk the streets at night, or just curious about one of the great controversies of modern science.

by Judy J. Newmark

ALONG with all the little ghosts and goblins who look up, shuddering with the ancient thrill of unknown mysteries linked to the fullness of the moon, is a sober, middle-aged man in Colorado He thrills more than any of them—because he was there

"The moon changed my personality," says James Irwin, the astronaut who walked on its rocky surface on a 1971 Apollo mission "Part of me is *still* there I'm more spiritual now, more a creature of the universe than just an earthling.

"I've not thought about how it might affect others But I think it does "

There are those who have thought about it Some of them believe that because the human body is mostly fluid, it may be affected by the moon's gravitational force, a kind of personal version of the ocean tide In his book espousing that belief, *The Lunar Effect*, psychiatrist Arnold L. Lieber holds this force responsible *for* a wide variety of physical, emotional and anti-social conditions And, he says, it is most noticeable when the moon is full

"Feeling funny?" Dr Lieber writes "Take a look at the moon. It's probably full."

But many scientists scoff at Lieber's book "That's little better than a crank book," responds George O Abell, a professor of astronomy at University of California, Los Angeles. "It's terrible "

Professor Abell has attacked Dr Lieber's ideas in several forums, including *The Skeptical Inquirer*, a magazine published by The Committee for the Scientific Investigation of Claims of the Paranormal. "The correlations Lieber finds are superficial, incidental and flukes," Abell says "I don't even know how sincere he is himself "

Others also voice doubts "From a physics point of view, the tidal effect on the body is negligible," says Peter Phillips, a professor of physics at Washington University at St Louis "But I'm not ruling out obscure influences of the moon that we have no understanding of All I'm ruling out is the effect of water nd gravity I don't think that's important at all "

"As an astronomer, it doesn't make sense to me," says Douglas Duke, a professor of physics at the University of Miami who instructed Dr Lieber in astronomy "It's like astrology—a stab in the dark, in my opinion You can't even call it a theory that can be verified afterwards

"But I think one has to be a little humble here I remember when I was a teen-ager A summer night, the full moon. sure, it made me feel different!"

Despite the critics, the hold of the full moon on the human imagination goes on And, some say, so does its hold on our lives

The claims are many The full moon causes an upsurge in violence, it worsens some psychiatric disorders, disturbs sleep and meditation, increases bleeding, aggravates stress and stress-related diseases The full moon is also said to be tied to an increase in births and to make healthy, normal, non-violent people act "weird"

Some of the presuppositions are even built into the language, with words like "lunatic" And, re enforcing the belief in lunar power, are gripping old stories of vampires and werewolves Dr Lieber discussing the intensity and persistence of werewolf myths, suggests that the stories echo man's ' racial guilt" over the hrror our gentle, vegetarian ancestors felt when they had turn to the "way of the wolf", hunting meat, to survive

Not everybody with opinions is an expert laden with degrees and statistics Ray Fox, for example, is the bartender at the Old Absinthe Bar in New Orleans' French Quarter "Maybe it's imagination or an old wives' tale, but when the moon is full, people get drunk faster, act goofy," he said "Most bartenders and waitresses would agree "

One who doesn't is Gus Vlahos "There are a lot of strange people around anyway, a lot of characters," said Vlahos, bartender at The Pump Room in Chicago "Maybe if something strange happens, people attribute it to the full moon "

Exactly, says Richard W Heuermann, assistant director of the McDonnell Planetarium in St Louis "People who work in hospitals have said to me, Oh, it must be a full moon, here come the nuts They have experiences I don't Perhaps they tend to notice weird stuff more when a full moon is shining in the window "

Nevertheless, physical explanations have satisfied followers of Ananda Marga Yoga for years On the *ekadashi*—the eleventh day after a new moon—and after a full moon, they fast in order to reduce the amount of fluid in their bodies on the days of the new and full moons Some followers fast on those days too

"The moon exerts a gravitational effect on the body, not just the planet and pulls body fluids up to the head said Ed Melanson at Ananda Marga's North American headquarters in Denver "It's a very subtle process You could meditate if you didn't fast, but it wouldn t be as effective You couldn't concentrate on your mantra There are people in India who still fast according to lunar schedule "

An Ananda Marga monk called Danesh Ananda notes that the fast days serve other purposes too including 'cleansing the body of poisons' and exercising self discipline "We try to have a very rational approach to our spirituality ' he said 'We don't believe in God as the Supreme Dictator We believe there are scientific answers to every question Fasting on a lunar schedule is science from thousands of years ago

Science today generally looks at it a little differently say Heuermann Prof Abell and others They say that the notion of a lunar tide effect on individuals is based on a fundamental misunderstanding of hov the tide works How does it work? The most important factor is the moon's differential gravitational pull on its nearest neighbour Earth

The tides are changes in the water level of the Earth's oceans and seas, Heuermann explained As the Earth turns different parts of it are at different distances from the moon Areas of the Earth closer to the moon feel a slightly stronger gravitational pull from the moon than parts farther away

Tides are not directly caused by gravity, but by differences in gravity—the changing distance between the centre of the moon and particular points on the surface of the Earth On a large object like the Earth, such differences in distance can be considerable

But, scientists say that pull is virtually constant over a small region, such as a person's body "Tides only happen because the Earth is about 8,000 miles in diameter ' Heuermann said 'But people are only a few inches through

But this is not widely understood, Prof Abell said, which is why other theories can sound persuasive Is there a connection between violent crime and the full moon? Like the legendary werewolves famed for their lunar-linked rampages this idea seems very unwilling to die And, according to some, it shouldn t

The whole subject came up again with spectacular publicity a few years ago when it was observed that the Boston Strangler tended to kill during the full phase of the moon The timing was noted by a forensic panel that was assembled during the killings to try to profile and thus help capture, the murderer

The panel failed its assignment, but it did write a paper "Our primary interest

BPL

STEREO TWO-IN-ONE

The only portable Stereo Radio Cassette Recorder with

• 'Stereo-wide' effect • 4-band radio

• 7 watts stereo power

• 3 LED indicators

• Low price

BPL-INDIA have emerged as leaders through 17 years in the electronics business

Now **BPL-INDIA** brings you Stereo Two-in-Ones. Results of the latest Japanese technology Offering you out-of-the ordinary listening pleasure At a highly competitive price

Ten Super Conveniences:

• 4 band Radio	FM/MW/SW 1/SW 2
• Power Output	7 watts
• Stereo-wide Effect	Guarantees far-apart sound from closely-positioned speakers, for true stereo effect
• 2 x 120 mm Speakers	Ensuring distortion-free audio reproduction at high volume levels
• Label-up Cassette Loading	Facilitating easy location of particular tape selections
• Mechanical Pause	Enabling temporary stops while recording or listening
• Automatic Shut-off	Preventing damage or stretching of cassettes
• One-touch Recording	Requiring only the record key to be pressed
• AC/DC Operation	Increasing portability
• Headphone Jack	For private listening

BPL 2-in-1. Big on sound, small on price.

in writing was how all the scientific tacks to try to track down the strangler were fruitless," recalled Dr E.A. Janino, who served on its steering committee. Most of the paper dealt with conventional forensic techniques, such as examinatination of bloodstains. The one paragraph that dealth with the moon, added for "completeness," was "taken out of context and blown all out of proportion," he said.

"But don't get me wrong," Dr Janino added. "I'm not one of those stupid people who has fixed ideas. There may be something to it. I've got an open mind."

So does Dr Leiber, who studied homicide rates in Dade Country, Florida, and found a peak with the full moon, and in Cuyahoga Country (Cleveland), Ohio, where his peak lagged the moon by about three days.

A St Louis detective says she doesn't need any statistics to know that the full moon makes a difference. "More people are out when the moon is full—different from the people we normally run into," she said. "There are more crank calls. Weekends are also busy, and the days the checks come out. Any time you get people with money, and the weekend, and the full moon, it's like a triple play. It really gets wild."

But Dr Mary Case, the city's deputy chief medical examiner, doesn't see the connection. "I'm familiar with the idea, but I don't know of any studies that have ever shown the moon affects behaviour, that certain types of violent crime occur more often.

Professor Vessey, a biologist at Bowling Green State University, spent several years in Puerto Rico studying rhesus monkeys. Usually, the monkeys sleep quietly all night. But Prof Vessey noticed that during the full moon, the monkeys move around more and make more noise. The youngsters keep on playing, and sometimes the adults copulate, almost always a daytime activity.

Was it the lunar force? Prof Vessey suspects it was simply the increased light that made daytime activities seem suddenly suitable.

In Dr Edson J. Andrews' office, it started out as a joke. "I'd come in late from surgery, and the nurse would say, 'I bet there's a full moon'," recalled the Tallahassee physician. "Sure enough, there was. She was an old country girl who had been brought up on phases of the moon, all those superstitions. You know you can't get a farmer to castrate his animals on a full moon."

He decided to look into it and determined that there was, indeed, greater surgical bleeding around the time of the full moon—not. worrisome enough to change his schedule, but enough to notice. But Dr Andrews has said that since he published his work in 1960, "I've got a file a foot high of letters from all over, corroborating it. Other surgeons have noticed it, too.

"And a nurse wrote to tell me that during World War II, she was in charge of a women's restroom at a big factory. During the full moon, they couldn't keep sanitary napkins in stock. Not scientific, but it's interesting, isn't it?"

The farmers who won't castrate animals during the full moon may use the moon's phases for other schedules, too. The most famous, of course, is planting according to the lunar cycle: aboveground crops planted from new moon to full moon, and root crops from full moon to the next new moon.

Only a folk tale? Dave Murray, chief meterologist for KSDK-TV in St Louis, doesn't think so any more. "It was astounding," Murray said. "The plants I planted according to the moon phase were real healthy. The ones I didn't, the radishes didn't do well at all, and the lettuce never came up. I'm a firm believer now.

"These ideas are real, real old. The way I understand it, the moon affects all fluid—in people, plants, any organism. It's not like the moon has tremendous pull. But it is enough to affect some things, mainly water."

The word "lunatic" says it all: moon madness. At London's infamous Bethlehem Hospital (Bedlam), inmates were routinely chained during the full moon. And a nurse with years of experience in modern psychiatric hospitals suspects she knows why.

"I couldn't document it, but the patients seem to become more agitated with a full moon," she said. "There's more acting-out behaviour. People who have hallucinations and delusions seem to experience them worse. On units where there are a lot of disturbed people, they all seem to experience them at once."

A secretary at a large newspaper sees the same thing at a milder level: when the moon is full, she gets more "nut calls" "People are simply not themselves," she said. "They are very vague, demanding and sometimes quite short-tempered. We get many more calls for anything and everything—for the she said. "They are very vague, demanding and sometimes quite short-tempered. We get many more calls for anything and everything—for the most weird things."

The emotional component in many physical disorders links two of the most popular moon beliefs: that the full moon increases bleeding, and that the full moon exerts an emotionally disturbing influence, particularly on people who are upset to begin with. The link: bleeding ulcers.

Professor Ralph W. Morris, a pharmacologist at the University of Illinois College of Pharmacy in Chicago, has spent years collecting data on hospital admission dates of patients suffering from bleeding ulcers (and no other disorders). By now he has no doubts. In Chicago there are two peak periods: the month of January (when Christmas bills are in) and the period around the full moon every month.

Regardless of the "real" effect of the full moon, few doubt that, emotionally, it can have a lot of impact—enough impact to change the way people feel

"I don't think there's any hope at all in trying to explain this by tidal forces." said Prof Philips. "But psychological reasons? We did evolve under the moon. And 'there are more things on heaven and Earth...'." ■

"LOSE 10-15 CMS OF BULGING FAT"

Let

SAUNA SYSTEM

reduce a combination of your WAIST and HIPS; NOW!

FREE 14 DAY HOME TRIAL OFFER RESULTS GUARANTEED OR YOU PAY NOTHING

Just fill out the coupon and post your order today! Try it. Use it FREE for 14 days. A trial period which will cost you nothing. Watch cms disappear. If for any reason you are not delighted, send it back, we will refund your money. Over 876,000 satisfied customers all over the world make us bold enough to make this super guarantee!

Slim Down Scientifically Without Starving! That's right! 4-6 cms starting the very first day! Science has known about this principle for years. In fact, right now, professional and amateur athletes the world over are using it in their training programmes. And many famous film stars who have to trim down fast rely on this method. Now, you can use it to melt cms off your waist ...your hips . . anywhere!

Don't Hold Fat In ... Lose It! If you want to go even further, the Sauna System will do it for you. Our special fastening system allows the Sauna Belt to adjust to your new size as you shrink away. And your waistline, hips and other problem areas will continue to shrink when you use the Sauna System programme. You can use it as often as you need to keep those cms off.

Not A Cheap Imitation! The Sauna System is strong — quality construction has added benefits which give soothing, invigorating support to tired, tense back muscles, while helping you trim away cms easily and comfortably. Just one look at our distinctive waist-belt and you know you'll be getting the utmost

Remember, elastics and girdles are merely flimsy imitations, which just squeeze the fat in. But the SAUNA SYSTEM takes it off... fast! It's working right now for thousands of satisfied buyers and it can work for you, if you order now!

The Sauna System comes with its own easy exercise programme to shed unsightly cms even more rapidly

REAL PEOPLE LOSE POUNDS AND CMS Here are the impressive stories (all sworn and notarized) of a few outstanding users. Everyone may not do as well, but if they can do this well, just think how many pounds and cms you will lose quickly with the SAUNA SYSTEM

FREE WITH THE PRODUCT A NEW UNIQUE FAT MEASURE IF ORDERED WITHIN 10 DAYS.

Mr. Gurmeet Singh — Ludhiana India
"My total weight loss was 9 cms off my waist and hips! I've been overweight for as long as I can remember. The Sauna System worked miracles! all in only 6 short months! The Sauna System even helped me to stop overeating and snacking. I lost 15 pounds! Now I'm a new man

Mrs. Mildred C Cable — Land O' Lakes. Fla
"I went from a size 20½" dress down to a 16! I tried every method. With the Sauna Belt, the exercise programme and a sensible diet, I lost 32 pounds! I lost 8 cms from my waist and 11 cms from my hips! Now, I tell all my friends about the Sauna System

BINNY

A Melody From Iran

by Bindu Tandon

A GREAT artist, whether he be a weaver of words, a user of crayons or the drawer of a violin bow, is an enigmatic creature. On the one hand, he is impelled by his magnificent obsession—his art, the perfection of which brings the wealthy and influential to his door, humbled and admiring. On the other hand, he is a more than fallible human being, flawed and given to all the weaknesses that flesh is heir to.

It was this mystique that I went to discover in Bijan Khadem-Missagh, the virtuoso 34-year-old violinist, composer and conductor from Vienna, who was on a visit to India (incidentally his wife's native land). I heard him at a concert organised by Philips India at the Tata Theatre, Bombay, in January and was intrigued by his Iranian ancestry, Baha'i faith, Viennese domicile, Indian wife and, most of all, his universal music—pure and stirring violin strains playing Schubert and Saint Saens, Bartok and Bijan Khadem-Missagh.

His music, he says, springs from his faith. He believes that the mainspring of any art, anywhere in the world, has been man's humanity, compassion and humility. His parents brought him up right, though he was a child prodigy—at 12 he made his debut as a soloist with an orchestra—"they saw to it that I knew about the more basic things of life like etiquette and morals which are important for spiritual development as well as music"

Quoting Toynbee, Bijan says, "Every culture is based on a religious impulse." And it has enlarged his music because his view of the world is not restrictive. Thus his own compositions have an Iranian melody, though set to a fully rigorous Western classical form, complete with rhythm and harmony. Eastern influence enriches his music, as did the transcription of Hungarian folk dances into Western classical music by Bela Bartok, or perhaps the French and Spanish influences in Saint Saens's pieces.

Talking of contemporary composers, he says most of them are "experimenting", using less rigorous musical forms by dispensing with the one or the other of the four important elements of Western classical music: form, melody, harmony and rhythm. Illustrating the difference, he says, "There had been perfection in the compositions of Beethoven, Mozart and Haydn's music, for instance, because they used all four elements in a structured form." Philosophically, he adds that "in music, as in anything else, in the beginning there are laws and then gradually the threads unravel and old structures mutate"

Referring to modern pop, jazz and rock, he says that increasingly today's music is using a lot of electronic gadgetary. This interferes with the purity of the sound. The music has less of an opportunity to touch one, coming as it does through a non-human, non-emotional intermediary.

On the subject of inspiration, Bijan says, "It is not in this world that one composes." Here he relates an interesting anecdote about Brahms, who on his death bed said: "I have dared not to tell you this before, but all my compositions were given to me from another source. I did not compose them; God gave them to me." And this spiritual dimension is the source of all really great music.

Bijan is a practical man, however. He conducts the Tonkuenestler Chamber Orchestra, Vienna, the International Music Festival, Austria, and the Midsummer Music Festival in Sweden. He also conducts courses in the fields of technique and interpretation. He teaches the conditions and laws of playing ensemble through practical experience in a course called Badener Beethoven.

Does this mean that Bijan plays more from the head than the heart? "Many years of practice have to go into learning, but to make an artist of a performer there has to be a spark." But many people, he says, "have a wonderful musical talent that is not discovered early enough and, like a candle in the wind, it sputters and dies. If their parents had a less narrow view of education they could have developed it. None of us are born better. An artist has to be like a flute. Only after the maboo has been emptied out and holes have been burnt into it does it produce beautiful music"

So this is an artist, world renowned, but also a man who does not let his music divide him from a healthy perception of life and living. He is an artist who has learnt to be a human being first. ■

"IT IS NOT IN THIS WORLD THAT ONE COMPOSES." Bijan Khadem-Missagh (left), the Iranian-born violinist composer-conductor from Vienna. Below with his Indian wife and two children

Education

Bihar Colleges

Dens Of Corruption

The poorest State in India, Bihar has a 26 per cent literacy rate. Its eight universities are infamous for arson, looting, cheating, politics and murders. The system is so consumed with canker that there is no hope for improvement.

by Sheela Barse

THE wall of the secretariat in Patna is deluged with urine. Its heavy, pungent stink stabs the dusty atmosphere and the continuity of wet patches assaults your eyes. As you go through the crowded corridors of the education department, you have to walk past urinals whose doors are open, floors are wet—the overflow of water mucks up the corridors too--and whose facilities are being used by men who do not see the need to respect the value of privacy.

To say that this nauseating physical reality is symbolic of the state of higher education in Bihar would, however, be an understatement. Things are actually much worse. One does not know where to begin—with the students who kill, with the professors who incite violence, with the politicians who employ students to capture booths, with the astute upstarts who set up education shops illegally, with the lecturers and students who "capture" accommodation belonging to universities and do not pay any dues, with the parents who bribe educationists to push the careers of their wards or with the corrupt vice-chancellors?

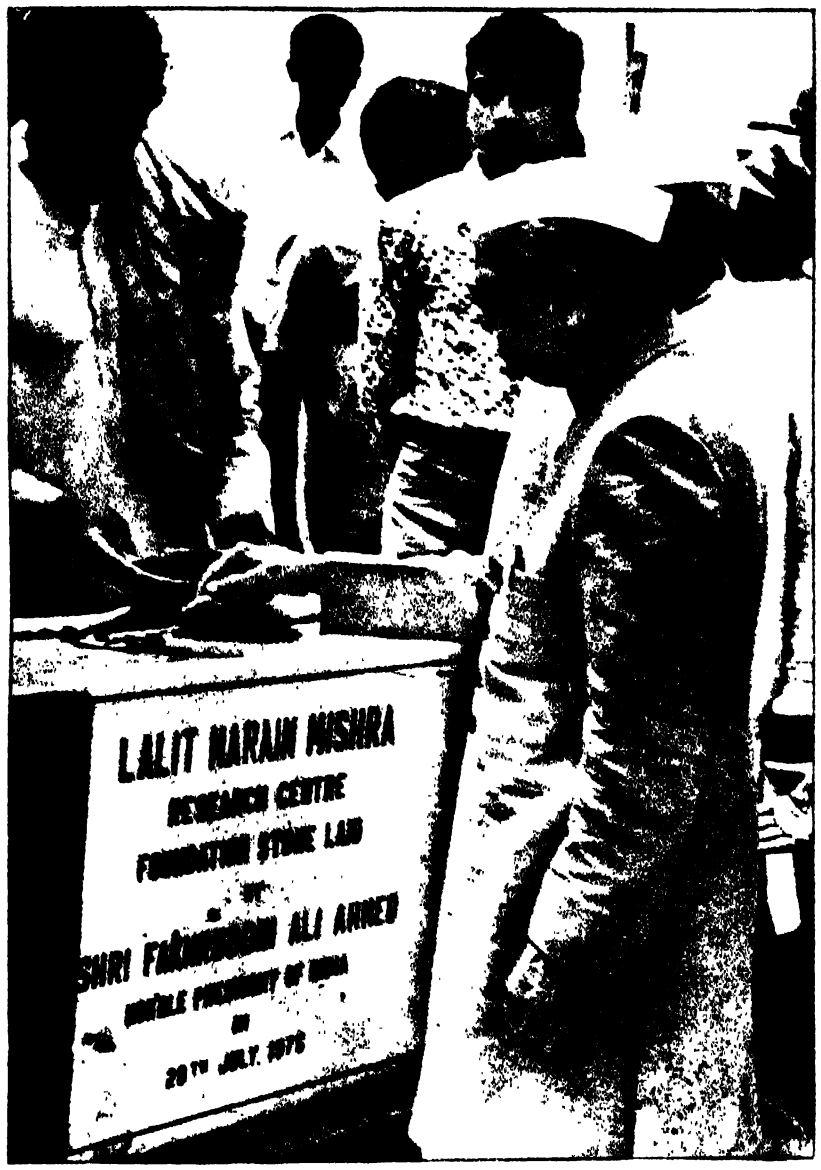
Let us begin with some data.

The poorest State in India, Bihar has a 26 per cent literacy rate and eight universities. The universities are: Bhagalpur, Bihar, K.S.D. Sanskrit, L.N Mithila, Magadh, Patna, Ranchi and the Indian School of Mines which is deemed to be a university by the University Grants Commission.

In 1981-82, 1,66,473 students were enrolled in Bihar's 417 colleges [261 Constitutent Colleges (CCs) and 156 Affiliated Colleges (ACs)] In addition, there are nearly 400 institutions that illegally call themselves colleges One of these days, the Bihar government will regularise these "colleges" because as a high ranking UGC official told me, "Unfortunately anything that is started in this country cannot be closed down." According to the Mishra government's statement in May 1982, it has regularised over 200 institutions so far!

Unethical Operators

In Bihar, the setting up and running of shools and colleges is masterminded by astute, unethical operators. None of them, of course, ever dream of providing a spacious, well-designed building, a well-stocked library, a good laboratory, a music room, a meeting hall, sports facilities or even a women's room or canteen. In fact, some of the "colleges" exist only on letterheads while others are mobile and still others—the most respectable—nothing more than a rented room or two to hold coaching classes. In his own way, Dr Jagannath Mishra, the Chief Minister, is devoted to education. He used to lecture to students of Bihar University until he joined the State Cabinet in 1972. (He is said to have secured his job in the University by contriving to pass a law that a man who joins active politics as an elected representative should be deemed to be on leave.)



Courtesy Blitz

A 'DEVOTION' TO EDUCATION Bihar Chief Minister, Dr Jagannath Mishra has no less than five institutions of higher learning associated with the family name.

More to the point, Dr Mishra first became an MLC in 1968 and since then he has seen to it that the family name is associated with no less than five institutions of higher learning. Thus Bihar now has the Lalit Narayan Mithila University in Darbhanga (named after his deceased brother L.N. Mishra), the Dr Jagannath Mishra Institute of Technology, Darbhanga, the Dr Jagannath Mishra Institute of Competitive Studies, Muzaffarpur, the L.N Mishra Institute of Economic Development and Social Change, Patna, and the L.N. Mishra Institute of Business Management.

It is pertinent to recount what is going on in other so-called colleges. In December 1982, three students were murdered within four days in Patna and Dr Mishra himself fumed, "Lawlessness in Patna colleges has crossed all limits!" The rot usually stems from the top. The landlady of a building in the Gadarbaug area of the State capital, for instance, wants the "college" which rents her building to vacate. The "college" proprietor wants governmental and political intervention to help him strike a bargain: he will vacate provided he can buy the open space adjacent to the building so that a structure can be erected on it to run the college The open space measures 600 yards!

Rented Premises

Worse, the Singhbhum Mahila College was declared a constituent college of Bihar University in 1981, though to date it does not have its own land, premises, laboratories or library. It started functioning on a rented place and was absorbed into the University within months of its birth.

Gangadevi Mahila College in Patna was less lucky. It was started in 1971 and became affiliated to Magadh University in Gaya in 1978. The college boasts of 8 ft by 10 ft classrooms jammed with fewer than a dozen benches, no desks for the lectures, no space between the benches and lecturers who simply dictate notes. I happened to push open a door which led to a 5 ft by 8 ft bathroom, complete with pump, tap, drum and 2 ft by 2 ft washing place, and found that a lecturer was holding her Hindi honours class there! Two girls comprised the total strength of the class!

Gangadevi College is supposed to have 800 students on its rolls and 80 lecturers. Given the limited space, two shifts are held: the first one starts at 7 am according to the registrar and 8.30 am according to a lecturer! When I reached the college at 10.15 am, I wondered if the first shift starts at all!

And, believe it or not, the lecturers who joined Gangadevi College in 1971 are paid Rs 160 per month The other lecturers are paid Rs 100 per month. During the first year at college, a lecturer is not paid during the vacation months. After a year he gets half his emoluments for the duration. It seems once this college gets the CC status, the teachers will start getting the UGC pay scales. The lecturers work in this hope.

The JD Women's College in Patna, a CC of Magadh University, is run from the first floor of two buildings with a street in between. The main building has only five 10 ft by 10 ft and 10 ft by 12 ft classrooms, but, incongruously, it sports a brightly illuminated board (during the daytime too) screaming UROLOGY to advertise a medical consultancy on the ground floor. The other "wing" has laboratories and is on top of a shopping centre!

The college was started with three students on its rolls in 1971 by Ram Autar Singh, a tracer in the public Health Engineering Department. He owns 12 schools, and since JD College became a CC he has opened another college, Siddharth Mahila College, quite close to JD Until then lecturers of JD, too, earned a salary of Rs 100 per month.

Grossly Overstaffed

In a State where there are hardly any employment opportunities for the educated, candidates pay the education trader anything from Rs 7,000 to Rs 10,000 to get this pittance in the hope of securing the attractive UGC scale which begins with Rs 1,000 per month take-home pay. The trader who starts a college often does so with this bribe in his kitty.

So it comes about that many of the so-called colleges are grossly overstaffed It is in the interest of the promoter to get as many posts sanctioned, whether the department needs them or not. He therefore pays the university officials and

(continued on pg 28

Sukho Majri

A Punjab Village Shows The Way

In Sukho Majri, the hills and people were both naked at one time. The hills are now covered with raiments of green-gold. The people are now clothed in smiles. Collective will has shown the way to emancipation and human dignity.

by Maj Gen K.S. Bajwa (Retd)

IT sounds odd to talk of sovereignty in a remote hamlet nestling at the foothills of the Sivalik ranges near Pinjore. It would appear especially so after the annual extravaganza of the anniversary of the Indian Republic. But does the annual blare of trumpets affirm the existence of meaningful liberty and equality in the day-to-day lives of the people? How effective is the freedom of political choice and the faculty of moral discrimination when weighed down by hunger and want?

A plethora of government controls puts a severe damper on self-generating enterprise and has bred monumental corruption. The populist distribution of huge funds to weaker sections without promoting a participative and self-sustaining momentum tends to make the poor and the deprived even more dependent on the Government. It is a vicious circle. Abject dependence severely limits the effective participation of the people in their own governance which, in turn, opens increasing avenues for the State apparatus to arm itself with arbitrary powers. Is it then far-fetched to talk of a fresh struggle for freedom from the insidious fetters of economic slavery and social injustice? But the people of Sukho Majri have mustered their collective will to point the way for their emancipation to self-reliance and human dignity.

Rape Of The Hills

Dr Parshu Ram Mishra, a forester-turned-conservationist, talks of confusion in the concepts of conservation and development. The Sukho Majri model emerged from the efforts to save the man-made lake in Chandigarh from silting up. From a catchment area of 40 sq km, ravaged hills, stripped of their vegetative cover, were pouring down into the lake at an average annual rate of 55 hectares, the dredging of which would cost a crore of rupees. Urgent measures, which were no less costly, were launched by government departments to restore forest cover and check water run-offs.

But, as elsewhere in the country, the reality of a centuries-old feud between the people living in and around the catchment area and those in the hills was not fully grasped. The urgency of saving the Chandigarh lake was meaningless to the aggressive peasants and the foraging Gujjars, who attacked the tired hills with renewed vigour as they yielded less and less. The abstract idealism of conservationists, and the drive to keep distant pastures green was beyond their ken. Neither could they understand the logic of helping the Government to preserve a whole cake of the hill and forest resources at their doorstep for the uncertain promise of a slice being given sometime in the future. If a 35 ft wide fertile agricultural field belonging to Sarwan was rendered into a 30 ft-deep gully by rain water from just four hectares of hillside in one season, it was shrugged off as an evil visitation of nature. The need for forage and fuel was here and now, and the rape of the hills continued.

—Vipan Kumar

—Vipan Kumar

Vipan Kumar

BEACON OF HOPE. Daulat Ram and Paras Ram (above), once outspoken sceptics and now the leaders of a new social order. "Socially fenced" hills (left), barriers rooted in self discipline and community conscience. Below left, Krishna makes rope from babbar grass which earns her more than Rs 600 a month.

Dr Mishra and his devoted band at the Chandigarh station of the Institute realised that a new concept had to be evolved. A peace plan was needed to bring the brain and muscle power of the poor into productive harmony with the bounty of the hills and the rain water. A Hill Resources Management Society was promoted, comprising all residents of Sukho Majri. The Gujjars were motivated to give up grazing their cattle and take to stall feeding. The forest department was persuaded to permit the cutting of grass for a nominal charge, and common land of the village was pressed into service for collective benefit. The extraction of fuel wood was permitted without cutting down any trees. Dr Mishra and his colleagues firmly believed that the Government's fiats and physical barriers bred distrust and revived the age-old syndrome of covert defiance.

'Social Fencing'

They introduced a refreshingly innovative concept of "social fencing", a barrier rooted in self-discipline, community conscience and social enforcement. Daulat Ram, a grizzled 60-year-old Gujjar, once

an outspoken sceptic and now an acknowledged leader of the newly emerging social order, says: "My father used to trudge 10-15 km every day to bring in a headload of grass, and now we can cut it at our doorstep. We used to have 144 goats in the village; now only 34 are left. The number of buffaloes has gone up to 400. Milk yield has more than doubled. All animals are stall fed and there have been hardly any backsliders."

The hills and the poor people both were naked. The hills are now beginning to hide their pain and scars in raiments of green-gold. The people burnish their faces with smiles. From a "socially fenced" hilltop already well launched into regeneration, the weird moonscape across the *nallah* stands out in stark contrast. On the hillside no trees have been planted, but a host of vegetation is coming up under nature's own dynamics of recovery. There is evidence of grass having been cut, but the roots, like foundation garments, girdle the slopes firmly. On the other side is a shimmering sheet of water, impounded behind an earthen dam, built by the villagers themselves with a grant of one lakh rupees, a sum that also covered the cost of a network of irrigation pipelines. Below the dam is a spread of emerald gold.

Paras Ram, a teacher in a nearby rural school and treasurer of the Sukho Majri Hill Resources Management Society, proudly says: "The dam is like our bank and we share its riches evenly—the landowners and the landless. The latter can barter their share of water for a share of the produce. Whereas we used to buy grain and fodder, we are now self sufficient and even have some surplus to sell for cash." Undoubtedly, the hills and the water have helped grow more than crops—priceless pride and self-respect.

Wonder Tree

Much more than mere self-sufficiency in grain and fodder is needed for sustained growth and a satisfying social development of a community. The answer is sought in the wonder tree of Subabul, the *babbar* grass and a model of vertical productivity. The Subabul is one of the fastest growing trees, with an average growth of four to five metres annually. Its leaves make for protein-rich cattle fodder; the branches and trunk provide firewood, paper pulp and timber, ready for sale in three to five years. Nearly 200,000 saplings will be planted in panchayat lands this year. Already men, women and children are busy raising a nursery. After two to three years, the plantation will yield an annual income of nearly Rs 15-20 lakh to the society. The *babbar* grass has been planted on hill slopes and is being extracted for cattle fodder and for the cottage industry of rope-making. Prem Chand and his wife, Krishna, are earning Rs 600 a month from rope-making, in addition to their other pursuits.

Vertical productivity holds out great promise in the prevailing pattern of small land holdings. It envisages growth at three levels: tall eucalyptus trees all around, papaya plants in the fields and, underneath, garlic or ginger or turmeric, all of which grow well in the shade. Dr Mishra calls it the "lakha model" (promising an income of Rs 1 lakh per acre per year), and Daula is already well set to prove this claim. A self-generating and self-enriching society is being born.

Beacon Of Hope

All is not smooth sailing at Sukho Majri, though. Both bureaucrats and politicians view the development with suspicion. They fear that the growing self-esteem of the villagers will loosen their hold and diminish their stature in the rural society. And many of the planners, drawing their inspiration from the Western models that are far removed from the real India of our villages, are equally perturbed. But they are plainly barking up the wrong tree. Western political organisations and practices focus on the individual and his growth. In India, with its widespread and endemic deprivation, the Western model will not only require massive resources to work but also enormous time. Meanwhile the freebooting ethos, so much in evidence, will heighten the disparities. Moreover, individual development and a purposeful and smooth social organisation go hand in hand. It is, therefore, vital for us to promote small and self-generating segments of society to grow in harmony.

The pace of development at Sukho Majri has yet to gather an all-embracing momentum. But a spark has been lit in an area of total darkness, which promises to become a beacon of hope for national survival. Already Harijan Nada and Dhamala have organised their own societies. Perhaps in the not-too-far-distant future, the true concept of an Indian democracy—that of a covenant between free people with dignity and a government that governs the least—will become meaningful. In this context, it is relevant and vital to talk of emerging sovereignty at Sukho Majri. ■

(continued from pg 26)

ministers, among others, to get the posts sanctioned. An impatient VC, not wanting to wait for candidates to overcome their shyness and approach him, worked out a wonderfully efficient technique. He visited ACs and CCs, tut-tutted that they seemed to be short of teaching staff, offered to look into their predicament personally and suggested that they apply to him. As soon as the applications arrived from the colleges, he sanctioned the post and sent the order with a lecturer attached! During his short tenure he is said to have made quite a packet.

Indeed, the Governor-Chancellor, A R Kidwai, had reason to ask two VCs to leave. One of the VCs he sacked, a Dr Shyamnandan Kishore, was so well-entrenched in the capitol of his fiefdom, Muzaffarpur, that when Mr Kidwai wanted to visit Muzaffarpur as Governor, Kishore got all the important officials in the town to advise the former to cancel the trip.

Ironically, just as Mafia hoodlums are often booked only for wrong parking or minor discrepancies in their tax returns, the VCs and other dignitaries working in various Bihar colleges get caught for minor misdemeanours like rigging a progeny's marksheet or making false TA claims. But the offences actually committed by them include unauthorised occupation of flats on campuses (a problem Bihar University has still not been able to cope with), misappropriation of funds from the scholarship pool for adivasi and harijan students or the sums sanctioned for purchasing equipment, collecting money for getting students admitted to colleges, selling answers outside examination halls (a crime especially lucrative during the medical college entrance exams, where the rates leap from Rs 10,000 to Rs 40,000 per student), rigging marksheets or arranging the rigging of marksheets (one good professor even rushed by car from examiner to examiner making pay-offs from his own plunder), and admitting and protecting hoodlums.

Active Politicians

Quite a few professors are active politicians and elected members of the State Legislature and Parliament. P.N. Sharma, Principal of Commerce College, Patna, is a Janata Party MLC and has been in politics since 1971; Dr Shailendranath Shrivastav, head of the Hindi Department of N.N. College is a BJP MLA and leader of his party in the House. Some of the other teacher-legislators are K.K Tiwari, Satyadev Singh Jogeshwar Jha and Ramdeo Pratap Singh. The last-mentioned also has an engineering college named after him. A heavyweight Congress(I) politician, Ram Lakhan Yadav, probably holds the record in the field. Dr Chetkar Jha, Principal of Patna College used to be an MLC (Congress-I).

Whereas with Dr Chetkar Jha, education comes first, with a majority of teacher-politicians politics comes first. Students who help politicians during elections do not have to attend classes, appear for exams or pass them. They try to stay in student politics as long as they can and their patrons help them to achieve this. They try and get exams postponed as well as results postponed. If they happen to pass, they join another course, preferably Law, so that they can remain students for another five years. They do not have to think of starting careers. Student politics is their career. They already have money, power and the backing of their parents and patron-politicians. This is the gist of analysis made by a number of Patna University students. These students have been waiting for nine months to finish their graduation.

The most dramatic activity of student politicians is capturing booths. They use illegally acquired arms and bombs to establish their rule in the election areas. Their patrons see to it that they are not accountable to anyone. These armed students also stay in hostels even if rooms have not been officially allotted to them and invite friends to stay in other rooms. With an estimated five million illicit arms in circulation in Bihar, a number of students acquire home-made guns (priced at Rs 150 each) quite easily. I met a schoolboy studying in Bhavanipur who had acquired both a gun and a knife which he eventually used to kill a fellow student.

"Many students have 'captured' hostel rooms in Patna University hostels, and two hostels of Bihar University are in the hands of *goondas*. They do not pay any charges, canteen included. A great many of them do not necessarily have political backing. But we cannot get them evicted. For their argument is to get the teachers who are illegally occupying accommodation on Bihar University campuses and are not paying their dues evicted first," bemoans an inter-university board official.

—K.M. Kishore

COLLEGE CAREERS Some students try to remain in college as long as they can. They do not have to worry about starting a career; student politics is their career.

Mere Threats

The UGC, which pays Rs 550 lakhs for a five-year period to seven universities in Bihar, threatens to stop its grants every now and then, but in the absence of any specific authority it is unable to enforce standards in universities which receive its grants.

The Vice Chancellor of Patna University, Sudarshan Prasad Singh, says that the only answer to the current state of affairs in the universities of Bihar is absolute non-interference by politicians in the field of education. Dr Singh is about to lose his job because he has lost favour with the Chief Minister.

The inter-university board official quoted above sent his children out of the State for their higher education—a solution preferred by those who can do so. But how many parents have the means?

Meanwhile, arson, looting, cheating, illegal occupation of hostel rooms and murders, about four or five every year, will rule scholastic life in Bihar. ■

Letter From Calcutta

On The Warpath

AMIDST the poll violence that rocked Assam, the Gohpur carnage stood out as a grim warning of the possible shape of things to come. The kidnapping of a tribal candidate (the Plains Tribal Council defied the boycott to contest 20 Assembly and two Lok Sabha seats) may have been the immediate provocation, but as in Tripura and Manipur, the violence expressed more fundamental strife.

Constituting two million out of Assam's 1971 population of 15 million, adivasis were bound to be infected by Assamese chauvinism, Muslim defiance and Bengali nervousness. The tribal entities of Arunachal Pradesh, Nagaland, Meghalaya and Mizoram were also once part of Assam, and the PTC, supported by Nepalese settlers and Chota Nagpur adivasi tea garden workers, wants its area to become a Union Territory.

The pattern is becoming familiar in West Bengal, Bihar and Orissa. Either cruelly exploited or callously neglected, India's Scheduled Tribes are waking up to a militant awareness of their rights.

Next To Godliness

MR Hidayatullah cannot have guessed when he casually remarked at the end of his visit that Calcutta was a beautiful but dirty city, that he was touching a raw nerve. Stung to the quick, the Minister for Urban Development, Mr Prasanta Sur, promised: "We will keep the city clean."

Time was when our streets were washed each dawn, when fleets of lorries whisked away the garbage and parks were immaculately manicured. A special army of municipal *malis* trimmed the grass on stone-edged pavements, *jamadars* trundling up wheelbarrows to remove what had been cut. All that is only a memory in this squalid, odoriferous, festering urban slum.

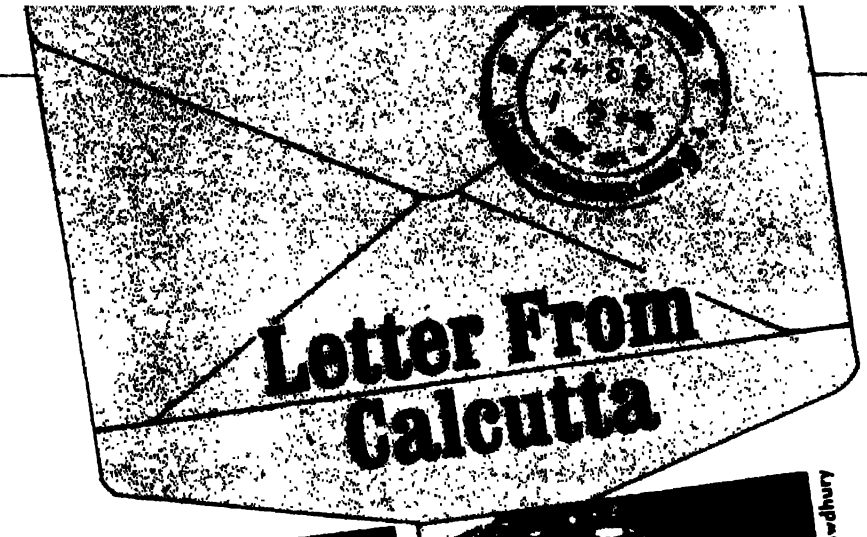
A Czech refuse incinerator, imported in 1945, has never been used and is rusting away. With 2,500 tonnes of daily garbage, there is no place left to dump it. The Corporation pays Rs 29 crores in annual wages to men who report only once a month to collect their pay packets. And to cap it all, this monument of municipal maladministration wants an armed battalion at its beck and call.

Govardhan

FOR years now it has been illegal in theory to keep cattle in the city. Now the Left Front has promised a Cattle Licensing (Amendment) Act to compel obedience.

Meanwhile, the Animal Husbandry Department says there are about 20,000 head of cattle in 2,000 illegal *khatals*. Stray cows are sometimes caught (there are four police pounds) but released when the owner pays a small fine and promises to send them away. But there is not a single animal in the nearby Ganganagar Cattle Resettlement Project, completed with Dutch aid over a year ago. Nor has desultory talk of marking seized animals so that second offences can be more severely punished, led anywhere.

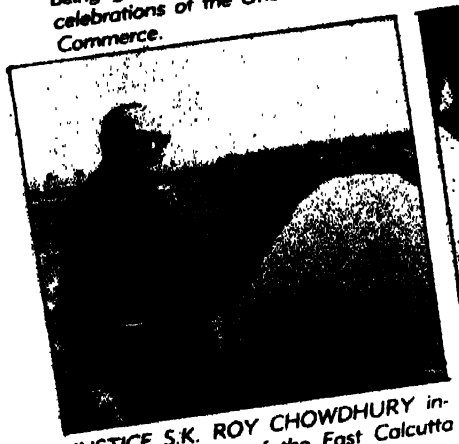
The demand for fresh milk (because of the unreliability of Government dairies) makes *khatals* a profitable business. It is also paying for the police to extort protection money from owners instead of driving them away. Finally, licences to sell bran (used as feedstock) are issued to people with influential connections and lucratively sold in the black market. All good reasons for preserving filthily insanitary *khatals*, ankle-deep in slush and dung.



VICE-PRESIDENT M. HIDAYATULLAH, being garlanded at the Golden Jubilee celebrations of the Oriental Chamber of Commerce.

MAN AND BEAST, living together in a "khatal".

Photographs by Mona Chowdhury



JUSTICE S.K. ROY CHOWDHURY inspecting the site of the East Calcutta Development Project of CMDA.

MR ASHOKE KUMAR SARKAR, editor of the Ananda Bazar Patrika, seen immediately after a massive heart attack which led to his death on February 17.

Spot Inquiry

THE financial scandal of the CMDA's earth-filling contract — which cost Rs 4.5 crores instead of the originally estimated Rs 1.05 crores — has now acquired disturbing political overtones. A member of the ruling Left Front says that one of Mr Jyoti Basu's colleagues supplied details to the Congress (I) so that the row over Mr Prasanta Sur's actions distracts attention from murky goings-on in his own department.

Meanwhile, Mr Justice Salil Roy Chowdhury, the one-man inquiry commission, has visited the 480 acre site to see what it is all about. He has also heard the defence that the rate went up progressively because though tenders were awarded in May, 1978, work could not start until January, 1980. He was told too that the "CMDA culture" permitted the Minister for Urban Development to sanction higher payment on his own responsibility in anticipation of the board's approval.

Follow The Leader

ONE Bihar politician — Mr Sitaram Kesari — long ago decided that loyalty was best demonstrated by trying to look as much like a fine-boned and elegant Kashmiri woman as it is possible for a short, squat, dark man to do. And so he began to sport a silver forelock in his otherwise raven head. Now the Chief Minister of Bihar is trying his hand at a different kind of emulation by forcing so many of his ministers to resign. Mr Kesari's hairstyle did not save him from the recent purge in New Delhi. It remains to be seen how Mr Jagannath Mishra fares, and whether he will be rescued by the dozen or so astrological rings that he flamboyantly flaunts on his fingers.

Blind As A Brasshat

GENERAL Ershad's troubles probably began only after General Muhammad Saleh al Hammad, the Saudi Arabian Chief of Staff, visited Dhaka. The Bangladeshi ruler then promised an Islamic constitution, tried to make Arabic a compulsory school subject, attempted to tamper with the hallowed ceremonies observed on Language Movement Day, and talked of banning students' unions which are traditionally secular and radical.

Even earlier, there was talk of Bangladesh providing 10,000 soldiers to defend the Saudi throne. The Islamic Foundation, funded by Riyadh, has also begun to train 100,000 maulvis, the numerous mosques it builds are exempt from taxes and receive water and electricity free of charge. It is also suspected of subsidising youth programmes and students' associations that propagate Islamic fundamentalism.

But for these initiatives, General Ershad might have been perfectly safe and secure. But by trampling on his country's history, beliefs and mood to create a theocratic state that is alien to Bangladesh's liberal humane temperament, he may have given politicians just the weapon they were looking for.

Hot Wire

THIS column has already noted Mr Justice P.C Borooah's commendable initiative regarding abominable conditions in Dum Dum jail. Tribute is now due to the concern and courage with which the *Ananda Bazar Patrika* group is pursuing that lead.

First, the weekly *Sunday* published a number of horrendous pictures of life in that prison, defying Mr Borooah's orders and inviting a show cause notice from the court. Now *The Telegraph*, the group's bright new English language daily, has followed it up by reproducing those pictures, a leader page article titled "If the price to be paid for publishing these pictures is a trip to jail, so be it" and, facing it, an open letter to the Chief Minister under the heading "If you have tears, Mr Basu, shed them for these inmates of Dum Dum central jail..."

The paper's editor ends his missive with what is almost a warning: "I do expect a reply from you, Mr Basu — not a reply from a Chief Minister of a state, but a reply from a Marxist who has spent a whole life taking up the cause of the oppressed". It is sensational, even melodramatic, but may be effective. Results would justify the emotionalism.

Shirt On It

AT a recent seminar on Gandhi's contemporary relevance, organised by the Gandhi Smarak Sangrahalaya in Barrackpore in conjunction with Calcutta's Jayaprakash Narayan Institute of Social Change & Social Welfare, a speaker recalled the 50th anniversary of Nazi rule to quote a verse that was apparently popular in England in the thirties.

Hitler with his Brown Shirts
Riding for a fall,
Mussolini with his Black Shirts
Back against the wall,
De Valera with his Green Shirts
Caring not at all,
Three cheers for Mahatma Gandhi
With no shirt at all.

Sumita Sandilya

Rape Most Foul

BELLARY: On February 14, a 16-year-old girl, daughter of a mechanic and her escort, a 20-year-old young man, were returning home hurriedly after a pleasant evening: a dinner at a relative's house followed by a movie. The girl had no inkling of the nightmarish experience that lay ahead.

As the couple neared the fort area, they were accosted by the police and taken to the Cowl Bazar police station for interrogation. Once inside the station, the boy was separated from the girl. When he protested, he was severely beaten. And the girl was allegedly raped by six constables. When around one am, the girl lost consciousness, the police panicked and took her to a private doctor who could only provide first aid. He suggested that the girl needed treatment at the government medical college hospital, which was done. On the way back from the hospital to her home, the girl along with her parents was brought back to the police station and given refreshments and coffee. Also, they were threatened with dire consequences if they reported the event to anybody. The news of the outrage could not be suppressed; it spread like wild fire. On Wednesday morning, an angry mob of 2,000 persons collected in front of the Cowl Bazar police station. They found that no action had been taken although 36 hours had passed. An enquiry at the level of the Dy Superintendent of Police was held. The girl came to the station and identified the persons who had participated in the rape. One constable Thimmappa, was suspended and charged with raping a minor girl. But the mob was not appeased. A section of the crowd demanded all the six constables who were involved in the rape to be handed over to the public. When the situation went out of control, the police opened fire. Seven persons were injured.

Next day the students joined the fray. Defying the ban order they attacked the police station with stones and soda bottles which were directed only against the police and no public property was destroyed. But the tension enveloped the city like a fog.

It was then that the criminal elements crept in. Credibility and public esteem were never the virtues of the police It is also the second largest operating area for matka gambling, and for years has provided easy money to the police.

Recently there was a split in Bellary's underworld. Factions led by a 'Naidu' and by one 'Gafoor' were both vying for police protection. One of the group allegedly lost and was waiting to settle the score. A public outcry against the gang rape came in handy. The "miscreants", "urchins" and "anti-social elements" were indulging in arson and looting in no time. Shops and hotels were ransacked, petrol bunks were burnt, private vehicles were damaged, banks were invaded and its furniture and records were burnt to ashes. In the random police firing seven innocents lost their lives—a traveller returning to the city from Hyderabad and a rickshaw-puller were among them. Over a 100 persons were injured.

A judicial enquiry has been ordered, the local Superintendent of Police has been transferred. Chief Minister Mr Ramakrishna Hegde, who visited the city, was not far from the truth when he said "certain political elements and vested interests are behind the violence". There was a clear difference between the type of protest held near the police station and the arson and looting everywhere else in the city. And this spread to the nearby districts also. With the by-election to the Tarikere assembly seat not far away, the restlessness has assumed a political tone.

M.N. Chakravarthy

MOB FURY. Chief Minister Ramakrishna Hegde attempts to pacify an angry crowd in Bellary.

A Crying Shame

CALCUTTA: It is not the second Hooghly Bridge in Calcutta It will be the third. The first across the Hooghly was the Bally Bridge, opened in 1929. The second was the Howrah Bridge, built in 1943. In any case, the way the project has been handled is a crying shame.

SAD NEGLECT. Even seven years after the foundation stone was laid for a bridge over the Hooghly river, not a single brick was added to it. Seen here wells being built for the "second" Hooghly bridge.

In 1969, an organisation called the Hooghly River Bridge Commissioners was set up under a State Act for implementing the scheme but it was not before 1972 that Mrs Gandhi laid the foundation stone. Not a brick was added to that stone for seven years! Ultimately, the Bhagirathi Bridge Construction Company was chosen as the main contractor

The BBCC sub-let the contract to Gammon (India) and Braithwaite Burn & Jessop Construction Company. Gammon, according to the Vice-Chairman of the HRBC, entrusted with the foundation and substructure work, slipped up frequently. They were never in time with the detailed drawings, and in a project of this nature, mammoth and intricate in engineering, one should have at least nine months of drawings in hand to plan and allocate jobs, the Vice-Chairman, Mr M.M. Sen, adds.

The Project Engineer of Gammon, Mr S.R. Jadhav, explains: "Detailed drawings have to be sent to two foreign consultants for approval. Often, one does not agree with the other, which means preparing fresh drawings and sending them all over again to the two."

The less said about BBJ, entrusted with the superstructure of the new bridge, the better. Its very existence is uncertain, says Mr Sen. The Union Ministry of Heavy Industries, the administering authority, wants to wind up the firm or merge it, preferably with Jessops, because of the huge accumulated loss. According to one estimate, it is as high as Rs 5 crores!

Nonetheless, Mr Prasanta Sur, Chairman of the HRBC and West Bengal Minister for Municipal Affairs, sounds sure of himself when he contends that BBJ will be kept alive at least till the bridge is built! This is important, for BBJ alone is well equipped in the country to tackle the superstructure. Resentment among its staff can spell doom for the bridge, Mr Sen points out!

If the contracting firms have been slack, whatever the reason, the difficulty in importing several items of modern equipment, like concrete pumps and cranes, has also caused colossal waste of precious time.

Land acquisition at the Howrah end of the site has also added to the delay, even though there was just one court case, which too went in favour of the HRBC. But serious efforts at acquiring land were not made in the initial years; for instance, between February 1980 and October 1981, merely 17.5 acres were acquired out of the total 65 acres that would be required to clear the approaches to the bridge at Howrah. At the Calcutta end, however, there were no problems, because the land belonged to Defence.

But nothing could have been more frustrating than the tardy flow of funds from the Centre, which had agreed to loan to West Bengal Rs 57.13 crores. This was the project estimate worked out in 1977. The very slow pace of work and mounting inflation forced the HRBC to re-estimate the cost in 1980; it was Rs 126 crores and the year of completion 1983. Two years later, another re-estimate by the HRBC placed the project cost at Rs 141.10 crores. The Centre, which feels that the figure will not be less than Rs 150 crores, refuses to bear the additional cost. It points out that once the final estimate of a project has been approved, any cost escalation thereafter will have to be borne by the State concerned.

To date, the Centre has sanctioned Rs 48.99 crores, which includes the 1982-83 allocation. Under the original agreement, a sum of Rs 8.14 crores is still due. But how and when the remaining Rs 83.97 crores is to come to meet the HRBC estimate of Rs 141.10 crores is still up in the air.

Many of those connected with the project believe that if this Centre-State dispute continues any longer, the bridge cannot be completed even by 1986, the most recent target.

Gautam Bhaskaran

"The Taming Of The Shrew"

An anti-view of "Dacoit Queen" Phoolan Devi's surrender.

By Vithal C. Nadkarni

—Ajaykumar

THE redeeming moment of the tamasha, the "Dacoit Queen" Phoolan Devi's surrender in Bhind, came when a jaunty activist slipped past the police cordon, grabbed the mike on the dais packed with VIPs and started denouncing the "lionised thugs". The authorities promptly switched off the microphone, muzzled the speaker, who was identified as a State Yuva Lok Dal leader, and hoisted him off the scene For added measure, they assaulted the press photographer who was attempting to record this astounding performance going on before the Madhya Pradesh Chief Minister Arjun Singh himself! (He later said those responsible for the assault would be sternly dealt with Does that mean we are going to witness yet another surrender?)

Strange how familiarity makes the most macabre events seem mundane Take the Behmai carnage Two years ago it appalled the entire nation It was headlined in the strongest (and blackest) terms The then Chief Minister of Uttar Pradesh, Vishwanath Pratap Singh, staked his job on the success of his one-point anti-dacoity programme He failed His own brother, a High Court judge no less, and nephew were gunned down by dacoits in an "accidental encounter" in the forest where Justice Singh had gone for shikar When dacoits struck again at Damastipur, V P Singh quit in disgust, thereby providing grist to the relentless monster that spews out headlines The resignation, however created an enormous backwash of public sympathy for Vishwanath Pratap Singh (Mrs Gandhi apparently took heed of this when she inducted him in the Central Cabinet after the recent reshuffle) Phoolan and her cohorts were being reviled more than ever before But public memory is proverbially short With newer (and "hotter") events capturing public attention, the sense of outrage created by the Behmai mass murders has inevitably waned And now it has been completely swamped by the euphoria and publicity following Phoolan Devi's surrender

So Phoolan rules the media waves—but only momentarily Her hold on the public imagination was more enduring when she was a "faceless beauty" unseen by anyone save her victims and paramours That legendary "Dasyu Sundari" (Dacoit Beauty) shrivelled and died the moment Phoolan stepped into the blaze of public scrutiny Left behind is a short, frumpy woman in a police uniform, full of tantrums and obscenities This girl with the chinky eyes, with the red headband and shawl, may look like a Dasyu all right But she is no sundari! (After seeing her some correspondents complained of a "letdown" But for this the Press itself is to be blamed for enhancing and distorting the myth of Phoolan Devi as a Circe, leading a pack of 'brutes.)

Perhaps in her "ordinary" avatar Phoolan is even more terrifying Because you don't have that nebulous fantasy to fall back on The mother of all that legendary terror is right before you—ill-tempered, abusive, defiant, wilful five foot shrew of a woman So when you meet her don't flinch Also don't even dream of reaching out to touch her she may snap your hand off or you might get clobbered by her friends!

Actually, *baghis* (fugitives, dacoits) in mufti look like ordinary folk And in the ravine-ridden Chambal where *chandols* (larks) rise like bullets from a Mauser into the sky, a *baghi* is nothing special You may cross the Jamuna with one and yet not recognise him in the gaggle of gossiping *gharwalis*, singing *mallahs* (boatmen) and *khewats* (fishermen) in your barge

Thus, lacking the distinguishing "Mark of Cain", any man or woman in the Chambal could be a *baghi*! (As Hitchcock has so masterfully shown, when evil wears an "ordinary mask" it becomes more terrifying By the same token, Klaus Barbie, the notorious Nazi Butcher of Lyons, who was recently arrested in Bolivia, produces greater shock and revulsion *because* he looks like a lovable old grandfather He is a travesty of all those nice silverhaired gents whom you meet in the park (and who are nice to children and animals!)

How to explain the pervasive power of the Phoolan myth? First of all here we have a female dacoit But then there are other women in the business of banditry The vital difference is that Phoolan has always been "close" to a gang leader, be it Vikram Mallah, Babu Gajjar, Baba Mushtaqueem or her current lover Man Singh Some of their macho has rubbed off on her And she has vicariously acquired power So much so that in public imagination *she* is the superwoman, the leader of the pack (Actually in one interview Phoolan Devi says the Behmai murders which made her most notorious were masterminded by a team member called Ramavtar)

Phoolan Devi's extra notoriety is also due to the fact that throughout her active career she was "faceless" The police did not have her picture So the myth of her extraordinary beauty spread and greatly romanticised her legend Hasina who was shot and stripped naked in a police "encounter" was more beautiful than Phoolan So is Kusuma Nain, the joint mistress of two bandit leaders But there is something catchy about the name Phoolan (flower), unlike 'Kusuma Nain' which means flower eyes Notice how an Amul butter ad effectively used it Stop Phoolan' Around!

Moreover, a promiscuous aura clung to Phoolan even *before* she became a dacoit It has obscured the tragic events in her life Her failed marriage with a much older man, the family feuds resulting in the loss of her property, the arrest (and possibly, brutalisation) by the police on an allegedly trumped up charge The men Phoolan turned to only exploited her There is some evidence to show that she resisted an impulse to commit suicide and the overtures of the dacoits who wanted to ' keep" her

But, even with all this, by Chambal standards, Phoolan's life was not exceptional It was only after Behmai, when she turned her wrath on the village where she was allegedly gang raped for 23 days, that her myth began to grow by leaps and bounds (or as a punster may say by rapes and rounds!)

Phoolan Devi's exploits take away your breath by their sheer effrontery and magnitude And they were not executed surreptitiously She took part in the slaughter of not one or two men but a whole herd of them in broad daylight, spitting as it were on the face of the law And what is more she got away with it She was always on the move—in Nepal in all the districts of UP, in the Jamuna ravines —always eluding the police (who as authority and establishment figures are saddled with a flat foot image the world over)

Some people see Phoolan as the gutsy "underdog" who bit back at a repressive, exploitative society Others write off the Behmai murders in casteist terms—it is the first and the only massacre of caste Hindus in the history of the Chambal valley! Our ambivalent attitude to her is such that no one comments when Phoolan thanks Bhagawati Maa (Goddess Durga) for having protected her However, the UP police say she should be thanking the MP police and also the Chief Minister Arjun Singh who got the maximum political mileage out of Phoolan Devi's "surrender" In recent months, Phoolan Devi was increasingly under pressure Her "fearsome" gang was reduced to a ragtag rump And the constant pressure by the police was beginning to tell Twice she escaped by the skin of her teeth In fact her capture or death was imminent when she dramatically surrendered

The unseemly row between the MP and UP police apart, the shrew has been tamed She can't revert to her wild ways now The stuff of her myths, once potent, has now been irreversibly denatured ■

**Interestingly, the moment Phoolan went to Raxaul (on the Nepal border) the Government of Nepal put up a prize of Rs 1 lakh on Phoolan Devi's head, while our State Governments were content with a few thousand rupees*

Art

A Treasure House Of Tribal Art

METAL MAIDENS (right and above)

by Shamsuddin

IN 1962 Niranjan Mahawar, a poet from Raipur, was on a visit to Jagdalpur, the district headquarters of Bastar. He was going to help his father, who had a rice mill there. "I was photographing a tribal girl combing the hair of her sister," says Mahawar. "She started laughing and her laughter was so natural—like a bubbling mountain brook. The girl had a comb made of bamboo spikes. I asked her who had made the comb and she replied that she had made it herself. It was a beautiful comb—a fair representative of tribal art. I offered her two rupees for it. At first she refused to sell it. But the people around persuaded her to give it to me. Ultimately she agreed and I gave her a ten rupee note. She didn't have change—in the whole village no one had change! The girl returned the note and gave me the comb free.

"It was an entirely new experience—a village where nobody had ready cash. The villagers had little things and small belongings in their huts. But they were happy, relaxed, so normal and so cheerful that I realised with a pang that here was a civilisation quite different from

ours. It was an idyllic way of life: one lived in harmony with the earth and the plants unencumbered by money or material needs."

Mahawar began to visit tribal villages during his business trips. He also began to collect their art. Today his house is a veritable treasure trove of tribal art. A number of experts unanimously agree that it should be preserved in a national museum. The shelves of Mahawar's drawing room are filled with the precious tribal creations. Mahawar says: "The art pieces are lying in every nook and corner of the house. All available space in the house has been occupied by cupboards, almirahs, trunks and boxes all full of my collection." Twenty years of searching and collecting have yielded over 1,500 objects from the length and breadth of Bastar.

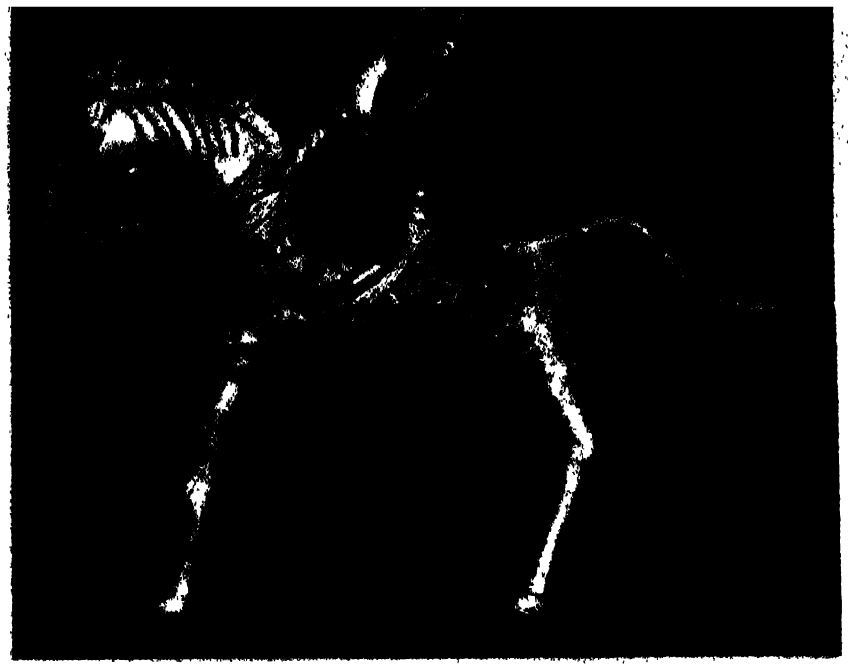
Mahawar says that Bastar has a very interesting tribal population free from "civilising influences". It still retains its "primitive" vigour, charm and simplicity. Handicrafts in that area are merely the outcome of their social needs. Hence the products have the quality of a living craft, in tune with the life of the people. In most other places including some parts of Bastar, this "living" quality has been lost as they produce their articles with an eye on the city buyer.

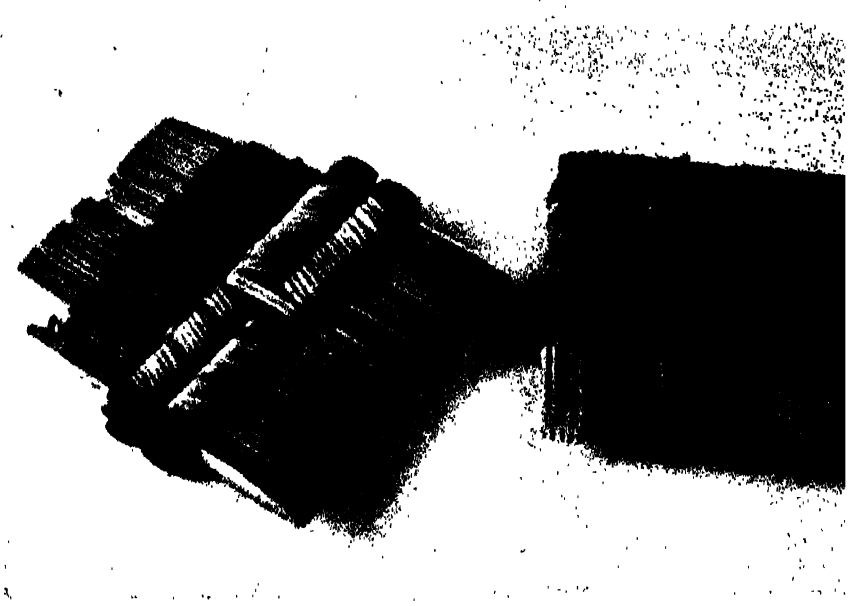
Mahawar's collection includes musical instruments, tobacco pouches, tools and weapons, ornaments and utensils, combs and hair pins, lamps, horses, elephants, camels, bulls, tigers, necklaces and even statues of gods and goddesses. They are mainly made of stone, wood, terracotta and metal. Bronze and brass are used for making metal objects. In rare cases copper is also used. The objects are balanced in composition, dextrous in line and deal with mythological and religious themes and they speak very highly of the technical skill and aesthetic sense of the tribal people. Their art depicts people's hopes and despairs, happiness and grief, fear and belief. It is an integral part of their life.

"This traditional craftsmanship is our link with the past and constitutes our cultural heritage," says Mahawar. "But, unfortunately, the inroads of 'civilisation' into tribal life are causing its extinction. As Dr Elwin points out: 'Open a school in a village and the people cease to carve, start a project and they remove their lovely ancient ornaments.' "

On being questioned about the various programmes being introduced in tribal areas, the poet confesses, "Nowadays so many programmes for their economic development and health have been launched. Special Tribal Community Development Blocks have been opened in which emphasis is laid on the promotion of tribal crafts and education along with better methods of agriculture, sanitation and health. The Government has found a good foreign market for their crafts and is endeavouring to improve the economic condition of the tribal people.

"But commerce has reduced good artists to artisans. Since the late '60s and early '70s after the Madhya Pradesh and the All India Handicrafts Board became active in Jagdalpur, there has been a steady deterioration in the quality of craftsmanship from Bastar. Foreign orders have ruined whatever individuality that remained and the artist today has been reduced to a human machine.





TRIBAL COMBS (above) *and* (top) *a deity.*

TERRACOTTA NANDI

"The artist produces the same kind of piece, from exact specifications, over and over again. It has killed his freedom, and what is worse, he earns only the bare minimum. All this is being done in the name of promoting tribal art! Moreover, modern civilisation which is a materialistic consumer culture, has total apathy towards tribal society. We think these tribals are *janglies;* they have no aesthetic sense, no music, no poetry, no literature, no drama, no dances and nothing of the fine arts. We have contempt for them. We don't want to know about them nor are we concerned about preserving their culture. And if some people come to 'know' about it, they do so with a sense of superiority. They tell the tribals to do things according to their 'civilised' ways. They meddle into art without knowing anything about it and its background. These city-slickers lack true appreciation of art. The 'crude' forms are looked down upon. Their toys, their sculptures, music—all are considered 'rustic' and of no importance.

"The urban elite is educated and trained in imported technology. The people from this particular class hold Government positions and are in decision making bodies. They hold the opinion that Indian villagers are backward because they are ignorant about modern technology and the latest scientific achievements.

"Actually, the British started art exhibitions in India. They also took the initiative in preserving our monuments and old ruins. They opened museums to preserve rare exhibits. There was a lot of art in our monuments, temples, mosques and churches. In villages music, fine art and magic flourished but tribal and folk art was neglected. This shows the cultural bankruptcy of our society. We are totally ignorant about it. Some people who were interested in tribal art gave it a commercial twist to earn foreign exchange. The All-India Handicrafts Board, without deep insight, exploited only the commercial aspect of their art and introduced new designs and motifs. They might have earned some money but they are solely responsible for destroying our rich traditions and cultural heritage. The sculptures of gods and goddesses, the intricate designs on textiles and the beautiful carvings are not crafts but they are fine pieces of art. These agencies, simply to spin money, have started manufacturing on a mass scale, of a standard size and weight and this has crippled the imagination and creativity of artists."

Mahawar has manifold problems about preserving his treasure which ironicallly is appreciated more by the foreigners. Mrs Jenevev Dourno, Curator of the *Museum of Man* in Paris, once came to India to record the tribal music of Bastar. Mahawar helped her in the recording. It was a great venture and as a result of that a long-playing record was prepared. Mahawar says, "When she visited my house, she was astonished to see my treasure and said that such a great treasure of tribal art should be preserved in a museum."

"Since then," Mahawar says, "I am worried about my collection because I don't have enough space to keep my objects; there is also the fear of pieces being stolen from my place. And now the greatest problem is how to preserve them all?" ■

That's Business

From Our Special Correspondents

MR N. RAJAGOPAL, Joint Secretary, Union Ministry of Agriculture.

FOUR IAS officers of the joint secretary rank have resigned and gone into business. They are Mr N Rajagopal, Joint Secretary, Union Ministry of Agriculture; Mr S. Padmanabhan, Commissioner, Aurangabad Division, Mr Ranjit Singh Pal, Managing Director, Handloom and Handicraft Export Corporation, and Mr Ashok Mubayi, Special Assistant to the Minister of External Affairs.

Mr Rajagopal, it seems, could not make two ends meet on his salary as a joint secretary. This was, of course, before the recent pay hike, which has taken a joint secretary's emoluments to over Rs 4,000 plus perks. Mr Padmanabhan's squeamish nostrils could not take the stink any more during the heyday of the Antulay regime. Both have joined Bharat Forge of Pune, Mr Rajagopal as Vice-President, Business Development, and Mr Padmanabhan as Corporate Adviser. Mr Pal has joined Bombay Dyeing. Mr Mubayi's reason for quitting as well as his present pursuits are not clear because of his evasiveness, but it appears that he is trying for a toe-hold in some oil drilling contract

Started with technical collaboration from SISCO (USA), Bharat Forge is today a leader in steel forging and crank-shaft technology. Its new axle plant is coming up near Mysore. The company has also secured government approval or a brake systems plant, which would be located in Jalgaon, a backward district of Maharashtra, and built with technical collaboration from Bendix of USA.

Torrent Of Hypocrisy

A wag insists that he dreamt the following encounter with Mr Natwar Singh, Secretary-General of the Non Aligned Conference in New Delhi

Wag: A man from Communication Control Systems, a New York-based company, is looking for you.

N.S. What does he want?

Wag: You see, they are marketing their latest gadget, a portable electronic lie detector, which operates on the principle that emotional stress can be indicated by a disturbance in the normal pattern of voice impulse and gives a light signal to alert the operator about a deceptive statement.

N.S.. How do we come into the picture?

Wag: Well, they want to cash in on the torrent of hypocrisy that is about to be unleashed.

N.S.. Rubbish, what do you mean?

Wag. Well, day in and day out you chaps talk about economic cooperation, but how can there be any such thing when the oil haves among the non-aligned are breaking the economic back of the have-nots. Just try asking the haves for a preferential oil price for the have-nots and they will tell you where to get off."

India 'Partner Country' At Hannover

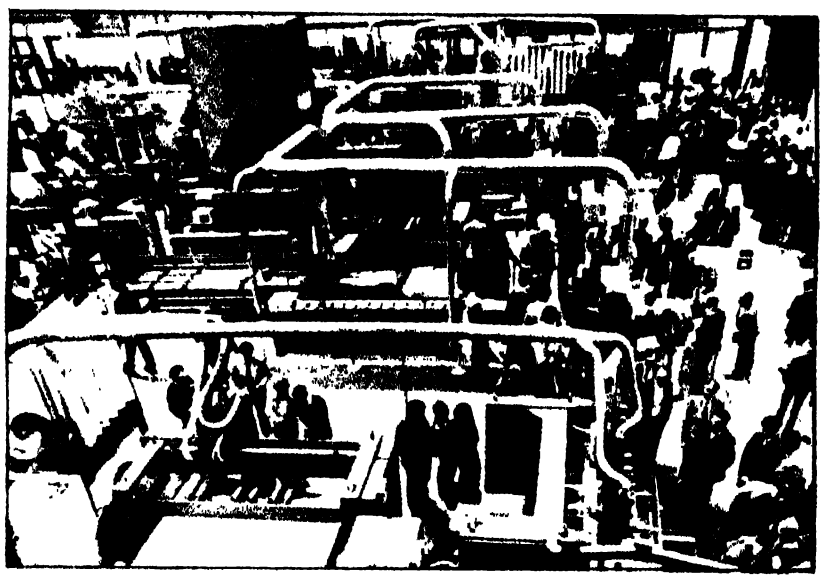
The week-long Hannover Fair, starting on April 13, threatens to become the biggest international exhibition so far of man's technological attainment. About 5,500 exhibitors from nearly 50 countries will display their latest wares over an area of 400,000 square metres. The organisers expect more than half-a-million representatives of trade and industry from well over 100 countries to visit the fair.

The companies participating from India are Larsen and Toubro (switchgears), Forbes (handtools) and K.G. Khosla Compressors (air compressors). This, admittedly, adds up to only a modest line-up, but what is of interest is the decision of the Hannover Fair authorities to adopt India as a "partner country" for 1984. The decision is undoubtedly a recognition of India's technological and industrial capability.

Explaining the concept of a "partner country", Mr K.V Schuurman, Regional Secretary, Indo-German Chamber of Commerce, says: "Participation in the fair is not country-wise but technology-wise. In 1980 it was decided to each year invite one country from among the group of nations which cannot be categorised as fully developed but which nevertheless has acquired notable industrial proficiency. The earlier partner countries were Brazil (1980), Greece (1981) and Mexico (1982). This year it is Portugal. The partner country is given a special hall where it can project all aspects of its industrial development. Brazil, for example, came with 200 companies. The Trade Fair Authority of India should not lag behind when India's turn comes next year."

MR K V SCHUURMANN, Regional Secretary, Indo-German Chamber of Commerce.

AERIAL VIEW OF THE HANNOVER FAIR which starts on April 13



Senseless Overregulation

That India, the world's largest producer of sugar, should have sugar control is an example of the sort of senseless overregulation that hangs like a millstone round this country's neck. It is estimated that the availability of sugar at the end of the current season will be 110 lakh tonnes, 80 lakh tonnes production plus 30 lakh tonnes carry forward stock. Yet, neither the Government nor the sugar industry is willing to countenance the suggestion of decontrol, thereby strengthening the impression that both have a vested interest in the continuance of a mutually profitable nexus.

If sugar is decontrolled, prices will fall, but not necessarily the heavens. Let us visualise the scenario. Domestic consumption should account for 65 lakh tonnes. At least 6.5 lakh tonnes could be exported under the international sugar agreement. The Government could make open market purchases to build a buffer stock of 18.5 lakh tonnes instead of dallying with a molehill of 5 lakh tonnes. That would still leave a surplus of 20 lakh tonnes. This would trigger a process of adjustment. The price of sugar would fall, the area under sugarcane would be curtailed and supply and demand would find their natural equilibrium at, say, Rs 3.50 to Rs 4.00 a kilo. Despite an initial period of dislocation, this would be an improvement over the present control-ridden, corrupt system.

MR DHRUV SAWHNEY, President, Triveni Group.

An articulate voice in the sugar industry is that of Mr Dhruv Sawhney, who belongs to the new generation of well-educated and sophisticated but pushy leaders of business. President of the Triveni Group, Mr Sawhney feels that decontrol at the present juncture would lead to a disastrous plunge in sugar prices, causing curtailment of production and scarcity, and cites the failure of the Janata experiment. But what he overlooks is that the Janata regime made the mistake of neglecting to build up a sizeable buffer stock. However, Mr Sawhney asserts: "There can be no question of collusion between the Government and the sugar industry. On the contrary, the industry is being squeeezed between the downward pressure on sugar prices and the high political prices of cane fixed by the States and is likely to run up a loss of Rs 400 crores. Unless the industry gets tax relief, something will give."

The Triveni Group, whose forte is engineering, has, in the face of global competition, bagged a $29 million turnkey contract to build a big sugar mill on the Indonesian island of Sulawesi. "We are running on schedule and hope to hand over the mill to the Indonesian Government towards end of 1984," says Mr Sawhney.

Arphi—Sound Business

Two decades ago, anyone needing a hearing aid had to get one from abroad. Today, he simply has to ask for an Arphi model. As pioneers in the indigenous manufacture of individual hearing aids, group hearing aids, speech trainers and audiometers, the Arphi group has set a pace that has taken its turnover to Rs 2 crore a year.

It all started with a parliamentary question in 1961, put to the then Union Health Minister, whether there were any manufacturers of hearing aids in the country. Since the Minister's answer was in the negative, Mr Phiroze Pestonjamas, Managing Director of Arphi Electronics Pvt Ltd, wrote to him expressing his willingness to embark on an enterprise if the Government would support him. Simultaneously, Mr Pestonjamas contacted a Danish firm, Oticon, reputed to be pioneers in the field of hearing aids.

Arphi's competitors consist mainly of indigenous manufacturers, like Novax and Elkon. Recently, however, Phillips has also entered the field. The domestic market is not without its problems. Import duties on essential components vary from 15 per cent to 160 per cent. Central excise is 30 per cent on loudspeakers. Even hearing aids, a welfare item, carry a sales tax of 4 per cent in Maharashtra.

Russian Language, Global Thrust

by S.K. Malhan

THERE are 2,800 living languages in the world today. Out of these, 200 languages are spoken by less than a million people, 70 by 50 million people and 13 languages are used by more than 100 million people. Russian is among the latter, more prolifically used languages. It is studied in more than 100 countries with a total number of more than 20,500,000 students. It has long since been adopted by the system of public education in 21 African countries, 10 countries in Southern and South-East Asia, 16 Middle East and 9 Latin American states. In advanced countries where English is more popular as a foreign language, some 2,500,000 school and college students study Russian. It is also a working language in the United Nations along with English, French,, Spanish, Chinese and Arabic. The number of persons with an adequate knowledge of Russian has grown from 500 million people in 1967 to approximately one-seventh of the world's population now, including of course the USSR, which constitutes less than one-sixteenth of the world population.

In the Soviet Union, Russian is the mother-tongue of 59 per cent of the population, and it is familiar in varying degrees to practically the entire adult population. Those who speak it fluently as their second language constitute more than 23 per cent of the population.

No polyglot could possibly master all the languages spoken and written in the USSR. Among these languages are 36 Iberian-Caucasian, 25 Turkic, 20 Ugro-Finnish, 24 Indo-European, 22 Mongolian, Tungus-Manchurian and Paleoasian and others. All of them are rated equal regardless of the number of people who speak them. All of them keep developing since none of them are allowed to die out. The internationalisation of the economies and cultures in the single system that has developed in the USSR makes it an effective means of communication between nations in the face of such linguistic diversity.

Third Most Used Language

Though citizens of the USSR are free to choose any language as a convenient instrument of mutual understanding, records have shown that Russian is by far the most suitable choice. Today the Russian language occupies the first place in the USSR and the third in the world (after Chinese and English) with regard to the number of people who use it. However, the number is not the only important factor.

Back in the 19th century many writers and translators claimed that Russian was "the most powerful of the Slavic languages", (Warnhagen von Ense, Germany), "the richest of the European", as if "especially created to express the subtlest shades of meaning", "possessing remarkable laconism combined with lucidity" (Prosper Merimee, France). "It is the language of a great nation" wrote the Belgian linguist Charles Sroleo in 1914. Not so long ago in his book "Profiles of the Future", Arthur Clark, a British scientist and science fiction writer, raised the question: "Will Russian or English be the principal language of the 21st century?"

At present more than half a billion people know Russian,in varying degrees. Together with a very limited number of other languages, Russian plays a very special role in the world as the vehicle of vitally important information: scientific, technological, ideological, literary and journalistic. More than one-third of the world's scientific and technological literature is published in Russian. Nowadays, with the free choice of languages for communication and education, a profound study of sciences is possible primarily through Russian. It also plays a tremendously important role in the political and economic spheres of international cooperation. Comprehensive economic and cultural cooperation between nations and exchange of political and technical knowledge leads to the enrichment of languages, and brings them up to the current level of social progress.

Simple And Easy

It has been confirmed through practical experience, that it is no more difficult than the other primary world languages. The London *Financial Times* also commented on the growing popularity of the Russian language in all countries. It is not only because tales of its being "extremely difficult" have been disproved but because people everywhere are becoming convinced that it is really worth studying in its own right as well as for the sake of the literature that it gives access to.

It is true that the Russian language has much to recommend for it. In the first place, local differences are hardly noticeable since they are expressed in a far weaker form than in the Chinese or German languages, for instance. They do not prevent people from understanding each other fairly well no matter where they live in the world. While in the Rhineland (West Germany) alone, dialectical contrasts are to be felt every 40 or 50 kilometres, making intercommunication between the local population and visitors quite difficult at times. The Ukranian and Byelorussian for example, have more in common with Russian than many of the German dialects have with each other.

What is more, almost 90 per cent of the words retain practically full identity with spelling and pronunciation, while in English and French, this is only about 10 per cent. Russian orthography is simpler and more perfect than any other language. It has no signs either above or below the letters and no combination of letters to express one sound—a characteristic feature of the Latin alphabet in all its variants. Many specialists believe it is the best alphabet ever to be created. Most of the alphabets used in the USSR are based on the Cyrillic alphabet considered by many to be the best ever created. It also differs considerably from many other systems, especially the hieroglyphic ones.

The diverse political and economic changes wrought by the 1917 October Revolution have also left an indelible mark on the Russian language. One of the major reasons for the popularity of the Russian language is the role it plays in helping the USSR in its relations with other countries, especially cooperation (economic and otherwise) with developing countries.

Secondly, with the increase of the numbers of newly-freed countries and the popularisation of national liberation movements in Asian, African and Latin American countries the English language is fast losing its status, to be replaced by national languages of the respective countries. Moreover, English in these countries, is considered a by-product of colonialism. On the other hand, Russian is looked upon more favourably.

Russian also has a very bright future in India. At present it is the second most popular foreign language, the first being English. In 1946, Delhi University opened the first centre which offered part-time courses in Russian.The Allahabad University followed suit in 1948. Since then the number of such universities and institutions are rapidly increasing. Today more than 50 universities and institutes in India offer courses in Russian, of one type or the other. That apart there are hundreds of private centres where Russian is taught.

Recently, a 16-member Indian delegation went to USSR to attend a seminar of the International Association of Teachers of Russian Language and Literature. It was attended by 70 teachers of the Russian language from 25 Asian, African and Latin American countries. Set up in 1967 not only with the aim of popularising the language but also of tackling research, scientific, methodological and purely organisational problems, it was named after A.S. Pushkin in 1973. The latest study-aids, glossaries and audio-visual courses are utilised at this institute which is also patronised by specialists in Russian studies who wish to undergo practical training at the institute. ■

....And Then Man Created His God

by Jatindra Mohan Ganguli

I OFTEN wonder why man conceived God in his own image, having his physical shape and form, and his feelings and sentiments, and his language too.

I look around. Nothing common to God and man appears in the creation. God can create, man cannot. He is mighty; He moves heaven and earth, stars and galaxies Man is so weak; he cannot defend and save himself from a little puff of wind, a little shake of the earth. There appears little indeed in the creation that points to any similarity and commonness in the work and activities of God and man—in their skill, ability and achievement.

In one respect, however, there seems to be some commonness—that in respect of cruelty.

Both are cruel, indescribably cruel. God's cruelty is unlimited and inconceivably hard, deep and penetrating. When He fancies to be cruel no softness, no hesitation stands in His way and halts Him. When He creates the blind, the cripple, the deformed; when He contrives sorrow, grief, misery and suffering He exhibits most subtle ingenuity. When He hurls a thunderbolt, or a devastating cyclone or shakes the earth a little for fun, a most fierce and relentless laugh is on His face. When he silently watches, unmoved, one creature killing and devouring another He shows how much harder than steel His heart is.

But his cruelty of His He gave to no other creature except man, and so in gratitude man gave Him his own physical form and worshipped Him.

Indeed, except man no other creature is cruel. All creatures kill for their food according to their nature, needs and requirements. They kill no more than what they need for living and not in excess of that and they never kill for sport and fun, and when they kill they kill as fast as they can.

Man kills not just for food, but also for sport and fun. And in killing he is callously indifferent to the pain and suffering caused to his victim by the manner of his killing. He will tie the legs of the fowl and carry it home, its body and head hanging down from his hand which holds the tied legs. He pins live butterflies and fixes them on a show-table in his drawing room. Man hides and waits under a tree in the dusk to shoot birds coming to nest on the trees. He feeds and tends lambs and calves till they grow up and then hacks them to pieces to eat. And so on. He kills for food, for dress, for sport, for curio collection, for so many purposes, meaningful or unmeaningful, and for no purpose also. He ties a goat to a tree on which he sits to shoot the tiger that comes in the night to pounce on the helpless goat and then boasts of his bravery.

Such and more callous cruelties of man are beyond enumeration. Pages of history are full of them, full of man's tortuous cruelties on animals and insects and on man also. In addition to the physical cruelties which he inflicts on other creatures and also on man, man shows such ingenuity and subtlety in giving terrible mental agony and suffering to other men as compared favourably with the ingenuity and subtleness of God in devising means and ways of giving bitter suffering and pain to His creatures.

Indeed, in respect of cruelty man has been true and faithful to his creater, and that justifies his own physical form to Him and endowing Him with his own nature, his feelings and emotions, likes and dislikes, sense and understanding. ■

Temples of Baroli

The magnificent 7th century temples of Baroli near Rawatbhata, in Rajasthan are in ruins and will disappear from our architectural map unless steps are immediately taken to protect and restore them.

by Dinanath Dube

A SCULPTURE IN RUINS at the Ghateshwar temple.

"TO describe its stupendous and diversified architecture is impossible; it is the office of the pencil alone, but the labour would be almost endless. Art seems here to have exhausted itself, and we were, perhaps now for the first time, fully impressed with the beauty of Hindu sculpture. The columns, the ceilings, the external roofing, where each stone presents a miniature temple, one rising over another, until crowned by the umlike *kullus*, distracted our attention. The carving on the capital of each column would require pages of explanation, and the whole, inspite of its high antiquity, is in wonderful preservation". This narration of Col. James Tod, taken from *Annals and Antiquities of Rajasthan* is about the temples of Baroli, located in a remote area on an extensive plateau of Mukundra, a branch of the Aravalli hills on the Kota-Rawatbhata road

In India, there are numerous temples dedicated to Siva and the important amongst them are located in Varanasi, Ujjain, Rameshwaram, Mahabalipuram and Hardwar. But besides these, there are other temples which are not well-known. Such is the one at Baroli near Kota in Rajasthan. In eastern Rajasthan, particularly in the Kota region and in Malwa in Madhya Pradesh, there is a chain of big Siva temples. The story of these temples starts from the 5th century and continues upto the 15th century. The Siva temples built during this period are Charchouma, Kansua, Baroli, Bhimchouri, Ramgarh and Nagada. The oldest temple is Charchouma built in the 5th century. The Kansua and Baroli temples date back to the 6th and 7th centuries.

Unique Temple

Hardly 30 miles from Kota near the Rajasthan Atomic Power Project, in Rawatbhata is a cluster of temples known as the Baroli Siva temple. This temple which stands on the banks of the Chambal river, is a unique blend of superb craftsmanship, architecture and sculpture. It speaks volumes for the devotional and artistic spirit of the people of the 8th century.

It is believed that Raja Hoon, master of Bhynsror, Fort, built this temple in commemoration of his love for a princess named Pingla, daughter of Raja Somchandra. Raja Hoon belonged to the Parmar dynasty who ruled over Chandrawati. He married Pingla and it may be that the princess ordered the temple in honour of their marriage.

The craftsmanship of the temple resembles Khajuraho. There are small shrines of Devi, Mahesh Murti, Narada and Ganesa around the main structure. The main temple faces east and is 58 feet high with an old-style *shikhar* (top) carrying a *kalasam*. The *shikhar* is replete with carvings. Of particular interest is a carving at the back of the *shikhar* showing a man climbing. The story goes that a thief tried to steal the gold *kalasam* but was turned into stone by Siva.

Nagara Style

The temples of Baroli come under the Nagara style and its architectural sculpture belongs to the period from the 7th to the 12th century. The temples of Baroli, a chain of nine temples come under three groups: (a) Three main temples near the water tank; (b) Five temples near the main temples; and (c) One temple known as *Mataji Ka Mandir*, located one km north-east from the main temples.

Four temples are dedicated to Lord Siva, in the form of Siva Linga, Trimurti, Ban-linga, Siva and Parvati. The remaining temples are dedicated to Lord Vishnu, Surya, Ganesh, Mahishasur Mardani and Vaman. All temples are built of stones, chiselled out of the close-grained quartz rock. The stone has eroded with centuries of wind and rain but even today, the sculptured edges are as smooth and sharp, as if it were carved only yesterday.

All temples have a large sanctum, a vestibule, a portico and a half-portico The main temple known as Ghateshwar

A NAYIKA adorns a pillar in the Ghateshwar temple

CARVED PILLARS in front of the Mahishasurmardani Temple

THE TRIMURTI TEMPLE, a view from the rear

(name of Lord Siva) facing east, is 58 feet high with a *shikhar* on the top of the spire. This *shikhar* of medieval style is adorned with carvings particularly with figures of monkeys in various poses. Lord Siva is depicted in all forms, expressions and actions—formally and symbolically.

The temples of Baroli comprise all principal gods and goddesses. The idols of Sapt Matrakas, Brahmi, Maheswari, Vaishnavi, Kumari, Aiendri, Varahi, and Chamundi are excellently carved. In these temples there are 42 and 22 representations of Lord Siva and Lord Vishnu respectively. The idol of Shesh Sayi Vishnu presently housed in the Government Musuem, Kota, is a large piece of sculpture measuring 7" x 41" Pandit Jawaharlal Nehru was struck by its architectural beauty, when he visited Kota in 1962.

Beyond the main temple is a big portico supported by 18 feet-high decorative pillars. On its doors are images of the rivers Ganga and Jamuna. The great Tandav dance is beautifully depicted on the walls of the temple. *Shringar Chouri*, a 400-feet square structure is also a notable feature.

Badly Neglected

To sum up, Baroli which was glorious in the past is badly neglected at present. The Muslim rulers had damaged the statues extensively. In recent years, according to local residents, a number of statues lying in the temple premises have vanished. The remaining are covered with moss and are apparently uncared for. At present the temple is under the supervision of the Archeological Survey of India There is a lot of concern about the protection of our cultural heritage and promotion of tourism but on the contrary we neglect ancient and rich monuments like Baroli It is desirable that the State Government and the Archeological Survey of India should set up a Joint Committee urgently, to chalk out a plan for protecting the temples of Baroli. ■

Before one goes through the gate
one may not be aware there is a gate.
One may think there is a gate to go through
and look a long time for it
without finding it.
One may find it and
it may not open.
If it opens one may be through it.
As one goes through it
one sees that the gate one went through
was the self that went through it.
No one went through a gate.
There was no gate through.
No one ever found a gate.
No one ever realised there was never a gate.

Early Printing In India

by Nirmalendu Das

THE concept of reduplication or reproduction, which lies at the basis of the technique of printing, has been known in India since ancient times. Both positive and negative seals have been recovered from the great Indus Valley Civilisation. However, the implementation of these ideas did not take place in India; the origin of the art of printing can be traced to China. It was the Chinese who first invented printed books and printed pictures by means of wood blocks and ink.

In Europe, printing with the use of movable types began in the 15th century, although block printing was known much earlier. But the technique of book printing with the help of movable types and a printing press was the real turning point in the history of printing. From the 15th century onwards, printing spread all over Europe, and to make printed books more attractive, publishers added printed pictures. All these printed illustrations and designs were made out of wooden and metal blocks using the technique of engraving and etching. Thus, the history of actual printing starts in Europe. The artists of this period, like Michael Wolgemut, Durer, Hans Baldung Grien, Hans Holbein and Pieter Brueghel took great interest in printing.

The technique of printing evolved in Europe required continuous research in the field. The technique of lithography was invented in 1796 in Europe, the use of photo-sensitive materials started during the 1820s; gravure and rotogravure in the 1890s. In 1904, the American printer Ivo W. Rubel discovered the process of offset. Serigraph started during the 1930s in Great Britain and the United States. With all these new techniques of printing, artists were able to explore their ideas in the field of graphic art.

Jesuit Pioneers

Among the Asian countries only Japan and China played a major role, especially in the field of colour woodcuts and wood engravings. It was on September 6, 1556, that the technique of mechanical printing by means of a printing press came to India for the first time. Of all the foreigners who settled in India, the Portuguese Jesuit missionaries in Goa were the first to think of printed books to promote Christianity. So they imported a wooden printing press and movable types from Lisbon. Soon the missionaries established two presses at the St Paul College and at Rachael (a village) in Goa. From 1556 to 1561, five books were printed in the local Konkani language with the help of movable types.

'VIRAT-SARUP', planograph, Ravi-Udaya-Vijaya Offset Litho, Ghatkopar, Bombay.

'SABITRI-SATYABAN' lithograph (stained in colour), Calcutta Art Studio, Calcutta

João de Bustamante, a Spaniard, who printed the five books, may therefore be considered the pioneer of the art of printing in India. The credit for preparing the first types of an Indian script goes to João Gonsalves, another Spaniard, who accompanied Bustamante to Goa. He was the first to make types of Tamil letters, which led to the first book in an Indian language, *Doutrina Christa*, printed in 1578 at Quilon.

Between 1556 and 1674, more than 25 books were printed in Goa. Most of them were in Roman and Konkani, the latter with Portuguese characters.

Like the European history of printing, the art of engraving illustrations was also developed for printed books in India. Some of the books printed in Goa bear historiated woodcut initials, ornamental woodcut initials and monograms. In 1568, the first illustrated cover page was printed in Goa. The illustration was made out of wooden blocks and followed the "relief" printing process. The credit for the first "intaglio" printing in India goes to the Danish missionary, Bartholomew Ziegenbalg. He published a book called *The Four Evangelists and the Acts of the Apostles*, printed in Tranquebar during 1714, and this book bears a printed design in brown, made from a metal plate. It marked one of the first illustrations printed in colour in India. During 1716, another book by Ziegenbalg, *Grammatica Damulica*, was printed in Tranquebar. This book is the earliest evidence of "intaglio" printing in India with pictures.

Printing activities started in different parts of India from the middle of the 16th century to the end of the 18th century. In Goa, Quilon and Cochin, printing was under Portuguese missionaries. In Bombay, from 1674 to 1675 it was under the efforts of Bhimjee Parekh. From 1712, printing activities were started in Madras by the Danish missionaries. In Bengal, a printing press was started by the British government during 1778.

→

Boost During British Rule

Printing seriously flourished in India luring the British rule. The 19th century vas a turning point in Indian history because of socio-economic, political and ultural evolution. With the growing demand for education among the merchant class and the middle class, printing developed into an important activity

Just as the Portuguese had started mechanical book printing in India, the British started printed pictures The reproduction of pictures on a single sheet of paper began in India during the last part of the 18th century in cosmopolitan Calcutta.

As the East India Company expanded its activities in the field of politics and commerce, they took special interest in scientific enquiries pertaining to geology, topography, natural history, ethonology, antiquities and the manner and customs of India

To record all these by means of drawings and paintings, amateur and professional foreign artists were attached to the East India Company From 1767 to 1820, more than 60 amateur foreign artists came to India They were of British, French, Dutch, Italian and German descent Apart from the professional artists attached to the East India Company, there were several foreign artists who started drawing and sketching in water colour, pencil and even in oil to record Indian scenes, antiquities, manners and customs. For the first time in India, drawings and paintings began to look realistic

To meet the growing demand for these drawings, the professional foreign artists in India began to publish albums of their original works by means of reproduction in etching, engraving and later on in lithography, which meant a wider circulation. Rodwell and Martin Smith Elder and Co of England printed the albums and sent them back to India William Hodges, a British artist in India, sent his works to England for reproduction in engravings, and his *Selected Views In India* was the first published album of its kind

The credit for publishing an album of 12 original etchings should go to Thomas and William Dannial, two British artists who came to Calcutta in 1786 Between 1786 and 1788, they published William Dannials' *Twelve Views of Calcutta* To publish this album they took the help of Indian artists and technicians whom they trained

Like the Dannials, William Baille and Solvyas also took the help of Indians for their work This was the way Indian artists and craftsmen learned the art of reproduction

Some of the foreign artists started teaching the art of graphics, oil painting, portrait painting, etc, in Calcutta and the technique of graphic art spread fast and wide

Book printing flourished due to the growing demand among the new educated and middle class society of British India To make printed books more attractive, publishers added printed pictures of Indian scenes and subjects Wood and metal blocks were used for such pictures. To fulfil the demand of the graphic market, a new class of artists was engaged for the art of reproduction They were Karmakar by caste, and the technique of engraving was their traditional family business

Graphic Art

Graphic art, especially engraving and etching, flourished in metropolitan Calcutta during the beginning of the 19th century One of the first printed illustrations by an Indian artist is in a book called *Annodamangal*, printed by Ferris and Co of Calcutta in 1816, the engravings on metal plates were done by Ramchand Roy.

During this period several books were published with printed illustrations done by Indians like Kashinath Mistri, Harihar Bondhopadhyay, Bishamvar Acherjee, Madhav Das, Birchandra Dutta, Rupchand Acherjee, Ramdhon Sarnakar, Ramsagar Chakravorty, Panchanan Karmakar, Manohar Mistry and others

The reproduction of a picture by means of lithography was started for the first time in Calcutta in 1822. During the 1830s, lithography became popular among the publishers of India due to its economy and easy facilities. Lithography spread all over India after 1840, especially upper and central India

The credit for publishing a picture album in lithography should go to Charles D Orly who started his private litho press named Bihar Lithography near Patna during the 1820s and published his album, *The Bihar Lithography Scrap Book*, between 1928-30

Artist John Grantz established his lithography press in Madras Presidency during the 1830s from where he published *Views of Madras* and pictures of Indian customs

From 1870, there were several private lithography presses well known for the reproduction of pictures by Indian artists Mention must be made of the Calcutta Art Studio, the Dinna Printing Press, the Imperial Art Cottage, the Kansaripara Art Studio, the Chorbagan Art Studio, the Bharat Chitrasala and the Chitra Silpi Company. In Dhaka, the Bengal Art Studio and the Kanak Kohinur Factory were famous, in the Bombay Presidency, the Raja Ravi Varma Press and the Ravi Udya Press; the Bolton Fine Arts Litho-works, the Chitrasala Press, the Deccan Printing Works and the Poona Litho Works in Pune and the Chitrasala Press in Kanpur

The reproduction of black and white pictures and even colour ones, from these presses soon created a special market in India. They began to publish on a variety of subjects, from mythology to science and from fiction to text books These lithographic pictures were popular among the middle and lower classes of urban and rural India

Graphic art was introduced as a subject in art schools around the country from the middle of the 19th century, especially in the Madras Government Art School, the J.J. School of Arts, Bombay, and the Calcutta Art School

Reproductions by means of the modern technique of half-tone blocks began in India during the second quarter of the 20th century

Printing as a creative medium began in Santiniketan in Calcutta during the 1920s The credit should go to Mukul Chandra Dey, the father of printing in India In 1922, the members of the Oriental Art Society organised an exhibition of the works of German expressionists More than 55 original graphics were displayed in the exhibition which brought contemporary Indian artists in contact with original creative printing for the first time. ■

It's A Stick-Up

by David Gunston

WOMEN in America have taken to wearing strips of it on their foreheads whilst doing their housework, believing that it prevents them frowning, and so stops wrinkles forming.

This is just the latest of the 1,000 or so known uses of the stuff, of which the world now uses many millions of miles every year Transparent sticky cellulose tape.

It has been around, incredibly, for over 50 years now. But we all take it so much for granted, accepting it as just another modern scientific aid to easier living, that we give no thought at all to its origins

Worse still, we pay no tribute at all to its American inventor, Richard G. Drew, who incidentally had hardly any of its present manifold uses in mind when he devised it. So here, for the record, is the cellulose tape story It is a tale of perseverance as well as of vision.

In 1921, Drew, fresh from college, was a young dance-band banjoist. He had some engineering training, and to his surprise was accepted from 15 applicants when he answered a newspaper advertisement inserted by the Minnesota Mining and Manufacturing Company, of St Paul, USA, who wanted a second research laboratory assistant.

The firm then made sandpaper, and one of Drew's first tasks was to try out experimental batches of new kinds in local motor re-spray workshops In those days, the two-tone car was just coming in, and everyone wanted one, but the paint-prayers had no really satisfactory way of masking one half of each car as they sprayed the rest. They often made their own glue and gummed paper and tapes with it.

None of these tricks really worked, and some adhesives tore away the paint when the masking strips were removed.

Drew was impressed, and one day promised an irate paintman that he would make him a better tape, and with the sublime confidence of youth set about to do just that.

"This looks like flypaper," said the man when Drew turned up soon after with some wrapping paper strips coated with sticky vegetable oils. Together they tried it out on a big blue car. It worked fine—but still ripped off a blister of paint when removed.

The young inventor went back to his drawing-board undeterred, spending six months trying linseed oil, naphthas, resins and chicle gum without much success. Finally he modified ordinary cabinet-maker's glue, keeping it sticky with glycerine.

This mixture did the trick, but the next problem was how to keep the tape in a roll without it sticking to itself. Drew solved this—or so he thought—by inserting butter muslin between each layer.

With a masking tape two inches wide, this made a cumbersome roll, but it stuck well to the car bodies and peeled off satisfactorily after use. At first, the company applied only half-an-inch of adhesive to each edge of the tape, but when the workshop men commented, "Why be so Scotch with the glue?", they coated the whole surface—and exploited the complaint by christening their product "Scotch tape."

Unfortunately, further snags were to hit them and their keen young inventor. The muslin lining proved too bothersome, and when the masked car bodies were baked to set the cellulose enamel, the tape often melted.

After 18 months of fruitless work, the whole idea was shelved—and Drew went back to studying sandpaper

But he did not forget his brainchild, and soon was testing out a new plastic base for the transparent tape—and a new glue. A few months later he found what he wanted. It was now 1928.

One last snag remained to be ironed out. A way had to be found to roll up the tape into handy form without letting the glue stick to the reverse or uncoated side of the tape when it was rolled.

Drew took two more years to solve this final problem. In 1930 he triumphantly produced a tape coated on one side with the sticky adhesive and on the other—with nothing. For by using a special form of cellophane he had found that the glue stayed on one side and never came off on to the other.

Since then, of course, the all-so simple tape in one or other of its myriad forms—plain, coloured or fancy—has become part of life the world over. So next time you use some spare a thought for Dick Drew, the nicest man ever to say, "It's a stick up!" ■

Health

The Yellow Baby Syndrome

by Dhirendra Kumar Dixit

KHUSHNOOR, a 25-year-old Rh-negative Parsi woman was pregnant. A routine test revealed that the baby she was carrying was Rh-positive Her obstetric history showed that she had undergone two abortions before marriage. She delivered a baby that was severely jaundiced and anaemic. But for the timely medical help she received, the baby would have died soon after birth.

Salma, a 35-year-old Dawoodi Bohra woman, recently delivered a "yellow baby" with marked jaundice in a Bombay hospital. The new-born did not survive for long. The reason: Rh-factor. Her blood group was Rh-negative and her husband's Rh-positive. Earlier, she had lost some blood in an operation and was given transfusions of Rh-positive blood

How many Khushnoors and Salmas might be carrying potentially yellow babies is anybody's guess. "Though only five to eight per cent of the Indian population is Rh-negative, early detection of this vital factor in the mothers' blood can save the lives of thousands of children," says Dr Nirmala Mokadam, a leading obstetrician and gynaecologist of Nagpur. "Medical research has developed successfully pre-natal and post-natal treatment that can avoid complications like anaemia and jaundice."

The Rhesus Factor

What is this Rh-factor which could mean life or death for the child? In 1939, Levine and Stetson discovered a hitherto unknown anti-body in the serum of a woman, following a stillbirth. In 1940, Landsteiner and Wiener reported the discovery of Rh-antigen in human red blood corpuscles. This complex antigen was given the name Rh because of its discovery in the Rhesus monkeys. The majority of men and women are Rh-positive while some who lack this Rh-antigen are called Rh-negative.

If the pregnant woman is Rh-positive, no further investigation is usually necessary. But if she is Rh-negative and her husband is Rh-positive, there is some cause for concern. The woman has got to be tested for Rh-sensitisation or presence of Rh antibodies.

In a normal pregnancy, the placenta separates the circulations of the mother and the baby. In the last lap of her pregnancy and particularly during labour, "leaks" develop in the placenta and some of the baby's blood escapes into the mother's blood-stream. To an Rh-negative woman carrying the Rh-positive child, such red blood cells, containing Rh-antigen, are 'foreign invaders'. She, therefore, reacts to them by producing antibodies against them. These antibodies in subsequent pregancies, can cross via the placenta and destroy the red blood cells of the Rh-positive baby resulting in severe anaemia and/or jaundice in the baby.

The disease occurs in about 0.5 per cent of all pregancies and its frequency is often overestimated. The foetal mortality is almost 25 per cent and in addition about five per cent of surviving infants show evidence of permanent cerebral damage. On an average, out of, 100 married women, 17 will be Rh-negative and 14 will have Rh-positive husbands. The Rh-positive husbands can be subdivided into eight heterozygous (possessing only one gene manufacturing Rh antigen) and six homozygous (possessing two genes that manufacture the Rh antigen). All the offspring of the homozygous men and half the children of the heterozygous men will be Rh-positive.

No anti-Rh antibodies are found in an Rh-negative woman unless she has had a blood transfusion or an intra-muscular injection of Rh-positive cells or a pregnancy with an Rh-positive child. A blood transfusion of Rh-positive cells given to an Rh-negative will cause no reaction at the time, but it may stimulate the production of antibodies and the patient is thereby sensitised. In practice, it is found that about 50 per cent of patients become sensitised which may be severe or even fatal.

Less Powerful Stimulus

Pregnancy is a less powerful stimulus to antibody production. At least two pregnancies are needed in the majority of cases before antibodies make their appearance. In contrast, transfusion of even 10 ml (millilitre) of Rh-positive blood to an Rh-negative woman may lead to dangerously high levels of antibodies, even in her first pregnancy. The breakdown of red-blood corpuscles by the Rh-antibodies causes an increase in bilirubin which becomes evident as jaundice when the baby is born.

Today this problem of Rh-sensitisation can be almost totally avoided by giving the mother an injection of Rh vaccine (anti-Rh-immunoglobulin) soon after the delivery (within 72 hours) of a Rh-positive baby. The mother should be given the vaccine every time she gives birth to an Rh-positive baby. The cost of the Rh-vaccine is about Rs 400. The Rh vaccine consists of antibodies which destroy the baby's trespassing red blood cells. Thus there won't be any "foreign" cells for the mother to react to and subsequent delivery would be safe. It is also important to do blood grouping of all women seeking MTP (medical termination of pregnancy), so that this injection is given to all Rh-negative women after their abortions.

No Rh-negative woman should ever receive Rh-positive blood for any reason. Both doctor and patient must insist on Rh-typing of donor and recipient before any blood transfusion is given.

If an Rh-negative woman has not been protected previously by vaccine, frequent monitoring of the antibody-level in the mother's blood while the baby is still in the womb is a must. If towards the end of the pregnancy this level is found to be rising to dangerous concentrations the birth of the baby is sometimes brought on artificially by Caesarean delivery to spare it further exposure to the mother's antibody. The moment the baby is born, laboratory tests help to determine the severity of the disease and the need for an exchange transfusion which involves taking out most of the baby's Rh positive blood, together with most of the material antibodies in the baby's plasma and replacing these by fresh Rh negative blood (just like the mother's) from a suitable donor. A valuable technique is amniocentesis where the amniotic fluid surrounding the unborn baby is tested at intervals during pregnancy by putting a needle through the abdominal wall. Amniocentesis helps to decide whether to bring on the baby's birth prematurely or to let the pregnancy continue up to the full term. It also makes possible, in the case of very severely affected babies (these can't surive long after birth or can die while still in the womb) the dramatic and sophisticated intra-uterine transfusion ie blood transfusion through the mother's womb, long before the baby is born.

Misconceptions

In India, only one out of about 30 deliveries by Rh-negative women is likely to be jaundiced and/or anaemic. And yet, misconception and ignorance about "yellow babies" reigns supreme even in the minds of educated people. Many seem to think that an Rh-negative girl as a prospective bride is an unadulterated evil, that she will give birth to imbeciles and idiots. Even Rh-negative men insist on marrying only Rh-positive women, little realising that an Rh-negative woman marrying an Rh-negative man hardly poses the problem of Rh incompatibility. Thanks to such baseless prejudices, many Rh-negative marriageable girls try to conceal the fact lest they miss the marital bus.

It is amazing and deplorable that even in major Indian cities like Bombay, Rh testing of pregnant women is seldom advised or carried out. Women undergoing MTP hardly have the Rh testing done. And one never knows how many women with repeated abortions and miscarriages have already formed Rh antibodies. The risk increases with each subsequent pregnancy thus making the poor (who lose many babies and prolifically procreate) more vulnerable.

In the ultimate analysis, there is a strong case for screening or typing of blood groups of the boy and girl before marriage. It is ironical that while in the West they match the blood groups before marriage, here in India we match horoscopes! ■

Cures That Endure

Bleeding— Out, out, damned spot!

THE sight of blood is hardly bearable, and almost never pleasant for the normal person. Usually a little bleeding will occur in the course of daily chores those minor cuts, scratches and bruises can hardly be avoided And minor bleeding will stop within minutes, generally on its own accord; but if there is any fear on the sight of blood, it is wise to apply a pad or dressing on the point

But the more serious kinds of bleeding occur in the case of victims suffering from *haemoptysis, haematuria, haematoma,* and *haemophilia.*

Spitting blood or coughing up blood-stained sputum from the lungs or bronchial tubes, known as *haemptysis* is often caused by a host of lung diseases from tuberculosis to pneumonia, and sometimes from scurvy Whatever the reason, a doctor should be consulted as soon as possible as the diagnosis for haemoptysis has sometimes revealed even aneurysm and mitral disease of the heart!

Haematuria is the medical term given to the presence of blood in the urine, and can often be missed because there are only a few blood cells giving the urine a light pink colour and the victim may be completely unaware that he is actually suffering from an inflammation of the kidney or the bladder, which cannot be treated without correct medical supervision.

Haematoma is the result of a severe injury or a bruise and results in a clotted lump of blood in the tissues. The most common ones are the ones received at brawls, on the nasal septum. A far more serious one can be the result of a major accident, where there is a *haematoma* in the skull.

An inherited disorder, and fortunately a fairly rare occurence is *haemophilia* a congenital disorder, heriditary in nature, that makes the blood clot very slowly, so that the victim suffers prolonged loss of blood unless he receives prompt and effective treatment. The deficiency of AHF, the anti-haemphilic factor in the blood plasma causes this abnormality Cures are few, and medical attention and transfusions of fresh plasma are needed for even minor injuries and certainly for teeth extractions Currently AHF concentrates have been developed which help during surgery for haemophiliacs.

Generally, in an emergency, it is always best to make the victim suffering from severe bleeding, lie absolutely still while an ambulance is summoned If you find that the bleeding is profuse, and the arm or leg, (where the wound is,) is not fractured, then it is best to raise the limb above the level of the rest of the torso Dry, and as far as possible, sterile dressings should be pressed on the wound, and as the dressings get sooked, more and more should be added on top *without removing the soaked ones.* In the case of internal bleeding, the best thing to do is to keep the patient quiet and still. You must seek medical help immediately And remember, all tight clothing should be loosened. The golden rule here, is much the same as in other crisis situations... keep your cool.

Julie Bijalpita Chatterjee

Loves To Offend

says Shashi Tharoor

V.S. NAIPAUL has an uncanny penchant for causing offence His incisive, bestselling dissections of Indian society in *An Area of Darkness* and *India A Wounded Civilization* aroused the ire of intellectuals and editorialists across the country. *Among the Believers* seeks to do for Islam what his earlier books did to India, and it has not won Naipaul many Muslim friends

Naipaul's latest work is sub-titled "an Islamic journey," which it is not: it is the account of a journey through four countries where Islam is in the ascendant Naipaul's musings as he wanders selectively through Iran, Pakistan, Malaysia and Indonesia make his book part-sociology, part-travelogue Once again we see the classic "Naipaul formula" perfected by V S. and his brother Shiva—a mix of subjective reporting, personal reflection, poetic description and audacious opinion, interspersed with extracts from one or two specific works of literature from which wide-ranging and generalised conclusions are drawn As a technique it is open to charges of superficiality and bias, but it does make for riveting reading

The central thesis of *Among The Believers*, if one can be found in the 430 pages of the author's diffuse and rambling prose, is the inadequacy of Islam as a response to the modern human predicament Naipaul makes his point by juxtaposing Islamic civilisation with Western culture, and finding the former wanting. Islam to him is fundamentally sterile. Even its recent revival has not come from within.

"It has come from outside events and circumstances, the spread of universal civilisation It was the late twentieth century that had made Islam revolutionary, given new meaning to old Islamic ideas of equality and union, shaken up static or retarded societies It was the late 20th century — and not the faith — that could supply the answers, in institutions, legislation, economic systems"

Islam's Failure

To Naipaul, Islam fails in not addressing itself to the challenge of the modern world "No religion is more worldly than Islam," says the author, but Islam today is in the grip of a fundamentalism which has strayed far from practical problems and has nothing new to offer. Where modern Islamic thinkers like the Indian poet-philosopher Iqbal had seen Islam as a reaction to the barrenness of Arabian imperialism, Naipaul argues, his successors in Pakistan and Iran are turning for inspiration to an Arabia that is itself devoid of creative vigour

From this contentious podium, Naipaul declaims his philippics against societies where Islam has entered the ruling ethos. In Malaysia, he says, Islam is a "weapon" for the Malays,"It is their way of getting even with the world It serves their grief, their feeling of inadequacy, their social rage and racial hate." In Indonesia, too, "Islam sanctified rage — rage about the faith, political rage: one could be like the other." So much for the author's originality of vision and of vocabulary. He goes further.

In Indonesia, he says, it is "injustice at home" that drives the masses to "uncritical journeys to the lands of the achieved faith": Communism before 1965, Islam today. To anyone familiar with the complexity and accommodation that characterise both faith and ideology in Indonesia, the real injustice is the author's sweeping judgement Indonesia has not rejected its own civilisation for Islamic dogma, as the author believes; rather, it has embraced Islam and made it a part of Indonesian civilisation.

Naipaul is at his most scathing on what he sees as the hypocrisy of Islam's denunciations of the West "The West, or the universal civilisation it leads," he declares, "is emotionally rejected. It undermines, it threatens. But at the same time it is needed, for its machines, goods, medicines, warplanes, the remittances from the emigrants "and of course its hospitals and universities. Thus in Iran, those who most praise Islam seek to escape from it and seek educational and professional opportunities abroad. A Pakistani Maulana dies in Boston; having fought for an Islamic society in his own country, Naipaul comments, "he had at the very end entrusted himself to the skill and science of the civilisation he had tried to shield his followers from."

Rejection is not, the author concedes, absolute rejection "All the rejection of the West is contained within the assumption that there will always exist out there a living, creative civilisation, oddly neutral, open to all to appeal to." This assumption makes Islamic communities cease to strive, because they can fulfil their material needs elsewhere "parasitism is one of the unacknowledged fruits of fundamentalism." The obvious rejoinder, of course, is that the world's poor societies will always need to call on the help of the more affluent ones the fact that some of the poor nations are Islamic and most of the affluent ones are Western is essentially irrelevant.

But Naipaul prefers to overlook this. He is sarcastic about Pakistani emigrants being shipped to West Berlin "to claim the political asylum meant for the people of East Germany," as if their being Muslim somehow weakened their claim to refugee status To Naipaul, the only freedom Pakistanis seek is the freedom to leave their country. But even if one were to accept this gross distortion as valid, it still does not follow that this reflects a failure of Islam rather than the tragedy of a country whose main political institutions have been, in the classic phrase, the coup and the mob.

Such misapplied criticisms are Naipaul's major problem he does not sufficiently distinguish between a general critique of Islam and the particular limitations of the countries he is visiting A drive on a Pakistani highway leads him to make the typically mock-profound observation that "the buses and trucks had no lights at the back, because there was no point in lighting up where you had been." In fact the buses and trucks had no lights because they were in a state of disrepair — which is a function of underdevelopment, not of Islam.

The same problem benights Naipaul's highly readable, intensely personal—portrait of Iran in chaos. Most of it is from the perspective of the author's relationship with a young communist, Behzad, hardly the most representative spokesman for Islamic Iran. There are passages of great descriptive flair, and Naipaul's effortless prose is evocative, even moving, but the section is most emphatically not a definitive study of the impact of Islam on Iran It is evident that the chaos the nuthor depicts is not caused by Islam *per se* but the fact of a revolution in process. The final shape of a society cannot be judged by the attempts to establish it; the civilisation of Republican France cannot be evaluated solely in terms of Danton and Robespierre.

Nor must Naipaul be evaluated solely in terms of these criticisms. *Among the Believers* is, for all that, a well-written, even enjoyable book. The arguments, however contentious they may be, are ably marshalled, and there is no denying the author's intuitive perceptions and flashes of genuine insight. V.S. Naipaul is among the major writers of our time and what he has to say is said with passionate conviction. Disagreement with what he writes does not make reading him any less a pleasure.

He is, however, ill served by his own contempt for his subject and by the sloppy editing that so often bedevils the work of established authors Ideas and arguments are repeated throughout the text; so are events and impressions. The arrest of a Pakistani journalist and his appearance in court in chains is mentioned three times, on each occasion as if it is a new piece of information. And there are trivial little errors which cause one to doubt the overall accuracy of the author's research. The proscribed Indonesian poet, Pramoedaya Ananta Toer, is called Pramoedra; a speech by the poet Iqbal in 1930 about his vision of "Pakistan" is cited in ignorance of the fact that Iqbal was, at that point, speaking not of an Islamic state but of a Muslim-majority entity within a federal Indian Union. These are all minor irritants, but they inevitably affect one's reactions to the book. ■

"AMONG THE BELIEVERS: An Islamic Journey" by V.S. Naipaul; Alfred Knopf; $15

BOOK REVIEW

Black Is Bountiful

reviewed by Dr G.S. Monga And V.J. Sanctus

DR Kabra's book on the black economy is a result of painstaking research and discussion at various levels. It deals with a number of conceptual and analytical aspects of a phenomenon which has overtaken the entire political economy of the country and explores a number of policy issues. Euclid-like he begins and progresses into the woods of the black money sector and reveals some of its unlimited variety. Beyond that there is disappointment and a lot of meande ing because the woods are dark and dee and the obstacles are many in the way progress. That is not the fault of th author who should be complimented f making a serious attempt to present comprehensive book on the involved sul ject of black money. Others who w attempt to deal with the subject may b able to go a little further in the prese environment. The author goes to gre lengths in explainjng and elaboratin certain aspects of the subject So th parts of the book appear to be repetitiv and often like an academic text .

The book claims to be an eye-open but seems to blink at times. The soci politico-economic tensions which lead and sustain the black money drama, th dynamics and their interaction as well alien influences are not clearly presente The exposition of the positive influenc if any of the black sector seems to ha been ignored for a pioneering venture exposure of both sides is necessary. Sin the incidence of black money is in almo every sector, the author has chosen hold it responsible for almost every co ceivable problem. True, black econon may be guilty, but condemnation alor does not establish the crime. An uncha lengeable proof must accompany th complaint. Dr Kabra has dispensed wi all efforts at quantitative estimation black money "with its very grey comp nents." Let us hope that does not lead the dissolution of all statistics collectir efforts in the Indian economy.

Regarding government intervention, Kabra has beautifully portrayed that "t 'disease' has afflicted the "physician Ironically in the latter sections, chooses to ignore all the past Himalayc "plunders" and places renewed faith in th very same machinery and remedie Some original points need to be include in his miscellany of measures.

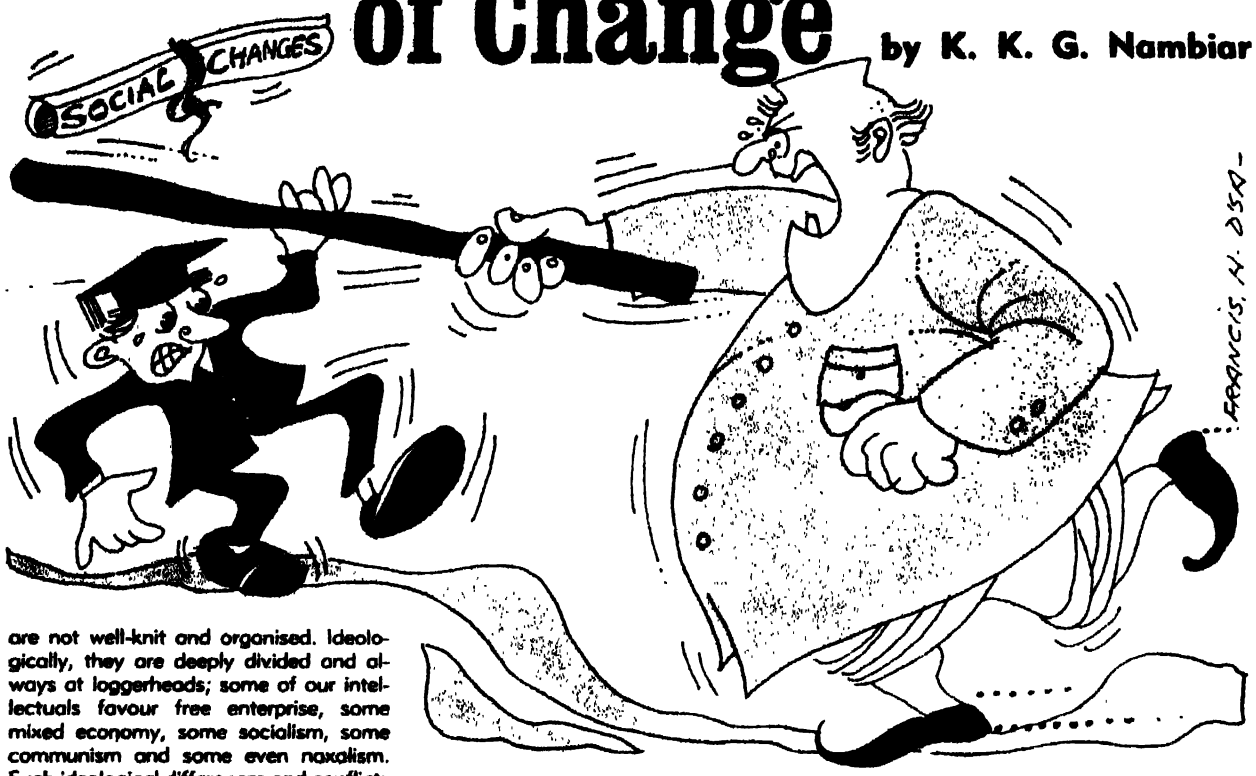
The bibliography in the book is remar ably comprehensive and covers not on the numerous articles published in th country for the last two decades and ov but also gives a list of public documen and government reports pertaining to th subject. The notes at the end of eac chapter are quite exhaustive.

Dr Kabra certainly deserves kudos f his venture. Although such efforts eve tually bring us back to square one in th existing climate, they have a directi value: much more work remains to l done. Frustrations are inevitable but th must happen when an irresistable for like the love of the lucre is managed wi the help of more love and affection.

"THE BLACK ECONOMY IN INDI Problems and Policies" by Dr K.N. Ka re; Chanakya Rs 80.

Intellectuals As Agents of Change

by K. K. G. Nambiar



IT is no secret that the Government of the day in India is not favourably disposed towards intellectuals. Criticism, dissent and independent thought, some of the basic traits of intellectuals, are not relished by the powers that be. Under the circumstances, the exhortation of Mr Vasant Sathe, when he was I & B Minister, to intellectuals to find ways to change the present economic order had come as a pleasant surprise. The existing order, Mr Sathe said, "... centred around social and economic inequalities and intellectuals should act as agents of change".

The world is familiar with the fame and glory of Indian intellectuals. Perhaps, India had the largest roll of intellectuals as saints, religious founders, thinkers, poets, scientists, scholars, legists and so on. They exerted influence upon millions and reshaped, in one way or the other, the mind and behaviour of the latter. They also transformed cultures and social institutions. It was India which had hit upon the brilliant idea of a place-value system for numerals. "In contrast to the clumsy Greek and Roman methods of counting." Zero, the most valuable of all numerals, is one of the "subtle gifts" of India to mankind and algebra had its origin in India. Similarly, the science of music was "systematised" in India before it could be called a science elsewhere.

Food For Thought

The influence of intellectual-saints like Vivekananda and Sri Aurobindo was wider and deeper; the rise of Rabindranath Tagore to universal fame was another cause of India's "figuring more prominently in the intellectual horizon of humanity." Radhakrishnan, by his brilliant exposition of India's religious and cultural ideals, stirred the mind of modern men. C.V. Raman was made a Noble Laureate for his contributions to Physics and an Indian name is now associated with Einstein's Theory of Relativity. One of the notable figures in the realm of astronomy is an Indian, S. Chandrasekhar. The contribution of Indian intellectuals, even in recent times; to the evolution of a new cultural; religious and scientific order was, therefore, unique both in its magnitude and durability.

But the task before the present day intellectuals is to bring about a new socio-economic order. One-third of India's population continues to live under sub-human conditions. This should stir the conscience of our intellectuals. The true functions of the intellectually trained in any community is to assert the primacy of humtin and intellectuals values.

What has been the role and contribution of our intellectuals in seeking a solution to some of the most explosive socio-economic problems, particularly in freeing India from its degrading poverty? While some of our intellectuals wrote long treatises and held seminars and workshops on India's poverty, they hardly ever identified themselves as agents of change. Neither the disappointing results of our five-year plans nor the reckless distortion of priorities of development have persuaded them to formulate a development strategy of their own. This is no easy task, of course. But such an attempt was never thought of even to demonstrate the ire and impatience of our intellectuals with the present leisurely attitude towards some of the urgent problems of the country. Consequently soft options continue to rule the roast amid squalor and misery.

Basically, this could be ascribed to the fact that as a class, intellectuals in India are not well-knit and organised. Ideologically, they are deeply divided and always at loggerheads; some of our intellectuals favour free enterprise, some mixed economy, some socialism, some communism and some even naxalism. Such ideological differences and conflicts are inevitable, of course. But they have given birth to mutual distrust and hostility.

True, the concentration of our intellectuals in the metropolitan centres and the enormous size of the country inevitably limits the extent to which intellectuals can acquaint themselves with one another. But there has been no effort to bring together intellectuals belonging to different disciplines and commit them firmly and sincerely, to a programme, the main thrust of which will be to ensure the masses of at least their bare physical requirements. While a section of our intellectuals sheltered themselves in high positions and the accompanying comforts and lacked a concern for social equality, the lifestyle of our socialist and communist intellectuals is often at variance with their professed ideologies. Intellectuals in politics today, if any at all, have proved to be sycophants and have not hesitated to indulge in questionable practices to ensconce themselves in their positions of petty authority. Different categories of our intellectuals—scholars, philosophers, professors, economists, authors, editors, journalists, jurists, lawyers or artists—have all shown a marked preoccupation with their own narrow self interests.

In any society, men and women in the teaching profession are well respected. By conducting themselves with discipline, dignity and rising above pettiness they could have endeavoured to bring about healthy changes in social attitudes Instead, even the very integrity of our teaching profession has come under a cloud. Recently, one of our senior academicians observed that if 48 per cent of India's population lives below the poverty line in material terms, 95 per cent of our academic community is living below the poverty line in academic terms!

Barring some exceptions, editors and journalists in India do not display a concern for intellectual freedom and also intellectual integrity. Some of them are notorious for sycophancy. The preoccupation of our newspapers with ministerial utterances is nauseating. Sufferings and hardships of the people are not systematically focussed and discussed in our newspapers. This is due mainly to the fear that free and unfettered discussions on the failures and lapses of the government would earn them its wrath. The press, among other things, is supposed to uphold human values and act as a messanger of all shades of opinion. If it does not play its role correctly, the authorities become complacent with the result policies and programmes that widen the socio-economic disparities escape critical scrutiny.

Reluctance among our writers and authors to comment impartially and boldly on the true state of affairs of the nation is clearly evident. Could it be that they are now increasingly looking upon the State for grants and aids for organising Sahitya Sammelans and for setting up their forums and clubs? The recently held Sahitya Sammelan of Marathi writers publicly thanked the State's Chief Minister for his government's donation of Rs 50,000 to the Sammelan. Can such intellectuals be trusted not to compromise their values and principles and shut their eyes to humbugs and hypocracies of the ruling class?

As intellectuals, economists were expected to play a big role in the quick realisation of social objectives of planning. But in recent years, the prestige of the economists' profession has declined to such an extent that a senior economist was at pains to point out that the deliberations of the economists at an All-India Economic Conference did not receive even a passing reference in the national press! "The main interest of the vast majority of delegates attending the conference was the election of the office-bearers of the Economic Association and membership of the executive which brings monetary benefits to the incumbents," he lamented.

It could be denied that intellectuals are also part of the some society in which values, feelings of fellowship and compassion are witnessing a progressive decline. As Tagore said: "In everyday life our personality moves in a narrow circle of immediate self interest And, therefore, our feelings which are events within the short range become prominent subjects for ourselves " When material advancement becomes the sole urge of individuals, particularly intellectuals, society loses its lustre.

What needs to be realised is that it is only when the government is prepared to involve intellectuals uctively in the process of decision-making and execution of development plans can they serve effectively as agents of change. But the attitude of the Government towards intellectuals is one of frustrating indifference. Asked Mr N.A. Palkhivala, one of India's foremost intellectuals: "Can you imagine our central and state governments asking any one with vision in this country as to what is required to be done? They have the monopoly of all wisdom and the net result is that no one is consulted."

Those members of the government like Mr Sathe who want intellectuals to work for a new socio-economic order should see to it that intellectuals get enough opportunities to participate in the process of decision making and policy formulation. The talk of "committed judiciary" and "committed bureaucracy" is nothing but an attempt to scare away intellectuals and also to deny them their rightful place in society.

The Government should concede that it is the inalienable right of intellectuals to criticise, whether to move back to traditional values or forward towards the achievement of the equalitarian dream. In doing so, intellectuals "help to mantain the conflicts which is the lifeblood of the democratic system." But this has not been acknowledged in this country by the powers that be. How then can our intellectuals function as agents of change? ■

Kapil Dev's taking over from Sunil Gavaskar is part of a pattern by which the India captaincy has traditionally been a game of musical chairs.

New Captains For Old

Kapil Dev

—Amitya Tarafder

by Raju Bharatan

REMEMBER our troubled 1936 tour of England on which all that Baqa Jilani had to do to be assured of a place in the India eleven was to go and hurl, in full view of the other players, the famous five-letter Hindi swear-word at C.K. Nayudu? That was also the tour on which Vijay Merchant took the extraordinary step of urging Skipper Vizzy to step down from the India captaincy in favour of C.K. Nayudu "in the interests of the team".

As far is known, no member of the current India team went up to Sunil Gavaskar to make a similar request. But Gavaskar himself certainly anticipated events when, following the Rest Day of the Final Karachi Test, he stayed back and let Kapil Dev lead the team. Sunil returned after lunch to resume charge only so that he may qualify to open the India second innings in quest of his 27th Test hundred.

The charge has been made that, on the Pak tour, Gavaskar was interested in himself rather than in the team. The charge may or may not be valid, but the moment any such *feeling* crept in, it was imperative that Sunil made room for someone else at the helm.

Kapil Dev has since assumed command and needs all the support he can get. In other words, Kapil's appointment can no longer be a matter of either debate or dissent. For Gavaskar's claim to primacy had rested on the 2-0 win he fashioned against Pakistan in 1979-80 on the strength of splendid teamwork. Once he ceased to promote *that* kind of teamwork, he became a sitting target. After all, Bishen Singh Bedi had paid the supreme penalty for a 0-2 reverse in which India caved in only after giving Mushtaq's Pakistan *some* kind of a fight.

The truth, of course, is that Gavaskar was having massive batting problems on the Pak tour: he was playing, *and* missing, much more often than before. If sufficient attention was not focused on this aspect of his cricket, it was only because our other batsmen in Pakistan, bar Mohinder Amarnath, shaped much worse. In the circumstances, it was best that Gavaskar was left to resolve his technical problems sans the burden of leadership since, in Pakistan, it had become obvious that his batting worries had begun to tell on his captaincy.

Snakes And Ladders

The surprising development, therefore, is not that Gavaskar ultimately made way for Kapil Dev—it is that, every time this kind of thing happens, cricket buffs are caught on the wrong foot. After all, have things ever been different in Indian Cricket? Right from the time the princes held sway, the India captaincy has been a game of musical chairs. Except for Tiger Pataudi, no one has held charge for any sustained length of time.

The captaincy acrimony, in fact, begins with a Pataudi—with the appointment of Pataudi (Sr) as India captain, over the head of Vijay Merchant, for the 1946 tour of England (*a la* Vizzy over the head of C.K. Nayudu in 1936). How can anyone who saw it forget the whole Brabourne Stadium shouting *Bowled*... in a crescendo as Pataudi Sr took his belated stance at the wicket in a Zone match on the eve of the 1946 England tour! Fortunately, Vijay Merchant on that England tour proceeded to offer Pataudi Sr his unstinted cooperation and everything went smoothly. The tour saw Vijay Merchant emerge as India's most complete batsman—an opener fit to rank, as a technician, on a par with England's Len Hutton.

It was, therefore, inevitable that, when the tour of Australia came along in 1947-48, Vijay Merchant should take over from Pataudi Sr. However, groin trouble prevented Merchant from making that crucial tour on which he would have had the opportunity to test his technique against the lightning pace of Lindwall and Miller. The mantle of leadership fell, in the circumstances, on Lala Amarnath who, in the process, revealed himself to be perhaps India's finest captain of all time. However, the Lala was up against the might of Don Bradman & Co and his own batting, aristocratic in the *lesser* matches, somehow could not look up in the Tests.

The Crunch

Still, when it came to the question of who was to lead India against John Goddard's West Indies at home in 1948-49, there was no real challenger to Lala Amarnath, since Vijay Merchant was still unavailable. The crunch, therefore, really came only when the time came to select a captain for the home series against Nigel Howard's England in 1951-52. Lala Amarnath was the man in command when India had last played an *official* Test—in February 1949—but now Vijay Merchant, as the man who was to have been our captain on the 1947-48 tour of Australia, was back in the reckoning.

In the prospective tussle between two giants, Lala Amarnath and Vijay Merchant, the man ultimately to benefit was Vijay Hazare, who surfaced as India's new skipper though he couldn't say bo to a goose. Or maybe Hazare was made captain precisely *because* he couldn't assert his authority.

Anyway, Vijay Merchant spiked the guns of the stringpullers by readily offering to play under Vijay Hazare. And, in the First Test at Delhi of that 1951-52 series, Merchant hit a masterly 154. Whereupon, believe it or not, there were instructions to Vijay Hazare that, no matter what the price to pay, he should concentrate *only* on overtaking that 154 milestone!

In the process, India lost the opportunity to strike out for a win as Hazare plodded to 164 not out, leaving himself with too little time to bowl England out a second time. And, as that Delhi Test saw Vijay Merchant seriously injured while fielding after hitting 154, Lala Amarnath was back, this time under Vijay Hazare, for the next Test in Bombay!

However, Amarnath's batting powers were very much on the decline by this stage, so that, with Vijay Merchant out of

Sunil Gavaskar

the fray, Vijay Hazare retained the captaincy for the 1952 tour of England. Only, on that tour, despite brave shows by Hazare in the first two Tests at Manchester and Lord's, there was positive evidence of his batting, too, beginning to shed its sheen.

That 1952 tour of England was an ill-starred one on which we only narrowly escaped being whipped 0-4 so that, for the domestic series that followed against Pakistan, we were back to Lala Amarnath as captain! However, while leading India with flair, Amarnath once again was hardly in his element as a batsman, so that the selectors went back to Vijay Hazare for the 1952-53 tour of West Indies!

Switches Galore

On that 1952-53 tour, India were up against the might of *The Three Ws*: Worrell, Weekes and Walcott. And Hazare's best days were clearly behind him, so that it came as no surprise when he was finally dropped from the India team and, for the 1954-55 tour of Pakistan, Vinoo Mankad emerged belatedly as India's captain. Under Mankad, all five Tests in Pakistan were drawn and, when the team returned to India for the 1955-56 series against Cave's New Zealand, there was yet another switch in captaincy—this time to Ghulam Ahmed. However, Ghulam, like Viswanath, was never overkeen to captain India so that, after the First Test, Polly Umrigar took over and revealed himself to be a highly professional leader of men.

Since Umrigar proceeded to captain India in the three Tests of the 1956-57 series against Ian Johnson's Australia, too, the selectors would have been well advised, better late than never, to stick to him as India skipper. But they reverted to Ghulam Ahmed for the domestic series against West Indies in 1958-59 and, once again, the Hyderabad off-spinner cried away, so that the captaincy reverted to Polly Umrigar for the First Test at Bombay. Ghulam returned for a couple of Tests but, when he retired from the game at the end of the Third Test, Polly Umrigar found himself to be in command yet again. However, on the morning of the Fourth Test at Madras, when he was not given the replacement he wanted for Vijay Manjrekar, Umrigar, mentally shattered, resigned in a huff, never thereafter to captain India.

The selectors decided on a wholesale clean-up at this stage and swung to the other extreme by pitchforking Dattu Gaekwad into the India captaincy and appointing Pankaj Roy as vice-captain for the 1959 tour of England—in a team that included stalwarts like Vijay Manjrekar, Polly Umrigar and Subhash Gupte. It was a disastrous move which saw India lose the series in a clean 5-0 sweep by England.

At this point, Lala Amarnath, as Chairman of Selectors, decided on another startling change of policy which saw G.S Ramchand take over against Benaud's Australia in 1959-60. (This was the series with which Indian Cricket, following Jasu Patel's 14 for 124 in the historic Kanpur Test, received a tremendous fillip.)

However, though Ramchand led India with aptitude, his reflexes were gone by this stage and he cut a sorry figure with the bat against the pace of Meckiff, Rorke and Davidson. In the result, for the series against Fazal Mahmood's Pakistan in 1960-61, it was over to Nari Contractor

Healthy Turn

With Contractor's appointment began, fortunately, a healthy turn in Indian Cricket. Though all five Tests against Pakistan were drawn, Contractor led India with shrewdness against Ted Dexter's England in 1961-62, snatching a 2-0 series win that gave a fresh impetus to our cricket. By now, huge crowds were turning up for Test matches: there was hardly a home in which the radio was not switched on for the cricket commentary. Cricket was the new opiate of the masses.

However, on the 1961-62 tour of West Indies that followed, Nari Contractor was unfortunately felled by Charlie Griffith—something that meant an out-of-turn promotion for the Nawab of Pataudi. Perhaps no India captain has been as much commended, and as much criticised, as Tiger Pataudi. But of one thing there can be no doubt—that it was young Pataudi who gave a *forward* direction to our cricket. As one who had played most of his cricket in England, Tiger Pataudi stood up to the white man on the field with no sense of inferiority complex and taught his players to do the same. Pat's after-play habits were the subject of much criticism at the time but, when you consider the lifestyle of our Test players today, what went on under his captaincy can hardly be considered heinous. In terms of results, Pataudi, who led India in 40 Tests, may not have always delivered the goods, but he was certainly a highly respected captain who led from the front, giving our cricket a go-ahead outlook on which Ajit Wadekar merely cashed in when he took over.

The Spin Revolution

The elevation of Ajit Wadekar by the the Chairman's casting vote in 1970-71 is, of course, by now part of our cricket lore. Depending on how you look at it, it was either Vijay Merchant's great gambit or great gamble. It revolutionised our cricket. As Wadekar won for India her first ever series in West Indies and then in England, and turned the tables on Tony Lewis's England at home, all India was in a trance. Solkar at forward short-leg ushered in the Spin Revolution

Still the impression persisted that Wadekar was a lucky captain. And his luck ran out on the 1974 tour of England, so it was back to Tiger Pataudi. However, only after Pataudi had wrested the captaincy crown from Wadekar for the home series against Lloyd's West Indies in 1974-75 did the fact come to light that he could now lead only from behind, since his eyesight and reflexes were no longer sharp enough to counter the electric pace of Andy Roberts. Still Tiger Pataudi managed to reverse the loss of the first two Tests against West Indies by winning the Calcutta and Madras Tests through some astute captaincy. However, at the end of that series—which India lost 2-3 and which saw Tiger cease to be a batting force—Pataudi gracefully called it a day.

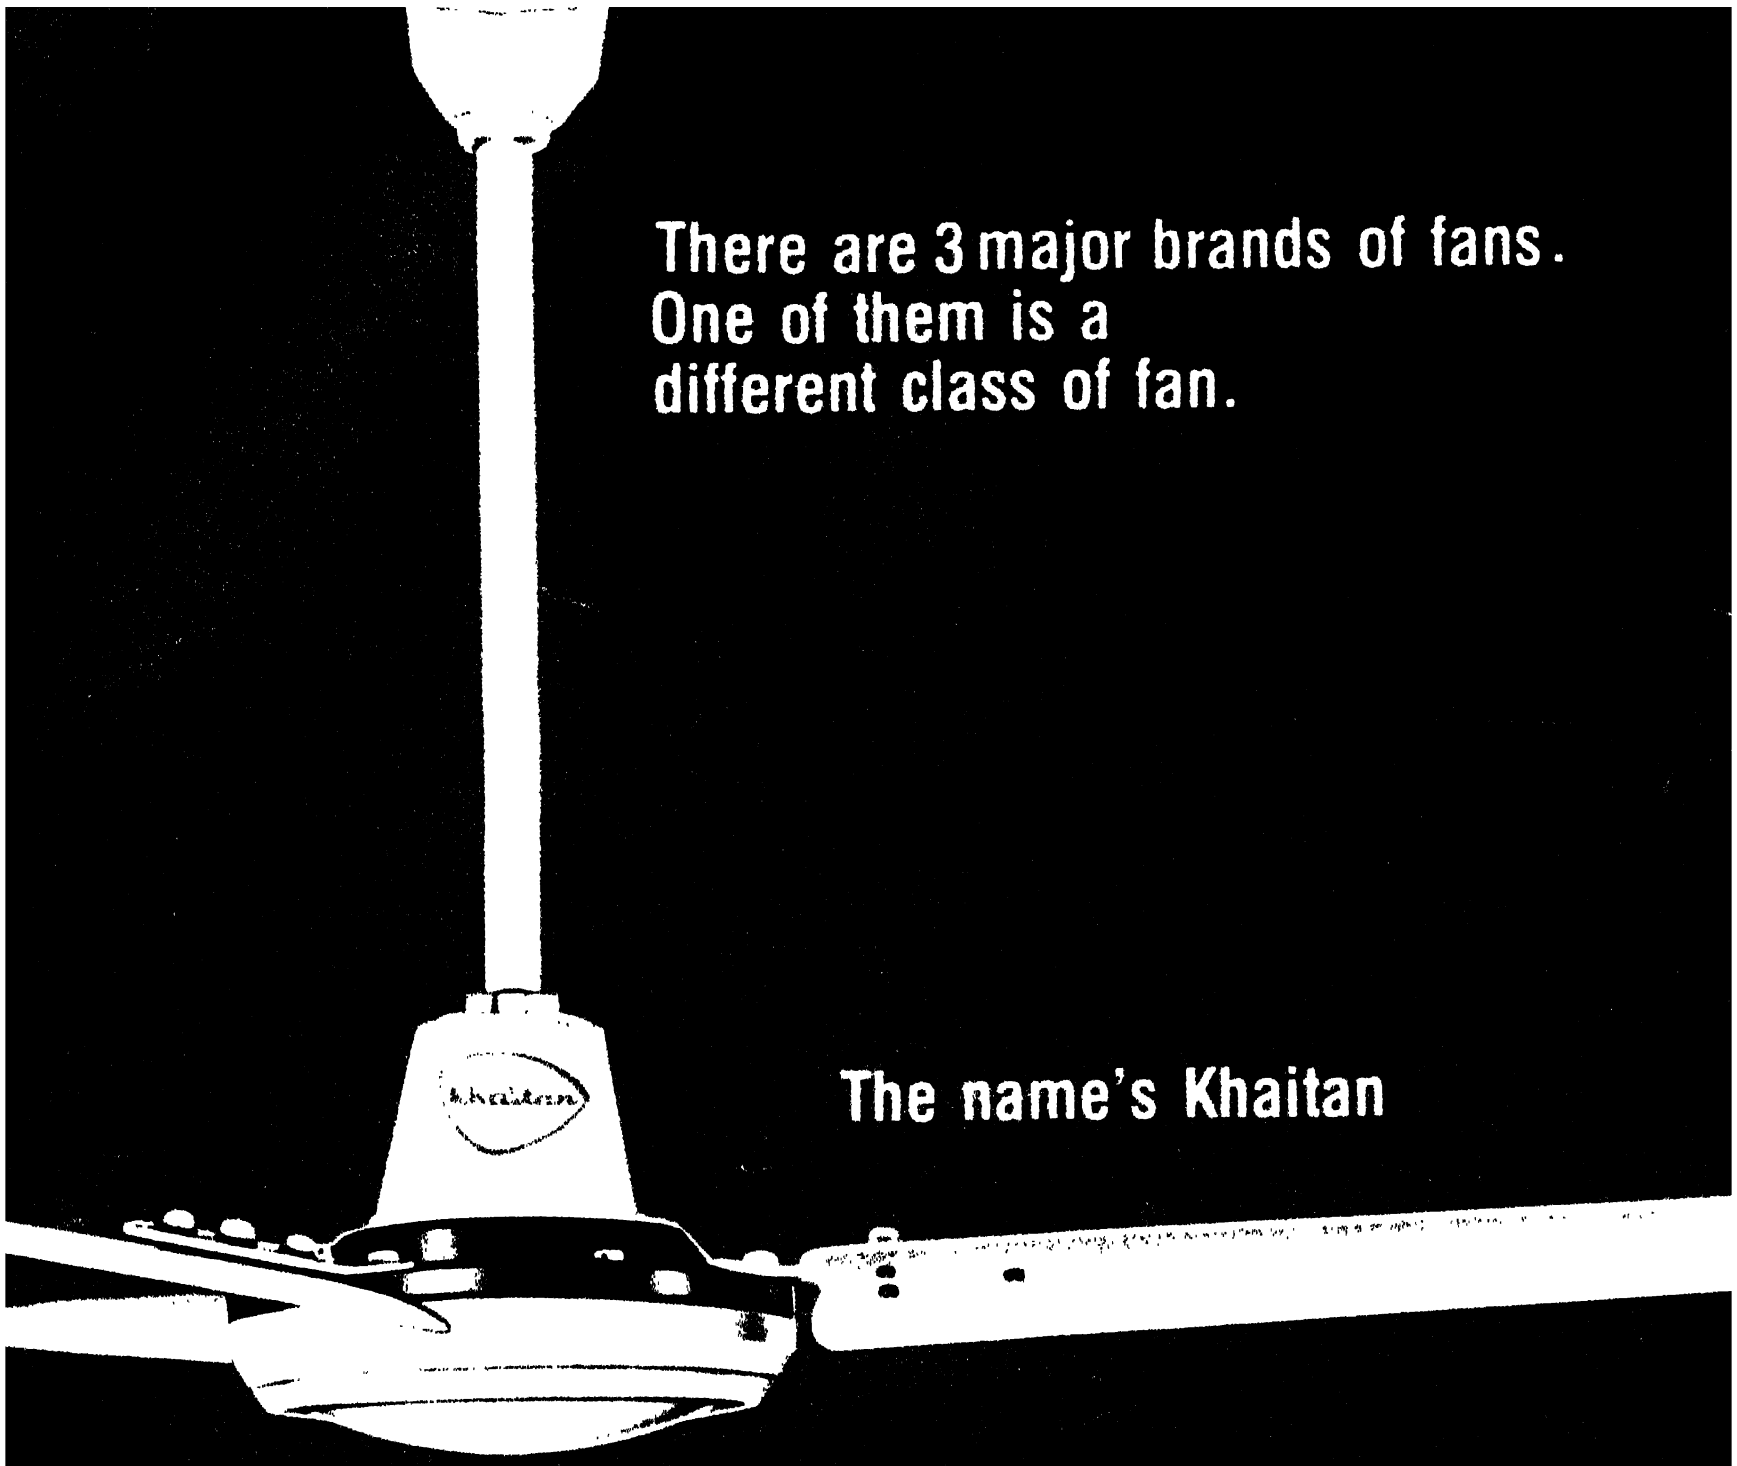
Since then, we have had at the helm Bishen Singh Bedi, Sunil Gavaskar, S. Venkataraghavan, Sunil Gavaskar again and now Kapil Dev. Bedi made a popular captain. But, with the Packer stars returning to the fray as India faced Pakistan in 1978-79, Bedi lost out in spite of the fact that, under his leadership, India were by no means totally outplayed—as they were under Sunil Gavaskar recently in Pakistan. But, then, Bedi was no longer the 'Sardar of Spin' he was in his heyday, so that the captaincy passed to Sunil Gavaskar for the series against Kallicharran's West Indies. Next, as we know, Gavaskar chose to surrender the crown to S. Venkataraghavan for the 1979 tour of England, only to win it back for the crucial series against Asif Iqbal's Pakistan. Now he has finally made way for Kapil Dev

Point To Note

Looking back, therefore, on the case-history of India's captaincy, one point emerges clear—that no leader except Tiger Pataudi has been allowed to settle. Even Tiger Pataudi, when he thought he was the Nawab of all he surveyed, was cast aside. As for Ajit Wadekar, he had to lose only one series to be sidelined. Bishen Bedi's crime was that he lost a series against Pakistan. While Sunil Gavaskar's undoing was the fact that he first won and then lost against Pakistan. Venkataraghavan, of course, was India captain only by Gavaskar default.

Now it is the turn of Kapil Dev. Only, let us hope that the word 'turn', for a change, will mean something healthy. Kapil's task is daunting enough, starting out as he does against mighty West Indies. He will clearly need time to find his feet. This time should be given to him since, for all the chop and change in captaincy during the last 50 years, Indian Cricket has really achieved little by way of concrete results. ■

There are 3 major brands of fans.
One of them is a
different class of fan.



The name's Khaitan

The new Khaitan Premium is a different class of fan. It is the result of a startling breakthrough in fan technology only the Khaitan R&D experts could achieve. So it has exclusive features no other fan offers. It's the only fan that consumes 30% less power. Which means you can save Rs. 10 per month on electricity bills. Month after month after month.

At the same time, it delivers 10% more air. No wonder it's the only fan with the ISI mark.

The Colonel And Napoleon

One god had failed him and now it was too late to find another.

by Cherry George

COLONEL Kuruvila prided himself on his good looks, his good health, his good sense He was still spry at seventy and he hopped around twice as fast as a man half his age—and of how many septuage narians, Indian septuagenarians, could one say that?

At seventy in India everybodyexpe-cts you to be half finished quite washed out You are expected to affect helpless ness moan about the state of your health and exaggerate every minor distemper into a crisis Here old age is acted out with rickety theatricality Kuruvila remem bered his poor dear father why he was old at fifty dying at fifty five though he didn t die till sixty five He wasn t so much a man as a role It was unutterably sad Why should a man want to die before he was dead? The Colonel saw himself as one man against a sad bad mad tradi tion

When he looked at himself in the mirror anxiously examining his still un lined face for the first wrinkle he puffed out his chest as if he were a cadet at Dehra Dun all over again and said aloud 'They are not going to take me! They meant almost everybody around him— from the milkman who diluted his milk with an equal measure of water to the newspaper boy who seemed to think a soggy newspaper was not a thing to apologise about to those sleepy eden tary bureaucrats at government offices banks railway stations He felt himself boiling within him when he thought of these overfed toads Our lives were run for us by a race of clerks clerks yes but without the only virtue that redeemed a clerk industry

Colonel Kuruvila blew his top off whenever he could which was often but not as often as he would have liked for he never seemed to be able to muster an audience easily People fled at his approach for no one seemed to have strong enough nerves to endure long salty sermons on the wretchedness of the nation and the wickedness of man Besides Colonel Kuruvila had the habit of staring accusingly at his interlocuters as if they were responsible for much of the topsy turvydom around them

Unhappily for the Colonel he didn t have a family to storm or preach at which is how some strong men vent their wrath at the world His wife had died ten years now His daughter had mi grated to England He was quite alone exposed to an angry world without the protective shell of a family a wife to bring his slippers and children to divert his mind

→

LIKE many good soldiers, Colonel Kuruvila was a ferociously disciplined man. But he had one weakness. No, it wasn't drink. Drink corrupted your breath and yellowed your teeth, so Colonel Kuruvila said. It wasn't women either—his morals were austere, nor did he care for the usual methods of ensnarement. No, it wasn't any of the common venalities. His weakness was, strange to relate, the Emperor Napoleon. He admired the man almost to idolatry.

Soldier, statesman, hero he,
As it were life's epitome

Colonel Kuruvila had a portrait of Napoleon in his bedroom—it was David's portrait of Napoleon crossing the Alps on a white charger. How magnificent the man looked! His red mantle fluttered about him like an angel's wings, his right hand was raised upwards to the heavens as if summoning his countrymen to a higher destiny and his face was inflexible in its sullen determination to conquer the world. Colonel Kuruvila couldn't help thinking of Napoleon every time he contemplated the mess that his countrymen had made of governing themselves—yes, what we needed, he would say, was a man on a white horse not to speak of the whiff of grapeshot, a leader you could follow to the furthermost ends of the world—lean, spare, austere, strtonx

Colonel Kuruvila discovered that contemplating Napoleon even in a portrait, steadied his nerves. The next time the cook served his egg grossly overdone, he seemed somewhat more in command of himself—you could even say—in Napoleonic command of himself. Even if he did box the cook's ears, he did it without demeaning and spluttering exhibitions of temper. He would box the cook's ears with cool self-possession as Napoleon would have—if he could for the moment step down from the portrait.

In his lonely widower's life there were times when the Colonel found his thoughts straying to his daughter, Shanta. Why did she have to exile herself in this way and bring sorrow to her father? But there was no arguing with Shanta. She had always lived her life exactly as it had pleased her to. Was she, he had often wondered, utterly selfish or was she displaying that kind of independence which from all reports, is greatly in fashion now-a-days, an independence which showed itself chiefly in declaring that you cared for nobody—not even for an ageing father—and nobody should really care for you? But the devil of it was that he couldn't help caring for his daughter. Flesh of his flesh, wasn't she?

His eyes moistened over when he looked at an old photograph of his daughter perched jauntily on his knee. There was a decidedly sentimental side to Colonel Kuruvila, however brutally he might cuff his cook's ears.

KURUVILA was pottering about in his backgarden one morning. He was resting his back after half an hour of vigorous hoeing when the bearer came running to him, excitedly saying that there was a telephone call from England. Colonel Kuruvila felt himself go weak in the legs. Was Shanta ill? Or worse? She had never phoned these past five years she had been away.

He went to his bedroom to take the call. The operator kept gabbling, asking him to hold on while she tried to secure the connection. The Colonel looked up at the portrait of Napoleon and found himself praying that his daughter had come to no harm, as if Napoleon were a god. He wondered in his agitated mind whether anyone had ever prayed in this manner to Napoleon. Perhaps not, but it was miraculous how quickly he seemed to settle down after the prayer, although his nerves had been twittering almost audibly but a few moments ago.

"What is it, Shanta?" asked the Colonel, when contact was finally established.

"It isn't Shanta, I'm afraid, Sir," said a male voice at the other end. "I'm a friend of hers. Well, how shall I put it, I have never handled this sort of thing before, and I hardly know what to say.....".

"That's enough of that now," said Colonel Kuruvila, sick with apprehension. "Tell me what you know, at once."

"Well, prepare yourself for a shock, Sir. Shanta has had a serious accident. She's in hospital."

"Is she alive or dead?" asked the Colonel.

"The doctors are doing their best but....".

"Is she alive or dead?" repeated the Colonel in a flat voice.

"Dead, Sir, dead," came the sobbing answer.

Colonel Kuruvila learnt that arrangements were being made to send the body home, as the macabre phrase goes. Had it come to this now? A coffin with a brass plate and an airway bill number. Porters sweating in the heat as they unloaded the coffin from the aircraft. The curious stares of onlookers, the pointing and the whispering. And then the prayers in the sweltering chapel and the wind ruffling the graveyard grass as he knelt alone to pray. And he hardly knew to whom to pray. He had lost the art of prayer. He had prayed in his impulsive way to David's Napoleon, but Napoleon now seemed an unsatisfactory god.

He hadn't saved Shanta, had he? Come to think of it, Napoleon hadn't saved his country, or himself for that matter. One god had failed, but it was too late to find another.

FOR the first time in his seventy years, Colonel Kuruvila knew what it was to be old. If old age was a state of mind, then he was old. Worse, he was defeated. A man can only stand so much and no more.

But then, thought Colonel Kuruvila, even Napoleon had been broken in the end—that giant, festering ego dying inch by inch on an almost barren rock as the world jeered. It was only David's Napoleon who remained forever on the Alps, on his prancing charger as if the tired, beaten man of St Helena had never existed.

The bearer brought in the newspaper on the breakfast tray, pushed to one side, beside the coffee pot, exactly as Colonel Kuruvila wished it, except that the newspaper was soggy, and not for the first time either.

Another time there would have been thunder and lightening but today Colonel Kuruvila proceeded to read the soggy newspaper without a word. He had made his peace with "them"—on their terms, almost like the vanquished Napoleon ■

ndian Women's Battle For Freedom

Kamladevi Chatopadhayay, Abhinav Publications, Rs 45.

Kamladevi Chatopadhayay's work is a welcome change from the cant so often dished out under the name of "feminist literature". In her book, she documents the role played by women in the freedom struggle from the late 19th century.

As she points out, "social work" then, was neither fashionable nor easy. The odds that the pioneers faced by way of ostracisation and hostility were tremendous. She stresses that the thrust of their activities was towards a complete change. Yet the distinction she makes between "class war" and a "crusade for sheer humanism" seems overdrawn.

Nevertheless, the author's own part in the freedom struggle has aided her in giving the book a touch of authenticity.

King of Kings, the story of Sir Garfield Sobers

Mahiyar Morawalla, Jaico Publications, Rs 15.

Cricket buffs and Sobers' fans will widely acclaim this compact and comprehensive account of the life and (cricketing) times of one of the world's greatest all-round cricketers very possibly the "king of kings"

Starting from "humble beginnings" and the apprenticeship years, the author carefully re-enacts the excitement of the more important and fascinating matches that Sobers played, and the interaction and rivalry between him and his contemporaries, notably Rohan Kanhai.

Containing exhaustive statistical data, this book is positively a "must" for cricket fiends but beyond the ken of the layman who will probably skim over the major portions of the book and read only the juicy anecdotes.

Magnetic Cure For Common Diseases

Dr H.L. Bansal, Dr R.S. Bansal, Vision Books, Rs 55.

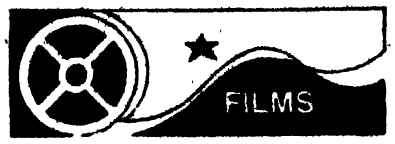
A detailed account of magnetotherapy, a comparatively little-known system of medecine, in which ailments are treated through the application of magnets to the body. No medecine is fed orally or applied externally to the patient.

The authors describe, in detail, the working of magnets on the human system, the powers and designs of specially-made healing magnets, methods and duration of their application, preparation of magnetic water, etc.

They also discuss a wide variety of diseases, ranging from asthma, arthritis, polio, bronchitis, blood pressure to colds acne, anaemia, headaches which can be treated by Magnetotherapy.

Case studies have also been cited to ensure a better understanding of the treatment. All things considered, an interesting book, worth perusal.

Minnie



Coincidence

Inspired by the Hindi movie *Ittefaq*, shown on television early last month, a 42-year-old driver employed with a pharmaceutical concern in Pune allegedly murdered his "nagging" wife. Driver Sharad Mehta took the cue from last year's Manjushri murder case, in which a young chemical engineer admittedly administered cyanide to his wife. For days together Sharad had been planning to kill his wife Mangala but he hesitated to. Finally, on that fateful Sunday night after watching television, he plucked up the courage.

Wayne's The Name-And Game

Are the Waynes about to take over Western films? John Wayne towered over the rest in his toughie roles, wearing the familiar, rugged, khaki cowboy hat and slouched cowboy shoulders. His well-known philosophy of "acting is a hard business" has not kept away his son. John Ethan Wayne began his career as a stuntman. Now, at the ripe, wise old age of 20 he has "gotcha" his first leading role in *California Cowboys*. But hold it! The swinging new cowboy will not be cantering lazily on horses and doing the lone ranger act with the injuns. He'll be whizzing past on motorcycles, swishing through on windsurfers and hanging high on hand-gliders. Not yet used to "star" treatment, Junior will be doing his own stunts. Like we said, Wayne's the name of the game.

—Newsweek

Guney's Travails

Turkey requested the extradition of exiled film director Yilmaz Guney, who attended the Greek premiere of his award-winning film, *Yol*, in Athens. But the Greek government ignored the request and Guney left for France. Melina Mercouri, the Greek culture minister, who offered Guney asylum in Greece on his last visit in May, attended the showing together with her husband, the director Jules Dassin. Guney, who now lives and works in France, was deprived of his citizenship by Turkey's military rulers in January. Guney, 51, escaped from jail in Turkey in October 1981 after serving seven years of a 19-year sentence for fatally shooting a public prosecutor.

Pope's Visit

Pope John Paul will be visiting India this year, according to a senior member of the Curia. In the event, the exposition of the relics of St Francis Xavier normally due in 1984 will be advanced by a year and held this year itself.

The Papal visit will signal a new chapter in relations between India and the Vatican The relations, though proper and cordial, had cooled off in the last three years. On one occasion the Vatican had put off a tentative Papal visit and on another, India had signalled that the time might not be appropriate.

Tickling An Elephant

A 25-year-old youth, who played mischief with an elephant by pulling its tail, thereby causing obstruction to traffic, has been fined Rs 150 by a mobile court in Madurai.

According to the police, when the elephant was being taken by the mahout to a dispensary, a drunken person tickled its tail. The annoyed animal then chased him for a long distance.

The culprit, Kanakaraj, ran for his life and entered a policeman's house from where he escaped through the backdoor

In apparent vengeance, the animal circled the house and squatted in front of it for some time, thinking he was inside. Later, the mahout managed to tame the animal and removed it from the scene.

Spitting for Money

Metaphorically, "spitting on the face" may mean the worst of insults; but in the grim reality of the Capital's underworld, it may mean making an easy buck.

Rajesh and Mukesh, both residents of Sadar Bazar, have been earning their livelihood by spitting on other s faces.

In an ingenious scheme, one of the two men would spit on a passer-by's face, apologise profusely and politely give him a handkerchief.

When the victim is busy mopping up the spittle, the other partner would quietly remove the wallet and vanish.

In case the victim turned smart and resisted, both Rajesh and Mukesh would make use of the knives they always kept tucked under their belt.

Unfortunately for them, both have now been arrested by the Paharganj police.

Goldie

"Razor Bank"

The Pakistan National Hairdressers' Federation has decided to establish a "Razor Bank" with headquarters at Karachi and branches in all major cities and towns. It will aim at the general welfare of poor barbers and the development of the hairdressing profession.

Owners of all beauty parlours, hairdressing saloons and barbershops, manufacturers of cosmetics and barber instruments and dealers in hairdressing saloon supplies will all be requested to cooperate in the noble and humanitarian services of the "Razor Bank" said Islam Salmani, Secretary-General of the Hairdressers' Federation.

Honorary Citizen

The city of Rome has named Nelson Mandela, a jailed black South African leader who has struggled to end apartheid, an honorary citizen. Mayor Ugo Vetere handed over the plaque of honorary citizenship to Mozambique's Marcellino Dos Santos. Mandela had asked him to accept the honour on his behalf. The mayor read a letter from President Sandro Pertini recognising Mandela's "generous and fearless work in favour of equality among men and progress for African people." Mandela, 64, is serving a life prison term after being convicted in June 1964 of planning sabotage and conspiring with Communists to overthrow the Government. His wife, Winnie Mandela, is banned and confined to the Orange Free State town of Brandfort.

—International Herald Tribune

Moulin Millstone

In the publicity surrounding the return of Klaus Barbie to France special consideration has been paid to the widow of the murdered resistance hero, Jean Moulin, the 75-year-old Marguerite Storck Cerruty, as she now is. Yet infact she held that position only two years, from 1926 to 1928 She claims divorce was forced upon them by their parents, and that she saw Moulin often during the war. But Moulin's friends and colleagues say she abandoned him after only weeks of marriage to become a singer in Paris. Once, in May 1943 Moulin's secretary found him uncharacteristically agitated. He explained that he had seen his ex-wife in the street, and was extremely worried that she might have recognised him.

Hot Tongue

A man who tried to rape a young waitress in Bangkok fled in pain after she bit off the tip of his tongue, the police said.

Earlier this year , a Bangkok nurse bit off part of the tongue of a man trying to steal a kiss.

Both women turned in the pieces of tongue to the police but neither has yet been claimed.

Gigi

THE pretty young school teacher was concerned about one of her eleven-year-old students. Taking him aside after class one day she asked, "Victor, why has your school work been so poor lately?"

"I can't concentrate," replied the lad. "I am afraid I have fallen in love."

"Is that so?" said the teacher, holding back an urge to smile. "And with whom?"

"With you," he answered.

"But Victor," exclaimed the secretly-pleased young lady, "don't you see how silly that is? It's true that I would like a husband of my own someday, but I don't want a child."

"Oh, don't worry," said Victor reassuringly. "I'll be careful."

AS the two little girls walked hand in hand to kindergarten, one confided: "I found a contraceptive on the patio yesterday."

Asked her friend: "What's a patio?"

THE farm had been mortgaged, and willingly, to give the daughter a college education. Now, driving home from the station after meeting her at the train, farmer Johnson was greatly disturbed when his daughter whispered confidentially, "I have a confession to make, Papa — I ain't a virgin no more."

The old man shook his head sadly, "After all the sacrifices your mother and I made to give you a good education, you still say 'Ain't'!"

"I SENT my boy to college to get an education," complained one father to another, "but all he seems to do is shack up with co-eds smoke pot and have a good time."

"Most college students do that today," replied his friend.

"That's the trouble," snapped the first chap. "I should have kept him home and gone to college myself."

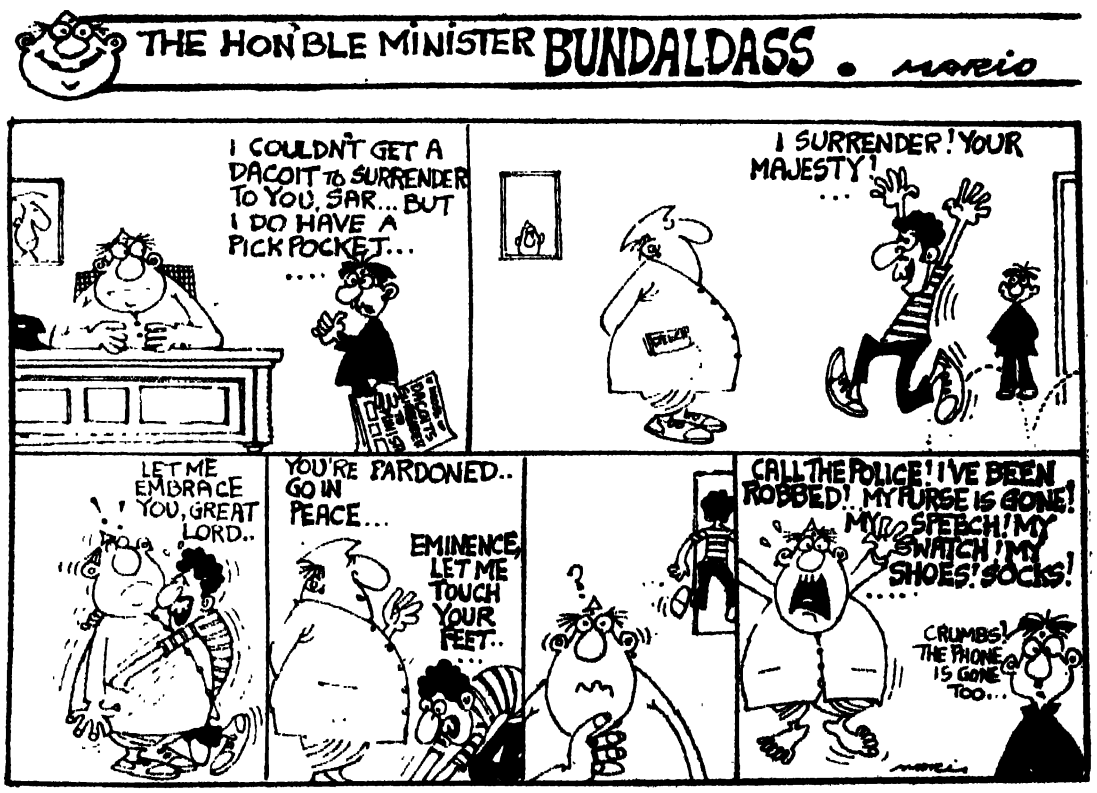
"We Indians observe our traditions and customs very strictly!"

"WHAT is the plural of man?" asked the school teacher.

"Men," replied Nandu.

"And the plural of child?"

"Twins," was the unexpected reply!



A CURVACEOUS young secretary, having just returned from a magnificent vacation in a South American republic, walked into the foreign exchange section of her New York bank and dropped a wad of foreign currency on the counter. The teller counted it carefully and gave her 53 cents in exchange.

"Do you mean to tell me that's all I get?" gasped the lovely thing.

"I am afraid so, miss," said the teller. "That's the legal exchange rate."

"Damn," the girl hissed. "And like a fool I gave him breakfast too."

AT the inquest the coroner gently asked the widow if she could remember her late husband's last words.

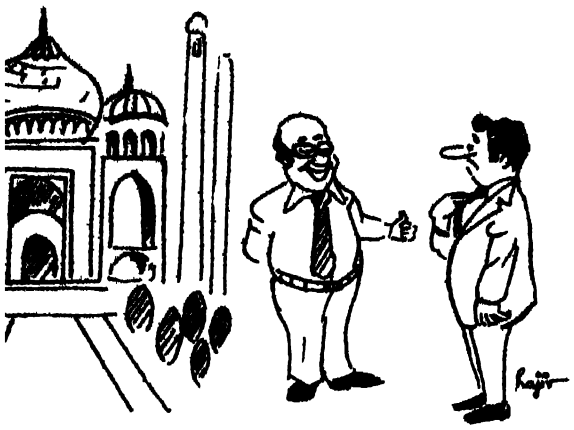
"Yes," she replied. "He said, I don't see how they make a profit out of this stuff at a dollar a bottle."

AFTER watching an extremely attractive maternity-ward patient earnestly thumb through a telephone directory for several minutes, a hospital orderly finally asked if he could be of some help.

"No, thanks," said the young mother, "I am just looking for a name for my baby."

"But the hospital supplies a special booklet that lists every first name and its meaning," said the orderly.

"That won't help," said the girl, "My baby already has a first name."



'Don't be afraid young man I am also on sick leave!'"

ASKED by his teacher to spell "straight", the third-standard boy did so without error "Now," said the teacher, "What does it mean?"

"Without water"

"DADDY, how far is the earth from the sun?" said Tony

"Oh, I'm sure I don't know!" said Daddy, who was busy in the garden

"Well, then, I hope you feel sorry tomorrow when I am getting punished for your ignorance," said Tony

JUDGE "Did you see the beginning of this trouble?"

Witness "Yes, your honour, seven years ago"

Judge "Indeed! Explain yourself'

Witness 'I was the best man at their wedding, your honour

AFTER a long, strenous day, a physician was awakened from a sound sleep by the ringing of the telephone at his bedside

"This is Mr, Jones My wife is in terrible pain' said a nervous voice "Come at once It's her appendix"

The doctor sighed, somewhat irritated Go back to bed," he said wearily "She hasn't got appendicitis I'll look in the morning"

On hearing that, the voice became frantic, pleading for immediate attention

"But she couldn't possibly have appendicitis," insisted the doctor 'I removed her appendix three years ago and I have never heard of anyone having a second appendix"

"Well, then," said the voice, "maybe you have heard of a man having a second wife"

DOCTOR "My dear sir, it's a good thing you came to me when you did"

Patient "Why doc? Are you broke?"

PILLOO," said his mother, severely, "there were two pieces of cake in the pantry when I went out, and there is only one now How is that?"

"I don't know, mother," replied Pilloo, "But it was dark in the pantry and I suppose I didn't see the other piece"

"PLEASE, Sir," said a small boy nervously on coming into the class, "ought I to be punished for something I haven't done?"

"Of course not," said the teacher kindly

"Please, Sir," said the small boy with a sigh of relief, "I haven't done my homework."

THE judge was disgusted with the attempts of the accused to defend himself

"I have never seen such clumsy lying," he declared, "why on earth don't you get a lawyer to act for you?"

DOCTOR "Did you tell that young man I think he's no good?"

Daughter "Yes, I did, Daddy And he wasn't at all upset He said it wasn't the first wrong diagnosis you've made"

PROFESSOR "Darling, if you marry me I'll satisfy your smallest wishes'

"And what do you propose to do about the big ones?"

Compiled by T.V. Sowrirajan and M.B. Pavan

The Famous And Their Foibles

by Surendra

"TO each his own" is probably an accepted phenomenon. However, glaring deviations from accepted norms of living, do occasion comment and, very often, amusement. For example, Emperor Kaiser was very proud of his moustaches and kept twirling them. He even had a special "machine" to always keep them upright.

Henry III had an inexplicable fondness for pierced ears and compelled all his courtiers to bore their ears.

Long noses were Napoleon's especial fancy, resulting in marked favouritism on his part towards long-nosed soldiers.

Balban, the most powerful king of the slave dynasty in India, was extremely particular about rank and social status, once refusing an extremely generous offering worth several lakhs of rupees, merely because the doner was low-born.

Conversely, Louis XI, the King of France, was so fond of washermen and barbers that he would discuss state affairs with them, and keep them away from his family and courtiers

Royalty does, indeed, have its fair share of eccentrics—Henry II's hobby of inventing signatures had reached a novel point. He intertwined the signatures of his wife and his mistress, added them to his own and called it the "royal signia".

Amongst our own "Maharajas" also, quite a few indulged their weird and expensive whims. Jaipur's Maharaja Swai Madho Singh was so particular about cleanliness and purity that when he went abroad, he first bought a ship and spent thousands of rupees washing it. Then he arranged for Ganga water for drinking, clay for washing hands and two big stones for washing and beating clothes aboard the ship. While abroad however, the water naturally gave out and could not be sent for from India, so he got a separate well dug for himself and drank only the water from that well for the duration of his entire stay.

The famous war strategist, the Duke of Wellington, had a fetish about punctuality, and could not tolerate even a slight deviation from it. He himself was so punctual that six or seven clocks always ticked away in his room, to avoid even a second's unpunctuality.

Benjamin Franklin had odd sleeping habits (pun not intended). Even severe winters would see him walking about naked for 10 minutes in his bedroom which had 4 beds. If one bed got warmed up, he would go to the next one. One wonders where he finally slept! The British novelist Charles Dickens used to keep a compass with him so that the bed in which he slept was turned towards the right direction.

William Blake, the well-known and well-loved poet, was also known for his idiosyncracies. One day a friend of his visiting him, was surprised to find William and his wife sitting naked. When the friend hesitated, they hailed him "Come on, come on, we are reading about Adam and Eve and we thought we should read it as Adam and Eve."

Byron, another renowned poet, was so terrified of nightmares that he always kept a pistol handy, each night, to ward them off.

The famous English historian Edward Gibbon was probably the most bizarre of them all. He was so madly in love with Suzanne Carvord that he would stop people on the road and allow them to resume their journey only when they had praised the beauty of his beloved.

Dr Samuel Johnson had the odd habit of touching every pole he passed on the road. The French novelist Emile Zola in turn, would count the gas poles on his way.

Some collectors' hobbies are no less ludicrous The Pharaoh of Egypt, Tutenk hamen had a passion for collecting caps of various kinds. Baron Rothschild collected flies and Earl Baldwin kept owls. Jefferson listed horoscopes of eminent people, Leonardo da Vinci actually bred lizards and the like. The list is endless.

Lord Kitchner held women and cats in dread. Undaunted by dangerous wars, these feminine and feline viles made him acutely nervous.

Women have not lagged behind in odd behaviour. Cleopatra's idiosyncrasies have now become legendary. Among them was the habit of bathing in milk and an uncontrollable passion for watermelons.

Fellow eccentrics include Austria's Princess Elizabeth, who was so enamoured of her own slim waist that she slept with a wet towel wrapped around it, and the famous French actress Sarah Bernhardt who kept a coffin ready for herself due to her premonitions of death.

Others who shared these fears were Daniel Seane who prepared his coffin himself, which remained with him for seven years till he really died. The 17th century poet John Donne also kept a coffin in his room so that he would be reminded of the transitoriness of life.

And so on and so forth, each oddity weirder than the next. However, only the peculiarities of the rich, the famous or the royal, are noticed and talked about fashionably. In mere mortals, these would either be ignored altogether or severely derided.

Next Week For You

S.K.KELKAR

CAPRICORN
(Makara)
Dec 21-Jan. 19

Don't bury yourself too deep in domestic issues. Pay due attention to your career. Someone who is genuinely interested in your well-being will offer goodwill and blessings. Avoid travelling by air early in the week. Clear domestic backlog by midweek. A thrilling bit of news comes you way.

AQUARIUS
(Kumbha)
Jan 20-Feb 18

Career interests and business activities will suddenly recede into the background and your attention will be centred on domestic affairs. You will be caught in the social whirl and most of your leisure time will be thus taken up. Someone close and intimate may temporarily cut off relations with you.

PISCES
(Mina)
Feb 19-Mar 20

Willingly or otherwise, you will have to undertake travel this week, either as business or pleasure. Sightseeing and developing new contacts will keep you busy most of the time. Financial matters should be sorted out carefully. Give your elders due respect and secure their willing support for your activities.

ARIES
(Mesha)
Mar 21-Apr 20

The next few weeks form a favourable period for organising finances and family. Adopt a matter-of-fact attitude while planning the future. Do not paint too rosy and over-optimistic a picture. Aim at reconciliation in business and social affairs. Money gains of midweek help you to meet various needs.

TAURUS
(Vrishabha)
Apr 21-May 20

The events of the week tend to create an unsettled situation but you will take effective measures against the problems. Don't allow prejudices to develop within the family otherwise you will be the target of criticism and misunderstandings in the near future. The early part of the week is suited for romance.

GEMINI
(Mithuna)
May 21-June 20

This is one of your luckiest weeks. Additional spending money comes your way soon. Group activies will help to boost up business and career in the next couple of weeks. Friends of both the sexes will demand your attention either socially or professionally. Do not quarrel with your elders for petty reasons.

CANCER
(Kataka)
June 21-July 20

Business, professional and vocational activities are under favourable stars but they may cause much annoyance to family members. In addition to the normal routine you will take on a few more responsibilities on an impulse but you will do well. Look after your health in the early part of the week.

LEO
(Simha)
July 21-Aug 21

The period ahead demands much initiative, drive and courage. You will have to face many challenges and wrestle with several bottllencks. Government officials will do well and attract the attention of the higher-ups. Do not displease seniors and subordinates. You may feel dull early in the week.

VIRGO
(Kanya)
Aug 22-Sept 23

Mental burdens and physical exertion will weigh you down considerably, in the coming fortnight. Financial resources should be carefully conserved. The time at your disposal should be utilised for creative work. Assignments you have accepted should be carried out. Adopt a concialiatory approach towards elders.

LIBRA
(Tula)
Sept 24-Oct 23

You will be drawn towards a new personality and he/she will keep you engrossed and busy for some more time. Your existing ties will however pull you in the opposite directions. Maintain status quo and keep both of them happy. Friday brings surprising news and that will keep you pondering over it.

SCORPIO
(Vrishchika)
Oct 24-Nov. 22

Worldly war between the young and the old cannot be ruled out with regard to marriage. Don't trust strangers. In business and work life however, it is smooth sailing. Financial gains come your way towards the weekend. Clear all backlog by midweek. Relations at work become tense towards the weekend.

SAGITTARIUS
(Dhanu)
Nov 23-Dec 20

It's adventure this week, both in personnal life as well as career. Youngsters will be bold and straightforward in the disclosure of their love-affairs and will express a desire to marry a current sweetheart. Bury your differences with the family and effect a reunion midweek. Important issues should be settled.

STAR FOCUS

Stiff Time Ahead For Vasantdada

As predicted in the columns of *Weekly*, April 4, 1982, Mr Babasaheb Bhosale was compelled to resign from the post of CM after completion of a year

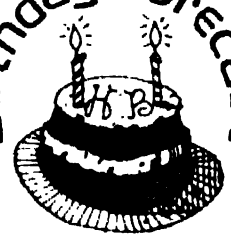
Mr Vasantdada Patil was elected as a leader of the House once again and was sworn-in on February 2, 1983 at about 11 am According to the Western system, Aries (22) was rising on the ascendant and Capricorn (16) on the meridian cusp. The sun near the 10th house, Jupiter in 9th house along with eccentric Herschel, and Mercury on 10th, will give breathing time to the new CM to sort out muddles and chronic problems at least for a couple of months ahead.

Weak Mars, near 12th house, Saturn-Pluto along with the Moon on 7th may create disharmony and cause defections due to which the CM may find it difficult to maintain unity and coherence in and outside Government.

From the middle of April, significantly from July, the situation will go on becoming tense on account of continued threats of defection and opposition among its rank and file.

Taking into account all these and many more planetary aspects and the transit of Saturn-Mars in one single sign and Libra for more than 6 months in 1984, it is unlikely that the present ministry will survive over a year and thereafter there might be a mid-term poll.

Birthday Forecast



Sunday, March 13

Nothing spectacular happens this year but it will be easy going. Keep things steady. Finances are good so long as you don't go in for heavy investments.

Monday, March 14

No smooth sailing this year. Handle all those around you with utmost care, especially between August and December. Do not allow yourself to be ostentatious this week.

Tuesday, March 15

A change in work life is unadvisable. Maintain status quo until the end of the year. 1984 brings better luck. Financially, no serious handicaps this year. Guard against possible ill health in December.

Wednesday, March 16

Everything depends on how you deal with family members, elders and seniors. On the financial front, you will do well but restrict over spending on luxuries.

Thursday, March 17

If you blend the enthusiasm of youngsters with the advice of seniors you will vastly improve your vocational prospects. The middle-aged should sort out their property matters before November/December.

Friday, March 18

This is a year of contradictions. Some vivid experiences come your way. There will be a tendency to change partners in the middle of the year; you must postpone the decision until the end of 1983 or early 1984.

Saturday, March 19

A mixed year. Don't act impulsively between September and December. Be sympathetic towards your family and enlist their cooperation and help during a crisis that comes in August/September.

A nutritionally complete feed should contain all the nutrients in the right proportion...

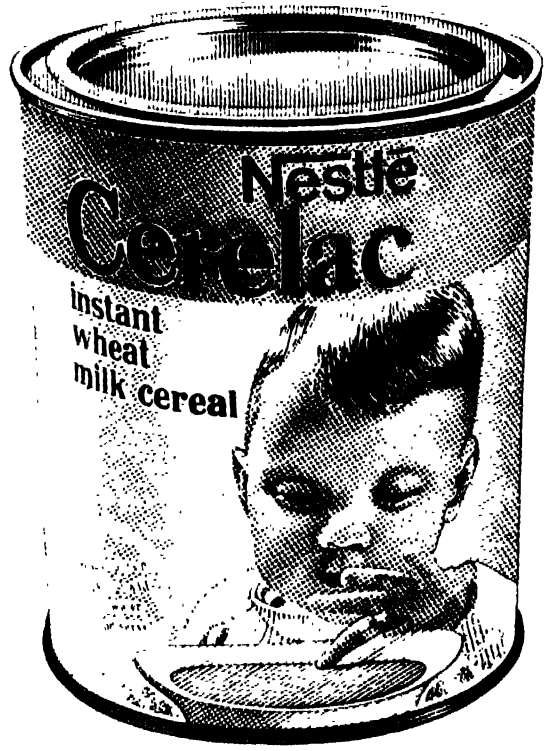
Cerelac provides a nutritionally complete feed –in one delicious form.

When your baby is about four months and ready for solids, consult your doctor about Cerelac. You'll find it reassuring to know that every Cerelac feed you give your baby is nutritionally complete.

Which means every Cerelac feed has all the necessary nutrients, proteins and calories he should get from a single solid feed. You do not have to supplement it nutritionally.

Cerelac owes this nutritional completeness – and taste – to its delicious blend of wheat flour, full cream milk and sugar. Cerelac provides proteins for body building, carbohydrates and fats for energy and all the essential vitamins and minerals for all round development.

Give your baby Cerelac—for his full, healthy growth.



Cerelac is so easy to make Just add it to pre-boiled, warm water Mix, stir and serve

This Week's Bridge

Calcutta Invitation Tournament - III

PAKISTAN, with four of the teams which finished second in the 1981 World Championships, including the brilliant Zia Mahmood who is fast becoming known as one of the leading players in Europe, played ANAND MEHTA in the 64 Board Finals of the Invitation event held at Calcutta's Saturday Club in January. For MEHTA, Anand Mehta - Orlando Campos playing together for the first time in their lives, and Avinash Gokhale - Jaggy Shivdasani had battled through as a foursome, being joined by Ratanlal Kejriwal only midway through the semi-finals.

After three eventful sets of 16 Boards, we led by 15 imps, with 16 Boards to play. Earlier Pakistan had bid and made an incredible 22 point small slam, on a finesse, and a Grand Slam with King Jack and two more missing in the trump suit, which made when the King doubleton was in finesse. But they had missed a couple of games, gone overboard a few times, and missed two excellent slams, one laydown and the other odds on.

On the first two boards of the last set Pakistan made up 10 imps of their deficit, but this board put us well in front:

West dealer, None Vulnerable.

	♠ A10874 ♥ 8542 ♦ Q3 ♣ 92	
♠ K93 ♥ AK3 ♦ AK8 ♣ AQ103	N W E S	♠ QJ65 ♥ 10 ♦ J964 ♣ KJ85
	♠ 2 ♥ QJ976 ♦ 10752 ♣ 764	

West	North	East	South
Masood	Jaggy	Zia	Avinash
2C (i)	P	2D	2H
2NT (ii)	P	3C(iii)	P
3D	P	3H	P
4C	P	4D	P
4H	P	5C	P
6NT	P	P	P

(i) Acol, or weak preempt in Diamonds
(ii) 22 - 24 Balanced.
(iii) Stayman.

Jaggy led the four of Hearts, third and fifth best. Masood won his Ace over my Jack, and played a low Spade, the Jack winning as Jaggy ducked. Over to the Ace of Clubs, and a second small Spade, Jaggy doing very well by ducking again. The Queen won as I sluffed the six of Hearts. Masood now cashed the Queen and Jack of Clubs, Jaggy pitching the two of Hearts confirming 4 cards, and on the King of Clubs,, I discarded the Queen of Hearts, beginning an unblock. Jaggy pitched a Spade.

Masood tried his best, coming up on the Ace of Diamonds and cashing the King of Hearts, but the hand was an open book by now. I unblocked the *nine* of Hearts, and when Masood cashed the King of Diamonds dropping the Queen, he tried to throw me in with a Heart, but the unblock had done the job - Jaggy was able to win with the precious *eight* of Hearts, and cash the Ace and a Spade for down 2. Our team mates had stopped in Three No Trumps, making 5, II imps to us.

A few boards later came this board:

West dealer, E - W Vul.

West	East
♠ AKQJ832	♠ 64
♥ 6	♥ 10752
♦ AJ984	♦ Q2
♣ Void	♣ KQ654

West	North	East	South
Masood	Jaggy	Zia	Avinash
2S (i)	3H	3S	4H
5D	P	5S	P
P	P		

(i) Acol, forcing for one round.

Zia's three Spades was perhaps an overstatement, but he did have useful cards outside. Masood had to show his Diamonds, and our competition had pushed them a bit too high. Masood was unlucky - the King of Diamonds lay over the Queen, Diamonds broke 4 - 2 with the ten not dropping, South had 1075 of Spades, so he had to one down. With no interference, Campos - Kejriwal were able to stay in four Spades at the other table, West bidding both his suits vigourously but accepting his partner's repeated sign offs.

Three boards from the end of capacity Vu Graph audience erupted. We were leading by 37 imps when this is what the audience saw:

East dealer, North - South Vulnerable.

	♠ Q ♥ Q5 ♦ AK98652 ♣ AKQ	
♠ J98632 ♥ 1064 ♦ 4 ♣ J82	N W E S	♠ AK75 ♥ 983 ♦ QJ3 ♣ 954
	♠ 104 ♥ AKJ72 ♦ 107 ♣ 10763	

In the Closed Room, Pakistan had played in five Diamonds, making on the nose when trumps broke 3 - 1. This was the Open Room auction:

West	North	East	South
Masood	Jaggy	Zia	Avinash
		P	P
2D (i)	D'ble (ii)	2H (iii)	D'ble
2S	3S (iv)	4S	5H (v)
P	6H	P	P
P			

(i) Multi - Weak 2 in a Major or Acol 2 in a Minor.
(ii) General strength.
(iii) Limit if partner has a Weak 2 in Hearts.
(iv) Directional.
(v) Very good Hearts.

Since my Double of Zia's Two Heart bid could have been on scattered values with good hearts, Jaggy decided to first explore Three No Trumps with his Directional bid. When I stressed very good Hearts (maybe I should have had the ten of Hearts), he was able to bid Six! With Hearts 3 - 3, even a Spade lead and continuation wouldn't have hurt me. As it was, Masood led a Diamond, so I made seven.

Eventually we won by 31 imps, 150 - 119 over 64 Boards. There was lots of good bridge, and I imagine the Vu Graph audience enjoyed themselves as much as the players did

West Bengal Bridge Association, and the Saturday Club, have rendered a invaluable service to the cause of Indian bridge by holding this tournament. It enabled many top Indian players to play against tough opposition from Indonesia and Pakistan; it enabled our players to gain exposure to the carding methods of our world class opponents; it introduced some of us to playing with screens and bidding boxes, which is a little disconcerting until you get used to it; and finally the result is likely to inspire our teams to do even better, in future, agaist better known opposition.

AVINASH GOKHALE

This Week's Chess

Double Deflection

FREE offer of a Rook on the 8th rank to deflect, by its forced acceptance, either of two enemy men, is the delightful theme of the combination in position Nos. 309 and 310.

Van der Wiel - P. Nikolic

Dutch IM John Van der Wiel won the International Tournament at Novi Sad (Y) and achieved his GM norm with 8½/13. Other results: GM Quinteros and GM Popovic 8; GM Ribli and IM P. Nikolic 7½ GM Razuvayev and GM Smejkal 7; GM Kurajica and GM Romaishin 6½ ; GM Gheorghiu 6; GM Suetin and IM Bjelajec 5½ ; GM Gligoric 4; IM Deze 3½.

1.e4, e5 2.Nf3, NC6 3.Bb5, a6 4.Ba4. Nf6 5.00, Be7 6.Re1, b5 7.Bb3, d6 8.c3, 00 9.d4, Bg4 10.Be3, d5?! 11.exd5, cxd4 12.Bxd4! Nxd4 13.cxd4, Bb4 14.Nc3, Bxc3 15.bxc3, Nxd5 16.Qd3, g6 17.Re5, c6 18.Rae1, Ra7 19.Ng5, Bf5 20.Qg3, Qd6 21.Qh4; f6 22.Ne4, Qd8? 23.Bxd5ch, cxd5

Position No 309: 24.Re8!!, Rxe8 25.Nxf6ch, Kg7 26.Rxe8, Re7! 27.Qxh7ch, Kxf6 28.Qh8ch,Kg5 29.h4ch, 1-0.

9.d4) Ruy Lopez. Mostly 9.h3 is played disallowing the pin ..... Bg4.

10.Be3) 10. Aseyev-Averbakh, Moscow 1982: 10.d5 Na5 11.Bc2, c6 12.h3, Bc8 (M. Zeitsev-V Agmazov, Moscow 1981: 12...Bd7 13.Nxe5, dxe5 14 d6, Nb7 15.dxe7, Qxe7) 13.dxc6, Qc7 14.b3, Nxc6 15.Nbd2, Nd8 16.Bb3, Ne6.

10...d5!) After 10... Nxe4 11.Bd5, Qd7 12.Bxe4, d5 13.Bxh7ch, Kxh7 14.dxe5 Black loses a Pawn

Often played is 10.. cxd4 11.cxd4, Na5 12.Bc2, c5 (or 12... Nc4 13.Bc1, c5); Judasin-Psachis went: 13.dxc5 dxc5 14.Qe2, Nc6 15.Nc3, Ne5; 'Kurs Dyebutov gives 13.h3, cxd4 14 Bxd4, Bxf3 15.Qxf3, Rc8. 20.Kh1, Bh5 21.Rc1, Nc4.

12.Bxd4!) An improvement on the book variation 12.Bg5, Nxd5.

18.Rae1) White has gained advantage in the doubling of Rooks in e-file and the pressure on Black's Knight on d5.

22...Qd8?) He had to play 22... Bxe4 23.R5xe4, Kg7; though after 24.Re6, Qd7 25.Qg3 and h4-h5 White's attack is still strong.

29.h4ch) Having saved the back rank mate, White can now take Queen.

Chandler - Szeles
Keszthely (Hungary) '81

1.d4, d5 2.c4, e6 3.Nc3, c5 4.cxd5, cxd4?! 5.Qa4ch, Bd7 6.Qxd4, exd5 7.Qxd5, Nc6 8.Qd1, Nf6 9.Nf3, Bc5 10.e3, Qe7 11.Be2, 000 12.00, g5 13.b4!, Bxb4 14.Bb2, Rhg8 15.Nd4, Kb8 16.Ncb5, Ne5 17.Qb3, g4 18.Rfc1, Nf3ch! 19.Nxf3, gxf3 20.Bxf3, Bxb5 21.a3, Rd2! 22.Bd4!, Nc4! 23.Qxb4, Ng5!

Position No 310: 24.Rc8ch!, Rxc8 25 Qxe7, 1-0

3...c5) Tarrasch Defence.

4...cxd4?!) Hennig-Schara Gambit, lively but doubtful; if 5.Qxd4, Nc6 6.Qd1, exd5 7.Qxd5, Be6 or 7...Bd7 and 8... Nf6. Normal is 4...exd5

11...000) 'Kurs Dyebutov' suggests 11...00 12.00, Rfd8.

14.Bb2) All this is book; 14...g4 15.Nd4 with better chances.

23... Ng5!) He cannot play 23...Qxb4 24.axb4 because of the double threat 25.Bxe4 and 25.Bxa7ch etc. Now after 24.Qxe7 (24.Qxd2?, Nxf6ch etc.) Nh3ch 25.Kh1, Nxf2ch 26.Kg1, Nh3ch draws.

24.Rc8ch!!) If 24...Kxc8 25.Bg4ch stops the draw and if 25...f5 26.Qxe7; or 25...Kd8 26.Qxd2.

Are you...
Paying through your nose to get quality?
Or settling for a cheap alternative
with dirt cheap quality?

Strike
The Biz Balance

On Price

Earlier there were two types of scourers. Quality cleaning powders that cost the earth, and cheaper cleaning powders that cut down on cost simply by cutting down on quality.

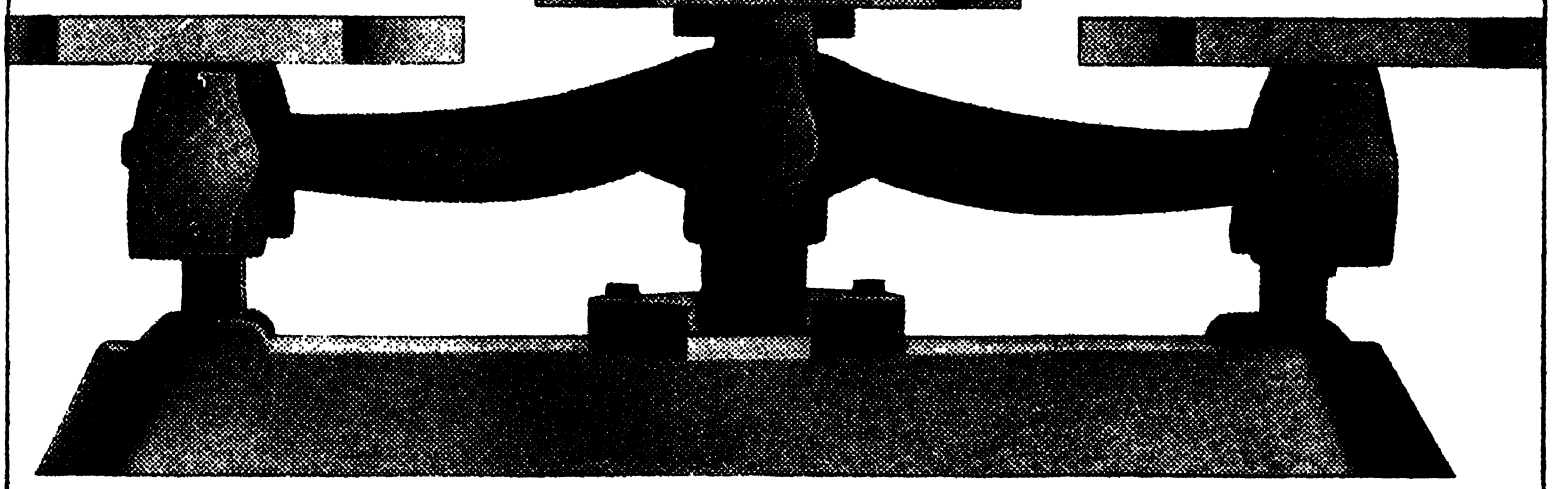
Then came Biz!

Biz strikes a unique balance between Economy and Quality. In fact the Biz offer of Economy is a double-edged one. Look at it this way — Super Biz costs 25% less than other leading scourers. And also, you need to use much less of Biz than cheaper cleaning powders to get the same sparkle.

On Performance

Extra detergent helps Super Biz cut through grease with ease. And wipe out spots and stains, slime and grime, all in no time. A faster foaming action helps it clean faster and better with much less effort.

Super Biz is gentle on delicate surfaces, tough on rough surfaces. Use it on almost anything. Steel utensils, ceramics, glassware, crockery, cutlery, sinks and tiles. Why buy expensive specialized cleaning powders to solve different cleaning problems when multi-purpose Biz is available? Don't sacrifice on economy or quality. Just strike the Biz Balance of Super Savings and Super Performance.



Cuts down on costs without cutting down on quality

Versatile

More and more mills have started using the versatile high-crimped wonder fibre

Grasicrimp **blended with Polyester**

The inherent properties of Grasicrimp fibre invest the blended fabrics with a number of advantages

- Worsted feel, which closely resembles woollen fabrics
- Greater bulk and hence better warmth retention
- Greater fullness of handle and hence better drapeability
- Higher resistance to pilling
- Better crease recovery due to high crimp in the fibre
- High tensile strength and tear-strength
- GRASICRIMP blends give better productivity in spinning due to better cohesiveness
- GRASICRIMP blends are also more economical because of their greater dye-affinity
- GRASICRIMP is available in white and in various shades in spun-dyed form

A nutritionally complete feed should contain all the nutrients in the right proportion...

Cerelac provides a nutritionally complete feed –in one delicious form.

When your baby is about four months and ready for solids, consult your doctor about Cerelac. You'll find it reassuring to know that every Cerelac feed you give your baby is nutritionally complete.

Which means every Cerelac feed has all the necessary nutrients, proteins and calories he should get from a single solid feed. You do not have to supplement it nutritionally.

Cerelac owes this nutritional completeness—and taste—to its delicious blend of wheat flour, full cream milk and sugar. Cerelac provides proteins for body building, carbohydrates and fats for energy and all the essential vitamins and minerals for all round development.

Give your baby Cerelac—for his full, healthy growth.

Cerelac is so easy to make. Just add it to pre-boiled, warm water. Mix, stir and serve.

Cerelac®
Already contains milk

NORVICSUN

Invest in a brilliant idea..

1 You can buy it today without an import licence
2 Pay for it in rupees
3 It's automatic
4 Comes with complete back-up service, spare parts, consumables.

Dozens of manufacturing organisations, leaders in their fields, service industries, law firms and research centres have bought the Nashua-Dynamatic 1221 for those four reasons. And for something else. It operates on the Liquid Toner Transfer process. It is the most significant advance in copier technology in over 20 years. Dynamatic Hydraulics Ltd. brings this technology to India in collaboration with Nashua of the United States, the most prestigious name in copiers

The Nashua-Dynamatic 1221 plain paper copier delivers the first copy in four seconds flat Other copiers take longer just to warm-up.

This is what BARC has to say

"We have been used to computerised operations for years. The Nashua-Dynamatic 1221 is in the same class of facilities. Fast, flawless, first rate"

And Bank of Maharashtra adds

"We used the Nashua-Dynamatic 1221 plain paper copier for a continuous period of eleven hours and got over 8,000 copies All copies were uniform in quality and the machine proved to be a real work horse."

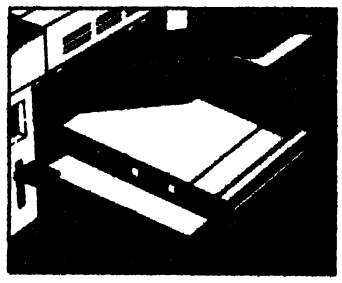
Now listen to ONGC.

"Our scientific drawings are as precious as the oil we produce The Nashua-Dynamatic 1221 duplicates them by the hundreds. And it switches off on its own. No wastage of electricity"

We, on our part, are as proud of our customers as the copier we make The Nashua-Dynamatic is infact the only copier that makes sense Consider these features.

The unique Dual Cassette System

Its two cassettes can be loaded simultaneously with two different sizes of paper. And the size required for the copy can be selected at the flick of a lever Originals ranging in size from A5 to B4 i.e. 209.55 mm. × 149.22 mm. to 254 mm × 355.6 mm. can be copied. Besides, you get copies at the rate of 20 per minute.

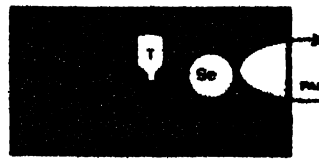


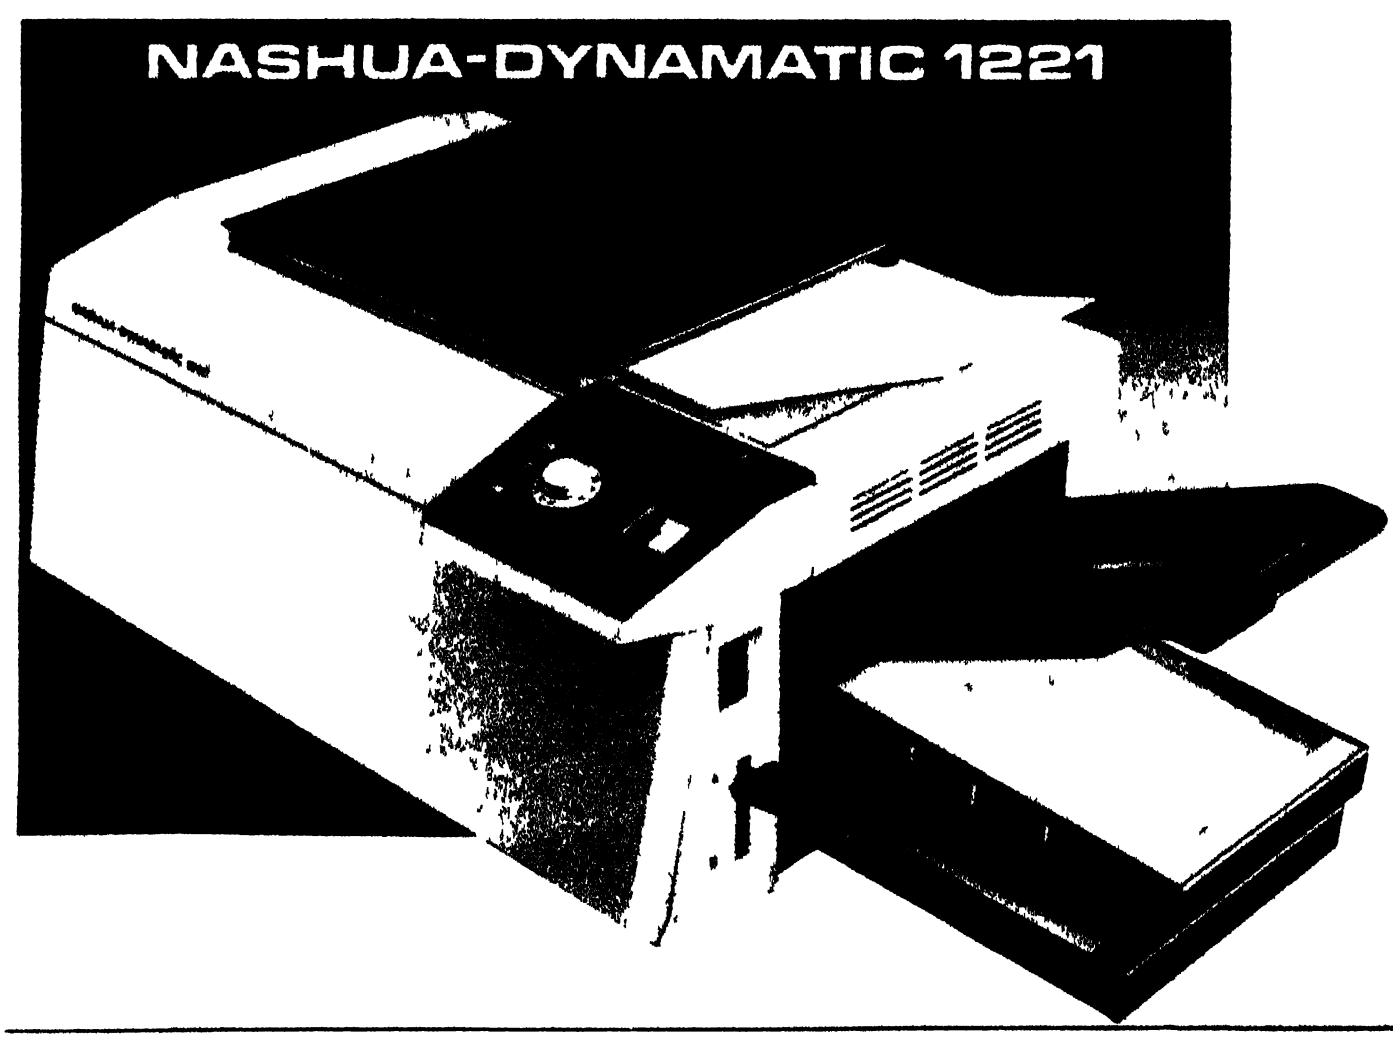
Line and halftones, sharp and crisp

Not only does the copy come fast, it comes right. Because a sensitive electronic 'brain' reads the background level of each original and automatically adjusts the copier. So whether it's book print, an ad or an engineering drawing, the result are superb. On the paper we provide or on letterheads or tissue — the choice is yours.

The technology that made Nashua No. 1

The Liquid Toner Transfer process employed here has been termed a breakthrough in copier technology. This is why the Nashua-Dynamatic is the most advanced copier in the world today





Elimination of problem areas

First, because the image is transferred by liquid toner, there's no powder toner to clog up the machine, to cause jams and breakdowns. Eliminating the need for cleaning brushes, filters, vacuum systems and allied power equipment.

Second, paper travels only one third the distance when compared to conventional copiers. Which means 66% less chances of paper jam. And quicker, cleaner copies.

Less electricity consumption

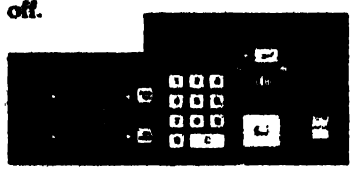
The fourth big advantage: this is the only copier that can afford to switch off automatically after 60 seconds of non-use. Because there's only a four second wait for a first copy. That's how Nashua technology takes care of your electricity bills.

..The Nashua-Dynamatic Automatic Plain Paper Copier.

The Nashua-Dynamatic 1291 has all these features. But this is a more sophisticated machine and naturally, it has certain outstanding additional capabilities.

Touch-Sensor sophistication

Few copier control panels provide you with as much creative power as the one found on the Nashua-Dynamatic 1291. It's located on the front right deck of the machine where it is easy to see and reach. By lightly touching its keys, you can program the machine in a matter of seconds. Each selection is confirmed by an audible beeper tone, which can be adjusted high, low, or turned completely off.

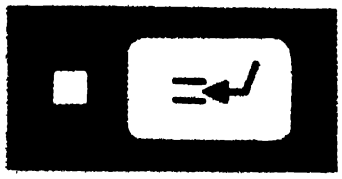


Size reduction

Copying of originals in sizes ranging from A5 to A3 including B4 & F4 is possible. And by using the reduction key, you can shrink large originals to economise on paper and mailing costs, standardize formats and simplify filing. Reduction from A3 to A4 is possible i.e. a 66.9% reduction ratio. You can even prepare oversized documents on the Nashua 1291 for fascimile transmission. All at the rate of 36 copies per minute.

Interruption for urgent copies

Sometimes, an urgent document must be copied while a long report is being duplicated. By pressing the interrupt copy key, the long run can be suspended and the priority copies made without delay. Then press the interrupt key again, and the copy program returns to the point where you left off.



Plus many more marvelous features which more than justify the price of the Nashua-Dynamatic 1291.

The engineers on call

There's a lot more to the Nashua-Dynamatic 1221 and 1291 about which our engineers will enjoy talking to you. For they are the boys who will instal and service your machine. Wherever you are in the country, they'll be on call, ready with spares and consumables.

Ask for a demonstration. So that you can see for yourself the fastest starter in the copying business, the Nashua-Dynamatic 1221. Or better still, the Nashua-Dynamatic 1291.

LETTERS TO THE EDITOR

Freedom Of Sexpression

Sir—P.K. Nijhawan's well researched article ("Sex Revolution And Hinduism", February 20) was interesting. It certainly helps in liberating Indians from a false sense of guilt, which the West imposed on us. Mr Nijhawan's treatment of the subject was exemplary: not once did he seem off colour.

Balvinder Singh
Chandigarh

Bitter Pills

Sir—"Beware Pretty Maids All In A Row" by J. B. Chatterjee (February 20) is informative. In the description about Rawolfia it says:"This is a particularly interesting shrub as it has medicinal values in addition to its poisonous character." The same applies to many other plants: Datura and Gloriosa are used in Ayurvedic medicines and Gelsemium in homoeopathy.

Permit me to recall one incident in which a stone-cutter, who was disgusted with the unsuccessful treatment given to him by many doctors for his chronic stomachache, took the roots of *Gloriosa superba*. He didn't die. He was cured!

Dr T. K. Yathindradas
Bombay

Divided We Stand

Sir—R. Sriman's "A Disturbing Moment For Indian Cricket" (February 13) ignored one important reason for India's defeat: our team lacked national spirit. Each player played as an individual.

Dr Gulati
New Delhi

Sir—We read with keen interest Mr R. Sriman's impartial and impressive article. Our cricketers' dismal performance in the recent cricket series against Pakistan.

It has been proved without slightest doubt that our present cricket team is no match to the formidable and professional cricketers of Pakistan. Let's accept this humiliating defeat sportingly and let this "*failure be the key to success*".

If we really want India to occupy a respectable and prominent place on the cricket map of the world, then it is imperative that the following steps should be taken:

Revamp the whole cricket set-up both at State and National level.

There should be no room for politicians, only sportsmen and professionals should be associated.

Irrespective of any 'ism', deserving and talented cricketers should be encouraged.

Incentives should be introduced and a cadre of professional cricketers should be built-up

To weed out the old guard, who have been successively a failure/ deadwood.

As has been suggested by Gavaskar and others, Board of Control for Cricket in India, should take-up with the International Cricket Board to have "umpires" from neutral countries. This will go a long way to avoid unnecessary bitter feelings for the so called bad/wrong and doubtful umpiring decisions, etc.

—Mons Chowdhury

We sincerely hope that the destiny of our Indian cricket, which is in deep crisis, will be in the right hands.

NTR's Task

Sir—G.S. Reddy's analysis of the present Government in Andhra Pradesh ("Misty Dawn Of NTR's Ram Rajya", February 15) made interesting reading.

As he rightly puts it, it is hard reality and not the movie screen that NTR has to face. It is not going to be a bed of roses all the way along—it is one thing to preach and another to practise. NTR has begun with a bang, we hope he lives up to public expectations. If it is an ideal welfare state that he has in mind, if it is the whole India that he sees in AP—rather than a state jaundiced by regional considerations—then should have more of his ilk.

Have the Augean stables now been cleaned? Let us now hope that the people are not taken for yet one more ride!

K. V. Krishnan
Bombay

The Bohras

Sir—That the High Priest still enjoys the utmost love, respect and confidence of the Bohras is unquestionable and can be easily assessed by attending any of our religious ceremonies. ("Struggle Against Authoritarianism", February 13).

The Nathwani Commission was a group mostly of non-Muslims. Hence it was not possible for them to understand the traditions and feelings of Islam. The judgement of such a commission was bound to be prejudiced.

Fakhruddin S. Attar
Surat

Marvellous "Mystic"

Sir—I am myself a mystic artist and I enjoyed Mr Jean Letschert Ascharyacharya's creations (February 13). My hearty congratulations to Ms Christine Merllie and the artist.

Manani

Mishra Raj

Sir—The WEEKLY is to be widely acclaimed for its bold investigative reporting on the Bihar Chief Minister, Dr Jagnnath Mishra, the most derided Chief Minister in India. ("Fresh Move To Oust Bihar CM", February 13). The incisive report is well-analysed, thought-provoking.

Also, it is totally beyond my comprehension why Mrs Gandhi is taking no action against Dr Mishra.

Khursheed Ahmad
Patna

Hurrah! Hurrah!

Sir—In your cover story, "Can The Congress (I) Put Its House In Order?" by K.C. Khanna and K.R. Sundar Rajan's article, "Can Mrs Gandhi Do It?" immediately following it (February 6), you took a good look at Mrs Gandhi's recent reshuffling of her Cabinet and her Party's Secretariat. Mrs Gandhi did not make any drastic changes in both. The only innovation worth mentioning is the appointment of UP's ex-Chief Minister V.P. Sigh as a Cabinet Minister and of her son Rajiv Gandhi as a General Secretary of the Congress (I). Her son is given important matters to deal with and wields as much power as, if not more than, any of the other secretaries. His appointment is more significant than that of V.P. Singh, who can only be considered to have been rewarded for his "clean" image, unsullied in the mire of UP politics.

Though Mrs Gandhi's Party had met with a humiliating defeat in the Assembly elections in Karnataka and Andhra Pradesh during this January, it is wrong to conclude that her influence in the country is now waning and that she is incapable of doing any good to the country. A political leader of her stature is still not in sight. If, with the Sikhs in Punjab and the students and young men in Assam on a rampage, anyone can solve India's problems, it is Mrs Gandhi and Mrs Gandhi alone. She has her foibles, but we may have to put up with them and stand behind her, giving her every support in her effort to prevent India from disintegration, which is no longer an imaginary threat.

Mr Khanna is to be congratulated for recognising Mrs Gandhi's potential.

K. Govina
Kuttippuram

Sir—The much talked about and much publicised second Kamaraj Plan was a farce. How can a doddering octagenarian rejuvenate a fractious party? The Congress (I)'s shattering defeat in Andhra Pradesh and Karnataka shows that people cannot be fooled any longer by Mrs Gandhi's political gimmicks. In fact, all the Congress (I)-ruled States are the bastions of ministerial corruption and nepotism.

K.N. Sudhakaran Pilla
Belgaum

Tibetans Speak Out!

Sir—The thoughts and feelings of Tibetans have been mispresented in K.N. Sud's article (Tibetan Exiles: Too Rich To Go Back", February 6). If we are rich, it is result of our hard work during our dispiacement in India. However, wealth is not what we seek. It has been out unceasing endeavour to struggle for independence. We don't equate material richness with political independence. Just think of it—we had fled our Motherland, a very rich and fair one, in 1959 out of sheer repugnance of subjugation of our sacred land by China.

The author has misconstrued and misinterpreted our adaptability in the Indian Society. He has implied that we have endeavoured to achieve a complete absorption in the Indian Society, like some Indian minority groups. This is entirely wrong. He has also gone to the extent of quoting His Holiness the Dalai Lama to the same effect. We know however, the statement has been quoted in an injustifiable context.

The concluding sentence, "And who knows, in course of time, they (meaning Tibetans) may start asking New Delhi for a linguistic state of not their own", is just wrong but positively mischievous.

Tashi Phuntsok
Karnataka

What's In A Name?

Sir—It was not "Mr Smith" but Frank Smythe who first wrote about the Valley if Flowers ("Hemkund and the Valley of Flowers", February 6). Since then the original name of the valley, Pushpawati, given by the Pandavas, has fallen into disuse.

Anil Bahuguna
Member, International Mountain Society
New Delhi

Precious Pics

Sir—P. Dhavan's photographs ("A Hobby Par Excellence", February 6) were fantastic. I wait eagerly for each Third Eye feature in the WEEKLY which has acquired a special place in the hearts of the readers.

Krishna Pachegonkar
Aurangabad

Future Of Astrology

Sir—"The Future Of Astrology—The Soothsayers Of The World Unite!" (January 3) brings out some important points which deserve careful scrutiny.

The author has indirectly implied that college-going scientists are to be held accountable for the ill effects of Manhattan project. And since Manhattan project was immoral, college-going scientists have no right to protest against anything "immoral" like dependence on astrology. Actually the college-going scientists have done an admirable job in protesting against the issue. It is unfair to blame science or scientists for the ills which flow out of misuse of science and technology by any society.

It is indeed unfortunate that although Indian scientists (or sages—call them by any name you like) developed astronomy to a significant level about 2000 years ago, as pointed out by the author, it did not flourish in our country. It is anybody's guess what India's position would have been in the world today had we struck to a rational, non-superstitious outlook.

S.K. Bhattacharjee
New Bombay

Overwhelming!

Sir—In the "Weekly Pick" (January 30) one read with interest Mrs Gandhi's comment that "both Sanjay and Rajiv Gandhi shared the traits of their late father, Mr Feroze Gandhi, and had great concern for honesty and achieving excellence in their work. They were both direct and knew their own minds and had leadership qualities".

May I add that honesty and persuit of excellence are very Parsi traits, built on the foundation of the teachings of prophet Zarathushtra.

A. Parsi

Are We Fair To Our Armed Forces?

The general discontent in the Armed Forces has to be traced not only to the declining capacity to fight inflation but also to the choked promotion prospects in the Defence Services following the emergency recruitments, especially in the Army and the Air Force (made 20 years ago) and to intra-Service disparities.

Another major factor is the moral ethos in a society where corruption has made life easier for those sections that are not called upon to sacrifice anything for the country. Our Special Correspondent presents an in-depth analysis.

Birla's Brightest Star

Cover Story

If there has been a Government clampdown on civil liberties in Assam, the Assamese themselves have denied freedom of expression to their own people. If the police atrocities on the Assamese have been excessive, the terrorisation of Bengalis and "immigrants" by the Assamese has been no less. Insane violence has taken over Assam today. If this reign of terror is not halted immediately, the State will soon split into fragments, says our staffer, SUJATA ANANDAN, in this on-the-spot assessment which took her straight to the centre of the scene of action.

Black & white photographs by the author

Assam On Fire

THE once-placid blue waters of the Brahmaputra today run stormy purple with the blood of hundreds of victims of "democracy" and "non-violence". What began three years ago as a peaceful "satyagraha" for totally legitimate reasons has turned into a mad carnage. Tension, suspicion and hatred between the communities ride high in Assam today, the peace and the langour of its people are shattered—seemingly forever.

Even the best of causes can become perverted and this is what is happening in Assam. Between the blunderings of the administration and the loss of reason by the agitators, the State is sinking deeper and deeper into crisis and there seems to be no way out of the impasse.

The imposition of elections on an unwilling electorate was perhaps one of the most unfortunate actions of the Government in recent times. Far from restoring order in the State, it has only helped, if anything, to bring the various sections of the people in Assam into a state of open confrontation with each

DEMOCRATIC DISSENT? Assam is plastered with anti-poll graffiti (above and left) that are sad reminders of the enforced elections on a largely unwilling electorate. The agitators were determined that there should be no election and ultimately succeeded in making the Government look ridiculous. However this did not stop the formation of a Ministry in the State.

other. Before the elections there was at least a state of armed truce between the communities. But today, with so much loss of life and property among so many communities;the fissures in the Assamese society have widened into gaping chasms

"Violence is a necessary attribute of the struggle for existence," a young Assamese woman tells me, after the Nellie massacre where the victims were mostly women and children. "Violence, in its purest form, determines the survival of the fittest and I think it is most desirable."

"The first round in the battle against the immigrants has gone to us," says another Assamese youth. "I don't think any freedom can be won without the sacrifice of a few lives and Nellie has been such a sacrifice."

How would he have reacted had the victims of the Nellie massacre been Assamese instead of Muslim "immigrants"? His eyes blaze and he mutters, "We would have taken two immigrants for every Assamese killed."

What is the reason that a gentle peace-loving people have been moved to such madness and violence? The answer lies, perhaps, in fear—a genuine fear of being swamped by the "foreigners", of losing their identity and possibly their State,once the number of the Bangladeshi immigrants becomes overwhelming. They also see the possibility of Assam seceding from India if the immigrants throw up a fanatic Muslim leader or, much worse, acceding to Bangladesh on the strength of their religious majority.

This is,indeed,a serious problem—one that the entire country must face and not just the Assamese people alone. The North-East is strategically one of the most dangerously situated regions in the country, surrounded as it is by four foreign nations, three of which—China, Burma and Bangladesh (Bhutan is the fourth)—though not permanent enemies, can certainly not be counted upon as friends at all times. The Super-powers also love to fish in troubled waters and Assam is very much troubled today.

While this might well occur to the higher-ups in the Government, other considerations—mainly political—cloud their judgment. Indeed, the entire situation has been the creation of politicians who held personal gains far more important than any national good.

Not Recent

The influx of Bengali Hindus and Muslims into Assam is not of recent origin—it goes back, in fact, to the British days. Englishmen imported labour from the neighbouring Bengal into the tea gardens and the educated Bengalis to man their offices. The lazy Assamese, who loathed to work in their fields themselves, allowed this influx. The numbers of the aliens grew with partition and the subsequent Indo-Pak wars of 1966 and 1971. However, the stream of infiltration remained steady in the intervening years for there was practically no control exercised at the borders. That the problem is, indeed, serious is apparent from the population figures obtained from the 1971 census report: while the growth rate in the rest of the country during the previous decade (1961-70) was 24.8%, in Assam the population increased sharply by 35 per cent.

A large percentage of this abnormal increase was the result of large-scale immigration. In the days before partition, the immigrants were mostly Muslim peasants; their immigration was actively encouraged by the British and the Assamese landlords themselves who found it difficult to secure labour locally to till their land. After partition, however, a large number of Hindu refugees poured into Assam from the neighbouring East Pakistan, as did the Muslims, though in lesser numbers.

TWO EXTREMES. While a clampdown on local newspapers like Assam Tribune *(above, top)* Dainik Asom *and* Agradoot *(see Weekly, February 27-March 5, Page 30) formed part of the denial of civil liberties to the people of Assam, the agitators lost all reason as they went about systematically destroying bridges (above) and other public and private property in an attempt to stop the elections at all costs. Below left: The politicians are apparently unconcerned with what happens to the rest of Assam, so long as they remain in power. Seen here APCC (I) President Haren Talukdar and Congress (I) Lok Sabha candidate from Gauhati Bhubaneshwar Bhuyan talking politics at the Boko Inspection Bungalow with jawans of the Maharashtra Special Reserve Police Force in the background. Assam today, indeed, looks beseiged by men in khaki of all hues.*

On examination, nearly 2.2 lakh persons were declared illegal immigrants between 1950-61 and almost an equal number of illegal entrants were identified in the next decade. Although tribunals were set up for their detection and deportation, local landlords—who benefited from cheap labour—and local politicians—who benefited from their votes—intervened on their behalf and a large number of those ordered deported thus continued to live in the State.

Then during 1971, nearly one lakh refugees fleeing the reign of terror in East Pakistan entered Assam and remained in the State after India and Bangladesh signed an agreement to the effect that Indian citizenship would be granted to all those refugees who had been in India for at least six months before the civil war broke out in the erstwhile East Pakistan (March 25, 1971). At this time no one objected to this influx and least of all the politicians—especially the Muslim leaders belonging to the Congress—since the immigrants formed a most reliable section of the electorate: the Muslims as a minority community have traditionally identified the Congress with security. In Assam they were ensured safety and shelter, so long as they voted for the Congress *and did not demand their fair share of power.* With security their main consideration, the Muslim immigrants complied: they even declared Assamese to be their language in an attempt to assimilate and blend with the local Assamese. Things went peacefully for some years.

Other Factors

But there were other factors operating in the hills, not the least important of them, the economic. Education had been long in coming to the Assamese but,once it did, it helped them to realise that they were fast becoming a minority in their own State. Not only had the immigrants, now aware of the power of their own vote, sought and gained a greater representation in the State Legislature but they had also secured land from the local

→

GLARING DIFFERENCE. The fact that the elections in Assam were a total farce is indisputable. Whatever little voting was recorded was only in the Bengali Hindu and Beng Muslim areas (left). *Polling centres in Assamese areas were totally deserted* (right). *Not even animals stirred here.* Inset (left): *Dr Birendra Kumar Bhattacharya bemoans th total denial of civil liberties to the Assamese.*

Assamese at fairly low prices and, with their labour and industry, become fairly prosperous. They were in a position to bargain for more power and if their terms were met, could render the Assamese political orphans in their own State. The Assamese burned with resentment for a long time but were unable to mobilise a strong enough force to fight this threat to their identity.

Then two apparently unconnected events, separated by a few months, stoked the fires of revolt and gave the Assamese people the necessary motive to launch a full-fledged agitation on the foreigners issue

In September 1978, speaking at an Electoral Officers' conference at Ooty, the former Chief Election Commissioner, S.L. Shakhder, expressed his concern at "the alarming situation in some States, especially in the North-Eastern region from where disturbing reports are coming in regard to the large-scale inclusion of foreign nationals in the electoral rolls." Expressing the view that the influx had become a regular feature, he felt that "on basis of the increase of 34.98 per cent between the two censuses, the increase likely to be recorded in the 1991 census will be more than 100 per cent over the 1961 census. In other words, *a stage would be reached when that State may have to reckon with the foreign nationals who may in all probability constitute a sizeable percentage, if not the majority population in the State.*" (Emphasis added).

He went on to add, "Another disturbing factor in this regard is *the demand by the political parties for the inclusion in the electoral rolls of the names of such immigrants who are not even Indian citizens, without even questioning and properly determining their citizenship status*" (Emphasis added).

The CEC was, in fact, referring to the influx of Nepalis into Sikkim and not to Assam but his statement brought to the surface the simmering discontent of the Assamese people against a similar state of affairs in their own State.

Finally, in April 1979 when the Election Commission ordered a revision of the electoral rolls in the Mangaldoi parliamentary constituency for holding a byelection necessitated by the death of the sitting Janata Party MP, the Assamese found their worst fears confirmed—nearly 45,000 names on the electoral list were discovered to be those of persons of doubtful nationality. Although these names were eventually struck off the list, the discovery resulted in the explosion of a mass movement—the longest drawn that independent India has witnessed so far. Today it has turned Assam into a bloody battleground of divisive forces.

The movement, in the beginning, was totally reasonable and legitimate, although not very Gandhian in character, as the agitators are prone to claim. Any satyagraha must necessarily be both popular and peaceful but while the Assam movement was the former, the latter it was *not*.

As early as 1980, the State witnessed the cold-blooded murder of as many as 400 people—mostly Bangladeshis and Bengalis of Indian origin. Although the All Assam Students Union (AASU) and the Gana Sangram Parishad (AAGSP), which spearheaded the movement, disowned all responsibility for the killings (they blamed "anti-social elements"), there was a stage even as long ago as that when it was difficult to recognise who was the underdog and who the overlord.

Coercive Tactics

Moreover, a satyagraha is wholly peaceful and involves no coercion at all. The movement, however, began with the adoption of several coercive tactics (like picketing) and even today remains largely coercive. While the movement enjoys

NO PATTERN IN THE KILLINGS. At Nellie, tribals massacred immigrants; at Gohpur they killed the Assamese.

majority support among the Assamese people, there is still a small segment which does not care, one way or the other, how the movement goes so long as it is left in peace. These people would rather not have much to do with the movement and would like peacefully to continue in their jobs, but they are not allowed to do so.

For example, an Assamese Government Press worker refuses to co operate with the movement and insists on voting at the elections. As a warning, his house is set on fire. When this fails to bring him to heel, acid is thrown at his wife and daughter: he is finally *coerced* into begging, with folded palms, for forgiveness and into expressing his willingness to cooperate with the movement.

In another instance, a woman journalist who investigates and exposes a false claim made by the movement leaders receives her first warning with the slaying of her brother. When this fails to cower her, her husband is killed.

During the recent Assembly elections there were large sections of the people who did not—or could not—vote for fear of retribution from the agitators. They could have defied the movement and asked for police protection: but this would have only left them even more open to attack once the protection was withdrawn at the end of the polls.

Can any such means ever be termed Gandhian?

There is a theory that had the Government not blundered into arresting moderate AASU leaders like Prafulla Mahanta and Bhrigu Phukan, who advocate nonviolence in preference to violence, much of the bloodshed could have been avoided. Says Debo Prasad Borooah, Professor of political science and journalism at the Gauhati University, and the moving force behind the agitators: "Even Gandhi's movements generated violence. But Gandhi was never held responsible for them."

Gandhiji, however, was well-known to have suspended his movements the moment any innocent people were massacred. We, however, live in a different day and age and so the agitators tend to react differently.

Is there any good reason for the excesses being perpetrated by the agitators? According to Dr Birendra Kumar Bhattacharya, the 1979 Jnanpith award winner and leading light in the Assamese literary field, a clamp-down on civil liberties and a total denial of all democratic means of expressing dissent has led the Assamese people into this violent expression of their frustration at the non-settlement of the foreigners issue and of their resentment at the imposition of the elections without such a settlement.

Civil liberties have, indeed, been denied to the Assamese for a long time now. What's worse, a reign of terror by the CRPF has been let loose on the people of Assam. Men in khaki uniforms, helmets and rifles gleaming, patrol the streets d in and day out. On the slightest provoc tion, they shoot first and ask questio later. Assamese seem to be their spec target. In this seemingly "Police State" Assam, it would appear, that to be Assamese is itself the greatest crime

Police Atrocities

The Assamese, indeed, live in extren fear of the CRPF. Police atrocities on t innocent people of the State have be numerous. There have been arbitra killings of local Assamese in the village there have been instances of extren action by the CRPF against even the mo harmless forms of defiance by t Assamese. They have, in every instanc opened fire without resorting to eith lathi-charge or tear-gas. Their explan tion for this disregard of the norms is th tear-gas and lathis are ineffective in t hills: the rioters escape into the de woods, which the CRPF, strangers to t land, find difficult to penetrate.

However, the Government of India h in its arsenal a large stock of rubb bullets which have never been use These bullets wound but do not kill. Th nevertheless achieve the same purpos dispersal of a rioting mob. The admini tration and the CRPF authorities, howe er, have shown no consideration for live the most shocking example of their co lousness has been the firing incident Tongla: the orders for the firing we passed by the Collector (and not th District Magistrate) two hours after th actual incident!

If the CRPF is hated by the Assames the non-Assamese in the State harbo similar feelings for the Assam Police These men are in direct contrast to th CRPF; they have been known to run awa from the scene of a riot instead marching in and restoring law and orde However, wherever they were in a majo ity and better-armed, it is widely allege they have allowed the killings of innocer non-Assamese, if not actually partic pated in the massacre.

The Government must, indeed, tak serious note of all this. In a trouble-to state, the State Police itself can rise revolt. There have already been a fe scattered instances of defiance borderi on mutiny and their importance in th scheme of things has not gone unnotic by the agitators.

Be that as it may, the Assame resentment against the foreign nationa has today grown to cover the indigenou Bengali Hindus and Bengali Muslims wh have been living in the State longer thc most people, apart from the Assame

pains to emphasise that "our agitation is against foreign nationals of all kinds and *not* Indians from other States", the Assamese people are increasingly resentful of the better jobs and higher positions in the State being taken up by the Bengalis—and others.

They have a point—the North East Frontier Railway, for example, is staffed almost entirely by Bengalis. There is no local recruitment, all appointments are made in Calcutta and personnel "transferred" from there to the various sub-divisions in Assam.

In a State where unemployment is fast becoming a serious problem, the Assamese thus continue to be denied jobs while Bengalis from another State are ensured of a means of livelihood; they swell the population figures in Assam and tax the State's resources.

Similarly, while nearly half the country's tea-production comes from Assam, 90 per cent of this produce is auctioned in Calcutta; taxes eat into the producers' profits, while a greater part of revenue goes to the Government of West Bengal.

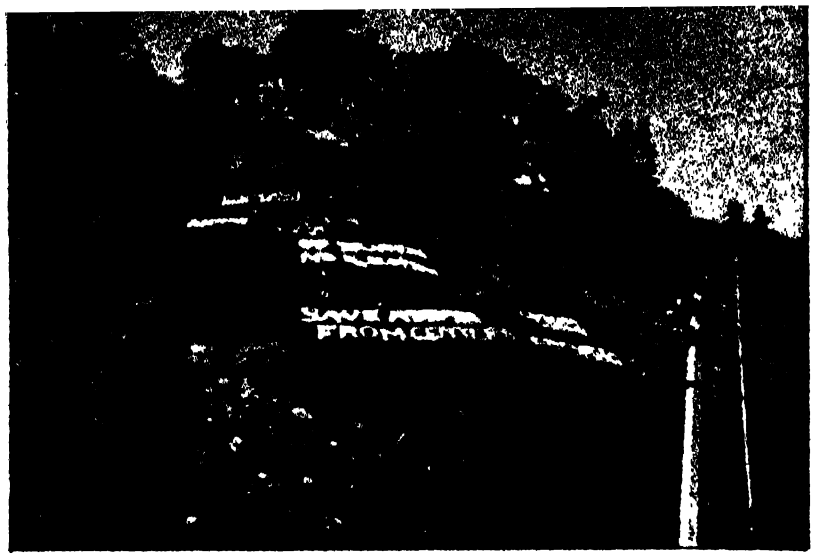
Oil, in India, was first struck in Assam and half the country's total produce comes from this State (as also nearly 80 per cent of the on-shore oil). Yet this oil is processed in Bihar and the neighbouring States receive more in revenue and employment opportunities than does Assam itself.

Repetitive Facts

The story is repeated again and again—Assam is the biggest producer of plywood; yet the wood is processed outside the State and resold to Assam; the State has the biggest potential for hydel power and yet only 3 per cent of this has been so far utilised; only 10 per cent of Assam's villages are electrified while the national average works out to 40 per cent. But what the Assamese find most galling is the fact that they now own or occupy only a *marginal* 10 per cent of their own land—a major part of it having been usurped by the Bengali immigrants.

The situation is, indeed, comparable to what prevailed in India during the British rule. The threat to the Assamese identity is very serious. What Assam faces today, India may have to face tomorrow—invasion by the Arabs and by the Superpowers, and if the country remains as divided as it is today, it will not be in a position to fight back.

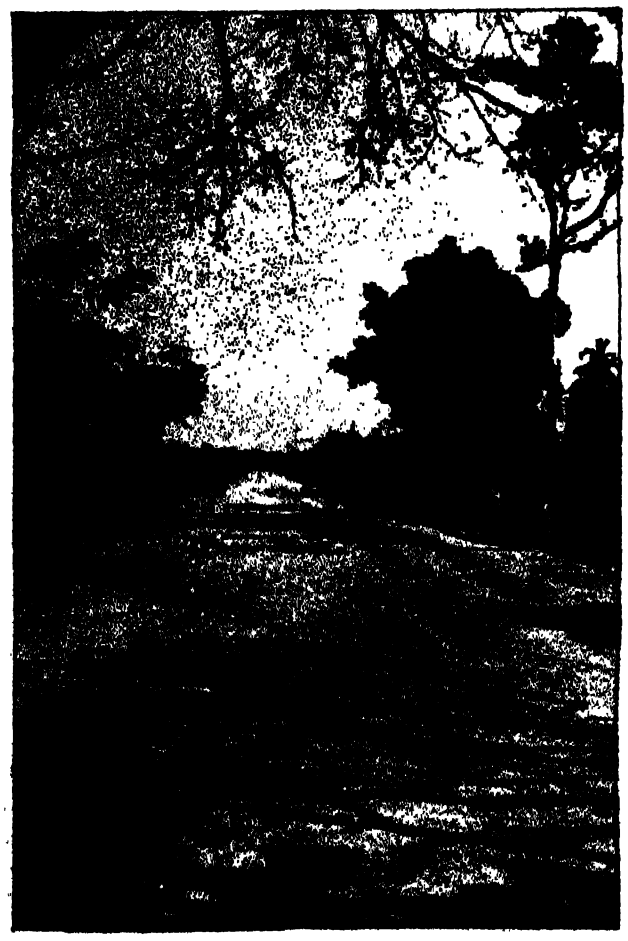
Although, a ministry has now been constituted in the State, it does not seem likely that it will be very effective in setting matters right in Assam. For one thing, the legislators have no legitimate right to preside over a State, 85 per cent of which did not vote them to power. (For example, in a tribal district where the electorate comprises some 60,000 odd voters, the total number of votes cast were only 267. The winning Congress (I) candidate secured 266 votes, one vote was declared invalid. This means that not even the Opposition candidates were able to vote for themselves).



"SAVE ASSAM FROM CENTRE'S EXPLOITATION". Even the hills and dales have not been spared in Assam. Anti-poll slogans stare down at one from rock faces all the length of the highway.

AFTER THE STORM. Survivors of the Nellie carnage at a relief camp on Jagiroad, a few miles from Gauhati. Significantly most of the survivors, as the victims, were the aged, women and children. The men, it is believed, were away raiding an Assamese village some distance away at the time of the attack by Lalung tribals who took a heavy toll of the Bangladeshi "immigrants"

FORSAKEN LAND? All roads leading to Assam are blocked by the CRPF who are the most feared people in Assam today. Consequently very few venture out of their homes. Add to this the non-cooperation by the Assamese during the period of the elections and the picture of desertion is complete.



the life of the legislators that they live confined to the MLAs hostel in Dispur, under heavy police guard. It is unlikely that they will visit their constituencies in the near future. Such visits are extremely essential if the people have to be influenced in any way.

The movement leaders look upon the new Government as "just another army of occupation imposed upon the unwilling people of Assam" and are determined to overthrow it at all costs. The legislators thus will be occupied more with retaining their newly-won power than devoting time and effort towards a solution of the foreigners' issue in the State.

In any case, the problem has reached such dimensions that it cannot be solved by the State Government alone, least of all by a weakling like the present ministry. Embroiled in the issue are our international commitments and certain human considerations. People who have lived here for decades cannot be arbitrarily thrown out of the country, merely because they were not born here. In any case where would they go: back to Bangladesh where they will be hounded and terrorised, tortured and killed?

That does not mean, however, that they cannot be rehabilitated elsewhere in the country. Constitutional procedure must be strictly followed while granting such migrants Indian citizenship rights. And there should, henceforth, be strict patrolling of the borders to prevent infiltration anywhere in the country.

No Reason

For there is no reason why Bengali-speaking foreigners should be allowed to enter the country and become citizens merely because they share a common language. Nowhere else in the world would such a situation ever be allowed: France and Belgium share a common border and a common language but neither country would ever allow the influx of illegal entrants. Similarly Austria and Germany share a border and a language but neither would allow such an influx, whatever the reasons. Why must we, then, bow to Muslim pressure and allow ourselves to be swamped by lakhs of illegal immigrants?

The initiative thus rests with the Central Government and Mrs Gandhi in particular. She has, however, disclaimed all moral responsibility for the killings in Assam (she was replying to a question by pressmen at Nellie) and has blamed the agitators for inciting the violence. Moreover, she told foreign newsmen at a press conference in New Delhi that the figures of the killings in Assam were "grossly exaggerated" by the press.

The statements indicate that she is in no hurry to settle the issues plaguing Assam. Perhaps, she feels, that another spell of President's Rule in the State will fill the bill. One must not forget, however, that the sleeping tiger has been roused in this north-eastern State. Further neglect of its well-being might well plunge the entire north-east into a deeper abyss, a return from which might be well-nigh impossible.

And, if the agitators do not cease their senseless violence (they have cabled Amnesty International about the "arbitrary killings and grave violation of human rights" in their State, but themselves continue to be inhuman in their dealings with the immigrants, the tribals and the Bengalis), their beautiful land will eventually become their own graveyard. ■

Assam: Politicians Speak Out

The refusal of the Government to give priority to the solution of the foreign nationals issue over holding elections has aggravated the situation in Assam, says Professor Madhu Dandavate

To meet people's resistance to the elections, the Government used violence and invoked the most regressive provisions of the old laws framed during the British regime. The entire election process was illegal and violative of all norms of fair and free polls. They were conducted on the basis of the 1979 electoral rolls which did not take cognisance of the latest census reports which had inducted lakhs of youth as voters.

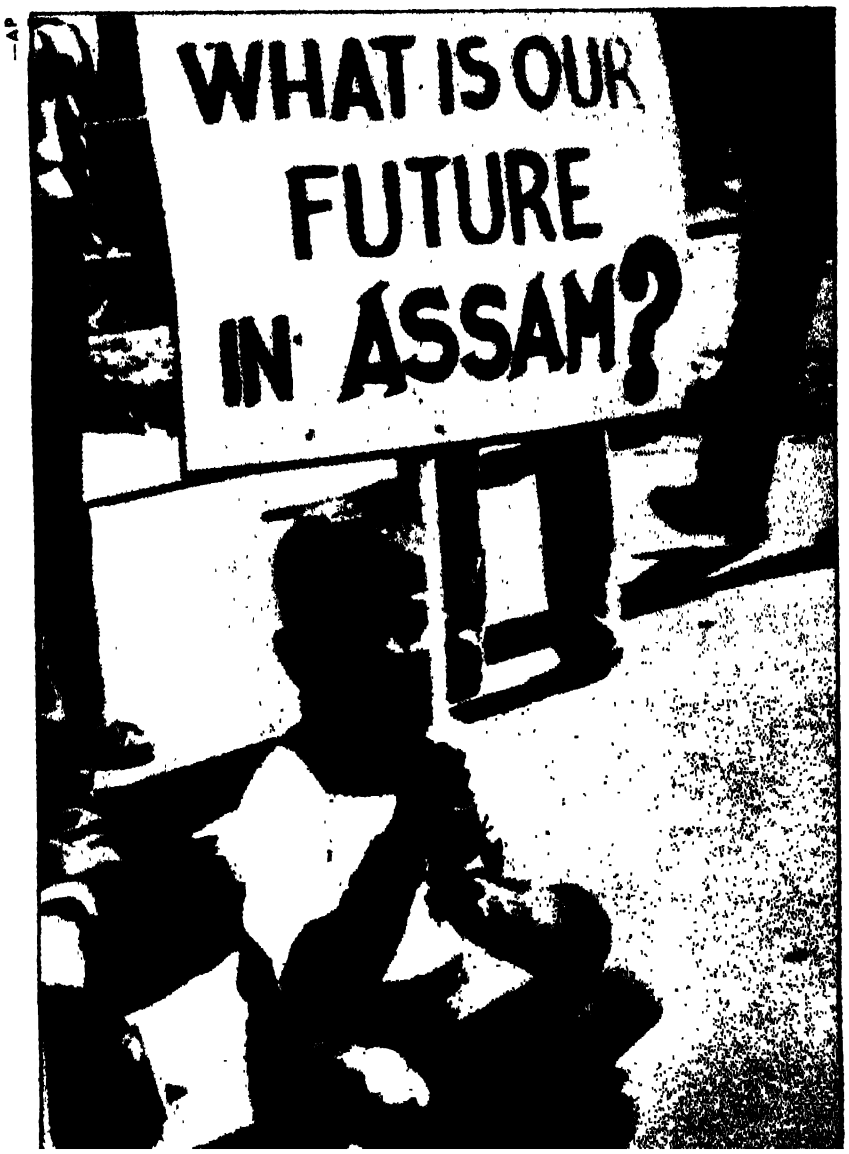
During elections there was press censorship and section 144 was promulgated all over the State banning meetings. Under these conditions how could elections be fair and free?

Besides, NSA and ESMMA were freely used to intimidate and detain the agitators. The Armed Forces Special Powers Act was brought into force. The President promulgated the Assam Executive Magistrates (Temporary Powers) Ordinance which gave unprecedented judicial powers to executive magistrates. On top of it all, the Assam government invoked section 17 and 18 of the Indian Police Act of 1861 which authorised the Government to appoint residents of neighbourhood to act as police officers. Paramilitary forces clashed with the agitators and with local policemen resulting in deaths in police firing. The tragedy was that even violent clashes between linguistic and religious groups took place.

A Cabinet Minister made inflammatory speeches particularly in Bengali-speaking areas provoking the residents to kill four Assamese-speaking persons for each Bengali killed. He further threatened the minorities who did not vote for the Congress (I) with deportation.

The Assamese-speaking population, the tribals and the immigrants coming from Bangladesh and the paramilitary forces seeking to restore law and order on the strength of bullets and bayonets are all involved in clashes today. I would not like to further identify the people and their reasons lest it further aggravates tension there.

The Government had initially adopted the right position in seeking a solution to the issue through tripartite talks. After prolonged talks, however, the participants got bogged down. The Government at that time became aware that smooth elections would not be possible unless the issue is settled amicably. It was, therefore, toying with the idea of introducing a constitutional amendment to extend the President's rule beyond March 19.



AP

NO PURPOSE ANY MORE? A lone man sits desolately amidst the ruins of his worldly goods after the sacking of his village (above). A child wearing a mask (left) joins in protest before Parliament in New Delhi.

At this stage the Janata Party, the Bhartiya Janata Party and the Lok Dal assured the Government that they would support the amendment. The only difference was that while the Government wanted the last Parliament session to be extended, the JP and the BJP insisted that since a tripartite meeting was to be held on November 6 and 7 for the settlement of the issue, a constitutional amendment prior to the talks would be hypocritical. The two parties gave a categorical assurance that in the event of failure of the talks, they would support the amendment if a special short session of Parliament was convened for the purpose.

Unfortunately, the Government is distorting the facts. An impression is being given to the country by the Prime Minister that the opposition parties like JP, BJP and Lok Dal were neither prepared for the elections in Assam nor were they ready to support the amendment. I challenge Mrs Gandhi and the Government to prove their claims. If they are true I will not only resign from Parliament but also from politics.

I know for a fact that at one point of time the Government had even had the draft of the proposed constitutional amendment made ready by the Law Ministry. Then something happened between November and January that made the Government change its mind.

Elections in Assam have not solved any problems but created new ones. The Assembly elected is most unrepresentative. Naturally a strong demand will emanate for its dissolution, for the dismissal of this rum government and for the installation of President's rule pending the settlement of the foreign nationals issue.

The Janata Party and the BJP are trying to constitute a non-official judicial commission of prominent jurists to go into the factors behind the unprecedented clashes, launch a nationwide struggle against the new Assembly and a national rehabilitation programme for Assam.

Dinesh Goswami, Independent Member of Rajya Sabha from Assam, formerly of the Congress (I):

The Government decision in favour of elections in Assam was totally unethical. There was no constitutional compulsion whatsoever for the polls. The Government had called the opposition leaders on November 3, who were taking part in the tripartite talks, for their support for the amendment. All of them agreed. The Government at that time did not give the impression that it would not bring about the amendment especially as there have been precedents when Government has brought about constitutional amendments even when the ruling party did not have two-thirds majority in Rajya Sabha.

Secondly, why did the Government not implement its own commitment for the identification of foreign nationals in Assam with 1971 as the cut-off year?

Thirdly, the elections were held on the basis of the unrevised 1979 electoral rolls. Non-revision of rolls has robbed lakhs of youth who have attained voting age after 1979 of the chance to vote.

One reason why Mrs Gandhi held the elections in an extremely unfavourable atmosphere may be, as one Congress leader told me in confidence, that having been rejected by the minority community in Andhra and Karnataka she did not want to lose the solid vote bank of the minorities in this State, which the identification and deportation of foreign nationals would have caused.

From the beginning the local administration has underplayed the tension in the State with the result that police arrangements to fight the violence proved greatly inadequate. A senior police official told me that there were unwritten Government orders to give election duty priority over law and order. "It was impossible for us to do both," he said.

The future of Assam seems very grim. The traditional trust between communities and groups has been shattered. Mistrust, hatred and revenge have taken over the people. The new Government is totally unrepresentative. To make matters worse, Mrs Gandhi has recently hinted at further fragmentation of Assam. This is most unfortunate. What Assam seriously needs now is healing. Assam is surrounded on all sides by secessionist forces and instability and smouldering discontent in this State could be dangerous.

NO ELECTIONS WITHOUT A SOLUTION. Assamese women protest in Gauhati against the polls. Below: *Officials were specially flown in from Delhi for polling duty and kept under heavy police guard to prevent any attempt on their lives.*

Jaswant Singh, BJP Member of Rajya Sabha, spent five weeks in Assam and has been involved with the tripartite negotiations since the beginning. According to him, the situation in Assam today is beyond palliatives. To understand it we must separate the cause from the effect. Unfortunately, the Government is only paying attention to the effect and ignoring the cause, which goes deep and is long-standing.

The Prime Minister has so debased all her political following, says he, that she has nothing else to bank upon for advice and correct information except the bureaucracy which invariably gives wrong information that is pleasing to her. Secondly, he firmly believes that the Government has been dishonest and insincere in its handling of the whole problem. Its attention has mainly been on putting, somehow or other, a Congress ministry in Assam, and not on finding a solution to the problem of foreign nationals.

"I honestly do not know what the future of Assam will be" he says sadly. I am too deeply pained to do any crystal gazing. If, however, we can take care of today, tomorrow will be better. What needs to be done immediately is to stop the growing alienation among the people. The Governor and his set of advisers must be dismissed, all the NSA prisoners released unconditionally, the Assembly suspended and peace and normalcy restored." ■

In The States

NTR's "School" For Politicians

A NEW TRICK? If it works, NTR's latest scheme for training "politicians" in the art of politics could well be a precedent that the rest of the country would do well to follow.

HYDERABAD: Graduates in Andhra Pradesh can now aspire for admission to another professional college—the college for politicians. Scheduled to open in June this year, the college will train graduates in various disciplines like Telugu culture, history, world affairs and parliamentary practices. Financed by the one year-old ruling Telugu Desam, admission to the college will be restricted to party workers. The screening of candidates will be done by the party. Initially, 400 students will be admitted to this college which is proposed to be set up in rural surroundings with residential facilities.

While the projected college is intended to train prospective legislators and parliamentarians, the Telugu Desam legislators in the present House, many of whom are new to political life, will undergo training in the Rajaji International Institute of Public Affairs and Administration. This institute is being set up at Hyderabad by the Bharatiya Vidya Bhavan.

Since 400 students will be admitted every year, the Telugu Desam's college for politicians will eventually turn out hundreds of trained party workers within a decade. In a phased manner, graduates of this college will be provided with party tickets to contest elections, thus adding a touch of professionalism to a much-despised vocation.

The three-year training will provide an insight into the various aspects of political life. The emphasis will be on a detailed study of the party manifesto. To broaden the perspective of the prospective legislators they will also be taught international affairs and world geography. As L. Pandu Ranga Reddy, Principal of the proposed college told this correspondent, "The future Telugu Desam legislators will be equally at home while discussing the Falklands and Rhodesia."

The syllabus for the various courses has been finalised and submitted to the Telugu Desam party president for approval. While the medium of instruction will be Telugu, English will also be taught as an additional subject. A special feature of the training programme is the inclusion of Yoga—the physical fitness exercises that carried the party chief N.T. Rama Rao through his hectic election campaign.

Besides the class room training, lasting for nine months in a year, the students of the college will have to acquaint themselves with the problems of a selected constituency. After gaining an insight into these through field study, the students will submit a report on their findings.

Not all successful candidates of this college will be able to make it to the Legislative Assembly or Parliament. Many of them will work as party functionaries in the neglected rural areas. Perhaps they will lead the Land Army units, being proposed by the Telugu Desam Party. These units may function on the lines of Komsomols—the youth organisation floated in Russia in 1918. This can also solve the unemployment problem in rural areas, by engaging the members of the Land Army in health, education and industrial activities.

If the Telugu Desam's college for politicians is run on the right lines, the complexion of politics may undergo a welcome change in Andhra Pradesh.

G.S. Reddy

Innovative Indian Doctors

BOMBAY: Doctors in one of Bombay's municipal hospitals have attracted worldwide attention by their innovative work in the field of plastic surgery.

They have achieved a breakthrough in the simple but highly effective method of using skin as turn-over flaps to cover complicated wounds.

This use of de-epithelised skin, carved out from an adjacent area, heals the injury faster because the covered skin continues to be "alive" since it still gets its blood supply from the area kept attached to the body. According to its originator, Dr Ravin L. Thatte, who has recently won the 1982 Hari Om award for this work, the method means rapid covering of wounds, faster treatment and much reduced cost.

The "turn-over" flaps will be a boon to thousands of accident victims. The earlier method of using detached skins has several drawbacks.

Bed sores are another phenomenon which have baffled doctors and have been the subject of intensive research in the past. Now, in a very simple approach, the Sion hospital study, with the aid of clay models, has helped to locate susceptible areas in patients so that the incidence of bed sores is minimised. These sores, a nightmare for the bedridden and paraplegics, usually erupt on the prominent bony areas of the body. The Sion study has shown that the pressure points have no correlation with the weight or surface area of a person.

Yet another advance (made, again, by Dr Thatte) is in the treatment of harelips. His technique leaves the skin undisturbed and lays stress on the muscles. The advantage of this method is that scars do not mar the the skin as the muscles are sutured horizontally. It also allows the lips to move freely.

Yet another breakthrough is in the use of surgical stainless-steel wire-meshes to replace broken bones, like in the reconstruction of a lost thumb or support for a broken nosebridge.

This technique, developed by Dr A.D. Dias, has many advantages—the materials are easily available, they cost only a fraction of the presently imported implant material, they create no body reaction, and they offer the surgeon scope for his creative talents.

Original work is also being done by the doctors in the treatment of multiple burns.

All this work has been done by the hospital's Department of Reconstructive Surgery, which, surprisingly, is just three years old. More remarkable is the fact that no extra funds were at all necessary for the successful research projects.

Two doctors, Dr A. Gopalakrishna and Dr L.D. Dhami, have won prestigious awards for their research. In a unique bone grafting done by Dr Gopalakrishna, a length of bone was removed along with its blood vessels and transferred to another area. The operation was done under a microscope and sutures finer than hair were used. Very few such successful cases have been recorded in the world.

The results of their work have been published in separate articles by the *British Journal of Plastic Surgery* in a single issue. This is the first time that any medical journal of repute has given so much space for papers from a single source—a high honour indeed!

E. R. Ram Kumar

BEFORE AND AFTER. The new technique evolved by Dr Ravin L. Thatte holds out new hope for the harelipped.

Almonds For The Plains

LUDHIANA: The famed Ludhiana almonds can now be grown in the plains of North India, thanks to the efforts of horticulturists at the Punjab Agricultural University The University has identified certain almond varieties that can thrive in the climate of the northern plains

Research on the possible cultivation of almonds in the plains began in 1971 at the PAU under the overall supervision of Dr G S Nijjar, former Professor and Head of the Horticulture Department of the PAU Dr D K. Uppal, Senior Horticulturist of the PAU is the Principal Investigator of the project.

Almonds are normally cultivated only in hilly tracts and India imports a large quantity to meet her requirements Certain limiting factors like occdsional spring frosts at the flowering stage and heavy rains when the fruits just begin to form had earlier stunted the growth of almonds in the hilly areas of Jammu and Kashmir Moreover, apples take precedence over almonds in hilly areas

To begin with experts at the PAU selected only such varieties as would thrive in the plains Forty exotic species from countries like USA, Australia, France, Spain, Russia, Italy and Afghanistan were introduced A survey of almond-growing States like Himachal Pradesh and Jammu and Kashmir was also undertaken—this yielded 62 and 69 promising varieies, respectively

Two of the exotic varities namely California Peppershell (USA) and Pethick's Wonder (Australia) have shown great promise and five indigenous species from Jammu and Kashmir have also proved outstanding

According to Dr Uppal, eleven year-old trees of California Peppershell have yielded as much as 4 5 kgs almonds per tree while Pethick's Wonder trees of the same age yielded 4 kg per tree Eight year-old trees of JK-55 (selection from Jammu and Kashmir) have yielded 2 5 kg per tree This variety has a distinct advantage over the exotic varieties because of early maturity

In addition to selecting suitable varieties a massive programme of hybridisation was also launched to evolve species that will thrive in the plains The Hybrid-15 variety is an outcome of this work This species has surpassed all the others in yield and quality It has been in in production since 1973 Another hybrid still under experimentation promises still higher yields

Dr Uppal strongly feels that if 170 trees are planted in an area of one acre and the average yielded is 2 to 3 kgs per tree, the total production could be between 3 to 4 quintals per acre This yield compared favourably withtheaverageyields of USA Australia and other leading almond growing nations

For a higher yield of almonds the presence of honeybees, who act as pollination agents, is essential Italian honey bees introduced by the PAU have proved very effective in this process

Tarnjit Chawla

LUDHIANA ALMONDS that previously grew only in the hilly tracts now flourish even in the plains of north India The breakthrough was achieved by horticultunsts at the Punjab Agricultural University

...And Beyond

Palaces For Sale

Rajas and Maharajas are no more But their palaces still remain to tell sensational tales of intrigue and romance of an era past

Sometime ago a Delhi newspaper advertised a 150-room fort for sale This palace, four-storeyed and 400 years old, is situated three miles from the historic Haldighati plain Its current owner is the successor to the Dilwara State—33-year old Maharaja Akshya Singh But there have been no takers yet Some industrialists and film stars no doubt showed interest but were probably put off by the enormous sums it would cost to renovate the palace.

The Jheel Mahal of Udaipur, a big state adjacent to Dilwara, has already been turned into a hotel The Chamatbagh palace has been sold to Seth Krishan Gopal Gehani for Rs. 15 lakhs At the time of the sale, allegations were made in the Rajasthan Vidhan Sabha that a minister had a hand in the deal Now 200 residential flats are rapidly coming up in this Palace Complex

Udaipur's Jagniwas and City Palace are the centres of a bitter dispute Recently a Sub-Divisional Magistrate had decreed that the City Palace, Laxmi Vilas Palace, Residency and Jagnivas are not the Maharana's personal property but belong to the village

The story is the same throughout the country Several palaces have been sold because of the inability of its owners to incur huge expenses on maintenance and taxes While more than 22 palaces all over the country are today 5-star hotels,family disputes have led to litigation about the ownership of several others.

Hyderabad's seventh Nizam, Osman Ali was once numbered amongst the world's most-affluent people. However, disputes between his successors and their inability to pay taxes have impelled the government to auction some of his palaces and other propert.Prince Mukaram Shah is at present busy selling the 250-acre Chirag Mahal located at Banjara Hills He will have to pay several crores of rupees in taxes Earlier, the government had already taken over Kothi Mahal (where the last Nizam breathed his last) from him in lieu of taxes

The Nizam has, however, decided not to sell the Falaknuma and Chaumohalla palaces Prince Mukaram himself, tired of the constant bickerings among nearly a hundred successors of the late Nizam has settled in Australia where he runs a sheep farm It may be recalled that three years ago there was a major dispute with regard to the auctioning of the Hyderabadi jewels which the government stopped They were officially classified as valuable antiques

The palaces of Mysore, another large princedom, have also been under dispute for a considerable period But the present Raja of Mysore, 28-year old Kanti Dutt, is determined to turn the 600-room palace into a hotel and build a commercial residential complex in Bangalore The Mysore Palace is an exquisite example of a combination of Hindu and English architecture The ceiling of its Durbar Hall is made of imported glass The doors have beautiful designs inlaid with ivory The palace has a 244 kg gold throne and silver gates

Similarly, the dispute between Rajmata Vijay Raje Scindia of Gwalior and her son Madhav Rao Scindia have resulted in the sealing of the Jaivilas palace and the extensive museum it houses

The famous Rajwada Mahal of Indore was sold for Rs 14 lakhs sometime ago but later acquired by the government in response to the people's protests at its sale The palace is valued at Rs 7 crores

THE JAI VILAS PALACE of Gwalior has, of late, become the centre of bitter controversy This sprawling, elegant home of the Scindias was shut down when it was discovered that Rajmata Vijay Raje Scindia and her son Madhavrao Scindia could not reconcile their differences

The problem facing the Holkar family of Indore is that the late Raja s Indian wife had no son while his son, Richard by his American wife cannot be regarded a successor Holkar's daughter Usha Raje is married to a Bombay businessman and there is nobody to take care of the palace

Maharaja Martand Singh s fort situated at Govind Garh in the Rewa state of Madhya Pradesh was well known for its white tigers and its museum worth crores of rupees The Maharaja desires to sell the palace and the Madhya Pradesh police contemplates buying it for motor training But nothing can be settled because of the differences between the Maharaja and the Maharani of Rewa

Since last Dassera the dispute over the royal palace of Bastar in Madhya Pradesh has also become public On the death of Pravinchandra Bhanj Muhadev in 1965 his younger brother succeeded to the state On his death, their wives Vedwati and Hitendra Kumari fell out over the property The younger brother's wife, Hitendrakumari, wanted to convert the palace into a fabulous hotel with a cold storage plant and a cinema hall To raise the funds for such a complex she found it necessary to sell the palace land The elder brother s wife Vedwati, obtained a stay order from the court against this sale and there matters rest

In Bihar the Darbhanga Mahal has also become a matter of public dispute (Darbhanga lies 200 miles from Patna) The Darbhanga Raja was issueless Of his three wives, one is still alive There is bitterness between the young nephew of the Maharaja, who looks after the trusts in the state, and Maharani Kamsundari over the disposal of the palace and other property The Darbhanga property is valued at Rs 10 crores The matter has been further complicated by the interference of Bihar's Chief Minister, Dr Jagannath Mishra (Bihar's leading papers *Indian Nation* and *Aryavarta* are run by the Darbhanga Trust)

The walls of these palaces enclose within them so many secrets and the bad blood they witness today is no different from the intrigues of the past'

Vyas (PS)

THE IMPRESSIVE FACADE of IIT, Bombay, established with USSR assistance in 1958, with 100 students. Today it has 2,600 students, a faculty strength of 328 and 10 academic departments. Despite its formidable credentials, the institute falls short of its own goals, says the author.

Are Our IITs Any Good?

The Indian Institute of Technology, Bombay, is celebrating its Silver Jubilee this year. In a candid assessment, the author questions the Institute's claims of being a "centre of excellence". Is it breeding "scientist-engineers" or misfits in industry? Her conclusion: there is a big gap between expectation and fulfilment.

by Minnie Vaid

A COPY, very often, remains a copy. At least that is so with regard to the Indian Institutes of Technology, deliberately modelled on the Massachusetts Institute of Technology (MIT) in the US. The Government has poured in vast sums of money to get it going, given it autonomy and a privileged status, installed sophisticated equipment and expensive machinery, adopted modern methods of evaluation and examination as well as a phenomenally select and exclusive admission procedure. And yet, an IIT graduate does not necessarily turn out to be the "scientist-engineer" that he was expected to be by the architects of these elite institutes

Nor have the IITs become, as prophecied, "centres of excellence in technological education" or "pace setters of technological changes in the country"

Indeed, it would be fair to suggest that as institutes of higher learning, they are not quite cost-effective. Each IIT receives approximately Rs 7 crores annually from the Union Government. Yet, the quality or excellence of the academic teaching/training it provides, the relevance of what it does for industry and the country's technological progress, and the adequacy of its graduates for the nation's needs is all suspect. And since valuable national resources are concentrated into a select number of IITs instead of being distributed more widely—after all it costs the nation about seven times more to educate an engineer at IIT than in many other regional engineering colleges—is it too much to expect a fair, if not total, justification of this expenditure?

Objectives Fulfilled?

The best way to assess would probably be to find out whether the IITs have fulfilled the objectives laid down by the Sarkar Committee (1946), as well as their own. A pressing need for indigenous technology coupled with the equally important need for revamping the existing and inadequate facilities for technical training in India in the post-World War II period, was responsible for the plan to set up four IITs at Kharagpur (1951), Bombay (1958), Madras (1959) and Kanpur (1960). (The College of Engineering and Technology, at New Delhi was converted into the fifth IIT in 1961). Based on the MIT model, the establishment of the IITs was felt to be a major step towards the eradication of the need for foreign expertise in setting up new industries.

Six objectives were outlined in the Sarkar Report, the importance ones being: firstly, to teach a student the fundamental principles and theories of engineering so that he can apply these with confidence many years later; secondly to equip him with tools and inspire in him, the desire to continue, after the end of his formal training, the independent study of practical processes, technical principles, administrative organisations and advanced theory; and, finally, to give him, during formal training, such knowledge of practical work as would assist him in realistic appreciation of engineering principles as applied in practice.

To these, the IITs added their own goals: to train technical manpower to meet the requirements of industry in its growth and development; to provide continuing leadership in the fields of technical and science education; research and development in various fields of science, engineering and technology; and to offer technical and consultancy services to industries and Government services.

Demanding Role

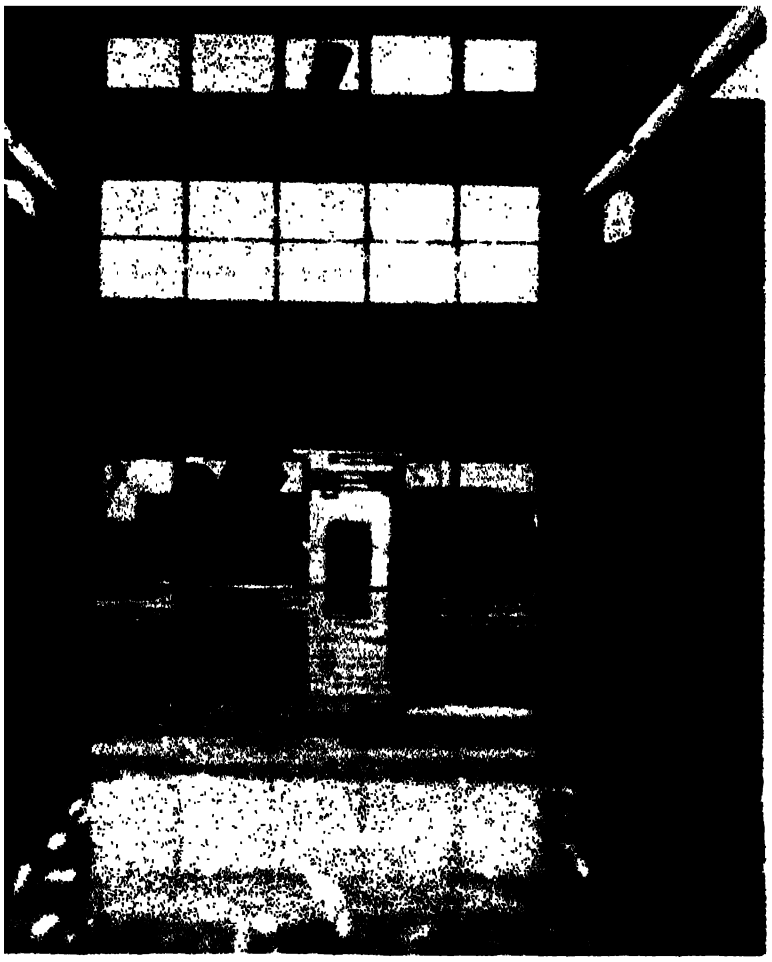
In view of the crucial and demanding role that these institutes of higher learning were going to play in implementing the national educational policy, the Institute Of Technology Act (1961) was passed by Parliament, conferring the status and privileges of universities on all five IITs. The Sarkar Committee further recommended certain innovative measures such as reduction of the number of formal lecture hours, greater emphasis on seminars and tutorials, evaluation of internal in-semester work done by students, flexible assignments and a scheme of workshop and practical training in industry.

And so, IITs geared themselves to change the old order of imparting education. An extremely stiff and competetive Joint Entrance Examination was introduced, along with the "credit" system of evaluation. This was further refined by awards of letter grades and relative grading, periodic quizzes, tests, home assignments, and semester-end examinations. Lastly, periods of practical training and projects of professional interest were made obligatory. Thus the "scientist engineer"—the IIT B. Tech graduate—who spends approximately 12,000 academic hours over the five most formative years of his life (*Seminar*, 1981 report by S.R. Ganesh) with the added benefit of the highest available order of teaching in the country, was expected to contribute substantially towards "technological excellence" in India. Unfortunately this is not the case.

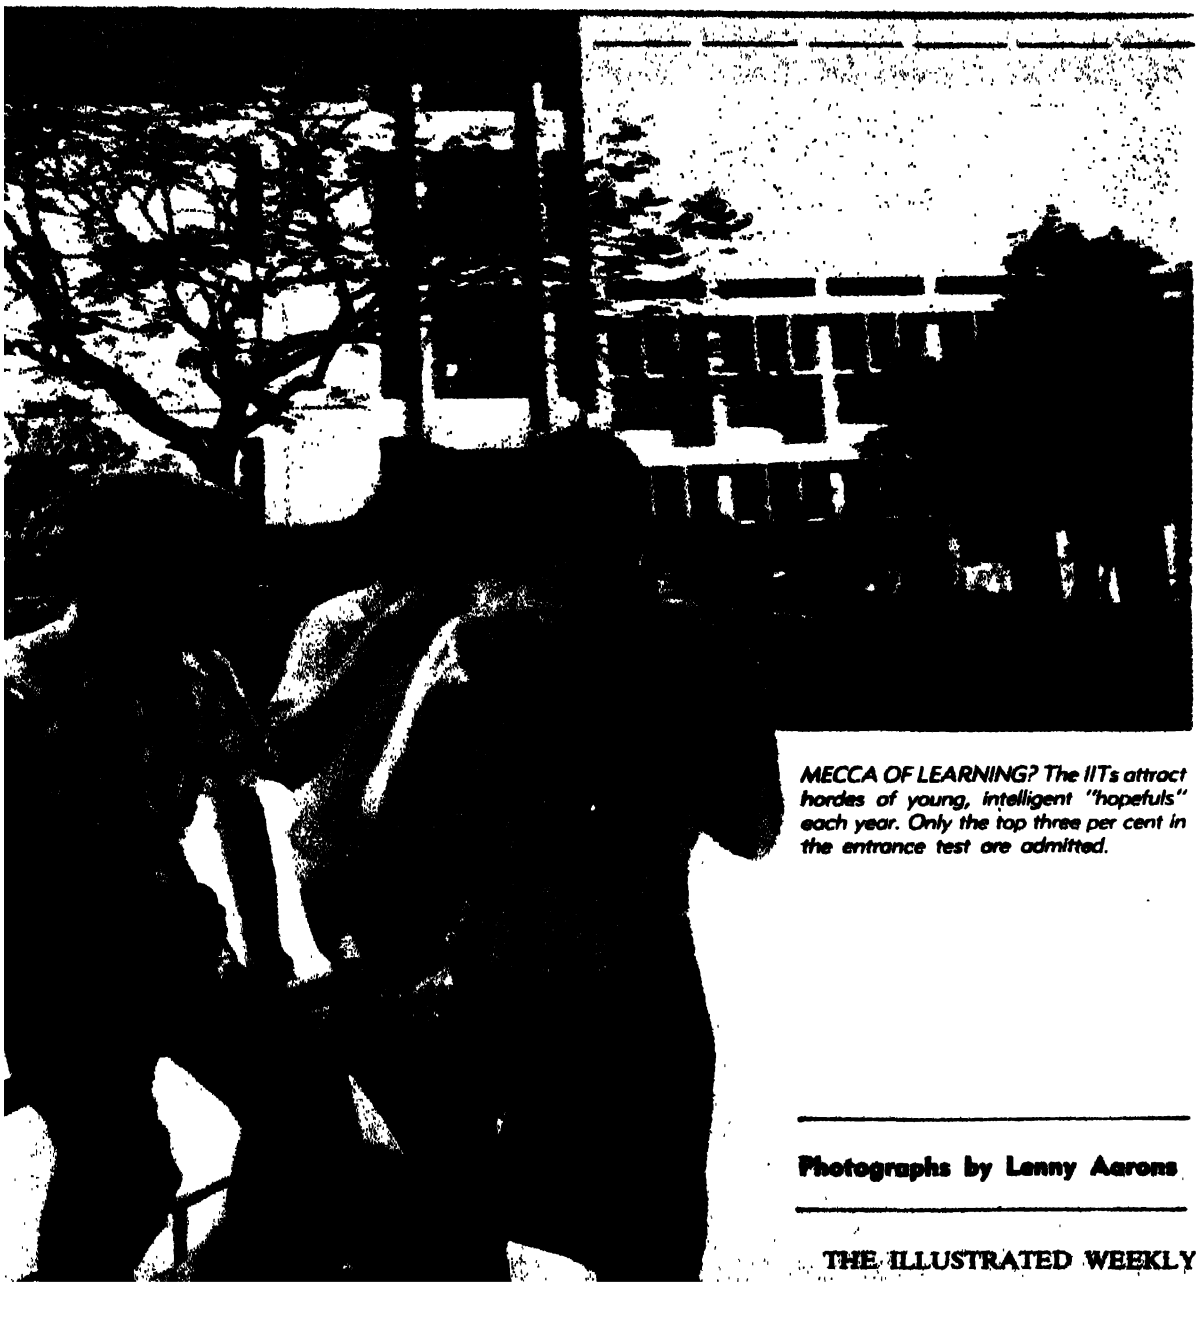
A majority of the teaching staff at IIT, Bombay, for instance, make no bones about it. They freely acknowledge that a considerable number of IIT graduates *do* go abroad for post-graduate or management studies Some start applying to foreign universities around the fourth year of their stay at IIT. Statistics reveal that as many as 19.83 per cent of the total number of B. Tech graduates at IIT, Bombay, went abroad in 1981. This figure does not take into account those students who go abroad after a few months of joining industry—a fact which would not be recorded in the files of the Training and Placement Office, which publishes these statistics. The percentage of Chemical Engineering students going abroad is as high as 30-35. This is due to limited advanced research facilities within the country and the demand by chemical companies for mechanical and electrical engineering students for maintenance work. The Government spends approximately Rs 10,000 per student (B Tech) per year. The benefit of the money thus spent by the national exchequer is thus lost to the country due to the brain drain which, more often than not is irreversible. (The new 4-year B. Tech course has been implemented only recently, as against the earlier 5 year one).

Going Abroad

Many members of the faculty at IIT, Bombay, including the Director and Deputy Director, admit that a good number of their graduates do go abroad, though some claim that the number is declining (it has been more or less stablized now—see chart). Predictable reasons are provided for this phenomenon—"Most of our students are easily able to get scholarships abroad—there is a lot of glamour attached to it. I feel, however, that it is more a reflection on the Third World industry," says Prof R.Bedford, Dy. Director. The Director, Prof A.K. De concurs: "There is a serious lack of opportunity in



BOOKS FOR THE ASKING... With more than 1,50,000 books; xerox, microfilm and microcard reading facilities, the library is grossly under-utilised.



MECCA OF LEARNING? The IITs attract hordes of young, intelligent "hopefuls" each year. Only the top three per cent in the entrance test are admitted.

Photographs by Lenny Aarons

India, especially in the R&D sector; hence places abroad lure our youngsters."

Besides, "brain-drain is a global phenomenon". "IITians are brighter, and more ambitious". "The institutes are helpless to counteract." While all such arguments are valid to a large extent, it does seem a great waste of national talent.

Similar explanations are proferred with regard to the high ratio of IIT (B. Tech) graduates going in for management studies—so much so that the IIMs have had to lay down certain restrictions on the number of IIT graduates applying for admission. In this case, the word "sociological" is substituted for "global". Equal blame is apportioned to industry. "The demands of industry are responsible for this trend," moans Professor B.D. Mishra, Dean, Student Affairs, "for it has capriciously decreed that management posts are more lucrative and challenging than technical." "An IIT engineer starts at Rs 1,500 a month," adds Prof De, "while an MBA probably gets Rs 2,500 per month. The whole salary structure has got to change." For all that, the faculty is clearly mixed up. It does not quite know whether to deplore or justify the trend. Thus Prof K.C. Mukherji (Electrical Engg dept) quietly moves from analysis to rationalisation. "The percentage of students," he says, "entering the IIT Bombay through Joint Entrance Examination from Bombay city alone has increased. So has the percentage of students from the higher income bracket. These students come from good schools, have had the benefit of excellent coaching classes and have, in addition, acquired a value system steeped in the pursuit of money, power or status. Only management or marketing jobs satisfy this need."

The others are even more apologetic. "Only IIT undergraduates are going in for MBA courses," says Prof Bedford. "Where is the harm if our students go in for management? They will change the existing culture in those fields," argues Prof De. One wonders, in that case, why the IITs do not set up management centres of their own, instead of conducting the occasional course in the area.

Nor is the number of IIT graduates who go in for sales, marketing and personnel jobs in private industry without doing a management course, negligible. The point is that they too are lost to engineering. And, only a miniscule percentage opts for R&D jobs or even the public sector. Again, the reasons given are "external"—low pay scales; over-bureaucratisation; lengthy waiting periods for recruitment in public sector and R&D establishments; routine, uninteresting problems given to engineering graduates who have been trained on a "futuristic basis", and so on. "We do not want our technologists to follow obsolete Indian technology," asserts Prof Bedford. Professor Isaac, former Dean, Student Affairs, is equally blunt: "IIT graduates are over-qualified." Even if this is so, it can provide only small comfort to the IIT graduates or their Indian employers. Many IITians working here frankly admit that they are out of their depth in essentially engineering jobs due to the severe dichotomy between the training given to them at the institute and the needs of Indian industry.

Though Prof K.C. Mukherji states that "our aim was not to gear our education to the needs of the industry but to provide adequate knowledge to the student so that he can bring his training to more benefit than a person who fits into a pre-arranged slot", it is reasonable to expect that IITs should not train their students in a vacuum and that their courses of study and practical training should be tailored to meet industry's felt needs. While it can be accepted that IITs are not meant to turn out good apprentices or proficient workers on the shop floor but men who can build and run whole plants, the fact remains that, on the whole, the practical training they provide is deplorably inadequate and unsatisfactory for purely engineering jobs.

Practical Training

Indeed, Professor Mukherji admits that "not enough emphasis is given to practical training even though every department assigns two to three faculty members as training supervisors of students for their training programme," and adds, "by and large there is apathy both ways." "The duration of practical training (six to eight weeks), should be extended," suggests Prof B.D. Mishra. But Prof Bedford evidently differs: "Conceptualisation is more important than practical training." Not

→

surprisingly, the period of practical training for which a student is attached to a running plant or enterprise is not even evaluated or given credit for. In the event both students and industry fail to take each other seriously.

True, any number of seminars are held each year (this year the figure is considerably higher than usual as IIT Bombay is celebrating its silver jubilee year) ostensibly to bring students closer to industry. A few industrialists are also traditionally on the board of Governors of IITs. But the feeling of alienation between them persists. B. Tech courses are not updated according to changing trends in industry and therefore the advantage of flexibility of courses afforded to these institutions is not utilised to its fullest extent. Specific industry-oriented and linked projects are not taken up due to the constraints of time and finance. The faculty accuse industry of being indifferent and impatient in dealing with trainees, adding that IIT graduates should be given orientation courses after they join an enterprise, a suggestion that most employers simply shrug off.

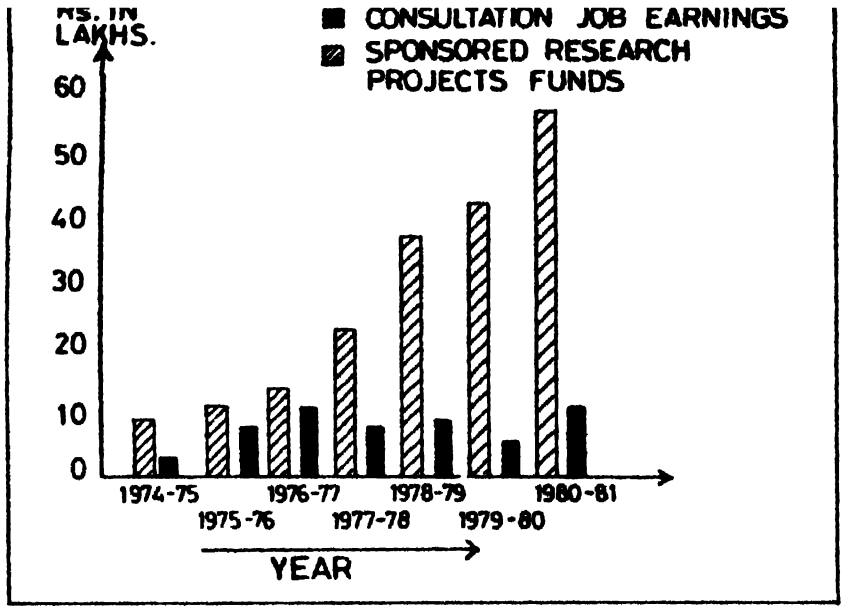
Sponsored Research

Possibly the only worthwhile interaction between IITs and industry is restricted to the sponsored Research and Development projects and consultancy jobs undertaken by faculty members. National organisations such as the Department of Atomic Energy, Department of Electronics, Department of Science and Technology, Ministry of Defence and CSIR (Council for Scientific and Industrial Research) sponsor from time to time, projects of an inter-disciplinary nature, to be carried out at the institutes. Currently, there are over 80 sponsored projects in progress at IIT, Bombay, alone. Faculty members from the institute's numerous centres (Computer Centre, Centre of Studies in Resources Engineering, International Design Centre, Regional Sophisticated Instrumentation Centre, etc) carry out such research in energy systems, environmental systems, semi-conductor materials, resources engineering and so on. However on their own admission, no single breakthrough has been achieved in the last quarter of a century.

As regards consultancy jobs undertaken for industry by individual faculty members, the record, again, is unimpressive. Though some of them have involved design and development of processes, product equipment, feasibility reports, preparation of software packages and the like, the annual funds received by the institute for such work over the past ten years have been fluctuating erratically (see graph). Figures for the total receipts from sponsored research projects are also pretty small.

In any event, whether sponsored R&D projects and consultancy programmes benefit students is a moot point. IIT Bombay's faculty is divided on this score. The dean R&D, Prof Hariharan, feels that teachers can best keep abreast with changing trends in industry through such projects, since they are not overloaded with actual teaching hours, their research and consultancies would be reflected in the updated quality of education imparted to the students.

Prof Mukherji agrees with this view. "Consultancy keeps the faculty refreshed and enlivened," he says. But yet another professor could not disagree more. "A teacher simply cannot teach and be a good researcher or consultant at the same time. R&D needs a different kind of environment—elaborate effort with full time people, team work and sincere devotion. Moreover, R&D is a process from the laboratory to production but in IIT, Bombay, it is merely a gimmick to impress outsiders. There is, in fact, no real R&D work being done here."



ERRATIC RECORD of consultancy jobs undertaken for industry by faculty members. Figures for total receipts from sponsored research projects, are also quite unimpressive.

The question, however, still remains—how do consultancy and sponsored R&D projects help the IIT student, assuming that this is a major yardstick for judging the excellence of the IITs. Statistics further reveal that in the engineering streams (mechanical, electrical, civil, chemical and metallurgical) the total number of papers published by members of the faculty in foreign journals over the years, was again erratic. What does that prove, if anything? The answer is in the realm of conjecture.

No Rapport

The staff-student ratio at IIT Bombay (1:6) is also extremely high and, therefore, conducive to a great amount of attention being fostered on the student, leading to a better "rapport" between the two. This is, sadly enough, just not the case—one of the harshest and strongest criticisms levelled against the IIT Bombay, is the near total indifference of the majority of the staff members towards the students' problems—academic or otherwise, their choice of careers in the future, or their social and intellectual development.

Most students name their seniors as major influences for career choices, and peers in their social life. Nobody mentions the faculty in this context, barring the inevitable exceptions. Nor do the library, the curriculum, tutorials, practical training, workshops, hostel life and gymkhana activities have much impact in forming their social or political views.

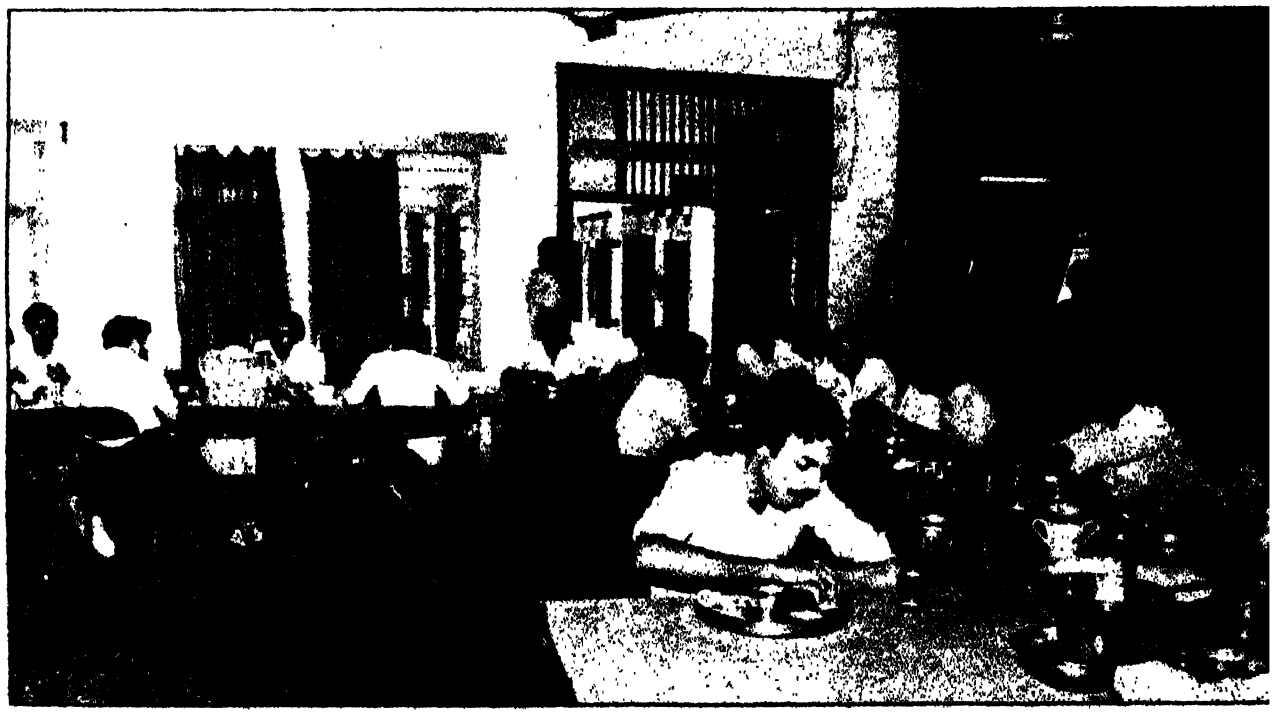
To be sure, the Gymkhana, which is the existing student body, lists among its major activities all types of sports—especially mountaineering—and cultural affairs such as painting, music, debates, photography, dramatics, social science and the National Cadet Corps. It has as many as 28 secretaries for specific activities mentioned above, a General Secretary Cultural Affairs, a General Secretary Sports, and a General Secretary Academic Affairs from among the students and 2 Chairmen and the President (who is also the Dean, Student Affairs) from the faculty. Though Gymkhana funds are more than adequate and there is tremendous financial autonomy, representation is desultory and a general attitude of apathy prevails, though some Gymkhana activities such as mountaineering and dramatics are extremely popular.

The students are not the only ones who complain about the non-existent staff-student rapport, the staff also admit it, albeit reluctantly. "I know student-teacher interaction is not enough, inspite of counsellors, and hostel wardens, but we are trying to obtain funds to allot to each faculty member for hosting an occasional dinner or tea for 4-5 students whom he shall take under his wing," says Prof De. One hopes a congenial relationship will develop over these cosy "occasional teas", but will it? "There is inadequate interaction," explains another Professor, "because IIT teachers do not feel that they are a part of IIT." If so, then money is obviously not the answer.

And so the interaction is restricted to classroom lectures, tutorials and labs and the ever-present quizzes, tests and examinations held each semester, the latter justifying the term especially coined by IITs: "continuous evaluation".

Launched with the laudable intention of reducing the importance of the year-end examination which negated regular study and led to a lot of pressure, the continuous evaluation system gives equal importance to in-semester quizzes, tests, tutorials, lab work and end-semester assessment and the student can, ostensibly, complete the course work at his own pace (due to the credit system), subject to a minimum. Summer term courses can be taken, courses can also be dropped within 8 weeks of the beginning of the regular semester. Credit for a course is calculated by adding the number of lecture hours, tutorial hours, practical hours and self-study hours. A student who fails to earn 36 credits in each of the

ENERGY FOR ENGINEERS. Students have mixed views about their workload. Although most of them admit to being subjected to considerable and continuous pressure, they claim that the stories of students taking drugs or alcohol to escape tension are exaggerations.



1st two semesters (of the 1st year), is required to leave at the end of the third semester. This rub is applicable only in the 1st year (3 semesters) to weed out students who cannot cope with the workload or who have problems of adjustment.

There are, curiously enough, mixed views, again, both among students and faculty about the efficiency of the continuous evaluation programme. While one final year student says wryly "There is no continuous evaluation, only continuous tension, as far as theory work is concerned (Lab work is continuously evaluated)", others feel that the pressure and the workload is bearable. Yet all admit that copying/cheating is rampant but that "not many pass only due to copying. Students cheat due to force of habit or because they are too lazy to work out lengthy calculations. But the basic groundwork and preparation, of course, has to be done by each individual."

It is more likely that copying is a way to beat the system, as students have to continually prepare for one test after another (on an average they have 2 tests a week) till it becomes almost a mechanical exercise to get over with, without any real interest, understanding or curiosity about the subject. To quote Prof Mukherji, "a test looms so large before the student that he cannot concentrate on regular work. The be-done-with-it feeling is common and the test is thus an erroneous measurement of the students' ability. Regular homework should be assigned and graded."

He however, feels that complaints about the workload are exaggerated and that a student works much harder for entering the Joint Entrance Examination. Prof Isaac also says that "no Indian student abroad complains about heavy schedules—one can't ask for high levels and low workloads in the same breath. Life is more competitive at the higher levels of science and technology. I feel a lot of this pressure is because of the basic lack of motivation in students here—they've been pushed into the IITs by their parents and by their good marks."

Be that as it may, there is cut-throat competition among IIT students, aggravated by the relative grading system whereby you do better if others do worse. Moreover, the entire grading (and for that matter, course re-orientation) system is controlled solely by the course instructor. This can quite often lead to arbitrary decisions, according to some students. The students are expected to evaluate their courses and their teachers' performance at the end of each semester but, even if they are critical of either, the instructor is not obliged to pay: heed.

As for the Scheduled Castes and Scheduled Tribes and foreign students, it is difficult to reconcile the objective of training the "cream" of India's talented youth to be leaders of calibre, and the admission of the admittedly academically less proficient class of students. IIT, Bombay, reserves 15 per cent seats for SC, 5 per cent for ST (both of whom have to pass JEE but with lower standards of grading), and 25 seats (direct admission) distributed among foreign nationals and Indian nationals residing abroad.

In view of the extremely selective screening procedure—for eg., out of 5578 candidates appearing for JEE (western zone) only 441 were called for counselling and 261 were selected for IIT, Bombay, in 1982, one cannot help wondering how justifiable is the direct admission of the underpriv leged and foreign students, when excellence is sought to be pursued and meritocracy avowedly promoted.

However, once these students are part of the IITs it is the latter's duty to help them overcome initial hurdles and maladjustment problems with sincerity and without conscious superciliousness. But some foreign students at IIT, Bombay, claim that the general attitude of the institute, towards them is that of downright discrimination. "They take little care to help us overcome our difficulties, especially in the first 2 years when we need time to adjust to the environment, ways of teaching, language, even the food! Instead, we start with problems, are labelled "backloggers" and set aside," says a foreign student angrily. "It is this labelling right from the beginning, that is unfair. No effort is made to draw us out. Some professors even have an arrogant anti-foreign bias," he adds.

Though foreign students are allowed to clear the first 3 semesters with 28 credits against the obligatory 36 for the others, this is not a great help, they feel, because no special coaching is given to them in their weak subjects. Since they have to shoulder the burden of the backlog by themselves, its a constant struggle—and not many have survived or succeeded

Preparatory courses were started enthusiastically enough, but declared a failure by both the recipients and the donors, as there was an immense gap between the prep and the real courses. They have since been discontinued. Some foreign students, however, attribute their easy adjustment to extra tutorials and counselling by certain faculty members, as well as a good relationship with seniors. Almost all state that they have no particular peer group problems; in fact, they get along better due to their overall proficiency in sports. By and large, the faculty also feel that foreign and SC and ST students are deficient and that "they are discriminated against to an extent."

Another form of discrimination is the ban imposed on political debates or public meetings among students. According to some students, the authorities' reaction to student issues even remotely linked to politics is one tinged with hysteria, the offenders immediately being labelled either "Leftists" or "Naxalites". Deserving special mention, in this respect (of student unity), are the aggressive and gutsy girls community of the student population. Forming a pitifully small minority (there are 139 girls, undergraduate *and* post-graduate, on the rolls today), they form women's organisations and forums, protest vociferously against their wrongs—discrimination by the faculty or harassment by colleagues or their acute accommodation problem (since 1976).

The Ladies' hostel consisting of 100 rooms, reportedly, had to be augmented by letting out 2 flats, and converting store rooms into proper rooms. The girls are mostly post-graduate and mostly from the sciences—relatively few enter engineering streams.

In the final reckoning, however, a chance remark made by the Deputy Director, Prof Bedford, seems to be an apt summation. "Twentyfive years is too short a lifetime to judge our performance, though we could have done better."

And in view of the recent innovations—the 5 years' (Masters Degree) integrated course in engineering, which includes a year's apprenticeship in industry and the Larsen and Toubro-donated Rs 8 lakhs chair for nuclear engineering to impart highly specialised skills to students—it may not be overly optimistic to expect a radical transformation in at least some of the vital areas of technical education at IIT, Bombay ■

MOULDING THEIR FUTURE. Unlike workshop hours, practical training is not assigned course "credits" and therefore tends to be taken lightly by both students and the organisations to which they are attached, during the training period.

Brain Drain Slows Down

Year	IIT, Bombay, Total Number of Students	Students gone abroad	
	B.Techs - graduated out	Number	Percentage
1970	274	95	34.67
1971	330	76	23.03

A Tame Budget

Housewife Left Out In The Cold

By A Special Correspondent

Since planned development remains the shibboleth of the day, a major criterion to judge a Finance Minister's performance is the amount of money he sets aside for the Plan. Pranab Mukherjee has done well on this count, having hiked the Central Plan outlay to Rs 13,870 crores from Rs 11,000 crores in 1982-83—an increase of 26 per cent. It is mainly because the Finance Minister has stretched himself to the maximum on behalf of the Plan that he has rendered himself vulnerable to attack on other grounds.

WHEN Union Finance Minister Pranab Mukherjee was presenting his Budget proposals in the Lok Sabha on February 28, his soporific monotone suddenly acquired a solicitous ring as he announced: *I propose to exempt totally pressure-cookers from excise duties. The housewives would now find someone else in their kitchens letting off steam.*

Kudos to Pranab Mukherjee's ghost writer for coming up with a well-turned phrase but, as a housewife pertinently pointed out in a post-Budget Doordarshan programme, a pressure-cooker is only a once-in-a-while buy.

Barring the proposed reduction in excise duty on sugar—which would no doubt bring some sweetness into the life of many an Indian—the concessions pertaining to kerosene stoves, electric bulbs and fluorescent tubes are fine as far as they go but, in essence, barely minor sops to the popular imagination. More important from the angle of the beleagured common man is what happens to the general price level. In fact, this could be a starting point for looking at the Budget.

Pranab Mukherjee's claim about "keeping a tight rein on inflation" does not bear scrutiny. To begin with, any talk about a non-inflationary Budget in a developing economy is so much poppycock. Large investments in long-gestation capital and infrastructural projects result in immediate creation of incomes, but the fruits of such investments always take time to materialise. Thus we have what is called in economic jargon the "inflationary gap". But this Government—like most Governments the world over—has been exacerbating the inflation already built into the development process by not balancing its Budget and meeting a part of the expenditure by simply printing currency notes. This time the Finance Minister has left a deficit of Rs 1,555 crores.

If to this are added the earlier deficits—Rs 2,577 crores in 1980-81, Rs 1,392 crores in 1981-82 and Rs 1,945 crores in 1982-83—the total already comes to Rs 7,539 crores, making nonsense of the Sixth Plan exhortation that the deficit for the 1980-85 period should not exceed Rs 5,000 crores. It is amazing that, while dwelling on the non-Plan expenditure in 1982-83, the Finance Minister made no reference to the Rs 800-odd crores spent on the Asian Games. Such attempts at camouflage only detract from the Government's credibility.

Then, the effect of taxation on the price level must be reckoned. To the Rs 716 crores proposed to be raised through indirect taxation in the Budget must be added the Rs 2,100 crores sought to be mobilised through the Railway Budget and the other "phantom budgets" envisaging hikes in P & T tariffs, oil prices and cigarette duties. Thus a total resource mobilisation effort of nearly Rs 3,000 crores cannot but generate inflationary pressures.

Three Points To Note

The Government's claim about inflation having been controlled at the moment calls for three observations.

- One, a low percentage increase in the wholesale price index would appear to be less of an accomplishment if it is realised that each time the base on which it is calculated is higher.

  Two, although on the basis of a point-to-point comparison in the wholesale price index inflation stood at 3 per cent in the last week of January, in terms of the consumer price index—which is what matters to the people—it stood at 8 per cent.

  Three, liberal imports because of the cushion provided by the IMF loan have served to somewhat dampen the inflationary pressures. When this cushion is removed shortly, what happens?

In the ultimate analysis, the main imponderable having a bearing on the inflationary impact of the Budget is the behaviour of the monsoon in the coming months. If the Weather God smiles and disgorges his largesse on the rain-hungry earth, each drop of rain would virtually mean one number of inflation douched. If he frowns and looks away, inflationary fires are likely to rage below.

As the economy is in the grip of some kind of recession, it is a natural point of interest whether the Budget seeks to do anything to undo the present situation. At the outset, it needs to be understood that the Indian recession is not the trough of a business cycle and, therefore, is of a different genre from the recession in the industrialised West. The Indian recession is the combined result of partial withdrawal by a drought-hit agricultural sector of demand support to industry, some overshooting of the mark in import liberalisation and the tendency of a high-cost industry continually to seek high profit margins.

- As regards the first factor, the proposal to reduce the price of certain fertilisers (the suggestion was made by me in the *Weekly* in a pre-Budget article) by exempting them from excise duty is sensible. It will boost agriculture and thus also serve to restore its support to industry.

  Similarly, the proposal to raise, with certain exceptions, Customs duties by 5 per cent acquires the additional rationale of providing a protective umbrella to those who feel that the import policy is excessively liberal.

Reason To Feel Let Down

Notwithstanding its inefficiency and indiscipline, the corporate sector was perhaps justified in expecting reliefs because of the recession. It has reason to feel let down. Lowering of the interest tax on banks—so that they can now lend at 18 per cent instead of 19.5 per cent—and an increase in the depreciation allowance from 10 to 15 per cent are changes in the right direction.

But, simultaneously, the surcharge on the income tax payable by companies—technically called the Corporation Tax—has been increased from 2.5 per cent to 5 per cent. The option to deposit the additional surcharge in the Industrial Development Bank is hardly going to amuse businessmen.

Further, various concessions have been taken away in the name of rationalisation.

- All in all, the Budget in itself can scarcely be described as a major antidote to recession. Much, again, will depend on the behaviour of the monsoon.

The Finance Minister's effort to discipline rich businessmen will, however, receive public approbation. The manner in which prosperous companies have been exploiting concessions to get away with zero tax has, despite the FICCI's ponderous rationalisations, been an embarrassment to our socialist credentials, such as they are. The provision that henceforth fiscal incentives and concessions will not be allowed to absorb more than 70 per cent of a company's profits is thus well conceived. I am also inclined to support curbs on the misuse of the allowance given for "entertainment expenditure", although this would mean less free five-star lunches for me.

However, it can hardly be gainsaid that "lavish and wasteful expenditure" of this nature is indulged in more by Government departments than by private firms. This can be ascertained by visiting any five-star establishment at any time and seeing the lunch and dinner notices displayed there. Pranab Mukherjee would, therefore, do well to appreciate that discipline, like charity, should begin at home.

Frustrated at the hundreds of crores blocked in litigation in respect of excise duty, the Finance Minister has proposed that, henceforth, the tax deduction allowed for income-tax assessment would be the actual amount paid in a year and not the statutory liability. Nobody would grudge this.

Utterly Unoriginal

Structurally, the Budget is utterly unoriginal, making no attempt whatsoever to usher in the much-needed tax reform, with the result that the existing system, particularly the Income Tax Act, remains the taxpayer's nightmare and the tax consultant's delight. As if to exercise his guilt, Pranab Mukherjee has made a sheepish reference to the Economic Administration Reforms Commission towards the end of his speech, promising a Direct Taxes Amendment Bill "the preparation of which will be taken in hand".

This does not make sense. If such a Bill were to come close on the heels of the Budget, what would be the position of the present proposals? Evidently, the Govern-

ment is in no hurry, assuming that it would bestir itself at all.

Moreover, niggling here and tinkering there, the Budget seems the handiwork of constipated bureaucrats rather than an imaginative political leadership.

- For example, what is sought to be proved by reducing the income-tax rate on the first slab between Rs 15,001 and Rs 20,000 from 30 to 25 per cent and simultaneously increasing the surcharge from 10 to 12.5 per cent? The explanatory memorandum to the Finance Bill points out that the net benefit to an earner of Rs 16,000 in a year would be Rs 49—or about Rs 4 per month!

  Again, the duty-free limit in regard to the baggage of passengers returning to India would be increased from Rs 1,000, fixed in 1978, to Rs 1,250. What a blow for realism!

  Neither is the removal of the ceiling of 30 per cent of gross income in respect of savings in Life Insurance and Provident Funds likely to yield much additional savings. How many Indians can set aside more than 30 per cent of their gross income for such savings?

However, just as nothing is an unmixed good, there is no such thing as unrelieved folly.

- Introduction of 3-Year Central Government Bonds as another avenue of investment to qualify for exemption under the Capital Gains Tax is an improvement inasmuch as the 7-Year National Rural Development Bonds have too long a maturity.

- More investment for non-resident Indians—particularly the proposal to levy a flat rate of tax of only 20 per cent plus surcharge on the income derived by them from investments in shares and debentures of Indian companies made in foreign exchange—is welcome.

  The impetus sought to be given to exports by allowing exporters to deduct 5 per cent of their incremental turnover while computing their taxable income is incontrovertible.

  Liberalisation of excise duty concessions to the small-scale sector is unexceptionable.

  Equally supportable is the stimulus sought to be given to production by extending the scope of excise duty rebate for excess production. In fact, the scheme should be made more comprehensive and simpler.

Breached, Not Observed

The Sixth Plan document says: *It is essential to ensure that the subsidies on account of food, fertilisers and exports are kept within reasonable limits in order to release resources for development.*

Once again, the Plan has been followed more in the breach than in the observance, since the Budget shows subsidies totalling Rs 2,250 crores: Rs 798 crores for fertilisers, Rs 800 crores for food and Rs 652 crores for exports.

The fertiliser subsidy has increased mainly because of cost escalation triggered by the recent hike in the prices of petroleum products and the cess on crude. For reasons mentioned earlier, nothing can be done about this. But, if the Government were to cease using subsidised foodgrains as a bribe to the articulate sections of the population, the food subsidy (as argued in these columns in an earlier issue) would come down.

Since planned development remains the shibboleth of the day, a major criterion to judge a Finance Minister's performance is the amount of money he sets aside for the Plan. Pranab Mukherjee has done well on this count, having hiked the Central Plan outlay to Rs 13,870 crores from Rs 11,000 crores in 1982-83—an increase of 26 per cent

It is mainly because the Finance Minister has stretched himself to the maximum on behalf of the Plan that he has rendered himself vulnerable to attack on other grounds. Appropriately, the largest chunk has been earmarked for the energy sector. Petroleum, power and coal get Rs 5,014 crores—which comes to over 36 per cent of the Central Plan outlay.

But the Finance Minister has displayed extraordinary *naivete* in thinking that the performance of State Electricity Boards can be improved by doling out awards from a puny sum like Rs 50 crores. The problems of the SEBs are deep-rooted. Neither can the Government check slippages in power projects unless it deigns to implement the recommendations of the various committees on power development, the latest one being the Rajadhyaksha Committee.

Defence expenditure has been hiked from Rs 5,350 crores in the current year's revised estimates to Rs 5,971 crores. Considering that one fighter plane, or frigate, or tank means that much less basic amenities to poverty-ridden people, the Government should be made to give a detailed justification for this huge expenditure. The legitimate needs of political freedom and economic freedom have to be carefully balanced.

The GNP is expected to increase by only 2 per cent in the current year owing to a downturn in agricultural output (down by 3 per cent) and a slower growth rate in industry (up by only 4.5 per cent) To quote the Economic Survey: *1982-83 was a testing time for the Indian Economy.*

How will it fare in 1983? It should be clear from the foregoing that a Budget is never the only factor in the situation, especially if it is a tame one

- How the Indian economy fares in 1983 will depend on the efficiency of the infrastructure.

  It will depend on the extent to which world recession permits absorption of our exports.

  It will depend on cooperation between capital and labour.

  It will depend, above all, on the behaviour of the monsoon.

In the coming months, therefore, we should train our sights skyward, with our fingers crossed.

■

Budget—II

Design For Solvency Despite Setbacks

Though the author underscores many of the points made in the preceding article, his emphasis is different and his overall view is well worth a perusal.

—Editor

by Balraj Mehta

WE have not cut the Development Plan and we have not cut the subsidies for food and fertilisers, enthusiastically exclaimed a senior official of the Union Finance Ministry after the presentation of the Pranab Budget for 1983-84. He indeed seemed to suggest that something in the nature of a miracle had been performed by financial wizards (himself included) at a time when the financial position of the Government was gravely stretched.

There are certainly several plus points about the Pranab Mukherjee Budget for the coming year. The outlay for the Annual Plan has been stepped up by 21.5 per cent—with a 26.1 per cent increase in the central sector of the Plan. In the Budget proper, a big resource-raising effort has been mounted which is estimated to yield by "non-inflationary means"—so it is claimed—Rs 716 crores in a full year. This has been preceded by an even bigger resource-mobilisation effort—adjustments in customs and excise duties, upward revision of Railway freights & fares and post & telecommunication charges and a hike in the prices of petroleum products—which is estimated to bring to the Central Exchequer as much as Rs 2,100 crores in a full year. Such a massive resource-raising effort is unprecedented and easily surpasses even the much-maligned "harsh" Budgets of Morarji Desai in 1963 and Charan Singh in 1979. But solvency has been restored to the financial balance-sheet of the Central Government.

The additional resource mobilisation, moreover, can legitimately be claimed to be designed for financing the Development Plan. The non-Plan expenditure is intended, after all, to increase by less than 10 per cent in the coming year and all of it is not necessarily non-developmental, administrative expenditure being only a fraction of it. At the same time, the claim of defence to budgetary support has been adequately met. The budgetary allocation to defence is proposed to go up by as much as Rs 871 crores next year compared to the first Budget estimates for the current year.

Besides the plus points for the broad parameters of the Budget, there are others which are relevant and exist to satisfy a variety of sectional interests. It is not always possible, of course, to meet all the heightened pre-Budget demands and

FINANCE MINISTER PRANAB MUKHERJEE

expectations of sectional interests with a stake in the Budget and its impact on the economy. The corporate sector has been trying to display disappointment over some of the fiscal measures in the Budget. This is probably intended to cloud the fact that wide opportunities for profitable growth have been opened for the private corporate sector in the last three years by means other than the Budget which, in the circumstances, had to take some measures, even if partial and half-hearted, for the rationalisation of the tax structure for this sector.

Cases In Point

The Budget has indeed made a substantial contribution towards the generation of larger internal resources by the corporate sector for accelerated growth. The reduction of interest tax to half and the increase in the rate of depreciation from 10 per cent to 15 per cent are cases in point These two measures alone will result in an increase of more than Rs 200 crores in the resources available to the corporate sector for investment in modernisation and expansion.

There are other concessions and incentives also. The one grouse which has been expressed by the spokesmen of the corporate sector is with respect to "minimum tax" on at least 30 per cent of the profits of a dividend-paying company This is intended to end the anomaly in the tax system which enabled many companies to take advantage of the plethora of exemptions, deductions and rebates and reduce their tax liability to zero even when they made large profits, paid out handsome dividends and also spent lavishly on a variety of perks and non-productive activities.

There is much force in the idea which the Finance Minister has applied in the Budget that the fiscal instrument should be used for encouraging saving and investment and discourage wasteful expenditure. Only its application should have been more vigorous and wider-ranging. There is indeed a case for elimination of most of the exemptions, deductions and rebates which clutter the direct tax structure for the sake of better tax administration and collection. In that event, again, it will be possible substantially to reduce the formal rates of taxes to the level of their real and effective rates and the myth of high tax imposts would be destroyed without loss of revenue to the Government.

Coming to taxes on personal incomes and wealth, the Budget for 1983-84 has made marginal adjustments only with minimal revenue implications. It has, however, kept the direction set in the Budgets of the last three years which had won kudos for the Budget-makers for their solicitude for the "middle classes". There is some more of the same, such as raising the exemption limit in respect of income-tax liability and liberalisation of exemption for the income-tax payers against a variety of approved savings. What needs to be questioned in this context, however, is the contention that these adjustments in tax on incomes (and others on wealth) bring relief to the "common man"

To bracket those having an annual income of Rs 40,000 and above—numbering about 3 million—in the category of "the common man" is to stretch the point too far. When the same or similar logic is extended to taxes on commodities, there is the grosteque proposal of exempting pressure-cookers and "fuel-efficient" kerosene stoves from excise duties in the name of coming to the aid of housewives in India and promoting fuel efficiency to boot.

So much for the fiscal proposals in the Budget. What about the expenditure side? The Government's Budgets, especially the Union Budgets, have ceased to be merely statements of accounts of the Government and exercises in the balancing of revenue and expenditure. Launching of the processes of development planning after gaining political independence has given the Budgets wider dimensions as instruments for setting the pace and the direction of the development process. Resource-raising and the manner in which resources are raised are, therefore, as important in this context as expenditure and allocations to various sectors, projects and programmes. If again, in this context, there is a sense of relief and satisfaction that resource stringency has not been allowed to result in a direct and absolute cut in Plan outlays, there must be disquiet over the large lags that have developed in the progress of the Plan in physical terms. In spite of the 21.5 per cent increase in financial allocation for the Plan in the coming year, the lags in physical terms will not shorten but lengthen.

This position was indeed built, to start with, into the design of the Sixth Five-Year Plan when 1979-80 was set as its base year and the financial size of the Plan was fixed in terms of 1979-80 prices. The year 1979-80 had recorded an absolute decline of 4.8 per cent in national income. The subsequent years—the first three years of the Sixth Plan—recorded in 1980-81 an increase of 8 per cent over the depressed base of 1979-80; in 1981-82, of 4.5 per cent over 1980-81; and of barely 2 per cent in 1982-83 over 1981-82.It is indeed deceptive to claim a growth of 5 per cent per annum during the first 3 years of the Sixth Plan by skirting the 1979-80 reference-point for determining the growth rate. As matters stand, the growth rate during the first three years of the Plan will turn out to be less than 3 per cent per annum—way behind the target set for the Plan. In per-capita terms, the position at the end of the current year (1982-83) will be found barely level with 1978-79. The so-called recovery of the economy from the shambles in which the Janata-Lok Dal power interregnum is supposed to have plunged it has not been very striking, after all.

On the contrary, the performance of the economy during the current year admittedly has been so dismal that it has cut short whatever feeble recovery was registered in the first two years of the Sixth Plan. According to the present quick estimates, there will be an absolute fall of 3 per cent in agricultural production and the overall growth in national income will be barely 2 per cent. There are some who apprehend that the position is worse than officially admitted considering the widespread recessionary trends in the industrial sector and the absolute fall in revenue collections compared to the Budget estimates during the year—an unprecedented phenomenon in itself.

Official Claim Belied

The stark extent and nature of the poor performance of the economy during 1982-83 is only emphasised when it is attempted to be attributed entirely to "drought" which has resulted in a fall of 3 per cent in agricultural production as against more than 15 per cent in 1979-80. The relatively much smaller setback in the agricultural sector in 1982-83 compared to 1979-80 and the failure to absorb it and maintain the growth tempo indicates a progressive weakening of the growth impulses in the economy, especially during the last three years, giving the lie to the official claim made in the Pre-Budget Economic Survey as well as in the presentation of the Budget that official economic policy and management had imparted during the last three years "an appreciable degree of resilience" to the economy "despite a setback in agriculture, growing constraints on resources and continued strain on balance of payments".

A major contributory factor in weakening the growth impulses in the economy, when adverse weather conditions hit the agricultural sector, has been man-made, more especially the policy of import liberalisation and emphasis on the "softer option" of growth with borrowed money from abroad.The inability or the unwillingness of the political authority to mobilise domestic resources—not merely in financial terms but much more markedly in material and human terms—has been debilitating for self-reliant growth on a self-sustaining basis. Witness the eagerness with which power-generation stations and other larger, capital-intensive and long-gestation projects are proposed to be erected with total foreign financing. This implies import of all machinery, equipment and skilled services for these projects as well as financing of local costs even while Indian ability and capability for erecting power stations and such other projects (among which the Bharat Heavy Electricals in the public sector is prominent and best equipped) have to face gross underutilisation of capacity for want of orders. Witness again the wanton manner in which dumping in the Indian market of foreign goods and services has been allowed to the detriment of Indian industry.

Perils In Store

Meanwhile, the so-called "cushion"—which the IMF is supposed to have provided to finance the structural adjustment of the Indian economy and expose it in competition to foreign capital and supplies under agreed "conditionalities"—will be running its course in the coming year and India will then be exposed to mounting pressures for repayments of foreign loans and, to that extent, there will be a drain on its lean resources and depletion of available resources needed for development. A measure of the realisation of the perils in store in the wake of the so-called "liberalisation of the economy" so far as the balance-of-payments position is concerned seems to have dawned on official circles. This is indicated by caution against liberal contracting of foreign commercial loans and the anti-dumping fiscal measures which, at last, have been incorporated in the Budget. But these measures are not adequate in themselves and a more courageous and wider effort for domestic-resource mobilisation (especially material and human resources) for development will be called for to revive and strengthen growth impluses in the economy.

Talking of resource mobilisation—financial, material and human—it is not enough to sit back after the taxes, the levies and the price revisions have all been resorted to essentially as revenue-raising exercises for balancing accounts in the face of diverse claims on budgetary resources. A silver lining in this context is the growing potential of returns from past investment in industrial and commercial undertakings in the public sector, especially if the returns come from higher efficiency, and not merely from hikes in administered prices of the products of these enterprises. For the rest, however, exclusive reliance on indirect taxes and price mechanism for raising financial resources is misplaced and can easily disturb stability, more particularly price stability, which is claimed as the signal achievement of official policy and management. For one thing, effective curbs against inessential imports will at once shrink revenue realisations from customs duties. The fact indeed is that revenue from customs, looked at from the narrow view of balancing the budgetary sums, may, and does, act as a spur for liberal imports and this tendency will have to be strongly curbed. So far as other forms of indirect taxation are concerned—excise duties in particular—there is a limit beyond which their cost-push effect is bound to disturb price stability.

False Propositions

A shibboleth has lately gained ground in official parlance. It is to claim that indirect taxes and increases in administered prices are a non-inflationary way of raising resources. Worse still is the idea which has been canvassed brazenly and cynically by interested quarters, official and non-official, that direct taxes discourage saving and investment and reduction in direct taxes promotes work efficiency and production: Both are false propositions. According to all sound economic thought and logic, mopping up of disposable incomes, as they generate in the economic structure, on the basis of the principal of progression is the foundation of any sensible and equitable fiscal policy and it is the only way of raising resources by non-inflationary means for meeting the needs of the state and of development.

The budgetary policy under the spell of the so-called supply-side economics has perverted all sound and equitable concepts of development policy, especially the policy for raising resources and their deployment for development. Its logic has been to shift the burdens of development on the shoulders of those who are least able to bear them and monopolisation of the gains of development by a thin upper crust of society. In this process, again, the proud role of the state as the principal agent of economic and social development on an orderly and equitable basis has been diluted and is bound to dilute further.

It is not fortuitous that from the concept of the state occupying the commanding heights of the economy, which informed India's development strategy when the processes of development planning were launched way back in the 1950s the role of public-sector investment is being progressively limited to development of infrastructure and opening up and widening of opportunity for private business and enterprise to grow and thrive even while the mass of the people have willy-nilly to remain outside the pale of the development process and await patiently the gains of development to trickle down to them. The trimming of the Sixth Plan in the public sector to what is called the "core sector"—in which, again, the development of commercial-energy resources is given an overriding priority—and paring of the State plans to an extent in which social services and welfare programmes, except for population control, receive the lowest priority fall neatly into place in this scheme of things.

Interview

It's Now or Never

World Teetering on the Brink of Economic Chaos

by C. Raghavan

GENEVA: The present is a now or never opportunity to change the international monetary and financial systems in ways to end deflation, restore recovery and growth and do all these things without repeating the past, according to Dragoslav Avramovic.

A Yugoslav national, Special Advisor to UNCTAD Secretary-general, Gamani Corea, and ex-officio member of the Brandt Commission and Director of its Secretariat, Dragoslav Avramovic discussed in an interview the main issues of the world economic crisis—in essence the crisis of finance and money—in the light of the latest report of the Brandt Commission and other recent proposals and studies.

Question: *Is finance and money really the key issue of the crisis or is it merely a reflection of the crisis in trade, commodity and other sectors?*

Answer: The emphasis on money and finance in Brandt II and elsewhere is a reflection of the deep-seated problems of the world economy, specially as it affects the developing countries (DCs).

Ultimately, all crises, whether cyclical or structural, end up as financial crises and liquidity problems. What is important to consider, from the long-term view, is whether patch-up jobs can solve the present problems, or whether out of the present predicament a sequence of changes can be developed to make repetition of the past less likely.

Liquidity gap figures are now being bandied about—$70 billion according to UNCTAD. $85 billion according to Brandt II, Others say it is all exaggerated, and a temporary crisis.

No. The gap is much more. The facts are there. According to the World Bank President (at the GATT Ministerial meeting in November), compared to 1980, the export earnings of the Third World, other than on oil, were down in 1982 by $40 billion a year, while the increase in debt servicing payments by the Oil-Importing Developing Countries (OIDCs) was up by $35 billion. Since the collapse of private capital loans to the Third World in August 1982, the shortfall runs at an annual $30 billion compared to 1981. These three figures alone add up to over $ 100 billions.

Then the fall in export earnings on petroleum of the oil-exporters was $85 billions in 1982 compared to 1980. To the extent it was due to price falls, some Oil-Importing Developing Countries (OIDCs) may have benefitted. But most of the fall was due to volume reductions.

So you really have a 180 billion gap of which 100 billion is for the OIDCs.

Is this a question only of numbers or of quality and a crisis of the systems? In other words, not merely of finance but of how?

Both. What is being done now may be ample in so far as speed of mobilisation is concerned—IMF quota increases and the General Arrangement to Borrow (GAB). But the amounts are insufficient and will not lead to changes likely to help the world economic recovery.

First, together, these will give $30 billion in usable funds to the IMF spread over a minimum period of three years, or an annual rate of $10 billion, compared to the $100 billion liquidity gap of the OIDCs alone.

Second, it is at best a medium-term loan, repayable over the next five years. On the other hand, the short-term debts of the Third World alone rose to $160 billions at the end of 1982 compared with 60 billion at the end of 1980. There really is a major problem. The IMF-GAB package is significant, but really extends the problems into the future for the next few years rather than seek a solution.

Third, we have the problem of "conditionality" of the IMF. As US Secretary of State (George) Shultz and Treasury Secretary (Donald) Regan have said, if under conditionality every one is asked to export more and import less, you can only have deflationary pressures in the world economy.

Fourth, IMF stabilisation agreements take time to negotiate. So the Bank of International Settlements (BIS) in Basel provided the bridging finance. The President of BIS, Mr Fertz Leutwiller, has said at Davos, European Management Forum, at the end of January that BIS will be doing this no more. So one leg of this edifice has been weakened.

Finally, even if the IMF quotas are increased (as UNCTAD, Brandt II, and the Group of 24 developing countries in the IMF are asking), the funds available will still be small, and mind you it is funds for the IMF and not to the countries.

All the present schemes count on the restoration of confidence in banks and the capital markets, and their starting to resume lending again. If this does not happen—and there is no evidence of it—there is no way out other than enormous deflation.

Banking Crisis

The Bank of England Chief has been quoted as saying the banking crisis is all over.

The fact is, despite the best efforts of the IMF, in a number of cases—we need not mention the countries, but they are figuring in the papers every day—the package deals announced are still not tied up. These are difficult and time-consuming operations, involving a large number of parties. On the one hand, you have "conditionality" and deflation, and on the other the difficulties of putting the deals together. The only result is continued agony, frequent reschedulings, and impossibility for anyone to plan ahead even a few months.

What could be the solution that would also help changes in the systems?

Some of us have been arguing for large injection of SDRs (Special Drawing Rights in the IMF) to avoid deflation, and do three things while we consider longer-term changes.
First, to consolidate short-term debts (at floating interest rates plus 2-3 per cent in commissions and service charges) into long-term debts. *Second,* renegotiate the interest rates and *third,* ensure a better performance on the part of the Third World.

Clausen, at the GATT Ministerial meeting, and Brandt II now, all seem to throw cold water on the view that the Third World is responsible for its own problems.

Undoubtedly, as Clausen said, the blows from outside have been overwhelming for the Third World during the last 2-3 years. But at the same time, in a number of countries, there is room for improvement—to reduce capital flights, to reduce growth of unproductive expenditure, and to eliminate inappropriate use of public funds (corruption and waste).

DRAGOSLAV AVRAMOVIC

But this is a question that the developing countries must address and sort out themselves. That is why I have been arguing that the Third World has to be given a good deal of authority in the distribution and monitoring of the use of SDRs. This would, in effect, take us to the institutional changes necessary.

If we have a large issue of SDRs, we could take a major step forward in the reconstruction of the International monetary System. If its distribution is partly automatic, and partly under the control of the developing countries themselves, it will be a type of change that would take us forward to the New International Economic Order.

In other words, not a give away of public funds, but under a different type of "condionality"?

Yes, but without the political problems of now. Otherwise, I see no way of getting out of this crisis. The Balance of Payments problems will be with us for a long time, with debt reschedulings and frictions. The problems will grow bigger by the day.

The changes I am suggesting will open a new North-South relationship. It may sound like a dream, but it is not.

The Marshall Plan in Europe was administered by the recipients, and so was the Alliance for Progress, and on a smaller scale now the International Fund for Agricultural Development.

You can accomplish the same thing now by giving powers to the G-24 in the IMF, under some broad guidelines of the IMF Board and the overall authority of the IMF Managing Director. This can be done immediately without any amendment of the IMF articles.

Common Crisis

Brandt II talks of "Common Crisis" and the dangers of deflation and depression. But there still seem to be some fears that all this will generate inflation, and the IMF still seems to be emphasising the fight against inflation.

The crisis is evident. In 1982, the commodity prices fell by 30 per cent since 1980. Prices in three major product groups have fallen—cereals, oil (petroleum), and metals. In three major industrial countries—US, West Germany and Japan—prices are rising now at an annual two per cent rate. World reserves have fallen sharply (200 billion dollars in 1981, and total Third World reserves down to $106 billion or 2-1/2 months of imports). We are talking about a liquidity injection of $50-60 billion but the US budget deficit alone is over 200 billions

There is large-scale unemployment in the US and Europe, over ten per cent. There are large agricultural surpluses. OPEC is desperate to shore up the oil market. The Newly Industrialised Countries (NIC) have excess capacity in all consumer goods. The US industry is working at 62 per cent capacity, and West Germany's at 74 per cent.

Where is the fear of inflation? How much further can you go?

The alternative really is deflation, financial chaos. Forty countries now, have stopped repayments of principals, and are paying interest by borrowed funds. This is a critical situation: enormous financial and trade consequences or some orderly settlement. Are debts to be paid out of expanding production or by reduced consumption? The latter carries enormous risks, the first much less.

Last year, world trade fell by 5-10 per cent. Mexico, the third largest market for the USA is down, and so is Nigeria, the most important market for the UK. The Middle East, so important for West German engineering goods, is in deep trouble. Thirty four per cent of the US-EEC-Japan exports are to the Third World, and that is where the trouble is.

Now Is The Hour

Is it a now or never?

Yes The opportunity for reconstruction of the financial and trading systems was never better. There is greater realisation of the need now everywhere, more open-mindedness in the USA—the Secretaries of State and the Treasury are saying we cannot go on like this

The outlook for new approaches is more promising than ever before. It will not be easy, but it is Now or Never, particularly for the monetary system, where we have a very confused and very difficult situation.

There is no fixed frame of reference any more. Enormous inflation has been replaced by deflation. Financial structures and debts of not only, the Third World, but of enterprises in the industrial countries, are in trouble.

The enormous difficulties in sorting out these problems are such that movement to a new world monetary relationship is inoperative—a greater degree of participation by the Third World must be its essential ingredient. They are a major factor; oil-exporting countries are the major creditors, and the importing ones are the consumers of capital and the major markets. ■

BPL SANYO

RATAN TATA, the 45-year-old nephew of JRD, is now the Chairman of Tata Industries.

Young Entrepreneurs—I

Heir-Apparent To The Tata Throne

by Hashim Khairullah

Mr Ratan Tata's elevation to the post of Chairman of Tata Industries is an indication that he may well become the next head of the House of Tatas. The post is still being held by JRD Tata, but it is obvious that the ageing monarch is looking for a successor.

AS Chairman of Tata Industries Ltd, Ratan Tata (45) has a hard task ahead of him. His biggest challenge is the obvious one: to fill the shoes of the legendary JRD who, in October 1981, nominated Ratan to the second most powerful job in the group and who might still bequeath him the sprawling Tata empire. (Total assets in July 1982 valued at Rs 1,538 crores). Mr Ratan Tata's new post as Chairman of Tata Industries virtually means that he is now almost certain to become the next head of the House of Tatas, started by Jamsetji Nusserwanji Tata in 1868. The highest position in the group is the Chairmanship of Tata Sons Ltd, the holding company which controls the empire. The post is still being held by JRD himself, but it is obvious that the ageing monarch (78) is now looking for a successor for Bombay House, the Tata Headquarters.

Ratan Tata's present role, therefore, will be basically of learning how to exercise the controlling powers over the Tata companies through the Tata Industries Board, the think-tank for Tata Sons.

JRD's move of nominating Ratan can best be described as part of an eventual plan to hand over the reigns to his nephew. The fact that he chose Ratan as his heir-apparent and not the seasoned Tata professionals like Nani Palkhivala, S. Mookgaokar, and Russy Mody is an indication of his confidence in him. But the question still being asked is: Will Ratan prove himself? Will he deliver the goods, so to speak, and make the grade after JRD retires? Can he hold the group together and command respect from these elderly professionals? Will the House of Tatas, which has been controlled by the Tata family, despite its meagre shareholding, remain in the hands of the family? (The Tata family owns only a minute fraction of the shares of the parent company, Tata Sons. Over 80 per cent of the shares are held by various public trusts. The holdings of Tata Sons and its subsidiary Tata Industries in other important Tata companies like TELCO, TISCO and TOMCO, are almost negligible.)

Considering the responsibilities he has, Ratan Tata, the Cornell- and Harvard-educated son of Naval Tata, will have to plan his moves cautiously. His major experience within the set-up has been limited to National Radio and Electronics Corporation (NELCO), which has been a non-performing company. His brief stints in TELCO and TISCO, prior to his nomination can best be described as apprenticeship. On the other hand, the quality of the professionals in the Tatas has traditionally been high and it is from these professionals in the Tata House, that Ratan may face a challenge.

The Tatas are all set for a massive modernisation and diversification programme. TISCO, the group's top money spinner (profits before tax—Rs 77.65 crores) will in the next three years spend over Rs 200 crores in modernisation, TELCO aims to increase its present turnover (Rs 802.95 crores) by more than Rs 300 crores. Ratan's main role now will be to see that the decisions regarding the major modernisation and expansion of TISCO and TELCO are implemented effectively. He will also have to oversee the expansion plans of the Tata Electric Company, which is adding two new 500-MW units to its existing grid that feeds power to the vital Bombay-Pune belt. Another major task which he may be entrusted with is the proposed Bombay High gas-based fertiliser plants of Tata Chemicals.

The coming years are, therefore, very critical for the Tatas, and more so for Ratan. His task will be to ensure that the momentum of modernisation and diversification is not slackened. The economic environment is changing rapidly—government liberalisation in industrial licensing, imports and controls is evident. The investment climate is encouraging. As group Chairman he will have to maintain the informal bonds and muster the ability to inspire credibility in the public and shareholders alike. As the heir-apparent to the Tata fiefdom, he will have to prove his competence and acquire a certain stature to hold the groups together. He will have to put all his resources together to ensure that the structure and foundations of the "great" House of Tatas, does not come crumbling down.

Mr Ratan Tata was not available for an interview as he was preparing for a business trip to New York, but he agreed to answer "selected" questions in writing, categorically refusing to comment on the Union Budget. Excerpts:

Question: *Your new task as Chairman of Tata Industries is vastly different from your previous one as the Chief Executive of Nelco. What difference in perspective do you now see?*

Answer: Tata Industries has sometimes been referred to as a "commonwealth of companies". Policy decisions and new directions in the organisation generally take the form of a consensus at board meetings, where the heads of most Tata companies are represented. This is obviously quite different from the operation of a single company like Nelco.

What will be your new areas of growth? What new projects are you planning to venture into?

I envisage that one of the main areas of our growth will be in high technology fields. I would like to see Tatas move into the various high technology areas which one would like to see India develop in—several of these areas are at present reserved for the public sector. They may relate to defence or communications or certain areas of electronics. I think these areas are exciting if they were opened up and I would like to see the private sector, and Tatas, in particular, involved.

I also envisage a growing presence for the organisation abroad, where our activities till now have perhaps not been as energetic and intensive as they should have been.

Why have the Tatas consistently fallen in line with Government objectives, whatever they may have been? Do you find it convenient as the Government is your major shareholder? How do you match your objectives with those of the Government's?

We may have fallen in line with Government policies in the sense that we have not "bucked" the system. We are, of course, helpless in matters where the Government decides on certain policies and priorities, with all of which we may not necessarily find ourselves in agreement. We do, however, make our views known in such matters. But the objectives

→

The Tata Iron And Steel Co. Ltd

	1980-81	1981-82
	(Million Tonnes)	
Saleable Steel -		
Production	1.537	1.606
Sales	1.373	1.415
	(Rupees in Crores)	
Gross Revenue	520.86	704.69
Profit before Taxes	52.06	77.65
Profit after Taxes	26.46	47.65
Dividends	8.56	13.09
Dividend on Ordinary Share	15.00	17.00*

(*including an additional Jubilee Dividend of Rs 2 payable subject to the approval of the Financial Institutions and the Joint Plant Committee)

with which we have always fallen in line are those laid down by our own tradition. Thus, it has been a part of our tradition not to snatch at opportunities for the sake of profits or short-term gains. This is evident from the very inception of the organisation, when Tatas repeatedly chose to invest in and manage 'core' sector activities, like steel, power generation, commercial vehicles, etc, where the gestation period has been tremendously long and where shareholders have had to wait for many years for their dividends—but it has finally been worth the effort.

Could you throw some light on the concept of 'strategic planning' which you have recently introduced in Tata Industries? How do you plan to achieve your goals through this concept?

Strategic planning will, I hope, define a direction for the Tata organisation to pursue in coming years. It will help to crystallise and clarify the areas in which we should strive to have a more marked presence in future.

Strategic planning in India is not recognised as a need because of the hitherto protective industrial environment, but I consider it important. With the liberalisation of the Union Government's licensing and import policy, industry is breaking away from the traditional seller's market and thus there will be a greater awareness of a need for strategic planning in the years to come. I believe that a lack of strategic planning has a profound effect on the position of a business organisation in the market place and most of the problems of an organisation can usually be traced to lack of planning.

While your performance in the heavy industries has been commendable, the same cannot be said about your performance in the consumer field. Do you identify a weakness in your marketing strategies?

True. Tatas have been weaker in the areas of merchandising of consumer products, and our marketing strategies have, perhaps, not achieved the kind of excellence which we have been able to achieve in other fields of industrial activity. The reasons for this are not simple or common for all our consumer product companies. It is perhaps because we have over the generations, concentrated on the 'core' sector that we may have tended to neglect the field of consumer and allied products. But we are taking steps to correct this situation.

The Tata Engineering And Locomotive Co. Ltd

	1980-81	1981-82
	(Rupees in Crores)	
Total Assets	270.19	400.71
Sales and Other Income	616.02	802.95
Profit before Taxes	24.37	41.88
Profit after Taxes	24.37	41.88
Dividends	6.05	8.39
Shareholders' Funds (Net worth)	112.46	145.95

Exports went up by nearly 15.6 per cent to Rs 60.59 crores.

The binding factor of the Tata Companies today is Mr J.R.D. Tata. He commands total respect from the senior professionals, the shareholders, down to the workers' union. Will you be able to hold the group together and command the same respect? Have you foreseen the problems of always being in JRD's shadow? Is your youth an advantage or a disadvantage in this regard?

I obviously cannot answer this. Time alone will be the best judge. Mr J. R.D. Tata has set ideals and values of a very high order. His vision and foresight is immense. His successor, whoever he may be, will have to work hard to uphold and sustain such standards.

Is there a special quality of entrepreneurship? Is there an attitude to success?

Entrepreneurship calls for innovation and considerably higher personal risk than that required in organised and established corporations. In our present Indian environment of protected markets and shortages, there can often be temptations to cut corners or sacrifice standards for short-term gains. If entrepreneurship is to survive and grow in the real free market sense, there would, in my view, need to be a far greater stress on achieving excellence and retaining high standards in all areas. ■

Dehra-Tijara—A Place Of Jain Pilgrimage

THE ruins of an ancient fort-palace and a magnificent dome commemorating the great yogi from Natha Sampradaya, Babri Bharthahari, set against a shimmering waterfall have always been part of the quiet splendour of Tijara, a sleepy little town tucked away in the Aravali hills of Rajasthan. But 25 years ago a stirring event suddenly brought this obscure town into the limelight. A simple, god-fearing Jain lady, Saraswati Devi, living in the nearby town of Dehra, had a dream in which it was revealed to her that a wondrous divine power lay buried in the historic ruins of Tijara. The local Jains, in the presence of throngs of devotees excavated the site indicated by the pious woman and unearthed an exquisite 500-year-old statue of the 8th Jain Tirthankara, Bhagwan Chandraprabhu. The idol, 45cm high and fashioned from white stone was in a state of perfect preservation. Bhagwan Chandraprabhu, depicted in a Padmasana, radiated infinite grace and compassion. At its base the statue bore the symbol of the moon and an inscription giving the names of the donors, their geneology and the dates.

Marvellous healing powers were ascribed to the idol which was temporarily housed in a tin shed. The news of the discovery spread far and wide and thousands of devotees flocked to the place in search of Chandraprabhu's miraculous cures and religious solace. A unique attraction of the place are the statues of Bhagwan Rishabharatha with Bharatha and Bahubali—the three are nowhere else found together.

Dehra-Tijara has since seen a radical transformation. It is now a bustling pilgrim town with a stately temple, dharamshalas dotted all over and many other facilities including free dispensaries and eye camps organised from time to time. More than Rs one crore has been spent on the development of the area. The managing committee of Dehra Tijara has launched many welfare projects.

A Panch Kalyanak Mahamahotsav has been organised from March 16 to 24. Some 200,000 pilgrims are expected to participate. During the mahamahotsav on March 22, the foundation stone of the Chandraprabhu Digambar Jain Degree College will be laid by the President Giani Zail Singh. The President of the Digambar Jain Mahasamiti, Mr Shreyans Prasad Jain, will be felicitated on the occasion. The Union Home Minister Mr P.C. Sethi and Mr Ashok Kumar Jain, President of the Federation of Indian Chambers of Commerce and Industry, are expected to attend.

—Tarachand Prem

Letter From Calcutta

Assam Fall-Out

WEST Bengal's special destiny seems to be to provide sanctuary for the homeless. The camps at Jasodanga and Dangi are still crowded with more than 10,000 people forced to flee Assam in 1980; the recent massacres there rule out any hope of early return. Instead, the West Bengal Government has again generously opened its doors to a new wave of battered victims of murder, arson and pillage.

More camps are being set up along the border and around Jalpaiguri and Alipur Duar. Though desperately short of funds, the Left Front has spared Rs 4 lakhs while Mr Jyoti Basu pleads with Mrs Gandhi for special assistance. But there is no knowing how many thousands will pour in: the 6,000 refugees — many injured, some in blood-soaked tatters — who have already arrived from Goalpara, Kamrup and Darrang districts might swell into another tide unless order is restored. Recent arrivals complain of Assamese as well as adivasi brutality.

As Hindu Bengalis, this is their natural refuge. But West Bengal is not selective. Muslims from Assam and Bangladesh (economic refugees, the latter) find it just as natural to settle down here as did the four or five million people uprooted from erstwhile East Pakistan. West Bengal has also provided a home for workers from Bihar, Orissa and Uttar Pradesh and, in earlier times, for displaced Chinese, Nepalese and Tibetan communities. Few other states can match that record of liberal humanism.

R.I.P.

TRIBUTES were paid to 16 or 17 illustrious Bengalis on February 22 when the Assembly adjourned after the Speaker's obituary references. Among those remembered was West Bengal's first Chief Minister, Mr Prafulla Ghosh, who died recently at the ripe age of 93. A man of simple habits and noble ideals, Mr Ghosh unfortunately somewhat damaged the respect in which he was held by becoming a cat's paw in machinations against the United Front in the late sixties.

Of the many stories of his unorthodox methods, the one I like best tells of how he tricked a blackmarketeer. Walking unrecognised into a sweet shop at the height of rationing, Mr Ghosh bought some sweets, casually inquiring how the shopkeeper managed to get sugar. "That's my business!" was the curt reply. "No, it is mine!" retorted the Chief Minister, summoning the police already posted outside.

No less sad is the untimely passing of Mr Asoke Kumar Sarkar under whose inspired stewardship, the *Ananda Bazar Patrika* group blossomed into a major chain of national publications reaching out to millions. It may have been apposite that Mr Sarkar — a patron of the arts, especially literature and *jatra* — should collapse and die at the Book Fair. He was in the middle of an address felicitating the distinguished Bengali novelist, Benoy Mukherjee, "Jajabar" to his many fans; apparently Mr Mukherjee would not receive his award from a lesser man.

Best Foot Forward

IT may or may not be true that Thomas Bata, founder of the massive worldwide chain, vowed that he would see that every Indian was shod [illegible] promise to redeem — [illegible] than bootmakers turn out shoes, bare feet are becoming an increasingly rare sight, at least in cities. The founder's son, Mr Thomas J. Bata, Chief Executive Officer of Bata Shoe Organisation which has been based in Toronto ever since they had to move out of Czechoslovakia, who recently spent two days in Calcutta, has much to be pleased about.

So have we, especially West Bengal, for this was where it all began, way back in 1931. The original factory shifted from Konnagar to Batanagar, whose 11,000 employees make it one of Asia's biggest workshops at least in the private sector. And the company is now spread in 95 countries. Its Indian products may not always be noted for elegance but stand out for price, durability and pleasing comfort, while Bata's prosperity signifies West Bengal's industrial stability. Little wonder that Mr Bata's first appointment in Calcutta was with the Chief Minister.

Immortal Ekushey

BANGLADESH's Language Movement Day (February 21, hence Immortal Ekushey as it is called in Dhaka) followed a predictable pattern in Calcutta. The Deputy High Commission's flag was lowered to half-mast in honour of the four Dhaka students shot down by Pakistani police in 1952, and there were memorial speeches and songs. More Bengali than the Bangladeshis, CPI students staged protests outside the mission and the Bangladesh Biman office while the CPI(M-L) burnt an effigy of General Ershad, both to express disapproval of the Martial Law regime's attempts to play down the significance of the Language Movement.

But it was not only neighbourly solidarity that inspired Calcutta. The tussle in Dhaka between Bengali nationalism and Islamic fundamentalism also provided our Socialist Unity Centre with an opportunity to protest against the Left Front's virtual abolition of instruction in English in the lower classes. While Bangladesh is again preparing to fight for Bengali (against Arabic), West Bengal is anxious to defend English (against Bengali) — a revealing [illegible] maps, of the difference between the two Bengals.

Prison Sentence

CONDITIONS in Dum Dum jail must be unspeakable since those who dare speak of them are visited with dire retribution. Two warders, Mr Asit Acharya and Mr Arun Roy, who broke the rule of silence with the result that *The Telegraph* published horrendous accounts, have been served with charge sheets, while the daily and its stable companion, *Sunday*, are charged with contempt for the revealingly grim pictures of the jail and its inmates that they carried.

Clearly, the Government was stung to the quick by press publicity and by the strictures of Mr Justice P.C. Barooah whose unprecedented visit to the jail seems only to have confirmed his worst fears. Mr Acharya and Mr Roy have, therefore, been accused of supplying "distorted and exaggerated information" to "embarrass and humiliate" the administration and to damage its "prestige".

This is a curiously callous allegation. It does not suggest that the pitiable plight of prisoners is of any account. Nor does the disciplinary move indicate any desire to improve conditions. But what is most tragic is that the authorities do not seem to realise that their "prestige" would have been most secure if they had encouraged constructive steps to ensure that prisoners are treated like human beings, especially lunatics and juveniles who are locked up for no fault of their own. Instead, we are treated to what looks suspiciously like a hushing-up operation.

Flying Dragon

SO few international airlines nowadays use Calcutta airport that we must be grateful for the inauguration of Druk-Air, Bhutan's brand new national carrier, which now flies twice a week from here to Paro. Druk-Air has bought an 18-seater West German Dornier 228 which is the only one of its kind in this part of the world; but there are hopes that Vayudoot will choose the same aircraft and eventually make it at HAL's Kanpur factory. There are also hopes that Bhutan will buy a second Dornier and increase the number of flights so that the airline's orange and yellow colours and springing silver dragon become a familiar sight at Dum Dum.

Not that I foresee a mad rush of summer holiday makers paying Rs 900 for the single journey and then hiring a limousine at Paro for the hour's drive to Thimphu: Bhutan is just not geared as yet to compete with Darjeeling, Kurseong or Kalimpong as a middle class summer resort. But there is a thriving, though strictly regulated, traffic in foreign tourists which will benefit from being able literally to fly over the tortuous complexities and bureaucratic obstructiveness of India's Inner Line permit regulations.

But one snag will remain. Contrary to Bhutanese expectations, tourists will have to undergo Customs and Immigration checks at Dum Dum. New Delhi is quite firm about that, insisting that otherwise, foreigners might be able to send or bring anything they choose across the open border with the dragon kingdom. A second problem is the delay in Dhaka giving permission for Druk-Air to overfly its territory. The difficulty arose, apparently, only because India — not Bhutan — applied to Bangladesh for the Bhutanese airline.

Out Of Focus

THOUGH Attenborough's *Gandhi* is being screened in many cities, there seems not a whisper as yet, of it coming to Calcutta. One explanation advanced is that none of the personalities that loom so large in the Bengali psyche, feature in the film. A cinematic record of the times that leaves out Rabindranath Tagore, Deshabandhu Chittaranjan Das and, above all, Netaji Subhas Chandra Bose seems out of focus, if not downright offensive.

Vintage Voyager

LIKE Bombay and Delhi, upper class Calcutta too thrives on visiting celebrities. And so Mrs Draupadi Naipaul, with two eminent sons, Vidya and Shiva, to her credit, was assured of an effusive reception when she arrived here with 136 other people from Trinidad and Tobago, whose parents were shipped out from the port of Calcutta on board the Fatel Razak on February 23, 1845. If the visit had not been so short, society hostesses with literary pretensions would have fallen over each other to lay on salons and soirees (or what passes as such) for the descendants of indentured labourers whose original passage was surely coldly ignored.

West Bengal never did provide this class of immigrants: the people we have sent abroad are doctors, teachers, scientists and professional men. But East Bengal's lascars were among the earliest sub-continental settlers in Britain, and the former Mauritian Prime Minister, Sir Seewoosagur Ramgoolam, still acknowledges his Bhojpuri antecedents in Bihar. South of here, Orissa — Kalinga in its golden heyday — boasted an even more adventurous overseas record.

The "Journey to the Roots", as Mrs Naipaul's tour was named, was an essay in nostalgia, also recalling the voyages of Fiji Indians who refer to themselves as "Jahaji" and talk of their employment as "Girmit" (guranteed). It also recalled happier times when Calcutta was eastern India's only outlet, a major international port with shipping services to every corner of the world. Strikes and silting have put an end to all that; what little traffic remained has suffered terribly from the riots in Assam whose consignments of jute and tea have dwindled almost to nothing. ■

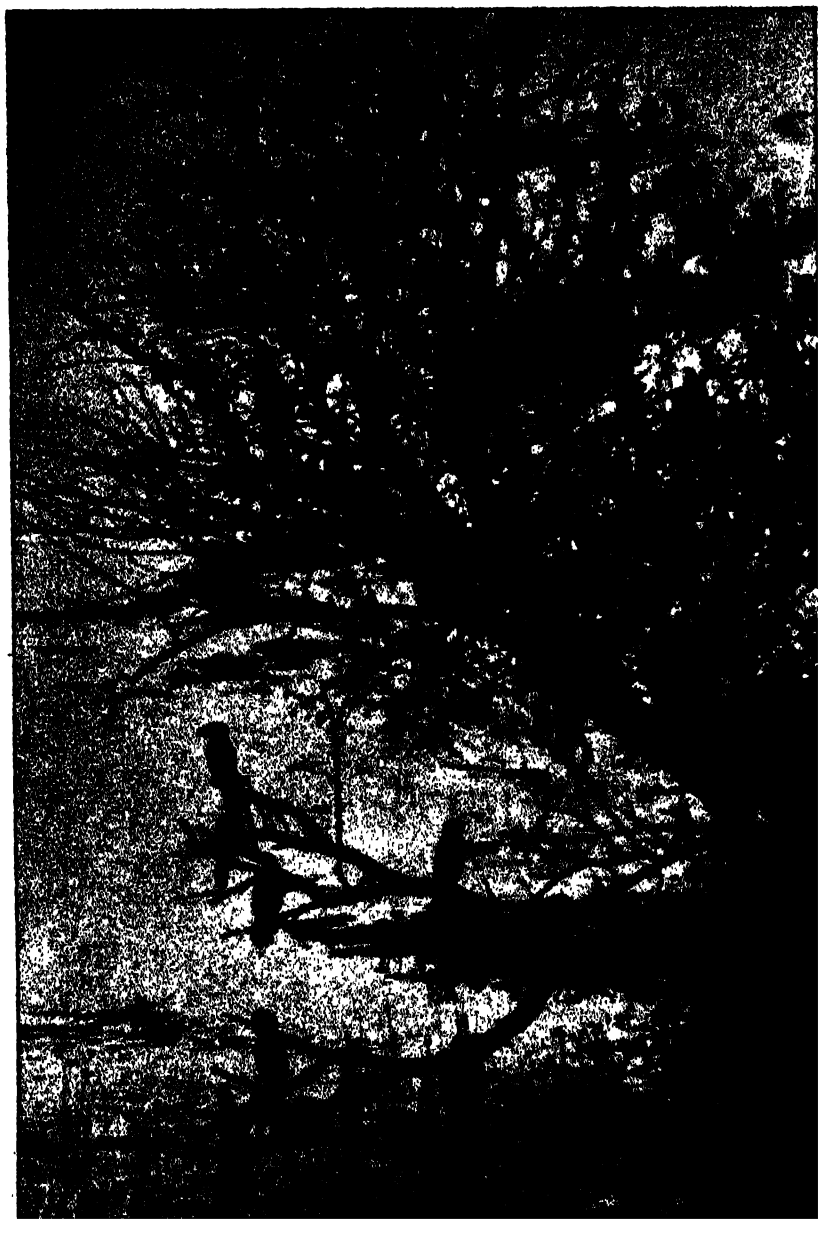
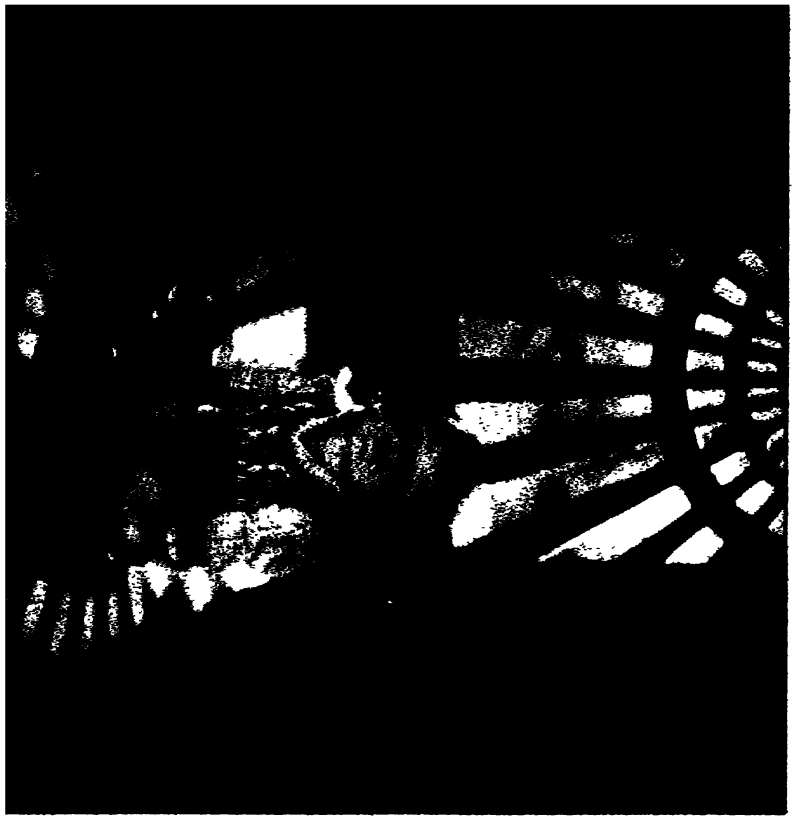
The Third Eye

The Ordinary Made Beautiful

Photographs and Text by Surendra Sharma

I WAS born an artist. As a young child I was an avid painter and was always busy with my paints and brushes. I took up photography as a challenge when a picture I took of my friends at a picnic was a miserable flop. That was eight years ago. Today I am totally involved with my camera and the wonderful things it can do. Although I am in the hotel business, I always have my camera with me. My aim is to present the ordinary—village life, children, birds—in a beautiful, pictorial way. I also have a soft corner for action pictures. I have advised and shared my knowledge of photography with many youngsters, but what I really want to do is to start photography classes in regional languages. I have had my photographs exhibited at the Jehangir Art Gallery in Bombay and published in *Dharmayug*. Ultimately, I only want to make people happy through my pictures. ■





World

Extradition Of Klaus Barbie

France To Relive Guilt And Glory Of Last War

Auschwitz, Dachau, Riga are but a few of the many concentration camps in which Jews were systematically exterminated Among the chief perpetrators of this dastardly crime were Himmler, Heidrich, Eichmann, Bormann and Klaus Altmann alias Klaus Barbie Before he left Bolivia for France, Barbie, now 69, told reporters "I am in death's waiting room" Barbie's past sins have finally caught up with him, and, he now faces a trial "Though the mills of God grind slowly, they grind exceeding small."

by Latika Padgaonkar

NEARLY forty years after the end of the Second World War memories of its horrors hardships and triumphs have been carefully preserved by the French The films the innumerable books written year after year the ritual of wreath laying at the tomb of the unknown soldier the privileges granted everywhere to the war wounded and now new prints of old journals and newspapers of the war months entrench the feeling deeply in daily life

Recently there was occasion for this 1983 is the 50th anniversary of Hitler's coming to power The press and TV have lost no time in digging up buried phantoms so that today's France may always know and never forget what happened to her sovereignty less than half a century ago

With the arrest of Klaus Barbie those semi healed war wounds have opened up again for some not so much with hatred and vengeance as with a feverish desire to see justice done

Klaus Barbie alias Klaus Altmann, alias the Butcher of Lyons has long been sought by the French He has also been sought by Germany, and by that indefatigable Nazi hunter Simon Wiesenthal in Vienna who has made it his life's mission since 1946 to track down Nazi war criminals wherever they may be

Barbie was expelled from Bolivia on February 4 after a stay of over 30 years in that country Handed over to the French authorities and brought to France under police escort and in complete secrecy Barbie spent his first night on French soil in the Montluc prison in Lyons where 40 years earlier he had interned thousands of French partisans and Jews It is here that the presiding judge notified him of his arrest for 'crimes against humanity'

Wrangles Galore

After years of diplomatic and judicial wrangles after innumerable demands for extradition the French have at last succeeded in bringing back a killer of heroes and children They have done it with dogged determination and exemplary serenity But one and all have hastened to add that there is no feeling of vengeance behind the move only the conviction that justice must follow its course (The death sentence was abolished in France 18 months ago so it remains more or less certain that Barbie will be condemned to life imprisonment although a few voices have been raised demanding an exceptional restitution of that extreme penalty)

It has been impressed upon the common man everywhere that not so long ago liberty was in danger and that danger—in other guises and under other dictatorships has not been averted even today Speaking of the Nazi's arrest the Prime Minister Pierre Mauroy said that the government remains faithful to the memories of the hours of struggle and mourning through which France saved her honour"

Who is Klaus Barbie? A Nazi forged out of the same metal as Eichmann, if not on the same scale A son of German school teachers he was born in 1913, and joined the Hitler youth at the age of 20 His climb upwards was rapid Posted in Amsterdam his duties included the supervision of the Jews to be deported In 1942 he was transferred to Lyons France with the rank of Obersturmfuhrer

By this year the greater part of France was under German occupation and the Vichy government, struggling to define itself was also dominated by the Germans De Gaulle had already launched his call for a Free France (later called Fighting France) claiming that Petain's government had not been popularly elected and therefore could not represent French sovereignty The Resistance Movement had begun too first with a few individuals or small groups but gradually growing in numbers Lyons was a stronghold of the French Resistance sheltering many people wanted by the Nazis

Klaus Barbie as the head of the Gestapo in Lyons worked with dedication and energy towards crushing the Resistance On one of the walls of the Montluc prison (then the seat of the Gestapo), a plaque recalls that 10,000 people were interned here and that 7,000 of them succumbed Barbie, commanding some 40 German policemen, had a hand in this deed Hundreds were deported and gassed Yet like so many Nazis, he was considered "a good friend, a lover of life by his colleagues The personal file of the Gestapo says that his "behaviour (was) good rigid, conception of life and capacity of judgement solid and clear, particular characteristics zealous, thorough collaborator particular weaknesses none In the last months of his stay in the French city in August 1944 he sent a final convoy of 41 Jewish children between the ages of three and 13 to Auschwitz

His greatest triumph was the liquidation of Jean Moulin, de Gaulle's representative, who had created the National Council of the Resistance Betrayed, Jean Moulin fell into German hands Horribly mutilated and tortured by Barbie himself Jean Moulin died without revealing anything In an interview with the German magazine *Stern* in 1980, Barbie declared "This man was my enemy during the war, but I had esteem for him" He said he had even laid a bouquet of flowers on Moulin's tomb

After the war, Barbie hung around in Germany with impunity, benefitting from American protection An ex member of the American Special Service, speaking recently on NBC, asserted that Barbie received payment from the Americans in exchange for information They refused to reveal his identity or whereabouts to the post war French Ambassador in Germany In 1951 Barbie like so many of his fellow criminals escaped to South America under the name of Klaus Altmann

His fascist activities continued in Bolivia where he settled From 1951 to 1971 he was the head of a construction company but he associated himself closely with the country's military He frequented the Army Headquarters was a pal of former Nazis and the extreme rightists, setting up and training commandos, and working with General Luis Garcia Meza to overthrow the interim civil government of Mrs Lidia Gueler in 1980 With the fall of Meza's regime in 1981 a left wing government headed by Hernan Suazo came into power and it is this government that took the responsibility of expelling Barbie for having entered the country with false identity papers

The killer has thus returned to the scene of the crime, but his trial will be long slow and complex Judging by the remarks made to different journals and newspapers Barbie may show no regret 'I do not recognize war crimes' he once said during war there is neither good nor bad neither liberty nor humanity

The case of Klaus Barbie holds a very special interest for France for there is more to it than a disclosure, enumeration or—ultimately—even proof of his crimes Implicated in the Barbie affair is the attitude of the French during the Occupation years Who and how many resisted the Germans? Who and how many collaborated with them? French history, as it was understood and taught for some twenty years after the war ended, had it that France rose as a nation to oust the enemy But latterly, this interpretation has been doubted and questioned

With three-fifths of France held by the Germans, there were as many who plotted and schemed with the invaders and betrayed (overtly or in silence) their compatriots as those who opposed them It is this hidden page of sordid history that will be dragged out into the open

Barbie, with his fate sealed, stands to lose little by giving away the names of those traitors yet unknown, or by dulling the edge of complacency of those who remained mute and who now wish to forget

Nevertheless, the French want this trial, want it to be even a historic and instructive trial, so that the younger generation may learn how utterly humiliating it is for a country to be invaded

France feels confident that it has evolved politically and emotionally to face the tribulations of those painful years and accept its share of both guilt and glory ■

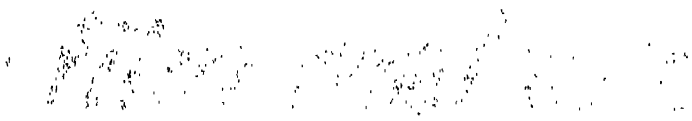
...the Far Pavilions Cinema

Film makers all over the world are looking towards India with renewed interest. Although international films have been shot here before—Jean Renoir's *The River* comes easily to mind—there seems to be a gold rush on now. First there was Richard Attenborough's *Gandhi*, followed by the Bond film *Octopussy* and Ivory-Merchant's *Heat and Dust*. There was also the *Raj Quartet* and *Staying On*. Other projects in the offing are Steven Spielberg's sequel to *Raiders of the Lost Ark*, a Franco American production called *Man's Fate, Kim*—based on the book by Rudyard Kipling, and David Lean's *A Passage to India*. The floodgates have been opened.



Photographs by Sudhir Kasliwal
Text by Dinesh Sharma

A QUIET little part of the fabled pink city of Jaipur transformed itself overnight to provide the backdrop for *The Far Pavilions*, based on the book by M.M. Kaye. Show-biz suddenly seemed to be everybody's business: top Hollywood stars and the Indian army; eager local artisans and college girls; a real-life maharaja, dolled-up traditional housewives and bored Rajput youths—and palaces full of poses. For the dream merchants it was like a dream come true: princely India and the British Raj recreated, with locations modified to look like the Khyber Pass, the Residency of Kabul, the plains of north India and the cantonment of the British garrison. The schedule: five months. The budget: 12 million dollars.

"There is no where we could have filmed *The Far Pavilions* in the world," says Ben Cross, who plays the character of Ash, an English soldier, "except where we are now. Seeing living history all around as a backdrop makes it a vastly different experience than working any where else in the world." Ben, who made his first screen appearance as an extra in *A Bridge Too Far*, shot to international fame as Harold Abrahams in the Oscar-winning *Chariots of Fire*. The other stars who have been brought together for this film are Omar Sharif, Christopher (Dracu-

THE RETURN OF THE RAJ. Left: Christopher Lee; Far Left: writer Molly Kaye, producer Geoffrey Reeve and actress Sneha Gupta; Below Far Left: Rossano Brazzi; Below Centre: a scene from the film; Below: Amy Irving.

WHO IS THE IMPOSTER? Col Bhawani Singh, the former maharajah of Jaipur (centre), looks uncomfortable in the company of tinsel maharajahs Lee (right) and Brazzi (left)

A ROYAL TIP. The former maharani of Jaipur and Christopher Lee listen to director Peter Duffel with rapt attention.

la) Lee, Sir John Gielgud, Rossano Brazzi, Robert Hardy, Rupert Everett, Benedict Taylor and Amy Irving. Notable among the Indian members of the cast are Saeed Jaffrey, Ajay Sahni, Jennifer Kendal, Iftekar and a top British model of Indian origin, Sneha Gupta.

Haunting Love Story

The Far Pavilions, published in 1978, is a passionate and haunting love story set against the spectacular and epic sweep of battle, treachery and intrigue of late 19th century princely India. Molly Kaye took 15 years to write this novel, and to date it has sold some 15 million copies. Born in Simla, the celebrated writer has poured her impressions of India into this love story which takes place during the battle of the Kabul Residency. Her husband, Major-General Geoff Hamilton, CB, CBE, DSO, was an officer of the Corps of Guides, the regiment that fell in this battle. To see her best-selling novel take the shape of a film meant for the international market, M.M. Kaye flew down to Jaipur.

The Far Pavilions is being made with the backing of Goldcrest Films and Television, the promoters of *Gandhi*. It is the first time a British-produced mini-series has been pre-sold to cable television in America. The full length feature is being filmed simultaneously with the television series. The TV serial will be in three parts of two hours each, while the feature film will be three hours long. Its producer Geoffrey Reeve is also a famous director (Alistair Maclean's *Puppet on a Chain* and *Caravan to Vaccares*). Out of business for a couple of years, Geoff Reeve is on the come back trail with this film. That he is aiming for a box-office smash is evident from the technical team he has put together. John Peverall, the winner of the Academy Award for Producer of the Best Picture of 1978, *The Deerhunter*, is the executive producer. Robert Laing, the art director of *Gandhi*, is production designer. Raymond Hughes, the chief costume designer for BBC television for the last 16 years, resigned from his job to accept the challenge of recreating the magnificent costumes of 19th century India. And the director of photography is none other than Jack Cardiff, who won an Academy Award for *Black Narcissus*.

Rare Fusion

On the sets of the film there is a rare fusion of real and tinsel glory. Lt Col Sawai Bhawani Singh, the ex-ruler of Jaipur, is a familiar figure on location, giving orders on a walkie-talkie, sharing a joke with Christopher Lee or Rossano Brazzi, who look a little self-conscious in flowing *angarkhas* and glittering jewels. The Rajmahal Hotel, once Bhawani Singh's palace, has been booked entirely by the film company and is being used as the unit's headquarters.

The maharani of Jaipur, Padmini Devi, can also be seen on the sets, giving expert advice on traditional jewellery or, at times, arranging for as many as five dozen ladies to participate in the day's shooting, dressed in their best jewels and *odhnis*, and not charging a single penny for it. As many as a thousand extras have been required for major scenes. Local college girls have performed the traditional jhoomar dance, the 61st cavalry of the Indian army has loaned its men and horses to comprise the elite Corps of Guides; and hundreds of young Rajputs have found themselves posing as courtiers and sepoys. Many of them are connected to the erstwhile feudal chieftains of the Jaipur *riyasat*.

When the camera was switched on on January 10, it meant the culmination of more than two years of preparations. "It was a remarkable coincidence," says Geoff Reeve, "that at Jaipur, near Samod, I found three hillocks with little forts built on top, exactly the way the kingdom of Bithor has been described in the book."

Additional advantages were easy to discern when M.M. Kaye's friendly rapport with the ex-ruling family of Jaipur was discovered. And then Jaipur had such magnificent palaces and forts waiting to be brought back to life.

However, the film company is not taking any chances. Two massive generators are towed along from location to location. An English catering company has flown a "flying cube", which houses the unit's continental kitchen and is transported in a truck. A water chilling and filtering plant is also always at hand. All equipment and personnel have been insured. Walkie-talkie sets operating on a specially alloted frequency and a hot line between locations around a 50 km radius have been provided. The headquarters at Rajmahal, with the help of 65 guards, ensures that the sets remain undisturbed.

Obviously used to a much faster pace of life, the major stars have been bored stiff in a small town like Jaipur. "I am about to form a lonely hearts club in Jaipur," laments the hero, Ben Cross. Ah, those lovely sultry eyes of the beautiful Indian girls. At the risk of being stoned to death I just admire them from a distance. Every evening the question that invariably crops up is where to meet for a drink and where to go for dinner. However, the exercise eventually ends up in the hotel room. "There are some exceptions too. "I am just going wild about this place," declares Sneha Gupta, who has "come home" for the first time.

"India has never before been shown in colour in any English movie as it will be in *The Far Pavilions*," says Ajay Sahni, who announces his intention to settle down here in Jaipur. According to him, all major stars have been reporting for work as early as 5 am. "It's a very dramatic movie," says Sahni. "In one of the scenes, the hero, Ash, who is a split personality torn between the vastly different cultures of India and England, asks a senior military official how he would feel if Britain was ruled by Indians the same way the English ruled here, and if Englishmen were subjected to all that the Indians have been subjected to.

Dramatic Rescue

Ash was brought up as an Indian by a widow called Sita. As the story goes, he was discovered by the British authorities at the age of 11 and sent back to England. He comes back to India as a young British officer and through a series of coincidences is assigned the job of escorting the wedding procession of his childhood love, Princess Anjuli (Amy Irving), and her half-sister, Princess Sushila (Sneha Gupta). The princesses are married to the aging Rana of the Rajasthani kingdom of Bithor. Soon after, the Rana dies, and according to tradition, his wives have to commit *sati*. Ash dramatically rescues his sweetheart from the funeral pyre and shoots her sister before she offers herself to the flames.

The unit is going to be in Jaipur till mid-April. ■

Will The Bombay Mills Reopen?

by B. Shanker

BOMBAY'S textile strike of nearly 2.5 lakh workers in 63 mills has crossed 400 days. And there are no signs of its being withdrawn by Dr Datta Samant, the leader of the Maharashtra Girni Kamgar Union, which is spearheading the agitation. Neither are the millowners in any mood to talk to the militant trade unionist whom they don't recognise as the spokesman for the workers.

Dr Samant claims that the agitation is as intense as ever and the workers will not go back to their jobs till their demands are met. The managements, on the other hand, claim that the workers have been coming back to them and asking for their old jobs but not all are being taken. The attendance in mills has reached 76,000, they claim. The mills are said to be returning to normalcy.

But are the city's textile mills in any condition to run at all? Did the strike merely precipitate the decline of an industry which has been in terrible health for a long time? If every striking worker returns to his post tomorrow, how many of the 63 mills will be able to run beyond the first year? Let us briefly examine the history of the industry first. Since Independence the Government has been investing heavily in the growth of infrastructure as well as industries like petrochemicals and engineering but to the neglect of consumer goods industries, especially textiles.

The Government even curbed the growth of the mills and encouraged the handloom and decentralised powerloom sector to boost labour-saving technology.

On their part, the managements of most of the mills neglected the latest technological or management developments. Modernisation, was not considered very profitable and mill managements squeezed out the last drop from their primitive machinery installed many decades ago. Out of the total of 2.10 lakh looms installed in India's 278 weaving mills, only 50,000 are automatic and, in this respect, India is many times more backward than Brazil, Mexico, Taiwan and even Thailand and Indonesia.

In a recent report the Indian Cotton Mills Federation said that as many as 82 per cent of all looms and 63 per cent of spindles are over 15 years old and obsolete. In every department—weaving, blowroom and processing—Indian mills, by and large, lag behind technologically.

According the World Bank's survey of the textile machinery industry (1975): "By Western European standards of mill-housekeeping, the machinery is operated in conditions of almost unimaginable squalor. The machinery itself is in a bad state of repair and this, together with the appalling operating conditions, gives an abysmally low technical performance in terms of both quantity and quality of product." It called the majority of mills as "industrial slums".

Fuelling the crisis was the rapid growth of the unorganised powerloom and handloom sector. Given their low labour and overhead costs, it was able to flood the market with cloth much cheaper than that made in mills. Also, with longer-lasting polyester fabrics in vogue, people did not buy cloth as often as earlier.

But for a couple of boom years in the late seventies, the writing was plainly on the wall for all to see. The industry was heading towards a crisis—the worst ever in its 130-year history.

The crisis was *not* triggered by Datta Samant's strike which, if anything, has merely hastened the death of the city's sick mills.

POLICE ESCORT "LOYAL" WORKERS. Even if the strike is called off, many of the 63 mills may not be able to run beyond the first year, says the author.

Bombay's mills can be roughly divided into three categories:

First the small number of mills which are financially sound because they concentrate on quality, better working conditions and lower accident rates. In terms of management techniques and equipment, all of them are progressive companies. (Standard, Mafatlal, Bombay Dyeing, Khatau, Morarjee and Century are some of them.) They have all invested in newer machinery. All these mills are said to be working three shifts at the moment.

In the second category are the semi-modernised mills with less standardisation. They have invested in new equipment but their financial condition is not very strong. Examples: Gold Mohur, Hindustan A, Hindustan Process House, Shreeniwas and Podar. All of them are said to be working two shifts per day.

The last and by far the biggest group consists of the most backward mills in the industry—Sitaram, Bradbury, Madhusudan, for example—where the same old obsolete equipment is flogged with increasing workloads with no allowance for breakdown or closure. The managements of these mills are no longer very interested in their concerns. Some of them even applied for closure to the State Government but were turned down.

The industry as a whole is already facing a severe financial crisis. But even large doses of capital by banks and financial institutions may not be able to save some of the mills. (A massive injection of Rs 300 crores is needed to get the mills moving again and even then not many will last more than the first two years.)

Banks, flooded with savings due to higher interest rates, are ready to step in and bail out some of the mills. In fact, they are keen to invest in the first group of companies but are awaiting some sort of directive from the Centre.

Three units of Kohinoor (workforce 11,000), Sitaram Mills (3,194), Mukesh Mills (1,100) and Madhusudan Mills (3,902) will not open at all due to non-availability of finance. These mills have negative worth and their capital and reserves have been nearly wiped out. (In fact Mukesh, which had applied for closure, was gutted in a fire and is finished).

Mills like Finlay, Goldmohur, Phoenix, Tata and even Podar may find it difficult to keep up normal operations without substantial aid from the banks in the shape of term loans and production finance.

Nationalisation has been mentioned as one of the solutions to save the industry from the doldrums. Earlier, newspaper reports suggested that Mrs Gandhi was assessing the economic, political and legal implications of nationalisation of Bombay's mills.

Some of her colleagues like A.P. Sharma and Shivraj Patil are said to be against the move while Pranab Mukherjee reportedly favour's it. But is nationalisation the answer? Consider the record of the National Textile Corporation. It was formed in 1974 to take over and run sick mills and, over the years, it has taken 112 mills all the country under its wing. The Government sanctioned Rs 40 crores for modernisation of 100 sick mills under NTC in 1974-75 but this amounted to a niggardly Rs 35 lakhs per mill. NTC has been making staggering losses year after year and none of its mills seem to be in any position to better its own performance in the years to come.

Taking over sick mills doesn't necessarily make them healthy. Large doses of capital will not help because many are inherently non-viable. Furthermore, nationalisation is too easy a way out and the burden will fall only on the taxpayer—the owners will get away scotfree despite poor management. The investment climate will also suffer if the uncertainty of nationalisation hangs over the industry.

Samant has claimed that the workers are ready to take over the mills and run them but no millowner who has so far refused to even recognise or acknowledge Samant will agree to that.

What then is the solution? First of all the Government should let the sick mills to die. Allowing them to even exist however precariously, will be a drag on the industry as a whole and, particularly, the healthy units. The other mills should be given liberal soft-term loans and other facilities like exemptions from duties and other levies. Harishchandra Maganlal, Chairman of the Millowners' Association had suggested in its last Annual General Meeting in June 1982, that powerloom factories should also be given tax holidays.

On their part, mill managements should invest in new machinery and techniques. They should face the reality. The old ways are gone for ever. The industry will not be the same again. It will take at least two years for the better-placed mills to recover (only 10 mills showed profits in 1981-82) and at least five years for the other mills. Industrial magnates in other parts of the country can learn a lesson or two from this strike. ■

That's Business

From Our Special Correspondents

IF DR S.P. VOHRA, Managing Director, Bakelite Hylam, could have his way, many cars in India, if not all of them, would have bodies made of plastic—fibreglass reinforced plastic (FRP), to be precise. The basis of the dream is, of course, business, as Bakelite Hylam is a leader in engineering plastics and is already making this material. But Dr Vohra, a US-trained technologist, seeks to legitimise his commercial motive with the energy argument. "A car body made of plastic would weigh only 30 per cent of that made of steel, and a lighter vehicle would consume less energy."

However, car manufacturers have been slow to bite. Dr Vohra puts it down to sheer laziness in making the new moulds which would be required. The only meaningful discussion he has had so far has been with Ashok Leyland. Mahindra and Mahindra have been making some plastic-based innovations in their jeeps, but the material is being supplied by one of their own companies, Roplas.

Bakelite Hylam is setting up another unit near Hyderabad for the manufacture of phenolic foam and urea formaldehyde foam. A reasonable profit-maker, Bakelite Hylam has stirred the devouring designs of Duncan Brothers, who have already cornered over 12 per cent of the company's shares. But even if the Duncans persist, it is going to be no cakewalk, considering 40 per cent of the equity is held by British Petroleum.

Much Ado About Nothing

Serpentine queues outside Parliament, jampacked visitors' galleries, armed guards standing sentinel over sealed bags of budget papers whose secrecy is as inviolate as maidenly innocence, and a pervasively suspenseful atmosphere. This is a typical scene on Budget Day, and it was enacted in full measure on February 28. And yet I wonder, and my wonderment is shared by many economy watchers, whether the budget merits as much fuss as is made over it. Insofar as it shows how deeply the Government intends to dig into people's pockets, the budget evokes tremendous public interest. But is it an important economic factor? What if the infrastructure remains bogged in the mire of inefficiency, if labour and capital remain at daggers drawn, if economic initiative continues to be squelched by red-tape? What if—God forbid—the rains fail? It is not fiscal policy alone but answers to these questions as well which would collectively determine the shape of the economy.

It is the secretiveness that explains the exaggerated importance. Apart from the question of parliamentary privilege, the need for secrecy arises because the dominance of the Executive spills over into the Legislature and, therefore, what the Government proposes gets enacted unless the powers that be, of their own volition, effect some changes during the passage of the Finance Bill. If the budget proposals were made public beforehand, the legitimate assumption that these would eventually pass into law could lead to frenetic pre-budget speculative activity. In the American system, near-complete separation of the Executive and the Legislature enables the budgetary proposals to be indicated beforehand in the President's state of the Union message. It is understood all round that the proposals are not law in their draft form and would be chopped and changed in the legislature, irrespective of their political configuration.

Two Firsts

Walchandnagar Industries have manufactured a robot, making them a trailblazer of sorts. Although the computer-controlled monstrosity is of limited utility in the Indian context, there is scope for improving its resemblance to human physiognomy.

However, the company has secured another first which makes more sense. Walchandnagar Industries has literally vasectomised its way to the FICCI's award for promotion of family planning among its own employees and the rural people in surrounding areas. It had 1,023 sterilisations to its credit in 1981-82, the total number of operations since 1971-72 being 6,286. Corporate initiative in this field has so much potential that the Government ought to introduce a scheme envisaging tax concessions against demonstrated results, assuming, of course, that tax-weary managements are not allowed to chase their employees with scissors.

But while pursuing the red triangle, the company itself seems to be in danger of slipping into the red, its gross profits having declined to Rs 2.4 crore in the year ended September 1982 from Rs 3.6 crore in the preceding year. Nonetheless, the dividend has been maintained at 16 per cent, not to speak of the sanction of an additional 2 per cent as Seth Walchand Hirachand centenary bonus. Plainly, Walchand Industries give much lower priority to ploughing back profits than it deserves.

Fortunate 'Loophole'

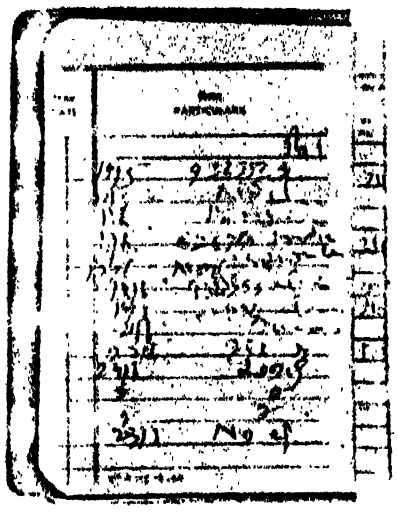
Big companies pay exorbitant fees to tax consultants because they help them to avoid tax. The effectiveness of such expertise sometimes boggles the imagination. At a recent meeting of the Consultative Committee of the Finance Ministry, a prominent member, Mr R.R. Morarka, gave the names of some companies which claim to have no corporation tax liabilities. The list makes interesting reading: Delhi Cloth and General Mills, Tata Engineering and Locomotives Company, Calico, Kothari (Madras), Voltas, JK Synthetics, Sylvania Laxman, Hindustan Motors, Kamani Engineering Corporation. All these companies are known to have profits ranging between Rs 2 crore and Rs 10 crore per annum!

Stung by the criticism that companies are having a ball, the FICCI has issued a rejoinder in the form of a "study". If some companies have not made a provision for corporation tax, says the FICCI, it is because they are availing of tax incentives, especially investment allowance. Such a blow for investment ought to be "commended rather than condemned". It is a pity that the Union Finance Minister has sought to plug the "loophole"—though not wholly or immediately—regardless.

Improve Handwriting First

Bank managers have been advised not to hobnob with businessmen. Should not the same rule apply to the army of directors and joint secretaries in the economic ministries? Everybody knows that no businessman can function without keeping these fellows perpetually ingratiated.

The directive also speaks about the need to improve customer services in banks. That these have deteriorated has by now become a cliche. The accompanying picture shows a page from the pass-book of an account in the Punjab National Bank. If any PNB officer can decipher even a single word, he may share his revelation with the editor of this periodical.



FACSIMILE OF AN ILLEGIBLE PAGE OF A PASS-BOOK.

How Cheap Is Tea?

Some days ago, tea prices in the Calcutta auction advanced by Rs 2 a kg following advice from Iran, West Asia and the Soviet Union. But such short-lived bullishness should not be allowed to obscure the fact that unit value realisation of tea has been falling and that India, as the world's largest exporter, is the main sufferer.

Efforts to reach an international tea agreement, which envisages world supply management on the basis of countrywise export quotas, have again failed at Geneva. The yardstick to determine an export quota is supposed to be annual yield, arrived at by dividing production by planted area. New entrants to the tea scene contend that they have a larger proportion of immature plantations and so a mechanical division would put them at a disadvantage. The UNCTAD has, therefore, evolved a formula for "time-lagging" the planted area in accordance with an exporting country's mix of immature and mature plantations. It proposes the following time-lags: four years for Bangladesh, Sri Lanka, India and Mozambique; five years for Indonesia, Malawi and Argentina; six years for Tanzania, China and Kenya.

Kenya's refractoriness is proving a major obstacle in the way of an agreement. Interestingly, a number of tea plantations in that country remain in British hands. Is John Bull indulging in backstage manoeuvres to ensure that his cup of tea remains cheap?

Making Life Easier

Useful Products & Processes

Compiled by Vithal C. Nadkarni

Blind Berthas

SCIENTISTS of the Madras Centre of Central Marine Fisheries Research Institute (CMFRI) have recently stumbled upon a remarkable discovery in the field of lobster culture, when blinded, the Indian species *Panulirus homarus* grows fat faster. It also undergoes moulting (periodic shedding of shells) with greater frequency. These lobsters when experimented upon gained 60 to 70 gm of weight in one month compared to the weight gain of 10 to 12 gm by the "untreated" little creatures during the same period. In one typical experiment, the growth rate was simply spectacular—ten lobsters of the same size and weight (84.5 gm) when "treated" grew to an average weight of 432 gm in 165 days while the normal growth over the same time span under identical conditions was just 57 gm! Another unique feature was that the blinded eyes sprouted a pair of hairline antennae which are tactile in function!

The celebrated eye-stalk ablation technique, evolved as early as in 1940 but given up after unsuccessful attempts by the Australian and American researchers and employed by Indian scientists, proved effective and yielded positive results only with one out of the 10 varieties of lobsters available in the country. Thus, the method is not universally applicable.

Essentially, the technique involves ablation (removal) of the eye-stalk (ductless gland just behind the eye) which secretes moulting-inhibiting-harmones, retarding the growth of these crustaceans. Interestingly, all vertebrate animals have pituitary glands secretions of which promote growth. Non-vertebrates like crabs, prawns and lobsters do not have these glands.

Ablation of the eye-stalk, aver the scientists, means its cauterisation electrically with little pain, like an injection, and is certainly not cruel. But as the eye is mounted on the eye-stalk like a bud, the "injection" in effect blinds the hapless creature running helter-skelter, its food foraying ability severely hampered.

Little wonder then that there is a lot of criticism and controversy over the ethics of such experiments. Says Dr E.G. Silas, Director of CMFRI: "The baseless charges of unmitigated cruelty by animal lovers are to be deplored as we scientists are also humane enough not to subject the poor experimental animals to avoidable and unnecessary torture As it is, only one eye-stalk is removed enabling the lobster to move about freely. There is no palpable change in the behavioural patterns or mortality of lobsters."

Some scientists do feel that a simpler and less painful method can be developed using a chemical compound, for instance, instead of "gouging out the eye". "In any case," says S.N. Rajah, Executive Secretary, the Society for the Prevention of Cruelty to Animals (SPCA), "the Prevention of Cruelty to Animals Act, 1960 does not make experimentation, including operations, on animals in laboratories for research purposes, an offence. In fact, a committee for the control and supervision of experiments on animals constituted after the enactment of this legislation in 1964 was abolished in 1977 by the Janata Government. It is imperative to revive the defunct set-up."

Admittedly, the phenomenal growth in lobsters after the ablation of the eye-stalk opens up possibilities not only of augmenting exports (about 75,000 tonnes of lobsters were exported last year) but it can also pave the way for developing genetically fast growing strains, thereby making the lobster amenable to culture. With the lobster meat currently selling at Rs 70 a kg, the prospects of commercialisation are obviously bright.

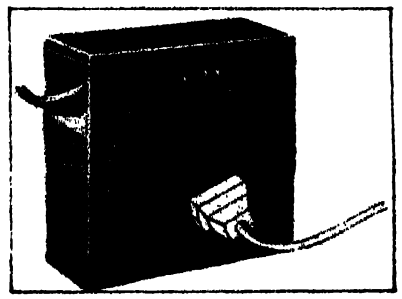
Xtena—Handy For Homes

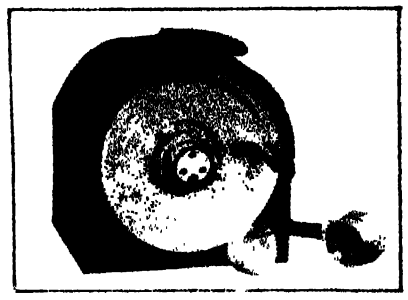
"XTENA", the handy extension cord box for home use is developed by M/s Automation, Bombay (Test Equipments (Elec) Pvt Ltd, 310, 'Neelam', Dr R.G. Thadhani Marg, Worli, Bombay-400 018).

Xtena serves as a portable socket. It can be used in temporary connections and saves the cost of cumbersome wiring and unnecessary sockets on the walls.

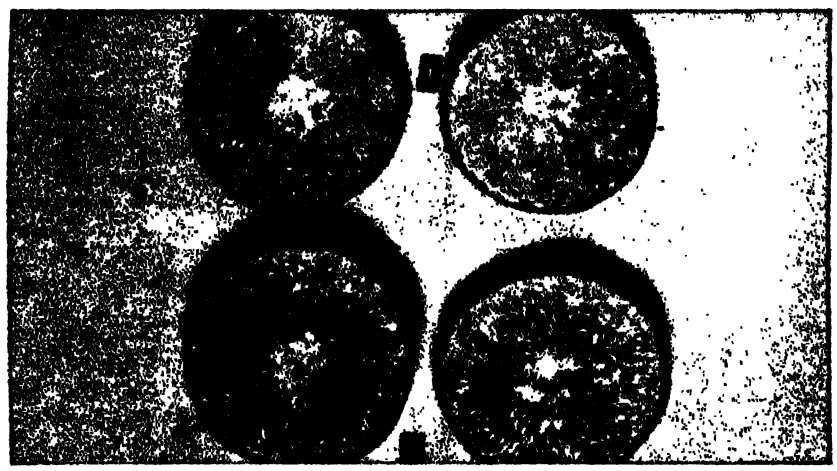
The 5-metre-long cable rolls into a rugged container (12 x 12 x 5cm). Xtena is extremely simple to operate and it has a provision for both 3 pin and 2 pin plugs.

It is especially useful with TV/Videos on trolleys, hair driers, tape recorders, pedestal fans, electric shavers, calculators, transistors, mixers, irons, toasters, table lamps, etc. A heavy duty model for industrial use in small factories and workshops (for portable tools such as drills) is also available.





Seedless Oranges



AT the Punjabrao Krishi Vidyapeeth a breakthrough in growing seedless oranges at its Telenkhedi farm in Nagpur has been achieved. A Mandarine Orange tree (No 182) bearing practically seedless fruits was recently located by Prof Y.N. Kunte, Professor of Horticulture and his colleague C.N. Kathale. The orange tree flowers twice a year, once in January-February *(ambia bahar)* and then in June *(mrig bahar)*. The fruits of the farmer blossoms mature in October-November while those of the latter in March. It was observed that the *ambia bahar* fruits of the Mandarine tree were seedless whereas the *mrig bahar* fruits from the same tree contained on an average 1.67 seeds per fruit. The seed content of fruits of other neighbouring trees was 5-6 seeds *(ambia bahar)* and 13-14 seeds *(mrig bahar)* respectively.

According to Prof Kunte seedlessness in citrus fruits is induced when pollination is prevented. But in this case, the "seedless" tree was growing in an orchard, where other normal trees were also growing. Hence, bud variation was the most likely reason for this trait.

What next? Trees from the bud grafts will be prepared to establish a "mother nursary". This will serve as a source of bud wood for future propagation of such trees. However, this will take time and sustained effort before truly seedless oranges become available to the consumers.

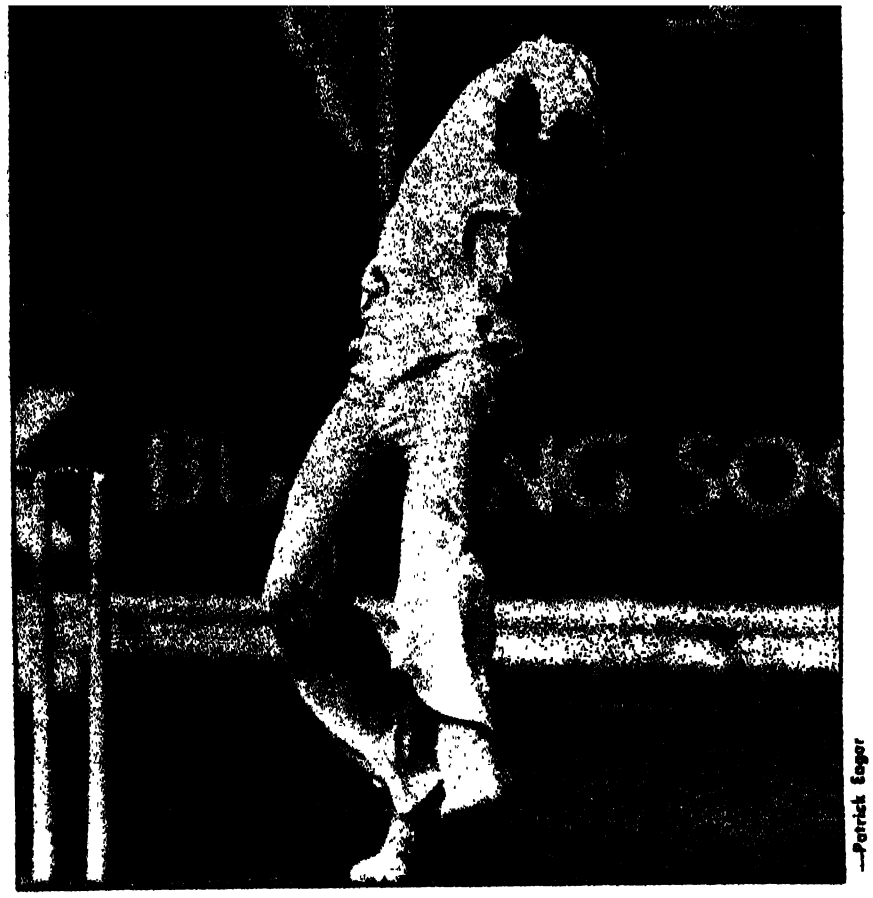
Of Kapil, Calypso And Sunil

The point was made last week that Kapil Dev as India's new captain must be given time to settle. In the circumstances, were critics quite fair in blaming him for losing the Kingston Test?

by Raju Bharatan



—Patrick Eagar

WHAT'S all this about "inept marshalling of his resources by Kapil Dev" having cost India the Kingston Test that was a thriller all the way? To put it more pointedly, were our resources, such as they are today, any better marshalled at Karachi than at Kingston? And before that at Lahore, Faisalabad and Hyderabad (Sind)?

It was a damn good game of cricket, this Test at Kingston. It rejuvenated cricket as a contest at a time when our involvement in the game was at a pretty low ebb following the trauma of Pakistan. It saw us give volatile West Indies, rating as cock of the world walk, a pretty good run for their Calypso money. In the seesaw course it took, it was a Test that proved a harkback to the time when cricket was king.

Mind you, Kapil's detractors are right when they say that he could have saved the Test. But at what cost? He could have saved it by resorting to the ploy of unleashing a barrage of bumpers in the closing stages. Since, under the playing conditions agreed between the two countries for the series, there is no restriction on the number of bouncers per over, the umpires could have done very little in the matter if Kapil had so refused to play ball. (For this was not a one-day contest in which they could declare an unreachable ball "a vertical wide".)

That Kapil did not seek match-saving shelter behind some such ruse is something that must redound to his eternal credit. He had promised attacking cricket when he was appointed India captain. And he played just that to make the Caribbeans hug him to their hearts.

His Most Exciting Test

It was the most exciting Test match I've ever played in, noted Kapil at the end of it all. *We lost but I expect that we'll come back in the series. Particularly when our batsmen get some more runs, which they will.*

Our batting failed in both innings at Kingston and therein lay the true reason for our defeat. And our fielding failed to measure up in that crucial final phase for all the knowhow we now have of one-day cricket. Dicky Rutnagur had described Ajit Wadekar's epoch-making 1971 team to West Indies as "a team of non-benders". Kapil's team, too, is regrettably a team of non-benders. Read this fact in conjunction with the substandard bowling support at Kapil's command and you have the anatomy of our defeat.

Wadekar's 1971 team picked up as it went along to clutch that 1-0 hold it gained on the series with the Second Test at Port of Spain. Kapil's team, too, could take matters in hand, starting with the Test at that happy hunting-ground for India. But this can happen only if Sunil Gavaskar leads the way. Sunil had promised Kapil cent-per-cent cooperation when he was forced to surrender command to him. Notwithstanding all that happened during the game we won (in spite of Gavaskar) against Trinidad and Tobago, I prefer to believe that Sunil will yet pull himself together to give Kapil his due.

When two superstars of matching ability clash, the sparks must fly. Now that we have seen the fur fly in the match against Trinidad and Tobago, let us hope Sunil will settle in that crease, as is his run-accumulating wont. For anything less than the very best from Sunil can only work to Kapil's detriment. And what works to Kapil's detriment must work, in the final analysis, to the detriment of the team.

Kapil lives for the day, Sunil for the morrow. Kapil made our day at Kingston when he picked up the gauntlet thrown down by Clive Lloyd. He now needs Sunil's sustaining influence for the India innings to build. For, once the carnivorous Windies pace attack swallows the head in the shape of Sunil, the torso and the tail stand woefully exposed for all the withstanding power of Mohinder Amarnath's helmet. As long as Dilip Vengsarkar continues to perform by fits and starts, the class of Viswanath is bound to be missed in the middle. So let us not draw any hasty conclusions based on the way our batsmen shaped in the Port of Spain Test. For Port of Spain was a featherbed on which our batsmen had just to lie back for the runs to come. Our real test is now—*after* Port of Spain.

It is only in this context that one can regret the loss of our very first Test in the West Indies. For this was the Test in which the Windies batting powerhouse had still to fire on all cylinders all at once. We had a foretaste of what could happen when that process begins in the way Viv Richards masterminded Lloyd's team of world-beaters to a point of vantage on that nerve-tingling last day.

Sunil, to be sure, would have shut up the game in such a setting had he still been India captain. Remember what Asif Iqbal as TV expert said when Sunil rejoined the India team as captain after lunch on the fourth day of the final Karachi Test? Until then, Kapil had been captaining the team and the runs had been coming in a steady stream. "But now that Sunil's back," said Asif Iqbal, "we notice that fewer overs are going to be bowled. Why, Kapil himself is walking back to the top of his run much slower than he did while he was leading the side!"

The art of containment is something taught to the Bombay player from the moment he cuts his cricketing teeth. And we saw what a master Sunil is in this art of containment the way he clung to the surprise 1-0 lead we gained in the series with that First (Bombay) Test against Keith Fletcher's England, late in 1981. But, in the process of holding on to that surprise win, we had five Test draws in a row and the whole series became slow-motion cricket *in excelsis*.

India could likewise have saved the Kingston Test, too, given the same stalling tactics. But then only the Sunil school of cricket captains can employ such tactics to fruition. Nothing is more certain than that Kapil would have made a mess of it, had he ventured on a policy of containment at Kingston. Kapil just does not play his cricket that way.

True, as he goes along, Kapil will learn (like Tiger Pataudi of similar temperament did before him) that "Test matches are played over five days and not three". Pataudi drew attention to this point when he talked of "the new tendency to rush our cricket" during the four-Test 1967-68 series against Bill Lawry's Australia. We lost that series in a clean 4-0 swoop by Australia. We won much goodwill in the result. Still, for all the goodwill so gained, Vijay Merchant (as the new Chairman of Selectors) could go on to ask how much we had achieved in terms of results and topple Pataudi from his lofty perch.

That was in January 1971. Now, in 1983, a captain is judged all the more by the results he obtains rather than by the goodwill he garners. This fact will slowly sink in as Kapil lives and learns the art of leading a *Test* team. But, in his maiden Test as captain, you just could not have expected Kapil, given his go-ahead outlook on the game, to go after maidens rather than runs. This in spite of the fact that our Test stars today prefer to chase maidens rather than runs, as the case of Sandeep (*Kabhi Ajnabi The*) Patil proves. After all, it is easier to face Poonam Dhillon and Debashree Roy than Mike Holding and Malcolm Marshall...

By Trial And Error

At the moment, therefore, instead of merely playing up the debit side of his Kingston balance-sheet, we must rejoice in the fact that the First Test saw Kapil Dev regain the knack of bowling more maidens and capturing more wickets. In other words, we must feel happy that, with this Test, Kapil began to get that telling outswinger of his working all over again. After all, in Pakistan, he really regained use of this, his most lethal weapon, only by the stage of the Fifth Test at Lahore—to lose it all over again in the Sixth Test at Karachi! Now that the Kingston Test has taught Kapil, by trial and error, how important it is to be selective even in attack, it is logical to conclude that, instead of going all out all the time, he will learn to conserve his bowling resources for the long, hard series ahead. For it is only by learning to conserve *his* bowling resources that Kapil as captain can conserve *India's* bowling resources—limited as limited could be when this tour started, but showing happy signs of regaining some of its lost sting on the evidence of Kingston.

It is easy to blame Kapil for handing over the ball to Mohinder Amarnath at that crucial juncture. Just as we chose to pour all the vials of our wrath on Bishen Bedi for that one over he bowled at Karachi in November 1978. That one over cost Bedi the India captaincy in spite of the fact that that Karachi Test was as good as lost by the time he came on to bowl. Likewise, the 2 overs and 2 balls that Mohinder Amarnath bowled at Kingston, without costing Kapil his captaincy, brought him brickbats galore. But, then, these brickbats were hurled by some of the world's finest bats!

Yes, only a West Indies led by Lloyd could have done it. Mohinder, as an old hand at the game and as the shrewdest captain in the Indian circuit alongside Ashok Mankad, *could* have handed that ball back to Kapil and asked him to keep it with Venkataraghavan. But Mohinder did no such thing—he went on to take a wicket with his first ball! And he *could* have gone on to take another wicket—instead of being hit all over the place. If he had so claimed another wicket, Kapil's move would have been hailed as a master stroke!

Ray Robinson put it in a nutshell when he pointed out that we Indians "sometimes tend to follow too closely fluctuations in performances and could perhaps show more philosophic recognition of how much the luck of the game can taunt either side". ■

KOHINOOR

Mangrove Magic

by Arun Bhatia

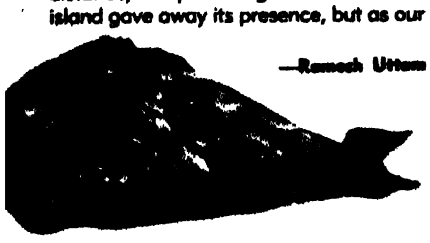
As I left Bombay with a batch of eight WWF-India campers, I admit that, as their leader, I felt apprehensive. After all, we were headed for an uninhabited island which is a swamp, has no drinking water, has octopi and other such marine life and, to top it all, has poisonous snakes.

Organising a nature camp for lay youngsters and adults at such a place may have seemed foolhardy, but this was the third marine camp and Lavkumar Khacher had had no casualties or mishaps during the first two. We could afford to be optimistic!

Country Boat

From Jamnagar's Bedi Bunder, we took a country boat to Pirotan Island. The wooden craft creaked and groaned on its two-hour journey through the Gulf of Kutch, and we were accompanied by the raucous cries of dozens of black-headed gulls which followed us. Mainland India was left behind; we were going away from civilisation.

The sun's rays had turned crimson when we sighted Pirotan. From that distance, only the lighthouse on the island gave away its presence, but as our boat came nearer we could see the tiny strip of land, looking vulnerable in the vast expanse of water.



—Ramesh Uttam

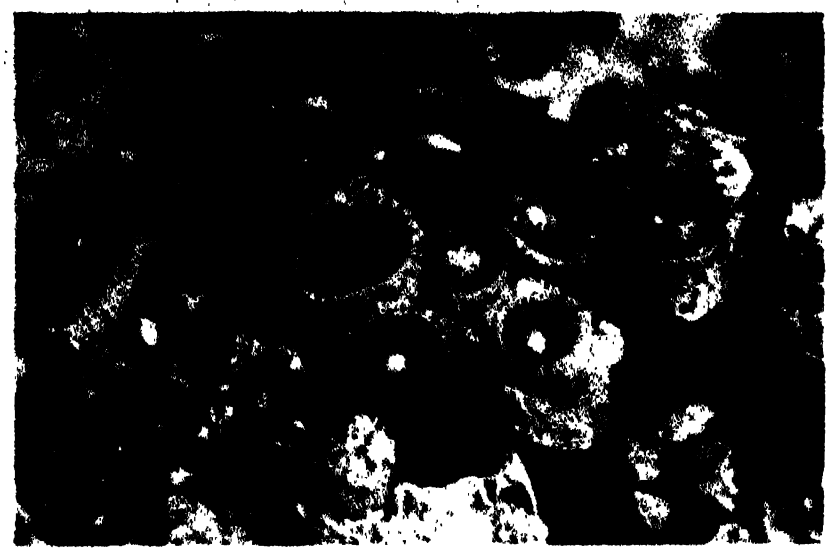
ENCRUSTED BIVALVE

A glance at a map will show that the Gulf of Kutch is protected from Indian Ocean "rollers" and that the Saurashtra peninsula keeps away the monsoon winds. Tidal creeks criss-crossing each other have coral reefs along mangrove islands that extend from Jamnagar to Okha. Pirotan is one such mangrove island.

Coral Reefs

Including the WWF-India participants from different towns in Saurashtra, our batch totalled 50. We were divided into four groups. Guided by Kutchi fishermen/sailors, we began our exploration through the mangroves. The great tidal reach unveils the coral reefs at low tide on Pirotan, so we waded ankle-deep in water.

The colours of living coral have to be seen to be believed: pink, red, [illegible]



Giggling, the shoes were retrieved and laces tied tighter. Walking styles were altered to keep the foot and shoe together.

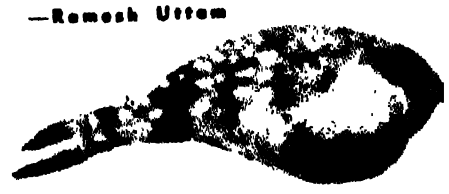
Our first meeting with an octopus [illegible] all our preconceived fears of this [illegible]

attempt to hide. It was a master of camouflage. One of the boys who tried to pick it up said it felt like lifting soggy brown bread.

Another natural survival instinct was demonstrated to us by a puffer fish. About the size of a carrot, it swam helter-skelter in the [illegible] water where we [illegible] to pick it up and it immediately bloated up like a balloon to triple its actual size. We photographed it and let it go.

We saw no saw-scaled vipers; maybe January was too cold for them. But in our three days we learned that this mangrove island has coral—the builder and supporter of fishes, insects, crustaceans, sponges, mollusks; in fact, the very foundation of marine life. And yet a local cement industry was wantonly destroying the coral by dredging the sand. An entire ecosystem was threatened, including the local fishing industry. The efforts of naturalists and environmentalists finally led the Gujarat government to declare this entire area a marine sanctuary in 1981.

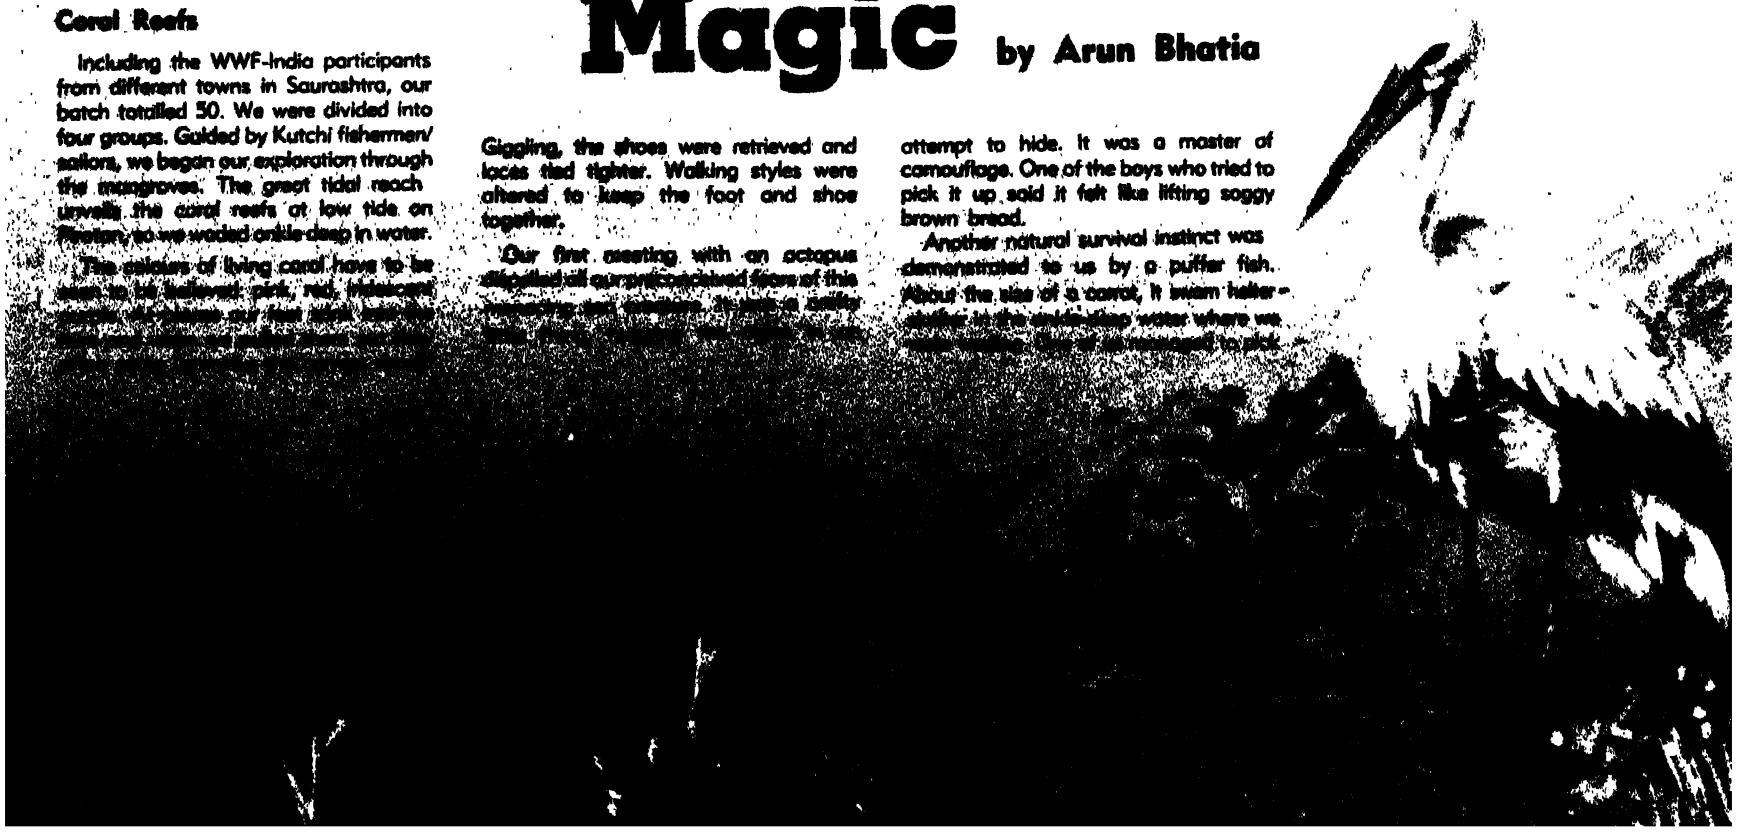
—Ramesh Uttam



OPEN CORAL (left) and Brittle Starfish (below left).

PUFFER FISH feigning death by bloating up.

After our batch of 50, eight other batches visited Pirotan and were exposed to nature. Several hundred thus benefitted from the experience. The fourth marine camp was held in 1982. People must make nature their friend for, as Thomas Lovejoy of World Wildlife Fund has said, "The answers to many of the demands of our ever more hungry and growing population lie in the very ecosystems that those demands pressure us to destroy." ■



Rediffusion/C/2042

Technique Of Total Relaxation

Yogi Samprasad Vinod, a young medical graduate of Pune, has evolved a special, easy and effective technique of Total Relaxation. It is a modified version of the Corpse Pose, or Shavasana, from Hathayoga.

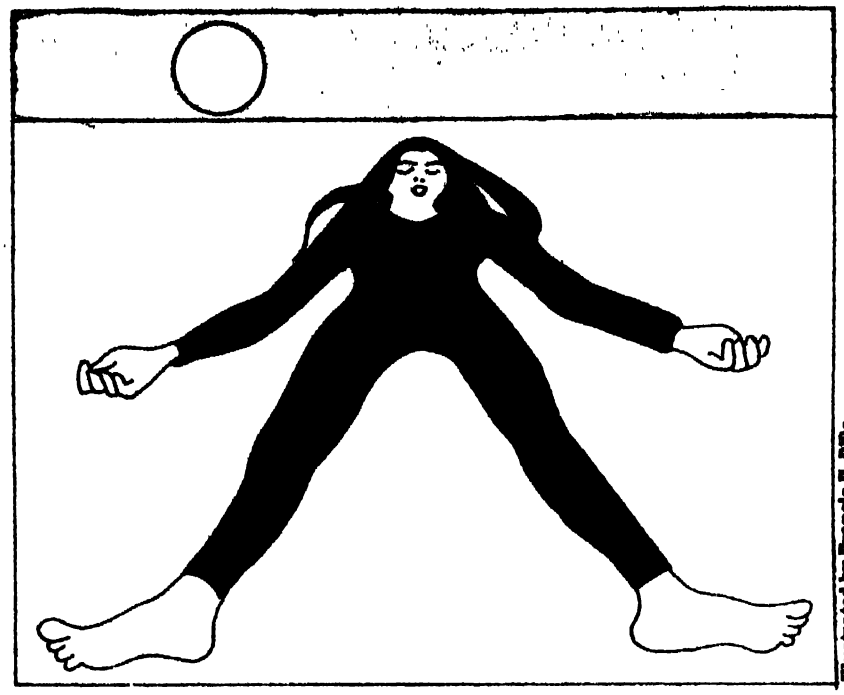
by Dr Samprasad Vinod

WHETHER we like it or not, whether we believe it or not, we are all subject to the process of death and decay. In fact, the process of death and degeneration goes hand in hand with life. Throughout our life-span, we continuously die and get reborn. Unfortunately, this process of dying is not easily perceptible and, therefore, we remain unaquainted with, and unaware of, its supreme glory.

Death is the most fundamental fact of life that we have to face one day or other. We must, therefore, learn to approach it boldly and gracefully. Complete ignorance about the nature of this experience generates unnecessary fears and related problems that make our life vulnerable to possessiveness, insecurity and what not? As a matter of fact, most of our physical, psychological, physiological and emotional problems stem from this ignorance and the resultant fearfulness. It is not possible for all of us personally to experience either the pre-birth state or the post-death existence. It is not necessary either. But, unless we overcome the excessive fear of death, we will never be able to lead a truly happy and healthy life.

Swatmaram, the seer of Hathayoga, has mentioned the Corpse Pose in his treatise called *Hatha Pradipika*. After blending the technique of Shavasana (as described by Swatmaram) with the essential philosophical basis (as prescribed by Patanjali, one of the greatest yogis of India and propounder of Ashtangayoga), what emerged was the wonderful and unique technique of Shavasana meditation.

A living being thinks, physically moves, emotionally responds, intellectually decides and perceives through his sense organs. At the time of death, his individual identity is forever dissolved into "nothingness". This "nothingness" is what we fear most. In contrast to living beings, a corpse cannot respond to any stimuli, it cannot perceive its individual identity as being different from that of other objects and persons. On this central perception of individuality as "I am so-and-so" is woven the entire world of our emotions, movements, intellectual pursuits and sensory perceptions.



Illustrated by Francis D'Sa

SHAVASANA, OR THE CORPSE POSE, which involves lying absolutely still on the ground and deliberately relaxing the mind and the body, is one of the most difficult of yogic "exercises".

In Shavasana meditation, one gradually learns to dissolve one's identity into "No-Thought-Awareness", which is akin to the experience of "Nothingness" that comes at the time of death. Suspension of all activities allows for "total rest" in a short span of about 15 to 30 minutes Regular practice of Shavasana meditation aquaints the individual with a short-lived experience of the void that comes after final death. This kind of experience completely dissolves all imaginary fears about death and thereby enables a person to confront death boldly and gracefully whenever it comes. This results in a complete transformation of one's personality and also changes the whole quality of living.

Most yoga teachers treat Shavasana merely as a method of physical relaxation. This involves lying supine on the ground and sending auto-suggestions to different parts of the body. Although this method enables a person to achieve a substantial degree of physical relaxation, it does not do justice to the profound philosophical meaning of Shavasana. Moreover, it does not evacuate the mind of its tormenting, irrelevant and meaningless thoughts and, therefore, can provide only a superficial rest.

How does Shavasana meditation differ from mere Shavasana?

In meditation, one is expected to attain:

1. Temporary suspension of all physical, mental, emotional and intellectual activities.
2. Effortless maintenance of this state of pure awareness, which is followed by the experience of true happiness.

Sitting either in Padmasana or in Vajrasana is usually considered necessary for the practice of meditation. However, for most people, it is extremely difficult to main this posture for long lengths of time.

On the other hand, in Shavasana meditation, instead of forcefully maintaining an upright sitting position, one goes through various stages to accomplish the objectives of meditation while lying comfortably on a mattress. Along with complete and speedy physical rest, the mind is freed from all its mental vagaries.

The Five Stages

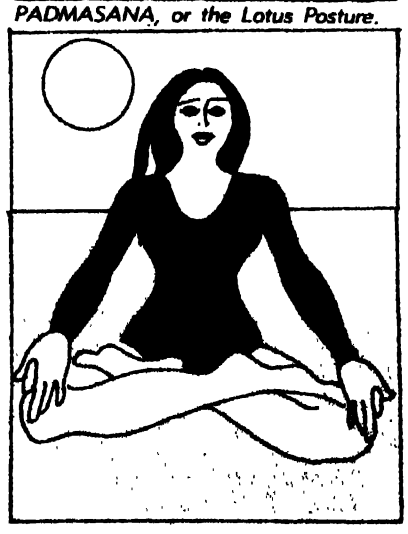
What are the stages of Shavasana meditation?

Stage One.

Lie supine in the most comfortable position of the body, with legs and arms spread apart and eyes gently closed.

VAJRASANA, or The Thunderbolt Posture, is practised widely for physical and mental relaxation.

PADMASANA, or the Lotus Posture.



Stage Two:

Starting from the lower limbs, gradually proceed attending to the minute as well as gross muscular tensions in different parts of the body. Whenever tension is noticed, that particular part of the body is to be gently moved into a completely tension-free state Mere awareness about muscular tensions, followed by a gentle movement in that part, is enough for the attainment of freedom from all muscular tensions.

Stage Three:

Closely and gently observe the movements of your belly—with each act of breathing. Do not try to control the rate and the depth of your breathing activity.

Stage Four:

Observe all thoughts that might appear in the field of consciousness of your mind, regardless of their nature. Neither fight nor get involved in any of those thoughts.

Stage Five:

Gently lift your attention from the body and turn it towards any object that is closely linked to infinity like a wide expanse of ocean, a blue cloud-free sky, a range of Himalayan mountains and the like. Slowly and swiftly, get into Total Communion *(Anantsamapatti)* with the object you have chosen

One must clearly remember, while practising this form of meditation, that all the above-mentioned stages are equally important and are closely related. Each stage must swiftly culminate in the next.

Its Benefits

Some of the important benefits of this technique are:

1. Relief from unnecessary anxiety, stress, strain, tension, emotional instability, mental turmoil, fear and the like.
2. One emerges refreshed, rejuvenated and revitalised due to complete rest.
3. Good rest improves the quality of one's work.
4. Physical, psychological, emotional and intellectual integration of personality is achieved. This is very useful in the prevention and the control of certain psychological and psychosomatic ailments, like anxiety neurosis, high blood-pressure, sleep disorders, lethargy, overweight, chain-smoking and acidity.

When the practice of other yogic postures is skilfully combined with Shavasana meditation, the benefits obtained are naturally multiplied.

In one study conducted at Scientific Yoga Therapy and Training Centre, Vijayanagar Colony, Pune, the following results were obtained:

Name of Disorder	*Percentage of Improvement*
High Blood-Pressure	92.3
Overweight	75
Sleep Disorders	80
Chain Smoking	77.8

The Weekly Pick

Crime In Our Society—A Political Perspective

S. Venugopal Rao, Vikas, Rs 75.

An erudite and intelligent interpretation of the political and sociological implications of crime. The chapter, "The Power Factor", which discusses the subtle ways in which different forms of criminality are coloured by political systems and ideologies, is especially noteworthy.

"Democracy, Socialism and Crime" is yet another absorbing chapter, giving examples of anti-social behaviour and political corruption

Incidents, comprising the "endless chronicle of crime", underscore the book's unconventional approach. Definitely recommended for academics and practising professionals.

Assam—The Difficult Years

T.S. Murty, Himalayan Books, Rs 150.

A painstakingly detailed account of the trouble-ridden State, deluged by serious problems over the past three years, further aggravated by the rank failure of the series of formal, informal, bipartisan and tripartite meetings between the Assam students and the Government.

The author has pieced together all the available material on the subject in his objective treatment of the issues involved. Starting with the Janata regime, the book provides an adequate background of the demands of the agitators, the foreign nationals problem, the stand of the opposition parties, etc, in addition to describing the actual course of the agitation.

At a time when the entire nation has been shocked by the Assam holocoust, this book is extremely topical.

Indian Heritage

Giri Raj Shah, Abhinav Publications, Rs 55.

A comprehensive yet succinct presentation of the history of Indian culture and its myriad aspects—religion, literature, social development, politics, art and music, all of which form our heritage.

Each topic is discussed systematically and in logical progression However this book is prescribed mainly for beginners and foreigners as a guide to the Indian psyche and culture.

The simple and concise nature of the book coupled with the considerable amount of background information that it provides about Indian art, music etc, makes it interesting enough for most readers.

'Illegal' Accident

The adage about most accidents happening at home must seem true to Jennifer O'Neill, the actress of *Summer of '42*. First, the 34-year-old film actress suffered a gunshot wound to the stomach; then her fifth husband, John Lederer, 34, was treated for a knife wound to the forearm—both self-inflicted accidents according to the couple. Last month they were indicted for possessing an unlicensed gun—but O'Neill was charged with a misdemeanour and Lederer with a felony which carries up to seven years in the penitentiary. Appearing on "Good Morning America", the TV breakfast show, O'Neill said: "I find it ironic that you have an accident and then end up being indicted."

To Lean With Love

On David Lean's last day at the Taj Mahal Hotel in Bombay some time in January, Subhash Basrur, the 28-year-old chef of the Rooftop Rendezvous, gave the famous film maker a pleasant surprise. He prepared a beautifully hand-painted menu entitled "A Passage to India" (the film Lean is currently working on). The dishes listed were: Feuilette 'River Kwai', Pomfret 'Zhivago', Salade 'Lara', Souffle 'Lawrence of Arabia'. Lean was immensely touched by Basrur's gesture, and in his scrawl on the menu are the lines: "Evening after evening of wonderful dinner. Many, many thanks."

Pudding Pot For Julie

Everyone at Harvard might have figured that after *Tootsie*, Dustin Hoffman was a shoo-in for the Hasty Pudding Club's annual "Woman of the Year' award. Wrong. But in this era of 'star cross-dressing, maybe Julie Andrews was just an apt a choice. Andrews, who received a best-acting Oscar nomination last month for her title role in *Victor/Victoria*, has made a career of overcoming her Mary Poppins image, and upon receiving the club's sacred brass pudding pot, inquired, "Can I throw up in this?"

Soho's Sex Cinemas

The current issue of *Sight and Sound*, the quarterly sponsored by the British Film Institute, devotes five pages to a survey of Soho's sex cinemas. The writer, Nick Roddick, suggests customers get rather a raw deal. One "full two-hour" programme lasted only 55 minutes; advertised titles seldom corresponded with the actual programme; reels were missing or promised scenes never appeared. Yet, Roddick reports, they were almost always three-quarters full. He calculates that for most of the time there are more customers (about 5,000 a day paying £2 to £4 each) watching sex films in Soho than there are in legitimate West End cinemas.

If You Are Late.....

A passenger who was late for the New Delhi-bound 25 DN Deluxe Express, hit upon a new idea to catch the train: he made an anonymous call at 10 am to the General Manager of Western Railway, Bombay and whispered, "There's a bomb on board."

However, since the matter could not be taken lightly, the policemen and railway officials made a clean sweep of the train to Delhi.

Panic spread like wildfire amongst passengers as stern looking policemen ushered them out of the compartments. A bomb demolition squad combed the train from end to end but could not find any explosive aboard.

Good PM, Bad Cook

Mrs Indira Gandhi is no longer good at cooking, though in her younger days she was.

She was taught to cook at 11, and did make a meal for her grandfather, Motilal Nehru, who was fastidious in his tastes, the Prime Minister recalled in a letter to Miss Nehru Tak, a first year science student of Ajmer, in reply to a letter from the youngster.

Now she cannot go beyond eggs, salads or something less simple, Mrs Gandhi confided to her young admirer.

She did cook a little during her student days in England and during the early years of her marriage, Mrs Gandhi said.

Longest-Drawn Indeed!

The longest-drawn legal battle in the world has been fought in a Pune Court—it took 761 years for a judgment to be delivered in 1966. A Seminar on *How To Avoid Delays In The Legal Courts* organised on the occasion of the centenary of the Vadgaon Maval Court in Pune district was told that the *Guinness Book of World Records* had made the entry in this respect in its 1982 edition.

Accordirig to the book, one Balasaheb Patlaji Thorat received a favourable judgment on April 27, 1966 on a suit filed by his ancestor Maloji Thorat in 1205.

The points at issue were rights of presiding over public functions and procedure at religious festivals.

A "Pot Smoker's" Paradise?

While the Pentagon keeps dismissing allegations of heavy drug use among Marines in Lebanon, Marines who have served there say the easy availability and low cost of hashish coupled with infrequent urine tests has made the peacekeeping tour of duty a "pot smoker's paradise." Said one Marine, "You can go up to any of the local merchants, to just about any 'Hey, Joe' who sells Pepsis on the street corner, and he can take care of your recreational drug needs." Marine brass insist only about one-eighth of the Lebanon detachment use any drugs, about the same as among home-based troops in North Carolina. But one NCO who served with the 32nd Amphibious Unit, the first to go into Lebanon last year, estimated that at least 30 to 40 per cent of his outfit smoked hashish.

"Ruined By West"

In a sweeping attack on imported democratic ideals, Japan's Education Minister, Mitsuo Setoyama, said that the post war Westernisation of the country's education system was to blame for the current trend of juvenile delinquency.

He was seeking to explain a recent spate of violence involving school children in their early teens. Mr Setoyama put the blame on American occupation policy, which, he said, aimed at destroying the Confucian morality which prevailed in the past, before Japan's defeat in 1945.

—Robert Whymant

Gentrifying The KGB

A former Soviet diplomat, Vladimir Sakharov, who defected to the US in the early 70s, says Harold R. (Kim) Philby, the British turncoat, helped change the image of the KGB from a collection of thugs to a formidable intelligence service. The transformation happened under Yuri Andropov and was a vital step in Andropov's eventual rise to leader of the Soviet Union. And, of Andropov's taste for Western dress, drink and music, Sakharov says Andropov was "westernised by the experience with Philby".

To Coin A Joke

The latest drachma joke doing the rounds in Athens: Papandreou consults foreign financial experts on how to restore value to the currency.

"Drill a small hole in the one drachma coin and fill it with gold," says the Swiss. No good; not enough gold in Greece. "Drill two holes and fill them with silver," says the German. No, not enough silver. "Drill three and fill with copper," says the French. Impossible—not enough copper. "Drill four holes," says the American financier in New York, "and sell them for buttons at two drachmas each."

Tribute

I Was Motilal Setalvad's Junior

by R. Vasudev Pillai

IN the psychedelic complexity of my memory, the image of Motilal Setalvad stands out in bold relief—a figure of intense simplicity.

I first met Setalvad when, in 1956, he visited my hometown, Hyderabad, with other members of the Law Commission on a fact-finding mission. He was invited to address the students of the Law College of Osmania University and I, as a member of the staff, was introduced to him. In this first encounter itself, he captured my imagination by the grandeur of his bearing and his straightforward way of dealing with men and matters

A few years later, I joined the staff of the School of International Studies in Delhi as a Lecturer in International Law. Setalvad was a member of the school's governing body and I got to know him better.

His Instinctive Ability

My term at the school ended in September, 1961, and I enrolled myself at the Supreme Court. Sitting on the back benches, I would watch Setalvad appear in brief after brief. What impressed me most was his instinctive ability to get to the heart of the most complicated set of facts and the mastery with which he could pierce through every legal contention, good or bad, that was advanced at a conference, sometimes demolishing and sometimes fortifying it.

He could read and understand overnight a brief so voluminous, that one would expect him to work on it for a week. And when he presented his case in court, he would remember every relevant fact. He never resorted to rhetoric or melodrama but his narrative of events bore an almost photographic precision Once I asked him how he could be so brief in his address. He smiled: "To be brief, it takes a long time."

Setalvad was a stickler for the rules of propriety and integrity. I have often heard him frankly advise potential clients not to waste their money if he saw no substance in their cases.

One evening, another junior and I were sitting with him, a counsel from Calcutta came in with a wealthy client The lawyer noticed our "brief hungry" look and out of pity for us, told Setalvad, "In this matter, if you wish you could have the assistance of not one but any number of your juniors, as my client can afford to pay them." But Setalvad rebuked him: "No, I can do without that. Surely, you are not going to mulct your client!"

For all his stern appearance, Setalvad was softhearted and easily touched by the misery of others. He frequently appeared without a fee for clients who said they could not afford his services.

Setalvad's outstanding characteristic was his uncompromising dignity. He never sought a favour from the Bench. Once, presenting a lengthy case, Setalvad was on his feet for several days, reading the evidence. His voice became hoarse and at last he began coughing. When an aide placed a glass of water before him, Justice S.K. Das remarked: "Mr Attorney, your colleague Mr Sastry can read the evidence. Surely you need some rest." But after a few sips of water, Setalvad continued with his presentation.

I joined Setalvad as a pupil just before he appeared for the State in the appeal of Commander Nanavati, convicted of the murder of, Bombay businessman and philanderer, Prem Ahuja. He told us then that he was not very familiar with criminal law but one would not have thought so to hear him question the experts and present the case.

After several years of working together, a natural intimacy developed between us. But always, there was about him a certain withdrawn dignity that inspired awe and veneration.

Setalvad was not a sociable man. He was laconic, intensely time-conscious and completely immersed in his professional life. Perhaps because he was aware of his own innate shyness, he avoided getting involved in politics, unlike his own senior, Bhulabhai Desai.

The most unforgettable case in which I worked with Setalvad was that of Vice-Chancellor Dr D.S. Reddy of Osmania University. Dr Reddy was appealing against an amendment in the Osmania University Act, passed by the State Legislature, which reduced the Vice Chancellor's term and also curbed the University's autonomy

Setalvad himself has vividly described how the case was conducted and won in his controversial autobiography, *My Life, Law And Other Things*.

Turning Point

That case proved to be a turning point in my own life and I was soon arguing my own briefs The day came when I had to appear against Setalvad himself. My client belonged to a wealthy family and had stood surety, among six others, for an American firm dealing in the import of manganese ore. A large sum—almost Rs 14 lakhs—was involved and the question was one of interpretation of the arbitral clause about the jurisdiction of the Bombay Chamber of Commerce.

I lost the case. But that evening, Setalvad invited me to dinner. When I took leave of him that night, he encouraged me with characteristic generosity. "Your client had no case this morning," he remarked. "But you should have more opportunities to argue in Court."

In April 1962, the members of the Supreme Court Bar decided to felicitate Setalvad on the fiftieth anniversary of his practice. As the junior-most member, I was given the privilege of presenting a silver salver to Setalvad.

Speaking on that occasion, I quoted the words of Judge Cardozo about Oliver Wendell Holmes which suited Setalvad most aptly. "Law in his hands has been philosophy, but it has been literature too. If anyone has ever been sceptical of the transfiguring of style, let him look to his opinions. They will put scepticism to flight. How compact they are, a sentence where most of us would use a paragraph, a paragraph for a page. What a tang in their pointed phrases, what serenity in their placid depths: what a glow and a gleam, when they become radiant with heat!"

When news came from Bombay on August 3, 1974, that Setalvad had passed away, I mourned for him as one does for a man who has made a deep and lasting impression on one's mind I have often thought of him as the "true gentlemen" of Cardinal Newman's description. "He may be right or wrong in his opinion, but he is too clear-headed to be unjust; he is as simple as he is forcible and as brief as he is decisive." ■

BOOK REVIEW

Secular Will Be The Hindu Rashtra

Reviewer: P.K. Nijhawan

THERE were compelling reasons why India as an independent nation consciously chose to be a secular democracy, right at the time of Independence. By doing so, she had eschewed all communalism at one go—communalism which had not only taken a large chunk of the country's area and population out of it, but also made it go through a blood-bath, the like of which was never seen before. This is where secularism was the negation of all communal politics. As a positive value too, it represented the ultimate and best in man's political evolution, treating all men equal in the eyes of the state, irrespective of caste and creed.

It could not be otherwise. For, it was the expression of the nation's resolve to live as a model multi-racial society, proving at the same time that the birth and proliferation of communal ideologies were, in fact, a studied imperial design to keep India divided and weak. The communal forces themselves were then at their lowest ebb, suffering as they did from an enormous sense of guilt.

They were now conscious of the immense damage they had done to the nation which had emerged inspite of them. Besides, secularism seemed to accord well with the political culture of the vast Hindu majority which apart from treating religion as very personel to each individual, had convinced itself that communal politics behind which the British always stood, had not only delayed the freedom of their beloved country, but had also left it truncated.

Growing Communalism

Today after a lapse of 35 years and having paid for communalism in blood and tears, we seem to have run into doubt whether the decision of our founding fathers in this respect was, in fact, the right decision! The reason is that the more we talk of secularism, the more communalism we get.

It has really become difficult to reckon who is a greater communalist—the one who believes in communalism straightway or the one who opposes it? Cynically speaking, it appears that each one of us is a rank communalist, skin-deep. Even in spite of running the country through secular institutions we find reaction continuing to beget reaction insofar as communalism is concerned. The picture is so bad that hardly a day passes without there being some evidence of communal tension or a fracas in one part of the country or another. In a way one long communal riot rages through the country throughout the year, difference of faces and location being of no consequence! What is the remedy?

Theocratic Solution

Prof Balraj Madhok, at one time the President of the Bharatiya Jana Sangh has come out with the thesis that to put an end to all communalism, India should be declared as a Hindu State forthwith. In his opinion, it is a one-time panacea for all our communal problems—the corollary being that the Muslims as opposed to the Hindus, are the real authors of all communalism and if they fail to see reason then they must face the wrath of a theocratic Hindu State.

In fact, he goes much beyond. He thinks that if we fail to do so, India's future as a notion itself would be at stake. He fears that a large-scale international conspiracy is afoot to undermine India as a nation with *Hindutva* (the quality of being a Hindu as synonymous with being an Indian) as its main ethos.

In putting forward this thesis Prof Madhok has marshalled sufficient facts and figures to prove that; (a) India is a fatherland of the Hindus; (b) The concept of *Rashtra* or the state is as old as Hinduism itself and the Hindus fulfil all the conditions of being a nation in the modern sense of the term.

WILL THE RASHTRA SAFEGUARD SECULARISM? Balraj Madhok (with garland), author of the book under review, being cheered by supporters.

This concept of *Rashtra* is multi-racial but the Muslims have all along refused to become a part of it, (c) The Muslims having created a theocratic Pakistan have lost the *raison d'etre* to continue to be the citizens of India and hence there should have been a wholesale exchange of the Hindu and Muslim populations between India and Pakistan right at the time of Partition; (d) A Hindu state is a secular state *per se* and that there could be no discrimination against any of its citizens on account of religion; (e) The Hindu state is also a democratic state and cannot be a fascist one. He sums up these thoughts in a beautiful aphorism "Statism is alien to Hindu State!"; and lastly (f) A Hindu state will solve most of the problems India as a nation faces today.

Merits Scrutiny

Prof Madhok's thesis has two plus point, *viz* information and passion. I call passion a good thing because it is synonymous with commitment and conviction. From a very narrow angle he does emerge as an uncompromising patriot who thinks of the nation as a whole and who wants to solve her problems in a very basic way which is through its inherent link—Hinduism.

He appears to be sincere in trying to understand the problem and attempting its analysis. He is, therefore, likely to be debated for long, though he might not be able to sway many even among the Hindus to his way of thinking.

And if he, one day, does succeed in making India a Hindu *Rashtra* (which appears to be a remote possibility because it is basically an un-Hindu thought), then the credit or discredit of that achievement or failure would go not to him but to those who refuse to join the secular consciousness of the nation. Perhaps it would be a bad day for the Hindus themselves! Perhaps it would be a counsel of despair!

Prejudice And Passions

The problem is that while information is a collection of facts and can be contradicted with another set of facts, passion is not a state of reason which when tinged with prejudice affects one's capacity to arrive at valid conclusions. This is what seems to have influenced Prof Madhok's judgement.

For example, while his conclusion that if Mahatma Gandhi and his men including Nehru were secular, it was due in the main to the fact that they were Hindus, may be accepted as correct, he should by the same logic be himself ranged against communalism.

But here enters Prof Madhok's own prejudice against Mahatma Gandhi and his numerous followers for their numerous acts of omission and commission. Let me quote a typical paragraph from the book (page 23) to prove what I mean:

With the debut of Gandhiji as the sole leader of the Congress in 1920 after the death of Lokmanya Bal Gangadhar Tilak, the process of nation-building was totally reversed, Gandhiji's lack of understanding of the mainsprings of Indian nationalism which had sustained Hindu resistance to physical and racio-cultural aggression of Islam for centuries was matched by his ignorance of fundamentalism of Islam and its history and tradition..

I have selected this paragraph for two main reasons: One that it is a mild condemnation of the Father of the Nation; and secondly he accuse of not understanding the mainsprings of Indian nationalism which had sustained Hindu resistance to Islam. Fortunately, he does not accuse Mahatma Gandhi for not understanding Hinduism as well because the Mahatma certainly did not quite understand Prof Madhok's brand of Hinduism!

But supposing he did not understand the fundamentalism of Islam as he is being accused of, then he did so precisely because he understood his own Hinduism all too well. Since Prof Madhok seems to talk from conviction, he is among the excusables! Otherwise, he is guilty of insulting the massive Hindu intelligence and intellect for accepting Mahatma Gandhi as their sole leader for such a long time.

As to the second point I wonder if any other Hindu leader could have inspired a Muslim leader like Khan Abdul Gaffar Khan and his fighting Pathans to take to the path of *Ahimsa* in precept and practice so much so that they threw their lot with the Hindu India even when Pakistan had become a certainty! Then which Hindu had the moral courage to walk into the raging fires of Noakhali to beard the lion of communal violence in its own den as it were? Not just that.

He admonished the Muslim fanatics right where doing so could mean anything and then performed the miracle of making them rehabilitate the same Hindus whom they had ousted from their hearths and homes only a short while ago! Which Hindu could be called "the living Christ" by a man like Romain Rolland? Again which Hindu could knowingly die at the hands of a Hindu fanatic for protecting the Muslims in Delhi? Only a real, moral Hindu could do all that Mahatma Gandhi did. Can we then not say that the mass of Indian Muslims might be feeling insecure for want of such a Hindu?

Interpreting Hinduism

Another reason why I lament this way is that the present ethnocentric state is not the outgrowth of Hindu idea of a state. Therefore, to find support for this type of nation-state as we are trying to have in India today, from the mainsprings of Hindu polity is not the correct way to interpret Hinduism. The Hindu *Chakravartin* whose writ ran in all lands was a different kind of king.

Empire-building was not his cup of tea though worsting others in battles or wars for establishing suzerainty was a game

Kings and their armies indulged in as often as possible. That's why strong empires are almost non-existant in Hinduism. The Hindus lack the very goal-orientation to achieve such an end. Not that the empires did not grow in India. But their value-orientation for the same was provided by Buddhism or Jainism.

Ajata Satru a contemporary of the Buddha was perhaps the first historical emperor. Nanda Empire, Maurya empire, Gupta empire — in fact all empires are connected with this type of Temple State goal orientation. It had a lot of violence built into it. This meant some type of theocracy: the Asokan empire was itself a product of this Church-State relationship that came about in the wake of Buddhism.

If the Asokan empire was built on the annihilation of the Kalingas, the Brahmanical revival itself was no less tyrannical. For example, when Pushya Mitra Shunga came to the throne of Magadha, he had issued an edict proclaiming: "Any one who brings to me the head of one Buddhist monk will get from me in reward one hundred gold coins". Now how do we defend ourselves against this type of diabolical head-hunting in the name of religion? Who justified such a violence? Obviously the theocratic state! Against whom? Perhaps against another theocratic apparatus! For what? For exterminating a religious minority! Well, this must be an aberration. Otherwise in the long annals of Hindu India such type of religious violence was wholly unknown.

That had to be so because the type of Hindu polity that India had as its goal aimed at fostering a cultural confederation in India—the basic compulsion of Indian reality. So if we have to move towards a true Hindu *Rashtra* its cost may, in fact, be too much. We may then have to weaken the fabrics of the nation-state that has grown in India out of a new type of nationalism. I say so because if such a nation state had been existing in India in the times when Hinduism was supposed to be at its zenith, then we would have without doubt ruled the world This was quite in the fitness of things because India has always been a populous and rich country (200 million strong in the Mauryan times) with men and women possessing the highest degree of material and moral riches. And it could have been so easy to conquer the world in those primitive times!

No Hindu Crusade

But knowing full well that they could do it, did the Hindus launch upon a world conquest in the name of religion? No. Instead the Hindus wanted to make India the preceptor of the world—*Jagadguru*. If that is the inescapable compulsion of Hindu India or the Hindu *Rashtra* as Prof Madhok calls it, it is in fact a decentralised entity in which the federating units are different but substantive cultures of India with Hinduism providing the over-all link.

India's linguistic reorganisation corresponds almost to this cultural reality. The concept of state as an ethnocentric idea then appears to be a recent imposition on Hinduism, Mahatma Gandhi as a well-schooled Hindu politician, was therefore, more close to the Indian or the Hindu reality when he wanted India to become a federation of lakhs of self-sufficient villages only.

Even now if India becomes a real federation in the Ministry of Home at the Centre and its powers are exercised by the states themselves or the smaller units below, communalism will perhaps become a thing of he past.

The Hindus and the Muslims will then learn to live together as part of a local reality.

In fact, the entire thesis of Prof Madhok stems not so much from the mainsprings of Indian nationalism, which, in his opinion the Mahatma did not understand as from his reaction to Islam which he claims to understand best. He fears in the main three things: (a) Conversion, (b) Subversion and (c) Aggression.

I shall not deal with conversion. Conversion can take place only if the Hindu society is weak. If people know their heritage and take pride in it then conversion would not affect. Besides, it can be stopped even by legislation. As to the possibility of subversion and aggression, these can very well take place if bigger powers so connive at.

In a way even the recent revival of Islamic fundamentalism and the birth of petro-dollar is the result of international conspiracies, one thrust of which is to cripple development in the Third World, particularly India. Perhaps it is highly flattering to think that one of the cornerstones of the US foreign policy is to somehow cancel out India even as a regional power. Pakistan has been their tool and some of the Muslims in India could be their allies in this game. It is one way to look at it. The other way perhaps is that if India somehow refuses to over-react and is strong enough to repel any military aggression then the very *raison d'etre* of Pakistan may one day collapse. And if the petro-dollar is a temporary phenomenon and does not last more than the remaining years of this century, then Islam may itself try to change its fundamentalist course which is already under tremendous strain.

The upshot of this argument is that India becoming a Hindu *Rashtra* of Prof Madhok's concept out of the latter two compulsions is really no guarantee of the fact that it would not be the target of internal subversion and external aggression. The last three rounds of armed conflicts with Pakistan have been won by India without becoming a Hindu *Rashtra*. Where then is the need for a Hindu *Rashtra*? The morale of our population and strength of our economic structure and armed forces are what would save the day for the country again, if ever such an eventuality arises.

So, there is no apparent or real reason for India to leave her present progressive path of development of new technologies and creation of necessary systems on the path of becoming a modern state as Nehru and his colleagues had envisioned it. Mere *Rashtra* is certainly no solution to any of India's problems, not even communalism.

"RATIONALE OF HINDU STATE" by Balraj Madhok; India Book Gallery; Rs 60.

Taming Time: Some Tips

by S. P. Sharma

TO the frequently put question: "Is it, or is it not, possible for an average person to regulate time?" The answer would be: "Yes, it certainly is." And offered here are a few tips towards the realisation of the same goal. Think not, however, that you own time. Because you simply do not. That is the hard truth. Neither do you own your own time, nor anyone else's. Let us accept this fact at the outset.

According to Dr C.S. Lewis: "Time comes to a man as a pure gift and he cannot own it anymore than he can own the sun." Curiously, a man may start the day—at times it does happen with some persons—as the lawful possessor of 24 hours at his command. Dr Lewis says that nothing throws a man into a passion so easily as to find a tract of time which he reckoned on having at his own disposal unexpectedly taken away from him by an unexpected visitor, or extra job, or owing to a change in plans and so forth.

The first and foremost rule, therefore, is to plan your time as effectively as practicable. But please do not, be disturbed by interruptions. Rather welcome and incorporate them into your plans.

The second rule is to plan ahead with your intellect, not your emotions, and be ready for the expected as well as the unexpected. Consider this example: Mr. X owns a car-producing factory in a country town. Each month he goes there to check on its operations. For nearly a decade he hated the trip. He usually complained: "When I arrived, everyone was waiting for me with problems. The workers insisted on seeing me about their grievances. The Superintendent-in-Charge had a list of the items he needed. The Accountant had his gripes against the factory Manager, who, in turn had his own against the inspectors, who had theirs against the engineers and so on. I used to dread the trip and would each time pray that things would be all right." Then I realised that for nearly ten years I had gone through the same advance sufferings, had hoped to avoid the problems but had always been disappointed. So, I reversed my attitude and told myself: "Now, you are going to make your regular visit to the factory and you are going to meet the usual 15 to 20 problems. Because, that is how you earn your pay and that is why you are needed. Had there been no problems, you would not have to make the trip. On the way to the factory I rehearsed in my mind the probable difficulties and made myself ready for them." This habit of looking ahead to problems prepared Mr. X for them and he found them easier to handle. Eventually, says Mr X: "My attitude transmitted itself to the others and they met me with smaller chips on their soldiers and more often they met with their own solutions ready".

The third rule is to clearly distinguish between "expectation" and "anticipation". For, when we expect something, we foresee or predict that it will happen. For instance, the bank will ask for higher interest on next year's loan because the money market prices are going up. Whereas, on the othe hand, to anticipate something means to take steps to handle it; for example, you budget an extra amount of money for the new interest rate. Therefore, when looking ahead, decide what you expect and can, or cannot, anticipate. Think not that just expecting will solve problems. On the other hand, when anticipation is impossible—like stopping a coming rain storm—do not sweat it out as though you were responsible for it.

The fourth rule is to convert time estimates to effort, accomplishment, and money estimates, and *vice-versa*. This means, for instance: A person may say, "Oh, I cannot walk five miles a dav. that is too far!" And if you ask the same person, "Can you take an hour's walk a day?" He replies, "Of course, I enjoy the exercise" Thus, an hour's walk may cover the distance of five miles. To take another instance. A man says, "I am too tired to make that telephone call." But if he converted the effort to time, he would see that it was really easy. Thus, he would say, "I am tired, but the call will take less than one minute to place, five minutes to talk, and five seconds to hang up. This is only a six minute job, so I will do it." Therefore, do not be satisfied with an estimate in terms of only one or two of the three key elements: time, money and effort. Instead get estimates for all the three.

The last, but not the least, rule is: "Cascade your energy and do not kill time". Cascade your store of energy by doing difficult or creative tasks when you are fresh, and keep the routine and mechanical jobs for your low-energy periods. This means if you find you are freshest in the early hours of morning and again in the late afternoons, then the best course would be to use these periods for creative tasks. And when you experience your creative energy fading, at once switch to jobs involving research, talking to people, and attending meetings. Later, when you are tired, you can handle the little tasks of paying bills, answering routine mail and so on. In his book, *How To Gain An Extra Hour Every Day*, Ray Joseph says: "When waiting is inevitable, do not consider it time you have to 'kill'. Take advantage of these minutes." You can use them for reading, making notes, relaxing, or breathing and physical exercises. Therefore, try to adjust you work to your personal "cascade" of energy. When a slack time comes, do not waste it by "killing" time. Instead utilize it for something useful or for at least real resting.

ANTS

by Randhir Khare

They killed to eat. The only other alternative for her was the whorehouse, disease and death.

THE pelican jerked back its head as a hard clay pellet smashed into its skull. It stretched its giant white body to fly but its muscles sagged and the bird crashed through *sundari* leaves on to the wet mud. Ajitesh stood over the bird, trying to grab its neck.

Blood speckled the roots on the jungle floor. A light shaft fell through the leaves on to the warm roots standing up like the veins in an old man's temple. Suddenly the bird went limp.

"Feather the bird," he said to his sister. She didn't move, only watched the cold blood-shot eyes of the pelican under its half-closed lids. "What are you staring at? Don't waste time, those forest guards will get us. Remember how they broke Gautam's hands. This is no time to worry over a dead bird."

She sat down on a stone near the bird. A bitter taste filled her mouth. She swallowed. Out from under the scales of leaves, red ants the size of her thumb-nail "feelered" their way towards the mound of feathers. They crawled up the beak and walked over the glazed eyes. They were scout ants, preparing the way for the armies to come.

She had always been afraid of ants. For her, they were the messengers of death, the ultimate humiliation. The morning after the storm when the goat shed collapsed, ants had reached the dead she-goat even before Aarti had. They marched along the wounds on its sides, climbed in and out of its ears, made their way down the nostrils, between the hooves, nibbled at the teats swollen with milk. Rank upon rank arrived, wave upon wave. Out of the black mud, from under the soggy palm leaves strewn by the storm, from old wood and cowdung cakes, red-brown and merciless.

Often she dreamed of ants. The night before her mother died, she had seen her as a giant ant walking at twilight along the jungle's edge. They found the woman's drowned body a mile up the waterway, the next day; ants had stormed her broken mud vessel of toddy lying among the stones.

Her father had befriended the ant hill behind the hut and nurtured it with sugar and milk kneaded into tiny fragments. He disappeared one day. His work at Bishaas Mashai's farm lay undone for weeks. Many say he had taken his own life because he felt alone. Aarti dreamt he was hidden in the ant hill. She soaked it in kerosene oil and set it ablaze.

After selling their hut and the patch of clay around it, they left Gosaba. Two miles down the waterway from Baghpara they bought a patch at the edge of the jungle, living off fish. Outside, from the branches of the jackfruit tree in season, a rain of ants fell with the breeze.

More than a roof- permanent protection.

The untamed mangrove jungles of the Sundarbans throbbed with tiger, cheetal, water birds, fish teeming the delta streams... and ants, beneath stones, leaves, bark, wherever there was life, wherever there was death.

"HOW can we go on like this?" he asked. "Understand one thing. This is our only chance. We must live by poaching too. We have to kill to live, it's as simple as that. We've got nothing left. There's only you and I. We have to survive. Look at me Aarti, are you crying?"

"No, I'm not. We are not animals that we should live this way. Let's go to Canning."

"You'll become a whore and I'll become a pimp, there's nothing else we can do. There is no money in Canning. Before you were born, we spent many years there. Father worked in a grain shop. We lived beyond the station. The marketplace was full of dirt and full of death."

"Everywhere you go, there is death."

"Here it is more open. We can survive."

"Is it important?"

"Yes. We must go on."

"Everywhere you look, life is *just* going on and on. Nothing changes. People who live here are no better off than ants."

"You're feeling alone. You need a man and a family."

"I can't stand this jungle anymore. Look around you. Crooked rotten roots, black mud that smells of a *murda* burning at the ghat, brown sickening water and rocks splashed with bird's droppings. And everywhere you look, ants. Can't you smell it? Everyone's dying. We can't get away from here..." she picked up a stone and flung it into the trees. A flock of pelicans exploded out of the green.

"Aarti, don't walk into the open, we might be seen. *Hai Bhogobaan...*"

"Don't call out to Him. Nothing will answer you. Only the cry of birds." She picked up another stone and helplessly swung it into the air. She walked back to him. She was crying. "Let's go to Canning."

"Killing a bird is easier than killing a man," he said after a silence. "It's also safer. We must live where we are living, fight till it's time you live with your husband."

She smiled to herself. "Husband. It's like dreaming of a world with no ants..." Aarti broke off as the vibrations of a motor boat broke the stillness. She scrambled to her brother's side, trampling on the upturned sharp edges of *sundari* roots, cutting the side of her foot. Blood started as the skin opened.

"Slowly, quiet, sit down here on this stone," said Ajitesh. "They mustn't hear us. Keep your head down." The sound of the motor approached and ceased close by. "They've cut the engine. They might be suspecting something." A red trickle of blood found its way into the mud. She watched the ants infest the pelican. A silence had fallen everywhere...

"They're in the clearing now. Keep your head down. Stop bothering about ants. Look, there they are. What's Bhoja the BSF man doing with them? He has a rifle on his shoulder."

"What will happen if they find us here?"

"Knowing Bhoja, he might even rape you."

Aarti's fifteen-year-old body stiffened. The pelican collected more ants.

WITH the sun behind the treetops, the motorboat moved away around the bend. Ajitesh dragged the bird to the water's edge and submerged it for some time. Clouds of red ants floated to the surface, struggled, then drowned.

They stretched its stiff wings and feathered the bird. Swiftly the knife skinned, gutted and dismembered the body, as Ajitesh quietly whistled to himself. A sweet smell of fishy meat hung in the air as they dragged the dinghy hidden among the bushes out into the water. Shadows followed them as they moved.

"The season of birds has only just begun," said Ajitesh, looking up at the darkening sky. "Before the sun rises and sets seven times, the jungle will be crying with water birds. Then I can use the net, the gum-trap, the smoking bamboo..."

"What's the easiest and most painless way to catch birds?"

"Nothing is painless, least of all catching birds. The net trap for instance. When we stretch the nets across from tree to tree we tie hooks of different sizes along its length and breadth. A bird trapped in the net is snared by sharp hooks as it struggles to get free..."

"How does it die?"

"When you hold the head between the thumb and forefinger and twist it around till you hear the bone snap... The gum trap is no gentler. Wood gum smeared on sticks hung up among the leaves stick to the bird on contact, even a short struggle further spreads the glue along the wing feathers. Then you hold..."

"Yes, I know what happens then .."

"The smoking bamboo trap is the least troublesome. We use a hollow bamboo. At night during roosting the mixture we burn in the mud *chatti* sends smoke up the wooden pipe into the treetops, suffocating the birds." Taking his sister's silence for interest he continued, "But this is all merciful when you think of the way they kill wild boar. They pack gunpowder and flint and metal pieces into a ball and cover it with *heeng* and flour. This is strewn along pig-trails. When a boar bites one, the bomb bursts and blows off half its head, I have seen a boar still half-alive running in circles..."

"Please. No more. I fear the season of birds," she said, breathing deep. "It only brings more ants; it brings the smell of wet feathers and blood..."

"It brings food."

"We lived on fish for so long and we were happy."

"Catching fish along the shore near Baghpara meant catching only *tengras* and eels and crabs and prawns. Enough for us to eat. Not enough, good enough to sell."

"But then we had enough. Why..."

"But cooking costs money. We need oil, *masala*. We need tar to patch up the boat. We need... there is money in poaching. Feathers are expensive. Ghosh Babu at Gosaba pays well for it."

"I cannot stay alone at home anymore. There is nothing. Nothing. Nothing for me to do. Wash the utensils, feed the goats, cook and wait. Sometimes I think you will never return. I feel so alone. I

imagine the guards have got you. I imagine you've been bitten. And strange things keep happening when I'm alone."

"What?"

"Well, I can't explain. I feel it and see it in the air around. That night you didn't return, I sat and waited on the stone outside the hut. Some jackals were crying near the lantana bushes. When I lifted the lantern towards them, their eyes glowed. Then I saw someone stand up. She was short and slim like Mother and she kept calling my name. Somewhere a *kaalobok* was calling from the tall grass near the waterside. And this woman never came near. She stood there and kept calling me. Ajitda, I swear, I saw her. She told me to feed sugar and flour to the ant hill near the jackfruit tree. Don't leave me alone."

"That's why I brought you along with me today."

"No, you are afraid I'll run away."

"You are imagining things."

"Where would you go if you ran away?"

"To Canning," she said, "to the whorehouse, disease and death." She laughed softly. She couldn't see his face but she knew he was hurt by her joke. So she tried to make him smile." You can marry then. It's time now, I think, for you to marry. You are many years older than I. Okay, *baba*, it is a joke."

AROUND them the jungle was festooned with fireflies. The smell of *sundari* roots, green mud, fish, water and animal dung grew. The waterway wound between wooded islands. The tide had fallen. The boat clicked and creaked. Oars sliced and pushed the water.

"Who's there?" a voice shouted from the foliage on the left. Aarti toppled into the water with a start. She splashed frantically like a wet bird and began hauling herself in when a torch beam scanned the water till it reached them.

Someone was holding the torch at an angle. The light threw him into shadow and lightly splashed three crouched figures behind him. They were skinning a *cheetal*, Ajitesh was sure, he had seen the antlers.

"Who's there?" the man shouted again. It was Bhoja, the Border Security Force guard with his rifle slung on his shoulder. "What are you doing here?"

"Shut up Bhoja, put the torch off, they'll see the *cheetal*," rasped one from the group.

"Let him go," said another. "Must be harmless. Collecting firewood."

Bhoja lowered his torch and turned around, "You are the forest guards, not me. I'm just trying to help." He didn't like being told to shut up. He walked down towards the bank and called out to Ajitesh again, "Hand over your weapons."

Aarti lay shivering in the boat. The Security Guard hadn't seen her. "Are you alone?" he called. Ajitesh didn't answer but quietly dropped his catapult with the pelican meat into the water. "Bring your boat alongside." The dinghy came closer and Bhoja saw the girl. "And does this belong to you? Stand up, woman." He flashed the torch across their faces. "You live nearby?"

"Two miles from Baghpara."

"How is she related to you?" Silence. "Speak up man, how is she related to you?" Bhoja kept the torch on Aarti, on her frayed sari, her small breasts, her bony hands, her large ungainly nose and close set eyes.

"She's my wife," said Ajitesh.

"Married? Liar."

"I bought her. She belongs to me."

Bhoja didn't listen anymore, he waded into the water to the side of the boat. There was no resistence. Her breath was caught in her small throat. Ajitesh couldn't move. He didn't know why. He wanted to do something. Smash the man's head with his oar. Make him into pulp. Break his neck like a bird. "You swine," was all he could say, and that too, under his breath.

IT was only when he heard her crying that he was propelled out of the boat. Thrashing through the waist deep water, he stumbled on shore. The torch lay on the ground lighting up grotesque shadows. Ajitesh snatched the rifle from Bhoja's loose grasp. The Guard's reflexes were slow at that moment. His rifle butt hit him between his shoulders and he blacked out, falling heavily.

"Don't Ajitda, don't kill a man," his sister was crying. The group arrived through the thicket and froze when they came into the pool of light the torch flung on the ground.

"If you kill him," one was saying," you will be hunted like an animal. We know you. We will get you."

Ajitesh pressed the trigger. The rifle jumped in his hand. Bhoja's knee-cap opened like a cauliflower. "You come closer," shouted Ajitesh, "and I'll make holes in you." Suddenly panic gripped him. He did not know how to work the bolt. The rifle was useless. He edged away slowly with his sister close beside him into the undergrowth. Bhoja rolled towards the waterside, striking a tree trunk. He was breathing like an old boat.

"Don't you come any closer or I'll shoot," rasped Ajitesh, backing into the dark. The night air was crowded with water-birds crying. Wet feathers spiralled down.

"They've gone," said one from the group and scrambled towards Bhoja where he lay in a moaning heap.

"Sink the bastard's boat, Bimalda, give me the axe. Give it here. I want to do it."

"I'll do it," Bimal said and swung the axe into the side of the dinghy. The vessel spun around, lurching under the blows. Each time the blade hacked into its side, it tilted towards the water's skin. Suddenly the skin split and the splintered wreck entered the opening and disappeared.

A pelican slid overhead into the trees beyond. Somewhere a night heron called. The fireflies returned. The water began wheezing softly again. ■

A WEALTHY Chicago woman sat for a portrait and when the artist was finished she expressed her displeasure. "I don't like it at all. The last time you painted me, I was gorgeous."

"Forgive me, Madam," he said, "but when I painted that picture, I was ten years younger."

FIRST grader. "We learned to say 'Yes, sir' and 'No, sir' today."
Father: "You did?"
First grader: "Yeah!"

THE company president told his sales manager, "To lessen consumer criticism, I've decided to offer a 10-year guarantee on our product."

"But, chief," the manager protested, "our product falls apart in three years."

"I know," said the president, "but we'll print the guarantee on paper that falls apart in two years."

A BUSINESSMAN who couldn't sleep nights, had tried several remedies, but nothing helped. So finally, he asked his doctors: "What about this twilight sleep treatment I've been hearing about?"

"Oh, no," said the doctor. "We just use that for labour."

"Well that sounds pretty one-sided to me," the executive complained, "haven't you got anything like it for management?"

"WELL, how is your insomnia? Did you take my advice?" Dan asked Jack.

"Yes," answered Jack, "and it was rotten advice, too."
"Why, what happened?"

"Well," explained Jack, "I got into bed and started counting sheep jumping over a fence. When I had counted to 24,510, I was so determined to make it 30,000 that I had to get up and make myself some black coffee in order to keep awake!"

AN overworked supervisor came down with a severe cold. First his voice became slightly hoarse, then extremely hoarse. Finally it gave out entirely. To show that he had not lost his sense of humour, he placed a sign on his desk that read, "Sorry, folks. Sound's out."

One of his employees, after looking at his miserable and haggard face placed a second sign beside the first: "Picture is terrible, too."

SPEAKER after speaker after speaker addressed the audience. Boredom replaced discomfort, which in turn increased the boredom. Therefore, when the master of ceremonies rose and started, "John Jones will now present his address," that is exactly what happened. Jones rose, walked to the rostrum, and spoke: "I live at 1914 Stoker Drive. Drop in for a visit." Jones returned to his seat. The audience applauded wildly.

THE man and his son came out of a pet shop with the youngster carefully and proudly carrying a covered box. They boarded the bus for the trip home, and just as they had settled themselves, the youngster asked in a voice loud enough for everyone to hear: "Daddy, is my kitten a man or a lady?"

"Why, it's a man-kitten," replied the father.

"How do you know?" asked the youngster.

Everyone heaved a sigh of relief when the father spoke up: "Well you can see he has whiskers, hasn't he?"

"He is neither a 'yogi' nor does he intend setting any world record—he is merely on an 'indefinite strike'."

A TEACHER was taking her first golf lesson. "Is the word spelled "Put" or "Putt"?" she asked the instructor.

"Putt is correct," he replied. "Put" means to place a thing where you want it. "Putt" means a vain attempt to do the same thing."

A SHOPLIFTER, caught stealing a ring in a jewellery store, pleaded, "Don't call the police. I'll be glad to pay for it."

When the cashier presented him the bill, he said, "That's a little more than I planned to spend. Could you show me something less expensive?"

AS the young stalwart entered the clubroom he received a hearty greeting from most of the members present. "He seems very popular," a visitor said to a member. "Is he one of your prominent sportsmen?"

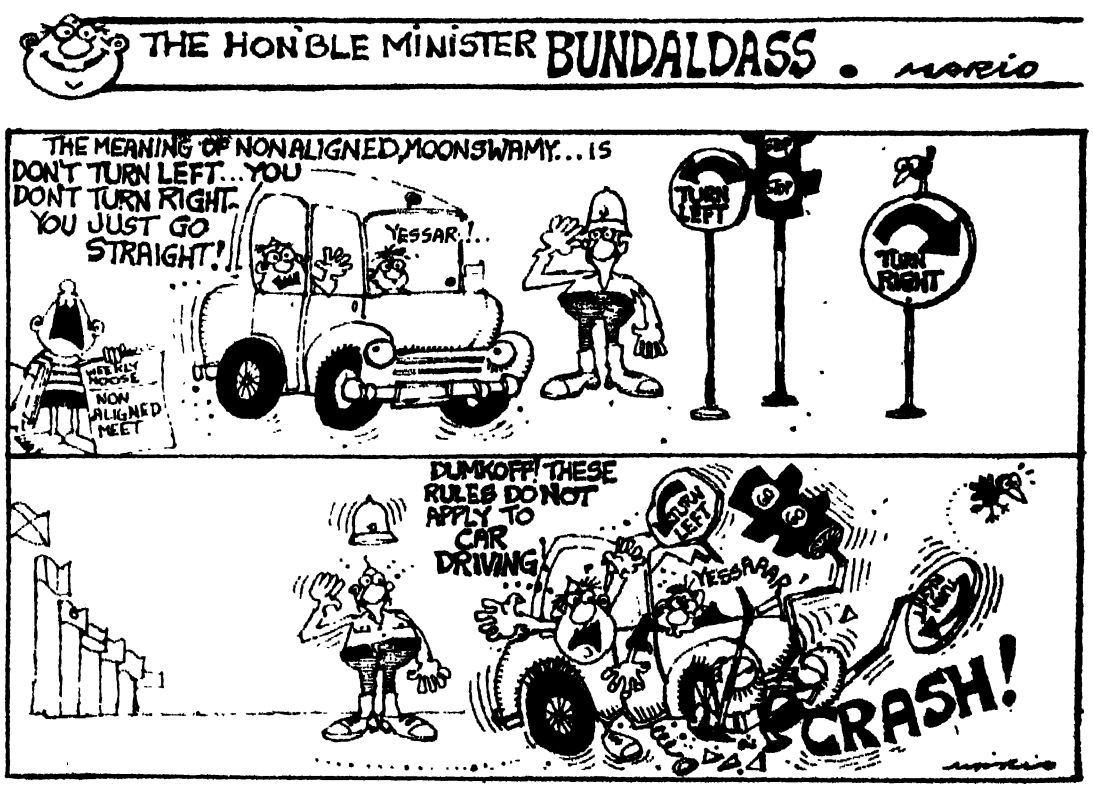
"No, but he distinguished himself by a bit of quick thinking, the other day when the circus was here. The tiger escaped, and the young man..."

"Saved someone's life," interrupted the visitor eyeing the hero admiringly.

"No, while everybody else was screaming and rushing about to escape, he walked coolly into the tiger's cage and locked himself in."

IF lawyers are disbarred and clergymen defrocked, doesn't it follow that electricians can be delighted, musicians denoted, cowboys deranged, models deposed, and drycleaners depressed?

A FOOTBALL coach called his players together in the locker room before the first big game of the season. "Now remember, men," he said, "Football is a game which develops courage, leadership and, above all, individual initiative. Now get out there and do exactly what I tell you!"



THE man's car stalled in heavy traffic as the light turned green. All his efforts to start the engine failed and a steady chorus of honking behind him, made matters worse. He finally got out of his car and walked back to the first driver. "I'm very sorry," he said, "but I just can't seem to get my car started. If you'll go up there and give it a try, I'll stay here and blow your horn for you."

A FELLOW bought a country estate and turned it into a game preserve. Pestered by persistent poachers, he posted a series of "No Trespassing" signs without effect. Finally he put up his warning: "Anyone Entering This Property Without Protective Clothing May Sustain Radiation Burns."

Suspecting something lethal in the briar patch, the sheriff confronted the landowner with, "Just what does that sign mean?"

The man replied, "It means anybody coming on my place naked is likely to get sunburn."

THE editor of a newspaper was questioning a reporter who had covered a political rally. "What did the candidate say?" he asked.
"Nothing," said the reporter.
"OK," said the editor. "Keep it down to one column."

AS the judge was stepping down from the bench one day, he tripped on the top step and fell all the way to the floor. An astonished court attendant rushed to his aid, and said: "I hope Your Honor is not hurt, sir."

"No," said the judge, "my honor is still intact, but I think I've broken my leg."

THE editor of a small weekly newspaper, incensed over several government bills which had recently been passed, ran a scathing editorial under the headline: half our legislators are crooks.

Many prominent local politicians brought pressure on him to make him retract the statement. Finally, he agreed and ran an apology under the headline: Half our legislators are not crooks.

YOUNG Tommy's parents were trying to teach him the value of money. To cut down on his spending, they made him keep an exact account of how he spent his allowance each week. One day, he remarked to them, "You know, since I have to write everything down, I really stop and think before I buy things."

The parents were congratulating themselves silently when Tommy continued, "I just don't buy anything that's hard to spell."

SALESMAN: "I got two orders today."
Boss: "Splendid. What were they?"
Salesman: "Get out and stay out."

COMPUTERS will never replace man entirely until they learn to laugh at the boss' jokes.

ONE of the greatest mysteries of life is how the boy who was not good enough to marry the daughter can be the father of the smartest grandchild in the world.

WANTING to test her children's powers of deduction, a teacher told them to write down what they would think if they went into a room and found cobwebs there. Each child in the class, except one, gave her the answers she had hoped for: That the room had not been dusted lately; that it had not been in use; that the person responsible was dirty and lazy. Jennifer's answer was sublime in its simplicity and refusal to jump to fanciful conclusions. She wrote: "A spider had been there."

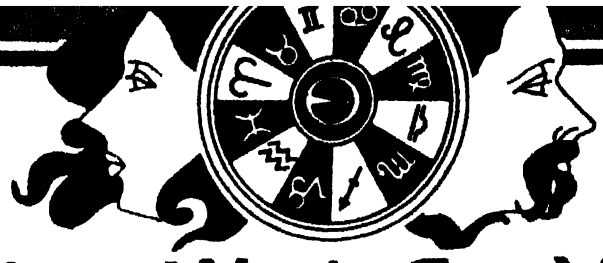
BEAU PEEP — the adventures of Legionnaire Beau Peep



Next Week For You

S.K.KELKAR

CAPRICORN
(Makara)
Dec. 21-Jan. 19

Domestic matters should not be allowed to interfere with career/business activities. Respect the advice of seniors while faced with responsible tasks A temporary separation from loved ones cannot be ruled out. Invest carefully in land, buildings and the agricultural sphere. Midweek your must slow down activities.

AQUARIUS
(Kumbha)
Jan 20-Feb 18

An outing either on duty or pleasure will be an ideal proposition this week. Don't displease seniors on petty grounds. Generation gaps should not be allowed to complicate domestic matters. Writers and artists will be at their best this week. Scientists should not be in an unnecessary hurry to air their findings.

PISCES
(Mina)
Feb 19-Mar. 20

Finances and career look up from this week onwards. A trip abroad will be arranged without difficulty. Rely only on banks and reputed financial institutions to meet your requirements. Brothers and sisters must be taken into confidence during important discussions regarding property and family affairs.

ARIES
(Mesha)
Mar 21-Apr 20

Your constructive approach to all things and a sporting outlook on life will be much appreciated. Sportsmen and army and police officials will be at their best this week. You will willingly accept an invitation to join a club or contest an election that comes your way midweek. Your purse will be strained.

TAURUS
(Vrishabha)
Apr 21-May 20

Worries and anxieties concerning your life or business partner will engross you considerably. Debts and liabilities will go on increasing and the flow of funds will be insufficient to meet your requirements, at least for the time being. Labour problems may frequently disturb industrialists and factory owners.

GEMINI
(Mithuna)
May 21-June 20

This is a week for socialising and taking the fullest advantage of group activities to better your career and business prospects. Elders will be busy finalising a long-delayed marriage. Your comfortable situation may tempt you to go in for the purpose of a lot of luxury goods and valuable articles.

CANCER
(Kataka)
June 21-July 20

A pleasant and happy period is ahead of you. You will lead a team or a committee and establish yourself as a group leader. A large gathering of irate citizens will inspire you to deal with the local problems. Be sympathetic to their cause. Respond to friendly overtures from others.

LEO
(Simha)
July 21-Aug 21

The events that take place this week will not only enhance your status and position but bring you greater responsibilities with more powers to execute Heads of organisations and management experts will shine in their respective fields. Youngsters should make every effort to go abroad now.

VIRGO
(Kanya)
Aug 22-Sept. 23

Problems concerning the younger generation will now come to a head. Hypertension and diabetic patients should adopt preventive measures right away or else their conditions will deteriorate. Older persons of the opposite sex will develop unnecessary prejudices against you and cause all much concern.

LIBRA
(Tula)
Sept 24-Oct 23

Your keen sense of justice and fair-play is likely to be offended and you will fight against it just to prove your point. Physical and mental exertion will exhaust you considerably. Try to restrict expenses on unnecessary luxuries in the next few weeks. Sportsmen and artists will be at their best this week.

SCORPIO
(Vrishchika)
Oct. 24-Nov. 22

Don't break existing ties while forging new ones. The generation gap should not be allowed to widen beyond a certain limit. Adopt conciliatory methods to prevent a break-up. Labour problems are likely to assume serious dimensions. Those in service may get lighter assignments.

SAGITTARIUS
(Dhanu)
Nov. 23-Dec. 20

A lucky and happy period is ahead of you. Hobbies and pastime interests will flourish. Love ties blossom and finally turn into a happy union. This is a week for socialising and taking part in public meetings. Health will be delicate and you must rest and relax as much as possible. Business will be brisk midweek.

STAR FOCUS — This Year For Ariens

Persons born between March 21 and April 20 come under this sign of the Ram. Ariens have abundant energy, an enterprising spirit, are great lovers of freedom, warm hearted and somewhat combative and erratic, as well.

During the current year, Saturn is going to transit in the seventh and eighth signs from the birth sun which betokens restrictions and limitations. It suggests that most of you have to move cautiously and carefully throughout the year. Any hasty actions mean frustration, disappointment and dislocation in career, business or vocation. No changes are advisable unless someone leaves you high and dry in the middle of the year.

The younger generation should seek stability in career and elders should look after their health. The middle-aged will have to bear various burdens with patience and tenacity.

There are indications of romance and a gay life between July and October. This period brings some sort of consolation but you must be prepared to give it all up in the face of unusual developments between November 1983 and February 1984. Those Ariens born at sun-set will be luckier than the rest. Those born at midnight should curb speculation and should not take any out-of-the-way chances. Those born at high noon will have a tolerably good period provided they are sociable and have a sporting outlook on life and follow a policy of give and take.

Sunday, March 20

Restrict your ambitions to your present activities and carry on with the routine. Take care and be tactful in all your dealings. Guard against possible ill-health. Curb investments.

Monday, March 21

You will be weighed down by excess burdens and will be under tremendous pressure. In desperation, you will venture out on a new activity in the middle of the year and that may prove unprofitable.

Tuesday, March 22

You are likely to be over-optimistic this year. You may be caught in the company of undesirable friends and associates who will embarrass you and do nothing for your status and prestige.

Wednesday, March 23

You will be keen on widening the horizon and your field of activities. Till May and again in November/December you will achieve something worthwhile. Mid-1983 is a tricky period when new changes and experiments must be avoided.

Thursday, March 24

This is going to be a year of steady progress. From now onwards until the end of May you will expand your business. Similar luck does not hold good between July and September.

Friday, March 25

An interesting and stimulating year. Do not neglect seniors, elders and those in authority between July and September. The last quarter of the year is good. Youngsters will indulge in romance in July/August.

Saturday, March 26

The year promises several opportunities to re-organise your business. You will adjust well to the swiftly changing circumstances. Until May things will go your way. Don't be in too much of a hurry especially in April, August and November.

SEXES

The Two Pay Cheque Couple

By C. Raju

A man will even face eternity if only someone will cater to his ego. The more a woman appreciates a man's abilities, the greater the chances for him to succeed. Boost up a man's ego and he will appreciate the gift for the rest of his life.

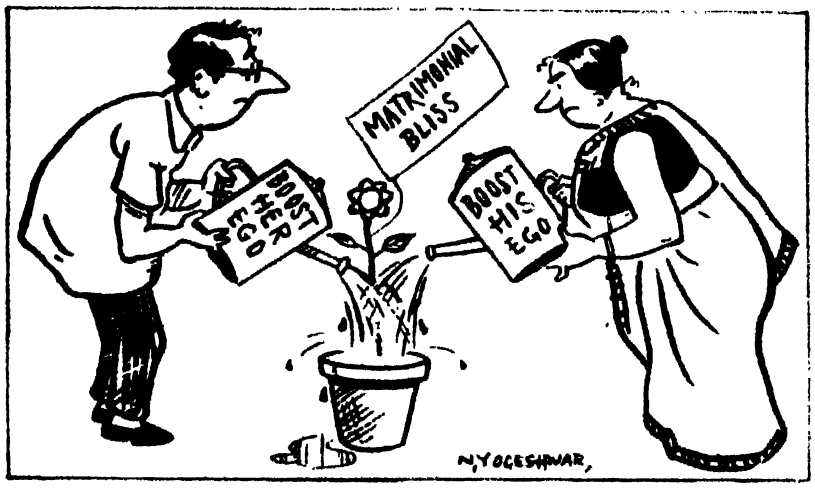
MRS. JOSHI wonders what has gone wrong with her Husband. There was a time when he used to appreciate every little suggestion of hers in buying curtains, bedsheets or clothes for the children. Now he does not volunteer to help her in anyway. He frowns ominously if she so much as straightens his wrinkle or pushes back his curls. He just grumbles over every little thing. And this has happened ever since Mrs. Joshi started working as a stenographer to supplement her husband's income.

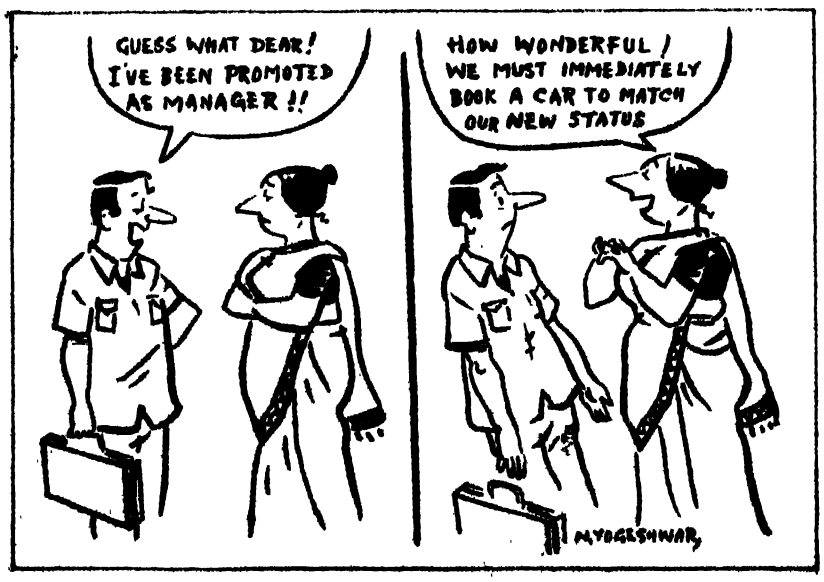
Though Mr. Joshi apparently accepted her decision to work, he could not reconcile himself with her decision emotionally and hence all these tantrums. A working wife makes him feel inadequate, as he was once the only bread-winner in the house. That is why he has become defensive and over-sensitive to real or imaginary situations that threaten his masculinity. Mrs. Joshi undermined his ego further by nagging and criticising which are generally known to be the prerogatives of a woman. In a complex and competitive society an average man is subject to continuous assaults on his ego. This makes him develop what psychologists call a 'defence mechanism' which upsets whatever quantum of harmony that may prevail at home. Every woman has her own ego to look after but psychologists, (who are invariably males,) believe that the male is far more vulnerable.

Package Deal

In earlier times a man's life was simpler. It was worth while if he could bring back enough to run the house. But today a man has to walk a tightrope over an abyss which threatens to engulf him any moment. He is not content with being merely a wage earner. He wants to be as well off as the next man. He wants to rise to the top of his profession. This cut-throat competition causes a great deal of tension and punches holes in his ego which he tries to fill up with similar attitudes as Mr Joshi's. Apart from this, a modern woman expects her husband to be a carpenter, a mason, an electrician, and compassionate father, an understanding brother and the life and soul of the party (which she loves to throw to boost up her ego,) and ofcourse a considerate husband at night!

It is hardly possible for any man to have these composite combinations. When he returns home his primary need is a balm for his bruised ego and what he gets is complaints galore, nagging and criticism. The most delicate and often intractable situations involve money, children and sex. A husband's income is very important to him. It often represents the barometer of his success. Sometimes it may happen that a husband proudly declares: "Shanta, I have become the Manager of International Ltd." This may often set in various chain reactions and a wife like Shanta must learn to cope successfully with Mr. Rao's success. A man's promotion may often mean extra strain for the wife. The husband has to face new responsibilities and is under greater stress. The wife has not only to cope with the stress of her husband but also with the jealous whispers of Gauri, Nalini and Vimla at the club. The boss will often hint that now that he has become the Manager, he should not be so chummy with his former colleagues. There is a hierarchy almost like a caste system between executives and employees in the lower cadre. As we often learn, the employees of the firm being one big happy family is just a myth. Often the wife has no choice but to cut off friendships with her former friends who are wives of subordinate employees.. At times a woman may feel that she would rather have her husband than his success. In such a situation it is necessary that husband and wife have a frank tete-a-tete and decide on their priorities; whether they aspire for success or family harmony. The proverbial tale of the cake which cannot be kept and eaten arises and one must decide between the two. A man's ego suffers appreciably, if his wife overspends or yearns for luxuries that are beyond his means. . This becomes even more destructive if the wife makes her husband feel inadequate by flaunting her own contribution to the family fund. Every man longs for respect and obedience from his children. Since both are at a discount today, he may very easily feel incompetent in some way.





Sanctum Sanctorum

The bed-room is a sanctuary where pleasure and tragedy lurk. And the biggest challenge to a man's ego takes place in bed A generation ago men were brought up to expect women to be mere instruments of pleasure, a woman's needs often went unheeded. Sometimes the wife might be tired or smarting from a quarrel with the grocer or a neighbour,or just upset by an unsavoury remark and would prefer to be left alone. This perfectly reasonable behaviour however, causes a severe dent in the man's ego. And he goes about sulking like a beaten dog—howling that he has been maltreated.

In such cases an understanding wife can render a vital service to herself, her marriage, and to her ego-stunted husband. Her first concern nevertheless should be to take the pressure off when her husband is in some kind of stress. A frank talk, (but not too frank,) will often work wonders. Sometimes a man may not like to tell his wife that he had a tiff with the boss or that he has failed to clinch a deal. A wife's job is to smoothen out her husband's crinkled ego.

A wife will prove prudent if she postpones all decisions that may involve arguments, until her husband is relieved of stress. Marriage may be an imperfect alliance striving for perfection, and both the wife and the husband may have their faults. Nobody is perfect. What is needed is a positive attitude on the part of both. A husband may annoy his wife in many ways, but that hardly gives her reason enough to enumerate and tabulate his faults. Its worth remembering that a man's life may be transformed by an honest expression of appreciation from his wife. The same thing is applicable to the woman as well.

Tact as we are well aware, is required both in business and in marriage. Whenever you quarrel, attack the deed, but not the person. Do not say: "You are mean and hateful." Isn't it better to say: "What you said is mean and hateful." And the golden rule is not to drag previous resentments into your argument. It is believed that men usually have more difficulty in talking about themselves and their frustrations than women do!

What about a wife's ego then? Is it to be submerged or annihilated? No certainly not. Everyone is entitled to his or her ego. It is only natural that a husband will be able to help the wife better, if his own ego is healthy. In the long run, it will surely pay good dividends if a wife learns to take the back seat, when her husband's ego is under stress. It is necessary for a wife in the interest of marital harmony to boost up her husband's ego and to give him a vote of confidence whenever required. At least the returns are often tempting..... the Kanjeevaram sari, perhaps? ■

They're both wearing the same thing. Daddy's T-shirt. The young one's T-shirt. Both made from Cashmilon, the amazing acrylic fibre. For a range of fabrics. For shirtings and T-shirts—light and comfortable. Totally moth-proof.

Cashmilon acrylic fibre can also be made into suitings and dress materials, hosiery and knitwear. All of them colourful. Light. Crease-resistant. Drip dry.

Next time you go to buy fabric, ask for Cashmilon blends.

MAKE MONEY ON SHARE MARKET

up to 30% off

in 12 weeks you could be dealing in shares more profitably than 6 million other investors and professionals!

HOW IS THIS POSSIBLE?

Simply through a unique 12 week home course in easy lessons, which tells you step by step: what are shares and debentures, how to buy and sell them, balance sheets; share market mechanism, its anamolies and pitfalls; why share prices rise and fall, price trends and how to identify them and locate investment opportunities with prospects of multiplying capital from 2 to 10 times or more, thereby beating inflation. And how to apply your lessons to current share market conditions. You also get a list of selected growth shares with prospects of capital appreciation Your questions answered. Written for the layman, by G. R. Mansukhani, the well known consultant in shares and commodities.

Even without previous know-how and with as little as Rs. 1000, you could be profitably dealing in shares in 12 weeks' time!

WHY DEAL IN SHARES?

The share market assumes greater importance now, as never before, because of restrictions on landed property and gold. And with inflation raging, fixed deposits, pensions, insurance and other safe investment plans have ceased to be ideal investments for economic security.

India's share population is rising. But today at 6 million, it is only 0.9% of the country's population, as compared with 6 to 12% of other countries.

Our share population could therefore increase very rapidly, thereby creating big demand for shares and its market services and vast opportunities for the more knowledgeable investors and professionals. And as Disraeli has said. "... the most successful man in life is the man who has the best information"

Satisfaction guaranteed, else money refunded. For details please send 70 paise self addressed envelope (23x10 cms.)

This Week's Bridge
Calcutta Invitation Tournament-IV.

A PAIRS event preceded the Invitation Team event at the International Invitation tournament organised by the Saturday Club, Calcutta, and the West Bengal Bridge Association last January at Calcutta.

Several top pairs from all over India, pairs from Indonesia, Pakistan and Bangladesh, and the leading pairs of Bengal comprised the starting field. Most of the leading pairs made it through the First elimination, except for the Pakistanis Fazli—Isphani and Bengal's Kamal Roy—Subinoy Ghosh. There were a few shock eliminations in the semifinals, the biggest surprise being the elimination of Pakistani super stars Zia Mahmood—Masood Salim. Jimmy Mehta—Sharad Mhatre and Govind Singha—Prashanto Ghosh were other notable casualties.

In the 32 pair final field the favourites were Robi Roy—Sukha Ranjan Ghosh and the top Indonesians Sacul-Waluyan and Aguw-Lasut. But a less fancied pair got into the lead after eight rounds, and led all the way up to the end, winning eventually by over four top boards—Vigyan Gupta and N. Acharjee. This Delhi-Calcutta combination, playing together for the first time, beat several pairs of International renown to carve out an incredible win. Vigyan Gupta, in particular, according to his partner, played as well as he has ever done in his life. High praise indeed, and considering that Vigyan is about 75 years old, this must be an achievement without parallel.

One of the most interesting deals in the finals was this one.

West	East
♠83	♠AQ6
♥A64	♥KQJ1053
♦Q8752	♦AK63
♣AQ3	♣Void

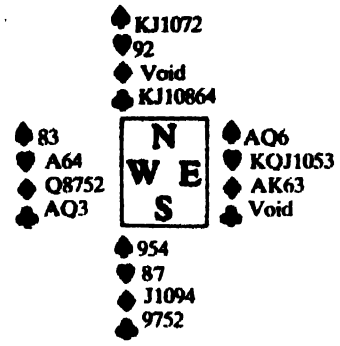
Jaggy Shivdasani and I played this board against Sukha Ranjan Ghosh, West, and Robi Roy, East. The bidding, with North dealer and neither side vulnerable, went:

West	North	East	South
	P	1C (i)	P
1D (ii)	2C	2H	P
3C	P	3D	P
4C	P	4S	P
4NT(iii)	P	5C(iv)	P
5NT	P	6D	P
6NT	P	7H	P
P	D'ble	P	P
P			

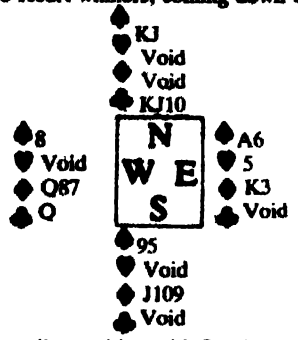
(i) 1C: 18 up
(ii) 1D:) Either 0-7, or 8 up Diamond suit.
(iii) Roman Key Card Blackwood
(iv) 2Aces, King of Diamonds, no Queen of Diamonds.

During this auction, which seemed a pretty confused one at the table, and indeed it was, Suku Ghosh needed to cue bid Clubs to clarify that his One Diamond bid was the 8 up Diamond suit variety, and cue bid again to show first round Club control, thereafter being unable to show his Heart fit until he bid Five No Trumps confirming all Aces. At this stage, I feel that Robi should have bid Seven No Trumps, since Suku's Five No Trumps, with the Diamond suit agreed, promised not only all the Aces but also the Queen of Diamonds. Be that as it may, the auction subsided in Seven Hearts when Jaggy, North, Doubled.

Even now Robi might have pulled to Seven No Trumps, but the earlier confusion probably prevented him from doing so. After the Double, I had an easy Diamond lead as South, which Jaggy ruffed, for down one. But if Robi had moved to Seven No Trumps, they would have got a top, because a player of Suku Ghosh's calibre—and that is very high calibre indeed—would have made the contract easily. This was the whole hand:



Jaggy, North, would certainly have led a Spade against Seven No Trumps, putting pressure on declarer at trick one. But after the Lightner Double of seven Hearts, more or less pin pointing the Diamond void in the North hand, declarer needs the Spade finesse, so Suku would doubtless have taken it. And now there is an easy Double squeeze for thirteen tricks. Declarer cashes the Ace of Diamonds just to confirm the Diamond void, the Ace of Hearts, the Ace of Coubs pitching a Diamond from dummy, and runs off four more Heart winners, coming down to:



or a similar position with South guarding the Diamonds, North Spades and Clubs. When dummy's last Heart is played, South must discard a Spade, to keep the Diamonds guarded. Declarer discards a Diamond, since that threat is no longer required. North discards a Club, painlessly enough, but when the King and Queen of Diamonds are cashed, North feels the pinch. If he discards a Spade, dummy's six of Spades is high-remember that South had to come down to a singleton Spade to keep the Diamonds guarded.

And if North discards both his Clubs, declarer's Queen becomes high.

The actual results on this board varied from three pairs down one in Seven Hearts Doubled, four making seven Hearts, a few in six Hearts, making six or seven, and one remarkable result: North opened two Clubs, East Doubled, South bid five Clubs, West Doubled and everyone Passed. East West failed to collect their Spade ruff, and got only 500 in exchange for their Grand Slam. Who were North and South?

Vigyan Gupta and N. Acharjee, of course.

AVINASH GOKHALE

This Week's Chess
Timely Centre Action

ENEMY King side attacking plans can be halted by aggressive action in the centre at the critical moment. In the games of position Nos. 311 and 312 Black's advance ...d5! distracts White.

Szmaplk-Hort (Luzern, 1982)

1.e4, c5 2.Nf3, d6 3.d4, cxd4 4.Nxd4, Nf6 5.Nc3, Nc6 6.f4, e5 7.Nf3, Be7 8.Bd3, Qb6! 9.Rb1, 00 10.Qe2, Bg4 11.Be3, Qa5 12.Bd2, Rfe8 13.f5?!, Qc7 14.Qf2, d5! 15.Ng5!?, Nd4 16.h3, Bc5! 17.Qh4...

Position No 311: 17...Bxf5! 18.Rf1, h6! 19.exf5, e4! 20.Bb5, e3! 21.Bxe8, Rxe8 22.Nf3, Nxf5 23.Nb5, exd2ch 24.Kxd2, Qa5ch 25.b4, Be3ch 26.Kd1, Qxb5 27.Qe1, Bf4; 0-1.

Sicilian Defence.

6.f4) More usual variations are 6.Bg5 (Richter Attack) 6.Be2) (Boleslavsky system). 6.Be3, 6.Nb3 and 6.g3 are also interesting alternatives.

Ermenkov-Szabo, Sofia 1981: 6.f4, Bd7 7.Nb3, g6 8.Be2,, Bg7 9.00, 00 10.Kh1, a5 11.a4 (draw, 71).

8.Bd3) Moskovsky-Weingold, Riga 1980: 8.Be4, Be6 9.Bb3, 00 10.f5, Bxb3 11.cxb3, Qb6 12.Bg5, Nxe4?! 13.Nxe4, Qb4ch 14.Nc3, Bxg5 15.00, Bh6 16.Kh1, Rad8 17.Nd5, Qg4 18.f6 (1-0; 43).

8...Qb3!) Prevents White's castling and forces the passive 9.Rb1 to defend b2.

13.f5?!) He could play 13.00 and if 13...Qc7 14.Nd5.

15.Ng5!?) 15.00 may be replied by 15...Bxf5! 16.exf5, e4.

17.Qh4) Now White stands to win a piece, for if 17...h6? 18.hxg4, hxg5 19.Qh8 mate.

17...Bxf5!) But Black has pre-planned this sacrifice.

18.Rf1!?) Hoping for 18...Bg6? 19.Rxf6!, gxf6 20.Nxh7, Bxh7? (better 20...Re6) 21.Nxd5 with a promising attack.

21...Rxe8!) More incisive than 21...hxg5 though temporarily Black remains a Rook down.

23.Nb5) The only place for the Queen is 23.Qe4, but then 23...Qg3ch is killing.

D. V. Prasad—K. V. Shantharam

The Tamil Nadu Grand Prix of six tournaments highlighted the vigorous chess activity in that state. The total prize pool added up to over Rs. 30,000/-. The winners were: Sivakasi—R. Ravi Sekhar, 7½; Virudhunagar—P.Gopalakrishna,6/7; Tuticorin—D.V. Prasad, 8/9; Palani—Arun Vaidya 9/11; Madras (Indian Bank Open)—Arun Vaidya, 7½/9; Coimbatore—K.V. Shantharam, 7/8. This game is from the last event.

1.e4, c5 2.Nf3, e6 3.d4, cxd4 4.Nxd4, Nf6 5.Nc3, d6 6.Be2, Be7 7.00, 00 8.Be3, Nc6 9.f4, e5 10.Nb3, a5 11.a4, Nb4 12.Bf3, Be6 13 Kh1, Bc4 14.Rf2, Qc7 15.Rd2, Rfd8 16.f5?!, h6 17.g4?...

Position No. 312: 17...d5! 18.exd5, e4! 19.Nxe4, Nxe4 20.Bxe4, Nxd5 21.Bxd5, Rxd5! 22.Qf3, Rxd2 23.Nxd2, Ba6 24.c3, Re8 25.Bf4, Bd6 26.Bxd6, Qxd6 27.Ne4, Qc6 28.Nd2, Qd7 29.Ne4, b6 30.Kg1, Bb7 31.Re1, Re5! 32.Kf2, Qc6!; 1-0.

6.Be2) Belkon-Geller, Las Palmas 1979: 6.Nb3! Nc6 7.Be3, Be7 8.f4, a6 9.Bd3, b5 10.Qe2, Bb7 11.000, Qc7 12.Kb1, 00.

10.Nb3) No good is 10.Nf3?, Ng4. 10.Nxc6, bxc6 11.Qe1 can be considered.

15.Rd2) Better may be 15.Nd2, Ba6 16.Nf1.

17... d5) A well calculated Pawn sacrifice to expose White's King.

21...Rxd5!) The point; if 22 Rxd5, Qc6 pins and recovers the Rook.

29...b6) White has no defence on the diagonal h1-a8.

32...Qc6!) White must lose the Knight or the Queen after 33.Nd2, Qc4ch.

LETTERS TO THE EDITOR

NAMby-Pamby?

Sir—The caption to the photograph of Julius Nyerere and Indira Gandhi in the article, "Will They Guard The Ramparts?" (February 27), states: "...the Founding Fathers of Non-Alignment were also the Fathers of their Nations.." Since Jawaharlal Nehru was one of the Founding Fathers of Non-Alignment, the direct implication is that it is Nehru and not Mahatma Gandhi who was the Father of the Nation! Is it an attempt at rewriting history, Soviet style?

C Antony Louis
Bombay

Sir—The Non-Aligned Meet at Delhi was a tamasha of Soviet block sheep and American hirelings, where blatant violations of human rights were fiercely defended. Alas, Non Alignment has lost its dignity.

Tatya Tendulkar
Kolhapur

Superb Summit

Sir—The cover of your Non-Aligned Summit special issue ("Scaling New Heights?", February 27) was very attractive.

Usha Parekh
Bombay

Sir—The cover story by K Natwar-Singh was interesting. The Seventh Non-Alignment Summit is a great milestone in the history of the country, more so because as the founder member of the Movement and the present Chairman of the Summit, India has a stupendous task ahead of strengthening the Movement, making it more meaningful, relevant, practical and purposeful, especially when it is passing through such troubled times.

Prabha Padmanabhan
Bombay

Sir—The WEEKLY'S coverage of the Non-Aligned Summit was excellent. There is no doubt that the Non Aligned nations are getting increasingly aware of the benefits that flow from their block on the chess board of international politics. In one way or another, they are definitely diluting the Super Bloc's strategy to some extent. Still they have much left to be achieved. What the Non Aligned wish to achieve is not very different from the "detachment" enunciated in the Bhagvad Gita.

Prabhakar S. Harsole
Indore

Sir— Although the articles and the coverage on the Non-Aligned Summit were very good indeed, why did you show the flag of India on the cover with a greenish Asoka chakra? It should have been blue.

G.M. Srinivas Bhat
Bangalore

Superb Sci-Fi

Sir—Samar Jha's story "They Are Coming" (February 27) is a stunning piece of science fiction. Please, can we have more of the same kind from Mr Jha?

H.P Mitra
New Delhi

Assam's Agony

Sir—While people in Pakistan are dying demanding democracy, people in Assam are dying from an overdoes of it! For a change the Constitution has become more important to Mrs Gandhi than the lives of the people ("A Mockery Of Democracy?", February 27).

Anyone could have foreseen the violence and the communal hatred and linguistic passions such a situation would release. Is the formation of a ministry in the State so important? An amendment could have settled that and provided one more year to thrash out a solution. Or did the Government want to legalise the illegal infiltrators by giving them one more chance to elect the people's representatives? Or did the Government want to bury the demands of the Assamese people under an orgy of communal and sectarian violence?

The whole episode reminds you of Mrs Thatcher calling an election in the UK where the immigrants were ready to vote while the whites were boycotting it. What did the simple and hospitable Assamese do to deserve this?

Prasanta J Baruah
Dibrugarh

Firaq's Folly

Sir—In his interview with Firaq, P.D. Tandon (February 27) could have given us the poet's verses to illustrate the latter's views on men or matters. Was Firaq's wife worse than Xanthippa (the wife of Socrates)? Socrates bore his travails quite cheerfully. This only goes to prove the adage: "Marry by all means... if you get a good wife, you will be happy; if you get a bad one, you will be a philosopher!"

N Srinivas Rao
Hyderabad

"Primitive" Pak?

Sir—The articles "Inside Pakistan Today I-II" (February 27) were excellent. However, Pakistan's economic achievements are not matched by its record on human rights. Judging from the barbaric punishments in vogue there, the country seems to be going back to the primitive age.

C J Parmar
Surat

Striking Snakes

Sir—The pictures of a "Snake Eating A Snake" (February 27) were striking. How did Mr P.C. Dhir manage to get hold of his "models"?

T.H. Vora
Nagar Chakla

Ah, Ha!

Sir—Thanks for the superb jokes. I've compared them with those in other magazines but none have their class. Your cartoon strip "Beau Peep" is also hilarious; don't ever drop it!

Deepak Misra
Gorakhpur

Sexy Society

Sir—One may not agree with all that Mr Nijhawan has said about the role of sex in ancient Hindu society but he has to be commended for trying to extract himself from the defensive straitjacket we Hindus are heir to ("Sex Revolution And Hinduism", February 20).

For judging a theory, you have to have a universal frame of reference. That being absent in matters religious, it is unfair to judge one religion by the standards of another or one civilisation by the norms prevalent elsewhere. There can, thus, be no scope for one-upmanship.

But one can't agree with Mr Nijhawan that the culture of North and North-West was predominantly Islamic—I would say, it was predominantly composite. In my native Kashmir, the Muslim peasant would recite with equal gusto the pre-Islamic lore like Nagirai and Akanandun as the post-Islamic Laila Majnu and Shahnama. The Hindu quoted couplets from Hafiz or Saadi as enthusiastically as from the Gita.

C.L. Munshi
Bombay

Clay Feet?

Sir—Ramoji Rao's article "NTR's priorities in Andhra Pradesh" (February 20) is a panegyric to the celluloid hero. The author seems to have been moonstruck by the supergod, superman NTR who has come upon *terra firma* to protect the weak, preserve the right and punish the wicked. NTR does *not* maintain inner-party democracy. As with other "demigods", NTR's word is final and a law unto itself. This may well prove to be his undoing.

G. Azeemoddin
Anantapur

The Portrait Of A Young Man As A Leader

Sir—Congratulations for putting Rajiv Gandhi on the cover (February 20). Your remark that "Rajiv Gandhi believes in Organization" is an accurate assessment of the young man.

Ramapati Kumar Sinha
Gaya (Bihar

Pleasant Peasants

Sir—Thanks for publishing the pictures by Virendra Kumar ("Portrait of Peasants", February 20). The accompanying text was also quite appropriate. Indeed, one good picture is worth a thousand words!

Satya Prakash Mishra
Sonepur Raj

Splendid Excerpts

Sir—The WEEKLY deserves to be congratulated for excerpting Omni's Continuum (February 20). Please let us have one such excerpt every week. These advances on the frontiers of science not only illumine us most splendidly but also confirm what our ancient seers divined intuitively.

P. Ramachandra Rao
Hyderabad

ZZZZZ

Sir—The article on sleep ("Oh! For A Good Night's Sleep", February 13) has overlooked a few facts.

It is well known that Einstein was a marathon snoozer (up to 12 hours at times). The amount of sleep required depends on your constitution.

Also REM (Rapid Eye Movement) sleep does not appear "just once in the middle"—it occurs 4 to 5 times in a night, totalling 80-100 minutes.

Sleeping pills can upset our bio-clock which governs the ebb and flow of sleep stages and can also cause secondary problems.

S.N. Guruprasad
Vellore

Sir—The article was interesting. But the author seems to forget that she is not a professionally trained doctor. It is both preposterous and dangerous, if not also sacrilegeous to comment upon drugs like antihistamines, scopolamines and bromides!! (Perhaps Ms Chatterjee meant drugs like amphetamine which are generally taken as mood elevators, not as depressants!!) To term antihista-

mines "sedatives" is palpably wrong, to put it mildly!

Dr Prakash Pai
Mangalore

Licence To Torture

Sir—You are doing a great job by taking up the cudgels on behalf of the millions who suffer in silence ("Scourge Of Noise", January 30). The Press alone can rouse public opinion against the menace of noise and force the Government to act. Even nights are not free of the menace. Entire neighbourhoods suffer the onslaught of blaring loudspeakers during marriages, religious festivals and nightlong musical sessions. Any occasion, be it solemn or cheerful, is an excuse to use loudspeakers, all because one can easily obtain a licence to torture one's neighbours!

T.C. Katrak
Calcutta

The Minorities

Sir—Your correspondent S. Aquib Akhtar ("Letters To The Editor", February 20) is right. A Hindu President in Pakistan and a Muslim Prime Minister in India will go a long way to wipe off the bitterness of partition.

Satya Narayan Mitra
Burdwan

Sir—Have you noticed how not a single Muslim has criticised Syed Shahabuddin's views while a number of secular Hindus were quick to attack Balraj Madhok's article? ("Muslim Minorities: Pampered Or Persecuted?", January 9).

A. Dharmarajan
Bombay

Sir—Both articles distressed as acutely. Why publish them and inflame communal passions?

Akhtar Vohra
Rajpipla

Your affairs: There's The Rub!

Sir—I fully agree with Dr M.S. Narasimhamurthy's views on the obnoxious habit of Test cricketers. Some alternative *has* to be thought of to meet the bowlers' tactical need to keep the shine on one half of the ball.

Will supply of two pads of turkish towel material with a plastic base, to be wrapped around the upper arms of the bowler, with provision for a little water to be squirted on to one of them (keeping the other dry for rubbing) at his discretion—one of the umpires can keep a small supply of water in a suitable plastic dispenser for this purpose—do the trick? Or, if this is too blasphemous a suggestion, the rubbing could be restricted by rule only to the upper arms of the players, without the application of saliva or sweat!

Brutalising The Police

Appalling service conditions, increasing interference from politicians coupled with public apathy and distrust are demoralising our police. Also, their mutinous rumblings have been put down ruthlessly. The Guardians of the Law are turning their wrath with increasing ferocity on the citizens, whose rights and interests they are supposed to protect. Nor are the police free from corruption—the pervasive malaise eating into the innards of our entire social order. The *Weekly* initiates a provocative debate (led by George Fernandes, Dharma Vira and K.F. Rustomji) on these and other sensitive issues.

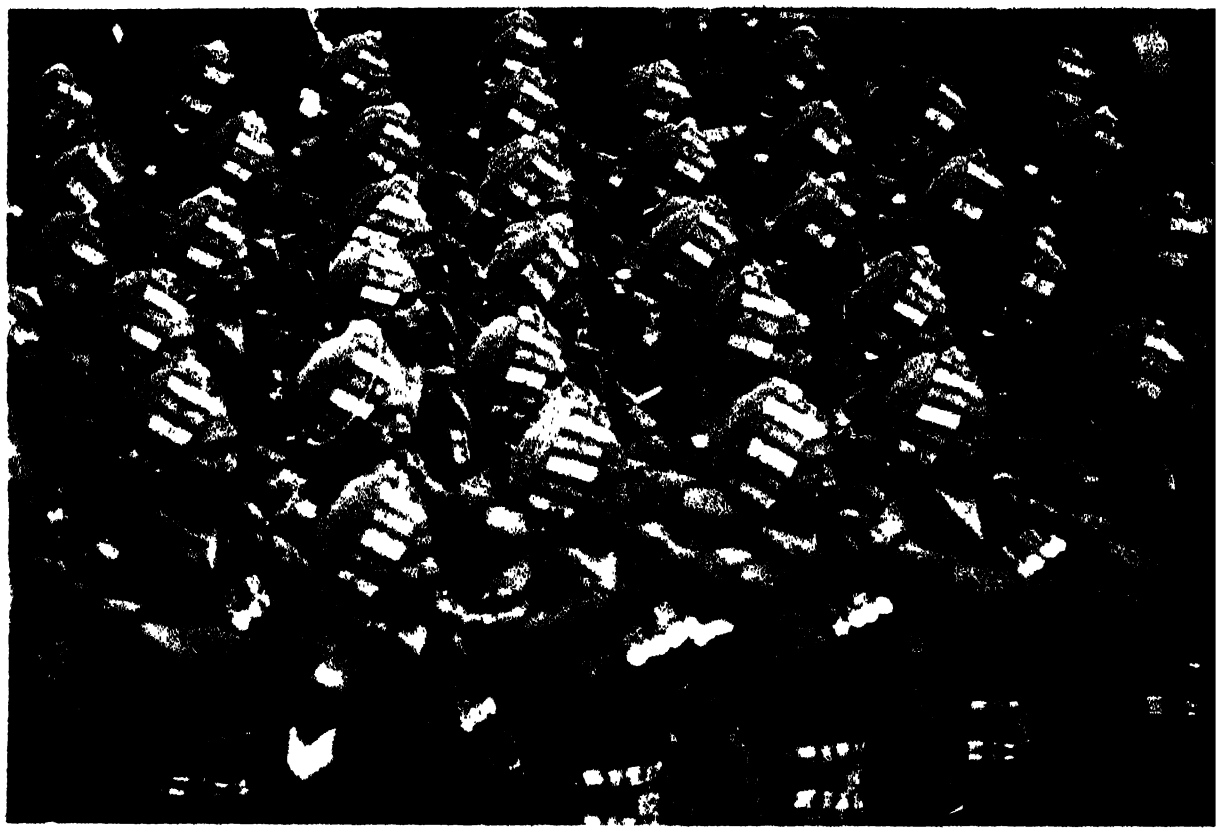
Cover Story



The safety, the honour and the welfare of your country come first, always and every time. The honour, the welfare and the comfort of the men you command come next. Your own ease, comfort and safety come last always and every time.

THE crucial question is how far will the Republic Day gift of added allowances and perks quell "the feeling of discontent (among Armed Forces personnel) when they find peddlers and *paanwaalas*, pimps and prostitutes, peons and page-boys—almost everyone who could be less rigid in his integrity and character—far better-off than they are materially.

The feeling, dramatically leaked out to the press some months ago, sent waves of concern through various sections of thinking men and women.

Why Are We Unfair To Our Forces

While the civilian officer is assured of job security and automatic promotion till the age of 58, the Service officer retires between the ages of 45 and 50. An ominous portent is the crystallisation of the conflict between armed and civilian services into a cold war. Apart from muscling the Armed Forces into a subordinate position, the civilians, allegedly, have scuttled the proposition for rejuvenating wage-scales in the Services. Is a career in the Services, then, so unattractive and so unremunerative that it no longer interests adventurous young men? According to highly placed officers, a life anywhere other than in the Army, the Navy or the Air Force is preferable today. Why? Perhaps the most telling commentary on a career in the Armed Forces is provided by the retired Brigadier or Lt-General who, given a second chance today, will advise his son not to follow in his footsteps.

By A Special Correspondent

In the context of the country's current economic situation, the new increase in perks and allowances are indeed more than a token gesture. The package concessions, ranging from free rations to free transport for school-going children, will cost the exchequer an additional Rs 32 crores every year. This follows the last cadre review and other decisions (taken three years ago) which had then added an annual Rs 35 crores' liability to the Government. The concessions in the new package will cover rations, clothing, education, transport, accommodation, mess facilities and special allowances to cushion the hardship of transfer and of being separated from families. Ex-Servicemen of public sector undertakings will also get to take home more money.

The entire package, generous as it may appear in the scale of the nation's economy, is but a drop in the ocean of expectations of the Chiefs of Staff, not to talk of the various internal reports on the betterment of the Armed Forces personnel—of which the "leaked report" was only one, and an extreme one, presumably. For the real issues are, firstly, of the brewing discontent among the personnel at all levels; and, secondly, the inability of the Armed Forces to attract and recruit the *right* kind of talent which is getting diverted to other avenues.

The joint paper presented by the Chiefs of Staff to the Government put forward proposals involving an additional liability of more than Rs 150 crores per annum. Some proposals highlight the need for indexing increases in allowances to inflation and, in a few cases, the recommended rates will amount to no less than a 600 per cent hike! It is a suggestion that will hardly be viewed with sympathy by the Finance Ministry, already wary of inviting similar demands from other sections of Government employees.

The general discontent in the Services has to be traced, not only to the declining capacity to fight inflation, but also to the choked promotion prospects in the Defence Services following the emergency recruitments, especially in the Army and the Air Force, made 20 years ago, and to intra-Service disparities. Another major factor is the moral ethos in a society where corruption has made life easier for those sections that are not called upon to sacrifice anything for the country.

The terrible problem of stagnation at the middle levels was sought to be relieved by an increase in the number of posts at the higher levels. But the pushing up of some people into the higher rank

THE PICTURE THAT THIS EX-SERVICEMAN PRESENTS is reflective of how the plight of the lower ranks is, if anything, worse than that of the officers in the Armed Forces. The Subedar and the Subedar-Major's emoluments (Rs 600 and Rs 750 a month) count for nothing in these days of inflation, while a Sepoy (Rs 300 a month) straightway falls into the ranks of the lower class. *Top:* Soldiers on the march may present an impressive spectacle, but a career in the Armed Forces is evidently no longer an attractive proposition.

has only led to the creation of a top-heavy structure. There is a realisation among Services personnel that unnecessary upgradation tends to devalue the post when the work of a Major is done by a Lt-Colonel.

A measure of the upgradation of posts can be had from the fact that 1,283 posts of Majors were changed to that of Lt-Colonel—with similar upgradations in the Navy and the Air Force. It is at the rank of Major that the stagnation was at the its worst and, therefore, the upgradations got over one hump only to create another one ahead. In the case of Lt-Colonels and above, the permissible percentage of selection declined sharply.

One of the earlier recommendations of the Chiefs of Staff was to have 6 more full Generals, 3 more Air Chief Marshals and 3 more Admirals. The Government did not accept it but the strains in the top echelons were partly relieved by the Army getting 11 additional Lt-Generals, the Air Force 4 new Air-Marshals and the Navy 3 more Vice-Admirals.

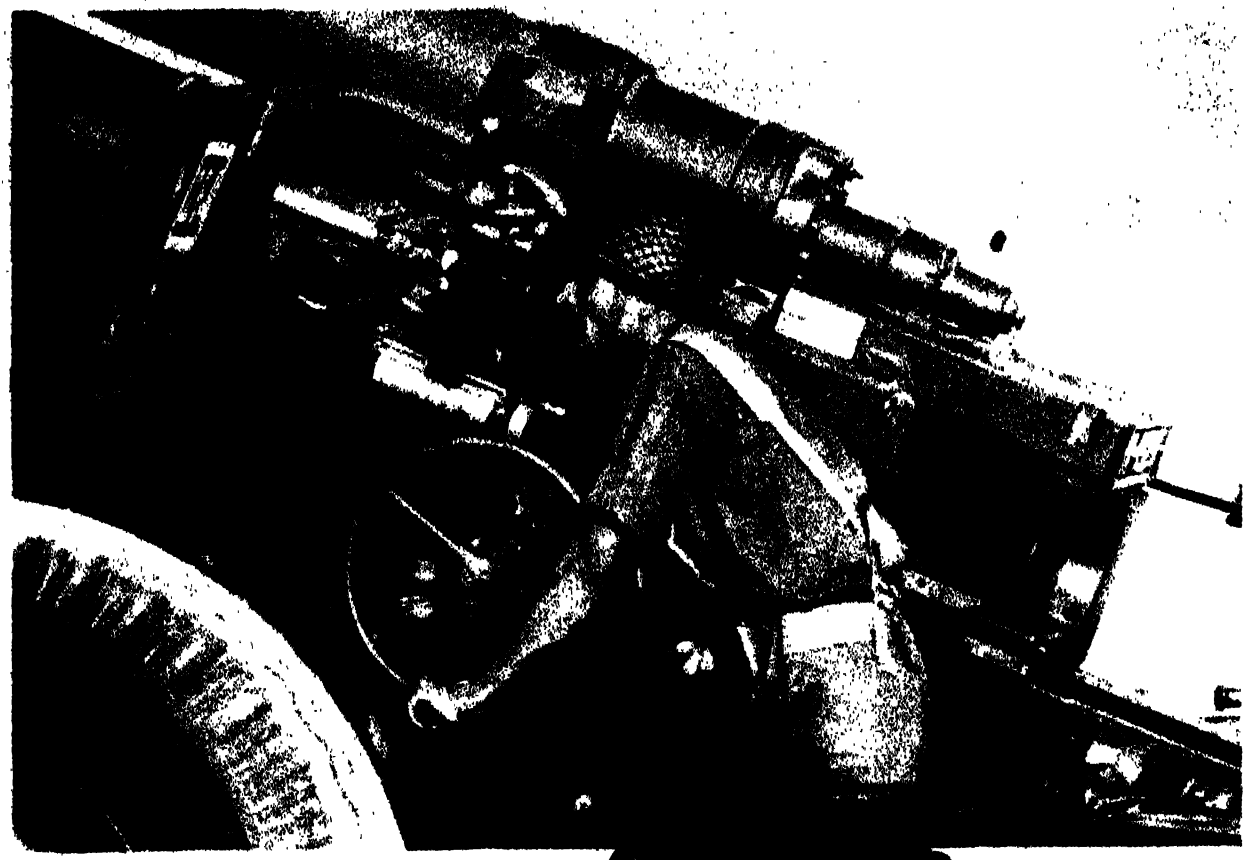
Another possible response to the bottleneck in promotions has been the idea of leaving the Services with the "golden handshake".

- In 1946, some 30 emergency commissioned officers were given an option to stay in the Army on full commission or join the civil services. All opted for the Army.

  In the mid 1960s, some 46 emergency commissioned officers were offered the same option and all opted for the civil services!

  Incidentally, they rose in their new careers far beyond their former col-

→



THE THREE SERVICE CHIEFS *(l to r)*: **Air Chief Marshal Dilbagh Singh, Admiral O.S. Dawson and General K.V. Krishna Rao. The Chiefs of Staff have at all times to speak with one voice if service conditions in the Armed Forces are to improve at *all* levels.**

ARMED FORCES PERSONNEL argue that,considering how lonely their job—a job fraught with danger—is, they are not sufficiently recompensed in the matter of pay and perks for their near isolation from the mainstream of life.

GAZING INTO A BLIGHTED FUTURE? All that a soldier gets extra for being on picket duty in NEFA or Mizoram is Rs 70 a month—officiously called a "Separation Allowance"!

leagues in military service. Two Foreign Secretaries, Jagat Mehta and R.D. Sathe, came from the Defence Services.

On the other hand, there was a time again when a retrenchment benefit was offered for those who had not fared too well in selection. The man concerned made calculations, found that the amount offered was less than what he would earn if he spent the rest of his years in service in the same rank and dug in his heels, patiently marking time for retirement—a situation not conducive to stepping up efficiency and morale in the military establishment!

Where then lies the rational solution to the problem? Among the suggestions are more than one Four-Star General, the creation of more specialised jobs, more research cells, a Defence University perhaps and more men sent out on deputation to civil jobs at various levels.

But, then, problems related to upward mobility are not the same in all sections of the three Services. All officer cadets pass out of the National Defence Academy together, but the one going into the Navy gets the Commander's rank after 12 to 13 years; in the Army, it takes 16 to 19 years to reach the rank of Lt-Colonel; and about the same time for a pilot to become a Wing-Commander.

The Air Force engineer, one of the worst sufferers of imbalances and anomalies, says his chances of making the Wing-Commander's grade are about half that of the flier and, above that rank, even less. Within the Army, officers of different classes of service face varying promotion prospects. While some units face the paucity of senior officers, in others a large number of senior Majors are destined to languish at the same rank for the rest of their careers.

For many of the problems, the Service Chiefs can pass the buck to the IAS-dominated administration, but they cannot escape the responsibility for two other sources of discontent: they have to ask themselves why more and more officers are knocking at the gates of the civilian courts for redressal of their grievances; the system of promotions, obviously, needs to be looked into, since it has been computerised only up to the Lt-Colonel's level.

A retired Lt-General regrets that frankness on the part of an officer has been devalued and a lot of *ji-hazoori* has crept into the promotion system.

The disparities within a service are often quite glaring. A free breakfast to the Air Force pilots has done more to disrupt the harmonious relations between the flying and the engineering branch than the flying bounty to which the pilots are entitled. One can still find an Air Force pilot's son joining the Air Force, but there is not one son of an Air Force engineer in the same Service. The three Services are progressively going in for more and more sophisticated equipment, but the technical wings are in disarray, because of discontent and shortage of personnel. If the situation is not remedied, one shudders to think of the maintenance of the computers on board Mirages and Jaguars.

For technical personnel, the Services have to compete even harder with other commercial civilian sectors who can buy up the best of available talents, offering fancy emoluments. Of course, the Services can stress motivation rather than money, but only up to a point. What they can do on an urgent basis is remove disparities and irritants being faced by the technical wings. Some of the old procedures of delegation of powers and authority within a unit handicap the engineers.

- The Government is aware of the problems of the technical wings of the Armed Services but, then again, it has to maintain some parity between the terms of services for engineers in the Army or the Air Force and those, say, in the Central Public Works Department or the Central Electricity authority.

The financial experts do not agree that the Services officer is any worse off than his civilian counterpart. All have been hit by inflation. A Services officer is educated at the expense of the state and he enjoys many additional perks as compared to a civilian officer, it is pointed out.

It is argued that weaponry handled by the officers has become more expensive and sophisticated and hence they deserve higher compensation for work. But this plea ignores the fact that the state makes a large investment in the training of an officer and equips him to handle this equipment.

THEY CERTAINLY NEED A LEG UP, our Service personnel, after a lifetime spent in defending the country's frontiers. It is dehumanising to see some of these ex-Servicemen living in chawls, earning a pension of as little as Rs 10 per month.

That still leaves us with the issue of the *perceived* decline in the status of Services officers as compared to the civilian administrative cadre. Some part of this view has a *visible* basis, some of it flows from the matrix of uneven socio-economic change in the country, but a part of it certainly stems from a petulant demand to be treated a cut above the rest of the people in the country, and even worse, with sidelong glances cast across our borders, a demand that our men must have an edge over the conditions of service of "our potential enemies"!

Some senior Armed Forces officers have expressed their genuine grievance of subordination to the bureaucracy—a matter that touches not at all their purse, nor merely their prestige, but the nation's stake in the maximum strength and efficiency of the Armed Forces. For instance, it is the bureaucrat now, and not the Chief of Staff, who leads a delegation going out to purchase defence equipment. This was not so three decades ago!

"We do not mind financial hardship, since we're prepared to even sacrifice our lives, but then at least this financial hardship should be shared by all," remarks an Air Force officer.

The Services officers must be able to lead a life free of financial worries, because their financial difficulties tend to lower their morale as well as hurt the command structure. The leadership role in the Services—the Indian ethos being what it is because of the feudal traditions—requires a certain life-style. Without this, an officer cannot inspire the admiration of his men. This aspect cannot be ignored either.

Tell-Tale Figures

The Government agrees that relative parity in pay and allowances between the military and the civil service must be maintained and says it is doing so. A comparative analysis prepared by the Government substantiates its claim. At some levels, the IAS officer may have an edge but, at some others, he is behind the Services officer.

- For example, an Army Major gets total emoluments of Rs 3,113.50 (including allowances and perks) while an IAS officer with 11 years of service gets Rs 2,388.80.

  Similarly, a Major-General gets Rs 4,550 while an IAS officer, after 26 years of service, gets Rs 4,300. The Services officers, on retirement, enjoy higher pensions than those given to the civilian officers retiring prematurely with the same pay and length of service.

The disparity in promotion prospects, according to the Government, is unavoidable to an extent, since the structures of the civilian and the military service are quite different. Of course, there are disparities galore. While there is only one Four-Star General in each wing of the three Services, several IPS officers have a rank equivalent to a Major-General. Full 60 per cent of the 3,000 IAS officers go beyond the level of Joint Secretary. An IAS officer in 18 years becomes a Joint Secretary, but a Services officer hopes to become only a Lt-Colonel or a Wing-Commander or a Commander in that period.

The civilian officer is assured of job security and automatic promotion till the age of 58, but the Services officer retires between the ages of 45 and 50.

The financial experts also point out that early retirement in the Services is far from a disadvantage. Moneywise, the Services officers are not badly off at the time of retirement and, at that age, they are well equipped to take up the next occupation.

But the most telling commentary on a career in the Armed Forces is provided by the retired Brigadiers and Lt-Generals, not many of whom, given a second chance today, will advise their sons to follow in their footsteps. These gentlemen, either enjoying their leisure or busy in some industry or on the farm, have retained their nostalgia for the life and the values in the Services but wish that their sons and sons-in-law had not joined the Armed Forces and, instead, taken up some other remunerative occupation. A

retired Lt-General admits he has to shell out Rs 600 every month to support his daughter and her Captain-husband. But not all young Captains and pilot officers can today draw upon the parental resources to pursue their not-so-glamorous career out of a sense of adventure or of national service.

Then there is growing discontent which gets reflected in light-hearted comments in the messes and in internal reports. Why is it that more and more Services personnel are knocking at the gates of civilian courts for redressal of their grievances? Every Service Chief, who is in office for 3 to 4 years, finds it necessary to take up with the Government the issue of pay and allowances and exerts gentle pressure on the Government through premature announcements on his recommendations.

Who does not feel the pinch today? There are, in fact, any number of Joint Secretaries in the Central Government at a given time who are counting the costs of their staying on in the Government instead of retiring voluntarily. But, unlike the IAS and other civilian groups, the Services officers, because of their tradition of isolation, have not adjusted themselves to the new realities in terms of financial situation, status and the changing social ethos. To add to their difficulties, the joint family system is no more and the cost of maintaining establishments—with the officer away to a non-family station—has become prohibitive.

The social and administrative changes of the post-Independence era have taken the extra shine off the status and glory in which this erstwhile representative of the emperor once basked. The IAS officer has been quick to perceive the change: it is common to see a District Collector getting up from his seat and offering tea to an MLA or a District Panchayat President. A Services officer, on the other hand, is still told by his father: "As a Second Lieutenant, I was entitled to a coupe in the train and, if by some chance I happened to be late reaching the station, I would still find the train waiting for me."

His father's colleague, a retired Lt-General, recalls: "The district administration used to be extremely sympathetic to all our problems. I was on the Front and my wife was living in Lahore with my uncle, quite an influential civilian. The uncle got a notice for the requisition of his house and all his pleas to cancel the notice failed. My wife went and met the Collector who, on knowing that I was away on duty, promptly cancelled the requisition order."

Little wonder that, today, a suggestion for immunity from writ jurisdiction of the Supreme Court crops up in an internal study in the Services on how to make the career more attractive.

The Biggest Setback

The biggest setback to the morale of the Armed Forces personnel stems from the rise in corruption in public life and in the civilian bureaucracy. An Air Force pilot can still live on thrill and air—provided he does not get to meet his former class-mate riding a personal car in his capacity of a minion in the industry section of the Factory Inspectorate. Try and imagine what a Naval Commander feels on being forced to give Rs 200 to a junior assistant in the Corporation office just to get the letter for the possession of his flat.

A Lt-Colonel compares himself to his class-mate who went in for a career in management. An Armoured Corps Commander is in charge of equipment worth Rs 50 crores and 700 to 800 men. His one mistake may cost the nation much more than that of a Managing Director of a Rs 50-crore company, but the emoluments of the two are nowhere comparable.

The resource constraints apart, the Government does recognise the need for improving the terms of service and working conditions of the Armed Forces.

The Defence Minister, R. Venkataraman (who held the Finance portfolio earlier), also favours a separate Pay Commission for the Armed Forces so that their peculiar conditions could be examined better.

Some more decisions on the recommendations by the Chiefs of Staff Committee are expected to follow. ■

AS THEY ARE CUT OFF for long days—and long nights—from home, they tend to feel uprooted from society and thrust into bleak wilderness. In fact, successive postings to different areas have all but made an alien of the Serviceman. And alienation is the cross borne not only by the lower ranks but also by the commanding officers.

They Are Getting A Raw Deal

Another point of view on how pay-scales in the Armed Forces need urgent revision.

by Pradeep Shinde

THE National Defence Academy at Khadakvasla is no longer drawing recruits from the upper and the middle classes. Instead, it has become a mobilisation point for denizens of the lower rungs of society. It is only those who have failed elsewhere that knock on the doors of the NDA. As if in concert, the number of disciplinary cases in the NDA and the IMA (Indian Military Academy) has shot up alarmingly. Turbulence and disorder have erupted where they should not—at the Training Schools.

There is absolutely no one coming forward with the required qualifications for technological courses. Since the majority of recruits are coming into the Armed Forces as a last resort, they lack the commitment and the initiative to enrol into advancement courses and make a career in the Services.

Left with no choice, a number of technical courses (electrical branch) in the Air Force and the Navy have been scrapped for want of trainees. In the last five years, the IAF has had only one B Tech from the IIT applying for a job. He was selected but he changed his mind.

● Are these symptoms a manifestation of a deep-rooted malaise in the Armed Forces?

Is a career in the Services so unattractive and unremunerative that it no longer interests adventurous young men?

An investigation into the working conditions and the life-style of the Services provides the answers. According to highly placed officers, a life anywhere other than in the Army, the Navy or the Air Force is apparently preferable. Why?

Consider, for example, the merits of a job in ONGC offshore installations. It is a lonely job, one fraught with danger and death, you might say. Its hazards and the isolation from the mainstream of life are sought to be compensated through sumptuous meals, comfortable accommodation and an extremely benevolent offshore allowance.

● In sharp contrast to these perks, all that a soldier on picket duty in NEFA or Mizoram gets is a niggardly Rs 70 per month. Officiously called a "Separation Allowance", it is assumed that Rs 70 is enough compensation for being uprooted from society and thrust into bleak wilderness. Attempts to increase this "alimony", says a Colonel, have been consistently sabotaged by civilian bureaucracy.

Successive postings to different areas have all but made an alien of the Serviceman. The alienation is a cross borne not only by the lower ranks but also by the commanding officer. Regulations may say that Captain so-and-so will have an uninterrupted tenure of two years. On →

paper, it will appear that the Captain enjoys at least two years of stability: what is not mentioned is that, during this tenure, the unit may be shifted *en bloc* to three different stations!

To soothe the pain of loneliness and separation, the Government bestows Rs 70 to married couples (whose families are not allowed to accompany them). If this separation is also threatened by the discomfort of high altitudes or hazardous areas, an additional allowance of Rs 125 is granted in the form of "uncongenial climate allowance". Thank God for small mercies!" remarked a Lt-Colonel (he got Rs 200 per month) who had just returned from a difficult assignment in the Himalayas.

It is really only the administrative and the quasi-administrative staff that enjoys some sort of stability and sends their kids to city schools and colleges. For this group, a paraphernalia of allowances helps generate a life-style much better than that of the average citizen. To name a few: concessions in house rent; water and electricity bills paid; outfit allowance of Rs 1,400 on first commissioning; and a renewal allowance of Rs 1,200 after 7 years, kit maintenance of Rs 50 per month; qualification pay of Rs 100 per month for Lt-Colonels; compensatory (city) allowance as per prevailing conditions, and so on.

An administrative duty or a Canteen & Stores job is now a much-sought-after posting. Besides precluding hazards like "uncongenial climate" and getting hit by stray firing, these postings have now assumed strategic importance for generating money. Duty-free rum and cigarettes, tinned food, beer and even small arms and ammunition are being siphoned off by groups of unscrupulous Servicemen and sold in the blackmarket.

- Whether it is the frustrating system which has created such cartels or whether it is simply human nature is open to conjecture. The fact remains that the machinations of the civilian world have crept into the Armed Forces.

Ominous Portent

A more ominous portent is the crystallisation of the conflict between armed and civilian services into a cold war. The bureaucracy dealt the first blow with the demotion of the three Chiefs of Staff. Earlier, this high-powered trio had preceded judges of the Supreme Court. In 1962, they were ranked above the Cabinet Secretary. Since then, however, the Chiefs of Staff have been superseded by the Attorney-General and the Auditor-General.

- This demotion has had its repercussions on the lower ranks. A Major-General with 27 years of experience now ranks below the Civilian Joint Secretary who assumes the post after only 18 years.

To add fuel to the fire, promotion in the police forces is a much quicker process. An IPS officer with only 16 years' service can easily aspire to become a DIG (Deputy Inspector-General). Moreover, at the top of the police pyramid, several posts (like Special IGP or Additional IGP) have been created. This ensures faster promotion and creates more vacancies for the lower ranks.

In contrast, only one-fifth of the Army and Air Force officers can hope to become either Lt-Colonels or Wing-Commanders. And, unlike the civilian and police forces which have innumerable Secretaries and IGPs, there can be only one General, one Air Marshal and one Admiral for the entire Armed Services. Here also, political considerations are uppermost—this again is a manifestation of the civilian-military cold war.

The classic civilian argument (to justify their quick promotions) is that, firstly, the average age for the commissioning of NDA/IMA officers is 19-22, while that for the civilian is 29 years. Secondly, Civil Servants invariably have a higher education and have spent a much longer time in academic institutions.

'Major' Drawback

The argument is valid to a certain extent. However, recently, the age limit for recruitment into the Armed Forces has been increased to 25 years.

- More important is the fact that most Armed Forces' officers have to retire between the ages of 48 and 52—about 6 to 10 years earlier than the Civil Servant.

Apart from muscling the Armed Forces into a subordinate position, the Civilians have also allegedly scuttled proposals for rejuvenating wage-scales. Today, a Major (after 10 years of service) receives Rs 1,500 per month. If he continues to stagnate in the same rank for another 10 years—*not an unusual phenomenon*—his pay will be Rs 1,800—an increase of only Rs 350.

- The Lt-Colonel suffers a similar fate. If he is lucky enough to be promoted to this post in 10 years, his salary would be approximately Rs 1,750 per month. Another decade of service will fetch him an increment of only Rs 200. Thereafter, for the next 5 years, both the Major and the Lt-Colonel will continue receiving the same salary, regardless of inflation and cost of living.

In fact, inflation has all but eaten away the earnings of officers.

- In 1947, for instance, the Lt-Colonel got Rs 1,560 per month after deductions—a princely sum those days. Today, he gets Rs 2,500, but the exact salary (at 1947 price index) would amount to only Rs 418!

The plight of the lower ranks (like Subedar and Subedar-Major) is still worse. How their monthly emoluments of Rs 600 and Rs 750 help them survive is anybody's guess. The Sepoy, earning Rs 300, at once falls into the ranks of the lower class—like casual labourers, poverty is a way of life for him.

They Have No Way Out

Inflation, of course, is a global phenomenon. However unlike other professions, the Servicemen cannot seek wage increases through agitations or strikes. Bound by discipline, the Armed Forces watch helplessly while their colleagues in the police force form unions and launch agitations for wage increases.

Not surprisingly, the Air Force is at the moment covered by a blanket of frustration.

- A Squadron-Leader, after 16 years of service, gets Rs 1,950 per month. Both inflation and income tax make large dents into this figure.

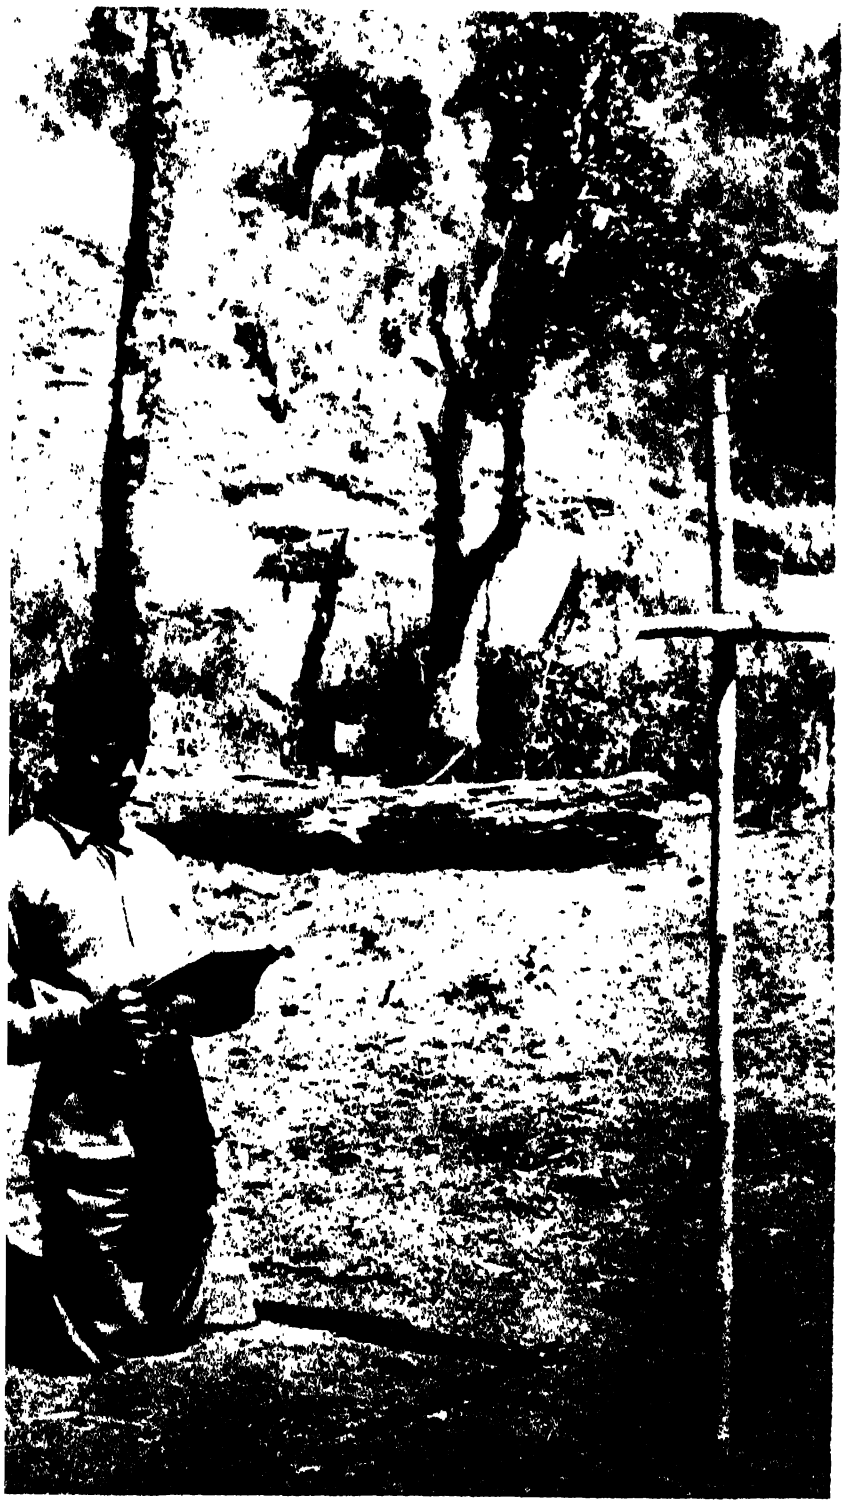
The bone of contention, however, is not the niggardly wages (compared to those of civilian pilots) but an allowance called "flying bounty". Every pilot who spends certain flight hours gets Rs 750 per month—a reasonable sum except for the fact that it comes under the purview of income tax and thus is reduced to Rs 400! "Why should flying hours fall victim to income tax?" asks an embittered Squadron-Leader stationed in the North.

To make matters worse, the Chiefs of Staff are themselves divided on common issues. For instance, a proposal to provide an allowance to engineers on the same lines as the controversial "flying bounty" was scuttled because the Army Chief apparently felt that his soldiers, too, should get some kind of "foot-slogging bounty". Not to be outdone, the Naval Chief opined that administrative executives should also get such a bounty. Finally, when the proposal was submitted, it was shelved by the bureaucracy on the ground that the Chiefs held different and contradictory views.

Such petty bickering and infighting have only served to demoralise senior officers who are now thinking in terms of defecting to the civilian sector and enjoying more satisfying emoluments as Vice-Chairmen or Managing Directors.

At this rate, our Armed Forces will consistently lose their best men to the private sector. ■

PRAY, WHAT ARE WE DOING FOR THEM? Leave alone the lesser ranks, even at the level of the Lt-Colonel the Serviceman today is none too well off. In 1947, a Lt-Colonel got Rs 1,560 per month after deductions—a princely sum those days. Today he gets Rs 2,500 per month: the exact salary (at the 1947 price index), therefore, would amount to only Rs 418 per month! Inflation has all but eaten away the earnings of officers



The Indian Railways Their Track Record

by Madhu Dandavate

The creation of a congenial atmosphere among Railway officers and men, the establishment of harmonious relations between the Railways' important wings like Traffic, Mechanical Engineering, Civil Engineering' etc' and effective coordination between the Railways and the economic Ministries are all essential for improving the performance of the Railways, the nation's biggest enterprise, and for keeping the nation's economy on the right rails, says the author, a former Railway Minister.

THE Railways form a vast network covering about 61,000 route-kilometres, dotted by about 7,000 stations. The undertaking—the nation's biggest—owns some 10,000 locomotives and runs just about the same number of trains daily. Some 10 million passengers move by train every day.

Despite all the criticism of the Railways, it cannot be denied that the movement of revenue-earning freight in 1981-82, at 221.2 million tonnes, was higher than the revised target of 220 million tonnes. During the first nine months of 1982-83 also, the total tonnage of revenue earning traffic moved was 3.5 per cent higher than the traffic in the comparable period of the previous year. Wagon turnround time, an important indicator of the Railways' efficiency, came down on broad gauge from 15.2 days in 1981 to 13.3 days in 1982-83.

These improvements have largely resulted from managerial and operational innovations, including the segregation of the conventional wagon fleets from wagons fitted with roller-bearing and central buffer couplers, the segregation of covered wagons equipped with roller-bearings and central buffer couplers into jumbo rakes, integrated end-to-end running of trains, and so on The Railways also resorted to loading in block rakes, wherever feasible, and this strategy has substantially contributed to the increase in their productivity. Thus, with all their shortcomings in financial and administrative management, the volume of freight traffic moved has substantially increased.

The financial results can be improved only by streamlining the policies and their implementation. The morale of the officers as well as the Railway employees has to be kept up. The undertaking can ill afford the confrontation between the Railway Minister and officers or employees. The open conflict between Ghani Khan Chaudhary and the Railway Board and its Chairman was, to say the least, unfortunate. Why did the Minister take the initiative through a press conference? He must take full responsibility for the successes as well as the failures of Indian Railways. He can ill afford to follow the motto: *Heads I Win, Tails You Lose*

Mr Chaudhary chose to make certain public allegations against the Railway officers as well as the employees. Referring to the cancellation of a few trains at the time of the elections in Andhra, he angrily remarked that officers cannot cancel the trains by giving priority to certain freight movements. The Minister conveniently forgot that the Railway Ministry itself has fixed priorities for rail movements Defence material, foodgrains and coal for power stations have high priority. Officers only implement the priorities fixed by the Ministry which, in turn, are approved by the Union Cabinet. If to conform to these behests some trains were cancelled by the officers, they only did their duty Why were they singled out for blame?

For good measure, the Union Railway Minister has let it be known that, since locomotive drivers got drunk on duty, the number of accidents had gone up! The allegation reminds me of an interesting story. When Lord Curzon was travelling by a special train, the Viceroy's staff warned the railway driver not to drink and be careful. The driver quipped. "To hell with your Viceroy: I don't drink and I would take care of the safety of the train because I'm equally concerned with my own safety."

Be that as it may, the Minister admitted in his Budget Speech that the number of accidents has declined by 26 per cent. Even with this reduction, it is no doubt quite high. For a comprehensive approach to the problems of safety on the Railways is called for. As on March 31, 1981, 14,000 kilometres of rails needed primary renewal so as to avoid multiple fractures to which these rails may be subjected For such renewals, adequate funds are necessary. But enough money is not provided and the niggardly allocations have, of late, been seldom fully utilised! In a long-distance journey, the rakes need to be checked at intermediate points. However, this is being largely dispensed with, thereby putting the safety of trains in jeopardy. Likewise, the automatic signalling system needs to be completely overhauled.

That is not all. A number of goods trains are being moved without guards while many others are driven under normal conditions by firemen, trained to drive locomotives in an emergency. The rule about restricting the continuous duty for loco-running staff to 10 hours—particularly of the drivers—is followed only in the breach. Besides, on an average, 100 railway accidents a year occur on unmanned railway level-crossings. The concerned municipalities and local bodies are supposed to bear a a portion of the expenditure for manning the gates and for recurring expenditure. Since they do not, unmanned level-crossings continue to be safety hazards.

Lofty Announcements

The Railways may make lofty announcements about ensuring the security of men and material on the trains. Every transhipment point is the place that encourages pilferage on a large scale. The unloading and loading operations at the transhipment points while transferring the materials from wagons on one gauge to the wagons on a different gauge are a God-given opportunity for the antisocial elements. A simple technological innovation—a container system or the lifting of closed box-wagons from one gauge to another without opening them—can end this menace. Similarly, the computerisation of reservations in a phased manner will be a great boon to passengers harassed by malpractices in that area

(Continued on page 15)

Calibre: It's when you don't make winning a destination, but a brief stopover to start all over again.

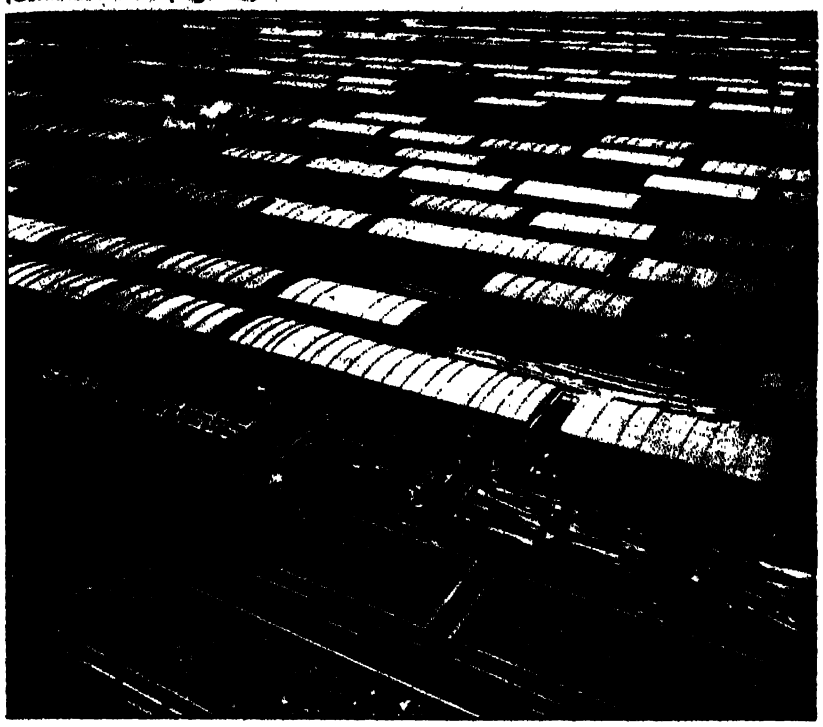
calico

(Continued from page 13)



NUMBER ONE IN INDIA AND ASIA. This marshalling yard at Mugalsarai, the biggest in India and Asia, handles over 10,000 wagons a day.

The Railways badly need to augment their locomotive power. The import of high-power locomotives will fritter away a good deal of precious foreign exchange. Double-headed trains, hauled by two locomotives, will ideally fill the bill. The experiment has already succeeded in the case of the Andhra Express, the Tamil Nadu Express and the Karnataka Express. The double-heading of trains has almost doubled the passenger capacity of these trains. The innovation should be tried in a large number of trains so that, without enhancing the frequency of the trains, their passenger-carrying capacity can be augmented.

The outmoded capital structure of the Railways—that remained in operation right from the year 1924 when the Railways' finances were seperated from the general finances up to the year 1977—requires basic changes. Formerly not only was the capital borrowed from the general revenues at a dividend of 6 per cent but, when Railways finances were in the red, a loan with interest was taken from the general revenues to meet the dividend liabilities. In the new capital structure that was introduced during the Janata regime, all dividend liabilities were treated as deferred liabilities and, therefore, the old system of taking loans with interest for meeting dividend liabilities was discarded. Even then, further changes in the capital structure are still needed. The heavy social burdens on the Railways—arising out of movement of essential commodities below operating costs, losses in the coaching and other services and heavy losses due to unremunerative railway-lines—are at present borne completely by the Railways. At least a substantial portion of these social burdens should be borne by the general revenues of the Government so that Indian Railways' finance would be improved.

As on March 31, 1981, about 14,000 kilometres of track, 8,000 coaches and 65,000 wagons are due for replacement during the Sixth Plan period. Unless substantial allocations are made for these replacements, assets of the Railways cannot be strengthened and its performance cannot be further improved. In the vast railway network, apart from monitoring that is done by various concerned officers, the Union Railway Minister himself has to remain vigilant and maintain a constant rapport with the railway operations and the financial management through zone-level meetings of all the concerned officers. A rapport with Officers' Associations and trade unions in Railways is a must for the Minister. One wonders whether the present Railway Minister is inclined towards such a rapport at all. Every step of his appears to be an intimidation and a confrontation between the employees and the officers. Such an approach will be self-defeating and destructive. If the administration is carried on by the new Railway Minister with this perspective of confrontation and isolation, whatever financial results were available in the past may be frittered away, giving rise to new constraints in the working of the Railways.

The Imperative Need

The Union Minister for Railways will have to keep in mind the imperative need of a ministerial coordination between the Railway Ministry and the Ministries of Energy, Power, Industry, etc. These Ministries are interdependent and any failure in one gravely affects the other. One doubts whether any concerted move for effective ministerial coordination is on the agenda of the Railway Minister. The style of functioning of the Railway Minister is not congenial to the improvement of healthy industrial relations in the Railways. A cordial atmosphere among the Railway officers and harmonious relations between the important wings of the Railways (like Traffic, Mechanical Engineering and Civil Engineering) are highly essential for railway operations. The disequilibrium in these harmonious relations has recently affected the atmosphere in Rail Bhawan. Restoration of this equilibrium is a must if the Railways are to improve to any degree. To the extent the performance in Railways keeps pace with the performance of various sectors of our economy, the Railways will be able to play their rightful role in the planned development of the country. Thus an effective coordination between all the economic Ministries (including the Railways) must receive the highest priority with a view to improving performance. ■

Grasicrimp the new high-crimped wonder fibre

...a runaway success

Grasicrimp fibre blends beautifully with acrylic and wool. It gives excellent results with knitted and woven fabrics.

Advantages of Grasicrimp - Wool blends

- Reduces mixing costs and are more economical
- Allows homogenous blending due to the absence of gilling
- Enables higher production in spinning due to fewer twists
- Gives a softer yarn by reducing the harshness of wool
- Adds to wearing comfort
- Gives a stronger yarn, consequently, a better fabric
- Gives a better drape and handle to the fabric
- Has better dye affinity as compared to normal viscose fibre
- Can give an all-weather fabric depending on the proportion of Grasicrimp in the blend

Advantages of Grasicrimp - Acrylic blends

- Economical to blend
- Adds to the wearing comfort due to high moisture absorbency
- When suitably blended the high bulk of acrylic fibre is ideally counter-balanced
- Available in various deniers to suit blending with acrylic
- Most of Grasicrimp fibre is available in both dull and bright finish
- Available in required shades to match acrylic

GRASICRIMP IS AVAILABLE IN WHITE AND IN VARIOUS SHADES TO SUIT YOUR MILL'S REQUIREMENTS

Birlas' Brightest Star

By Hashim Khairullah

From rehabilitating the sickly Indian Rayon Corporation to pioneering a dozen joint ventures abroad, Aditya Vikram Birla's achievements are admirable even for a member of the Birla empire. He is now spreading his corporate wings all over South East Asia

BORN in the first family of Indian business, Aditya Vikram Birla, has nevertheless managed to make big waves in the corporate world on his own At 40 Aditya is credited with the success of two of the brightest stars of the Birla industrial galaxy Gwalior Rayon (turnover Rs 325·76 crores) and particularly the Indian Rayon Corporation, which he turned around from a loss-making unit (Rs 29 lacs) to a highly profitable company making a profit of Rs 14 5 crores last year As Chairman of Gwalior Rayon, he has been instrumental in diversifying and expanding its activities in cement, caustic soda and sale of turnkey projects to foreign parties He is also the Chairman of Hindustan Gas and Industries (turnover Rs 9 4 crores) and has pioneered a dozen joint ventures abroad and is now spreading his corporate wings all over South East Asia His joint ventures in Thailand, Indonesia and Malaysia have been a resounding success

An engineering graduate from MIT, Aditya is the grandson of the legendary G D Birla He started his career by setting up a textile mill in West Bengal He denies having received "everything on a platter" He admits that he made mistakes and complements his father B K Birla who gave him his first opportunity to launch a new enterprise He now controls net assets worth nearly Rs 400 crores His achievements are admirable even for a member of the Birla empire Well-mannered and soft spoken he brushes aside the notion that he is the next heir to the Birla throne by categorically denying the very idea "There is no throne in the Birla house, only a lot of Birlas working"

In the course of an hour-long interview, Aditya Birla spoke on a wide range of topics Excerpts

The Union Budget: The Finance Minister has attempted to give a growth oriented Budget There are some positive proposals which would definitely benefit the economy The foremost amongst them is the changes in policy with respect to Indian Non Resident investment According to my reading, this would attract phenomenal investments if properly administered The higher rate of depreciation would also benefit industries as also the incentives given for Capital Gains tax There are, however, some taxes which may retard growth, specially the one which relates to the minimum 30 per cent of profit being taxed for corporations This would affect fast-growth companies which are providing employment and substantial revenues to the exchequer by way of excise duty, sales tax and octroi Their contribution is substantial Hence there is no justification for this further tax The levy on income-tax surcharge on individuals and companies is not understood, because this is a penalty on efficiency

Government Policies: I think the Government's intentions are quite conducive for growth. The Government wants production to improve It had declared 1982 as the "Productivity Year"

ADITYA BIRLA, grandson of the legendary G D Birla is making waves in the corporate world

It may not have been successful for various reasons like power constraints, the global recession to a certain extent and so on Even the Bombay textile strike has affected our productivity But we are basically talking about the Government's attitude and intentions, which are encouraging It is quite another thing that they can take more such steps or that all the steps they have taken have not given as much benefit as they should have

Global Recession And Its Impact On India's Economy: Worldwide recession does have an impact on our economy but not to the extent that it would have on countries like Thailand or Malaysia Frankly speaking, we Indian industrialists do not know what global recession really is We have to work outside India to really understand that Recession abroad means working the plants two days in the week None of the plants here work for two days in the week Recession in India means reduced prices, profit-squeeze and difficulty in selling some isolated commodities But one cannot say that there is a general recession here in India We have a gigantic market at home for practically all commodities So we are somewhat insulated from worldwide recession

Textile Strike: Even though the textile strike is localised in Maharashtra, it will have wide-ranging effects on the country It is a peculiar phenomenon If Dr Samant were to succeed in getting the kind of wage increase he wants, the Bombay mills vis-a-vis the other mills, would become completely uneconomic The net result? The Bombay mills would loose their competitive edge and will turn sick. Datta Samant might feel that he is trying to help the mill workers, but in the long run he is doing a great disservice to them, because once the level of wage as advocated by him is fixed, these mills due to high wage costs will not be able to compete and will die a natural death And the workers will (all) be out of employment

Labour Relations: I think labour relations are primarily the job of local management and if the management is strong, I think labour relations can be sorted out and there can be a healthy relationship between the two However once in a while there are adamant and unreasonable labour leaders who may be genuine in their desire to improve the lot of the workmen but are not practical and are unaware of the harm their actions inflict In such cases, as in the textile strike for instance, everyone suffers the millowners, the workers and the nation But basically I would think that the laws should be made such that the worker works The labour laws have become so lop-sided that they highlight only one aspect, i.e. job security They should give more importance to the fact that there should be higher productivity and unless there is higher productivity, we will have a serious problem on our hands Having the experience of working abroad I can say with first-hand knowledge that Indian labour is the most pampered

Problems Of Indian Industry Vis-A-Vis World Competition: We can become an international industrial force but there are factors hindering us The first is our old attitude of abhoring anything big Till recently we did not want big industries Actually, only big industries can reduce the cost of production And it is only with a reduced cost of production that the consumer can get his goods at a lower price In the case of small units, it will ultimately reflect in high prices for the consumer That is why our economy is a high-cost economy making it difficult to compete internationally Secondly, our excise duties and indirect taxes are among the highest in the world This also adds to the cost of goods Our products are thus high priced compared with those of say Thailand or Malaysia

Lastly, we do not utilise our resources efficiently The basic raw materials are high priced Take power, for instance In Gujarat, which has one of the best investment climates, the cost of power is twice that of say Thailand Now when we talk about competition outside we must remember that power, which constitutes a major raw material in any industry, costs us more than double what it does to our international competitors Likewise the cost of coal is also high Unless there is an all round improvement in the utilisation of existing infrastructural facilities like power, coal production and rail and port facilities, we cannot reduce the costs of these inputs and, hence cannot reduce our production costs

Dumping And Price Increases: Today anyone and everyone is dumping their products in India By dumping I mean they are even selling below cost This can be verified Unfortunately India opened up her frontiers when there was a general recession in the world We were caught in that kind of a situation There are anti-

→

dumping laws in America but none here. All countries protect their indigenous industries by way of duty protection for most of their products. India also has to protect its industries against unfair dumping through suitable duty protection.

That is not all. Today the textile mills are cash-starved. If you import goods you get six months credit, but if you buy locally the bankers give no credit. So it is a peculiar situation where India is promoting the sales of international giants at the cost of the indigenous producer. Thus the cash-starved textile mills are buying imported goods because of the extended credit (ironically extended by the Indian banks) and our plants have to run at 50 per cent capacity because the Government is starting the "closed" plants of international giants and closing Indian plants. Nothing comparable exists anywhere in the world.

Gwalior Rayon at a Glance

	(Rupees in Crores)	
	1980-81	1981-82
Assets	203.13	216.66
Turnover	294.59	325.76

Profit after Taxes	9.15	6.57
Dividends	3.89	3.89
Net worth per Ordinary Share	51.76	53.26
Dividend on Ordinary Share	20%	20%

In England and Europe there are textile quotas and the textile industry is protected by their government. Although developed countries are protecting their products, India, which is a developing nation, has no suitable protection machinery. We understand there is a foreign exchange crisis and here we are stopping our industries from growing and importing unemployment, thus further aggravating the strain on our foreign exchange reserves.

India's Industrial Future: If the Government and industry cooperate, we can become a big industrial power. We have everything. Good management skills, an abundance of raw materials and our biggest asset, good manpower. But we have not been able to capitalise on that since most of the skilled men are going abroad and are not contributing to our economy due to high personal taxes and very low take-home pay. We need greater discipline in our labour force and more co-ordination and cooperation between the Government and industry, so that we can become "partners in prosperity".

India's Politics And Policies: A sound Central policy is what we need in politics as well as in the industrial sector. Local politics do not affect our industries very much. It might affect the working of a particular unit but not our overall industrial expansion. It is the Central policies which would affect our expansion. Of late there is such a hue and cry about big business which is really not big. If smaller units are licensed to produce everything, it would ultimately result in a high cost economy. Ultimately the consumer would suffer. So the Government's policies must be far-sighted to benefit the whole country.

Indian Rayon

(Rupees in Lacs)

	77-78	78-79	79-80	80-81	81-82
Total Assets	2,880	2,346	2,747	3,994	4,933

Gross Profit/Turnover%	12.83	15.59	15.28	14.07	14.49

Take the IMF loan, for instance. The so-called big business was supposed to be the main benefactor of the loan but it is, in fact, being hampered by this move. The IMF may have suggested that there should be more free trade. The IMF may suggest anything but ultimately it is for the Union Government to decide what is in the best interest of the nation.

If the Communists were to take over the nation, they will have a big problem on their hands. If the industries are nationalised and operate at 44 per cent capacity utilisation, as the power plants are doing now, there will be a revolt and complete chaos. If the State controls and also runs all production facilities, there will be scarcity and spiralling prices. Moreover, the whole economy would collapse. We would have a situation like the one in Iran now. Confusion and chaos.

Parallel Economy: Our "parallel economy" is created by laws and taxes. Remedy of the root cause is more important than doing just superficial patchwork.

Ratan Tata and Competition: Ratan is a good friend of mine and there is no competition or conflict of interests between us. There is so much scope that we are not growing at each other's expense. Frankly, there is no race at all. I have a great admiration for the House Of Tatas and for Mr J.R.D. Tata in particular. There is room enough for both the houses to grow without treading on each other's toes.

On Being A Birla: I am proud to come from such an illustrious family which is so closely associated not only with industry but also social welfare activities, the arts and educational institutions. My grandfather, Mr G.D. Birla, was a close associate of Gandhiji and played an important part in the freedom movement. We have built hospitals, schools and temples all over the country, besides building industries. We believe that we should expand our national industrial base and run our industries economically and efficiently for the benefit of our nation. ■

Adimpact

That's Business

From Our Special Correspondents

MR C. M. KAPOOR is a typical young go-getting Punjabi businessman. He remarks grimly: "Unless something is done about our hopeless export infrastructure, particularly the absence of containerisation facilities in the hinterland, we will be knocked out of the world market—and the greatest danger is from China. Unfortunately, businessmen are so habituated to cowering before governmentwallahs that they never get down to brass tacks while talking to them." Mr Kapoor's impatience is, however, laced with naivete, for he would rather give a paper written by him to someone with influence in the corridors of power

Anyhow, his Jullundur-based export house, Kasinka Trading (he is its Managing Director), appears to be on a good wicket. It has won the Engineering Export Promotion Council (Northern Region) Shield for the best performance in exporting the products of small-scale industries in 1980-81 Kasinka Trading's exports have increased 20-fold in the last decade and now exceed Rs 2 crore, the main item being hand tools The Chinese gave Mr Kapoor gooseflesh because of their cheaper cast-iron vices, but he has left all that behind him, having switched to steel vices with the help of German technology at his manufacturing unit in Himachal Pradesh.

The top exporter's shield in the large scale manufacturer category has been won by the Faridabad-based Gedore Tools (India) Private Ltd. Cashing in on the growing popularity of the do-it-yourself trade, the company now exports hand tools worth over $ 16 million to more than 50 countries. Claims Mr Ashok Jhalani, its Executive Director. "We are the world's largest manufacturer of flat wrenches." He may be right, for Gedore wrenches seem to be turning half the screws in the world

Durable Old Man

I go to see Mr Morarji Desai at his Marine Drive flat on February 27. As I enter the room after taking off my shoes, he motions to me to sit down and continues his letter-writing, looking unlined for his 87 years. The soft murmur of the waves beating gently against the pylons barely a stone's throw away adds to the serenity of the atmosphere.

Q: May I extend my good wishes to you for your birthday which is tomorrow?

A: My birthday comes only once in four years—on February 29. But you should be worrying about the economic health of the nation which is being undermined by corruption. We urgently need a Lok Pal to curb corruption at the very top.

Q: Why did you not bring in a Lok Pal when you were Prime Minister?

A: I wanted to, but the Lok Dal would not let me. In fact, it was I who gave to Shakdhar the scheme about Government funding of elections.

Q: What else?

A: Indiscriminate imports under IMF pressure are spoiling our economy... I will not speak a word more You cannot suddenly jump in here and start an interview.

The durable old man is as crusty as ever.

DDA, Are You Listening?

Although the advanced countries switched to "ready-mixed" concrete long ago, here cement is still mixed at a construction site resulting, according to the Cement Research Institute of India, in at least 15 per cent wastage. The main obstacle to the popularisation of ready-mixed concrete in this country is the capital-intensive nature of the truck-mounted mixer in which the wet mixture must be constantly rotated. It costs about Rs 10 lakh and its payload is low. Moreover, it is an energy guzzler: much energy is consumed in constant rotation. And it has to return empty after disgorging its contents.

DR H.C VISVESVARAYA.

The Ballabgarh-based CRII has, therefore, been trying, under the guidance of Dr H C. Visvesvaraya, to figure out how to eliminate the truck-mounted mixer Now it thinks it has found an answer. semi-wet concrete which can be transported in ordinary trucks and to which the remainder of the water can be added at the site. Dr Visvesvaraya says that in this method the quality of the concrete remains unaffected. Naturally, the proportion of water to be added at the transportation stage and, later, on location will depend on the climate and the nature of construction.

Another advantage of this innovative methodology, about which the CRII is understandably chary of talking, is that ready-mixed concrete is less susceptible to thievery than pure cement. What with all the furore over the collapse of houses built by the Delhi Development Authority, its importance cannot be overemphasised. DDA, are you listening?

SEMI-WET CONCRETE being loaded into a mixer for second-stage mixing

Suspicion Justified

Some time ago, the release of statistical information on the 20-point programme by the Press Information Bureau was reportedly withheld on last-minute instructions from the Prime Minister's secretariat, engendering suspicion about its unsatisfactory progress. The following table of percentage performance of drinking water supply and electrification in rural areas over April-December 1982 shows that the suspicion was not groundless:

State	Drinking Water	Electrification
	in villages	
Andhra Pradesh	114	48
Assam	56	20
Bihar	50	23
Gujarat	53	29
Haryana	42	*
Himachal Pradesh	29	75

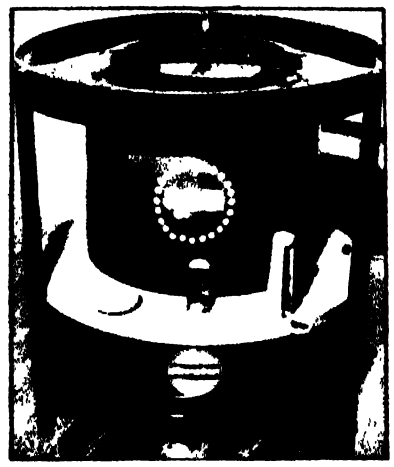
TERTIARY RECOVERY at the Institute of Reservoir Studies, ONGC, Ahmedabad.

"Nutan" Saves Kerosene

The Indian Oil Corporation's "Nutan" stove is supposed to have a thermal, efficiency of 60 per cent compared to the 35-40 per cent efficiency of most other wick stoves sold in the country. The IOC estimates that if "Nutan" were to find its way into every kitchen using kerosene, it would save the country 3 lakh kilolitres of kerosene.



Until now, there was a problem. In keeping with the Indian penchant for promoting monopolies, the licence was given to only one manufacturer, Oriental Metal Industries, Calcutta. But the company went under, thanks to labour trouble. The silver lining is that it has induced the authorities concerned to reverse its policy, and now licences are being given to small units in different parts of the country This augurs well for the easier availability of "Nutan" at competitive prices

ONGC Bags Big Fish

A little-known feather in the Oil and Natural Gas Commission's cap is its success in selling its expertise abroad Its subsidiary, Hydrocarbons India Ltd, has just bagged two contracts basin evaluation for Ceylon Petroleum Corporation and reservoir studies of a field in Iraq. The work will involve mainly interpretation of seismic data

The ONGC first went overseas in 1965 when, in collaboration with the Philips Petroleum Company of USA, it explored oil in the Gulf region on behalf of the National Iranian Oil Company. In 1976, the ONGC secured a contract from the Tanzanian government for drilling in the Songo-Songo Island. If the American reputation is bigger, so are their prices, enabling the ONGC to edge in sideways. ■

Letter From New Delhi

by N. Iqbal Singh

Flop Film Festival

THE year opened with a non-event I am, of course, referring to the Ninth International Film Festival. Seldom have I witnessed less interest, or less enthusiasm, for any of the international film festivals held during the last three decades. It took me back to 1952 when the First International Film Festival in India was held in Bombay. With what excitement had film buffs waited for the opening day and what a revelation it had proved to be for those who had not seen any foreign films before. As I happened to be head of the Bombay Radio at the time, and had a great deal to do with its radio coverage, I cannot forget the wonder with which films like *Bicycle Thieves* from Italy or *Yukiwarsoo* from Japan were received. They were to set a new trend in film-making in this country.

The contrast this time was startling because, whereas then the festival films had run to full houses, this time most of the theatres showing the films were half empty. Partly, this was due to the high prices of admission. However as regards the indifferent quality of the films in the competitive section, there could have been no more telling comment than the remarks made by the chairman of the jury, Lindsay Anderson, who after stating that the jury felt "obliged to record (their) disappointment at the general level of the films chosen" said "We must record, with regret, that in our judgment, no film had shown the power of expression, the importance of the theme or the originality of the conception which would justify the award of the Golden Peacock whether for a short or a feature film."

Most people attribute the chief reason, for the failure of the Festival, especially far as the competitive section is concerned, to the "terrible bureaucracy", to quote Lindsay Anderson again. Aruna Vasudev, documentary film maker and author of a couple of books on Hindi films, spelt it out clearly. "What actually happened was that there were three organisations which were running the Festival—the Ministry of Information and Broadcasting, the National Film Development Corporation and the Directorate of Film Festival. It became a triangular contest You can't run a festival like that."

True, in the Retrospective section, there were films by distinguished producers like Rocha but, in the opinion of one critic, "There were too many undistinguished films too." And Rocha's were 16 mm films which were subjected to the ultimate indignity of projection in substandard theatres.

Among the documentaries screened at the Festival, I thought Mira Nair's *So Far From India* was a good film made with a great deal of sensitivity.

DR HASSAN ALI HUSSAIN AL NI MAH, the present Ambassador of Qatar, has perfected the art of holding musical soirees.

Musical Soirees

IT was the last Belgian ambassador, J Graff, who started the vogue of inviting Indian musicians to perform at his house in Tilak Marg before an exclusive audience of his friends. Each evening's concert was followed by drinks and dinner. This festival of Hindustani music used to last for three or four days, and was a annual event.

The present ambassador of Qatar, His Excellency Dr Hassan Ali Hussain Al Ni Mah, known to most of his friends as Hassan, also holds similar concerts- and even dance recitals—but with a difference. In fact, he has reduced it to a fine art. The locale is a replica of a sort of *khema* (a large tent) which one would expect to find in a desert or in an oasis.

Designed by the ambassador himself, it is illuminated by hurricane lamps, which, he feels, are the nearest equivalent to a desert lantern, even the magnificent chandeliers, comprise a cluster of these lamps. The inside of the *khema* is snow white—its walls, its ceiling- and the flooring is covered by priceless carpets and skins with cushions and bolsters aplenty.

The music is heard in the traditional *baithak* style—sitting or lounging on the floor. The last two artists to perform at these musical *soirees* were Ustad Asad Ali Khan, perhaps the best performer on the *Vichitra Veena* in the country, and Ustad Munnawar Ali Khan, one of our foremost exponents of vocal music.

Noble Mission

LORD Briggs, known to most of us as Professor Asa Briggs, a distinguished writer and author of the monumental history of the BBC and also Chancellor of the Open University, was here, but on a strange mission.

The story goes back, as James Ure of the British Council told me, to the year 1916 when a man called Charles William Wallace, a Scotsman, a merchant and an entrepreneur, died leaving a sizeable fortune. At some stage in his life he had been connected with the well-known firm of Shaw Wallace and had lived in Calcutta. He had obviously a very liberal bent of mind because in his will he stated that, when a proper provision had been made for his descendants, he wanted his money to be channelised back to where it had come from, namely, the British and the Indians. So a trust was formed for his descendants who benefitted from the trust money for 60 years—the last descendant died in 1976. A knotty problem then arose because according to the terms of his will, the money was to be now equally divided between the British Treasury and the Treasury of "British India". But British India had ceased to be a legal entity. After a great deal of confabulation, the lawyers of the Wallace Trust decided that the money apportioned for British India should be divided, according to a formula, between present-day India, present-day Pakistan, present-day Bangladesh and present-day Burma. India, however, got the largest share—about eight hundred thousand pounds sterling. (Britain got about a million pounds.)

The next step was a meeting in 1978 between the British Prime Minister at the time, James Callaghan, and his Indian counterpart, Morarji Desai. The two prime ministers decided that in order to fulfil Wallace's objective, the money should be devoted to providing facilities whereby British people should learn more about India and the Indians more about Britain, a trust would be set up in Britain to pursue that aim, while in India a society called The Charles William Wallace Memorial Society would be constituted for the purpose.

Lord Briggs, along with Sir Charles Troughton, formerly chairman of the British Council, and the British Council, represented by Roddy Cavoliero, its deputy director-general, are the three members of the British Trust; the Indian Society is headed by Dr Kapila Vatsayana, additional secretary of Ministry of Education, and eight other officials representing various ministries and the Indian Council for Cultural Relations.

Lord Briggs was here to meeet members of the Indian Society to work out and identify a number of projects in which there could be an inter-change of people in both directions.

LORD BRIGGS, a distingurshed writer, was in Delhi to work out projects to be sponsored by the Charles William Wallace Memorial Society, in order to bring about greater cultural exchange between England and India.

"Immortal" Woman

FANCY meeting a French "Immortal", and a woman at that! Marguerite Yourcenar is the first woman to have been admitted to that purely male three-hundred-year-old citadel of the arts, L'Academie Francaise, which has a membership of forty. They are popularly known as the "Immortals" and you can only be elected when one of the existing members dies. Author of the famous *Memoirs Of Hadrian*, which received a special award from the Academie as well as the Prix Femina for 1952 and has already become a classic, Marguerite wrote her first book, *Alexis*, when she was 16.

MARGUERITE YOURCENAR, the first woman to have been admitted to the all-male L'Academie Francaise, whose members are popularly called "Immortals".

She has never looked back since. She has written a large number of books which include fiction, historical works, books of essays and even poetry. But it was *Hadrian* that made her famous. Did she feel thrilled when she became an "immortal", I asked her. "Not much," she said, "they had to take a woman, I suppose." She added: "It is an old institution, but don't forget that many great writers were never its members."

There wasn't much of a tradition of writing in her family, she told me, and she had had no formal education. However, she spoke good English because of her trips to England and the United States. She loves to travel, and had loved it here, her trip to Rajasthan in particular. And Agra—the Taj Mahal lived up to her expectations and more.

A gracious woman, Marguerite Yourcenar exuded tremendous charm and if *Memoirs Of Hadrian*, which is the only book of hers I have read, epitomises some of her greatness as a writer, she has undoubtedly earned her status as a French "Immortal". ■

A SCENE FROM "OPEN HEART", an entry at the IX International Film Festival, held at Delhi.

Letter From Calcutta

All For A Ball

THEY called him the Chinese Wall because he so stoutly blocked the advance of British footballers; but Goshta Pal, the legendary soccer player, the first recently to be honoured with a statue in Calcutta, was not the only one to triumph over boots with bare feet. It was the style of the times; exalted in the historic match of July 29, 1911 when Mohun Bagan, the team Pal later joined, won the IFA shield.

About that time, *The Times of India Illustrated Weekly* (as this magazine was called) wrote that "on Thursday and Friday every Bengali carried his head higher and the one theme of conversation in the tramcars, in offices, and in those places where babus most do congregate was the rout of the King's soldiers in boots and shoes by barefooted Bengali lads". That was on July 24, when Mohun Bagan defeated the Middlesex Regiment, five days later scoring an even more momentous victory over the crack East Yorkshires.

Goshta Pal was 15 (born August 20, 1896) when the "Immortal Eleven" so distinguished itself. But he must have experienced the delirious frenzy that gripped Calcutta, was himself one of the "Immortal Eleven" during a playing career that stretched from 1913 to 1935, and remained a reminder of that heroic age until his death in 1976.

Seeking Sanctuary

THE massive rally of refugees on the Maidan on March 2 draws attention once more to a problem that is permanently associated with West Bengal. The Maidan and its Shahid Minar, Ochterlony Monument to older readers, is similarly identified with lost causes: this was where a hapless community, driven out of new homes in Dandakaranya, congregated some years ago to demand refuge in the Sunderbans. The Left Front soon sent them packing to Orissa and Madhya Pradesh.

Mr Jyoti Basu is less inhospitable to victims of persecution in Assam. About 17,000 dispossessed people from the Karbi Anglong riots of 1979-80 still languish here, joined by thousands more, fleeing the election bloodshed. But Assam's Gana Sangram Parishad says there was no violence and, hence, no victims. All talk of uprooted humanity is "totally false and motivated" explain the men responsible for the carnage, accusing the West Bengal Chief Minister of "collecting Bangladeshis, vagabonds and beggars in trucks and buses" and passing them off as refugees. As for the camps in Assam, why, they are peopled only by malicious foreigners who set fire to their own houses and destroyed all they possessed just to claim official compensation.

Such novel versions are not exactly new. When in 1971 more than nine million people fled what was then East Pakistan, General Yahya Khan also accused Mrs Gandhi of collecting vagrants to elicit world aid and sympathy.

Hands Off

MRS Gandhi set the fashion, now everyone sees a "foreign hand" behind every disturbance. In Dhaka not long ago, the Zonal Martial Law Administrator, General Abdur Rahman, blamed "foreign agents" for leading astray Bangladeshi students and politicians. Two days earlier in the West Bengal Assembly, Mr Jyoti Basu too claimed to see a "foreign hand" behind the Assam troubles. He was promptly supported by the Congress(S) leader, Mr Zainal Abedin, who similarly accused an "outside force" of the violence. To be imitated so widely must be gratifying for Mrs Gandhi; the charge also nicely exonerates ourselves of any blame.

Photographs by Mona Chowdhury

REFUGEE RALLY AT CALCUTTA MAIDAN

"DRESS-AS-YOU-LIKE" poses adopted by painters and sculptors who participated in the All India Artists' Workshop in Calcutta. Picture shows Balkrishnan (above left) and Prakash Karmakar.

BRONZE STATUE of noted footballer Goshta Pal, a legend in his time.

Still Unbridged

MR Pranab Mukherjee spoke as a true Bengali when he explained in his Budget speech that since the still incomplete second Hooghly bridge "falls on a local road" it is a State responsibility. Bengali village life is riddled with tales of generations of bitter friction over a mango tree in one man's land whose fruit droops over another's, there are even more expensive and acrimonious lawsuits over "char" land that breaks away from one man's property and attaches down river to another's.

The Budget's promise of a paltry Rs 0.39 lakhs for 1983-84 seems grossly inadequate to the Minister for Urban Development, Mr Prasanta Sur, who now wants an immediate loan of Rs 83 crores and says that the total cost has gone up to Rs 158.80 crores. But Mr Mukherjee too argues like a litiginous Bengali and not as a rational Marxist when he points out that while 49 per cent of the work has been completed at the Calcutta end, the negligent authorities in Howrah, across the river, have bothered to finish only 22 per cent of their job. We now know why Hindu joint families in Bengal collapsed under the weight of strife and rivalry.

Life On Canvas

WHAT would Calcutta, or any other Indian city, be without its foreign cultural missions? I am moved to this acknowledgement by the vivid relevance of the All India Artists' Camp at Max Mueller Bhavan, especially the revealing insights provided by its theme—'Human Conditions in the 20th Century.'

As a dozen or so artists paint and draw in public, visitors wander among their canvases, engage them with questions and admire their work. There are talks on such pertinent topics as Man and Environmental Pollution or Civilisation in Crisis; and a simultaneous exhibition of the haunting works of Sunil Das, the young and talented Calcutta painter once noted for his horses and *tantrik* symbolism. Bombay is represented by Suruchi Chand, and Werner Knaupp, a German, who is the only foreigner participating.

The human condition, as it emerges here, is bleak though not without hope. Perhaps the most telling of all the pictures is Paritosh Sen's depiction of Assam's tragedy. His collage shows a woman slicing a chicken, her breast composed of newspaper illustrations of the massacres. "I just cannot imagine how an artist can put in so much into one canvas, like the Indian artists do", says Knaupp, who also believes that a similar camp would be impossible in West Germany because German painters cling to their privacy.

Publish And Be Saved

IT is not often that a judge upholds violation of his own orders. This happened here on March 1 when Mr Justice P.C. Borooah of the Calcutta High Court not only refused to punish *The Telegraph* and its editor, M.J. Akbar, for disobeying his specific instructions but even praised the disregard.

Mr Borooah had asked that pictures of what goes on in Dum Dum jail should not be published in *The Telegraph* or in *Sunday*. The order was ignored and both publications carried several grim illustrations of how lunatics are treated in this infamous prison. Counsel for the jail promptly complained of contempt and, respecting procedure, the Court asked Akbar to show cause why he should not be prosecuted.

His reply moved Mr Booroah to admit that "the boldness shown by Mr Akbar is certainly commendable in the sense that it is in the wider interest of the miserable and helpless inmates of the Dum Dum Central Jail". Pleas to the contrary by the Government's lawyer, Mr Naranarayan Gooptu, that the law should not be flouted with impunity and that the State and the jail had been brought into disrepute by pictures that prejudged the issue were brushed aside by the judge who said that the editor "may have been carried away by his emotions and sense of duty after seeing the nature of the photographs".

It was a signal victory for *The Telegraph* and its courageous campaign against prison callousness, but an even greater triumph for the noble traditions of India's judiciary.

In The States

The Erosion Of The Congress (I)

HYDERABAD: If the Congress (I) in Andhra Pradesh does not soon shake itself out of its complacency, the party in the State may soon become a thing of the past Presently, it is teetering on the brink of virtual extinction The results of the four by-elections , held on February 27, amply demonstrated this. It is very obvious that the people are not in a hurry to forgive the party for its misdeeds

For example Yemmiganur, from where former Chief Minister K. Vijaya Bhaskara Reddy was once elected by more than 11,000 votes, was generally regarded as a"safe"constituency by the Congress (I). Mr Reddy toured the constituency for more than 10 days, vigorously campaigning for the party candidate R. Hanumanth Reddy The dissensions in the ruling Telugu Desom Party, especially over the choice of the party candidate seemingly enhanced the chances of a Congress (I) victory But when the results came in, the Congress (I) lost its seat to Telugu Desam by as many as 6,639 votes

The miserable performance of the Congress (I) in Himayatnagar (a city constituency in Hyderabad) compounded the distress of the party. With the Telugu Desam and the Bharatiya Janata Party fighting tooth and nail over the seat, the Congress (I) hoped to run away with a victory. Their hopes were boosted with the entry into the fray of the Janata Party which spared no efforts in its speeches to make the BJP look small.

Although Telugu Desam spent a fortune on the campaign the chances of its victory were doubtful because of several unpopular decisions made by the ruling party The most unpopular of these is the one with regard to the reduction of the retirement age. Since Himayatnagar houses mostly the middle-classes, "Telugu Desam" is a dirty word in this area The Congress (I) banked on this, but came in for a rude shock when the people preferred the Bharatiya Janata Party candidate to its own. The BJP candidate, A Narendra, won by a huge margin of

MRS GANDHI must rehaul her entire party machinery in the State if she desires to save the Congress (I) from virtual extinction.

28,134 votes, surprising even the BJP workers themselves The Congress (I) candidate on the other hand polled only 3,599 votes, and lost even the deposit.

What a fall for a party that once held unchallenged sway in the State!

Nevertheless, the Congress (I) was hopeful of securing the Tirupati seat NTR's decision to divert the Tirupati temple funds towards social welfare measures went against him as did his decision to give up the Tirupati seat (won by a margin of 47,000 votes) in favour of the Gudivada seat. The choice of the Telugu Desam candidate had also whipped up a good deal of dissatisfaction among party workers. The Congress (I) could not have asked for a more perfect situation to exploit. But the Tirupati voters refused to be taken in by Mrs Gandhi's rhetoric. Despite everything, they voted for the Telugu Desam which retained the seat by a margin of 11,000 votes. In Madanpalli as well, NTR's party trounced the Congress (I) by 10,661 votes.

A pall of gloom now envelops the Congress (I) in Andhra Pradesh. The party's confidence is totally shattered. Padayatras undertaken by former CM, T. Anjiah and Union Minister P. Venkatasubbiah failed to refurbish the sagging image of Mrs Gandhi. The rot that set in more than 3 years ago is now eating into the party's vitals. Anjiah's quixotic acts, like undertaking a fast in protest against NTR's Government, have only helped to blight its image further.

Apparently disgusted with the party's dismal performance, the chief of the State Youth Congress (I) has sent in his resignation from his party post. It is expected that the State party chief, G. Venkataswamy, will also quit his post to facilitate a total overhaul of party machinery.

If the party is serious about ensuring its continued existence in the State, let alone returning to power, it has to discard a lot of deadwood, draft young blood and acquire a clean image. Mrs Gandhi can no longer take things for granted if her party is to avoid the prospect of extinction in the very State which returned her to the Parliament with such a thumping majority, only three years ago.

G.S. Reddy

Corrupt Forest Officials Help To Denude Forests

SIMLA: Illicit felling of trees has reduced the forest cover in Himachal Pradesh over the years from 30 per cent of the total area to barely 18 per cent (See *Weekly* August 22-28, 1982) Alarmed by the decline, the State Government nationalised all commercial cutting of trees and swept, through an ordinance promulgated on in October 1981, all private sales of such produce into the public sector. It has eliminated contractors' agencies and decreed that pine trees will no more be utilised to tap resin

But none of the measures is being sincerely implemented Dishonest contractors, backed by corrupt politicians, continue to make hay

The forest officers not only help the contractors in felling the trees but also guide them in the transportation of timber, through safe routes, out of the State. Costly timber worth crores of rupees has been smuggled out of the State with impunity, with the connivance of forest officials and others

Dishonest contractors fell trees under the cover of Departmental Tree Felling Rights and use fake permits or no permits at all to take timber after dusk when such traffic is prohibited under the law. Cases are not wanting when officials have been pressurised by 'political bosses' to release smuggled timber held at check posts

Likewise, merciless bleeding of pine trees for the sake of resin has had a disastrous effect on the pine trees *('cheel)*,(See *Weekly*, January 2-8, 1983) According to officials of the forest department, the estimated number of pine trees destroyed due to this process in one district of Himachal Pradesh alone amounted to 40,000. Despite the stipulation that cuts should be only half inch deep, in most cases they are as deep as four inches

One particularly brazen case was taken up by the Chief Justice of Himachal High Court through "*suo moto* powers" of the Court. It pertained to a forest lessee from Jubbal (the home town of Mr Ram Lal, Chief Minister of Himachal Pradesh, in Simla district).

After hearing the case, the Chief Justice, ordered cases under sections 420, 467, 468, 471 and 379 of the Indian Penal Code registered against Mr Mast Ram Tanta, the forest lessee, for forging a permit and illicitly transporting timber to Simla and suggested that the whole matter should be investigated by the Central Bureau of Investigation The Chief Justice has also ordered the parties to appear before him on March 1 and directed that the case should be tried by the Chief Judicial Magistrate, Simla.

Mr Tanta had been earlier prosecuted under sections 41 and 42 of the Indian Forest Act in April last year and was fined Rs 500, the maximum penalty that could be levied under the Act by the Judicial Magistrate of Tehsil Headquarters, Theog The Chief Justice subsequently received an anonymous complaint that Mr Tanta, an influential man, was a habitual offender and had been lightly dealt with.

The Chief Justice issued the notice of enhancement of sentence to Mr Mast Ram Tanta. The Deputy Director of Enforcement,Mr S.D. Minhas, after thoroughly examining the records and relevant papers, came to the conclusion that Mr Tanta had forged the permit to transport the timber worth Rs 2 lakhs. He recommended Tanta's trial under sections 420, 467 and 468. The Judicial Magistrate let him off with a mild fine when the accused pleaded guilty in this case

CHIEF MINISTER RAM LAL'S son and son-in-law were found to be involved in the Himachal Pradesh forest scandal.

The Chief Justice observed that the consignment of the timber in question was smuggled in trucks belonging to Mr Jagdish Thakur, son of the CM, Mr Ram Lal, and Mr Padam Singh, the CM's son-in-law. This is why this case of smuggling was considered "sensitive and delicate" by the State Enforcement Directorate and the Public Prosecutor opined that only a case under sections 41 and 42 of the Indian Forest Act be filed in the Court against Mr Tanta. The Chief Justice observed that Enforcement Directorate had concealed some papers from the Court.

The Chief Justice has pronounced strictures on the conduct of two directors of Directorate of Enforcement, Mr K.N. Kapur and Mr Lashkari Ram, and other officers. He said they displayed 'convenient memory' and were evasive in their replies to the questions put by the Court.

It was only when the Court ordered the investigating officer to find out the names of the owners of the trucks used to smuggle the timber that he gave the names. Even so he avoided mentioning the names of the fathers of the owners. He was again directed by the Court to verify their parentage and then he had to reveal that the trucks were owned by the son and son-in-law of the Chief Minister.

Higher Onshore Oil Yield

AHMEDABAD: The ONGC's onshore fields in Gujarat and adjoining areas may begin yield five to six million tonnes of crude oil a year by 1980.

The tentative estimate of oil production for 1983-84 from the Gujarat fields, according to the latest annual plan of the ONGC is three million tonnes (1.6 from Ankleshvar and 1.4 from Gujarat) while the figure for 1984-85 is 2.8 million tonnes. The reasons for the predicted decline are not far to seek. The conservative coordinators in the ONGC's Dehra Dun headquarters and at the Energy Ministry in New Delhi's Shastri Bhavan are optimistic of achieving a major leap in production from ONGC's north-eastern fields but not so enthusiastic about increasing production from the Western Region. The Ankleshvar crude is highly valuable for preparing detergent alkalites for petrochemicals and it is, therefore, considered necessary to produce this crude for a longer period as far as possible to meet the requirements of the PCL at Baroda.

At the recently-held 6th Oil and Gas Conference at Dehra Dun, Mr A.T.R. Raju, Chief Geologist of the ONGC, unfolded a strategy to produce five to six million tonnes of oil in the Western Region (Onshore) by 1990. About 25,500 sq km of the Cambay basin has been well-explored and about 500 million tonnes of oil has been struck here—localised in an area of 330 sq km, spread over 51 fields and pools. It is believed that small structural accumulations in the basin might yield another 150 million tonnes. By adopting timely and effective measures on proper well maintenance, stimulation and artificial lift, the present level of production in North Gujarat fields can be markedly improved. Mr Raju thinks it is possible to achieve a production of 2.75 million tonnes from North Gujarat.

The virgin areas of the Gulf of Cambay are expected to yield 100 million tonnes of oil. This area entails high risk exploration but with high rewards. In view of its immediate vicinity to the areas of production any discovery here could also be quickly developed for commercial production. The Western Region of the ONGC also includes Saurashtra, Kutch and parts of Rajasthan.

The Jaisalmer basin of Rajasthan is located on the eastern flank of the hydrocarbon-bearing Indus Basin with thick sediments deposited under favourable conditions. There is no reason why this hydrocarbon should not be tapped. The main problem, however, is the acquisition of sufficient data for ideal tapping conditions. A preliminary survey based on available data indicates that this area may yield 50 to 100 million tonnes of oil but the yields are expected to be much higher once the operations begin.

Dipak B.R. Chaudhuri

JABALPUR: Mr Satyavrat Chaturvedi, the Madhya Pradesh Deputy Minister for Irrigation, has resigned from the State Cabinet following his conviction by the High Court in a case of abduction.

A Division Bench of the High Court comprising Mr Justice J.S. Verma and Mr Justice M.L. Malik, in their judgement delivered at Jabalpur, held Chaturvedi guilty under sections 367 and 148 of IPC and sentenced him to three years rigorous imprisonment.

The bench also directed Chaturvedi to surrender after a fortnight during which he could also obtain a stay from the Supreme Court.

Soon after the judgment, Chief Minister Arjun Singh contacted the Deputy Minister on phone at Chhatarpur and is understood to have asked Mr Chaturvedi to resign.

MP's Criminal Minister

The Prosecution case was that Vinod alias Satyavrat Chaturvedi, son of a former Minister of Madhya Pradesh, Mr Baburam Chaturvedi, and Mrs Vidyawati Chaturvedi, Member of Parliament, along with five others had kidnapped one Brindaban Ahir of village Duda in Chhatarpur on April 25, 1973 and forcibly taken him to a nearby village where they inflicted serious injuries on his person with lethal weapons. Brindaban Ahir died in a hospital the same night.

The case was filed in the Court of Additional Sessions Judge, Chhatarpur who acquitted all other five co-accused but not Mr Chaturvedi.

The father of Brindaban Ahir had appealed to the then Chief Minister of Madhya Pradesh and the Prime Minister to intervene and see that due justice was given to him.

The CID was subsequently ordered to conduct an enquiry and the case had been filed afresh in the Chhatarpur Court. In the revision case, the Government then appealed in the High Court and the Court found guilty all the accused.

They were sentenced to three years rigorous imprisonment each.

Mukesh Kumar Sharma

Reaching Farmers The T & V Way

The Training & Visit system is a reorganised and streamlined agricultural extension method under which Village Level Workers (VLWs) and Agricultural Extension Officers (AEOs) receive periodical training and pass on their knowledge to farmers during their periodic visits. In this system, the VLW is a single purpose extension worker, concerned only with agriculture under a single line of command. The VLWs and AEOs receive training from the Subject Matter Specialists once a fortnight on current field operations and disseminate the relevant technology through selected farmers called Contact Farmers during their regular visits.

The T & V System was launched at the Rajasthan Canal Project and Chambal Project in Rajasthan and Madhya Pradesh respectively in 1974. Later, it was introduced in some projects in Andhra Pradesh. This system is now also in operation in the States of Assam, Orissa, Bihar, Gujarat, West Bengal, Tamil Nadu, Kerala, Haryana, Karnataka and Maharashtra. Other States are expected to adopt it shortly.

Under the programme, training is imparted on fixed days of the week or the fortnight at a training session by the Subject Matter Specialists (provided at the Sub-Divisional level). The training is a proper mix of theory and practice, employing the use of audio-visuals. A subdivision is attached to a Regional Research Station operated by the Agricultural University. The Subject Matter Specialists and Sub-divisional Agricultural Officers receive a two-day monthly training from the research scientists. They visit the farmers and note the adoption of the techniques.

The training, to begin with, is confined to a few selected crops which are grown by a large number of farmers in the area. The knowhow is limited to the stage of crop growth covering a fortnight at a time and concentrates on important practices and operations relevant to the following fortnight. For example, during the sowing of redgram or greengram, the treatment of seed with rhizobium culture forms the subject of training. The Subject Matter Specialists prepare a crop lesson in consultation with research scientists. This is printed or cyclostyled and distributed at the training session. Important points in the lesson are highlighted at the end of the lesson.

The VLW visits the farmers in his circle once every week in intensive areas, or once every fortnight in other areas. One VLW supervises about 800 farming families. He divides these families into 8 groups of 100 each and visits each group on a fixed day covering all the 8 groups every fortnight. In intensive areas, which command major irrigation projects, there are 500 farming families in a VLW circle and the VLW visits every week at the rate of about 60 families each day.

He groups 10 families into one unit and appoints 10 farmers as Contact Farmers. The Contact Farmers are the leaders of the group. All the neighbouring farmers are encouraged to meet the VLW during his visits.

Representatives of input agencies like Agro-Industries Corporation, Seed Corporations and Marketing Co-operatives are invited to the training session and the problems relating to the supply of inputs are discussed at the session and solutions found.

Supervisory support to the sub-division is provided by the Deputy Director of Agriculture and a group of SMSs at the district level and by the Regional Director of Agriculture, wherever provided.

At the State level, the Director of Agriculture is assisted by an Additional Director of Agriculture (Extension) who is supported by other staff. They conduct regular monitoring, evaluation and in-depth studies to determine the impact.

The system is designed not only to deliver messages to farmers but also to identify and feed back to senior extension officers, and ultimately applied researchers the farm level problems. This feedback mechanism is designed to ensure that the system remains responsive to farmers' needs and continues to deliver relevant technology. This reverse flow of information, however, is not sufficient for managers to monitor the system's efficiency in delivering information nor to form judgements about the extent to which improved practices are adopted by farmers and the consequent effects on crop yields and productivity. So resources needed for evaluation are also provided.

The T & V System, wherever it was adopted, has shown very encouraging results. It has been observed that the yields can easily be raised significantly under this system. There is no reason why similar results could not be ensured in other areas within a brief period of one or two crop seasons.

Dance

Kuchipudi: Must Women Dance Solo?

Degeneration, Not Development

Kuchipudi has plummeted alarmingly from an uplifting and edifying theatre experience to a frail and suggestive stage affair. Seductive poses, titillating passages, sizzling duets and the sort today constitute the hallmark of the trade, says the author.

Text and Photographs by Mohan Khokar

A TYPICAL DANCE-DRAMA in Kuchipudi

HE COULD have been walking on air, so delirious with excitement was Siddhappa. He was to be with his bride for the first time. The two had been married earlier, much earlier—he was four and she a mere six months—but the time had now come for consummating the union. In the evening there was to be a reception, after which he and his Kameswaramma would be escorted to the nuptial chamber. He could hardly wait. And it was yet only afternoon. He had to cross the river to reach his wife's place. Heady with anticipation, he slid into the waters and headed for the other bank. He had traversed half the distance when dark, ominous clouds foregathered above and, without warning, unleashed their fury in a nightmarish downpour. Siddhappa found himself hopelessly trapped, with water from every side threatening to swallow him up. Fearing that his hour had come, on an innate impulse he made a pact: if the Lord would spare him this once, he would renounce his wife and become a *sanyasi*. The next moment he was numb.

When he came to, Siddhappa found himself on the other bank. The villagers soon discovered who he was and, when he came to, carried him with ceremony to the bride's house. Eventually Siddhappa and Kameswaramma were alone, and when she raised her eyes to see him, she was transfixed. The uncanny radiance that invested his person told her that he was not of the earth but a transcended being. And she had no two thoughts. In an instant it was clear to her what role she would have to play in his life. She would be his spiritual companion, not worldly wife.

Not long afterwards, pleased with how Siddhappa had honoured his vow, Sri Krishna appeared to him in a dream and bade him recreate in word and action the story of Satyabhama's love for him, for that too centred round the theme of surrender and sacrifice. By now, by virtue of the pure and austere life he was leading, Siddhappa had come to be known as Siddhendra Yogi. As per the behest, he wrote the play, which he called *Parijatapaharanam*, but which later came also to be known as *Bhama Kalapam*. Keen that his work should be clean and virtuous and presented as a spiritual exercise, Siddhendra Yogi fought shy of women dancers, the *devadasis*, who were the leading practitioners of the art and enlisted the aid of a handful of raw Brahmin boys of his village. He offered the *Parijatapaharanam* as a dance-drama, and it is in this fortuitous way that the Kuchipudi tradition began, around the middle of the 17th century.

Dance And Drama

The art, however, was not entirely of Siddhendra Yogi's making. He fashioned his creation, in terms of both text and technique, on the forms of dance and drama then obtaining in the region, of which there were quite a few. The most rewarding description of these is given in the *Pandityaradhya Charitra* of Palakurki Somanatha, who belonged to the thirteenth century and was a great scholar and one of the most prominent poets and propagandists of the Lingayat sect of the Saiva fold. These were, for example, the *Siva Lasika*, performed by itinerant bands of devout men, which later expanded to take on Vaishnava themes as well and gave rise to the *Natya Matas* or *Brahmanar Matas*. And there were *devadasis*, hundreds of them, in temples such as at Tallapalem and Bhimavaram and who later also came to dance in the court and for public entertainment, when their art came to be given the label *Nattuva Mela*.

The earliest form of a full-bodied stylised dance-drama, however, was the *Yakshagana*. This had its roots in tribal usage but in course of time matured into a delectable theatre art involving dancing, acting and singing and carrying a blend of the crude and the refined, the folk and the classical. The first *Yakshagana*, *Sugmna Vijayam*, was written in 1570. And it is on the *Yakshagana* format, more than any other that Siddhendra Yogi modelled his art. In fact in local parlance Kuchipudi plays are to this day referred to as *Yakshaganas*.

The Kuchipudi tradition also stemmed from the Bhakti movement, which emerged in the south in the sixth century and spread rapidly with an overpowering and lasting impact. The cult acknowledged adoration as pure and exclusive love and ardent yearning for God, expressed through such means as ecstatic singing and dancing in glory of the Lord. The Kuchipudi players were accomplished artistes, but they were also inspired men who led saintly lives. They were Brahmins, and they performed not for livelihood or entertainment but as sheer offering on their part. And as the first play *Parijatapaharanam* and most of the plays that followed carried themes from *Bhagavata* lore, performers of Kuchipudi came to be known as *Bhagavatulu*.

The village of Kuchipudi, after which the dance-drama takes its name, was associated with performers long before Siddhendra Yogi stepped into the picture. It is on record that as early as 1502 a *melam* or team of actors from Kuchipudi staged an unrivalled piece before the Raya of Vijayanagar, focussing attention on the atrocities committed by a late chieftain and so forcefully did they bring home the message to him that the Raya ordered the latter to be beheaded. The

[illegible] the Queen Rudrama[illegible] witness a Kuchipudi performance [illegible] gifted the village [illegible]. But there was one stipulation: the male issues in the line of the benefactors would continue to serve the cause of Kuchipudi by pursuing it as a moral obligation. The stipulation has, by and large, been honoured. Even today, during the upanayanam or sacred thread ceremony, boys coming from traditional Kuchipudi families [illegible] daily, where they are made to wear ankle bells as part of their initiation into the art.

Kuchipudi has two temples, at Pairha-[illegible], which also enshrine relatives or images of Krishna as Rajagopala, which Siddhendra [illegible] and worshipped, and of Balakrishnamurthi. The Kaalingeswara temple started a public stage on the outside for Kuchipudi performances, which for a long time were presented, regularly, every Friday. Since about 20 years, the stage has been demolished. Though the village of Kuchipudi remained its focus, in time the art spread to some other places as well, such as Srirallam, Alampoor, Tanguturpalli and Mandapeta. The different centres bred their own systems, which were well patronised by the temples, local rulers and zamindars.

In the tradition, training in Kuchipudi began at the age of seven and continued for five to seven years. The boys were [illegible] a male dancer trained by a [illegible] presentation was in the open, [illegible] an improvised stage comprising [illegible] platform of raised earth with a [illegible] for covering. Illumination was provided by flaming torches or gaslight, [illegible] wonder known as gaspillam, which gives a strong flare when ignited, was used at climactic moments. The performance began about nine at night and continued till the early hours.

In a traditional Kuchipudi play, the *sutradhara*, or conductor, holds a key position. He is the leader of the *melam*, master of ceremonies, who sings, acts and dances and serves as an effective foil to the principal characters through his [illegible] innuendos and repartee. He appears in a set costume and with make-up, holding a crooked staff as the badge of his authority. The play opens with the musicians led by the *sutradhara* seated on one side singing an invocation to the Mother Goddess as Amba. This is followed by the appearance of a boy wearing a mask of Ganapati who prances for a while to the strains of a *Vinayaka stuthi*. Then come the ritual dancers, carrying the sacred flag, holy water, incense and the like, who go through their paces by way of purifying the stage. After this, begins the play proper with the *sutradhara* announcing its theme in a sing-song manner and exhorting the audience to witness it spiritedly and attentively for their own profit.

Unique Feature

Each major character in the play—and this is a feature unique to Kuchipudi—makes his or her first entry dancing and singing a *daru*, a type of composition that lists, in flattering terms one can be sure, the qualities and attributes of the charac-

pace; and the sequence is interrupted with a dance, by way of an interlude, a divertissement. This may be an abstract, ornamental number or a regular expressional piece. The ornamental compositions, such as the *Jatiswaram* and *Tillana*, are patently patterned after their Bharata Natyam counterparts. But Kuchipudi also incorporates a number of exclusive, and one might say enthralling items, such as dancing on an inverted earthen pot, or with a vessel of water balanced on the head, or with the feet planted on the rim of a tray, or to an uncommon rhythmic cycle at the same time tracing with the feet the outline of an elephant or a lion.

Expressional Numbers

The expressional numbers, projecting songs in Telugu or Sanskrit, are borrowed from a variety of sources. The most popular of these is the dance-opera *Krishna Lila Tarangini* of Tirthi Narayana, of which the first section *Balagopala Tarangam*, is a lasting favourite. Compositions of inspired poets like Tyagaraja and Kshetragna, too, are common, next to which come snatches from Jayadeva's *Geeta Govinda* and the *Adhyatma Ramayana*. Also ubiquitous are *Sabdams*, which are in praise of a deity or patron, and *Abhishekams*, which glorify divine personages. All such attractions, it should be noted, are injected into scenes showing a king holding court, for this lends a legitimate excuse to bring in a dancer as entertainer, or by a deliberate break in the play. The dancers are not extras but the very performers who have roles in the play, and the dances often are often an encore from the audience.

From its inception, the Kuchipudi art remained of interest and concern only to the Telugus. Though a large chunk of the present Andhra Pradesh was, till hardly

KUCHIPUDI FOUGHT SHY OF WOMEN DANCERS for over three centuries, till 1948. But once this trend was born, it soon became the vogue. Left: Yamini Krishnamurthi. Right: Vedantam Satyanarayana Sarma, the foremost artiste for female roles, as Satyabhama in Bhama Kalapam.

three decades ago, part of what was known as Madras Presidency, no Kuchipudi *melam* ever stirred out of the strictly Telugu-speaking areas. During the Telugu Nayak rule over Tanjore in the 16th century there came into being an extension of Kuchipudi known as Bhagavata Mela Nataka, but that is another story. The first time that Kuchipudi came to be seen outside its acknowledged bounds was as recent as 1948, when it was taken to Madras. The city was then riding the crest of a dance wave, which is probably what provoked the local Telugus to contribute their bit for their own art of Kuchipudi. This took the form of a function to honour the greatest master of Kuchipudi in our time, Vedantam Lakshminarayana Sastri, then 68 years of age, when he was presented a *simhatalatamu*, a carved golden bracelet. There was no staging of any Kuchipudi play, but a Smt Samarajyam gave a rendering of the *Balagopala Tarangam*. And this became the first occasion for a woman to appear in Kuchipudi on a public platform. And with this was born a trend, which soon became the vogue, and then the norm.

Idea From Bharata Natyam

The idea obviously was borrowed from Bharata Natyam, where women soloists, apart from the *devadasis*, were at the time enjoying considerable popularity. Indeed, speaking at the felicitation, B. Gopala Reddi, Finance Minister of Madras, fervently exhorted his people: "Kuchipudi style of dance has remained to be merely a style. No great exponent has come forward to spread it. The secret for its languishing lay in the fact that only men were its exponents. If it was confined to men alone it is doomed to be completely dead. They should start schools in which beautiful women, with proper facial features and physical build, should be trained." The advice was heeded only too well, for soon there were any number of Telugu girls engaged in the pursuit of Kuchipudi. And practically overnight, the male dance-drama aspect of Kuchipudi became secondary and the art came to be identified as a solo dance by women. Thus, when Kuchipudi was taken for the first time to Bombay, in April 1955, it was represented by two girls from Andhra. For Delhi, the first exposure was at the National Dance Festival, in December 1955, to which the foremost Kuchipudi *melam*, Venkatarama Natyamandali, contributed not, as one should have expected, a traditional play but an assortment of dances by a bevy of girls, billed, tellingly, as Kuchipudi Bharata Natyam. And at the prestigious Dance Seminar sponsored by the Sangeet Natak Akademi in Delhi in 1958, at which a number of obscure dance and dance-drama traditions were brought to light, all that came by way of Kuchipudi was a demonstration of technique by a Miss Konchanamala, B.A.

Understandably, therefore, Kuchipudi today is endowed with a character and flavour far removed from what it was intended to have. There are presently only two professional troupes of male performers. The bulk of the dancers are women, who in rare cases are paired with men. Essential elements of the art, such as *vachikabhinaya*, acting and the *sutradhara*, have conveniently been given the go-by. Of the kernel of the art *sringara bhakti*, what survives is plain *sringara* without the faintest veneer of *bhakti*. Indeed some of the more erotic pieces are so overplayed that they border on the *risque*. A male dancer portraying the passion of a woman in love is obliged to exaggerate, but if a woman is not on her guard her projection can easily slip into embarrassing impropriety and prurience. None of the established male Kuchipudi dancers dare attempt any female role, leave aside Satyabhama's which all along constituted the touchstone of the art. Features alien to the style, such as static poses based on *karana* and other sculptures, have been freely inducted into the presentation, evidently to give it a richer sparkle. Nor has Kuchipudi lagged behind in dabbling in what passes under the name of ballet, mostly with whimsically odd results. Playback singing wedded to cloying lip movement by the dancer, rackety orchestration, unconventional if not entirely new-fangled costume and adornment, and all the garishness of the tinsel cinema blazon the new game.

In sum, Kuchipudi has plummeted alarmingly from an uplifting and edifying theatre experience to a frail and suggestive stage affair. Seductive poses, titillating passages, sizzling duets and the sort today constitute the hallmark of the trade. As a seasoned dance-watcher from abroad on seeing a present-day dispensation of Kuchipudi pithily put it: "I suppose that's your version of oomph!" ■

DANCING ON AN INVERTED POT is both popular with and exclusive to Kuchipudi.

The Spy Who Came In For Cold Chicken

by H. Jesse Kochar

HIS eyes darting from edge to edge Comrade Poon stepped out of a small military plane at a secret air-base in Pyongyang. Half way down the gangway he let out a shriek—he saw a blanket advancing towards him. Before he could yell again he had been bundled into a neat roll and driven downtown, to the headquarters of the North Korean secret service.

Poon was unfurled on the floor before the ageing Spy-Chief. Poon slowly raised his head and spitting out four carpet-bugs managed to croak, "I protest, Comrade Spy-Chief. It is ridiculous the way I have been brought here, that's no way to welcome me home...!!" Poon produced two more bugs which had drowned in his mouth.

Spy-Chief threw a cold steely glare at Poon. "Go on," he ordered.

"...I was saying Comrade, that is no way to treat a fellow spy just because he comes home without summons," his tears dropped near the departed bugs.

"Next time use a clean blanket," the Spy-Chief told the tough-guys. Then turning to Poon he demanded, "Tell me, why did you leave your post in New Delhi without my orders?"

Tandoori Gobhi

"I was fed up Comrade," Poon lamented. "Try eating tandoori gobhi, tandoori frogs-legs and tandoori chicken day in and day out..." He saw Spy-Chief was taking notes.

"...In New Delhi they don't eat juicy snakes, fried lizards, roasted pigeons like us. It was a gastronomic tragedy. I was starved for cold chicken Comrade, so I made up an excuse and came here. But why that stinking blanket...?"

From the shadows, suddenly the Head of the Indian-Desk came out and placed a top-secret dossier before the Spy-Chief. He began to read it.

"You should not have been wrapped in a dirty blanket and brought here Comrade Poon," said the Spy-Chief, his face showing the various shades of red. "You should have been shot. You have been filing cock and bull stories from New Delhi."

"I? Cock and bull stories?" Poon protested. He saw one of his reports being dangled before him.

"Yes," the Spy-Chief sniggered meanly. "Here is one report from you on the New Delhi fly-overs."

"The one I got by bugging Buta Singh's buggy?"

"That's right, you reported that seven fly-overs are being built at a cost of ten crore rupees... length, half a kilometre; breadth, seventy-five metres; four lane traffic... and right in the next report you say thirteen persons died in the capital of severe cold while living on footpaths. How on earth.....?"

Nothing But The Truth

"I only told the truth Comrade. That's the way India runs..."

"You are a bloody liar." The Spy-Chief selected another report from the dossier, "Here is one of your horse-manure on a film."

"Is that the micro-film I sent in the tooth cavity of our football coach who visited Delhi?"

"Bloody right you are. You said that Bombay policemen may strike again. Because they are not allowed to bring cots to sleep during night duty! Do you think I am some kind of a nut to swallow that one?"

"It happens in India Comrade, it happens frequently," Poon wanted to be believed.

"And this manual of the Mirage aircraft Indians are building? Your note says you stole it from a test-pilot travelling in a city-bus. You blithering third-rate spy, you want to throw cow-dung in my eyes? A test-pilot travelling in a city-bus? A fellow who flies a twenty million-rupee aircraft travels in a city-bus to his workplace?"

"Comrade Spy-Chief I swear that is true. Absolutely true. In India smugglers travel in big cars and the test-pilots in buses..." Poon fell down on his knees. He knew he was not being believed at all.

A Rare Gem

"And here is an absolute gem from your fertile imagination." The Spy-Chief stared down at one of Poon's June-82 reports, "You used your transmitter, hidden in your riding boots, to tell us that western secret services are lamenting trouble in India..."

"Yes Comrade I did."

"...by planting cow-tails, pig-teeth, bull-horns and cigarette butts in places of worship. Are you trying to be funny Comrade Poon?"

"You must believe me Comrade, Indians take their animals seriously ..."

"Guards!" Comrade Spy-Chief thundered. "Take this man away and feed him to the hungriest chickens in Pyongyang." ■

Mesmeric Marilyn

The innocence and the fire that was Marilyn Monroe are captured forever in the most ravishing photographs ever taken of the legendary star. Bert Stern, famed photographer of beautiful women, had a dream. It was to create a great portrait of Marilyn Monroe, to catch on film her unique quality in one immortal photograph. Through a *Vogue* assignment, Stern arranged a meeting with Marilyn, who agreed to sit for him. It was to be the last sitting she ever gave. Six weeks later Marilyn Monroe was dead.

The photographs in Stern's book *The Last Sitting,* published on the twentieth anniversary of Marilyn Monroe's death, include some of the most famous of the star, as well as never-before-published photos from his private collection. Marilyn Monroe posed nude for Stern, the only time she had done so since the famous calendar shots taken when she was eighteen. Here you will read a part of Bert Stern's account of what happened then—how the sitting ignited into an extraordinary romance in which a man and a woman made love through a camera's lens. Here is Marilyn, clothed and unclothed, joyful, playful, wistful, deliciously wanton—a love goddess.

SHE was beginning to lose patience. I could see it on her face. She had been a good sport, but it was well after midnight, and the fashion was wearing thin. Besides, if I was drunk by now she was far from sober herself. I'd been sticking to Dom Perignon, but around the middle of the sitting I noticed that someone was spiking hers with 100 per cent vodka. That was a guaranteed way to get her very bombed. It could also create a very volatile situation.

One thing I knew for sure—it wouldn't be any fun to get in Marilyn's way if that combustible mixture ever ignited—and I could feel the storm clouds gathering.

I got down on my knees in front of her to shoot a low angle shot. Suddenly she seemed so cold... I had the crazy ideo that maybe she'd take pity on me if I knelt down to pay proper respect to her as the greatest symbol of woman that America had ever created. What I envisioned was an image of Marilyn that would be symbolic and sexy. I saw her in the nude wrapped in a chiffon American flag. That would make a great picture. Unfortunately, there were no chiffon stars and stripes around. Instead, there stood Marilyn in a black dress, looking down at me. Getting madder.

"Why don't you direct a movie?" she said out of the blue.

"Uh-huh," I said, without lowering the camera from my eye. Direct a movie? I was having enough problems getting a few great photographs.

She picked up her champagne glass, took another sip and said, "What's your premise?"

My premise? What a strange question. I didn't know what my premise was. I didn't know a photograph needed one. I didn't know how to answer, so I flashed off a few more frames on my knees to distract her. Usually when I am looking up at a woman, she seems more beautiful. It's sexier in a way. But Marilyn wasn't yielding.

I could feel her slipping away through my fingers. Admittedly we'd been working for hours. I'd done all these fashion shots for *Vogue,* and they were beautiful, but what did I really have of Marilyn? Of course I hadn't come here to get *her*... but that was what I really wanted, wasn't it?

But more, even more than that, I wanted something no one else could get from Marilyn, captured in a photograph forever.

That was my premise. I was down on my knees to her and I wanted her to award me with herself. To knight me by giving herself. And she was saying, *You're too talented to be given something so easily.* Not in words, but by the way she stood there looking at me, by the challenge in her eyes.

Marilyn and I had unfinished business, it seemed. I wanted something more from the pictures, and she wanted more from me as a person. I could sense it.

But what?

I got to my feet "I think we've done enough of this dress," I said. "Lets take a break."

Why was I so tired? The first time we'd worked all night without fatigue. Of course, then we'd been doing what we wanted. We hadn't had the whole Establishment to please.

As I went to get a glass of champagne, I remembered the little heart-shaped pill in my pocket The doctor had said, "If you get tired in the afternoon, take half." I was certainly tired. And there was no way I was going to stop until I got what I wanted. Maybe that little pill would help keep me going.

I took it out of my pocket. The little pink heart complemented the yellow of the champagne and the green of the bottle. I broke it in two, put half in my mouth, took a sip of Dom Perignon, and swallowed.

All the craziness of the sixties really began for me at that moment. But I didn't know that. All I knew was that after a few minutes a kind of cold energy flowed into my bloodstream. It wasn't much, just enough to bounce me around a few times and put a nice sharp edge on my fatigue.

Babs had dug up yet another black dress, and I was ready for anything. But Marilyn had had it.

"Do we have to do any more of this fashion?

"We're really almost finished," I said "Just one or two more dresses."

"I'm tired of all these clothes," she said. "Isn't there anything else to shoot around here?"

She looked around and then she walked off the white no-seam and grabbed a flimsy bed jacket that was lying casually on a chair near the strobe. I had tossed it there as a "no" when we were going through the clothes earlier, because Babs said it was bad fashion, and I didn't think much of it either. But Marilyn zeroed right in on it.

"Well, what about this?" she demanded, holding it up. It was a double layer of frills over black chiffon. "Is this fashion?"

"Well, I didn't think it was that nice," I started to say. But her mind was made up.

"I think it's very nice," she said, and she stormed off into the bathroom to change.

I looked at Babs. Babs looked at me. I shrugged, as if to say, it's not my fault. I didn't tell her to put it on.

"Bert, this is a waste of time," Babs said. "We can't run a picture of that. It's terrible. Tacky."

I said, "I know, but what am I going to do? It's late, and she's really been working hard. I'd better do a few pictures of her in the bed jacket."

The bathroom door opened, and Marilyn came out in this *thing*. Two layers of chiffon, a towel around her bottom, and that's all.

Babs winced. Kenneth threw up his hands.

Marilyn ignored them.

She came right up to me and lifted one layer of lace. I could see right through the sheer black chiffon... those beautiful breasts.

And she said, "How's this for thirty-six?"

She didn't mean her bust size. She meant her age.

I looked her straight in the eye, "I'm not afraid of you, Marilyn."

I turned to Babs. "Why doesn't everybody just leave the room and let me shoot her alone?"

Babs said, "I think that's a good idea, Bert." Everyone got up and began to file out of the room. As they were leaving Babs said, "We'll be right out here if you need us."

"Great," I said, and I closed the door and locked it.

I turned around. Marilyn Monroe stood in the centre of the room, backlit, with nothing on but a towel and a little bit of chiffon. Waiting.

We were alone. There was no one to tell us to shoot another dress or straighten another hair. This was just for us. Our scene... the brash photographer from Brooklyn and the sexiest woman in the world.

"What do you want to do?" she said.

What did I want to do? I didn't know where to begin. Looking around the room for a starting point, my eyes went straight to the daybed in the corner. I walked over to it, scooped up the lenses and boxes of film strewn on the bedspread, and pulled off the spread and blanket, leaving just the white sheets. Still cradling my Rolleiflex in one hand, with the strobe cord dangling, I dragged the bed to the middle of the room where the lighting was focused. Marilyn was watching.

"Here," I said. "Why not just get in the bed?"

Marilyn lay down between the bedsheets.

"Why don't you take the towel off?" I suggested. "It'll make bumps."

She reached down under the sheet, and then she raised her arm up high and handed me the towel. I took it and put it on the other side of the room. As I turned back, I caught a glimpse of her in the mirror we had used during the fashion shooting to show her what she looked like. I put on some music, picked up the bottle of Dom Perignon, walked backward toward her, watching her in the mirror, and sat down on the edge of the bed. Now I saw myself sitting beside her in the mirror. It was like a dream. In front of the mirror were her shoes, an empty bottle of Chateau Lafite-Rothschild, a cable release, and some used film boxes.

I picked up my Nikon and shot a picture of me and her.

She was really on, rolling around on the bed and giggling. I sat there trying to figure out the exposure without taking a Polaroid. I didn't want to do anything to turn her off. Because whatever else this was, it was one hell of a photographic opportunity. Here she was, ready to be something I'd never seen in the movies or anywhere. Right before my eyes, she was turning into an animal made of light. There was no time to stop. I set the camera at f/8.

I took a few shots, with the bed jacket falling down, and then I stopped. It wasn't right. I was taking bad pictures; I could feel it. Momentarily I was at a loss. But when I'm taking pictures, I trust my intuition. If something's wrong, all I have to do is *stop*. I simply stand there, and after a few moments what I have to do will come to me. It didn't take long to figure it out.

"You know," I said, "you're beautiful. But that bed jacket is... it's not... well, frankly, it's terrible. What are we going to do with it?"

"I'll take it off!"

"Why don't you do that?"

"But what should I wear?"

"You could just wrap yourself in the sheet," I suggested.

"Oh! Okay." And she wriggled out of the bed jacket under the sheet, while I kept on shooting.

The bed jacket slipped to the floor.

There was nothing but a sheet between me and the fire.

What was I going to do now?

"Just a second," I said to Marilyn. I went to the door and opened it. "Kenneth, could you come in here for a minute?"

"Sure, Bert," he said. He came in. Marilyn was lying on the bed with the sheet pulled up to her chin.

I said, "Could you just fix her hair a little bit?"

"Yes, of course," he said, and he brushed her hair out with that magic touch.

"Okay," he said, straightening up. She really did look much better.

"Thanks a lot," I said.

I walked him to the door As he left he turned and asked, "Do you need anything?"

"Well we could use some more champagne," I said.

He went out and handed a fresh bottle through the door.

"Okay, thanks very much," I said And I closed the door again

I heard a g.g, e behind me. I turned, Nikon in h and

Now she was really ready. She felt pretty again

I filled her champagne glass beside the bed and stepped back to watch her through the camera

She reached down for the glass Her leg flew up, and the sheet came flying off "Oops!" she giggled as she fell toward the floor, one hand on the champagne glass, the other clutching the sheets. *Blam*.. I shot She looked up and took a drink of champagne *Blam*! I couldn't resist shooting. She looked at me strangely, as if she was wondering just what I had in my mind. And what *did* I have in mind? Nothing but the pure magic of this moment I couldn't speak, I was so excited *Blam*!

She was rolling all around the bed, and I was shooting *Blang Blang. Click Click*. There was no time to check exposures, it was all happening so fast. Somehow she crawled on top of the sheet I said, "Why don't you lie so that nothing shows?"

"How?"

"Well, if you hang one foot off the bed, I can only see your back."

"I need another glass of champagne," she said.

What I wanted was a totally stark clean beautiful nude no clothes, nothing between her and me but the air We were moving there . getting closer. *Blang*... I moved closer... *blang*... closer...

I was standing right above her.

But I didn't make that last step, where vision dissolves into touch. Not yet. If I did what I wanted to do now, it would be over too soon, and the energy that was creating the pictures would dissolve—ffff! So instead of reaching for her, which was what I wanted to do, I stayed right on the edge, at a magnetic distance that was like the opposite of touching I wanted to take the time to dwell on the sight of her, and not go past.

That *energy of observing* is marvellous. When you desire someone so much, and she's right there in front of you, there's something very special about *not* touching and just letting *the light* caress her And the camera plays a very powerful role in all this Because you've got love coming through the lens. You just let it in and click! Close the box, and you've recorded impressions of that love, that energy, in photographs you can print and preserve.

Ours is the first age that has been able to do that. There are no photographs of Cleopatra, no prints of what Paris saw and felt when he gazed at Helen of Troy. They're like dead stars. The light from them no longer reaches us. But there *are* photographs of Marilyn Monroe. The *same* light that touched her passed through the lens of a camera, leaving these pictures of her.

I stood beside her bed looking down at her, so close I could feel the heat of her skin. I didn't know whether to be her photographer, or to hold her Since I was thirteen, I had dreamed of a woman who would roll around on a bed with me and do everything I ever wanted. Now I had found that woman. She was vulnerable and drunk and tender and inviting and exciting. But I had a camera in my hands and a drug in my veins.

My mouth was dry. My desire all seemed to be drawn up into my head and my eyes. I just kept going into that desire, expanding that space, making it brighter and brighter and brighter. The shutter feverishly clicked and whirred. In the whole world there were only the two of us, a man and a woman, alone together in that magical space of flashing white light

How long were we out of this world? Gradually the intensity subsided. Marilyn looked at me with a sleepy intimacy. I captured that look. The flashing of the strobes got slower

The flashes stopped

She was quiet, her eyes closed.

She was mine. . alone, all mine What was I going to do next? Take off all my clothes and get into bed with her? With all those people sitting out there waiting for us?

Come on, Bert, whispered my demon. *The greatest opportunity any man could ever dream of, and it's right in the palm of your hand! You'll never have this chance again*

No. I didn't want Marilyn Monroe this way.

It was late, Babs, Kenneth, and Peter were waiting patiently in the other room

had they gone home? I wasn't about open that door and see. They were obably still out there, tapping their feet, maybe half asleep. How long had it en? Ten minutes? Twenty?

My half a Dexedrine was beginning to ar thin, and I could feel fatigue creep- up. There was no reason to take any re pictures. I had shot everything I uld.

Marilyn moved a little. I sat down on bed next to her. I could hear her othing. At least she's alive, I thought. I ked at her. She was just lying there side me, peacefully, her eyes closed.

Or was she?

Maybe she was just waiting for me to... er all, why had she lifted up the veil d let me throw everybody out of the om? She had been in the mood for *mething.*

But what?

Maybe I should kiss her. Why not?

I leaned over her...

As my lips touched her, she turned ghtly away.

"No," she said.

My heart sank. I felt defeated.

But Marilyn didn't move. She didn't eam. She didn't sit up and slap me. e just crept back into her trance. I told rself all I had wanted was to pay tribute the goddess of love on the altar of her s. I cared about her enough to kiss her.

Of course there were other thoughts. aybe all I was doing was trying to make dumb pass at her, and not getting very

I sat there trying to feel better.

But if she'd been insulted, wouldn't she t get up and leave? She didn't want to s... but maybe she wanted to make re.

I put my hand under the sheet and ached her skin.

The room stopped moving. Everything come silent.

She nestled closer.

The energy between us was pure magic. We were inches away from pure erotic pleasure.

She wanted to make love. And I wanted to.

She was ready.

I was the one who stopped.

Why?

I've asked myself that question many times, and I've come up with many answers: marriage... prudence... cowardice... destiny... Dexedrine... But at that moment I think the truest one was that I cared too much for her. My desire for Marilyn was pure, it bordered on awe. To make love to her would have been too much... and not enough.

Slowly I withdrew my hand.

Marilyn's eyes half opened and she stretched. She looked up at me, and said:

"Where have *you* been so long?"

Those were her last words to me that night.

So long.

And then she was asleep.

It was Sleeping Beauty in reverse. The prince was supposed to wake her up, not put her to sleep.

I stood up and picked up my camera. One more picture. The lighting was all wrong, and I didn't have the foggiest notion of what the exposure was. It wasn't even a good picture. But I had touched one of the sweetest of God's creatures and it seemed right to take one last shot of her.

I wanted her profile against the pillow. The only way to get that was to stand over her. I climbed up on the bed in my stocking feet. The shutter softly went click.

She didn't stir.

I stepped down off the bed and looked around the room. It looked like a bomb had hit it. Champagne bottles all over the place... her shoes in one corner... a bottle of Chateau Lafite '55 on its side... a half-empty glass still standing.

I carefully opened the door.

Everybody was still sitting there, half asleep. They looked at me. I closed the door softly.

"Well," I said, "I'm finished. She's asleep," I added. "I'm going for a walk."

And I left the bungalow.

The east was just beginning to get light. The night was cool and blue-black, and the tiny stars seemed even farther away than usual. I walked slowly around the bungalow. I wasn't happy, I wasn't depressed. I felt detached.

I walked around the corner of the bungalow. And there, behind the bedroom where I had left Marilyn asleep, were two Japanese cooks in their tall cook hats peering through the window. I had pulled down the shade in the studio so that the window was blacked out, but there was still a crack where light streamed through.

What a story they could have told if we had made love! As it was, they'd seen enough. I'd gone right up to the edge with her. ■

THE LAST SITTING **by Bert Stern. Published in the UK by Orbis and distributed in India by UBS Publishers' Distributors Ltd. Price Rs 175.**

Festival

—M.S. Sharma

Holi represents a colourful synthesis of several cultural strains which are probably difficult to unravel today.

WE do not have a clear idea of why we celebrate some of our festivals The ignorance is not altogether undesirable the more instinctive our participation in a festal event the merrier After all a festival is a festival is a festival But sometimes one cannot help being a kulljoy and ask questions Why is Dipavali celebrated? There are a number of stories told but none of them contains a satisfactory answer to the question Hardly any Indian scholar has gone into the roots—anthropological, social, psychological and historical—of our festivals

A study of regional variations in observances could also be rewarding Dipavali is usually claimed to be a national festival It is celebrated by Hindus Buddhists, Jainas and Sikhs But Kerala is not part of the "Dipavali map", though of late the festival is making feeble inroads into the State The manner in which Dipavali is celebrated in various parts of the country is also different In the South it is usually a one-day affair—Narakachadurdasi Also no lamps are lit making nonsense of the name Dipavali From this some have concluded that Dipavali was an import of recent centuries into the South It is also suggested that the real Dipavali in these parts is Karttika on which occasion lamps are indeed lit

Why is Onam (the word is derived from Sravana) celebrated only in Kerala? In the story pertaining to this festival there is an echo of the legend relating to Dipavali In both a demon is commemorated

Holi is largely a Northern festival it belongs to the areas where the Indo European languages are spoken There

—Brahm Dev

HOLI—Why? How? Where?

—M.D. Sharma

are pockets in Andhra Pradesh and Karnataka where it is celebrated, but it "weakens" and fades off beyond the borders of Maharashtra. From this it would seem that Holi is an "Aryan" festival which the South refused to accept. But even this conclusion is a little hasty.

On the authority of Sabara's commentary on Jaimini's *Purvamimasasutra* it is believed that Holi was confined to the eastern parts of the country. the *sutras* (1.3.15-23) in question constitute what is called *Holakadhikarana* or *Holikadhikarana*. According to the commentators they sanction the celebration of certain local customs, among them Holi. (This writer has gone through the *sutras* and has failed to see mention of the word *Holika* or Holaka. But in all commentaries they are specifically related to the festival.)

Whatever the authority of the composers of *mimamsas* and their commentators, the inference is clear: Holi is a non-Vedic and non-Aryan festival which came to be accepted by the Vedic Aryans. But what is the "eastern country" referred to by the commentators? Bengal? Assam? Or further east? It is doubtful if the origin of the festival was Dravidian since there are no vestiges of it in the South. That Holi, a non-Aryan, non-Vedic festival, should be celebrated in the so-called Hindi belt, Aryavarta, is significant.

There are a number of stories about Holi, the one relating the festival to the demoness Holika, believed to be the sister of Hiranyakasipu,being the most popular. P.V. Kane tells the story that Krishna is believed to have told Yudhishthira. According to this, during the reign of king Raghu a demoness called Dhondha tormented children in his kingdom day and night. His *purohita* said to the king that in the month of Phalguna "boys with bits of wood in their hands may go out of houses in great glee, collect a heap of wood and grass, set it on fire with *rakshoghna* (demon- or demoness-killing) mantras, clap their hands, go round the fire thrice, laugh, sing and utter obscene words in the popular language and by that noise and loud peals of laughter on the part of boys and by the *homa* the ogress would die".

According to some authorities Holi is also "Raka Holake" observed on a *raka* or full moon for the *saubhagya* of women. The only religious rite associated with Holi, says Kane, is the worship of Krishna in Bengal where they also have a *dolotsava* or swing festival. Presumably because of the bonfire lit on the occasion Holi is also known as Hutasani. In the

Konkan area, men went about in the guise of women singing obscene songs.

Holi also signifies the burning of Kama. As in many other festivals—and not necessarily unique to those of India—there is an attempt in this to reconcile opposites, for Holi is at once an occasion for love and its destruction. In other words it symbolises the sublimation of love. Fire has in all cultures signified purification, the burning away of dross, evil.Remember that Kama, after he is consumed in the fire bursting out from the third eye of Siva, appears in an ennobled incorporeal form as Ananga. The attempt to unite several cultural strains, or the attempt to weave together several symbols, is a fascinating aspect of our civilisation and it is demonstrated in the evolution of Holi.

Holi is of course the festival of spring—indeed *the* festival of spring. It has provided inspiration for music and art and for romantic poetry. It evokes pretty pictures in our mind: of dainty princesses sprinkling water and dust on their lovers, of the flame of the forest burning like a love-smitten *nayika*, of the sun crowning the trees with flowers of red and yellow. Then of course there is the inevitable mango blossoms and the koel.

The warrior Spring,
Comes with armorial bearing,
Armed with the nimble shafts
Of the swelling mango blossom,
And the murmurous line of bees
Is the twang of his lustrous bowstring;
He is shooting his flowery arrows, my dear,
To pierce the hearts of lovers.

—from the *Ritusamhara*, translated by R.S. Pandit

Much of the romance and beauty has vanished from the Holi revelry. I believe our festivals have an important place in our ethos. But Holi today seems to have only what they call a "nuisance value"

—Ashtāvakra

An Abortive Coup

by Arun Bhatia

IT was an abortive coup.

The authorities that enforce the laws that protect endangered species of wildlife in our country needed volunteers because they had information that behind a city hotel, a shop sells skins of animals that face extinction. Stocking or selling such skins is against the law as it encourages poaching and killing India's precious tigers and dozens of other magnificent creatures of the wild.

The shop had to be raided, and we were told that fresh faces were needed as bogus customers. So we, X, Y and Z volunteered. We were given marked money and some pointers: how to dress, enter, obtain a cash memo as evidence, etc.

The flashiest Hawaiian shirt adorned X, who wore outrageous green socks with buff coloured shoes, posing as the "non-resident Indian going back to *phoren*" wanting a cat skin item for the wife aboard. Y & Z posed as his *desi contacts*.

We lingered at the target show window and allowed ourselves to be lured in. Once inside, the *phoren* X kept up the front of not being able to think in rupees. He would peer at every price tag and ask: "How much is that in dollars?" We clucked our tongues: "Not a single purse made of civet cat skin?"

We were then further enticed into the innards. The sanctum sanctorum, spacious, brilliantly lit, air-conditioned, was in stark contrast to the dreary cramped outer shop. The salesman boasted: "This winter fur coat was made by stitching skins of forty Himalayan foxes." We winced inwardly.

We kept up the charade successfully, but all three of us soon realised that while we were nature lovers, we were unfortunately not experts at identifying the correct items to bring off the coup: Does the long-eared desert lynx (*Felis caracal*) have spots like a leopard? Is the leopard cat (*Felis bengalensis*) endangered or not? If yes, exactly which pursue was made from its skin? We could obviously not ask the salesman. We ourselves were not sure and indeed, the variety of skins was bewildering.

Just buying an item, in hopes that it was of an endangered animal, would be a shot in the dark. All concerned would have a lot to explain if an innocuous legal item was bought by us with marked, government money!

With every passing moment, excitement mounted. Did the salesman's eyes narrow with suspicion?

There was no opportunity to consult one another. All three had the same idea: we would need to talk to some cat experts and get guidance on what to buy. We would need to go out, and then return.

We made excuses to the salesman, promised to return with more cash, and came out—empty handed.

Outsided, we explained what had transpired and were told sadly, that it was no use going back. The shop people would be wary, and alert and if we went back in, we may come to physical harm.

We were no longer fresh faces. It was an abortive coup. ■

Hello, Quiz Buffs! Here's just what you wanted: a Quiz Mountain! An opportunity for you to scale new mental peaks. From those peaks, do write and let us know what you make of this Quiz—whether it's too tough or too simple. For on your letters will depend the height of this Quiz Mountain

Question: How many newspapers and magazines in India currently carry a Quiz Section?

Answer: We do not know.

However, what we do know is that, if they do not stop doing it the way most of them are doing it now, Quizzing is going to get a bad name. With the 40 odd rupees required to buy a paperback Guinness Book of World Records and the time and the inclination, almost anyone can answer the longest, tallest, highest, lowest, widest, narrowest hottest, coldest and silliest of questions. That is not what a Quiz should be.

This Quiz will be different. No standard source-books will be used, least of all the GBOWR which, as an outstanding reference manual, has been unfairly used by many Quizpersons with intent to overkill. Further, instead of being a pot-pourri, our Quiz will cover one specific subject, or object, at a time. It will contain three sections: Level-ground, Uphill and Summit—as it moves from the Easy, through the Exacting to the Esoteric. Most of all, we will make The Quiz Mountain interesting, competitive and a fun thing. Like Quizzes should be.

Score 1, 2 and 3 marks a question in succeeding sections as you climb away from the non-experts. Then match your total score against ours, which we shall give you. If you cannot beat us, ever, then mountain-climbing is not for you. If you beat us about 50 per cent of the time, then what are you doing stuck in a 10-to-5 job? And, if you do it more often, then you should be setting the Quiz instead of us!

Remember, Quiz Mountain is going to be difficult, but fun.

The Quiz Mountain

This being the first time round, I want you to get the feel of it. Maybe I want to soften you up a little. The first instalment is, therefore, TRIVIA. The OED defines Trivia as things being of small value and importance, trifling, slight. Let us see.

Levelground (1 mark per question)

1. In Bharata Natyam, what are the first movements generally known as?
2. Which country won the most gold medals at the 1982 Asian Games?
3. The most celebrated law-maker in Indian history and also a hater of women Who?
4. In legend, what was the bird symbolising hope and continuity of life which rose from its own ashes?
5. What is the nickname given to The Times of India?
6. Playboy magazine's first cover uncovered who?
7. During the 1971 war, what was the Bangladesh resistance force known as?

Uphill (2 marks per question)

8. Who was the Beatle who was shot?
9. Best was the Beatle drummer who died; who is the other famous Best?
10. Speaking of football, who was the most expensive player when the World Cup commenced in Spain in 1982?
11. Speaking of Spain, who painted Guernica?
12. Madame Blavatsky founded the Theosophical Society along with whom?
13. MX is very much in the news. Who or what is it? Incidentally, it is also called the Peace-Keeper.
14. What a mystique! He's absolutely cuckoo! Who?

Summit (3 marks per question)

15. Americans buried in the Kremlin Wall? Yes, two of them were. Who were they? Both names please
16. Dr Barney Carr has recently become famous for being the first human to receive a mechanical heart At about the same time, Charlie Brooks Jr has become the first what?
17. Ah, Television! Who said: "Television is chewing-gum for the eyes?"
18. Where in the human body would you find the philtrum?
19. Your best friends all have slipped discs. In America, the extract of a very popular tropical fruit is now working wonders in the treatment of the ailment. What fruit?
20. If you are in Madras, you will probably need him now. Who is a Pluviculturist?
21. And just to ensure that you do not get an all-correct score, what is Novbosh?

Scoring

Our Score 30

10 to 20: All you need is a little bit of luck

21 to 30. Stay with us

31 & OVER· Call us

Below 10: Mountain-climbing is not your sport

Answers

1 Pranam. Anything that sounds close enough will score. 2. Who else? The People's Republic of China. 3. Manu 4. The Phoenix. 5. The Old Lady of Bori Bunder. 6. Marilyn Monroe, naturally. 7. The Mukti Bahini 8. John Lennon, one would imagine 9 George Best, the English Football superstar. 10. Diego Maradona, the Argentinan super flop. 11. You know the one with the screaming horses and dismembered humans: Pablo Picasso. 12. Sorry, not Krishnamurthy. Henry Steele Olcott. 13. Missile Experimental, the latest of America's most deadly nuclear goodies. Peace-Keeper after Peace-Maker, the Colt 45 revolver which won the West. 14. Prince Andrew of Falklands fame 15. John Reed, whose book shook the world, and William Heywood, chief of the Wobblies, the US Labour organisation 16 The first death-sentencer to be finished off with an injection, not voltage or gas Sodium Pentothal, if you are interested. 17. The American architect, Frank Lloyd Wright 18. The indentation just below your nose, on your upper lip. 19 The unglamorous, plebian papaya. 20. A rainmaker. What do you do? 21. Heard of the Hobbit? JRR Tolkien That's his language. Its Finnish, meaning New Nonsense.

Partha Basu

The safe, soothing action of mint for everyday stomach upsets

PUDIN HARA

Your family doctor

The natural anaesthetic and cooling effect of Pudin Hara soothes away your stomach troubles. A few drops can give you instant relief from stomach pain, gripes, gas trouble, nausea and other stomach disorders. It is also a remedy for indigestion in infants and grown-ups alike.

Keep a bottle handy in your medicine cabinet.

Available with all leading chemists.

A Dabur Product

A Janus Of Our Times

Homage to Arthur Koestler, one of the great writers of this century, a two-faced thinker who vainly sought a synthesis of the fragmented world view of his time.

by R.G.K.

"THERE is but one truly serious philosophical problem and that is suicide," says Albert Camus in his *The Myth of Sisyphus*. "Judging whether life is or is not worth living," he continues, "amounts to answering the fundamental question of philosophy." Wonder about the enigma of existence is common to all of us though few have moments of illumination For some such wondering is a lifelong affair and part of their creative endeavour. For more than forty years Arthur Koestler sought answers to Camus's fundamental question of philosophy He gave verbal expression to his quest often in lively prose, always provocatively, and tried to give a meaning to his life through his actions.

Does the manner in which Koestler died suggest that he "judged" that life was not worth living? To many the tragedy of existence is not merely that life is not worth living—they take a whole lifetime to realise the worthlessness of life. It is, however, different if we do not ask questions, accept life as it is or if we believe we have the answers to our questions There is nothing more abhorrent to our inner nature than a vacuum We try to fill our minds with one dogma or another, one set of beliefs or another, affirming the dogma and belief as truths and trying to rationalise them. All through our lives we deceive ourselves consciously and unconsciously with lies and half-truths or truths that are not really truths But self-deception is as much necessary for our upkeep as food is for our metabolism.

All his life Koestler wrestled with the lies and half-truths of his generation He tried to scan the "invisible writing", hoping to understand a syllable here, a word there He surveyed several branches of knowledge, several disciplines, for an understanding of man and his estate. Did his intellectual efforts and adventures fail to provide him with answers for the questions he asked? Did he finally hope to find the meaning of life in the embrace of death or was it despair that drove him to death? Death as an answer to the problems of life is a paradox and to some minds a beautiful, though painful, paradox. Koestler himself had an obsession with what we in India call *dvandvas*, pairs of opposites. Referring To Goethe's exclamation, "Two souls, alas, inhabit my breast," Koestler says "... if I am to remain truthful, the separate existence of those 'two souls' must be emphasised, for the split remained with me... It is reflected in the antithetical titles of several books: *The Yogi and the Commissioner, Insight and Outlook, Darkness at Noon, Le Zero l'Infini, Arrival and Departure*, and so on."

The profoundest antithesis is of course that of life and death in nature. Koestler speculated on death as he did on life. As a prisoner in Spain he was almost snatched from the jaws of Death by the British. In his *Dialogue with Death* he says. "Death tripped down the corridor, changing step, struck out here and there, danced pirouttes; often I felt his breath on my face when he was miles away; often I fell asleep and dreamed while he stood leaning over my bed." In the same work he says that even before getting to know Spain he used to think of Death as a Spaniard, "as one of those noble Senors painted by Velasquez, with black silk knee-breeches, Spanish ruff, and a cool, courteously indifferent gaze". We shall never know how Death appeared to Koestler when he was struck down. Did he seek a meaning in death? To think that death has no meaning is even more intolerable than to think that life has no meaning.

Did Koestler have a strong death-wish? In his criticism of Freud's concepts of Eros and Thanatos he quotes Pearl who said "Neither senescence nor natural death are necessary, inevitable consequences of life... the protozoa are potentially immortal." Sexuality and the death-wish, says Koestler, cannot claim universal validity and that both are based on "biological novelties" which appear only on a relatively high level of evolution. Freud did not study the "psyches" of lower orders of creation. Koestler's psyche was different from that of a protozoon—the more highly evolved we are the stronger perhaps the death-instinct. Ambivalence, too, is a characteristic of higher beings, one should imagine.

Unique

Koestler was unique among writers, though one must hasten to add that uniqueness is a quality present in any writer of merit. What is meant in the remark made about Koestler is that it is not easy to link him with any other literary figure or fit him into any broad category. I sometimes wonder whether he resembled Aldous Huxley in spite of their obvious differences. Both were, to use a term which Huxley often employed, cerebrotonic, though, I suspect, Koestler had also a strong streak of the viscerotonic in him. The two were also alike in being encyclopaedic, polymathic, surveying—or eager to embrace—all branches of knowledge.

The loss of faith in established religion was common to both. Also to be remembered is that, all the same, they were engaged in a lifelong quest for a faith, for glimpses of the Reality. Huxley flirted with many ideas and eventually found refuge in the Perennial Philosophy. Koestler had many passionate affairs of the mind and at least a couple of affairs of the political heart. He married Communism like many other intellectuals of his time only to discover that the marriage could not be consummated because of the claws and fangs that his red lady love cocquettishly flaunted

Was Koestler a committed writer? Instead of claiming that he was one, it would be more correct to say that much of his life was devoted to discovering an intellectually and emotionally satisfying commitment. Like Huxley he also wrote fiction, but his stories were incidental to his intellectual progression or travail. As a child of Central Europe he was a colourful character with some of the sad romanticism of the Danube. Huxley tried his best to be unBritish, found a home in California but retained his Englishness. Britain was a refuge for Koestler but he remained the wandering Jew all his life.

Precocious

Koestler viewed the world on many planes and he lived his life on different levels. He was born in Budapest in 1905, the son of a Hungarian father and an Austrian mother. As a precocious lad of 14 he felt a mystic elation when gazing at the blue sky and into spatial infinity. This was perhaps the initial step in the difficult journey towards a cosmic awareness. Predictably his heroes were not warriors and statesmen but men of science like Kepler, Newton, Mach, Max Planck. It is tempting to speculate whether, had he not been a school drop-out, he would have become a great scientist. However, there is no need for regret on this score. As a professional scientist, however eminent, he would have been confined to a narrow field The fact that he turned out to be a philosopher with an overall view of different branches of learning has been a gain

Koestler's early career was spent in journalism and politics. He was the sole newspaperman on the 1931 Graf Zeppelin Arctic expedition. This experience served to hone his sense of adventure as well as to provide ballast to his soaring ego. Though brought up in the liberal spirit, he was a Zionist in his youth and spent some time in a kibbutz in the Holy Land. Like most intellectuals of his generation he was drawn to Communism and its promise of Utopia. As a leftist journalist he had perhaps a sense of the missionary. He went to Spain as a special correspondent of *The News Chronicle* of London primarily to obtain "first-hand evidence of German and Italian military aid to the insurgents". He was arrested by General Franco's Military Intelligence and would have been shot but for British intervention. A close encounter with death like this must have had a profound impact on the mind—on the psyche of the young Koestler. The experience could awaken new sensibilities as it did in the case of Dostoevsky, or it could benumb.

Koestler's red period was just seven years—1931 to 1938. He said of his days as a Communist: "I went to Communism, to quote Pablo Picasso, 'as one goes to a

spring of fresh water', and I left Communism as one clambers out of a poisoned river strewn with the wreckage of flooded cities and the corpses of the drowned." Looking back, Koestler must be reckoned as one of the chief personalities who turned the intellectual tide against Communism. His *Darkness at Noon* has been acclaimed as one of the great political novels of the century. (Orwell's *1984* was probably inspired by this work.) In this the horrors of the Stalinist regime were portrayed in all their chillingness. The horrors were the more terrifying because they seemed absurd—and the absurd seemed possible in a labyrinthine totalitarian state.

In some chapters of *The Yogi and the Commissar* Koestler carried the debunking of Soviet Communism a step further. In the forties it became fashionable to draw upon it for ideas and phrases. A recurring theme in Koestler's works is the problem of morality and expediency. The choice between the two is difficult and the one can be as disastrous as the other. "The fact that both roads lead to disaster," says Koestler, "creates a dilemma which is inseperable from man's condition... The dilemma admits no final solution. But each period has to attempt a temporary solution adapted to its own conditions... a certain admixture of ruthlessness is inseperable from human progress." Could it be argued that the ruthlessness of the Stalinist regime was of this type?

Arthur Koestler, the breaker of idols, the tarnisher of the false gods that promise heaven on earth, was one of the outstanding polemicists of the last few decades. But it is likely that he will be remembered not for influencing the political thinking of his generation but for his explorations into science and the creative arts and philosophy. There are, however, critics who think that he was a great dabbler, a charlatan. He has his shortcomings like all writers and thinkers but it would be too harsh to denigrate him as a pretender to the title of philosopher or thinker.

Koestler had the Central European Jew's gift for universalising things. The sort of romanticism that an Englishman lacks can help in breaking out of the shackles of the common-sense view of the world. I believe Koestler stood on the lofty shoulders of Einstein, Schroedinger, Heisenberg, Mach and other great physicists of this century and on those of Freud and Jung to synthesise their beliefs and, to some extent, go beyond them. The man who began as a "science writer" rose to be one of the most controversial thinkers of his time.

Synthesis

Koestler did not conform to the common idea of a handsome man. There was a certain roughness about his face, at any rate as seen in photographs of him. He seemed to carry the furrows of suffering. One does not expect a man so grave in appearance to write about humour. It is, of course, palpably absurd to think that a man of wit and humour must look witty and humorous. At the same time to write on humour is not always a humorous exercise. Koestler's ideas of humour are part of one of his most original works, *The Act of Creation*. In this book he observes: "The conscious and unconscious process underlying creativity are essentially combinatorial activities—the bringing together of previously separate areas of knowledge and experience. The humorist's game is to contrive a *collision*; the scientist's purpose is to achieve a *synthesis*; the artist aims at a *juxtaposition* of the familiar and the eternal."

The Sleepwalkers, The Act of Creation, The Ghost in the Machine—these three works of Koestler are almost indispensable to an understanding not only of the evolution of scientific thought but of the very springs of creativity. Incidentally they also help us in unlocking the great minds of modern times and in creating a framework of our own to understand the world around us. These great minds were not rigorously logical or matter-of-fact and they too had their dreams and visions and intuitive leaps. Indeed reading Koestler we cannot help concluding that creativity in science is almost an irrational process, almost close to mysticism. He says: "In *The Act of Creation* I have ventured some guesses as to how (this) unconscious guidance works—how a temporary regression to less sophisticated mental levels can produce the happy combination of ideas, the focal bisociation, which produces the solution of the problem."

It is my personal feeling that Koestler shows a partiality towards Jung. He is fiercely critical of Watson, Skinner and the horrors of Behaviourism. Koestler, the man steeped in science, became more and more attracted towards the irrational and the inexplicable, the recondite. That is one reason he was not at home in the far too simplistic determinism of Watson and Skinner. "Reductionism," he said, "is the philosophical belief that all human activities can be 'reduced' to —i.e. explained by—the behavioural responses of lower animals—Pavlov's dogs, Skinner's rats and pigeons, Lorenz's greylag geese, Morris's hairless apes; and that these responses in turn can be reduced to the physical laws which govern inanimate matter. No doubt Pavlov and Lorenz provided us with new insights into human nature which we share with dogs, rats or geese, while the specifically and exclusively human aspects which define the uniqueness of our species are left out of the picture."

Koestler, one suspects, could not countenance the "dehumanisation" of man at the hands of the Behaviourists. He also opposed what he called "the totalitarian claims" of the neo-Darwinians, "the claim that chance mutation plus natural selection explains everything in evolution". He thought that there were a number of other forces that influenced evolution, many unknown forces. One of them, according to him, was environment

Koestler, with his profound understanding of science, leaned more and more towards mysticism and occultism during the last years of his life. The paradox of this development is more apparent than real. Physics, with the mysteries of the subatomic world, brought him to metaphysics. In his *The Roots of Coincidence* he gives a detailed account of the strange behaviour of subatomic particles, of entities being particles today and waves tomorrow, of time flowing back. According to him many physicists, including Einstein, flirted with parapsychology. In *The Roots of Coincidence* he also tries to explain the phenomenon of synchronicity with the help of the ideas of Jung and the physicist Wolfgang Pauli.

Many Indians are incensed by Koestler's debunking of yoga and his irreverent references to Gandhiji in his *The Lotus and the Robot* in which work he has also lambasted Zen. Koestler came to India—and travelled to Japan—in the hope of finding an "answer... to our perplexities and deadlocked problems". Clearly the East could not have offered readymade solutions to the problems of mankind. He looked at India and Japan with the scepticism characteristic of Europeans and with a certain arrogance. There was, however, no need for him to caricature yoga for we had done the job ourselves. When he came to our country he brought with him a different mental luggage and it did not include the ghost in the machine. As for Zen, he did not realise that it was less absurd than particle physics. He was not an arhant and was not sufficiently illumined to have a *satori*. He wrote that when he had finished *The Lotus and the Robot* "I went back in a chastened mood to Western science, to holarchies and holons, and man's urge to self-destruction."

The mysticism born of physics did not save him and he could not perhaps resist the urge "to self-destruction". Or did he hope to discover new cosmic horizons during his new voyage? ■

In Remembrance

by S.V. Vasudev

IT was in January 1959 that Arthur Koestler was in Bombay, on a tour of India for his book, *The Lotus and the Robot*. He had not yet gone round the country nor met anyone of consequence and his idea of India was confined to his reading in the British libraries. Even so, he seemed quite aware of the Indian mind and when I went to his room at the Taj he was conversing with a reporter who said that importations of that time, like the "yo-yo" craze, really affected the young in our country.

Apparently, Koestler was sure that the Indian mind was far beyond and above the reach of such feeble assaults, but the reporter was overenthusiastic about India and talked of the gradual corruption from abroad. I was not in the least surprised when Koestler soon saw him to the door and, closing it, turned to me and said: "Now, let's talk sense."

I had not gone to him with any set questions and the remark he made put me at ease for I understood that what he wanted was an experience of India, without any pretensions. Somehow the topic turned to god and it was a bit of a surprise to hear from Koestler that he did believe in "messages" I waited for an elucidation on this point and he said: "God, to me, is no bearded personage. You see, I was carrying a bottle of gin on this trip and had resolved to cut down on drinks. Last evening, I opened the cupboard, thinking I shall have a drink. But, just as I opened it, the bottle, which was placed on the top shelf, fell and broke. I took it that there was a message in that small happening. To you, it may not mean the same. But everyone has to think of a meaning to connect various incidents from his own point of view."

A passage from Koestler's *Spanish Testament*, his first work, came to mind. Of course, the experience he is talking about there is different. Yet, it brings out Koestler's other side: "The lesson of this type of experience, when put into words, always appears under the dowdy guise of perennial commonplaces: that man is a reality, mankind an abstraction; that men cannot be treated as units in operation of political arithmetic because they behave like the symbols for zero and the infinite, which dislocate all mathematical operations; that the end justifies the means only within narrow limits; that ethics is not a function of social utility, that charity is not a petty-bourgeois sentiment but the gravitational force which keeps civilisation in its orbit."

Koestler's search in India was to understand man as the symbol of the infinite. He believed in the "seasons" of life and that is why, in later years, he shifted from the political plane to psychology and the understanding of the creative process.

"I can say this definitely," he told me, reflecting on his life and career, "that except for small things, like having been impolite to certain people, I would have avoided nothing else."

It is sad that such a man died under circumstances that cannot easily be understood and I see him now standing on the kerb on Warden Road, waiting for the car sent by his friend. He had been to Kerala, but returned in haste to Bombay, when he found a delegation from the USSR in the same hotel. He was always a little overwrought and one could never utter conventional words like "see you" to him. He would want to know why and when, for he seemed to want to prepare himself for the next moment. We had a cup of coffee together, that evening, and he felt assured only when the misunderstanding over the late arrival of the car was cleared after a telephone conversation.

It was on a Derby day that he had invited me for lunch and he seemed happy when I pulled out my race-book the moment he told me of his programme after lunch.

"I can stay in America for a short period, talk to the people and see the country and feel that I understand both the people and the country. But I am sure that, however long I stay here, there will always be something that I cannot grasp." I did not meet Koestler after his Indian journey but, I am sure, he was not over-enthusiastic about his Indian experience, for he never was one to accept anything that was not authentic and there is very little today, that India can offer in authentic terms. That explains why *The Lotus and the Robot* is dedicated to Dr Verrier Elwin, easily the only authentic life of dedication that Koestler came across during his journey.

Koestler was not averse to mysticism. "It is a perverse mistake," he said, "to identify the religious need solely with intuition and emotion, science solely with the logical and the rational." His was a mind that sought knowledge through all the mainstreams of thought, refined it through continuous debate in the mind, and brought out the distilled essence in his writings.

What should be the ambition of a writer? "To exchange 100 readers now for 10 readers in ten years' time and one reader in a hundred years' time."

Surely, Koestler will have 100 readers in hundred years' time. It is a safe bet. ■

IMPROVISATION is a potent force in the training of an actor. It provides a good chance to draw from the real self and produce honest reactions.

To say that actors, like poets, are born, not made, is, according to a well-known actor abroad, tantamount to placing the art of acting below that of a handicraft, for no art becomes respectable or respected until its principles, its tenets, its precepts, are recognised, methodised and housed in a system.

Actors Are Made, Not Born

by Prof Roshan Taneja

WHEN, in 1963, the Acting Department of the Film Institute of India, Pune, began imparting training to aspiring actors and actresses, we came face to face with the age-old dictum. Actors are born, not made. "Whoever had trained Dilip Kumar?" they asked. And who had taught acting to Ashok Kumar before that?

We were pooh-poohed for our presumption in undertaking such a task. Things came to a point where some of the enrolled students decided to pack up and leave, so utterly demoralised were they by this "browbeating". One such student, who had gone to Bombay over a weekend, had the opportunity to meet certain people connected with films and, it seems, they had so mocked at the poor young man for his temerity to try and learn to act that, returning to Pune, he had immediately packed his bags and was on the verge of leaving the campus when he was prevailed upon to change his mind.

This is indicative of the kind of notions prevalent about the training of an actor, the fallacies that have spread about "talent" as opposed to "training". In this context, it is pertinent to quote a well-known actor from overseas who, during a speech to the FTII fraternity, had this to say. "During a discussion, certain influential members of the public and the press pronounced it as their opinion that acting could not be taught, that it was not an art at all, that it was a gift, that it was an effusion of enthusiasm; that, in point of fact, actors, like poets, were born, not made. Now that appears to me to place our art below that of a handicraft, for no art becomes respectable or respected until its principles, its tenets, its precepts, are recognised, methodised and housed in a system.

In this context, let us imagine the creator of the Taj Mahal. Had he been born in a place far removed from civilisation, without any possibility whatsoever of seeing architecture of any kind, would there be a Taj Mahal today? Or where would Shakespeare have been if he had accidentally, and unfortunately, been born in some remote region at the plough-tail, where the Drama School of Stratford-upon-Avon was not within his reach. He would have perished at the plough-tail and been buried in a furrow, and we would never have known him.

You must have principles in all arts. You cannot produce your own thoughts, your own feelings, unless you have some guiding principles. Our own veteran actors have acknowledged the need for training. Ashok Kumar asserts that training is a prerequisite for any actor venturing into the profession. He himself had to learn on the job and on his own. Dilip Kumar, the legendary actor, and also one of our most articulate, has been in favour of training, too. Amitabh Bachchan, our most popular actor and, in my view, our best, in an interview in Bangalore before his unfortunate accident, had this to say on how important technique is to an actor: *Speaking for myself, I feel terribly handicapped because I could have been much better if I had been at the Pune Film Institute or studied with recognised teachers...*

MOVEMENT Aspiring actors and actresses must attend dance class to keep them supple and graceful

According to tradition, these words in Latin were affixed as a motto at the Globe Theatre, London, in Shakespeare's time: *Everybody follows the trade of acting.* In the present day, it is apparently true that everybody feels competent to do so and that, too, without seeking even the slightest training for the trade. Yet acting *is* the most exact and exacting of all arts. In it, nothing can be left to chance—to an inspiration of the moment—after the camera has rolled and the performance has begun.

In acting, to wait for inspiration to flash upon you is about as sensible as waiting until your house is on fire before looking for a fire-escape. No actor has ever produced a truly great performance except after long study, close thought, deliberate purpose and careful preparation. That is the testimony of all the masters.

As we examine a variety of manuals from different periods, we become aware of a curious kinship—the same scheme of procedures, the same emphasis upon bodily expressions and classification of the elements of physical expression, a kind of grammar of expression, an analysis of the voice and its reproduction, and the means by which it is suited to different ideas, characters and moods. This has by now become such a generally recognised procedure that it seems to be accepted as the only possible one.

Yet, Horace said: *If you would have me weep, you must first of all feel grief yourself.* What he means is that when the right feeling is mastered it imparts the right movements to the limbs. In effect, the correct, logical and real behaviour pattern results from the right attitude.

Stanislavsky's 'Method'

The advent of cinema coincided with the search for true-to-life acting. Stanislavsky was busy researching and discovering the finer points of the art of acting as practised by the great actors of the day, like Salvini and Talma, and actresses like Duse and others, methodising and housing them into a system which has come to be known as the Stanislavsky system or the Method style. The Stanislavsky system is no continuation of the textbooks of the past or the present. It represents a sharp break with traditional teaching and a return to *actual* experience. It teaches, not *how* to play this or that part, but how to *create* it *organically*.

To show how basic the idea is, and yet how far-reaching, a simple example may suffice. Let a young, inexperienced actor begin to execute simple actions before the camera and let him begin to regulate his attention. He will immediately realise that he cannot rid himself of the idea that someone is looking at him, that someone

is present right near him and that that is why he cannot divert his attention to the right object. A muscular tension arises; the actor feels that he is not free any longer, that he is paralysed. His attention wavers and he starts to resort to cliches. But as soon as he obtains mastery of his attention, as soon as he succeeds in directing it expeditiously upon the object, everything becomes simple. He needs a focal point and does not have to resort to cliches.

Generally, most acting is cliche-ridden. A cliche is a ready-made form for the expression of a particular feeling. For, over the centuries, audiences have been conditioned to a highly complex language of stock symbols. It is this language that a majority of actors unerringly provide: a man who shifts his eyes from side to side is suspicious; a woman who pops her eyeballs and chews her fingers is afraid; a man who looks lovingly into a woman's eyes is in love; a man who stoops his shoulders and ambulates in a series of disjointed shuffles is old; a cliche used to indicate deep thought is wrinkling one's forehead and looking at the ceiling.

A cliche forces the feeling into a set cast and is likely to break up the continuity of the real experience. Hence it is very harmful for the actor. In order to eradicate a cliche, real activity should be substituted. If the forehead-wrinkling actor will stop and actually think—even if all he does is multiplication tables—thought will manifest itself on his face and his body.

The crux of the idea behind the training of an actor is for the actor to acquire the ability to really think, feel, listen and be involved. This may well be illustrated by what a great master like Charlie Chaplin had to say to an actor who was on the threshold after seeing some of the rushes of his film: "You don't listen." He told the actor that it was essential for an artiste to really listen to other artistes: "For a real reaction, you *must* listen."

These three words, *You must listen*, contain the gems of wisdom. Like all truth, it sounds all too simple, but in those three words is capsuled the whole secret of the art of good acting. For "listen" here means "contact" with the other actor or a sense of "relationship".

Involvement comes from practice or *abhyas/riyaz*. Through systemised exercises, an actor learns the technique of involvement. Involvement precludes an absence of consciousness—the greatest hazard of all acting. Beginning with the consciousness of the Self, it proceeds to register the presence of the camera and the crew, the sets, the lights—in short, the environment.

Emotional Limbering

Improvisation is the potent force in the training of an actor, the exercise *par excellence*. Its main function is to provide a thorough and complete emotional limbering for the actor. Also, the improving actor is on his own—free of the oppressive influence of the script—which gives him a good chance not to lapse into conditioned reflexes and current cliches but to draw from his real self and produce honest reactions.

The ultimate benefit is a realisation of the Self: of who he (the actor) is and how he reacts to various situations. In the freedom of improvisation, the actor taps his innermost feelings. The improvising actor learns what a full-blooded emotion really feels like and also what it will naturally lead to: he learns and understands the mechanics of spontaneous reaction organically while he is involved totally in the situation. Later, when he requires this emotion to emerge, he will be able to express its nuances accurately, because he has known its full range.

Improvisation makes him a keener critic of the drama and, consequently, a better interpreter of it. The acting specifics (credibility, contact, inner truthfulness) are all actively involved, for improvisation tends to establish values. The actor comes to learn that acting is effective when credibility is not violated; when he has made genuine contact with his fellow actors; when he has delivered a truthful emotional climax. He comes to learn that his acting is bad when his choices are widely melodramatic and illogical; when he is so preoccupied with his own performance that he does not register the presence of others; when he sidesteps the emotional high point and resorts to a convenient cliche.

Eventually, improvisation becomes his own personal laboratory in which he experiments with such basic elements as contact, concentration and involvement. To the modern actor, it is a useful—nay, indispensable—emotional limbering. Its constant use trains the organic parts of himself. It encourages a purity of feeling. A methodology in the training of a film actor is very important. Because film shooting is so discontinuous and fragmented, it is difficult for the actor to absorb his role in its entirety.

Yet another difficulty, characteristic of the work of the film actor, may be mentioned here. In theatre there is a "living link" between an actor and his emotionalised audiences, also, the performances differ from night to night because of different reactions from the audience each night. Stage actors derive their inspiration from knowing the audience is moved.

This element of direct consciousness is completely absent in cinema. And yet it does not follow that the feeling of an audience and the creative excitement and inspiration deriving from the audience are necessarily excluded from the work of the film actor. On the stage, an actor plays before hundreds of people; in films before millions. Unconsciously, the film actor is thrilled and inspired by this prospect when he faces the camera. As he imagines a house-full cinema, it gives rise to a new kind of excitement, not less real and, of course, not less significant.

Summing up, the actor's special position in the arts must be emphasised. In this context, the words of Constant Coquelin; *The actor has his first self which is the player and his second self which is the instrument*, are very appropriate. In the moment of his creation, he is the artist as well as the work of art. He is called upon to be involved and remain detached at the same time. This requires a high degree of concentration. The ability to master one's attention in full—regardless of any circumstances—and to always cleave to the necessary object is a fundamental rule for the actor. Once the mastery has been obtained, the action is then executed as a reflex, a motor discharge, without any interruptions ■

"I Wanted To Defect"

by Brahm Dev

The author thought he would come into the limelight if he announced his decision to defect to the United States. He made the efforts but, sadly, there were no takers.

IT was by mere chance that I was in New York. And, I wanted to defect. There were many reasons. I have had a desire since my childhood to hit the headlines some day. I seem to have missed all the opportunities during World War II. Then missed all the others of trying to assassinate one of the leading public figures, raping some Lolita or hijacking a plane. This last also I had missed during my last trip as I thought that the air hostesses on the plane were not worth holding as hostages. I felt that in the autumn of my life, this was the only chance left.... yes, defection.

I saw photographs of an elderly couple who had defected earlier (from Poland, I think), hugging their two-year-old child, on the front pages of almost all the papers in the USA. Well, I had gone to meet my grandchildren for the first time since they were born, had hugged them and had been hugged by them, too, BUT—no photographs!

Then I also learnt that one does not require any skill to defect, except whisper the four magic words: I want to defect. As simple as that. Well, that is what I thought.

With everything to gain and nothing to lose, I decided to defect. It was a difficult decision to make since from my childhood I was told by my parents, teachers, professors, politicians, intellectuals *et al* that one's nationality is a thing of pride. I have also heard about heads rolling like nine pins in fights, attacks and wars for the sake of one's national pride. As an exception there are some insane intellectuals who tell us that internationalism is above nationalism, but who cares for such a minority. What will the ammunition manufacturers all over the powerful countries do if people started paying heed to such foolish sermons? Sermons are meant for the half-hour every week when people gather in their places of worship. And in that half hour also, women keep looking at the dresses the other women are wearing and men at other women.

Sorry for these asides, but coming to the subject of my problem, I decided to defect.

I phoned up the office of the American Consulate and when a sweet voice asked, "Who is calling?" I said in a whisper, "Put me on to the highest authority in your office and do not ask my name or purpose of the call."

I heard some whispers, and a click on the line. A voice asked, "What can I do for you?"

It was gruffy but unmistakably a lady's voice. I am surprised that all the important posts in the USA are held by women, and they still have the ERA and other similar agitations all the time. I tell her: "I want to defect."

The voice queried: "From which country?"

I whispered back: "India."

"No, I am in favour of defecting."

"Are you in favour of Khalistan?"

"But why?"

"There are many reasons. You give me the green signal and I can tell you all these in person."

"We don't accept defectors from India."

"Not even if I am a communist," I try.

"In that case, you have the wrong number. Phone up USSR."

I correct myself, "I am not a communist, but I want to defect."

"Sorry," and the phone went dead.

I try again and this time the sweet little voice says, "You are an Indian. We give green cards only if you are a doctor or an engineer specialising in nuclear medicine or computer science." And the phone went dead.

Having failed there, I phoned up our Ambassador's office in Washington. Again, a sweet little voice asks, "Who is calling?"

I give my name. The voice asks, "What do you want?"

"I wish to speak to the Ambassador."

"He is busy on the hot-line."

"Hot-line? With whom?"

"Prime Minister of India, who else?"

"But it's important. When will he be free?"

"Are you dying? If so, you must have given the name and address of some friend or relative when filling the sponsorship form to take care of your last rites. Better contact him."

I am agitated. I say, "No, I am not dying and do not wish to yet." Then I whisper the magic words, "I want to defect to USA."

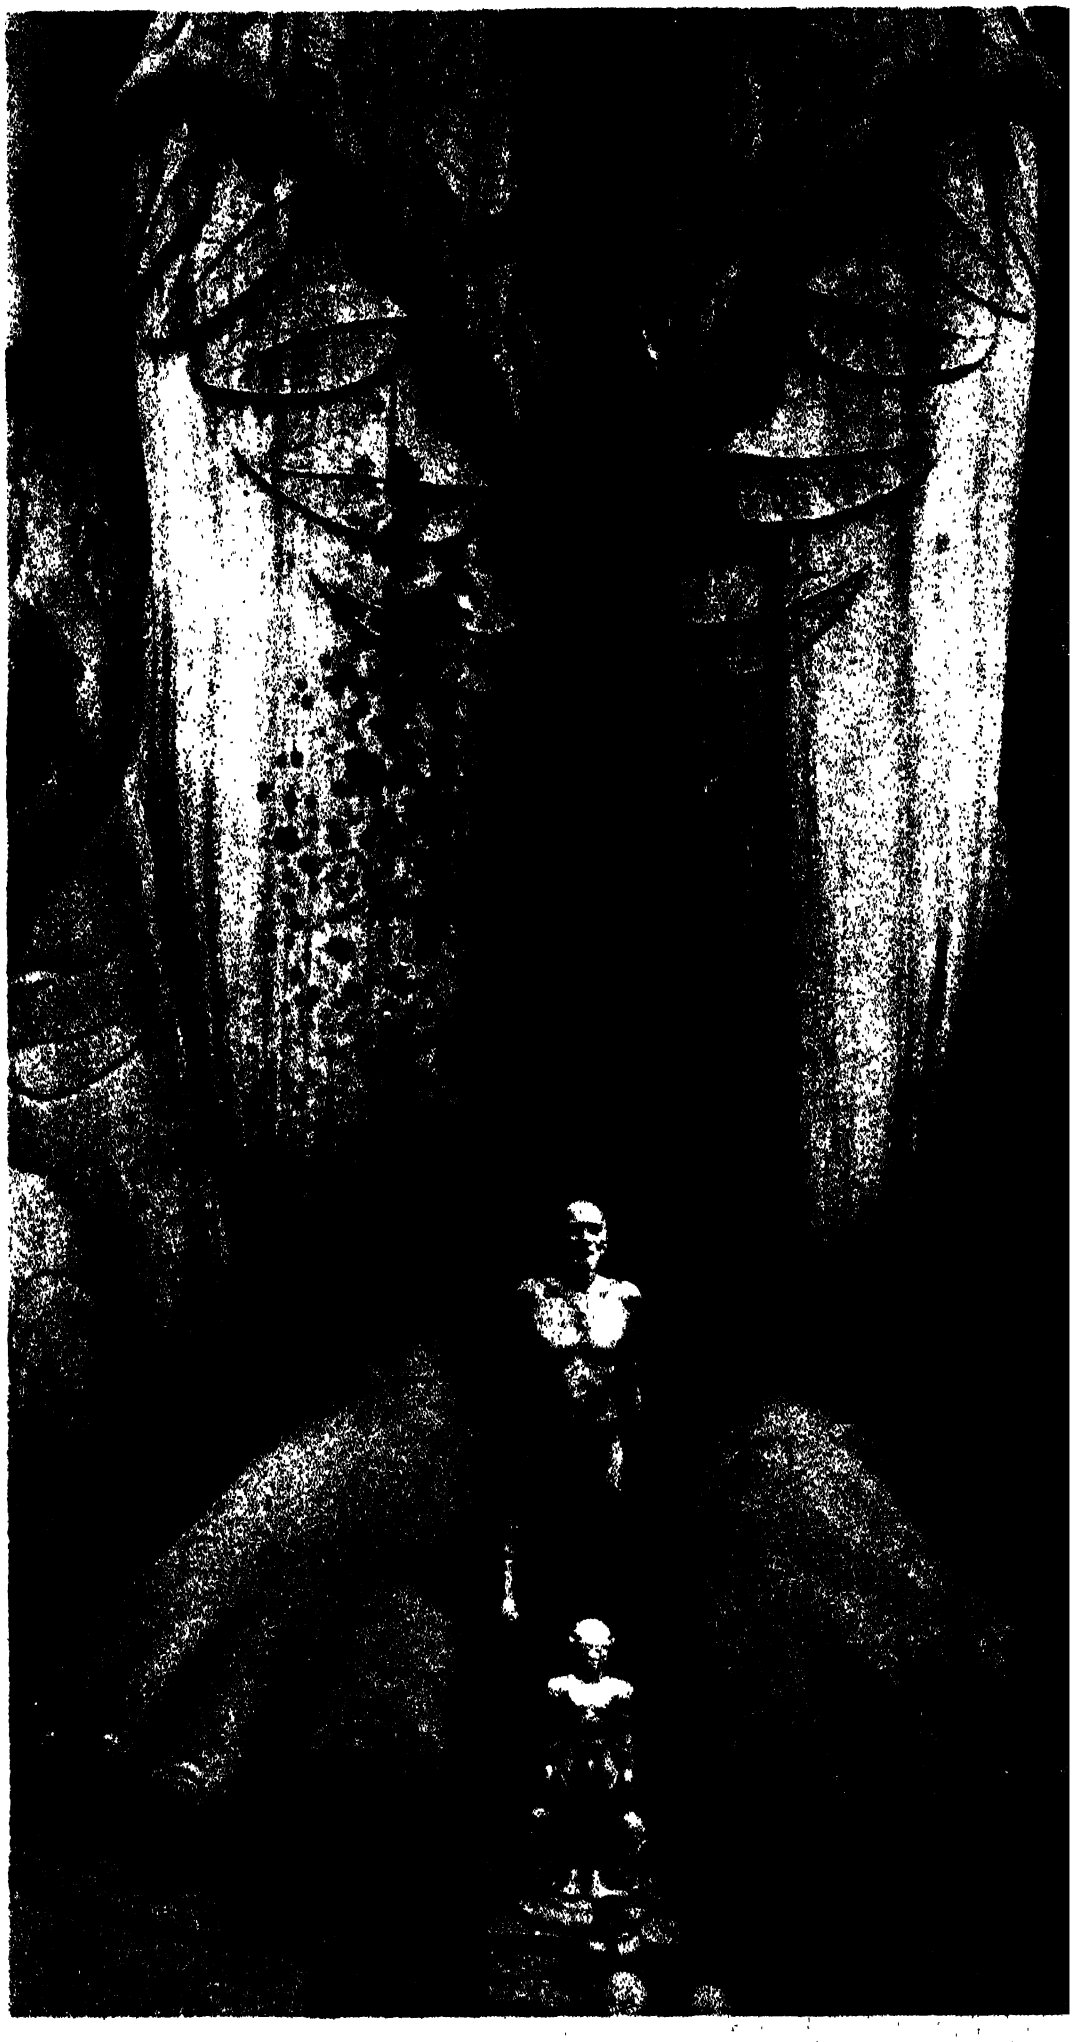
"What?" she says. "Go ahead, who is stopping you?" And the line went dead. ■

Photofeature

THE THIRD EYE

Image India

Photographs by Gurmeet Thukral



GURMEET THUKRAL is a young up-and-coming photo-journalist. The son of a professional photographer, he learned to handle a camera with ease and assurance at an early age. His subjects then were people and the "eternal" Himalayas. These sights and sounds instilled in him a thirst for adventure and, camera in hand, he has trekked from Ladakh to Nepal and has also travelled widely through the rest of India, covering a number of large and small festivals. "People and culture from every corner of India interest me most," says Gurmeet.

Over the years he has contributed to a wide variety of magazines. In India, his photographs have been published in the *Weekly, Madhuri, Youth Times, Filmfare, Imprint, Mirror, Swagat* (the in-flight magazine of Indian Airlines), various ITDC publications, as well as calendars and greeting cards. Abroad, his work has appeared in *The Sunday Telegraph* and *She* (London), *Stern* and *Geo* (Germany), *Fair* (Switzerland), *Actual* (Paris), *Asia Magazine* (Hong Kong) and *Hemisphere* (Australia).

"For a photographer, India is a treasure," says Gurmeet. An exhibition of his photographs, based on ten years of travel throughout the length and breadth of the country, will be held at the Jehangir Art Gallery, Bombay, from March 23-29. Called "Image India", the exhibition will consist of colour blow-ups depicting diverse aspects of Indian life and Indian atmosphere. ■

Growing babies
need a special solid food...
Farex

Because Farex is the more nourishing solid food for babies' rapid all-round growth

Farex is rich in protein for your baby's growth.

To protect the baby from protein deficiency, the World Health Organisation has laid down certain standards for protein content in, and feed preparation of, branded solid foods. A Farex feed, when prepared as directed, is rich in protein — so essential for your baby's growth.

Farex has extra iron for healthy blood.

"The baby is born with a large store of iron from the mother, but these deposits gradually decrease after birth. Although milk is a good diet, it is not a complete food because it lacks iron. This is why he needs solids containing iron."

— Dr. Subhash C. Arya

Iron is essential for your baby's blood, for his resistance to infection and for his general health and growth. That's why, Farex contains more iron than any other branded solid food.

Farex has the right ratio of Calcium and Phosphorus for building your baby's teeth and bones.

Your baby needs Calcium and Phosphorus for the development of his teeth and bones. But these can best be utilized by your baby if they are present together in the ratio of 2:1. Farex contains both these essential elements in this ideal ratio, ensuring healthier bones and stronger teeth for your baby.

And Farex is so easily digestible.

Farex has been specially pre-cooked to suit your baby's tender digestion.

'Come September And I'll Be Back'

—G. R. Viswanath

by Raju Bharatan

—Patrick Eagar

After a world record of 87 Tests in a row, G.R. Viswanath says he feels mentally weary and physically drained. He wants a spell away from it all to return fresh for the fray. Come September and "the effort will be there" on his part, he says, to win back the No 4 spot that was once his by divine right in the India team.

NO, G.R. Viswanath is not a father yet. When, following his traumatic dropping from the India team for West Indies, there appeared the news item that Kavita was all set to deliver, it seemed a situation pregnant with possibilities. Indeed, Vish was in Baroda when that news item was sprung on him. "It was certainly news to me!" recalls Vish. "I immediately trunk-called Kavita and asked what the hell had been going on behind my back while I was away in Pakistan. When she said the whole report was a canard, I heaved a sigh of relief that at least my marriage was safe even if my place in the India team was lost!"

Runs he may have lacked lately, but Vish never lacked a sense of humour. This alone enabled him to accept philosophically the fact of his banishment from a team he had done so much to hold together these 12 years. Only, contrary to public expectation that he could have been given one last chance in the West Indies in view of his track record as a thoroughbred, Vish himself was expecting the axe.

"By what logic could I have expected the selectors to retain me?" he asks. "Especially when I myself was not feeling up to the job? I knew I'd lately played more Test Cricket than was good for a man of my temperament. You tell me that, of my 91 Tests, no fewer than 48 have been played in the last 4½ years—starting with the late-1978 series in Pakistan. That's a hell of a lot of Test Cricket to pack into such a brief span, no wonder in Pakistan I suddenly began to feel stale! Remember, I started my sequence of 87 Tests running in West Indies in March 1971. Now, of these 87 Tests in 12 years, if 48 have gone into the last 4½ years, I can understand why I've *this* feeling. No, I'm not making any excuses for my failure in Pakistan—that failure speaks for itself. But you do need to be mentally fresh to take on the challenge of Imran Khan. Especially when he bowls so *accurately* fast as he did in this series. If you say you saw me play *and* miss much more often than ever before in this series, then that's it—I wasn't equal to the job this one time, I badly needed a spell of rest and I've got it now!"

"But if too much cricket was at the root of it all," I pointed out, "what if you'd gone to Packer, as quite a few of you were scheduled to do early in 1979? After all, Packer drove his players harder than any Cricket Board anywhere in the world..."

"Ah, but you forget," said Vish, "that, with Packer, I'd have been playing for the cash and not the country! When you're playing for your country, you've to be giving cent per cent all the time and that takes a hell of a lot out of you. Still, there's no greater honour than to play for your country, that's why I want to *feel* I'm up to it before making the effort again. And the effort, make no mistake, *will* be there. Which is not to say I'll go there and labour at the job. My runs never come *that* way—at Test or any other level of cricket. I'll just go and play my shots. If they think I'm still playing them well enough, they'll recall me, otherwise I'll have no regrets—never have had and never will."

Vish is like that: to this day he remains untouched by the crass commercialism of the game as it has evolved. And he *can* still afford to play his shots, since he is not only a run-millionaire but also a millionaire in real life. When I met him, Vish had just returned from Sharjah, richer by Rs 4½ lakhs (150,000 dirhams) from the Cricketers' Benefit Fund Series there in which, aptly, he had been bracketed for favour this year with Zaheer Abbas. The Gulf between his bat and pad, which proved his undoing in Pakistan, Vish now hopes to close when he makes his challenge afresh in September.

How Quick Was Imran?

"Was Imran Khan," I asked Vish now, "quicker than he was in 1978—when you had faced him so well?"

"No, Imran *wasn't* quicker now than he was then—if anything he was slower!" said Vish. "But he was much more *on target* now. That's to say, he wasn't merely fast, he also swung the ball like a boomerang! One thing let me tell you: that not in all my 91 Tests have I encountered a quickie who swung the ball as much as Imran did now at *his* pace. That ball at Karachi to which I shouldered arms and got out for the first time in my life offering no stroke—that ball, the way it moved at *that* pace! Never have I seen a cricket ball come in so *diagonally*. And I can't agree that my reflexes have gone any slower now than they must do in the case of a cricketer who's played so much Test Cricket for so long. But my responses, I agree, were not always swift enough. I'm hoping that the enforced spell of rest I'm having now will do the trick here. If it doesn't—well, a younger man is needed to do the job."

But where is the young man to do the job? Our present middle-order crop may have the guts but they visibly lack class. And Vish's greatness lay in the fact that he combined character with class. That character, can we now ever get it back *with* the class?"

"Remember the one Test innings at Faisalabad in which I did pass 50 in Pakistan?" says Vish. "Didn't I play my shots in that knock? That was one time I got going. At other times, I was getting out before I found my momentum. The most testing part of a Test innings is at the beginning. And this is when Imran managed most times to get at me. This is when I wasn't quite able to summon my old application. But summon it I must if I want to play for India again."

Yes, the style is the man. And the style has certainly gone out of Indian Cricket with the exit of Viswanath. With the style has gone the stability that Vish brought to the otherwise hour-glass-thin middle of India's batting. Those extra pounds around his waist, Vish needs urgently to shed them if he's to be *on* the Imran or Holding ball again. If, as he says, the Holding he faced early in 1976 "was a yard faster" than the Imran he encountered late in 1982, Vish, too, is 6 years older today. 'The Littler Master'—Vish is exactly a ¼ inch shorter than Gavaskar—can he get up on his toes again to play down the fastest bowling in the world in the form of Holding, Marshall, Roberts and Garner? For *that* is the quartet Vish is ironically likely to be up against when he makes his comeback bid.

Genius And Drink

The point has been made that it is his 'soft' living that's proved Vish's downfall. But, then, how many know that on the night preceding his greatest innings in Test Cricket (the night of January 10, 1975) Vish was so drunk and unruly that he had literally to be pressed into bed and put to sleep? Yet, next morning, he coolly walked out and hit 97 not out against Andy Roberts & Co in the Fourth Test at Chepauk, Madras. Said Tony Cozier of that epic innings.

The sight of any fast bowler repeatedly beating the batsman with sheer speed is always an exciting phenomenon; for him to be confronted by a batsman equally hostile and belligerent is the stuff of which the game's followers' dreams are made. As Viswanath plundered Roberts with his team in desperate trouble after lunch, there was the memory of Ted Dexter playing a similar innings in a similar situation at Lord's in 1963 against the fury of Hall and Griffith. Dexter's 72 then will always be talked of as one of the finest Test innings. So will Viswanath's, for he met force with force in an amazing display.

Can Vish be the same force again? Well, it is only against Holding & Co that he can retrieve the kind of ground he's lost to Pathan Imran. ■

Health

An Embarrassing Affliction

by Coomi Chinoy

COME vacation time and there is a mass migration from the cities by rail bus plane, car and ship for peace and quiet, fun and adventure

Whether people travel for pleasure or business, by land sea or air the "change' they undergo is unmistakable, for travelling involves a temporary change in life style and puts even the seasoned traveller to severe stresses "The stomach and the colon are mirrors of our mind observes Dr R H Dastur Bombay', eminent physician, "and when one is tense excited or emotionally upset there is a chain reaction in the stomach and the colon

A change of time zones while flying the excitement of arrival, the fresh air, the exotic food and drinks go to many people's heads, and they indulge in an orgy of eating and drinking An ominous feeling of uneasiness is followed by abdominal cramps, and a frantic rush to the toilet And so, a much looked forward to holiday or a crucial business trip is ruined by an attack of diarrhoea

Travellers have been easy victims of diarrhoea since ancient times Hippocrates (5th century BC) defined diarrhoea as "an abnormal frequency and liquidity of faecal discharge " Quite simply diarrhoea is an ingenious, self protective device of the gut to throw out unwanted contents through vigorous bowel movement

The state of health of an individual determines the course of diarrhoea The healthier a person the better is his resistance The easiest victims are persons taking antacids or drugs for ulcers and confirmed drinkers This is because antacids neutralise the acid in the stomach, which is a natural barrier against infection, and prolonged intake of excessive alcohol damages the stomach cells With the stomach's defences down the germs invade and colonise the intestines with painful consequences

Diarrhoea also poses a danger to diabetics, heart and kidney patients, and infants and the aged who become quickly dehydrated due to loss of body fluids and salts

Diarrhoea has several *avatars* Mercifully most diarrhoeal cases are mild and self limiting stomach upsets (due to over indulgence or unfamiliar food) with three or four loose stools daily with mucus, pus or blood Most travellers take this temporary discomfort in their stride Entero vioform (now banned because of its effect on the optic nerve), and Mexaform have been the travellers' sheet anchor for plugging troublesome stools

But all diarrhoeas are not so transient and innocuous Some can be vicious and life-threatening with explosive watery stools, nausea and vomiting The cause of misery is usually an invasion of the gut via food or water contaminated by any of the several types of disease-causing microbes The most notorious mischief maker is a two timer colon bacillus *Escherichia coli* which sticks to small bowel cells, and is also capable of diarrhoea producing toxins This 1/250th of a millimetre rod shaped bacterium is guilty of causing 25 per cent of all diarrhoeas in all age groups in the developing countries

However, six of its cousins in the colon can be lethal *Shigella* can inflame the mucous membrane of the small intestine and cause bacillary dysentery (frequent stools containing blood, pus and mucus accompanied by abdominal cramps and fever) *Salmonella* can survive in freezing or drying temperatures, contaminate ice dust, sewage and foods especially oysters lobsters, crabs and prawns and give typhoid

But the most feared microbe is *Entamoeba histolytica* which felled Alexander the Great and Napoleon This tiny unicellular parasite can cause amoebic dysentery (stools with mucus pus and

—Lenny Aarons

DEHYDRATION— THE COMMONEST and most dangerous side effect of diarrhoea

blood accompanied by griping abdominal pain) amoebic colitis amoebic hepatitis or amoebic abscess of the liver Ten per cent of the world's population is under its sway Unlike *Shigella* which stays put in the lumen of the intestine and is amenable to treatment the wily amoeba cysts penetrate the mucous membrane of the colon and carry on protracted guerilla warfare from their intestinal hideouts They even sail to the liver via the portal vein and cause amoebic hepatitis and amoebic abscess

Comma shaped *Vibrio cholerae* colonises the small intestine to cause sudden massive diarrhoea ('rice water stools"), watery vomits and rapid dehydration (loss of vital body fluids and salts) While the West got rid of cholera over a century ago, the developing countries are still in its vice like grip The seventh cholera pandemic (world epidemic) raged from 1961 to 1975 from the Celebes northward to Korea and westward to the whole of Africa and Southern Europe

Pretty, looking like a bunch of grapes, *Staphylococcus aureus* can be as poisonous as a snake! An instance of its venomous nature was provided by an outbreak of food poisoning on a jetliner 'flying high" from Anchorage to Copenhagen Fiftyseven per cent of the 343 passengers aboard became acutely ill with vomiting, diarrhoea and cramping abdominal pain Thirty of them had to be rushed to hospital on landing and given intravenous fluids Luckily, all survived to tell the tale A *Staphylococcus* had managed to sneak into the ham omlettes through a chef's infected finger and as the food was not adequately refrigerated aboard the plane, it had a wonderful opportunity to multiply *Staphylococci* can multiply at temperatures from 4°C to 46°C and thrive in cream pastries, salads and mayonnaise Heroin addicts and insulin using diabetics are more susceptible to *Staphylococcus* infections

By comprison, *Giardia lambia*, a pear shaped protozoan with popping eyes that parasatises the human duodenum and jejunum, is a barking dog that seldom bites A citizen of the world it particularly afflicts travellers to the Caribbean, Latin America, India, Russia and South and East Asia Giardiasis is marked by yellow, foul smelling, frothy stools without blood or mucus, gas in the stomach and mild abdominal cramps Giardiasis is a late starter during travels usually persists for weeks and often clears up by itself

Treatment

In most diarrhoeal cases which are mild giving the patient plenty of fluids (butter milk, weak tea, rice water, pomegranate juice) and a light diet -*khichdi* (rice and *mung dal* cooked with a pinch of salt), stewed apple half boiled minced meat -are all that's needed until the diarrhoea stops Curds rice dal, and mashed potato can be added to the diet when the patient feels better

But in cases of severe diarrhoea, cholera and food poisoning dehydration poses the greatest threat to life Dehydration symptoms are easy to detect—cold, clammy skin, sunken eyes, dry mouth, intense thirst, shallow breathing, muscular cramps, reduced flow of urine Dehydration can be quickly corrected by giving the patient at frequent intervals, a rehydration drink made of glucose and electrolytes (3 5 gm table salt, 2 5 gm sodium bicarbonate, 1 5 gm potassium chloride and 20 gm glucose mixed in 1 litre of boiled cooled water) as well as other fluids till the doctor arrives Readymade packs of Oral Rehydration Salts (ORS) are available at most chemists

Since the 1970s Oral Rehydration Therapy (ORT) has revolutionised the treatment of several diarrhoeas The National Institute of Cholera and Enteric Diseases at Calcutta has shown dramatic results in reducing the death toll from diarrhoea and cholera by the oral glucose salt mixture

Medicines

What about medicines? It has been found that anti-diarrhoeal drugs and binding mixtures (kaolin, bismuth and pectin), may temporarily relieve the symptoms but do not really help to cure diarrhoea Rather, they hamper the bowel's protective function to rid the body of harmful contents and should never be taken for dysentery Broad spectrum antibiotics are effective only on cholera and bacillary dysentery and giardiasis Antibiotics are not to be taken indiscriminately like peanuts as they kill off the useful bactena in the bowels along with the harmful ones and their progeny develop an immunity to the drugs For instance, Penicillin, which originally performed wonders against all strains of *Staphylococcus aureus*, now kills only ten per cent of them

Cures That Endure

Stomach Disorders

That excruciating stomachache again! Was it the *bhelpuri* you ate at Linking Road last evening, or the *pau bhaji* you gormandised at lunch? Yes, contaminated food is one of the most common causes for loose bowels and cramps in the stomach So next time you shoo off a fly from your *bhelpuri*, be prepared to do the rounds of the toilet all night

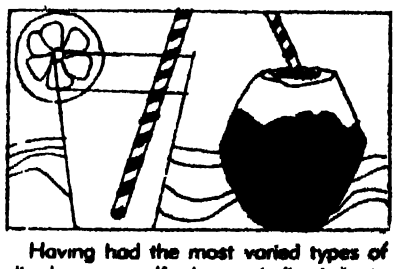
But *bhelpuri* and *pau bhaji* apart, diarrhoea may be a result of gastritis (an inflamed tummy) or gastro-enteritis (inflamed intestines) And modern research in the field has revealed that diarrhoea is often nothing more than allergy — apparently like your nose, which may be particularly sensitive to dust and pollen, your stomach may have an inborn dislike for certain foods Spinach, for instance, or cola drinks have an unhappy effect on some stomachs Believe it or not, excitement, nervousness, shock and great emotional stress is often the root cause for stomach upsets

The worst effect of diarrhoea is dehydration and this can be serious, as there is a highly quickened bowel movement playing havoc with the nutrition you require The nourishment you would normally get from the process of absorption is completely at a standstill and before you know it, the undigested food passes through your bowels

Though adults are not spared, diarrhoea is extremely common among children And the fluid loss they suffer is very difficult for them to withstand indeed!

For children, a sterile solution of sugar and salt in boiled water is very effective If the child can be coaxed into drinking an ounce or two at a time,then the tension of the baby's dehydration can be avoided The *jeera-pani*,we know,is very effective in diarrhoea *Babul* tree leaves and black cummin seeds crushed in equal proportions and taken regularly, guarantee respite from intermittent trips to the bathroom *Amla* is known to be very helpful as well The inner bark of the Mango tree (if you are lucky enough to have access to one) is known to be miraculous in its merits as a pacifier if applied gently around the navel, for those in this condition

Some times it is best to take as much *dab paani* or *nariyal paani* as you can get yourself to swallow. The fluid is very good for this condition and can give you some of the electrolytes and glucose you need.



Having had the most varied types of diarrhoea myself, due to indiscriminate eating habits, I have always found that fresh lime juice in a tumbler of cold water has never let me down. My blind faith in lime, would you say? No, the merit lies in the little sour fruit itself.

Julie Bijalpita Chatterjee

Next Week For You

S.K.KELKAR

CAPRICORN
(Makara)
Dec. 21-Jan. 19

Although your present activities do not yield immediate results, they make way for further openings. Revolutionary trends and ideas will keep you occupied but do not be too hasty. Avoid clashes and conflicts with those in authority. Deal tactfully with seniors. Financial gains are likely midweek.

AQUARIUS
(Kumbha)
Jan. 20-Feb. 18

Those in advertising have a very lucky week. Interior decorators will make a mark in their career. Journalists and scientists will be in the limelight on account of their superb performance. A trip abroad awaits sportsmen. Midweek is ideal for pushing professional interests. Expect money gains.

PISCES
(Mina)
Feb. 19-Mar. 20

Whether you like it or not you will have to take important decisions that will help re-organise your affairs successfully. The necessary finances can be raised with the aid of influential persons. A marriage will be settled, bringing relief to elders. Those in service will receive a promotion. You must slow down activities.

ARIES
(Mesha)
Mar 21-Apr. 20

A profitable business deal will come your way this week. If you launch a new scheme let it be only on trial basis. Representatives of various cosmetic firms and those dealing with fashionable goods will secure good business. Their success will bring them further promotion. Deal with customers and clients tactfully.

TAURUS
(Vrishabha)
Apr. 21-May 20

You will be kingmaker but you will work behind scenes. Negotiations or discussions for foreign aid or capital are likely to be finalised, shortly. Artists and writers should maintain the punctuality and efficiency in their present job rather than take up new assignments. Invest carefully. Your purse will be strained.

GEMINI
(Mithuna)
May 21-June 20

Keep your cool while solving public problems. Keep in touch with influential people and if you need help remind them of an earlier promise. Intellectual pursuits will bring a lot of profits, midweek. News from abroad helps to boost up export-import business. The weekend is spent with family and friends.

CANCER
(Kataka)
June 21-July 20

Politicians and social workers will be publicly honoured and receive recognition for their services. Those in authority must delegate their powers and keep up their efficiency. Businessmen should introduce their expansion plans with caution. Seek the opinion of family members midweek.

LEO
(Simha)
July 21-Aug. 21

You must keep on building goodwill. Your interest in foreign countries will pay off. Keep a careful eye on the ads in the dailies and you will secure a suitable job in the next few weeks. You may have to travel early in the week. You will be in the limelight midweek. Consult seniors and experts Artists will be at their best

VIRGO
(Kanya)
Aug. 22-Sept. 23

Ill-health will dog you the entire week. Your spare time should be utilised in reorganising business or revising earlier plans. Secure the help of youngsters and trusted subordinates for running your day-to-day business. Restrict domestic expenses in the early part of the week. You will be involved in a celebration.

LIBRA
(Tula)
Sept 24-Oct. 23

You will have to struggle hard for the success you anticipate in your work. Deal with partners sympathetically and with tact. Do not allow strangers to interfere in your private life. Guard against possible injuries during travel or while handling machinery. All important jobs should be cleared early in the week.

SCORPIO
(Vrishchika)
Oct. 24-Nov. 22

You must be prepared to face a storm in the near future. Your rivals will give you sleepless nights in the next few weeks. Those in service may be transferred shortly. Labour issues should be handled with utmost care. While submitting or proposing new plans, heed the advice of seniors and elders.

SAGITTARIUS
(Dhanu)
Nov. 23-Dec 20

A lucky period begins this week for activities both in and outside home. Youngsters will find a romance intriguing. Invest money carefully and do not be rash about speculation. Secret talks and exchange of views midweek help to gear up your business activities. Luck favours all your activities during the weekend.

STAR FOCUS

Be A Dancer

Today, dancing is not merely a hobby or pastime interest but an independent profession in its own right. Generally followed by women, a few men have also attained proficiency in this field.

Dancing is a spontaneous expression of joy, taking the form of rhythmic movements. According to Western ideology, the combination responsible for this is Aries-Libra 15 linked with Mars/Neptune plus Gemini-Sagittarius with Mercury.

I personally feel that if the above signs are converted into the Indian system, Pisces-Virgo and Taurus-Scorpio are associated with this artistic line. Pisces is most relevant for two reasons: (1) It relates to the feet, (2) Neptune, lord of the ascendant, suggests artistic and rhythmic movements.

Similarly, Taurus and Scorpio are excellent for artistic and effective expressions either in speech, writing or facial gestures.

Manju Bhargavi, the famous cine-star from South India and recipient of the award for *Shankarabharanam*, was born on July 24, 1952, on the Cancer ascendant. She is an adept dancer as well as an actress. In her birth chart Venus and Moon are in close proximity with the ascendant. In the Navansh chart, Mars and Pluto are in Pisces and Jupiter-Venus in Scorpio. She came into the limelight in 1979 and will enjoy public favour till 1995. 1983 and 1994 will be difficult years.

Birthday Forecast

Sunday, March 27

Respect the advice of seniors and elders while implementing new schemes and projects. Move cautiously in mid-1983 and during the end of the year. May and January are excellent months.

Monday, March 28

In everything you do this year, you must be patient and cautious, especially between June and September. The last quarter of this year and early 1984 are periods of consolation and extreme satisfaction.

Tuesday, March 29

You secure more than average success this year. Judges, lawyers and writers will be especially lucky. Do not take on heavy responsibilities in mid-April, July and October.

Wednesday, March 30

Maintain cordial relations in and outside home. Make use of all opportunities that come your way. Financial rescurces should be conserved carefully in August and September.

Thursday, March 31

The year provides ample opportunities to rehaul business and effect the necessary changes in your organisation. Associates and partners must be handled tactfully between August and October.

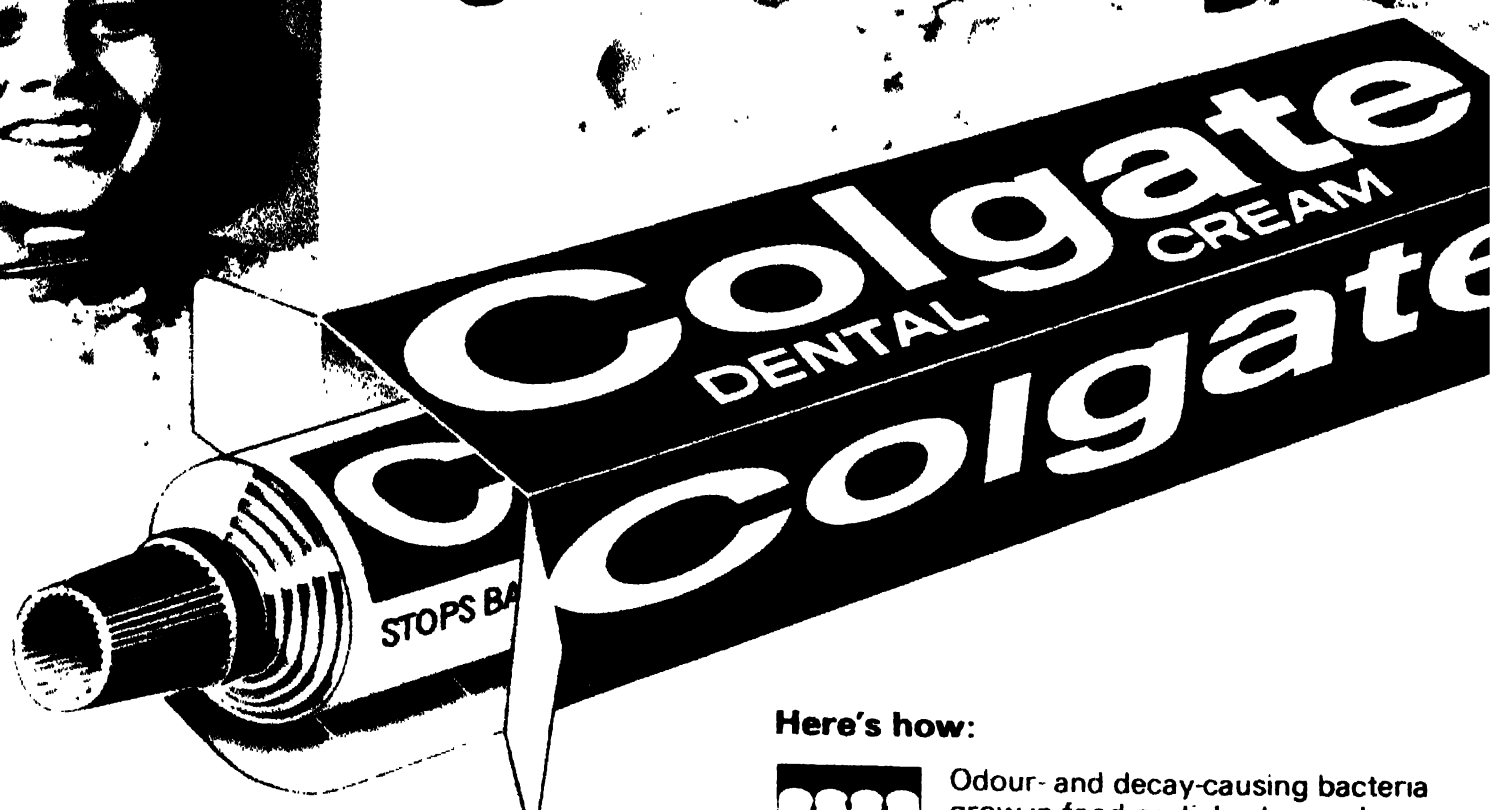
Friday, April 1

A lucky year for the realisation of your aims and objects. Promotional chances await those in service in this and the next month. You will have to make the necessary adjustments by mid-1983. Guard against ill-health.

Saturday, April 2

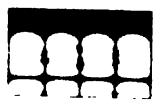
A year full of contentment and happiness. It also brings a new and happy phase in work life and business. Keep a tight reign over financial matters between June and October.

Stop bad breath... Fight tooth decay

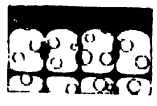


Colgate's trusted formula works to give you clean, fresh breath.... strong, healthy teeth every time you brush.

Here's how:



Odour- and decay-causing bacteria grow in food particles trapped between your teeth.



Colgate's unique active foam reaches deep to remove dangerous food particles and bacteria.

Result: Fresh-breath confidence, protection against decay, strong healthy teeth.

Remember to brush with Colgate Dental Cream after every meal: Stop bad breath... fight tooth deca

You'll love its fresh minty taste!

The Weekly Pick

India And The Non-aligned World

Hari Jaisingh; Vikas; Rs 75.

In the wake of the Seventh Non-Aligned Summit held at Delhi recently, this book gives a neat and concise background to the Non-Alignment Movement, which should prove useful to students of international affairs.

Beginning with the meaning of the term Non-Alignment, the author analyses how India's Non-Alignment policy was formulated on the basis of our traditions, experiences as well as certain practical considerations.

The chapter "From Belgrade To Havana" provides a brief summary of the earlier Summits and their individual significance. The author also devotes an entire chapter to the architect of India's foreign policy, Jawaharlal Nehru.

Tribes Of India

Christoph Von Furer-Haimendorf; Oxford University Press; Rs 100.

An all-encompassing account of the various aboriginal races in India, whose origin dates back several thousand years ago.

While earlier the tribal folk lived undisturbed in their secluded regions, improved means of communications opened up previously inaccessible areas and the tribes had to counter infiltration by economically and politically advanced ethnic groups.

The author discusses, at great length, this oppression of the tribals, especially in the state of Andhra Pradesh.

The book, which is a little too serious to appeal to most readers, also contains chapters by Michael Yorke and Jayaprakash Rao.

Business Law

S.R. Patel; Asia Publishing House; Rs 125.

Undoubtedly an asset for businessmen, senior executives and company secretaries, who face legal problems in their daily quota of work, but also valuable for beginners interested in the subject.

The author covers the important principles underlying the Law of Contract, the Partnership Law, the Law of the Sale of Goods, the Law of Negotiable Instruments, Company Law and all other laws connected with commercial dealings.

Though the chief merit of the book lies in its simple and lucid style, it is, nevertheless, "heavy" reading, even for a select target audience.

Minnie

Going, Going, Gone

Two houses of the late film actress Meena Kumari were auctioned last week by the income-tax department in order to recover dues amounting to Rs 6 lakh. This is perhaps the first time that the property of an actress is being auctioned nearly ten years after her death. In another instance, the film *Ganga Jamuna*, produced by the late Nasir Khan, brother of Dilip Kumar, in the early '60s will also be auctioned. However, the auctioning of the film's negative and other material was stayed by a court order.

—The Evening News of India.

Gandhi Causes Trouble

A sailor in Norway, Ms Leslie Cole, was court martialled and sentenced to 60 days' hard labour with forfeiture of 60 per cent of her pay-cheque for refusing to wear her navy uniform or perform her military duties after seeing Attenborough's *Gandhi*. Ms Cole will be discharged from the navy after she has served her sentence.

God In Court

Comedian George Burns, who starred in the film *Oh God*, was told by a lawyer during a brief court appearance: "I never cross-examined God before." "I am only God when I get paid for it," the 81-year-old Burns replied. Burns was giving evidence for the defense in a case concerning the late Groucho Marx, whose companion, actress Erin Fleming, is being sued for $1.68 million by the Bank of America. The bank alleges she obtained $ 400,000 from Marx and syndicated rights to his TV shows by exerting undue influence over him.

—Reuter

DisGRACEful Behaviour

A bronze bas-relief portrait of the late Princess Grace of Monaco was stolen from a commemorative pillar on the outskirts of Nice, in France. Prince Rainier and Princess Caroline unveiled the plaque last month when a major road, linking Nice and the neighbouring Ville Franche-surmer, was renamed in memory of Princess Grace. The plaque was screwed to the pillar and the thief removed it without damaging the marble base. It was sculpted by Nice artist Alexandre Mari.

Accused A Witness!

Can an accused appear as a witness in a lawsuit against him?

It sounds strange but this did happen in Poona some 50 years ago.

In a suit filed at Vadgaon before a magistrate, who in those days was also the tehsildar, one of the accused in the case involving illegal felling of timber was also asked to become witness, for want of evidence.

When an objection was raised by the defence counsel, holding a brief for the six accused, the chair ruled that the order was perfectly legal, pointing out that when he could play the dual role of a magistrate and a tehsildar there was nothing wrong in the accused also appearing as a witness.

Uncivilised Society?

The most charitable thing that can be said of Mrs Indira Gandhi's recent utterances on the grim tragedy in Assam is that she does not know what she is saying. They are a stock mixture of naivete, arrogance and irresponsibility that is all the more shocking because a Congress (I) Ministry has been formed in Assam and will no doubt attempt to rule a sullen populace. ....A government in any civilised society would have submitted its resignation in the face of the immense tragedy that took place in Assam.

M.V. Kamath in *Express Magazine*

Ban This Obscenity

Women members of the Bharatiya Janata Party will start a campaign against obscene publicity hoardings and advertisements.

They plan to go in groups to places where such "offensive" hoardings are to be seen. The women will paint the hoardings in jet black.

—The Hindustan Times

Mourning Tourism

The country's leading hoteliers and restaurant owners attending an All-India Convention in New Delhi, stood in silence to "mourn the demise" of tourism in India. This provided a fitting end to the convention whose theme was *Are We Really Serious About Tourism?*

Interestingly enough, among those in the audience grieving tourism's passing away was the Director-General of Tourism, Mr B. Mehra.

Maxim's In Peking: Mon Dieu!

Surely you know the place. The ghost of Edward VII hovers over the Red Table. Prince Ali Khan, Picasso and the Aga Khan have each presided over the five tables of the Banquette Royale. And Table 16 was once the exclusive preserve of the Prince of Wales.

The place, of course, is Maxim's, the *belle-époque* restaurant on Rue Royale in Paris. But courtesy *couturier* Pierre Cardin, the self-styled "most famous restaurant in the world" will soon go into something resembling mass production. Under Cardin's auspices, exact replicas of the Parisian Maxim's—with its bronze garlands, *art nouveau* murals and scarlet banquettes—are scheduled to open within a year in New York, London, Rio de Janeiro and, improbably, Peking. Other clones are planned for Istanbul, Rome, Moscow, Miami and Los Angeles.

Puzzling Fragments of the Papal Plot

According to British and American intelligence officials familiar with the operations of the Bulgarian security services, the Rome-based Bulgarians who have been linked to papal assailant Mehmet Ali Agca held cover jobs that are normally assigned to members of the military intelligence service (RO) and not the DS, Bulgaria's equivalent of the KGB.

A US Embassy official in Rome told Sen Alfonse D'Amato that the Italian defence minister was mistaken when he charged that there had been an increase in radio traffic between Sofia and the Bulgarian Air Lines office in Rome just after the shooting.

The Family Man—1

By Charles H. Heimsath

Illustrated by Francis H. D'Sa

The visiting American businessman was lonely on his first day in the Indian city. He liked a family setting at breakfast and approached the table at which sat a blonde woman and child, both dressed in saffron.

ENTERING the hotel coffee shop he
it immediately at ease. So many Euro-
pans and Americans sat idly having
reakfast, talking casually or reading the
ewspaper, he noted. They all were loose
lothing, the unstarched flowing cotton
hirts and pyjama-like pants or full skirts
nat nearly all the young travellers in India
ad ordered for themselves on arrival.

Men were bearded and had embroi-
ered cloth bags with long straps for easy
houlder carrying. Some wore small wal-
ets of cloth around their necks in which
hey kept things requiring greater safety.

Most of the women had either braided
heir hair or wore it tied in a loose bun;
ree flowing hair caught a lot of dust. So
lack were their blouses and so loosely
rovan their skirts that a good deal of the
utline of their bodies was visible. He saw
in this context of the bra-less styles back
ome and diagnosed correctly that it was
ot meant to provoke sexual interest but
ust the opposite. In fact, with far less
xposure of raw skin than he saw this
norning, Indian women had begun to
timulate him, their saris about the only
consistent feature of aesthetic interest in
he otherwise dreary land.

Besides wearing floppy clothes, these
Westerners produced a striking uniformity
f colour—saffron, India's colour for hol-
ness. Though in different shades the clear
urpose of the saffron dress was to unify

the wearers, set them apart from others, give them identity. They were followers of the Master Spirit. He had been told about the ashram, created about six years earlier by a commanding spiritual leader and now attracting hundreds of Europeans, Americans, Australians and a few Japanese.

He liked the looks of these breakfasting followers of the guru. They were healthy, strong, mostly under thirty and obviously not on heavy drugs. Whatever they were getting out of their Indian experience, they were obviously better off than Americans of his generation who had taken in Europe during the 1950s, searching for some cultural or intellectual inspiration but finding instead how cheaply they could live a dissipated existence in the student quarters of Paris or Rome or on a Mediterranean beach.

In the 1970s gurus in India began organising these disaffected or adventurous young people for whom Europe was too expensive—and in any case too Americanised. They were offered a programme of directed rebelliousness in ashrams such as this one, some intelligent direction for their individual psychological searches and probably healthier environments than he had found in his first wanderings in Europe. If the Master Spirit served no other purpose than to keep potential malcontents and drifters off the streets of Europe and India, he was providing a useful public service. With these thoughts he surveyed the scene.

WHILE the crowd having breakfast seemed unexpectedly reassuring to the well-dressed American entering the room, it also posed a problem for him. There were no empty tables. A few accommodated single Indian men and he thought momentarily of asking one of them if he could share the space. But this was a large transit hotel catering to preoccupied businessmen and none of them appeared likely to offer more than a grunt of recognition in case he sat down.

He hoped for a bit of conversation to spark off his day, a word of friendly exchange on some meaningful topic. He liked a family setting at breakfast. No matter what was said over toast and coffee his day began well if he could fit himself into someone else's day. He liked to think that this proved he was a sharing person, not dependent on others but by exchanging experiences with them, he gained some enhancement of his own identity. He was, in short, lonely, on his first day in this Indian industrial city.

And then he saw her—and the little girl. He had walked the length of the room, ostensibly to pick up a menu card from the desk at the back but in fact to give himself time to think about the space problem. Half glancing at the menu, he faced the two empty seats of a table at which sat a woman and a child. They were both blonde, perhaps American, dressed in saffron; they had no noticeable ties with the others in the room. The woman could be approached, asked if she minded sharing her table, and perhaps even engaged in conversation. The little girl was present to assure that his intentions were purely friendly. He had a busy day planned, and this could be a good beginning—if he was lucky.

"Excuse me. Good morning. You must be a member of the ashram," he began, leaning a bit over the table from behind one of the vacant chairs. He hoped it was a plausible opening and he took care to smile with special warmth at the little girl, who looked up at him. The woman returned the smile and nodded in a natural and welcoming way, pushing herself back slightly to look directly into his face. "Yes, of course. Good morning."

His next remark had to be casual, yet it should engage her somehow in a small conversation that would lead naturally to having a stranger at breakfast. "Even the children wear saffron, it seems..."

She was smiling, glanced at the child and nodded pleasantly. "You see," she replied quickly, "Guruji wants everyone to look the same, at least dress approximately the same, and so..." He was easing himself around the empty chair, his eyes conveying the question, would he be permitted to join them? With a graceful gesture, still speaking—she was obviously European, probably French, with such natural courtesy—she offered him the place opposite her.

FRANCIS H. D'SA

Interrupting with the necessary remark to match her offer, he protested, "I'm afraid I may be disturbing you..."

"On the contrary," she said at once and repeated the gesture of invitation. He seated himself with a smile of gratitude and an extra smile and nod towards the girl, who by then was returning to her porridge.

"How far is the ashram from here?" he asked, agreeably relaxed in the cushioned chair, as if he had often eaten with these people.

"Only ten minutes," she replied—she was French, he could now be certain—"by auto-rickshaw."

THEY continued to talk about the ashram; he asked nothing very serious, she replied with more information than she was asked for. She spoke English in carefully chosen words and phrases. She was educated, he judged, used to intellectual society, a cultivated person in good command of herself. They said nothing about themselves, but made the most of the simple pleasure of agreeable talk. It was a fine way to begin the day, he thought, and he had the feeling that it meant as much or even more to her, to be able to chat happily over breakfast.

All the while directing her main attention to the newcomer, the French woman also gave thoughtful care to the child, who was not eating well. "...*un peu de sucre, ma cherie?*.." The woman offered to sprinkle more sugar on the scarcely touched porridge, then to pour more milk. She stroked the child's forehead, sat her up straighter in the low chair—business-like movements of concern for the child's comfort, accompanied by soothing words. "She's not eating well; she had high fever last night, and look at those mosquito bites on her cheek."

He looked attentively at the mosquito bites on the blonde child's cheek and thought of his own children when they were her age—about three, he estimated. "All last night she was awake with those damn mosquitoes," the woman said, without annoyance, just stating the fact. He remembered his own experience in the hotel room; he had to turn on the ceiling fan to scatter the insects.

"Don't you have a fan in your room?" he asked.

"No, not yet, but I'm going to buy one today," she answered; then seeing his slightly questioning look, added, "You see, we're not staying in this hotel." She spoke while peeling an orange; she handed a section of it to the child after removing the seeds. "You should see our little room; it's in a very old house and it's very dirty and has no fan. We only come here occasionally for breakfast."

The woman was round-faced with dark blue eyes, the colour of his own, and a strongly accentuated thin nose, expressive mouth and well-formed chin. Her colouring was French-English blonde, not the faded or ghostly pale blonde of the north but the sunny blonde of middle-Atlantic Europe. She smiled often and completely, not a snatched smile out of politeness but a total smile, with beginning, middle, and end—the end poised, it seemed, to introduce the beginning of a new smile. Her voice was animated but not at all agitated in the way of some intellectual French people. She had views but expressed them without embellishing arguments. "I don't know why I like that funny guy," she said referring to the Master Spirit of the ashram and laughing. "But we all enjoy ourselves so much out there. I just cannot keep away from him!"

She liked to talk, that was plain, and he found it useful to get this insider's view of the famous ashram and its guru. There was nothing secret or hidden about the place, everyone was free to discuss what went on, even in a lighthearted tone.

"Isn't that sacrilegious," he asked, half smiling, "to speak of him as a 'funnyguy'?"

"Why not?" she answered. "He wants you to say whatever comes to your mind about him. That way you find out your real feelings about your own quest for truth." Everyone in the ashram was given an Indian name, he was told for example, "Swami Anand" in real life could be Mike Greenberg from Berkeley, California. There were lots of Jews there, mostly American. The major national group, however, was German.

The little girl had by now left her porridge uneaten and dropped her head into the woman's lap and fallen asleep. Her flushed face was hidden beneath the tablecloth. "I may have to consult a doctor," the woman said, "if her fever doesn't go down." She looked at the child, but not with any intense concern. "She was fine for the first week we were here, and then... with those mosquitoes last night, just couldn't sleep."

"Any other symptoms?" he asked, sounding, he thought, rather professional. In fact, he had at once become involved with the child's welfare.

"No, none. She's really all right. Today I'll get a fan."

"Do you know a doctor here?" he asked, realising that within a week she probably had no good local contacts. "No, I don't," she replied. "Last time we were here—she was just one and a half—the ashram doctor looked after her. But she never really got sick. And that swami is gone now."

"I can find the name of a good paediatrician," he told her, with a warm sense of satisfaction in offering fatherly help. He liked being able to talk to her in this way. There was an easy intimacy about their common concern for the child. He knew some local people with small children through his business relations with an Indian pharmaceutical firm.

"Oh, that would be very nice of you. I'd appreciate that!" she told him, smiling broadly. He liked her smile; it was both trusting and lighthearted. This woman could be an engaging companion, he thought.

The child was not stirring. She seemed to be making up her lost sleep and might well remain there a long time. They had eaten, the waiter moving back and forth seeing to their common needs. He was beginning to feel a certain indecisiveness about his day's work. Soon he would have to persuade himself to leave for his first engagement. It was almost 10 o'clock, India's starting hour. There would be a car at the hotel entrance.

"I'll leave you my name and room mber," he said, deciding he had to get . "If you are here at lunch time, about e, we can meet and I'll give you the ctor's name."

She was nodding. How lucky for him at they would have reason to meet gain. Then he checked himself and tried imagine the woman's schedule that ay with a sick child and shopping for a n. "But if you're not here," he added, lon't worry, I'll understand you've got her things to do. You can call my room the evening and I'll give you the me." He rose, having paid his bill.

"Thank you," she replied, not moving. e smiled again and bowed slightly as backed quickly away from the table. ey had made a fine beginning. oughtfulness, good manners, intelli nt talk; it was all there between two angers in an alien land.

HIS business that day required rapid vement from one appointment to other. His Indian counterpart in the gotiations their firms were conducting d provided a car—a well-maintained t old Ambassador, an automobile ose British prototype had been de loped in the 1950s. He settled into the r seat, noted the handsome leather holstery and the starched uniform of driver and geared himself up to what uld have to be a high standard of rformance if his firm was to get the siness they sought

ndians were behind the times in most the obvious ways—manufacturing old del cars, for example—but in business als or any legal negotiations they stood well up to world standards. He had to be sharp today, and he must remember to be patient as well; Indians of high position were impressed as much by the person they dealt with as by what he was offering. He reviewed his figures, repractised his ordinarily instantaneous conversion of rupees into dollars. He must remember that a *crore* meant ten million, a *lakh* one hundred thousand.

His firm manufactured the most durable variable speed heavy mixers that anyone could buy. But they were expensive, perhaps the most expensive of that line. He had to fight for every sale by convincing the buyer of the benefits of long-term trouble-free use, good follow-up service and high resale value of the used machinery. This day would be demanding, possibly more than usually so. But it had begun very well.

From the hotel near the railway station he was driven first through the old city—narrow, poorly paved streets lined by three-storied residences, their carved wood balconies unpainted and stained Honking in unpatterned bursts the driver would move swiftly among carts, cycles, labourers with head loads, women rushing to get their children across busy intersections, young men strolling amiably together (fingers interlocked), scavenging dogs and cows, and occasionally a leper hauled along by a small boy or girl on a low wheeled cart, his bandaged finger stumps held up in imploring display.

The backbone of the human traffic were the shoppers. Nowhere, he considered, except perhaps in New York City's garment district, had he seen so many people on the street intent on doing business. India for all its centralised, supposedly socialist economic policies appeared to him to be the most vigorous free enterprise system on earth. He found it exciting—familiarly enterprising and competitive.

The sturdy and manoeuvrable Ambassador had reached the city's outskirts unscathed, picked up speed, and now was finally turning through the high iron gates of the pharmaceutical plant. He ran over a few opening phrases that had conveyed in past encounters the right mixture of business and social grace and glanced again at the list of corporate officers he was likely to meet. The car pulled up to the entrance, a guard opened the door and saluted him. And then someone he knew, a thin man in shirt and tie, rushed out smiling with outstretched hand. He was well received, he felt himself in perfect form.

The time passed quickly. Business dealings in the States raised everyone's adrenaline and left him drained, but in India, he had often found, his body relaxed in negotiations like these, and his mind thus functioned more clearly. That's why high-level Indians seldom had to repeat themselves in serious matters, he had observed; their minds were so keenly focussed on the subject at hand that once a statement, an offer or acceptance was pronounced, that was the end of it. Of course the common person talked endlessly, mostly needless chatter But at the top, in striking contrast, words were precise and they were binding.

Such was the hour's work this morning: his deal was understood, his high prices already anticipated and appreciated, he would need no further dealings at present and would learn the outcome after return ing to Bombay.

He had then to escape from a luncheon invitation involving an hour's lay-over at the plant waiting for the strict one o'clock meal time and another hour over lunch Fortunately, he'd made a tentative arrangement to visit a government microbiology laboratory if he was free about noon, and he used that excuse to leave In fact he was tied down more compellingly to the possible reunion with the French woman and the child back at the hotel.

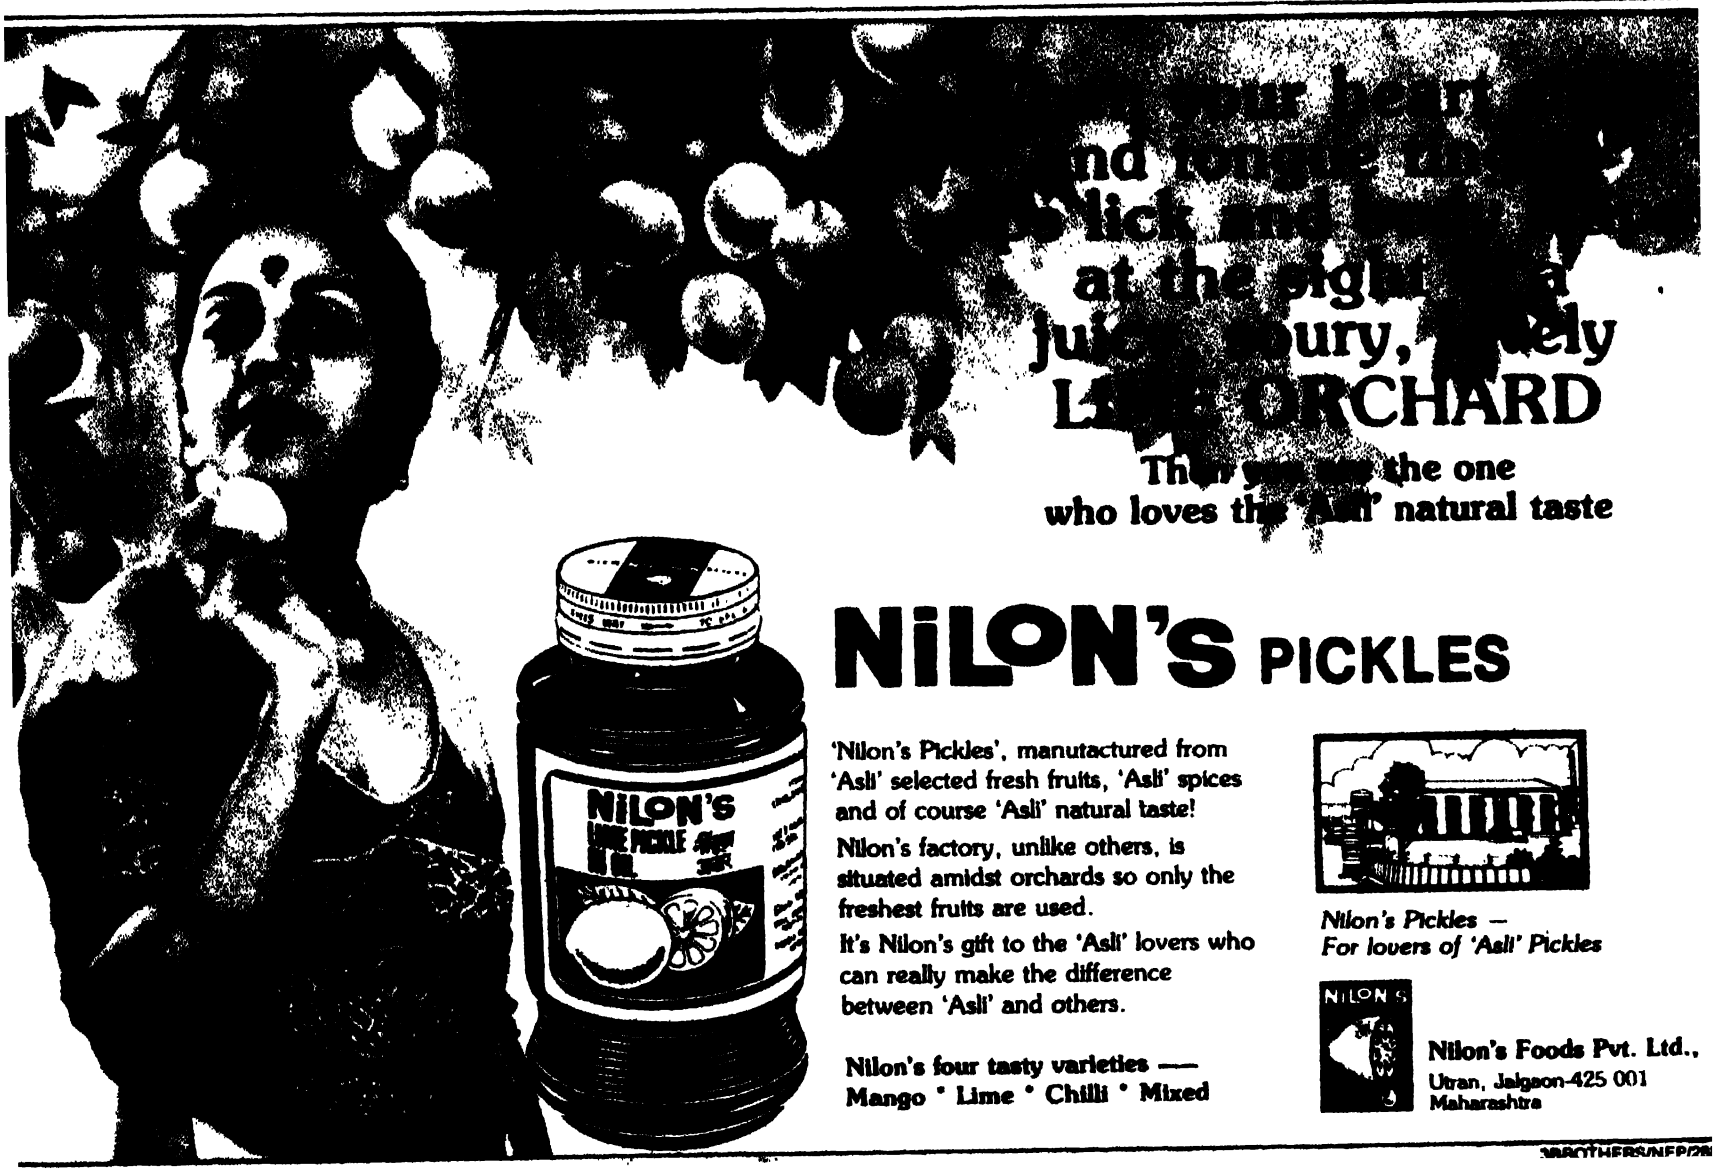
He moved fast, in and out of the laboratory, re-established useful scientific contacts, confirmed his guess about the direction the Indians were moving in certain immunological experiments, and was back at the hotel just before one o'clock. Would she come? He thought so, because of the child's illness He had telephoned his friend with the small children during a spare five minutes at the plant and had the doctor's three addresses and telephone numbers at hand

At the hotel reception desk he asked for his key. The clerk reached back and gathered up with the key a small piece of paper. It was a note, which he read quickly

> *Savitri and I will be at the hotel at 20 hrs to see you. She had a high fever and is sleeping all day*
>
> *Love, Ma Prem Priyo*

So that's her name! he thought. And she's coming tonight—never mind the lunch, which would be too abrupt anyway. She signed herself with "love," he mused. What does that mean? He knew it would be difficult this afternoon to concentrate on his work

(to be concluded) ■



HER Husband is so stupid, that when she gave birth to triplets, he wanted to know who were the fathers of the other two.

"I FINALLY cured my kid of biting his nails."

"Really. How did you do it?"

"I knocked his teeth out."

A PRETTY girl was looking at a large collection of greeting cards labelled, "For your sweetheart." She read each card carefully before rejecting it. Finally she decided on one which said simply and directly, "Because I love only you"

She held the card up, turned to the shopkeeper and said "Please give me a dozen of these."

MAID: "Oh, Madam, I am very sorry, the twins have fallen down the well."

Mother: "Oh, dear me. Just rush up to the library and get me the latest issue of "MODERN MOTHER'S MAGAZINE". It contains an article on how to bring up children."

AT a charity function a beautiful young nurse was selling kisses, for 50 paise each, to help a good cause. A stout, balding man, old enough to have more sense, bought Rs 5 worth and declared "I'll double that order if you promise to nurse me if ever I am a patient at your hospital."

The nurse agreed, and said sweetly, "Thank you. I work at St. Ann's Maternity Hospital."

THE honeymoon is really over when he phones to say he will be late for dinner, and she has already left a note saying that dinner is in the refrigerator.
